

Pipette Tips & Filter Tips

BRAND® pipette tips and filter tips are manufactured in a cleanroom under state-of-the-art production conditions. They are automatically rack packed and packaged to ensure consistently high quality.

- High-purity polypropylene, free from DiHEMDA and oleamide
- Manufactured without lubricants
- Cadmium-free pigments
- Graduation for a quick volume check
- Rack-packed tips and filter tips up to 1000 µL free of DNA (<40 fg), RNase (<8.6 fg), endotoxins (<1 pg) and ATP (<1 fg)
- Autoclavable at 121 °C (2 bar), acc. DIN EN 285
- Environmentally friendly packaging systems
- CE-marked according to IVD-Directive 98/79 EC
- BIO-CERT® tips sterile according to ISO 11137 and the AAMI guidelines; a SAL of 10^{-6} is obtained

Superior quality tips –
priced for value

BRAND® Pipette tips, quality fit for reliable results

Optimum results are achieved in combination with BRAND® microliter pipettes. BRAND® quality tips seat perfectly for precise analyses.

BRAND® pipette and filter tips are tested and designed to fit BRAND® pipettes and most of the pipettes from GILSON®, Thermo Fisher Scientific FINNPIPETTE®, Eppendorf® and BIOHIT®/Sartorius®. The 5 mL tip is exclusively tested for BRAND® pipettes and Thermo Fisher Scientific FINNPIPETTE®. The 10 mL tip is suitable for BRAND® and Eppendorf® pipettes.

High Quality Tips

Pipette tips are the most frequently used disposables in the laboratory. As laboratory tests have become increasingly sensitive, tip requirements have become more stringent over time. From the raw materials, to the molding machines, and quality control procedures, many parameters need to be considered to meet the highest standards for research and standardized applications.

For the manufacturing of pipette tips and filter tips, BRAND® exclusively uses raw materials that are free from the additives di (2-hydroxyethyl) methylidodecylammonium (DiHEMDA) and 9-octadecenamide (oleamide). These additives are often found in raw polypropylene, and can interfere with biological tests, leading to false results. Only highly polished molds are used, so that no parting agents or demolding aids are needed.

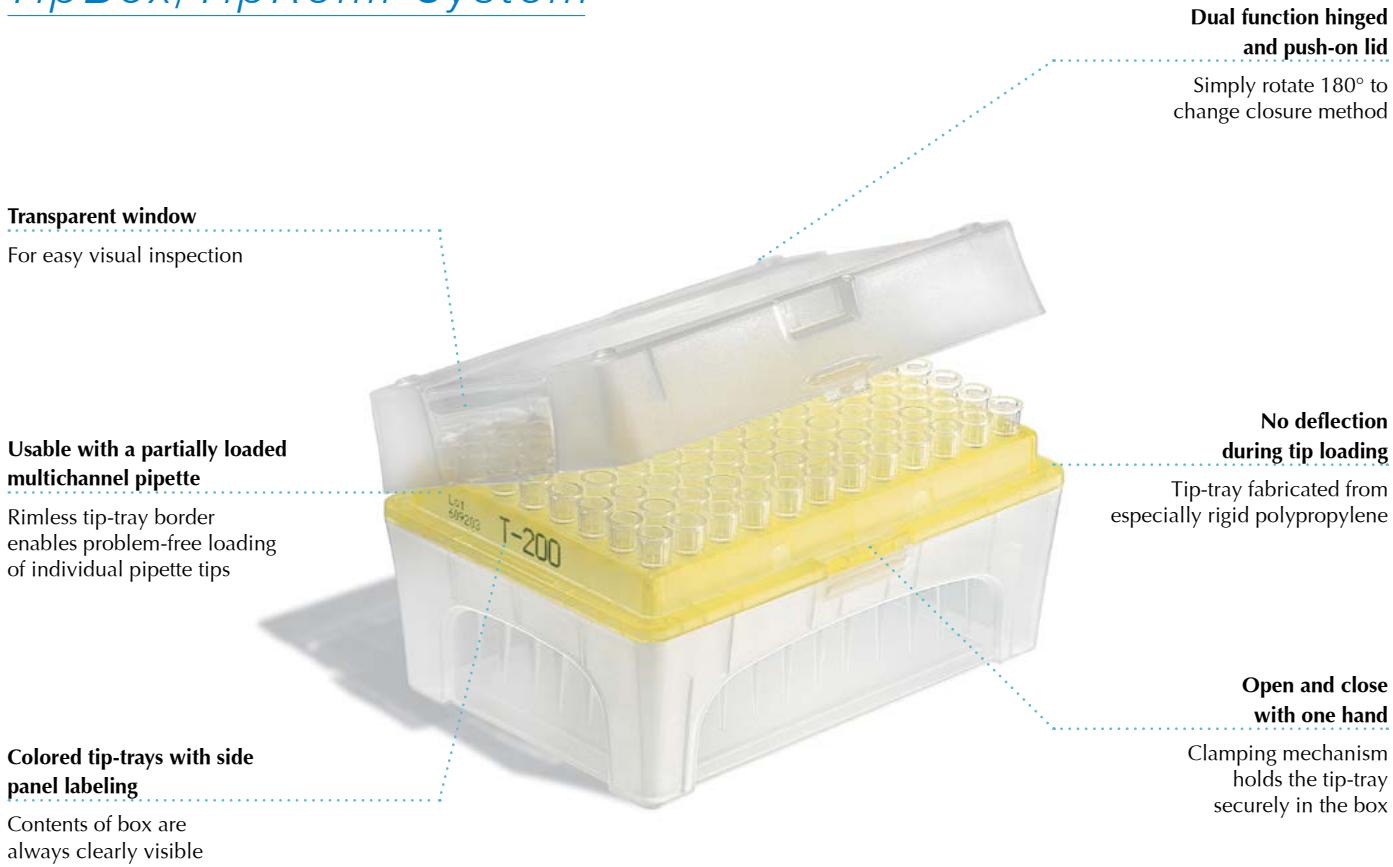

One of the world's largest
cleanroom facilities

BRAND® disposable items for the life sciences are produced using the most advanced cleanroom techniques in one of the world's largest cleanrooms for laboratory disposable items. The ongoing cleanroom monitoring includes continuous measurements of air particulates, positive air pressure, air exchange rate, room temperature, and the relative humidity, among other things. This ensures that the actual parameters can immediately be checked against the nominal values. Deviations are detected immediately and suitable countermeasures can be taken before the limit values are exceeded. The high-precision control of environmental conditions provides a very high degree of stability in the corresponding parameters, especially the room temperature. This uniformity, together with quality testing of the final product by batch, guarantees the consistently high quality in the life science products from BRAND®. For the production of disposable items, Class 8, 7, and 5 cleanrooms are available, Class 8 compliance with ISO 14644-1 is certified by external, independent auditors.

Pipette Tip Packaging Options

TipBox/TipRefill System

Sterile reloading

Press the long sides of the transfer aid together and continue pressing them together while withdrawing the tip-tray. Ensure that the holding straps for the transfer aid are correctly positioned.

Insert the filled tip-tray perpendicularly from above into the previously sterilized TipBox until it locks into place.

Remove the transfer aid from the mounting plate. Finished – all without tip contact.

Dual function lid

TipBox features a unique dual function lid design. To change closure method from hinged to push-on, simply remove lid and rotate 180°.

TipRefill, TipStack™ & Transfer Aid

TipRefill

TipRefills reduce waste by 20% compared to filled TipBoxes. All rack packed pipette tips and filter tips up to 1000 µL are free of DNA, RNases, endotoxins and ATP (for detailed information see page 129). BIO-CERT® TipRefills are sterile according to ISO 11137 and the AAMI guidelines, and have a SAL of 10⁶. These racks are supplied with a transfer aid that enables simple, contamination-free transfer into a TipBox. Tip size and lot number information is printed on one side of each tip-tray.

TipRefill

TipBox

Bulk

TipStack™

A tip tower containing 5 filled tip-trays and a TipBox constitute the space-saving refill system for 20 µL, 200 µL and 1000 µL tips. Tightly sealing spacers prevent the tips from getting stuck together, and keep them free from DNA, RNases, endotoxins and ATP. BIO-CERT® TipStacks are supplied with a transfer aid for contamination-free use in a TipBox.

- Recyclable components
- Reduced waste
- Sterilizable and reusable TipBox
- High purity pipette tips
- Space-saving design

TipStack™

Transfer aid

TipBox 5/10 mL

TipRefills

sterile and non-sterile

The TipBox refill unit is protected in environmentally compatible recyclable PET packaging. Sterile TipRefills are supplied with a transfer aid for sterile handling of tip rack.

Bulk packed in bags

non-sterile

All tips are produced under supervised state-of-the-art clean-room conditions, automatically shrink-wrapped in reclosable bags, and packaged in cardboard boxes. The batch number is printed on every bag.

TipBox

sterile and non-sterile

Made of polypropylene with a hinged push-on lid, the tip box is stackable and repeatedly autoclavable at 121 °C (2 bar), according to DIN 285. (Empty TipBox, ordering information see page 18)

TipBox 5/10 mL

non-sterile

The 5 mL and 10 mL tips are only available non-sterile in the TipBox configuration.

TipStack™

sterile and non-sterile

The TipStack™ is a space-saving, environmentally compatible refill system for TipBox. It consists of 5 racks of 96 tips and 1 TipBox. Sterile TipStacks are supplied with a transfer aid for sterile handling of tip rack.

Pipette Tip Size & Descriptions

0.1 - 20 μL (A) **0.1 - 1 μL (Filter) (I)**

The nano-cap™ tip was developed for the nanoliter range and is ideal for molecular biological applications such as PCR. At 37 mm long, it features a capillary rise that is visible to the naked eye at 0.1 μL. The capillary part of the tip conveniently fills gel wells for most gel electrophoresis systems. It is suitable for pipettes up to 20 μL. The racked tips are colorless in a grey-colored tip tray.

0.5 - 20 μL (B) **0.5 - 10 μL (Filter) (J)**

The slender design and 46 mm length allow pipetting in microtubes and microplates without touching the walls. Graduations at 2 μL and 10 μL simplify a quick volume check. The racked tips are colorless in a grey-colored tip tray.

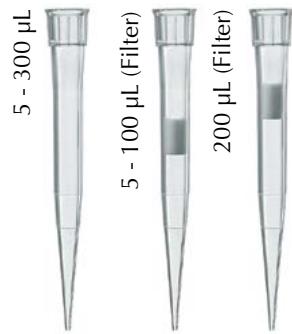

1 - 50 μL (C) **1 - 20 μL (Filter) (K)**

At 50 mm, this tip is ideal for working to the bottom of narrow containers. Graduations at 2.5, 10, 25 and 50 μL for quick volume check. The racked tips are colorless in a grey-colored tip tray.

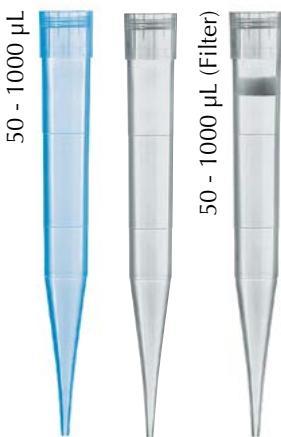

2 - 200 μL (D) **2 - 20 μL (Filter) (L)**

A tested and proven thin-walled tip. Lighter in weight, 50 mm long and can be used with virtually all pipettes with yellow color code. Graduations at 20 μL and 100 μL for quick volume check. Bulk tips are colored yellow. The racked tips are colorless in a yellow-colored tip tray.

5 - 300 μL (E) **5 - 100/200 μL (Filter) (M/N)**

This thin-walled tip is suitable for reverse pipetting and plate washing. It is 53 mm long and can also be used with pipettes with yellow color code. It is particularly suited for working with multichannel pipettes. Graduations at 50 and 100 μL for quick volume check. The racked tips are colorless in a green-colored tip tray.

50 - 1000 μL (F) **50 - 1000 μL (Filter) (O)**

A proven thin-walled tip designed for routine laboratory and research pipetting. Its length is 70 mm. Graduations are at 250, 500 and 1000 μL for a quick volume check. Bulk tips are colored blue. The racked tips are colorless in a blue-colored tip tray.

0.5 - 5 mL (G)

Its particularly slender shape, 160 mm length, and approx. 9.6 mm diameter allows pipetting even from narrow volume measuring equipment such as volumetric flasks with NS 12/21. Suitable for Transferpette® and Thermo Fisher Scientific FINNPIPETTE® microliter pipettes.

1 - 10 mL (H)

At 156.5 mm length and approximately 15 mm diameter, this tip is ideal for working with the Transferpette® S 10 mL and is compatible with Eppendorf® systems.

Filter Tips

BRAND® Filter tips are non-self sealing and have a PE filter that is free from chemical additives. Permeability is controlled by the combination of pore size and filter length, so that no aerosols can reach the pipette shaft. These filters function with consistent reliability. Liquids can pass very slowly if they accidentally contact the filter. Since the filter does not swell, as with self-sealing

filter tips, the sample can be recovered from the filter by simply actuating the pipette's blow-out function, or by centrifugation if necessary. This is clearly an important advantage of non-self-sealing filters, especially when working with valuable samples. The absence of filter additives protects samples from contamination.

Ultra-Low Retention Pipette Tips

Ultra Low Retention (ULR™) tips are produced through a special, patented physicochemical process. The resulting surface is homogeneous, defect-free and has extremely low surface tension – over 50% less than PTFE (see table, page 22). This significantly reduces sample loss and provides substantially higher reproducibility when working with critical media.

- **Ideal for biological samples**—Suitable for detergents such as TRITON™ X-100, SDS, Tween, etc.
- **No leachables**—No additives or siliconization of the tip surface
- **High chemical resistance**—Ideal for working with solvents
- **Autoclavable**—At 121 °C (2 bar) without damaging the material properties
