Preset	CONF0
State Saved	Yes
Range	Configuration 0|Configuration 1|Configuration 2|Configuration 3|Configuration 4|Configuration 5|Configuration 6|Configuration 7|Configuration 8|Configuration 9
Backwards Compatibility SCPI	`[:SENSe]:RADio:STANdard:DGPU`

CHP Power Integ BW

Specifies the range of integration used in calculating the power in the component carrier s in the CHP measurement.

Remote Command	`[:SENSe]:CCARrier0|…|4:CHPower:BANDwidth:INTegration <freq>` `[:SENSe]:CCARrier0|…|4:CHPower:BANDwidth:INTegration?`
Example	`:CCAR0:CHP:BAND:INT 20MHz` `:CCAR0:CHP:BAND:INT?`
Notes	You must be in LTEATDD/LTEAFDD Mode to use this command. Use :INSTrument:SELect to set the mode
Couplings	When System Bandwidth of the parameter set is changed, the value of this parameter also changes as shown in the following table.

System Bandwidth	CHP Integ BW
1.4 MHz (B1M4)	1.4 MHz
3 MHz (B3M)	3 MHz
5 MHz (B5M)	5 MHz
10 MHz (B10M)	10 MHz
15 MHz (B15M)	15 MHz
20 MHz (B20M)	20 MHz
200 kHz(B200K)	200 kHz

Preset	5 MHz
State Saved	Saved in instrument state
Min	100 kHz
Max	20 MHz
Backwards Compatibility SCPI	`[:SENSe]:CHPower:BANDwidth:INTegration` `[:SENSe]:CHPower:BWIDth:INTegration`

ACP Power Integ BW

Specifies the Measurement Noise Bandwidth used to calculate the power in the component carriers in the ACP measurement.

Remote Command	`[:SENSe]:CCARrier0|…|4:ACPower:BANDwidth[1]|2:INTegration <freq>` `[:SENSe]:CCARrier0|…|4:ACPower:BANDwidth[1]|2:INTegration?`
Example	`:CCAR0:ACP:BAND:INT 20MHz` `:CCAR0:ACP:BAND:INT?`
Notes	Carrier sub op code, 1 is for BTS, 2 for MS. Default is BTS You must be in the LTEATDD/LTEAFDD mode. Use :INSTrument:SELect to set the mode
Couplings	When System Bandwidth of the parameter set is changed, the value of this parameter also changes as shown in the following table.

System Bandwidth	BTS ACP Meas Noise BW	MS ACP Meas Noise BW
1.4 MHz (B1M4)	1.095 MHz	1.08 MHz
3 MHz (B3M)	2.715 MHz	2.7 MHz
5 MHz (B5M)	4.515 MHz	4.5 MHz
10 MHz (B10M)	9.015 MHz	9.0 MHz
15 MHz (B15M)	13.515 MHz	13.5 MHz
20 MHz (B20M)	18.015 MHz	18.0 MHz
200 kHz(B200K)	180 kHz	180 kHz

Preset	4.515 MHz|4.5 MHz
State Saved	Yes
Min	100 kHz
Max	20 MHz
Backwards Compatibility SCPI	`[:SENSe]:ACPower:CARRier[1]|2:LIST:BANDwidth[:INTegration]` `[:SENSe]:ACPower:CARRier[1]|2:LIST:BWIDth[:INTegration]`

SEM Power Integ BW

Specifies the integration bandwidth used to calculate the power in the component carriers in SEM measurement.

Remote Command	`[:SENSe]:CCARrier0|…|4:SEMask:BANDwidth[1]|2:INTegration <freq>` `[:SENSe]:CCARrier0|…|4:SEMask:BANDwidth[1]|2:INTegration?`
Example	`:CCAR0:SEM:BAND:INT 20MHz` `:CCAR0:SEM:BAND:INT?`
Notes	Bandwidth sub op code, 1 is for BTS, 2 for MS. Default is BTS You must be in LTEATDD/LTEAFDD Mode to use this command. Use :INSTrument:SELect to set the mode
Couplings	When System Bandwidth of the parameter set is changed, the value of this parameter also changes as shown in the following table. Note that you cannot set the value exceeding the corresponding System Bandwidth

System Bandwidth	BTS SEM Integ BW	MS SEM Integ BW
1.4 MHz (B1M4)	1.095 MHz	1.08 MHz
3 MHz (B3M)	2.715 MHz	2.7 MHz
5 MHz (B5M)	4.515 MHz	4.5 MHz
10 MHz (B10M)	9.015 MHz	9.0 MHz
15 MHz (B15M)	13.515 MHz	13.5 MHz
20 MHz (B20M)	18.015 MHz	18.0 MHz
200 kHz(B200K)	180 kHz	180 kHz

Preset	4.515 MHz|4.5 MHz
State Saved	Saved in instrument state
Min	100 kHz
Max	20 MHz
Backwards Compatibility SCPI	`[:SENSe]:SEMask:BANDwidth[1]|2:INTegration`

Carrier Config Presets

Lets you configure the Component Carrier presets.

Max BTS RF Bandwidth

Sets max BS RF bandwidth used when the carrier configuration preset runs. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:RFBW <freq>` `[:SENSe]:CCARrier:CONFig:RFBW?`
Example	`:CCAR:CONF:RFBW 40MHz` `:CCAR:CONF:RFBW?`
Preset	40MHz
State Saved	Saved in instrument state
Min	1.4MHz
Max	200 MHz

Carrier Spacing Delta

Sets delta channel spacing used when the carrier configuration preset runs. Channel spacing is determined from this value and the default channel spacing defined in the standard, i.e. Channel spacing = (BW_{chan1} + BW_{chan2}) * 0.5 + [the delta spacing]. Since this value is a difference from the default spacing, this value can be negative to allow narrower channel spacing. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:SPACing:DELTa <freq>` `[:SENSe]:CCARrier:CONFig:SPACing:DELTa?`
Example	`:CCAR:CONF:SPAC:DELT -200kHz` `:CCAR:CONF:SPAC:DELT?`
Preset	0Hz
State Saved	Saved in instrument state
Min	-1.0 MHz
Max	10.0 MHz

Preset ETC

The ETC configuration is applied. The component carrier parameters are dynamically changed using values of the parameters of each test configuration under Carrier Config Presets menu when some test configuration is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig NONE | ETC1 | ETC2 | ETC3` `[:SENSe]:CCARrier:CONFig?`
Example	`:CCAR:CONF ETC1` `:CCAR:CONF?`
Notes	The control for NONE is not available
State Saved	Saved in instrument state
Range	ETC1|ETC2|ETC3

ETC1 Attributes

Sets ETC1 carrier configuration.

Max Number of Component Carriers

Sets max component carriers placed when the ETC1 carrier configuration preset runs. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:ETC1:CMAX <integer>` `[:SENSe]:CCARrier:CONFig:ETC1:CMAX?`
Example	`:CCAR:CONF:ETC1:CMAX 5` `:CCAR:CONF:ETC1:CMAX?`
Preset	5
State Saved	Saved in instrument state
Max	5
Min/Max	1

Component Carrier System BW

Sets bandwidth of the component carriers placed when the ETC1carrier configuration preset runs. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:ETC1:BANDwidth B1M4 | B3M | B5M | B10M | B15M | B20M | B200K`

	`[:SENSe]:CCARrier:CONFig:ETC1:BANDwidth?`
Example	`:CCAR:CONF:ETC1:BAND B5M` `:CCAR:CONF:ETC1:BAND?`
Preset	B5M
State Saved	Saved in instrument state
Range	1.4MHz|3MHz|5MHz|10MHz|15MHz|20MHz|200kHz

Component Carrier Narrowest BW

Sets narrowest bandwidth of the component carriers placed when the ETC1 carrier configuration preset runs. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:ETC1:BANDwidth:NARRowest B1M4 | B3M | B5M | B10M | B15M | B20M | B200K` `[:SENSe]:CCARrier:CONFig:ETC1:BANDwidth:NARRowest?`
Example	`:CCAR:CONF:ETC1:BAND:NARR B1M4` `:CCAR:CONF:ETC1:BAND:NARR?`
Preset	B1M4
State Saved	Saved in instrument state
Range	1.4MHz|3MHz|5MHz|10MHz|15MHz|20MHz|200kHz

ETC2 Attributes

Sets ETC2 carrier configuration.

Max Number of Component Carriers

Sets max component carriers placed when the ETC2 carrier configuration preset runs. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:ETC2:CMAX <integer>` `[:SENSe]:CCARrier:CONFig:ETC2:CMAX?`
Example	`:CCAR:CONF:ETC2:CMAX 5` `:CCAR:CONF:ETC2:CMAX?`
Preset	5
State Saved	Saved in instrument state
Min	1
Max	5

Carrier Side (with BTS RF BW)

Select the side of RF bandwidth to place the ETC2 component carriers. When this value is changed, the carrier configuration preset is initiated.

- NEGative - Negative (lower) edge of RF bandwidth. If the option is selected, the available component carriers will be placed sequentially from the lower edge of the RF bandwidth starting from first
- POSitive - Positive (upper) edge of RF bandwidth, If the option is selected, the available component carriers will be placed sequentially from the upper edge of the RF bandwidth starting from first

Remote Command	`[:SENSe]:CCARrier:CONFig:ETC2:BANDwidth:SIDE NEGative | POSitive` `[:SENSe]:CCARrier:CONFig:ETC2:BANDwidth:SIDE?`
Example	`:CCAR:CONF:ETC2:BAND:SIDE NEG` `:CCAR:CONF:ETC2:BAND:SIDE?`
Preset	NEGative
State Saved	Saved in instrument state
Range	NEGative|POSitive

Component Carrier System BW

Sets carrier bandwidth of the component carriers placed when the ETC2 carrier configuration preset runs. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:ETC2:BANDwidth:CARRier[1]|2|…|5 B1M4 | B3M | B5M | B10M | B15M | B20M | B200K` `[:SENSe]:CCARrier:CONFig:ETC2:BANDwidth:CARRier?`
Example	`:CCAR:CONF:ETC2:BAND:CARR B5M` `:CCAR:CONF:ETC2:BAND:CARR?`
Dependencies	The Carrier Bandwidth is coupled to Max Component Carriers. The settings are enabled following the Max Component Carriers. For example, the 1st Carrier Bandwidth and 2nd Carrier Bandwidth will be available if the Max Component Carriers is 2
Preset	B5M
State Saved	Saved in instrument state
Range	1.4MHz|3MHz|5MHz|10MHz|15MHz|20MHz|200kHz

ETC3 CC Bandwidth

Sets the bandwidth of the component carriers placed when the ETC3 carrier configuration preset runs. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:ETC3:BANDwidth B1M4 | B3M | B5M | B10M | B15M | B20M | B200K` `[:SENSe]:CCARrier:CONFig:ETC3:BANDwidth?`
Example	`:CCAR:CONF:ETC3:BAND B5M` `:CCAR:CONF:ETC3:BAND?`
Preset	B5M
State Saved	Saved in instrument state
Range	1.4MHz|3MHz|5MHz|10MHz|15MHz|20MHz|200kHz

3.7.8.4 Meas Standard

Enables you to access Preset to Standard functions.

In LTE-Advanced TDD Mode, the parameters under Predefined Params impact the gate or trigger length and delay of the following measurements:

- Monitor Spectrum
- Channel Power
- ACP
- Power Stat CCDF
- Occupied BW
- Spectrum Emission Mask
- Spurious Emission

In LTE-Advanced FDD Mode, the Predefined Parameters in this section are used in the Transmit On/Off Power measurement. The Modulation Analysis measurement has its specific Predefined Parameters setting.

In LTE V2X Mode, Predefined parameters apply to all LTE V2X measurements.

System BW

Sets the demodulator to the specified bandwidth and configures the settings of every component carrier according to the default values listed in table for the current direction (Uplink or Downlink).

For example, when Number of Component is 3, after executing the command RAD:STAN:PRES B5M or selecting corresponding Bandwidth in the dropdown menu, all the 3 component carriers are configured as 5Mhz bandwidth, and all the settings of these 3 component carriers are set according to the table.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet B1M4 | B3M | B5M | B10M | B15M | B20M | B200K`
Example	`:RAD:STAN:PRES B5M`
Notes	B200K selection is available in LTE-A FDD mode B200K option is for NB-IoT which requires N9080EM3E license
Couplings	Preset To Standard presets parameter values listed in section "Values for each Preset To Standard". And the system bandwidth of each component carrier under the Component Carrier Setup will be preset to the selected one
Preset	B5M
State Saved	Yes
Range	1.4 MHz (6 RB) | 3 MHz (15 RB) | 5 MHz (25 RB) | 10 MHz (50 RB) | 15 MHz (75 RB) | 20 MHz (100 RB) | 200 kHz (NB-IoT)

UL/DL Config

Sets the TDD UL/DL Allocation parameter of each carrier to the selected value.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:ULDL CONF0 | … | CONF6` `[:SENSe]:RADio:STANdard:PRESet:ULDL?`
Example	`:RAD:STAN:PRES:ULDL CONF0`
Notes	CONF0: Configuration 0 (DSUUUDSUUU) CONF1: Configuration 1 (DSUUDDSUUD) CONF2: Configuration 2 (DSUDDDSUDD) CONF3: Configuration 3 (DSUUUDDDDD) CONF4: Configuration 4 (DSUUDDDDDD) CONF5: Configuration 5 (DSUDDDDDDD) CONF6: Configuration 6 (DSUUUDSUUD)
Dependencies	When the setting is selected, the ULDL Alloc per component carrier under the Component carrier Setup will be preset to the selected value

Preset	CONF0
State Saved	Yes
Range	Configuration 0|Configuration 1|Configuration 2|Configuration 3|Configuration 4|Configuration 5|Configuration 6

Dw/GP/Up Len

Sets the TDD special sub-frame configuration of each component carrier to the selected value.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:DGPU CONF0 | … | CONF9` `[:SENSe]:RADio:STANdard:PRESet:DGPU?`
Example	`:RAD:STAN:PRES:DGPU CONF0`
Notes	CONF0: Configuration 0 CONF1: Configuration 1 CONF2: Configuration 2 CONF3: Configuration 3 CONF4: Configuration 4 CONF5: Configuration 5 CONF6: Configuration 6 CONF7: Configuration 7 CONF8: Configuration 8 CONF9: Configuration 9
Dependencies	When the setting is selected, the Dw/GP/Up Len per Component Carrier under the Component Carrier Setup will be preset to the selected value The special sub-frame configuration 9 is only enabled when it is LTE-Advanced TDD
Preset	CONF0
State Saved	Yes
Range	Configuration 0|Configuration 1|Configuration 2|Configuration 3|Configuration 4|Configuration 5|Configuration 6|Configuration 7|Configuration 8|Configuration 9

Analysis Slot

Specifies the starting analysis slot. The measurement will adjust the gate delay or trigger delay according to this parameter.

Remote Command	`[:SENSe]:RADio:SLOT TS0 | TS1 | DPTS1 | UPTS1 | TS4 | TS5 | TS6 | TS7 | TS8 | TS9 | TS10 | TS11 | TS12 | TS13 | TS14 | TS15 | TS16 | TS17 | TS18 | TS19` `[:SENSe]:RADio:SLOT?`

Example	`:RAD:SLOT TS0`
Couplings	Measurement's gate length or meas interval will couple to the parameter
Preset	TS0
State Saved	Yes
Range	TS0 | TS1 | DwPTS1 | UpPTS1 | TS4 | TS5 | TS6 | TS7 | TS8 | TS9 | TS10 | TS11 | TS12(DwPTS2) | TS13 (UpPTS2) | TS14 | TS15 | TS16 | TS17 | TS18 | TS19

Meas Interval

This parameter specifies the desired slots count that needs to be analyzed. The measurement will adjust the gate length or meas interval according to this parameter.

For NB-IoT uplink cases scenarios, when Measure NPRACH is Off, this parameter indicates not only the slots' count to be analyzed, but the time elapse of the off power measurements as well.

In LTE-A FDD Mode, this parameter only appears in the Transmit On|Off Power measurement.

Remote Command	`[:SENSe]:RADio:MINTerval <integer>` `[:SENSe]:RADio:MINTerval`
Example	`:RAD:MINT 1`
Notes	The backwards compatible command [:SENSe]:PVTime:MINTerval is available in LTE FDD & LTE-A FDD Modes
Dependencies	This parameter is disabled when all the below conditions are met at the same time: – System BW is "200 kHz (NB-IoT)" – Direction is "uplink" – NB-IoT Subcarrier Spacing is "3.75kHz" – Meas NPRACH is "OFF"
Couplings	Disabled when the "Measure PRACH" is in scope and its value is not off, then the actual meas interval is the length PRACH or SRS channel For NB-IoT case scenario, when the parameter is disabled, its value is automatically determined by both Meas NPRACH:
Preset	1

Meas NPRACH	Meas Interval
Preamble0	3 slots
Preamble1	4 slots

State Saved	Yes
Min	1
Max	20, when System BW is NOT “200 kHz (NB-IoT) 16, otherwise
Backwards Compatibility SCPI	LTE: `[:SENSe]:PVTime:MINTerval`

CP Length

Specifies whether the cyclic prefix is configured as NORMal or EXTended for power measurement. The parameter will affect the gate length or meas interval parameters.

In LTE-A FDD Mode, this parameter only appears in the Transmit On|Off Power measurement.

Remote Command	`[:SENSe]:RADio:CPLength NORMal | EXTended` `[:SENSe]:RADio:CPLength?`
Example	`:RAD:CPL NORM`
Notes	The backwards compatible SCPI command [:SENSe]:PVTime:CPLength is available in LTE FDD & LTE-A FDD Modes
Dependencies	Disabled when System BW is set to “200 kHz (NB-IoT)” and Direction is “uplink”
Couplings	Set to NORMal when System BW is set to “200 kHz (NB-IoT)”
Preset	NORMal
State Saved	Yes
Range	Normal|Extended
Backwards Compatibility SCPI	LTE: `[:SENSe]:PVTime:CPLength`

Measure PRACH/SRS

Specifies whether the analysis slot is used for PRACH channel or SRS and the PRACH preamble format of the analysis slot.

The measurement will adjust the gate length or meas interval according to this parameter.

Remote Command	`[:SENSe]:RADio:MEASure OFF | PPF0 | PPF1 | PPF2 | PPF3 | PPF4 | SRS | DSRS` `[:SENSe]:RADio:MEASure?`
Example	`:RAD:MEAS OFF`
Couplings	If direction is downlink, the control is disabled and the value is set to off

	If this control value is not off, Meas Interval is disabled
Preset	OFF
State Saved	Yes
Range	Off|Preamble 0|Preamble 1|Preamble 2|Preamble 3|Preamble 4|SRS|DSRS

Reference Config

Specifies which component carrier’s ULDL Allocation Configuration and Dw/Up Length Configuration settings are used to adjust time slot to be measured automatically. For Modulation Analysis measurement, this control specifies which CC is used as the reference CC for time alignment results.

In LTE-A FDD Mode, this parameter only appears in the Transmit On|Off Power and Modulation Analysis measurements.

Remote Command	`[:SENSe]:RADio:RCONfig CC0 | … | CC4` `[:SENSe]:RADio:RCONfig?`
Example	`:RAD:RCON CC0`
Notes	The options CC1~CC4 can be enabled with 9080B/9082B-2FP license
Dependencies	Reference Configuration is coupled to Number of Component Carriers. For example, reference configuration list will include CC0~CC1 if the number of Component Carriers is 2
Preset	CC0
State Saved	Yes
Range	CC0|CC1|CC2|CC3|CC4

3.7.8.5 Limit

Accesses the setup menu for the measurement ramp up, ramp down time and threshold for off power.

Please note, whether the pass/fail shown in measurement bar(at upper-left corner of screen) will be pass or fail is just determined by the threshold listed in Limits menu, they are Max Ramp Up Time, Max Ramp Down Time, Downlink Off Power and Uplink Off Power. If and only if ramp up time, ramp down time and off power (downlink or uplink) measured are all less than Max Ramp Up Time, Max Ramp Down Time and Off Power (downlink or uplink) separately, the Pass/Fail flag is set to pass (green), otherwise Pass/Fail flag is set to fail(red). The limit mask shown on screen is just to indicate which part is active burst and which part is inactive burst, the mask is nothing to do with the Pass/Fail criteria.

Max Ramp Down Time

It used as threshold which can judge whether the real measured ramp down time can be passed or not. If real measured ramp down time exceeds Max Ramp Down Time, then ramp down time measurement fails, otherwise, it passes.

Remote Command	`[:SENSe]:PVTime:LIMit:RAMP:DRTime <time>` `[:SENSe]:PVTime:LIMit:RAMP:DRTime? [:SENSe]:PVTime:LIMit:RAMP:DRTime?`
Example	PVT:LIM:RAMP:DRT 17.0e-6 PVT:LIM:RAMP:DRT?
Couplings	While Downlink is selected, the default value is 17us, and while Uplink is selected, the default value is 20.0us.
Preset	17.0 us
State Saved	No
Min	1.0 us
Max	100.0 us
Resolution	0.1 us

Max Ramp Up Time

It used as threshold which can judge whether the real measured ramp up time can be passed or not. If real measured ramp up time exceeds Max Ramp Up Time, then ramp up time measurement fails, otherwise, it passes.

Remote Command	`[:SENSe]:PVTime:LIMit:RAMP:URTime <time>` `[:SENSe]:PVTime:LIMit:RAMP:URTime?`
Example	PVT:LIM:RAMP:URT 17.0e-6 PVT:LIM:RAMP:URT?
Couplings	While Downlink is selected, the default value is 17us, and while Uplink is selected, the default value is 20.0us.
Preset	17.0 us
State Saved	No
Min	1.0 us
Max	100.0 us
Resolution	0.1 us

Downlink Transient Period

The setting is used to set the threshold for downlink transient period which is calculated from expected burst boundary to the point of the specified OFF power limit. Burst (slot) boundary is determined from the external trigger and frame configuration parameters – UL/DL allocation and special sub-frame configuration.

If the measured ramp up or ramp down transient period of downlink signal exceeds the threshold, the ramp up or ramp down transient period measurements fail.

Remote Command	`[:SENSe]:PVTime:LIMit:TRANsient:DLINk <time>` `[:SENSe]:PVTime:LIMit:TRANsient:DLINk?`
Example	PVT:LIM:TRAN:DLIN 17.0e-6 PVT:LIM:TRAN:DLIN?
Dependencies	This control appears only when the Radio Direction is Downlink and is available when Auto Timing Adjust is Off.
Preset	17.0 us
State Saved	No
Min	1.0 us
Max	100.0 us
Resolution	0.1 us

Downlink Off Power

It is used as threshold in downlink which can judge whether the real measured off power can be passed or not. If real measured off power exceeds Downlink Off Power, then off power measurement fails, otherwise, it passes. Please note, the unit of this parameter is dBm/MHz.

Remote Command	`[:SENSe]:PVTime:LIMit:POFF:DLINk <real>` `[:SENSe]:PVTime:LIMit:POFF:DLINk?`
Example	PVT:LIM:POFF:DLIN -89.0 PVT:LIM:POFF:DLIN?
Notes	Update the default Off Power limit value from -85 dBm/MHz to -83 dBm/MHz, as the TS36.141 applies 2dB Test Tolerance (TT).
Dependencies	This control appears only when the Radio Direction is Downlink.
Preset	-83.00
State Saved	Yes
Min	-150.00
Max	0.00
Resolution	1.0

Uplink Off Power

It is used as threshold in uplink which can judge whether the real measured off power can be passed or not. If real measured off power exceeds Uplink Off Power, then off power measurement fails, otherwise, it passes. Please note, the unit of this parameter is dBm.

Remote Command	`[:SENSe]:PVTime:LIMit:POFF:ULINk <real>` `[:SENSe]:PVTime:LIMit:POFF:ULINk?`
Example	PVT:LIM:POFF:ULIN -50.0 PVT:LIM:POFF:ULIN?
Notes	Update the default Off Power limit value from -50 dBm to -48.50 dBm, as the TS36.521 applies 1.5dB Test Tolerance (TT). As the setting is shared by LTE and V2X, and V2X works in Band47 (5.9GHz Band), the off power limit for this band is -48dBm, so the default value of the setting is -48dBm for V2X carrier.
Preset	LTE V2X: -48 others: -48.50
State Saved	Yes
Min	-150.00 dBm
Max	0.00 dBm
Resolution	1.0 dB

Uplink On Power Reference

This is used as an Expected Transmission ON Measured power reference in uplink, which judges whether the real measured on power is passed or not when "Uplink On Power Limit Test" on page 1260 is set to on. If the real measured on power is within Uplink On Power Reference +/- Uplink On Power Tolerance, then on power measurement passes, otherwise, it fails.

Remote Command	`[:SENSe]:PVTime:LIMit:PON:ULINk:REFerence <real>` `[:SENSe]:PVTime:LIMit:PON:ULINk:REFerence?`
Example	`:PVT:LIM:PON:ULIN:REF -8.0` `:PVT:LIM:PON:ULIN:REF?`
Notes	NB-IoT and C-V2X are embedded in the LTE/LTE-Advanced FDD application, so the application can be seperately configured as LTE,NB-IoT and C-V2X formats. Then the preset value of the parameter is changed based on the configuration of the LTE/LTE-Advanced FDD application.
Dependencies	This control appears only when the Radio Direction is Uplink.
Preset	LTE: -8.6 NB-IoT: -11

	C-V2X:-2.8
State Saved	Yes
Min	-150 dBm
Max	150 dBm
Resolution	0.1 dB

Uplink On Power Tolerance

This is used as the pass/fail margin from the UL On Power Reference value for the UL On Power measurement limit test when "Uplink On Power Limit Test" on page 1260 is set to on.

Remote Command	`[:SENSe]:PVTime:LIMit:PON:ULINk:TOLerance <real>` `[:SENSe]:PVTime:LIMit:PON:ULINk:TOLerance?`
Example	`:PVT:LIM:PON:ULIN:TOL 10.7` `:PVT:LIM:PON:ULIN:TOL?`
Notes	NB-IoT and C-V2X are embedded in the LTE/LTE-Advanced FDD application, so the application can be seperately configured as LTE,NB-IoT and C-V2X formats. Then the preset value of the parameter is changed based on the configuration of LTE/LTE-Advanced FDD application.
Dependencies	This control appears only when the Radio Direction is Uplink.
Preset	LTE: +/- 7.5 dB NB-IoT: +/-7.5dB C-V2X: +/-8.0dB
State Saved	Yes
Min	0 dB
Max	100 dB
Resolution	0.1 dB

Uplink On Power Limit Test

When this is set to on, the measurement judges whether the real measured on power is passed or not. If the real measured on power is within Uplink On Power Reference +/- Uplink On Power Tolerance, the on power measurement passes, otherwise, it fails.

Remote Command	`[:SENSe]:PVTime:LIMit:PON:ULINk:STATe OFF | ON | 0 | 1` `[:SENSe]:PVTime:LIMit:PON:ULINk:STATe?`
Example	`:PVT:LIM:PON:ULIN:STAT 1` `:PVT:LIM:PON:ULIN:STAT?`

Dependencies	This control appears only when the Radio Direction is Uplink.
Preset	OFF
State Saved	Yes

3.7.8.6 Threshold

Accesses the setup menu to set the thresholds used to find ramp up and ramp down part in burst signal.

Ramp Up Start Level

It specifies the relative power level to active slots average power level at which the ramp-up starts.

Remote Command	`[:SENSe]:PVTime:THReshold:UP:STARt <rel_ampl>` `[:SENSe]:PVTime:THReshold:UP:STARt?`
Example	PVT:THR:UP:STAR -50.0 PVT:THR:UP:STAR?
Preset	-20.000 dB
State Saved	Yes
Min	-120.000 dB
Max	0.000 dB
Resolution	1.0 dB

Ramp Up End Level

It specifies the relative power level to active slots average power level at which the ramp-up ends.

Remote Command	`[:SENSe]:PVTime:THReshold:UP:END <rel_ampl>` `[:SENSe]:PVTime:THReshold:UP:END?`
Example	PVT:THR:UP:END -50.0 PVT:THR:UP:END?
Preset	-0.915 dB
State Saved	Yes
Min	-120.000 dB
Max	0.000 dB
Resolution	1.0 dB

Ramp Down Start Level

It specifies the relative power level to active slots average power level at which the ramp-down starts.

Remote Command	`[:SENSe]:PVTime:THReshold:DOWN:STARt <rel_ampl>` `[:SENSe]:PVTime:THReshold:DOWN:STARt?`
Example	PVT:THR:DOWN:STAR -50.0 PVT:THR:DOWN:STAR?
Preset	-0.915 dB
State Saved	Yes
Min	-120.000 dB
Max	0.000 dB
Resolution	1.0 dB

Ramp Down End Level

It specifies the relative power level to active slots average power level at which the ramp-down ends.

Remote Command	`[:SENSe]:PVTime:THReshold:DOWN:END <rel_ampl>` `[:SENSe]:PVTime:THReshold:DOWN:END?`
Example	PVT:THR:DOWN:END -50.0 PVT:THR:DOWN:END?
Preset	-20.000 dB
State Saved	Yes
Min	-120.000 dB
Max	0.000 dB
Resolution	1.0 dB

3.7.8.7 Advanced

The Advanced tab contains controls for setting advanced functions of the analyzer.

Dependencies	This tab does not appear in EXM or VXT.

Noise Floor Extention

Turns on the **Noise Floor Extension** function. When this function is On, the expected noise power of the analyzer (derived from a factory calibration) is subtracted from the trace data. This will usually reduce the apparent noise level by about 10 dB in low band, and 8 dB in high band (>~3.6 GHz).

When Noise Floor Extention is on, the Off power results (signal plus analyzer noise)will be is compensated by subtracting the estimated noise power, leaving just the signal power. For downlink, the 70us RMS Off power trace will be compensated , and for uplink, both Off Power Before and Off Power After results will be compensated.

Remote Command	`[:SENSe]:CORRection:NOISe:FLOor ON | OFF | 1 | 0` `[:SENSe]:CORRection:NOISe:FLOor?`
Example	CORR:NOIS:FLO ON
Dependencies	This control only appears in instruments with the NFE or NF2 license installed. In all others, the control does not appear, however the SCPI command will be accepted without error (but will have no effect).
Couplings	When NFE is enabled in any mode manually, a prompt will be displayed reminding you to perform the Characterize Noise Floor operation if it is needed. If NFE is enabled through SCPI and a Characterize Noise Floor operation is needed, an error will be entered in the system error queue.
Preset	Unaffected by Mode Preset. Turned off by Restore Mode Defaults.
State Saved	No

Noise Correction

Sets the noise floor correction function to On or Off. On enables measurement noise correction when the measured power in the reference channel or any offset is close to the noise floor of the analyzer. Off turns these corrections off.

Remote Command	`[:SENSe]:PVTime:CORRection:NOISe[:AUTO] OFF | ON | 0 | 1` `[:SENSe]:PVTime:CORRection:NOISe[:AUTO]?`
Example	PVT:CORR:NOIS OFF PVT:CORR:NOIS?
Couplings	None
Preset	0
State Saved	Yes
Range	On|Off

Ramp Time Length

This parameter indicates the searching window length in which the start of ramp up or the end of ramp down is searched. If it is set shorter than actual ramp time, the ramp may be lost. The start of the searching window is derived from the external trigger when auto timing adjust is off, and is at the actual burst boundary when auto timing adjust is on.

Remote Command	`[:SENSe]:PVTime:RAMP:SEARch:LENGth <time>` `[:SENSe]:PVTime:RAMP:SEARch:LENGth?`
Example	PVT:RAMP:SEAR:LENG 1.0 PVT:RAMP:SEAR:LENG?
Preset	17.0 us
State Saved	Yes
Min	1.0 us
Max	100.0 us
Resolution	100 ns

Off Power Meas Rules

The parameter is to indicate which way to calculate 70us RMS Off Power over the entire OFF period. When it is “Speed”, 70 us averaged power is calculated in 35us granularity during OFF period; when it is “Accuracy”, the 70us RMS Off Power is calculated for each sample points during OFF period

Remote Command	`[:SENSe]:PVTime:POFF:MEAS:RULes SPEed | ACCuracy` `[:SENSe]:PVTime:POFF:MEAS:RULes?`
Example	PVT:POFF:MEAS:RUL SPE PVT:POFF:MEAS:RUL?
Couplings	When the direction is uplink, the control is always greyed out. There is no 70us RMS off power for uplink signal.
Preset	Speed
State Saved	Saved in instrument state
Range	SPEed|ACCuracy

IF Gain

Accesses the menu that sets ranging in the digital IF when acquiring an I/Q time record.

See "More Information about IF Gain" on page 1265.

This function is not affected by RF Input Range attenuation.

More Information about IF Gain

To take full advantage of the RF dynamic range of the analyzer, you can manually turn on or turn off a switched digital IF amplifier. When it is turned on, the signal will get approximately 10 dB of gain.

- Setting IF Gain to Man and selecting High Gain will turn on the digital IF amplifier and get an extra 10 dB gain.
- Setting IF Gain to Auto will activate the Auto rules for IF Gain.

These settings affect sensitivity and IF overloads.

IF Gain Auto

Activates the Auto Rules for IF Gain. When Auto is active, the IF Gain is set to High Gain under any of the following conditions:

- the input attenuator is set to 0 dB
- the preamp is turned On
- the Max Mixer Level is –20 dBm or lower

For other settings, Auto sets IF Gain to Off.

Remote Command	`[:SENSe]:PVTime:IF:GAIN:AUTO[:STATe] ON | OFF | 1 | 0` `[:SENSe]:PVTime:IF:GAIN:AUTO[:STATe]?`
Example	PVT:IF:GAIN:AUTO ON PVT:IF:GAIN:AUTO?
Dependencies	This control does not appear in EXM, VXT, or UXM
Couplings	When either the auto attenuation is active (for example, with an electrical attenuator), or the optimize mechanical attenuator range is requested, the IF Gain setting is changed using the following rule The Auto selection sets IF Gain On under any of the following conditions: – the input attenuator is set to 0 dB – the preamp is turned on – the Max Mixer Level is –20 dBm or lower For other settings, Auto sets IF Gain to Off
Preset	OFF

State Saved	Yes
Range	Auto|Man

IF Gain State

Selects the range of IF gain.

- On sets the high gain option, which allows for better noise level measurements
- Off sets low gain when measuring large signals

When this parameter is changed manually from front panel, IF Gain Auto will become Man.

Remote Command	`[:SENSe]:PVTime:IF:GAIN[:STATe] ON | OFF | 1 | 0` `[:SENSe]:PVTime:IF:GAIN[:STATe]?`
Example	PVT:IF:GAIN ON PVT:IF:GAIN?
Notes	where ON = high gain OFF = low gain
Dependencies	This control does not appear in EXM, VXT, or UXM
Preset	OFF
State Saved	Yes
Range	Low Gain (Best for Large Signals)|High Gain (Best Noise Level)

3.7.8.8 Global

The controls in this menu apply to all Modes in the instrument.

Some controls (for example, "Global Center Freq" on page 2276) allow you to switch certain Meas Global parameters to a Mode Global state. These switches apply to all Modes that support global settings. For example, no matter what Mode you are in when you set **Global Center Freq** to `ON`, it applies to all Modes that support Global settings.

Other controls (for example, **Extend Low Band**) are actually set in this menu, but apply to all Modes.

Global Center Freq

The software maintains a Mode Global value called **Global Center Freq**.

When **Global Center Freq** is switched `ON`, the current Mode's center frequency is copied into the **Global Center Frequency**, and from then on all Modes that support global settings use the **Global Center Frequency**, so you can switch between any of these Modes and the **Center Frequency** remains unchanged.

Adjusting the **Center Frequency** of any Mode that supports Global Settings, while **Global Center Freq** is `ON`, modifies the **Global Center Freq**.

When **Global Center Freq** is switched `OFF`, the **Center Frequency** of the current Mode is unchanged, but now the **Center Frequency** of each Mode is once again independent.

When **Mode Preset** is pressed while **Global Center Freq** is `ON`, the **Global Center Freq** is preset to the preset **Center Frequency** of the current Mode.

This function resets to `OFF` when "Restore Defaults" on page 2278 is pressed, or when **System**, **Restore Defaults**, **All Modes** is pressed.

Remote Command	`:INSTrument:COUPle:FREQuency:CENTer ALL | NONE` `:INSTrument:COUPle:FREQuency:CENTer?`
Example	`:INST:COUP:FREQ:CENT ALL` `:INST:COUP:FREQ:CENT?`
Preset	Set to `OFF` on **Global** Settings, **Restore Defaults** and **System, Restore Defaults, All Modes**
Range	`ALL|NONE`

Preset	`OFF`
Backwards Compatibility SCPI	`:GLOBal:FREQuency:CENTer[:STATe] 1 | 0 | ON | OFF` `:GLOBal:FREQuency:CENTer[:STATe]?`

Global EMC Std

When this control is switched `ON`, the current Mode's EMC Std is copied into the **Global EMC Std**, and from then on all Modes that support global settings use the **Global EMC Std**, so you can switch between any of these Modes and the EMC Std remains unchanged.

Adjusting the EMC Std of any Mode that supports Global settings, while **Global EMC Std** is `ON` modifies the **Global EMC Std**.

When **Global EMC Std** is switched `OFF`, the EMC Std of the current Mode remains unchanged, but now the EMC Std of each Mode is once again independent. When **Mode Preset** is pressed while **Global EMC Std** is `ON`, **Global EMC Std** is preset to the preset EMC Std of the current Mode.

This function resets to `OFF` when "Restore Defaults" on page 2278 is pressed, or when **System, Restore Defaults, All Modes** is pressed.

Remote Command	`:INSTrument:COUPle:EMC:STANdard ALL | NONE` `:INSTrument:COUPle:EMC:STANdard?`
Example	`:INST:COUP:EMC:STAN ALL` `:INST:COUP:EMC:STAN?`
Dependencies	Only available if Option EMC is installed
Preset	Set to `OFF` on **Global** Settings, **Restore Defaults** and **System, Restore Defaults, All Modes**
Range	`ALL | NONE`

Extend Low Band

The software maintains a Mode Global value called **Extend Low Band**.

Under the current sweep configuration crossing over two bands, when **Extend Low Band** is turned `ON`, the instrument checks whether one band can cover the whole sweep frequency range or not. If it can, then the instrument locks the band; otherwise, it does nothing (the band crossover occurs).

This function does *not* work when **Band Lock** under **System** > **Service** > **Lock Functions** is not -1 (no Band Lock). In that case, **Band Lock** takes priority over **Extend Low Band**.

This function resets to `OFF` when "Restore Defaults" on page 2278 is pressed, or when **System**, **Restore Defaults**, **All Modes** is pressed.

Remote Command	`:INSTrument:COUPle:FREQuency:BAND:EXTend 0 | 1 | ON | OFF` `:INSTrument:COUPle:FREQuency:BAND:EXTend?`
Example	`:INST:COUP:FREQ:BAND:EXT 1` `:INST:COUP:FREQ:BAND:EXT?`
Preset	Set to `OFF` by **Global** Settings > **Restore Defaults** and **System** > **Restore Defaults** > **All Modes**
Range	`ON|OFF`

Restore Defaults

Resets all functions in the **Global** settings menu to `OFF`. Pressing **System**, **Restore Defaults**, **All Modes** has the same effect.

Remote Command	`:INSTrument:COUPle:DEFault`
Example	`:INST:COUP:DEF`
Backwards Compatibility SCPI	`:GLOBal:DEFault`

3.7.9 Sweep

The Sweep key contains controls which allow you to control the sweep and measurement functions of the analyzer, such as the sweep or measurement time and whether in Single sweep/measure or Continuous sweep/measure mode.

The Sweep key accesses controls that enable you configure and control the acquisition of data and the X-axis parameters of the instrument. These controls might include Sweep Time, Continuous/Single, Pause/Resume, X Scale and number of Points.

3.7.9.1 Sweep/Control

This tab accesses controls that enable you to operate the Sweep and Control functions of the analyzer.

Sweep/Measure

Allows you to toggle between Continuous and Single sweep or measurement operation. The single/continuous state is Meas Global so the setting will affect all measurements.

The front-panel key **Single/Cont** performs this exact same function

See "More Information" on page 1270

Remote Command	`:INITiate:CONTinuous OFF | ON | 0 | 1` `:INITiate:CONTinuous?`
Example	INIT:CONT 0 !puts analyzer in Single measurement operation. INIT:CONT OFF !puts analyzer in Single measurement operation. INIT:CONT 1 !puts analyzer in Continuous measurement operation. INIT:CONT ON !puts analyzer in Continuous measurement operation
Preset	ON (Note that SYST:PRESet sets INIT:CONT to ON but *RST sets INIT:CONT to OFF)
State Saved	Saved in instrument state
Annunciation	The Single/Continuous icon in the Meas Bar changes depending on the setting. A line with an arrow is single, a loop with an arrow is Continuous.
Status Bits/OPC dependencies	n/a
Backwards Compatibility Notes	See the description of this control in the Swept SA measurement

More Information

With **Avg/Hold Num** (in the **Meas Setup** menu) set to **Off** or set to **On** with a value of 1, a sweep is taken after the trigger condition is met; and the analyzer continues to take new sweeps after the current sweep has completed and the trigger condition is again met. However, with **Avg/Hold Num** set to On with a value >1, multiple sweeps (data acquisitions) are taken for the measurement. The trigger condition must be met prior to each sweep. The sweep is not stopped when the average count k equals the number N set for Avg/Hold Num is reached, but the number k stops incrementing. A measurement average usually applies to all traces, marker results, and numeric results. But sometimes it only applies to the numeric results.

If the analyzer is in Single measurement, pressing the **Cont/Single** toggle control does not change k and does not cause the sweep to be reset; the only action is to put the analyzer into Continuous measurement operation.

If it is already in continuous sweep:

- the INIT:CONT 1 command has no effect
- the INIT:CONT 0 command will place the analyzer in Single Sweep but will have no effect on the current sequence until k = N, at which point the current sequence will stop and the instrument will go to the idle state.

See "Restart " on page 1270 control description for details on the INIT:IMMediate (Restart) function.

If you are already in single sweep, the `INIT:CONT OFF` command has no effect.

If you are already in Single Sweep, then pressing the **Cont/Single** toggle control in the middle of a sweep does not restart the sweep or sequence. Similarly, pressing the **Cont/Single** toggle control does not restart the sweep or sequence if the sweep is not in the idle state (for example, if you are taking a very slow sweep, or the analyzer is waiting for a trigger). Even though pressing the **Cont/Single** toggle control in the middle of a sweep does not restart the sweep, sending INIT:IMMediate does reset it.

Restart

The Restart function restarts the current sweep, or measurement, or set of averaged/held sweeps or measurements. If you are Paused, pressing Restart does a Resume.

The front-panel key **Restart** performs this exact same function

The Restart function is accessed in several ways:

- Pressing the Restart key
- Sending the remote command INIT:IMMediate
- Sending the remote command INIT:RESTart

See "More Information" on page 1271

Remote Command	`:INITiate[:IMMediate]` `:INITiate:RESTart`
Example	INIT:IMM INIT:REST
Notes	:INITiate:RESTart and :INITiate:IMMediate perform exactly the same function.
Couplings	Resets average/hold count k. For the first sweep overwrites all active (update=on) traces with new current data. For application modes, it resets other parameters as required by the measurement.
Status Bits/OPC dependencies	This is an Overlapped command. The STATus:OPERation register bits 0 through 8 are cleared. The STATus:QUEStionable register bit 9 (INTegrity sum) is cleared. The SWEEPING bit is set. The MEASURING bit is set.
Backwards Compatibility Notes	For Spectrum Analysis mode in ESA and PSA, the **Restart** hardkey and the INITiate:RESTart command restart trace averages (displayed average count reset to 1) for a trace in **Clear Write**, but did not restart **Max Hold** and **Min Hold**. In the X-Series, the **Restart** hardkey and the INITiate:RESTart command restart not only **Trace Average**, but **MaxHold** and **MinHold** traces as well. For wireless comms modes in ESA and PSA, the **Restart** hardkey and the INITiate:RESTart command restart every measurement, which includes all traces and numeric results. There is no change to this operation.

More Information

The **Restart** function first aborts the current sweep or measurement as quickly as possible. It then resets the sweep and trigger systems, sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the analyzer is in the process of aligning when a Restart is executed, the alignment finishes before the restart function is performed.

Even when set for Single operation, multiple sweeps may be taken when Restart is pressed (for example, when averaging/holding is on). Thus when we say that Restart "restarts a measurement," we may mean:

- It restarts the current sweep
- It restarts the current measurement
- It restarts the current set of sweeps if any trace is in Trace Average, Max Hold or Min Hold
- It restarts the current set of measurements if Averaging, or Max Hold, or Min Hold is on for the measurement
- depending on the current settings.

With Average/Hold Number (in Meas Setup menu) set to 1, or Averaging off, or no trace in Trace Average or Hold, a single sweep is equivalent to a single measurement. A single sweep is taken after the trigger condition is met; and the analyzer stops sweeping once that sweep has completed. However, with Average/Hold Number >1 and at least one trace set to Trace Average, Max Hold, or Min Hold (SA Measurement) or Averaging on (most other measurements), multiple sweeps/data acquisitions are taken for a single measurement. The trigger condition must be met prior to each sweep. The sweep is stopped when the average count k equals the number N set for Average/Hold Number. A measurement average usually applies to all traces, marker results, and numeric results; but sometimes it only applies to the numeric results.

Once the full set of sweeps has been taken, the analyzer will go to the idle state. To take one more sweep without resetting the average count, increment the average count by 1, by pressing the step up key while Average/Hold Number is the active function, or sending the remote command CALC:AVER:TCON UP.

Pause/Resume

Pauses a measurement after the current data acquisition is complete.

When Paused, the label on the control changes to Resume. Pressing Resume un-pauses the measurement. When you are Paused, pressing **Restart** does a Resume.

Remote Command	`:INITiate:PAUSe`
Example	`INIT:PAUS`
Dependencies	Not displayed in Modes that do not support Pausing.
Annotation	Only on control

Remote Command	`:INITiate:RESume`
Example	`INIT:RES`
Dependencies	Not displayed in Modes that do not support Pausing.
Annotation	Only on control

Abort (Remote Command Only)

This command is used to stop the current measurement. It aborts the current measurement as quickly as possible, resets the sweep and trigger systems, and puts the measurement into an "idle" state. If the analyzer is in the process of aligning when ABORt is sent, the alignment finishes before the abort function is performed. So ABORt does not abort an alignment.

If the analyzer is set for Continuous measurement, it sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the analyzer is set for Single measurement, it remains in the "idle" state until an :INIT:IMM command is received.

Remote Command	`:ABORt`
Example	ABOR
Notes	If :INITiate:CONTinuous is ON, then a new continuous measurement will start immediately, with sweep (data acquisition) occurring once the trigger condition has been met. If :INITiate:CONTinuous is OFF, then :INITiate:IMMediate is used to start a single measurement, with sweep (data acquisition) occurring once the trigger condition has been met.
Dependencies	For continuous measurement, ABORt is equivalent to the Restart key. Not all measurements support the abort command.
Status Bits/OPC dependencies	The STATus:OPERation register bits 0 through 8 are cleared. The STATus:QUEStionable register bit 9 (INTegrity sum) is cleared. Since all the bits that feed into OPC are cleared by the ABORt, the ABORt will cause the *OPC query to return true.

3.7.9.2 X Scale

This tab accesses controls that enable you to set the horizontal scale parameters.

Ref Value

Enables you to set the display X reference value.

Remote Command	`:DISPlay:PVTime:WINDow[1]|2|3:TRACe:X[:SCALe]:RLEVel <time>`
	`:DISPlay:PVTime:WINDow[1]|2|3:TRACe:X[:SCALe]:RLEVel?`
	Window numbers are as follows:
	Burst: 1
	Rise: 2
	Fall: 3

Example	`:DISP:PVT:WIND:TRACE:X:RLEV 1s ! 1-Burst for Transmit On/Off Power`
	`:DISP:PVT:WIND:TRACE:X:RLEV? ! 1-Burst for Transmit On/Off Power`
	`:DISP:PVT:WIND2:TRAC:X:RLEV 1s ! 2-Rise for Transmit On/Off Power`
	`:DISP:PVT:WIND3:TRAC:X:RLEV 1s ! 3-Fall for Transmit On/Off Power`

Couplings	If X Auto Scaling is On, this value is automatically determined by the measurement result. When you set a value manually, X Auto Scaling automatically changes to Off.
Preset	-100us
State Saved	Saved in instrument state.
Min	-10.0 s
Max	10.0 s
Resolution	10.0 ns
Annotation	<value> s bottom left of graph

Backwards Compatibility SCPI

Window Numbers used to be a combination of View and Window, now the VIEW parameter is not used and defaults to 1. All Windows are referenced through VIEW1. For backwards compatibility the old View and Window numbers are honored as below:

Window	Old SCPI Command	New SCPI Command
PVT - Burst	:DISP:PVT:VIEW[1]:WIND:TRAC:X:RLEV 1s	DISP:PVT:WIND[1]:TRAC:X:RLEV 1s
PVT – Rise	:DISP:PVT:VIEW2:WIND:TRAC:X:RLEV 1s	DISP:PVT:WIND2:TRAC:X:RLEV 1s
PVT – Fall	:DISP:PVT:VIEW2:WIND2:TRAC:X:RLEV 1s	DISP:PVT:WIND3:TRAC:X:RLEV 1s

Scale/Div

Enables you to set the display X scale/division value.

Remote Command	`:DISPlay:PVTime:WINDow[1]|2|3:TRACe:X[:SCALe]:PDIVision <time>`
	`:DISPlay:PVTime:WINDow[1]|2|3:TRACe:X[:SCALe]:PDIVision?`
	Window numbers are as follows:
	Burst: 1
	Rise: 2
	Fall: 3

Example	`:DISP:PVT:WIND:TRACE:X:PDIV 1ms! 1-Burst for Transmit On/Off Power`
	`:DISP:PVT:WIND:TRACE:X:PDIV?! 1-Burst for Transmit On/Off Power`
	`:DISP:PVT:WIND2:TRAC:X:PDIV 1ms ! 2-Rise for Transmit On/Off Power`

	`:DISP:PVT:WIND3:TRAC:X:PDIV 1ms ! 3-Fall for Transmit On/Off Power`
Couplings	If X Auto Scaling is On, this value is automatically determined by the measurement result. When you set a value manually, X Auto Scaling automatically changes to Off.
Preset	4 ms
State Saved	Saved in instrument state.
Min	1.00 ns
Max	1.0 s
Resolution	ns

Backwards Compatibility SCPI

Window Numbers used to be a combination of View and Window, now the VIEW parameter is not used and defaults to 1. All Windows are referenced through VIEW1. For backwards compatibility the old View and Window numbers are honored as below:

Window	Old SCPI Command	New SCPI Command
PVT - Burst	:DISP:PVT:VIEW[1]:WIND:TRAC:X:PDIV 1ms	:DISP:PVT:WIND[1]:TRAC:X:PDIV 1ms
PVT – Rise	:DISP:PVT:VIEW2:WIND:TRAC:X:PDIV 1ms	:DISP:PVT:WIND2:TRAC:X:PDIV 1ms
PVT – Fall	:DISP:PVT:VIEW2:WIND2:TRAC:X:PDIV 1ms	:DISP:PVT:WIND3:TRAC:X:PDIV 1ms

Ref Position

Sets the reference position for the X axis to Left, Center or Right.

Remote Command	`:DISPlay:PVTime:WINDow[1]|2|3:TRACe:X[:SCALe]:RPOSition LEFT | CENTer | RIGHt`
	`:DISPlay:PVTime:WINDow[1]|2|3:TRACe:X[:SCALe]:RPOSition?`
	Window numbers are as follows:
	Burst: 1
	Rise: 2
	Fall: 3

Example	`:DISP:PVT:WIND:TRACE:X:RPOS LEFT ! 1-Burst for Transmit On/Off Power`
	`:DISP:PVT:WIND:TRACE:X:RPOS? ! 1-Burst for Transmit On/Off Power`
	`:DISP:PVT:WIND2:TRAC:X:RPOS LEFT ! 2-Rise for Transmit On/Off Power`
	`:DISP:PVT:WIND3:TRAC:X:RPOS RIGHt ! 3-Fall for Transmit On/Off Power`

Preset	CENTer
State Saved	Yes Saved in instrument state.
Range	Left|Ctr|Right

Backwards Compatibility SCPI

Window Numbers used to be a combination of View and Window, now the VIEW parameter is not used and defaults to 1. All Windows are referenced through VIEW1. For backwards compatibility the old View and Window numbers are honored as below:

Window	Old SCPI Command	New SCPI Command
PVT - Burst	:DISP:PVT:VIEW[1]:WIND:TRAC:X:RPOS LEFT	:DISP:PVT:WIND[1]:TRAC:X:RPOS LEFT
PVT – Rise	:DISP:PVT:VIEW2:WIND:TRAC:X:RPOS LEFT	DISP:PVT:WIND2:TRAC:X:RPOS LEFT
PVT – Fall	:DISP:PVT:VIEW2:WIND2:TRAC:X:RPOS LEFT	DISP:PVT:WIND3:TRAC:X:RPOS LEFT

Auto Scaling

Toggles the scale coupling function between On and Off.

Remote Command	`:DISPlay:PVTime:WINDow[1]|2|3:TRACe:X[:SCALe]:COUPle 0 | 1 | OFF | ON`
	`:DISPlay:PVTime:WINDow[1]|2|3:TRACe:X[:SCALe]:COUPle?`
	Window numbers are as follows:
	Burst: 1
	Rise: 2
	Fall: 3

Example	`:DISP:PVT:WIND:TRAC:X:COUP OFF ! 1-Burst for Transmit On/Off Power`
	`:DISP:PVT:WIND:TRAC:X:COUP? ! 1-Burst for Transmit On/Off Power`
	`:DISP:PVT:WIND2:TRAC:X:COUP OFF ! 2-Rise for Transmit On/Off Power`
	`:DISP:PVT:WIND3:TRAC:X:COUP ON ! 3-Fall for Transmit On/Off Power`

Couplings	When Auto Scaling is On and the Restart front-panel key is pressed, this function automatically determines the scale per division and reference values based on the measurement results. When you set a value to either Scale/Div or Ref Value manually, Auto Scaling automatically changes to Off.
Preset	ON
State Saved	Saved in instrument state.

Backwards Compatibility SCPI

Window Numbers used to be a combination of View and Window, now the VIEW parameter is not used and defaults to 1. All Windows are referenced through

VIEW1. For backwards compatibility the old View and Window numbers are honored as below:

Window	Old SCPI Command	New SCPI Command
PVT - Burst	:DISP:PVT:VIEW[1]:WIND:TRAC:X:COUP OFF	:DISP:PVT:WIND[1]:TRAC:X:COUP ON
PVT – Rise	:DISP:PVT:VIEW2:WIND:TRAC:X:COUP OFF	:DISP:PVT:WIND2:TRAC:X:COUP ON
PVT – Fall	:DISP:PVT:VIEW2:WIND2:TRAC:X:COUP OFF	:DISP:PVT:WIND3:TRAC:X:COUP ON

3.7.10 Trace

The **Trace** menu lets you control the acquisition, display, storage, detection and manipulation of trace data for the available traces.

3.7.10.1 Trace Control

Allows you to control the available traces.

Max Hold Trace

This control allows you to make the Max Hold Trace visible or invisible in the display..

Remote Command	`:DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:MAXHold[:STATe] ON | OFF | 1 | 0` `:DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:MAXHold[:STATe]?`
Example	`:DISP:PVT:VIEW:WIND:TRAC:MAXH ON` `:DISP:PVT:VIEW:WIND:TRAC:MAXH?`
Notes	None
Couplings	While Rise & Fall view is selected, this control will be grayed out. Rise & Fall view will not support trace max/min hold.
Preset	OFF
State Saved	Yes
Range	On|Off

Min Hold Trace

This control allows you to make the Min Hold Trace visible or invisible in the display.

Remote Command	`:DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:MINHold[:STATe] ON | OFF | 1 | 0` `:DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:MINHold[:STATe]?`

Example	`:DISP:PVT:VIEW:WIND:TRAC:MINH ON` `:DISP:PVT:VIEW:WIND:TRAC:MINH?`
Notes	None
Couplings	While Rise & Fall view is selected, this control will be grayed out. Rise & Fall view will not support trace max/min hold.
Preset	OFF
State Saved	Yes
Range	On|Off

70us RMS Off Power Trace State

This control is used to control the display of 70us averaged off power (dBm/MHz) trace over the entire OFFperiod when the direction is downlink. The parameter also controls to display the off power limit line. The OFF power period is from burst down edge boundary plus max transient period to burst up edge boundary minus max transient period.

Remote Command	`:DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:POFF[:STATe] ON | OFF | 1 | 0` `:DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:POFF[:STATe]?`
Example	`:DISP:PVT:VIEW:WIND:TRAC:POFF ON` `:DISP:PVT:VIEW:WIND:TRAC:POFF?`
Notes	Except for 70us RMS off power trace on the trace window, the off power limit line (dBm/MHz) is also shown up when the state is on.
Couplings	While Rise & Fall view is selected, this control will be grayed out. Rise & Fall view will not support 70us RMS off power trace. When the direction is uplink, the control is always greyed out. There is no 70us RMS off power trace for uplink signal.
Preset	OFF
State Saved	Yes
Range	On|Off

Burst Trace State

This control is used to control the display of the burst signal waveform (RF Envelop) trace in the Burst View.

Remote Command	`:DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:BURSt[:STATe] ON | OFF | 1 | 0` `:DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:BURSt[:STATe]?`
Example	`:DISP:PVT:VIEW:WIND:TRAC:BURS ON` `:DISP:PVT:VIEW:WIND:TRAC:BURS?`

Notes	In order to view 70us OFF Power RMS trace alone, the toggle of burst signal waveform trace is supported.
Couplings	While Rise & Fall view is selected, this control will be grayed out. Rise & Fall view will not support signal waveform trace.
Preset	ON
State Saved	Yes
Range	On|Off

3.8 Modulation Analysis Measurement

The Modulation Analysis measurement provides modulation analysis capabilities for LTE & LTE-Advanced FDD/TDD signals, eMTC (enhanced Machine-Type Communications defined in 3GPP Rel. 13, also known as Cat-M1) signals, NB-IoT (Narrowband Internet of Things) signals and Sidelink V2X signals (also known as LTE V2X in this document).

The Modulation Analysis measurement is used to test the Transmitted signal quality for both Base station and User equipment for E-UTRA (Evolved Universal Terrestrial Radio Access) according to 3GPP specifications.

The UE (User Equipment), BS (Base Station) radio transmission, reception definitions and their conformance testing requirements are listed in the specifications of the following tables.

3GPP standards	Version	Date
TS 36.101 (UE Radio Tx/Rx)	14.7.0	04/2018
TS 36.104 (BS Radio Tx/Rx)	13.7.0	03/2017
TS 36.141 (BS Conformance)	13.7.0	03/2017
TS 36.521-1 (UE Conformance)	14.6.0	04/2018

The Modulation Analysis measurement refers to the standards as below to support the demodulation of the signals.

3GPP standards	Version	Date
TS 36.201 (Phy General Description)	13.3.0	03/2017
TS 36.211 (Phy Channels and Modulation)	14.6.0	04/2018
TS 36.212 (Multiplexing and Channel Coding)	14.5.1	01/2018
TS 36.213 (Phy Layer Procedures)	14.6.0	04/2018
TS 36.214 (Phy Measurements)	13.4.0	01/2017

3.8.1 Modulation Analysis Measurement Results for LTE-A FDD/TDD

The following table denotes the LTE-Advanced Modulation Analysis specific results returned from the (FETCh|MEASure|READ):EVM commands, indexed by subopcode. MEASure:EVM<n> performs the equivalent of CONF:EVM;INIT:IMM;FETCh:EVM<n>. This gets you the default measurement, which is a 5 MHz downlink with auto detection of allocations.

For queries listed in section, the results returned depend on the value of n, as follows.

n	Results Returned
Not specified or n=1	Returns measurement results for Component Carrier 0 when it is active All the return values are floating points **LTE-Advanced Downlink Results for each Component Carrier** The result contents are customizable If no result is available, NaN (9.91E+37) is returned 1. EVM (%) 2. EVM Symbol Time Adjust 1 Window Start 2 Window End 3 Center 4 Custom 3. EVM Pk (%) 4. EVM Pk Index 5. EVM Peak Sub Car Index 6. <table>
<tr><th>n</th><th>Results Returned</th></tr>
<tr><td></td><td>25. In-band Emissions Result<table><tr><td>0</td><td>PASS</td></tr><tr><td>1</td><td>FAIL</td></tr></table>26. In-band Emissions worst Margin (dB)
27. In-band Emissions worst Slot
28. In-band Emissions worst RB
29. Spectral Flatness Result<table><tr><td>0</td><td>PASS</td></tr><tr><td>1</td><td>FAIL</td></tr></table>30. Spectral Flatness worst Margin (dB)
31. Spectral Flatness worst Slot
32. Spectral Flatness worst Subcarrier
33. 3GPP-defined 256QAM EVM (%)</td></tr>
<tr><td>2</td><td>Returns the results of the Frame Summary table of CC0 in numeric format, with NaN instead of string results. Since this table changes depending on the Channel Profile Setup, the data names and units must be determined at run time by using CALC:EVM:DATA<k>:TABL queries.</td></tr>
<tr><td>3</td><td>**Error Information of each Component Carrier**
Returns total error information of each **Component Carrier**. The values are bitwise OR operated on the Error Information as follows:<table><tr><td>Error Information</td><td>Decimal</td><td>Binary</td></tr><tr><td>No Error</td><td>0</td><td>0x00000000</td></tr><tr><td>Parameter Setting Conflict</td><td>1</td><td>0x00000001</td></tr><tr><td>ADC OverRange</td><td>2</td><td>0x00000010</td></tr><tr><td>Sync Error</td><td>4</td><td>0x00000100</td></tr><tr><td>Demod Error</td><td>8</td><td>0x00001000</td></tr><tr><td>Burst Not Found</td><td>16</td><td>0x00010000</td></tr></table>For example, if ADC Over Range and Sync Error occurred, the value is 6.
The total result length is variable. The returned contents vary depending on the total number of Component Carriers, which is specified by Number of Component Carriers.
Returns the following scalar results:
1. Total Error Information of CC0
2. Total Error Information of CC1</td></tr>
</table>

n	Results Returned
	3. ... **nCarr. Total Error Information of the last carrier.** Where, nCarr is the number of carriers to be measured.
5	Returns three results (I offset, Q offset and IQ offset) for each active Component Carrier. For example, if CC0 and CC4 are active, six values are returned, the initial three values are for CC0 and the following three values are for CC4. 1. I Offset (Average) in Volts 2. Q Offset(Average) in Volts 3. IQ Offset(Average) in dB
6-9	Reserved
10	Returns measurement results for **Component Carrier 1** when it is active. All the return values are floating points. The result fields and detailed description see the first row (n=1) of this table.
11	Returns measurement results for **Component Carrier 2** when it is active. All the return values are floating points. The result fields and detailed description see the first row (n=1) of this table.
12	Returns measurement results for **Component Carrier** 3 when it is active. All the return values are floating points. The result fields and detailed description see the first row (n=1) of this table.
13	Returns measurement results for **Component Carrier** 4 when it is active. All the return values are floating points. The result fields and detailed description see the first row (n=1) of this table.

Because the results for MEASure, READ, or FETCh queries are statically defined, use the following query:

CALCulate:EVM:DATA<n>:TABLe:STRing?

as this provides both string and numeric results (numeric formatted as ASCII), and the queries.

CALCulate:EVM:DATA<n>:TABLe:NAMes?

CALCulate:EVM:DATA<n>:TABLe:UNIT?

to obtain lists of descriptive data names and associated units. For table results that can change dynamically, such as the Frame Summary, these provide the only possible way to interpret remote table data, since static tabulations such as those above are not sufficient.

As an example for the previous commands, if you have performed CONF:EVM;INIT:IMM;FORM ASCII, the following commands return results similar to those shown in the columns below. The FORM ASCII command dictates that the FETC results are returned as ASCII in a comma-separated list. The CALC:EVM:DATA<n>:TABL query responses are a comma-separated list enclosed in quotes (that is, they are a single string).

FETC:EVM<n> Results vs CALC:EVM:DATA<n>:TABL series Results

In addition, if just the “FreqErr” result is desired, you can obtain it using the command:

CALC:EVM:TABL:STR? “FreqErr”

For the example data above, the response is:

“844.1331046”

3.8.2 Views

The Modulation Analysis measurement supports up to six views.

Some of these views are multiple-window views. When in a multiple-window view, you select a window by touching it. The menu controls may sometimes change depending on which window is selected.

Whenever the View changes, the default menu is Frequency, unless otherwise specified in the View description.

Remote Command	`:DISPlay:EVM:VIEW:PRESet BASic | SUMMary | RBSLot | SUBCarrier | MIMO | CROSs`

Example	`:DISP:EVM:VIEW:PRES BAS`
	sets the Basic view
	`:DISP:EVM:VIEW:PRES SUMM`
	sets the summary view
	`:DISP:EVM:VIEW:PRES RBSL`
	sets the RB Slot view
	`:DISP:EVM:VIEW:PRES SUBC`
	sets the Subcarrier view

	`:DISP:EVM:VIEW:PRES CROS`
	sets the Cross Carrier Summary view
	`:DISP:EVM:VIEW:PRES MIMO`
	sets the MIMO view

Preset	Basic
State Saved	Saved in instrument state

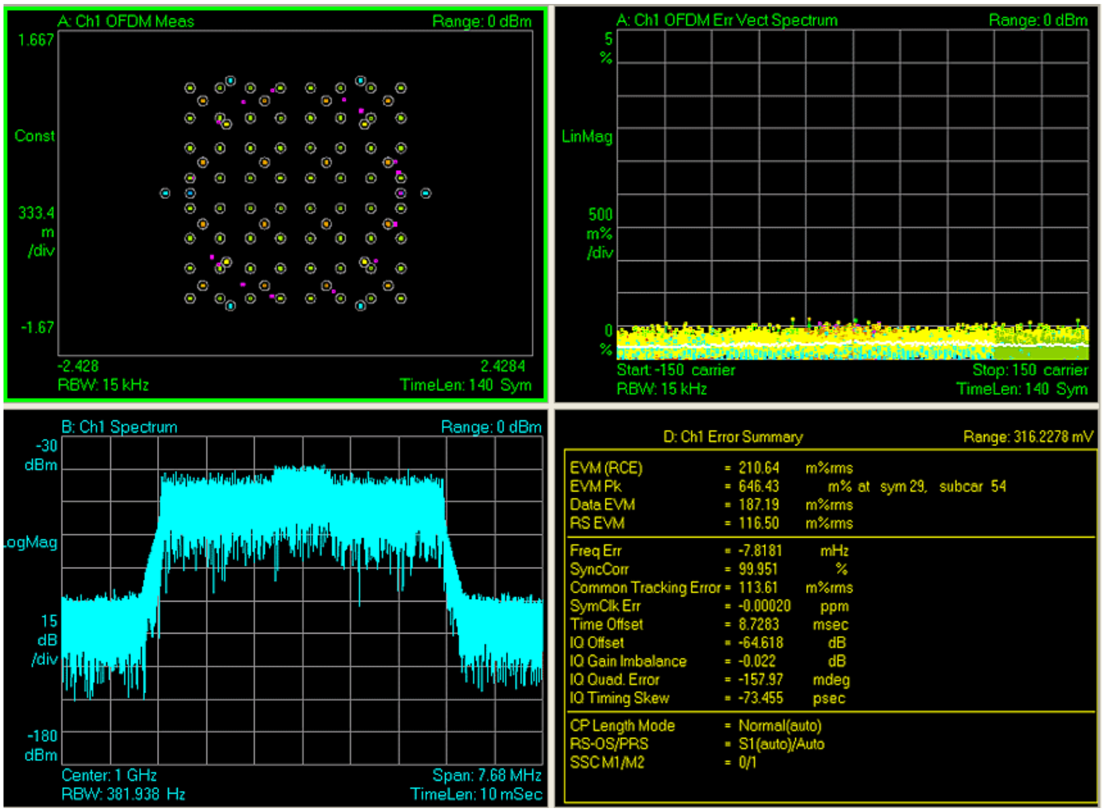
3.8.2.1 Basic

This view consists of the following windows of the selected Component Carrier in a Grid 2x2 layout:

- IQ Meas
- Spectrum
- Error Vector Spectrum
- Error Summary

This layout is set by Meas Preset and is good to ensure that the signal is being demodulated correctly, as well as showing many basic demodulation setup problems.

Example	`:DISP:EVM:VIEW:PRES BAS`



```
EVM (RCE)              = 210.64     m%rms
EVM Pk                 = 646.43       m% at  sym 29,  subcar  54
Data EVM               = 187.19     m%rms
RS EVM                 = 116.50     m%rms
Freq Err               = -7.8181      mHz
SyncCorr               = 99.951        %
Common Tracking Error  = 113.61     m%rms
SymClk Err             = -0.00020     ppm
Time Offset            = 8.7283      msec
IQ Offset              = -64.618      dB
IQ Gain Imbalance      = -0.022       dB
IQ Quad. Error         = -157.97     mdeg
IQ Timing Skew         = -73.455     psec
CP Length Mode         = Normal(auto)
RS-OS/PRS              = S1(auto)/Auto
SSC M1/M2              = 0/1
```

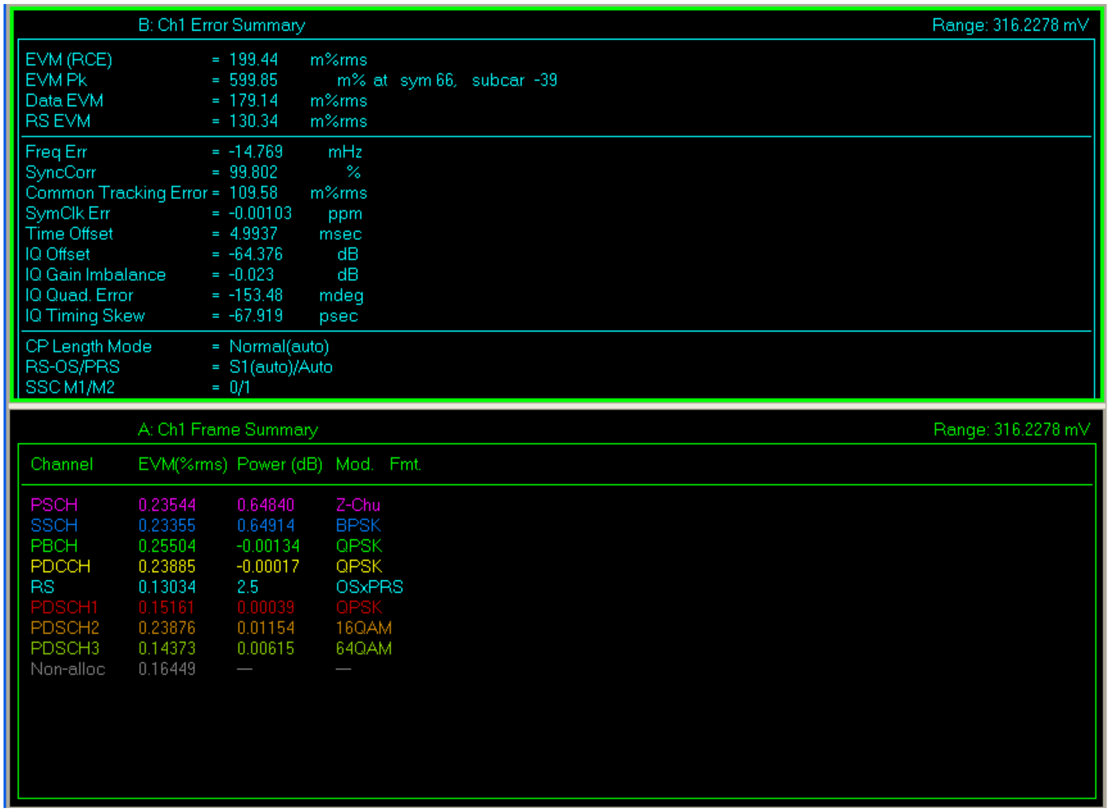
3.8.2.2 Meas Summary

This view consists of the following windows of the selected Component Carrier in a Stacked layout:

- Error Summary
- Frame Summary

This layout provides the full list of the composite result metrics and characteristics of each of the logical channels.

Example	`:DISP:EVM:VIEW:PRES SUMM`



```
B: Ch1 Error Summary                                    Range: 316.2278 mV
EVM (RCE)              =  199.44    m%rms
EVM Pk                 =  599.85       m% at  sym 66,  subcar  -39
Data EVM               =  179.14    m%rms
RS EVM                 =  130.34    m%rms
Freq Err               =  -14.769     mHz
SyncCorr               =  99.802        %
Common Tracking Error  =  109.58    m%rms
SymClk Err             =  -0.00103    ppm
Time Offset            =  4.9937     msec
IQ Offset              =  -64.376      dB
IQ Gain Imbalance      =  -0.023       dB
IQ Quad. Error         =  -153.48    mdeg
IQ Timing Skew         =  -67.919    psec
CP Length Mode         =  Normal(auto)
RS-OS/PRS              =  S1(auto)/Auto
SSC M1/M2              =  0/1
```

```
A: Ch1 Frame Summary                                    Range: 316.2278 mV

```

3.8.2.3 RB Slot Meas

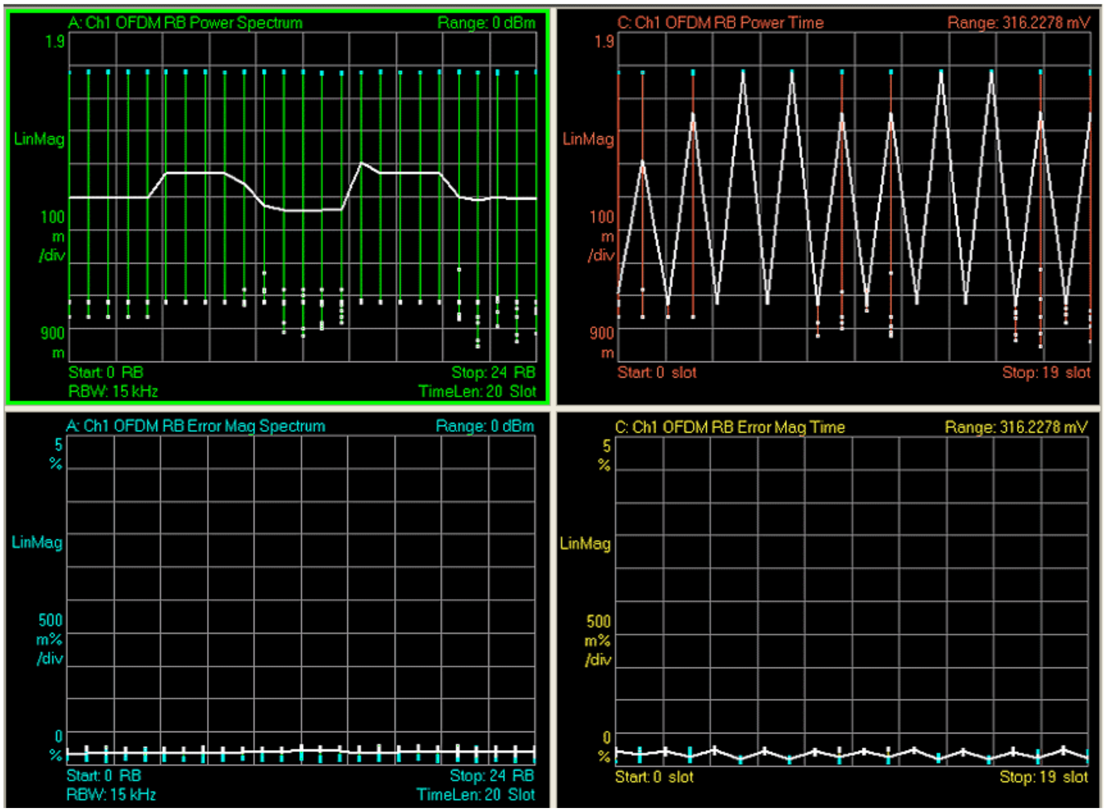
This view consists of the following windows of the selected Component Carrier in a Grid 2x2 layout:

- RB Power vs Spectrum
- RB Error Mag vs Spectrum
- RB Power vs Time
- RB Error Mag vs Time

This layout provides the details on the Resource Block.

The Preset View: RB Slot Meas control performs the immediate action of changing the layout and view to this configuration. Preset View is an action, not a state.

Example	`:DISP:EVM:VIEW:PRES RBSL`



3.8.2.4 Subcarrier Meas

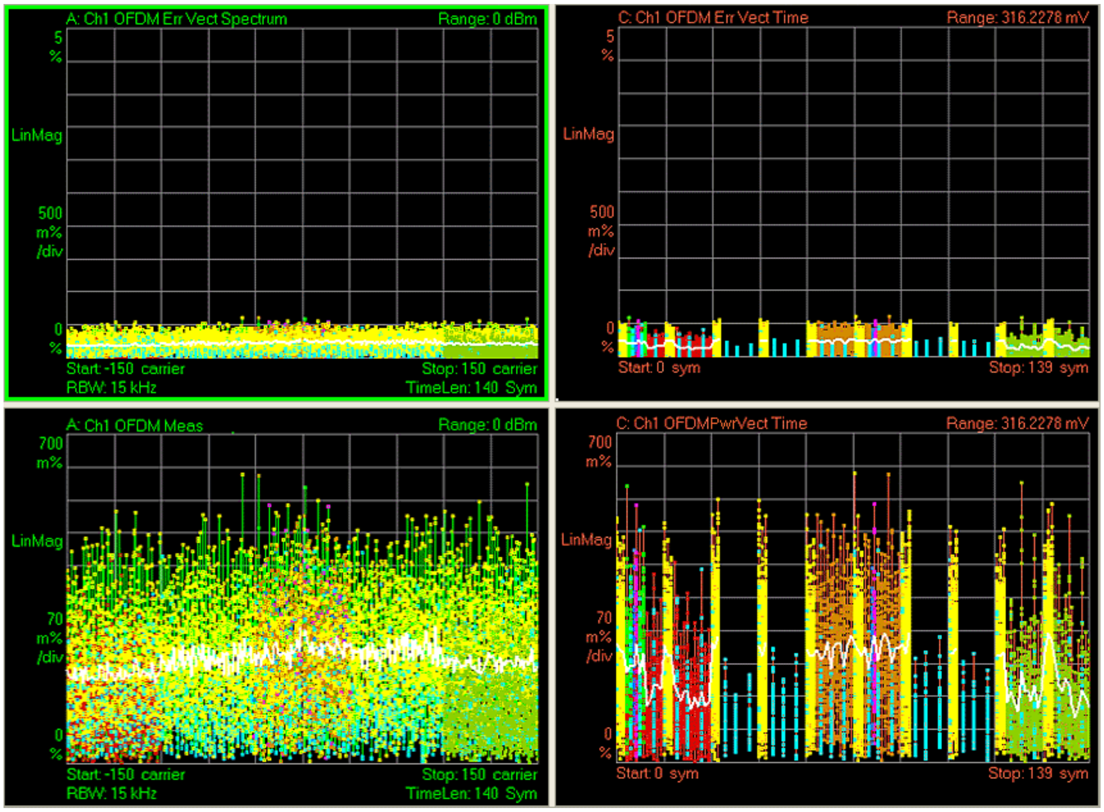
This view consists of the following windows of the selected Component Carrier in a Grid 2x2 layout:

- Error Vector vs Spectrum
- IQ Meas (Log Mag)
- Error Vector Time
- IQ Meas vs Time (Log Mag)

This layout provides the details on the Power and EVM results.

The Preset View: Subcarrier Meas control performs the immediate action of changing the layout and view to this configuration. Preset View is an action, not a state.

Example	`:DISP:EVM:VIEW:PRES SUBC`



3.8.2.5 MIMO Summary

This preset view consists of the following windows in a Stacked layout:

- Chan Freq Resp
- MIMO Info Table

This layout provides the details on the MIMO results.

The Preset View immediately changes the layout and view to this configuration. Preset View is an action, not a state.

Example	`:DISP:EVM:VIEW:PRES MIMO`

3.8.2.6 Cross-Carriers Summary

This layout provides the details Error Summary of the selected Component Carrier, Cross-Carriers Summary information about the Time Alignment Error (TAE) and Channel Power for each component carrier (CCx) relative to the selected Reference Component Carrier (specified by Reference Config on Meas Standard tab).

The TAE for the CCx is calculated by subtracting the Time Offset of the reference CC from the Time Offset of the CCx.

The relative Channel Power for the CCx is calculated by subtracting the Channel Power of the reference CC from the Channel Power of the CCx.

Example	`:DISP:EVM:VIEW:PRES CROS`

3.8.3 Windows

There are various windows (each displaying a specific trace) available in the Modulation Analysis measurement.

The table below ("Table: SCPI Commands for trace configuration" on page 1293) shows available trace data types. Use the following SCPI command to configure the trace data.

`:DISPlay:EVM:TRACe|2|3|4|5|6:FEED <string>`

For example, the following command sets the first trace to Spectrum.

:DISP:EVM:TRAC1:FEED “Spectrum1”

TRACe number 1 to 9 can be mapped to the Window number displayed on the screen. You can add more than nine windows on the screen, but only up to nine windows can be configured to show various trace data types.

Besides the window names as listed in the table below, the Data Registers are also available for display if there are traces stored in them (for example, “D1”, “D2”, “D3”, “D4”, “D5”, “D6” and so on).

Table: SCPI Commands for trace configuration

3.8.3.1 Pre Demod

Displays the Trace Data choices that show pre-demodulation results.

Spectrum

Averaged FFT of the Time waveform for the selected Component Carrier. This window appears in the Basic View.

Example

```
:DISP:EVM:TRAC1:FEED "Spectrum1"
:DISP:EVM:TRAC1:FEED "CC0 Spectrum1"
```

Inst Spectrum

FFT of the time waveform for the selected Component Carrier. “Inst” or Instantaneous refers to this result not being averaged.

Example

```
:DISP:EVM:TRAC1:FEED "Inst Spectrum1"
:DISP:EVM:TRAC1:FEED "CC0 Inst Spectrum1"
```

For both "Spectrum" on page 1296 and "Inst Spectrum" on page 1296,

- When "Acquisition Mode" on page 1447 is Simultaneous, the Span is based on the aggregated bandwidth of multiple Component Carriers.
- When "Acquisition Mode" on page 1447 is Sequential, the Span is based on the BW of the specified Component Carrier.

Search Time

Search Length long time record acquired for the current measurement.

Example

```
:DISP:EVM:TRAC1:FEED "Search Time1"
:DISP:EVM:TRAC1:FEED "CC0 Search Time1"
```

Time

Time data corresponding to the measurement interval used to compute demod results.

Example

```
:DISP:EVM:TRAC1:FEED "Time1"
:DISP:EVM:TRAC1:FEED "CC0 Time1"
```

Raw Main Time

Raw time record acquired for the selected Component Carrier. This data is unprocessed and includes additional points acquired for settling of the filters involved in subsequent processing, such as the demodulation filtering.

Example

```
:DISP:EVM:TRAC1:FEED "CC0 Raw Main Time1"
:DISP:EVM:TRAC1:FEED "Raw Main Time1"
```

3.8.3.2 Demod

Displays the general demodulation results.

IQ Meas

IQ Meas is the measured IQ symbol values of the subcarriers. There is one complex value for each subcarrier for each symbol in the burst.

In Downlink mode, IQ Meas shows the IQ values for channels/signals in the selected layer. When the component carrier contains only one layer, IQ Meas shows the values of the subcarriers from the OFDM symbol FFT.

Normally, this trace data is displayed as a constellation. The constellation display shows both data and pilot subcarriers, the pilot and data values are shown in different colors.

Only the points of channels/signals selected in Composite Include are shown on this trace. The color of a point indicates which channel/signal the point belongs to. The colors of the channel/signals are shown in the Frame Summary trace.

In the constellation (Const) format, reference constellation circles/crosses are drawn where the symbol points are expected to fall only when "Power Boost Normalize" on page 1453 is set to On.

With the IQ Meas constellation view, you can get an understanding of how close the constellation points are to the reference. Also, you can turn off various corrections, such as "Equalizer Training " on page 1485 and "EVM Minimization" on page 1493 to see how well, and in what way, they are correcting the signal.

Example	`:DISP:EVM:TRAC1:FEED "Demod CC0 IQ Meas1"`
	When Direction is Uplink
	`:DISP:EVM:TRAC1:FEED "Layer CC0 IQ Meas1"`
	When Direction is Downlink

IQ Ref

IQ Ref is the reference (ideal) IQ values of the subcarriers. There is one complex value for each subcarrier for each symbol in the burst.

Normally, this trace data is displayed as a constellation. The constellation shows both data and pilot subcarrier symbols, the pilot and data values are shown in different colors.

In Downlink mode, IQ Ref shows the reference IQ values of the subcarriers from the output of the FFT (frequency domain).

When analyzing channels transmitted on C-RS antenna ports with transmit diversity or spatial multiplexing, this trace shows the channel data values after precoding has been removed. When precoding is removed, the subcarrier notation does not apply to channel data values since the values do not have a one-to-one correspondence with on-air subcarriers. See "MIMO Decoding" on page 1470 for more information.

For downlink signals, the PDSCH IQ data that is used in calculating this trace comes from the layer chosen when selecting this trace. Other LTE channels/signals are included in Layer traces for convenience.

For uplink signals, the IQ data comes directly from the OFDM symbol FFT, except for PUSCH. PUSCH subcarriers are despread before being used in calculations.

In uplink mode, when PUSCH is included in analysis, IQ Meas shows PUSCH IQ values after despreading (IFFT), overlaid on the the other channels/signals reference

IQ values, which come directly from the output of the symbol FFT. To view PUSCH points in the frequency domain instead, use the IQ Freq Ref trace. See the SC-FDMA Symbol Points section in IQ Meas for more information.

Only the points of channels/signals selected in Composite Include are shown on this trace. The color of a point indicates which channel/signal the point belongs to. The colors of the channel/signals are shown in the Frame Summary trace.

The data in this trace comes from the interval specified by Measurement Interval and Measurement Offset.

Example	`:DISP:EVM:TRAC1:FEED "Demod CC0 IQ Ref1"`
	For Uplink
	`:DISP:EVM:TRAC1:FEED "Layer CC0 IQ Ref1"`
	For Downlink

IQ Meas Time

IQ Meas Time shows the same information as IQ Meas when the data is shown in the Const or I-Q trace format. When the data is shown in any other format, time is on the horizontal axis instead of frequency as in IQ Meas.

The concept pertaining to "IQ Meas" on page 1297 applies to IQ Meas Time, with the exception mentioned above. Also, see "MBMS mixed-mode CP" on page 1301.

Example	`:DISP:EVM:TRAC1:FEED "Demod CC0 IQ Meas Time1"`
	For Uplink
	`:DISP:EVM:TRAC1:FEED "Layer CC0 IQ Meas Time1"`
	For Downlink

IQ Ref Time

IQ Ref Time shows the same information as the IQ Ref trace when the data is shown in the Const or I-Q trace format. When the data is shown in any other format, time is on the horizontal axis instead of frequency as in the IQ Ref trace.

The concept pertaining to "IQ Ref" on page 1298 applies to IQ Ref Time, with the exception mentioned above. Also, see "MBMS mixed-mode CP" on page 1301.

Example	`:DISP:EVM:TRAC1:FEED "Demod CC0 IQ Ref Time1"`
	For Uplink
	`:DISP:EVM:TRAC1:FEED "Layer CC0 IQ Ref Time1"`
	For Downlink

Uplink IQ Freq Meas

IQ Freq Meas shows the IQ data taken after the OFDM symbol FFT is performed on the measured data. This trace is available only for uplink signals and is in contrast to "IQ Meas" on page 1297 which, in uplink mode, shows PUSCH SC-FDMA points after despreading (IFFT).

PUSCH IQ values shown on the IQ Freq Meas trace resemble a collection of random points concentrated around the origin as a result of the SC-FDMA modulation.

NOTE To view SC-FDMA (uplink PUSCH) signals in the time domain, use IQ Meas.

The data in IQ Freq Meas, which comes from the Time trace data as that data is passed through the demodulator, is a 2x2 matrix with frequency along one dimension and time along the other. In addition, each one of the points in the matrix is a complex value; therefore, there are four total dimensions. The choice of trace format determines which two dimensions are on the x-y plane, and which dimensions are overlapped, averaged, or ignored. The relevant trace formats and their corresponding view of the data are described below.

Constellation, IQ - The I-Q plane is mapped to the x-y plane and each point contains both a subcarrier and a symbol-time reference. In other words, each point plotted on the complex plane comes from a symbol transmitted on a specific subcarrier at a certain time.

LogMag, LinMag, Real, Imag, Wrapped Phase, Unwrapped Phase - Subcarriers are plotted along the x-axis. All the symbols that a subcarrier transmits are plotted above the corresponding subcarrier tick on the x-axis, in the specified format (whether it be dB magnitude or the real value of the symbol point, and so on).

Example	`:DISP:EVM:TRAC1:FEED "Demod CC0 IQ Freq Meas1` For Uplink

Uplink IQ Freq Ref

IQ Freq Ref shows the reference (demodulated) IQ values of the subcarriers for each OFDM symbol point at the output of the FFT. This trace always shows OFDM reference IQ points (unlike IQ Ref, which in uplink mode, shows reference PUSCH SC-FDMA IQ points after despreading (IFFT)).

This trace is only available for uplink signals.

To view SC-FDMA (uplink PUSCH) signals in the time domain (after despreading), use the IQ Ref trace.

Example	`:DISP:EVM:TRAC1:FEED "Demod CC0 IQ Freq Ref1`

For Uplink

Detected Allocations

Detected Allocations Time shows the allocations of the selected layer in a two dimensional grid with frequency on the vertical axis and time on the horizontal axis. Each point on the grid represents a single resource element (1 subcarrier x 1 symbol).

Only signals that are selected on the Channel Profile Tab are shown on this trace.

By default, the unit for time is set to symbols. However, you may set “Time Unit” to ‘sec’ in the “Edit Window” Dialog, to change the unit for time to seconds.

The points are color coded according to channel type. The Frame Summary trace shows all channels and their corresponding colors. Also, see "MBMS mixed-mode CP" on page 1301.

Example	`:DISP:EVM:TRAC1:FEED "Demod CC0 Detected Allocations Time1"`
	For Uplink
	`:DISP:EVM:TRAC1:FEED "Layer CC0 Detected Allocations Time1"`
	For Downlink

MBMS mixed-mode CP

MBMS signals are transmitted during the MBSFN region of MBSFN subframes using Extended CP mode (six symbols per slot). The non-MBSFN region in these subframes (and the rest of the frame) can be transmitted in Normal or Extended CP mode.

For mixed-CP-mode LTE frames, traces that show time on the x-axis in units of syms (OFDM symbols) need unevenly spaced x-axis points to correctly represent the time location of the symbols (since extended CP symbols are longer than normal CP symbols).

Instead of using non-uniform x-axis spacing of symbol points, the LTE demodulator shows the time axis as if all the slots use Normal CP (with seven symbols per slot), and for MBSFN slots, the demodulator fills the first 6 symbols of the slot with the extended CP symbols, leaving the 7th symbol blank.

3.8.3.3 Demod Error

Displays the general demodulation results, which are related to the Error Vector.

Error Vector Time

This trace shows individual signal error vectors for each subcarrier and symbol versus Time (symbol) and frequency (subcarrier) in the Measurement Interval. Each error vector is the vector difference, for that subcarrier at that symbol time, between the corresponding "IQ Meas" on page 1297 value and the "IQ Ref" on page 1298 value.

The EVM values for subcarriers are plotted above their corresponding symbol time on this trace. The values of the error vectors are usually plotted as a magnitude, but you can choose other formats as well.

In addition, a white trace is drawn, where each point is the RMS average over the valid subcarriers, which is the same result as is plotted separately as "RMS Error Vector Time" on page 1302.

For uplink PRACH analysis, this trace's x-axis is marked in subframes. The PRACH EVM data points are located at the subframe that the PRACH preamble begins in.

Example	`:DISP:EVM:TRAC1:FEED "Layer CC0 Error Vector Time1"`
	For Downlink
	`:DISP:EVM:TRAC1:FEED "Demod CC0 Error Vector Time1"`
	For Uplink

RMS Error Vector Time

RMS Error Vector Time shows the Root Mean Square (RMS) average EVM for each symbol. The RMS average for each symbol is calculated from the subcarrier EVMs of currently selected channels and signals. This trace is the same data shown as a white trace shown in "Error Vector Time" on page 1301"Error Vector Time" on page 1301"Error Vector Time" on page 1301.

Example	`:DISP:EVM:TRAC1:FEED "Demod CC0 RMS Error Vector Time1"`
	For Downlink
	`:DISP:EVM:TRAC1:FEED "Layer CC0 RMS Error Vector Time1"`
	For Uplink

Error Vector Spectrum

Error Vector Spectrum shows the difference between the measured values and the reference values for each resource element in a layer. The error vectors for each resource element in the Measurement Interval are calculated and the values are plotted above the corresponding subcarrier. The values of the error vectors are usually plotted as a magnitude, but you can choose other formats as well.

On this trace, the individual error vectors are plotted versus frequency (subcarrier). So, at each valid subcarrier, there is a point plotted for each valid symbol. Note that subcarrier 0 is not plotted since it is not used. In addition, a white trace is drawn, where each point is the RMS average over the valid symbols, which is the same result as is plotted separately as "RMS Error Vector Spectrum" on page 1303.

Example

```
:DISP:EVM:TRAC1:FEED "Layer CC0 Error Vector Spectrum1"
```

For Downlink

```
:DISP:EVM:TRAC1:FEED "Demod CC0 Error Vector Spectrum1"
```

For Uplink

RMS Error Vector Spectrum

RMS Error Vector Spectrum shows the Root Mean Square (RMS) average EVM for each subcarrier. The value displayed above each subcarrier index on the x-axis is the EVM RMS average for the subcarrier over all symbols in the Measurement Interval. Only currently selected channels are included in the average.

Example

```
:DISP:EVM:TRAC1:FEED "Demod CC0 RMS Error Vector Spectrum1"
```

For Downlink

```
:DISP:EVM:TRAC1:FEED "Layer CC0 RMS Error Vector Spectrum1"
```

For Uplink

Common Tracking Error

Common Tracking Error shows the corrections calculated by EVM Minimization. The complex value for each symbol is the average of subcarrier phase and amplitude corrections to that symbol. When EVM Minimization is set to 3GPP, the Common Tracking Error trace still shows the tracking error for each symbol, but tracking is calculated per slot (uplink) or per subframe (downlink).

For signals with multiple C-RS antenna ports, this trace shows the tracking information of the path determined by the Ref Meas Channel and Ref C-RS Port parameters.

To view the tracking information for all C-RS/Rx paths simultaneously, select the MIMO Common Tracking Error trace.

The Common Tracking Error trace shows phase or amplitude error when the appropriate trace format, such as Wr Phs or Log Mag, is selected.

Tracking information is calculated and shown in this trace whether or not the corrections are applied to the signal.

The information in the Common Tracking Error trace is calculated from a symbol FFT location determined by the Symbol Timing Adjust parameter.

Example

```
:DISP:EVM:TRAC1:FEED "Demod CC0 Common Tracking Error1"
```

For Downlink and Uplink

RB Error Mag Spectrum

RB Error Mag Spectrum shows the EVM of each resource block (RB) in the selected layer. The EVM points are plotted with respect to frequency (resource blocks on x-axis). The distance away from the x-axis expresses the magnitude of the EVM.

The data comes from the interval specified by Measurement Interval and Measurement Offset.

Example	`:DISP:EVM:TRAC1:FEED "Layer CC0 RB Error Mag Spectrum1"`
	For Downlink
	`:DISP:EVM:TRAC1:FEED "Demod CC0 RB Error Mag Spectrum1"`
	For Uplink

RB Error Mag Time

RB Error Mag Time shows the EVM of each resource block (RB) in the selected layer. The EVM points are plotted with respect to time (slots on x-axis). The distance away from the x-axis expresses the magnitude of the EVM.

The data comes from the interval specified by Measurement Interval and Measurement Offset.

Example	`:DISP:EVM:TRAC1:FEED "Layer RB Error Mag Spectrum1"`
	For Downlink
	`:DISP:EVM:TRAC1:FEED "Demod CC0 RB Error Mag Time1"`
	For Uplink

RB Power Spectrum

RB Power Spectrum shows the resource block power spectrum for the demodulated data specified by Measurement Interval and Measurement Offset. For trace formats that show magnitude (Linear Mag or Log Mag (dB)), multiple power values are plotted above each RB index on the x-axis. Each point represents the power of a particular slot in the Measurement Interval. The distance away from the x-axis expresses the power.

The RB Power Spectrum trace is different from the other traces in that channel frequency response equalization is not applied and Non-alloc resources are included whether or not ‘Non-alloc’ is selected on the ‘Profile’ tab of the “LTE-Advanced Demod Properties” dialog.

Resource block numbering starts from 0 and increases with frequency.

The In-band Emissions trace are used to make in-band emission measurements for uplink signals.

The data in this trace is generated from the 2D IQ Meas (frequency x time) data grouped into resource blocks (12 subcarriers x 1 slot). The power values of the resource elements are summed for each resource block, and the resulting resource block power values are plotted along the frequency axis. To view the resource block powers plotted with respect to time, use the "RB Power Time" on page 1305 trace.

For downlink signals, PDSCH IQ data that are used to calculate this trace come from the chosen layer of the selected trace. Other LTE channels/signals are included in Layer traces for convenience. For more details, see the Layer Traces and Resource Element Distribution topic.

For uplink signals, the IQ data comes directly from the OFDM symbol FFT, except for PUSCH. PUSCH subcarriers are despread before being used for calculations.

Points on the trace are color-coded to represent which channel/signal they contain. When a resource block contains more than just one channel/signal (which is often the case unless some channels are turned off in Composite Include), the point is colored white and a marker on the point is labeled “Composite.”

You can disable the average line for this trace by clearing the ‘Show 2D Avg Line’ check box in the “Edit Window Dialog”. When the average line is disabled, the marker does not display the average value for the current marker location.

Example

```
:DISP:EVM:TRAC1:FEED "Layer CC0 RB Power Spectrum1"
```

For Downlink

```
:DISP:EVM:TRAC1:FEED "Demod CC0 RB Power Spectrum1"
```

For Uplink

RB Power Time

RB Power Time shows the resource block power for each slot in the time interval specified by Measurement Interval and Measurement Offset. For trace formats that show magnitude, multiple power values are plotted above each slot index on the x-axis. Each point represents the power of a particular resource block in the measurement interval. The distance away from the x-axis expresses the power.

The RB Power Spectrum trace is different from the other traces in that

1 channel frequency response equalization has not been applied

2 non-alloc resources are included whether or not Non-Alloc has been selected on the Profile tab of the LTE-Advanced Demod Properties dialog box

Slot numbering starts from 0 at the beginning of a frame.

The data in this trace is generated from the 2D IQ Meas data (frequency x time) grouped into resource blocks (12 subcarriers x 1 slot). The powers of the resource elements are summed for each resource block, and the resulting resource block powers are plotted for each slot along the time axis. To view the resource block powers plotted according to frequency, see the RB Power Spectrum trace.

For downlink signals, PDSCH IQ data used in calculating this trace comes from the layer chosen when selecting this trace. Other LTE channels/signals are included in Layer traces for convenience. For more details, see the Layer Traces and Resource Element Distribution topic.

For uplink signals, the IQ data comes directly from the OFDM symbol FFT, except for PUSCH. PUSCH subcarriers are despread before being used in calculations.

Example	`:DISP:EVM:TRAC1:FEED "Layer CC0 RB Power Time1"`
	For Downlink
	`:DISP:EVM:TRAC1:FEED "Demod CC0 RB Power Time1"`
	For Uplink

Freq Error Per Slot

Freq Err Per Slot shows the frequency error of the signal as a function of slot number for the data in the Measurement Interval. This is the frequency error that is compensated on a per-slot basis as part of the EVM minimization process.

The frequency error is expressed as an offset in Hz from the center frequency of component carrier x (CC center frequency = Carrier Reference Frequency + CC Frequency Offset).

Example	`:DISP:EVM:TRAC1:FEED "Demod CC0 Freq Err Per Slot1"` For Downlink and Uplink

Uplink IQ Offset Per Slot

This trace is only available for uplink signals.

IQ Offset indicates the magnitude of carrier feedthrough (power at 0 Hz). When there is no carrier feedthrough, IQ Offset is zero (-infinity dB). For an uplink signal, even when the signal is an ideal signal, any IQ offset adversely affects the subcarrier EVMs since the DC subcarrier is not orthogonal to the other subcarriers.

An IQ offset can be caused when the center (DC) carrier (which is supposed to be filtered out) leaks into the signal. IQ offset can also be caused when the baseband signal has a DC offset which then shows up as (DC) carrier power when the baseband signal is upconverted.

IQ Offset Per Slot shows the average IQ offset for each slot in the Measurement Interval. The IQ Offset Per Slot trace is calculated and is valid for active slots only (slots that contain channel allocations, as defined in the LTE Allocation Editor or autodetected).

Example	`:DISP:EVM:TRAC1:FEED ""Demod CC0 IQ Offset Per Slot1""` For Uplink

Uplink In-band Emission

This trace is only available for uplink signals.

In-band Emissions shows the resource block power spectrum for the slot with worst emissions during the multiple slots specified by Measurement Interval and Measurement Offset.

This trace is identical to RB Power Spectrum except for the following three differences.

1. In-band Emissions always includes Non-alloc signals, regardless of the Non-alloc parameter selection.
2. In-band Emissions includes autogenerated limit lines the slot with the worst emission.
3. RB Power levels are normalized such that the average active RB power is 0 dB.

Resource block points whose power exceeds the limit are displayed in red.

See Section 6.5.2.3 of 3GPP TS 36.521-1 for more information about in-band emissions measurements.

Example	`:DISP:EVM:TRAC1:FEED "Demod CC0 In-band Emissions1"` For Uplink

Uplink Cross CC In-band Emission

This trace is only available for uplink signals.

The in-band emissions are a measure of the interference falling into the non-allocated resources blocks

The in-band emission is defined as the average across 12 sub-carrier and as a function of the RB offset from the edge of the allocated UL transmission bandwidth. The in-band emission is measured as the ratio of the UE output power in a non–allocated RB to the UE output power in an allocated RB. The basic in-band emissions measurement interval is defined over one slot in the time domain. For all types of E-UTRA UE release 8, this measurement only check the RBs within the Configured Channel Bandwidth.

There are 3 frequency regions to be checked for this measurement.

The first one is called General, it is for non-allocated RBs . The limit is given out as below, the more distant the non-allocated RBs located from allocated-RBs, the less power should be present required by this limit.

$$\max\left\{ -25-10\cdot\log_{10}(N_{RB}/L_{CRB}), \\ 20\cdot\log_{10} EVM \;-3-5\cdot(|\Delta_{RB}|-1)/L_{CRB}, \\ -57\ dBm\ /180\ kHz\ -P_{RB}\right\}$$

The second part is called image, the image frequencies are those that are enclosed in the reflection of the allocated bandwidth, based on symmetry with respect to the center carrier frequency, but excluding any allocated RBs.

The third part is called carrier leakage, The applicable frequencies for this limit are those that are enclosed in the RBs containing the DC frequency if is odd, or in the two RBs immediately adjacent to the DC frequency if is even, but excluding any allocated RB.

For UEs supporting contiguous CA, this measurement is re-defined. Since the transmitter can transmit multiple CCs simultaneously using a wideband transceiver, so the actual center frequency is based on the final implementation of the base station transceiver, for example, the center frequency is any frequency between the CC0’s high edge and CC1’s low edge. Taking this into consideration, another test requirements for in-band emissions for those non-allocated component carriers are provided by 3GPP.

By default, it shows the result for the slot with the worst emissions.

See Section 6.5.2.3 of 3GPP TS 36.521-1 for more information about in-band emissions measurements.

Example

```
:DISP:EVM:TRAC1:FEED "Cross-CC In-band Emissions1"
```

For Uplink

3.8.3.4 Tables

Displays the Trace Data in tabular form.

A scrollbar appears when the contents are too long to be displayed in the window. You can scroll the window without a mouse with the following steps.

1. Press **NextWindow** key to select the window you want to scroll.
2. Press **Esc** key to turn off the active function
3. Then, press one of **Arrow** keys.

Error Summary for LTE-A FDD/TDD

For NB-IoT mode, see "Error Summary for NB-IoT" on page 1313.

For LTE-V2X mode, see "Error Summary for LTE V2X" on page 1315.

Error Summary contains information about the quality of the signal being analyzed (in the Measurement Interval). Below is a list of available data results.

Only EVM and EVM Pk are calculated from the channels that are selected for analysis in the Composite Include list on the Profile tab. The other Error Summary data results are not dependent on which channels are selected for analysis.

- EVM - Overall RMS Error Vector Magnitude for all selected channels in Composite Include
- EVM Symbol TimeAdjust
- EVM Pk - The peak EVM value and location of the peak EVM
- Data EVM - RMS Error Vector Magnitude of the user channels (PDSCH for Downlink, or PUSCH, PUCCH, and SRS for Uplink)
- 3GPP-defined QPSK EVM - RMS average EVM of PDSCH QPSK allocations, calculated based on the standard
- 3GPP-defined 16QAM EVM - RMS average EVM of PDSCH 16QAM allocations, calculated based on the standard
- 3GPP-defined 64QAM EVM - RMS average EVM of PDSCH 64QAM allocations, calculated based on the standard
- 3GPP-defined 256QAM EVM (%rms) - RMS average EVM of PDSCH 256QAM allocations, calculated according to the standard
- 3GPP-defined 1024QAM EVM (%rms) - RMS average EVM of PDSCH 1024QAM allocations, calculated based on the standard
- RS EVM - RMS Error Vector Magnitude of the reference signal
- RS Tx. Power (Avg) - Average (dBm) reference signal power, can be used to calculate RSTP as defined in Section F.3.3 of 3GPP TS 36.141

- OFDM Sym. Tx. Power - Average power (dBm) for OFDM data subcarriers, can be used to calculate OSTP as defined in Section F.3.3 of 3GPP TS 36.141
- RS Rx. Power (Avg) - Average Cell-specific Reference Signal "Received" Power (dBm), can be used to calculate RSRP as defined in Section 5.1.1 of 3GPP TS 36.214 (Downlink only)
- RSSI - Received Signal Strength Indicator
- RS Rx. Quality - Cell-specific RS Receive Quality, can be used to calculate RSRQ as defined in Section 5.1.3 of 3GPP TS 36.214 (Downlink only)
- Freq Err - Average carrier frequency error
- SyncCorr - Correlation between the measured P-SS signal and the reference P-SS signal
- Sync Type -
- Common Tracking Error - RMS average of the correction applied to each symbol by EVM Minimization
- SymClk Err - Frequency error of the measured signal's symbol clock
- Time Offset - The distance from the start of the Search Time trace to the beginning of the Measurement Interval (not averaged)IQ Gain Imbalance - I vs Q amplifier gain imbalance (ratio of I-gain to Q-gain)
- IQ Offset - Magnitude of carrier feedthrough
- IQ Quad. Error - Amount of angle skew between I and Q
- IQ Timing Skew -Time difference between the I and Q parts of the signal
- CP Length Mode - Current CP Length: normal or extended (useful when CP Length is set to Auto in demod properties)
- RS-OS/PRS (Downlink only) - The current setting of the RS-PRS measurement parameter
- Cell ID - The physical-layer Cell ID of the signal
- Cell ID Group/Sector - The signal's Cell ID group and Cell ID sector, determined by physical-layer Cell ID
- Channel Power - average power of the component carrier
- In-band Emissions Result - Result of limit test on the In-band Emissions trace (Uplink only)
- In-band Emissions Worst Margin (Uplink only)

- In-band Emissions Worst Slot (Uplink only)
- In-band Emissions Worst RB (Uplink only)
- Spectral Flatness Result - Result of limit test on the Per Slot Eq Chan Freq Resp trace (Uplink only)
- Spectral Flatness Worst Margin (Uplink only)
- Spectral Flatness Worst Slot (Uplink only)
- Spectral Flatness Worst Subcarrier (Uplink only)

* displayed in dB when Report EVM in dB parameter is On

3GPP-defined 256QAM EVM or 1024QAM EVM is available only when higher order modulation is enabled with the required license in LTE-Advanced applications.

Example `:DISP:EVM:TRAC1:FEED "Demod CC0 Error Summary1"`

Error Summary for NB-IoT

For LTE-V2X mode, see "Error Summary for LTE V2X" on page 1315.

For LTE-A FDD mode or LTE-A TDD mode, see "Error Summary for LTE-A FDD/TDD" on page 1309.

The Error Summary table shows some metrics calculated from signal demod. The metrics are subject to averaging, unless indicated otherwise.

The SCPI command “:DISPlay:EVM:TRACe[1]|2|3|4|5|6:FEED <string>” can be used to configure the trace data.

The error summary values can be obtained using the CALC:EVM:DATA<n>:TABL commands.

The following metrics are shown in Error Summary Table:

Result name	Displayed Unit	Remote Name	Direction
EVM	%rms*	EVM	UL&DL

* displayed in dB when Report EVM in dB parameter is On

The error summary values can be queried using the CALC:EVM:DATA<n>:TABL commands.

Freq Err Per Slot

This trace displays the average frequency error for each slot. The frequency error is expressed as an offset in Hz from the current center frequency setting.

The trace shows the average frequency error per slot. The frequency error is expressed as an offset in Hz from the center frequency of the measured component carrier. Th frequency error is also one which is compensated on a per-slot basis as part of the EVM minimization process.

Frame Summary for LTE-A FDD/TDD

The Frame Summary trace shows the EVM, power, modulation format, number of resource blocks occupied, and Radio Network Temporary Identifier (RNTI) for the channels and signals that are present in the Measurement Interval.

Manual user mappings for downlink users (PDSCH), uplink users (PUSCH and PUCCH), and uplink PRACH and SRS are specified in the LTE Allocation Editor.

Downlink control channel and signal parameters are specified in the Downlink Control Channel Properties dialog.

Frame Summary shows information for only the data in the Measurement Interval.

There are currently 6 columns shown in this table.

4. Channel Name

- When the link direction is downlink, the following channels are shown in the Frame Summary:

  P-SS, S-SS, PBCH, PCFICH, PHICH, PDCCH,RS,P-RS,MBSFN-RS,PMCH,PDSCH1 to PDSCHn, Non-Alloc

- When the link direction is uplink, the following are the channels that are shown in the Frame Summary:

PUSCH DM-RS, PUCCH, PUSCH1 to PUSCHn, PRACH, S-RS, Non-Alloc

5. Error Vector Magnitude

   EVM is the RMS value of error vector magnitudes for the channel. The Report EVM in dB parameter affects the units of this data result. Non-alloc EVM is normalized with respect to the entire component carrier's average power per subcarrier, since dividing by the reference vector's magnitude (0 in this case) would cause the result to be undefined. EVM can be Averaged using RMS or Continuous Peak Hold averaging(MAX).

6. Power

   Power is the per-subcarrier power received at the reference measurement channel, averaged over all the subcarriers belonging to the physical channel. For PDSCH channels, the Power data result also shows the average power for each layer. The Report Relative Power Levels parameter affects the units of this data result.Non-alloc does not show a power value because the power value is normally zero, and even small values would result in a very large negative dB value.This data result can be Averaged using RMS or Continuous Peak Hold averaging(MAX).

7. Modulation Format

   Mod. Fmt. is the modulation format of channel. The modulation format for Non-alloc signals is not shown.

   When a channel contains more than one modulation format, Mod. Fmt. shows "Mixed" for that channel.

8. Number of RBs occupied

   Num. RB shows the number of resource blocks (1 RB x 1 slot) within the Measurement Interval that contain subcarriers belonging to the channel. Num. RB is not shown for Non-alloc signals. When Averaging is enabled, Num. RB shows the total number of resource blocks included in the average for each channel.

9. RNTI

   RNTI shows the Radio Network Temporary Identifier that a PDSCH transmission is intended for. The RNTI is used to scramble the CRC of PDCCH transmissions so that a UE only needs to decode PDCCH transmissions which have a CRC that can be unscrambled using the RNTIs assigned to the UE. The RNTI column is only shown when RB Auto Detect Mode is set to Decoded DCI. Non-Alloc signals consist of unused subcarriers in all shared and control channels. This includes unallocated user data subcarriers, the DC subcarrier, certain RS subcarriers in multi-antenna mode, and unused P-SS and S-SS subcarriers.

Non-Alloc signals include the following:

- Unallocated user data subcarriers
- The unused DC subcarrier
- Unused P-SS and S-SS subcarriers: these signals are 6 RBs (72 subcarriers) wide in the frequency domain, but only the center 62 subcarriers are actually used, and the remaining 10 are set to zero.
- Subcarriers reserved for RS in a multiple antenna port signal. For example, in a four Tx Antenna signal, the transmission from antenna port 0 does not transmit anything on the subcarriers that are used for RS in the other three antenna port transmissions.

Manually defined and autodetected user allocations are always considered allocated whether or not they are enabled for display in Composite Include and are not included in Non-Alloc.

Non-alloc means only unallocated shared channel subcarriers (those that could be allocated for users but are not). The rest of the traces consider Non-alloc to be any unused subcarrier (whether in control or shared channels).

Any resource elements (subcarriers) contained by a user channel that is present in the Composite Include list are considered allocated, regardless of whether or not the user channel has been selected for analysis and display.

Non-Alloc signal's EVMs are normalized with respect to the signal's average power per subcarrier, since dividing by the reference vector's magnitude (0 in this case) causes the result to be undefined.

When the link direction is downlink:

Example `:DISP:EVM:TRAC1:FEED "Demod CC0 Frame Summary1"`

Frame Summary for NB-IoT

This table shows certain characteristics of each of the logical channels. The list of channels shown is different for Downlink and Uplink. Each of the channels shown have the same color coding as used in the IQ demod traces.

The following are the characteristics that are shown in the Frame Summary Table:

- Channel Name
- Error Vector Magnitude

- Relative Power Level
- Modulation Format
- Number of Slots occupied

When the link direction is downlink, the following channels are shown in the Frame Summary:

- NPSS
- NSSS
- NPBCH
- NPDCCH
- NRS
- NPDSCH
- NPRS
- Non-Alloc (remote name :inactive)

When the link direction is uplink, the following are the channels that are shown in the Frame Summary:

- NPUSCH DM-RS (remote name:DMRS)
- NPUSCH
- NPRACH
- Non-Alloc(remote name :inactive)

Each channel has the following characteristics, the “xxx” in the Remote Name represents the corresponding channel.

Result name	Displayed Unit	Remote Name	Remote Unit
EVM	%rms	xxxEVM	%rms
Power	dB	xxxPower	dB
Mod Format	none	xxxModFmt	none
Num Slots	none	xxxNumRb	none

These values are never averaged; they always show the results of the current measurement. These results are valid only for the current measurement interval.

Non-Alloc signals consist of unused subcarriers in all shared and control channels. This includes unallocated user data subcarriers, the DC subcarrier, certain RS subcarriers in multi-antenna mode, and unused NPSS and NSSS subcarriers.

Non-Alloc signals include the following:

- Unallocated user data subcarriers
- The unused DC subcarrier
- Unused NPSS and NSSS subcarriers
- Subcarriers reserved for RS in a multiple antenna port signal. For example, in a two Tx Antenna signal, the transmission from antenna port 0 does not transmit anything on the subcarriers that are used for RS in the other antenna port transmissions.

Frame Summary for LTE V2X

This table shows certain characteristics of each of the logical channels. Each of the channels shown have the same color coding as used in the IQ demod traces.

The following are the characteristics that are shown in the Frame Summary Table:

- Channel Name
- Error Vector Magnitude
- Relative Power Level
- Modulation Format
- Number of RBs occupied

The following channels are shown in the Frame Summary:

- PSSS
- SSSS
- PSBCH
- PSBCH DM-RS
- PSCCH
- PSCCH DM-RS
- PSSCH

- PSSCH DM-RS
- PSDCH
- PSDCH DM-RS
- Non-Alloc (remote name :inactive)

Each channel has the following characteristics, the “xxx” in the Remote Name represents the corresponding channel.

Result name	Displayed Unit	Remote Name	Remote Unit
EVM	%rms	xxxEVM	%rms
Power	dB	xxxPower	dB
Mod Format	None	xxxModFmt	none
Num. RB	None	xxxNumRb	none

These values are never averaged; they always show the results of the current measurement. These results are valid only for the current measurement interval.

Non-Alloc signals consist of unused subcarriers in all shared and control channels. This includes unallocated user data subcarriers, the DC subcarrier, and unused PSSS and SSSS subcarriers, Guard subcarriers.

Non-Alloc signals include the following:

- Unallocated user data subcarriers
- The unused DC subcarrier
- Unused PSSS and SSSS subcarriers
- Subcarriers reserved for Guard period.

Cross-Carrier Summary

This table shows summary information about the Time Alignment Error (TAE) and Channel Power for each component carrier (CCx) relative to the selected Reference Component Carrier (Reference CC).

The TAE for the CCx is calculated by subtracting the Time Offset of the reference CC from the Time Offset of the CCx.

The relative Channel Power for the CCx is calculated by subtracting the Channel Power of the reference CC from the Channel Power of the CCx.

The trace shows the measurement results for Cross Carrier In band Emission when Direction is uplink and non-allocated component carrier are present.

Example `:DISP:EVM:TRAC1:FEED "Cross-CC Summary1"`

For Downlink and Uplink

Symbols

Symbol Table shows the numerical values of demodulated data (the data in the Measurement Interval) for the selected layer and can be shown as hexadecimal or binary digits.

This window has the following characteristics:

1. The digits are color coded to match the channel/signal colors in Frame Summary.
2. The symbol locations for channel/signals that are not selected in the Composite Include list on the Profile tab or in User Summary of Edit NB-IoT Channels are blanked on the Symbol Table. If the subcarriers are not allocated in one RB, the symbol locations of these subcarriers are blanked.
3. Signals that do not have numerical values assigned to symbol points are shown as zeros.
4. Non-alloc subcarriers, when included in analysis, are shown as zeros.
5. Each group of digits corresponding to a subcarrier is shown with the most significant bit first. The most significant bit is interpreted as b(i+n) where n is the highest value depending on the modulation type. For instance, b(i+5) is interpreted as the most significant bit for 64QAM modulation.

The modulation bit-mapping tables, which define b(i), are located in 3GPP TS 36.211 Section 7.

See Downlink Control Channel Properties for information on PHICH symbol table mapping.

To view decoded channel informaion bits, use the CW 0/1 Decoded Symbol Table for downlink or the Decoded Symbol Table for uplink. A scrollbar appears when the contents are too long to be displayed in the window.

Example `:DISP:EVM:TRAC1:FEED "Demod CC0 Symbol Table1"`

For Uplink

`:DISP:EVM:TRAC1:FEED "Layer CC0 Symbol Table1"`

For Downlink

Symbols for NB-IoT

This table shows the numberical values of the demodulated symbols over the measurement interval. It displays one value per sample/subcarrier for uplink. And it displays one value per subcarrier for downlink.

This trace has the following characteristics:

- The digits are color coded to match the channel/signal colors in Frame Summary (NB-IoT).
- The symbol locations for channel/signals are blanked on the symbol table if the corresponding channels are not selected in User Summary of Edit NB-IoT Channels.

  If the subcarriers are not allocated in one RB, the symbol locations of these subcarriers are blanked.
- Each group of digits corresponding to a symbol is shown with the most significant bit first.

The modulation bit-mapping tables, which define b(i), are located in 3GPP TS 36.211 Section 7.

A scrollbar appears when the contents are too long to be displayed in the window.

See "Table: SCPI Commands for trace configuration" on page 1293 for more information.

Decoded Symbol Table

When Direction is Downlink, this table shows the decoded values of the physical layer channels: PBCH, PDCCH, PCFICH, and PDCCH. The level of decoding is determined by each channel decoding selection (See "PBCH Bits" on page 1738 for details.)

When Direction is Uplink, this table shows descrambled PUSCH data when PUSCH Decoding is set to Descrambled. The default bit order for this trace is MSB-first.

Example	`:DISP:EVM:TRAC1:FEED "Demod CC0 Decoded Symbol Table1"`
	For Uplink
	`:DISP:EVM:TRAC1:FEED "Demod CC0 CW0 Decoded Symbol Table1"`
	For Downlink

Decoded Symbol Table for NB-IoT

The trace is for NB-IoT which is different from LTE.

When Direction is Downlink, this table shows decoded bits carried on downlink channel when the corresponding channel Bits parameter is set to values other than None. What level of decoding data is shown in Decoded Symbol Table sees the description of the corresponding channel Bits parameter. The default bit order for this trace is MSB-first.

When Direction is Uplink, this table shows decoded data carried on NPUSCH channel when NPUSCH Bits parameter is set to values other than None. What level of decoding data is shown in Decoded Symbol Table sees the description of NPUSCH Bits parameter. The default bit order for this trace is MSB-first.

A scrollbar appears when the contents are too long to be displayed in the window.

See "Table: SCPI Commands for trace configuration" on page 1293 for more information.

Decoded Symbol Table for LTE V2X

The trace is for V2X which is different from LTE.

When Direction is Uplink and the component carrier is V2X , this table shows decoded bits carried on sidelink channels when the corresponding channel Bits parameter is set to values other than None. What level of decoding data is shown in Decoded Symbol Table sees the description of the corresponding channel Bits parameter. The default bit order for this trace is MSB-first.

A scrollbar appears when the contents are too long to be displayed in the window.

See "Table: SCPI Commands for trace configuration" on page 1293 for more information.

Downlink Decode Info

DL Decode Info contains the decoded information from PBCH, PDCCH, PCFICH and PDSCH.

The upper section shows the status of the PBCH, PDCCH, PCFICH, and PDSCH decoders (On or Off).

The lower part of the table shows the decoded information for each frame. The data is color coded to match the color of the corresponding channel in the Frame Summary trace.

PHICH information

The decoded PHICH Hybrid-ARQ (HARQ) values are listed by PHICH Group for each subframe.

The values of the PHICHs in each PHICH group are listed in increasing order of PHICH Sequence index, starting with sequence 0 in the leftmost position and ending with NPHICHSF - 1.

The values of the PHICHs are one of the following:

- A - ACK
- N - NACK
- Off (inactive PHICH sequence index)

PBCH information

PBCH decoded information is available when PHICH Duration or Allocation(Ng) are set to Auto in the Downlink Control Channel Properties: Basic tab or when PBCH Bits is set to a value other than None.

A "CRC Invalid" message is shown when PBCH CRC fails. Otherwise the decoded PBCH contents are shown.

The following is a list of all the information contained in the PBCH section of the DL Decode Info trace.

- FrameNum - system frame number for each frame in the Measurement Interval.
- Transmission Bandwidth - one of 1.4MHz(6RB), 3MHz(15RB), 5MHz(25RB), 10MHz(50RB), 15MHz(75RB), 20MHz(100RB).
- NumTxAnt - number of C-RS antenna ports
- PHICH - PHICH resource Allocation size (Ng) and Duration. These values always come from the decoded PBCH bits and are unaffected by the PHICH Duration or Allocation(Ng) parameters in the Downlink Control Channel Properties: Basic tab.

PCFICH information

Decoded PCFICH information is available when the Auto check box is selected in the PDCCH Allocations section of the Downlink Control Channel Properties: Basic tab or when PCFICH Bits is set to a value other than None.

PDCCH SymPerSubframe shows a comma separated list of values, one for each subframe, that indicate the number of symbols at the beginning of a subframe which are allocated to PDCCH.

PDCCH information

PDCCH information is available when RB Auto Detect Mode is set to Decode PDCCH or when PDCCH Bits is set to a value other than None.

The demodulator uses the number of bits in a DCI payload to determine the DCI format. DCI formats 1b and 1d have the same number of bits and DCI format 1 can have the same number of bits as 1b and 1d. To work around these cases, the demodulator provides the DCI Formats 1, 1B, 1D Detection Include parameter.

DCI Formats 3 and 3A have the same payload length as DCI Formats 0, 1A, 1B. To work around this ambiguity, see the TPC RNTI Range parameter.

The following is a list of all the information contained in the PDCCH section of the DL Decode Info trace.

- RNTI - Radio Network Temporary Identifier. Identifies the intended recipient(s) of a DCI (downlink control information) transmission.
- PBoost (dB) - Autodetected Power Boost value for PDCCH. PBoost (dB) is reported in dB relative to the 0 dB level defined by C-RS Power Boost. See the Downlink Control Channel Properties: Basic tab topic for more information about how the 0 dB level is defined.
- The value reported for PBoost (dB) can be used to verify that the PDCCH Power Boost (dB) +/- Increments (dB) parameter has been set correctly.
- CCEOffst - Control Channel Element Offset Start Index for decoded PDCCH
- L - Aggregation level, which is one of \{1, 2, 4, 8\}.
- A - DCI payload bit length (message+CRC)
- DCIFmt - DCI format, which is one of \{0, 1, 1A, 1B, 1C, 1D, 2, 2A, 3, 3A\}
- RBAssign - Resource block assignment contained in a DCI message
- Nprb - Number of physical resource blocks assigned to PDSCH/PUSCH allocation
- Hop - Indicates whether Frequency Hopping is On or Off when using DCI Format 0 to schedule a PUSCH transmission.
- Type - PDSCH Resource Allocation Type
- lmcs(n) - Modulation and coding for transport block n
- NDI(n) - New Data Indicator for transport block n
- RV(n) - Redundancy Version for transport block n
- TBS(n) - Transport Block Size for transport block n
- CRC(n) - Cyclic Redundancy Check result (Pass/Fail) for PDSCH transport block n, whose allocation is indicated by the PDCCH.
- CRC Pass/Fail metric is only reported when RB Auto Detect Mode is set to Decode PDCCH and PDSCH Bits is set to a value other than None.

- EPRE - average Energy Per Resource Element, per transmit antenna.
- P_A(n) - PDSCH UE-specific relative power level (P_A) for transport block n.
- TBSwap - Transport Block to Codeword Swap flag (present in DCI formats 2 and 2A)
- CShift - UL PUSCH Cyclic Shift value (present in DCI format 0)
- TPC - Transmit Power Control value
- For DCI formats other than 3 and 3A, the TPC value is shown as a 2-bit decimal value (0-3).
- HARQ - Hybrid Automatic Repeat Request value (present in DCI formats 1, 1A, 1B, 1C, 1D, 2, and 2A)
- DAI - Downlink Assignment Index (present in TDD signals only and in DCI formats 0, 1, 1A, 1B, 1D, 2, 2A)
- TPMI - Transmitted Precoding Matrix Indicator (present in DCI formats 1B, 1D, 2, 2A)
- PMI - confirmation of Precoding Matrix Indicator for precoding (present in DCI format 1B)
- PwrOffset - Downlink Power Offset (present in DCI format 1D)
- CQIReq - Uplink Channel Quality Indicator request (present in DCI format 0)
- ScID - Scrambling Identity (present in DCI format 2B). See Section 5.3.3.1.5B of TS 36.212.
- See the nSCID parameter in the LTE Allocation Editor.

PDSCH information

PDSCH information is available when RB Auto Detect Mode is set to Power-Based and when PDSCH Bits is set to a value other than None.

The following is a list of all the information contained in the PDSCH section of the DL Decode Info trace.

- RNTI – Radio Network Temporarily Identifier
- TBS(n) - Transport Block Size for transport block n
- CRC(n) - Cyclic Redundancy Check result (Pass/Fail) for PDSCH transport block n

---

Example

```
:DISP:EVM:TRAC1:FEED "Demod CC0 DL Decode Info1"
```

For Downlink

Downlink Decode Info for NB-IoT

DL Decode Info contains the decoded information from NPBCH, NPDSCH.

The upper section shows the status of the NPBCH, NPDSCH decoders (On or Off).

The lower part of the table shows the decoded information for each frame. The data is color coded to match the color of the corresponding channel in the Frame Summary trace.

A scrollbar appears when the contents are too long to be displayed in the window.

See "Table: SCPI Commands for trace configuration" on page 1293 for more information.

PBCH information

A "CRC Cyclic Redundancy Check Invalid" message is shown when NPBCH CRC fails. Otherwise the decoded NPBCH contents are shown.

The following is a list of all the information contained in the NPBCH section of the DL Decode Info trace.

- FrameNum - system frame number for each frame in the Measurement Interval
- NumTxAnt - number of NRS Cell-specific RS antenna ports
- HyperSFN - the 2 least significant bits of hyper system frame number
- NumRepsOfNPDSCH - number of repetitions for NPDSCH carrying SIB1-NB message.
- SysInfoValueTag - a value tag for comparison with the stored one to indicate if a change has occurred in the SI messages.
- abEnabled - displays whether access barring is enabled
- OpMode - mode of operation information
- RasterOffset - NB-IoT offset from LTE channel raster for in-band and guard-band modes
- eutraCRSSeqInfo - E-UTRA CRS sequence info which is used to index to E-UTRA PRB index for NB-IoT carrier in in-band mode with same PCI
- eutraNumCRSPorts - number of E-UTRA CRS antenna ports for in-band mode with different PCI

NPDCCH information

NPDCCH information is available when PDCCH Bits is set to a value other than None.

The following is a list of all the information contained in the NPDCCH section of the DL Decode Info trace.

- RNTI - Radio Network Temporary Identifier. Identifies the intended recipient(s) of a DCI (downlink control information) transmission.
- PBoost (dB) - Autodetected Power Boost value for NPDCCH. PBoost (dB) is reported in dB relative to the 0 dB level defined by C-RS Power Boost.
- CCEOffst - Control Channel Element Offset Start Index for decoded NPDCCH
- L - Aggregation level, which is one of \{1, 2\}.
- A - DCI payload bit length (message+CRC)
- Idci – Index of DCI in one subframe (0,1)
- DCI - DCI format, which is one of \{N0, N1, N2\}

The following information elements are shown based on the detected DCI format:

DCI Format N0:

- Isc – Subcarriers Indication field for NPUSCH
- RAssign - Resource assignment (I_{RU}) to indicate number of RUs
- Idelay – Index for Schedule Delay
- Imcs - Modulation and coding scheme for transport block
- RV - Redundancy Version for transport block
- Nrep – Number of repetitions for NPUSCH
- NDI - New Data Indicator. When it is set as 1, the corresponding transmission data is new, otherwise it is re-transmitted.
- NSFrep – DCI subframe repetition number
- Nharq – HARQ Process number. The field can only be present when two HARQ Processes state is on

DCI Format N1:

- Iorder – NPDCCH order indicator. When it indicates Random Access Procedure, it is set to 1.
- INFOmcch – Information for SC-MCCH change notification
- When NPDCCH order indicator is set as 1, the following information elements are shown for N1 DCI format:
- PreambleFmt – Preamble format indicator
- Nstart – Starting number of NPRACH repetitions
- Isc – Subcarrier Indication field for NPRACH
- Icarrier – Carrier indication of NPRACH
- RSVD – Reserved field
- Otherwise the following information elements are shown for N1 DCI format:
- Idelay – Index for Schedule Delay
- RAssign - Resource assignment (I_{SF}) to indicate number of subframes
- Imcs - Modulation and coding scheme for transport block
- Nrep – Number of repetitions for NPDSCH
- NDI - New Data Indicator. When it is set as 1, the corresponding transmission data is new, otherwise it is re-transmitted.
- HARQack – HARQ – ACK resource field
- NSFrep – DCI subframe repetition number
- Nharq – HARQ Process number. The field exists when two HARQ Processes state is on

DCI Format N2:

- Flag – Flag for paging / direct indication differentiation, with value 0 for direct indication and value 1 for paging
- INFOmcch – Information for SC-MCCH change notification
- When flag indicates direction, the following information elements are shown for N2 DCI format:
- Direct – Information for Direct indication

- RSVD – Reserved field
- When flag indicates paging, the following information elements are shown for DCI format N2.
- RAssign - - Resource assignment (I_{SF}) to indicate number of subframes
- Imcs - Modulation and coding scheme for transport block
- Nrep – Number of repetitions for NPDSCH
- NSFrep – DCI subframe repetition number

NPDSCH information

NPDSCH information is available when NPDSCH Bits is set to a value other than None and NPDSCH is decoded successfully.

The following is a list of all the information contained in the NPDSCH section of the DL Decode Info trace.

- TBS(n) - Transport Block Size for transport block n
- CRC(n) - Cyclic Redundancy Check result (Pass/Fail) for PDSCH transport block n

---

Example	`:DISP:EVM:TRAC1:FEED "Demod CC0 DL Decode Info1"` For Downlink

Uplink Decode Info

UL Decode Info contains the decoded information from PUCCH and PUSCH.

The upper section shows the status of the PUCCH and PUSCH decoders (On or Off).

The lower part of the table shows the decoded information for each frame.

The data is color coded to match the color of the corresponding channel in the Frame Summary trace. For example, any text that is colored yellow represents information from PUCCH.

Uplink Decoded Information

The decoded information for each frame is denoted by the text Frame Num 0xNNN where NNN is the frame number in hexadecimal format.

Common Information

The following fields in the UL Decode Info table are common to both PUCCH and PUSCH.

- Sfn - the value n indicates the subframe number for the decoded channel information
- RNTI - Radio Network Temporary Identifier. Identifies the UE transmitting in this allocation.
- This parameter is specified for each uplink user using the RNTI field in the LTE Allocation editor.
- Nprb - Number of physical resource blocks assigned to this allocation. This parameter is always equal to 1 for PUCCH.
- Chan - uplink channel type specified as PUSCH or PUCCH (format) where format is the PUCCH format and is one of the following: 1, 1a, 1b, 2, 2a, 2b, 3.

PUCCH Information

Size metrics indicate number of most-significant bits

PUCCH decoding results shown per subframe include:

- HARQ Size - HARQ Ack/Nack Information Size in bits
- HARQ Info - HARQ Ack/Nack Information Word value (hex representation)

Due to joint CQI / PMI and HARQ-ACK encoding in Extended CP mode, any associated HARQ-ACK Info bits are also marked as questionable when CQI / PMI Info Size is set to Auto. To avoid this, specify manually the CQI / PMI Info Size parameter.

When HARQ-ACK Info Size set to Auto, the demodulator decodes the maximum number of HARQ-ACK bits (21 bits) since it is not possible to determine the actual number of HARQ-ACK bits. This allows you to view all potential HARQ-ACK bits and validate them against the expected bits. Also, since the actual number of HARQ-ACK bits is unknown, a question mark (?) is appended to the HARQ Info field.

The following table shows the possible formats that PUCCH can be autodetected as when PUCCH autodetection is enabled:

HARQ-ACK Info Size	Normal CP	Extended CP
12	3	3
2	1b,2b	1b,2
1	1a,2a	1a,2
0	1,2	1,2

- CQI / PMI Size - Channel Quality & Precoding Matrix Indicator Information Size in bits

- CQI / PMI Info - Channel Quality & Precoding Matrix Indicator Information bits (hex representation). The CQI / PMI Info field contains space for eight 32-bit words of data for alignment purposes. The CQI / PMI bits are placed in the most-significant section of the bit field.

When CQI / PMI Info Size is set to Auto, the demodulator decodes the maximum number of CQI/PMI bits (11 bits) since it is not possible to determine the actual number of CQI/PMI bits. This allows you to view all potential CQI/PMI bits and validate them against the expected bits. Also, since the actual number of CQI/PMI bits is unknown, a question mark (?) is appended to the CQI / PMI Info field. You can manually specify the CQI / PMI Info Size parameter to validate any bits marked as questionable.

Due to joint CQI / PMI and HARQ-ACK encoding in Extended CP mode, any associated HARQ-ACK Info bits are also marked as questionable when CQI / PMI Info Size is set to Auto. To avoid this, manually specify the CQI / PMI Info Size parameter.

When CQI / PMI Info Size is manually specified and decoding the CQI / PMI bits results in a CRC failure or detected bit errors, the letter F is appended to the bits to indicate decode failure. In this case, you must confirm that the manually specified CQI / PMI Info Size matches the test signal.

- SR Size - Scheduling Request Information Size in bits \{0 = SR not present ; 1 = SR present\}
- SR Info - Scheduling Request Information Word value (hex representation)

\{0 = expected SR BPSK sym d(0) fixed encoding; 1 = unexpected SR BPSK sym d(0) fixed encoding\}

- nPUCCH(1) - Resource index for PUCCH formats 1/1a/1b (decimal representation)
- nPUCCH(2) - Resource index for PUCCH formats 2/2a/2b (decimal representation)
- nPUCCH(3) - Resource index for PUCCH format 3 (decimal representation)

Decoded PUCCH HARQ-ACK, CQI / PMI, and SR information bits are aligned in the most-significant bits within the respective Info hexadecimal value.

PUSCH Information

Size metrics indicate number of most-significant bits

This trace shows the following PUSCH channel decoded message content for each subframe:

- HARQ-ACK Size - HARQ Ack/Nack Information Size in bits
- HARQ-ACK Info - HARQ Ack/Nack Information Word value (hex representation)
- CQI / PMI Size - Channel Quality & Precoding Matrix Indicator Information Size in bits. The CQI / PMI Info field contains space for eight 32-bit words of data for alignment purposes. The CQI / PMI bits are placed in the most-significant section of the bit field.
- CQI / PMI Info - Channel Quality & Precoding Matrix Indicator Information Word value (hex representation)
- RI Size - Rank Indicator Information Size
- RI Info - Rank Indicator Information Word value (hex representation)
- Imcs(n) - Modulation and Coding for transport block n, where n = 1 only for 3GPP Rel 8

For UL PUSCH 16QAM transmissions, which are encoded with IMCS = 20, the table reports IMCS = 21 as the value resulting in a successful PUSCH decode (CRC Pass). This is because TS 36.213, Section 8.6.1, Table 8.6.1-1 defines the same transport block size (ITBS = 19) for both IMCS = 20 and 21 for 16QAM PUSCH transmissions and the software has been configured to show the highest possible IMCS when there is ambiguity.

- RV(n) - Redundancy Version for transport block n, where n = 1 only for 3GPP Rel 8
- TBS(n) - Transport Block Size for transport block n, where n = 1 only for 3GPP Rel 8. TBS(n) is expressed in decimal format.
- CRC(n) - Cyclic Redundancy Check Pass/Fail for PUSCH transport block n
- The CRC Pass/Fail data result is reported when PUSCH Bits is set to a value other than Mapped.

When PUSCH HARQ-ACK, RI, or CQI / PMI Info Size is specified manually, if decoding results in either a CRC failure or there are detected bit errors for the corresponding information bits, the demodulator appends the letter F after the decoded bits for the appropriate Info field in UL Decode Info table, indicating decode failure. In this case, confirm that the Info Size and Offset Index parameters match the expected signal content.

When the Auto checkbox is enabled for the HARQ-ACK, RI, or CQI / PMI Info Size parameters within Decode tab, the demodulator attempts to auto detect the appropriate multiplexed control region information size as far as possible.

For certain test signal configurations there may not be an adequate number of mapped control information resource elements for reliable auto detection. In this situation, autodetected HARQ-ACK, RI, or CQI / PMI Info Size is questionable, and a question mark (?) is appended to the bits for the corresponding Info field in the UL Decode Info table, indicating that the decoded bits are questionable.

Any bits are marked as questionable should then be validated against expected test signal content. Note that you can manually specify HARQ-ACK, RI, or CQI / PMI Info Size parameters to validate any questionable size results.

Decoded PUCCH HARQ-ACK, CQI / PMI, and RI information bits are aligned in the most-significant bits within the respective Info hexadecimal value.

Example

```
:DISP:EVM:TRAC1:FEED "Demod CC0 UL Decode Info1"
```

For Uplink

Uplink Decode Info for NB-IoT

UL Decode Info contains the decoded information from NPUSCH.

The upper section shows the status of the NPUSCH decoders (On or Off).

The lower part of the table shows the decoded information for each transport block.

This trace shows the following NPUSCH channel decoded message content for each transport block:

- NPUSCH Config Params - display configuration parameters of NPUSCH channel such as Nru, Nrep etc.
- NPUSCH TBn - the value n indicates the transport block number for the decoded channel information
- RNTI - Radio Network Temorary Identifier, this is parameter specified in uplink NB-IoT channel allocation.
- HARQ-ACK Info - HARQ Ack/Nack Information Word value (hex representation)

Only NPUSCH format 2 carries UL control information (UCI), which is used to an acknowledgement of a DL transmission. So HARQ-ACK Info is displayed out for NPUSCH format 2 only.

- Imcs - Modulation and Coding for transport block
- TBS - Transport Block Size for transport block . TBS is expressed in decimal format.

NPUSCH transmission is separated in j blocks which each block includes specified length of consecutive NB-IoT UL slots, where j is related to Nrep parameter. The computation of j sees the 3GPP 36.213 16.5.1.2. Because each transmission block has its own RV and CRC, they are displayed on UL Decode Info table separately based on NPUSCH transmission blocks.

- Blkj - the value j indicates the code block number
- NumSlots - specifies detected physical resource allocated to the NPUSCH transmission block
- RV - Redundancy Version for transport block of each NPUSCH transmission block
- CRC - Cyclic Redundancy Check Pass/Fail for NPUSCH transport block of each NPUSCH transmission block

The CRC Pass/Fail data result is reported when NPUSCH Bits is set to a value other than Mapped.

Uplink Decode Info for LTE V2X

UL Decode Info contains the decoded information from PSCCH

The upper section shows the status of the PSCCH decoders (On or Off).

The lower part of the table shows the decoded information for each frame. The data is color coded to match the color of the corresponding channel in the Frame Summary trace.

A scrollbar appears when the contents are too long to be displayed in the window. You can scroll the window without a mouse with the following steps.

See "Table: SCPI Commands for trace configuration" on page 1293 for more information.

PSCCH information

PSCCH information is available when PSCCH Bits is set to a value other than None

A "CRC Invalid" message is shown when PSCCH CRC fails. Otherwise the decoded PSCCH contents are shown per subframe.

The following is a list of all the information contained in the PSCCH section of the UL Decode Info trace.

Sfn - the value n indicates the subframe number for the decoded channel information

Nprb - Number of physical resource blocks assigned to this allocation. This parameter is always equal to 4 for PSCCH.

SCILen - SCI message payload bit length

SCIFmt - SCI format, which is one of \{0,1\}

PRI -3 bits to represent priority of V2X message

RRsvn - 4 bits to represent the resource reservation interval in ms unit.

RIV - Resource indication value to indicate the frequency resource location of the initial transmission and retransmission. The value corresponds to a starting subchannel index and a length in terms of contiguously allocated subchannels.

SFgap - 4 bits to indicate subframe time gap between initial transmission and retransmission (no retrans; retrans)

Lmcs - Modulation and coding for transport block

Iretrans - 1 bit to indicate retransmission index

TxFmt - 1 bit to indicate transmission format. The field is present when rate matching and TBS scaling functionality is supported, otherwise invalid string is displayed. Where value 0 represents puncturing and no TBS-scaling and value 1 represents rate-matching and TBS scaling.

RV - Redundancy Version for transport block

XID - Destination Identity. The field is computed by the decimal representation of CRC on the PSCCH channel. The XID is used to generate the scrambling sequence of PSSCH transmitted in the same frame with PSCCH.

TBS - Transport Block Size for transport block

CRC - Cyclic Redundancy Check result (Pass/Fail) for PSSCH transport block , whose allocation is indicated by the PSCCH.

XID, TBS, CRC Pass/Fail metric are only reported when RB Auto Detect Mode is set to Decode PSCCH or PSSCH Bits is set to a value other than None.

Downlink UE-RS Weights

This table shows shows the subcarrier locations and weights for all UE-specific Reference Signal resource elements on a UE-RS antenna port.

The lower section of the UE-specific RS Weights summary indicates whether the UE-RS analysis is On or Off. The upper part of the table is divided into sections, one for each PDSCH allocation.

Each section contains the following information:

- UserXX - indicates which PDSCH user allocation the section belongs to. 'XX' is the user allocation index from the Composite Include list.
- UERS-RBs - total number of UE-RS Resource Blocks per subframe
- When a PDSCH allocation is transmitted on UE-RS antenna ports, the following information is present in the corresponding section in the UE-specific RS Weights summary table.
- Frequency index for UE-RS weight

- hn.w (part) or wn (part) - weights applied to the UE-RS subcarriers, averaged for each resource block or for the user, depending on the setting of the Weights Display Mode parameter.

Example	`:DISP:EVM:TRAC1:FEED "Demod CC0 UE-specific RS Weights1"` For Downlink

Downlink Cross-Carrier Summary

This table shows summary information about the Time Alignment Error (TAE) and Channel Power for each component carrier (CCx) relative to the selected Reference Component Carrier (Reference CC).

The TAE for the CCx is calculated by subtracting the Time Offset of the reference CC from the Time Offset of the CCx.

The relative Channel Power for the CCx is calculated by subtracting the Channel Power of the reference CC from the Channel Power of the CCx.

Example	`:DISP:EVM:TRAC1:FEED "Cross-CC Summary1"` For Downlink

3.8.3.5 Response

Displays the Trace Data choices that show equalizer response results.

Eq Ch Frequency Response

Eq Chan Freq Resp shows the channel frequency response calculated from the reference signal (C-RS for downlink and DM-RS for uplink) using the time data in the Search Time trace (capture length primarily determined by Result Length).

For downlink signals, Eq Chan Freq Resp is calculated from the reference C-RS/Rx path (determined by the reference measurement channel and the reference C-RS port). To view the equalization frequency response for all C-RS/Rx paths simultaneously, see MIMO Eq Chan Freq Resp.

The Equalizer Training settings determine data that is shown on the Eq Chan Freq Resp trace. When Equalizer Training is set to Off or RS, the Eq Chan Freq Resp trace shows the equalization frequency response calculated from the reference signal. When RS+Data is selected, the Eq Chan Freq Resp trace shows the equalization frequency response calculated from the reference signal and the data subcarriers (PDSCH for downlink and PUSCH for uplink). Also, the moving average filter setting affects the equalizer frequency response and thus affects the Eq Chan Freq Resp trace as well.

This trace is always calculated from an OFDM symbol FFT taken from the center of the cyclic prefix. This is different from most Demod Trace Data and Layer Trace Data, which use the Symbol Timing Adjust parameter to determine the location of the symbol FFT. See the Symbol Timing Adjust topic for more information.

This trace is affected by Averaging.

The Equalizer Training parameter determines whether the equalization is applied to the signal.

Eq Chan Freq Resp can be used to view the frequency response of the transmitter's filters when the transmitter is connected directly to the measurement hardware.

Eq Chan Freq Resp is affected by the Normalize Chan. Freq. Resp. parameter. Eq Chan Freq Resp is always shown with an average per-subcarrier power gain of 0 dB. When the Normalize Chan. Freq. Resp. is selected any phase, frequency, or timing offset in the channel frequency response is removed. When Normalize Chan. Freq. Resp. is cleared, any phase, frequency, or timing offset present in the channel frequency response is not removed.

Example	`:DISP:EVM:TRAC1:FEED "Demod CC0 Eq Chan Freq Resp1"` For Downlink and Uplink

Inst Eq Ch Frequency Response

Inst Eq Chan Freq Resp always shows the channel frequency response of the current measurement sweep (Inst Eq Chan Freq Resp is a non-averaged version of Eq Chan Freq Resp).

Example	`:DISP:EVM:TRAC1:FEED "Demod CC0 Inst Eq Chan Freq Resp1"` For Downlink and Uplink

Eq Ch Frequency Resp Diff

Eq Chan Freq Resp Diff shows the channel response's rate of change with respect to frequency, and is computed by subtracting the channel frequency response from a shifted version of itself (by one subcarrier).

This trace can be used to find the source of a spur or other problem in a signal that causes high EVM. When the problem is in the channel (that is, another transmitter is nearby), both the Error Vector Spectrum and the channel frequency response difference are affected. When the problem is in the transmitted signal (but not in the channel or in reference signal since the reference signal is used to calculate the channel frequency response), only the Error Vector Spectrum is affected.

To view the equalization frequency response difference for all C-RS/Rx paths, see MIMO Eq Chan Freq Resp Diff.

This trace is affected by Averaging.

Example	`:DISP:EVM:TRAC1:FEED "Demod CC0 Eq Chan Freq Resp Diff1"` For Downlink and Uplink

Inst Eq Ch Freq Resp Diff

As Eq Ch Resp Diff, but this trace is not averaged

Example	`:DISP:EVM:TRAC1:FEED "Demod CC0 Inst Eq Chan Freq Resp Diff1"` For Downlink and Uplink

Eq Impulse Response

Eq Impulse Response shows the channel equalization impulse response, which is the time-domain version of the channel equalization frequency response shown in the Eq Chan Freq Resp trace. The equalizer impulse response is computed by taking the reciprocal of the channel equalizer frequency response, performing data filtering and computations that produce a result length of 4x the FFT length, and then converting to the time domain.

Example	`:DISP:EVM:TRAC1:FEED "Demod CC0 Eq Impulse Response1"` For Downlink and Uplink

Eq Ch Freq Resp Per Slot

Eq Chan Freq Resp Per Slot shows the frequency response of the channel for each slot in the Measurement Interval.

Each slot's channel frequency response is plotted as a separate line with a different color. The colors are used to visually separate each slot's channel frequency response and have no correspondence to other traces' or channels' colors.

This trace can be used to measure Spectral Flatness as defined in Section 6.5.2.4 of 3GPP TS 36.521-1.

The Eq Chan Freq Resp Per Slot trace contains an automatically generated ± 2 dB limit line for each slot. Any points that traverse above their respective limit line is highlighted in red. The limit lines are drawn in red.

Example	`:DISP:EVM:TRAC1:FEED "Demod CC0 Per Slot Eq Chan Freq Resp1"` For Downlink and Uplink

3.8.3.6 MIMO (Downlink)

Displays the Trace Data choices that show MIMO results for downlink signals.

MIMO Info Table

MIMO Info Table shows information about the C-RS antenna port transmissions detected by the demodulator.

The first column contains the name of the data result, and the other columns display the value of the data result for each C-RS antenna port signal received on a VSA measurement channel (Rx0 = Measurement Channel 1). When there are multiple measurement channels, a horizontal section is added to the table for each additional measurement channel.

The C-RS results in this summary table are calculated regardless of successful demodulation, which means user mappings do not need to be defined for these data results to be calculated. However, the component carrier does need to be demodulated for the IQ impairment results to be calculated, since the IQ data results are calculated from the PDSCH subcarriers.

RSEVM and RSCTE are calculated with a Symbol Timing Adjust setting of EVM Window Center. When Symbol Timing Adjust is set to a value other than EVM Window Center, these data results may not match the corresponding reference signal EVM and Common Tracking Error data results in the Error Summary and Frame Summary tables.

Below is a table of data results provided and their descriptions.

Data result	Description
IQGainImb (dB)	IQ gain imbalance
IQQuadErr (deg)	IQ quadrature erro
IQTimSkew (nsec)	IQ timing skew
RSCTE (%rms)	Average (RMS) C-RS Common Tracking Error
RSEVM (%rms or dB)	Average (RMS) C-RS EVM Units are determined by the Report EVM in dB parameter
RSFreq (Hz)	C-RS frequency shift error
RSPhase (degrees)	Average (RMS) C-RS phase error
RSPwr (dB)	Average (RMS) C-RS signal power
RSSymClk (ppm)	Average C-RS symbol clock error
RSTiming (seconds)	C-RS timing error

RSPwr, RSTiming, RSPhase, RSSymClk and RSFreq are set to zero for the reference C-RS/Rx path determined by the Ref Meas Channel and Ref C-RS Port parameters.

The values of these data results for other C-RS/Rx paths are reported relative to the reference path.

Example `:DISP:EVM:TRAC1:FEED "MIMO CC0 Info Table1"`

For Downlink

MIMO Ch Freq Resp

MIMO Eq Chan Freq Resp shows the channel frequency response for all C-RS/Rx paths. Only results for antenna port transmissions that have been detected are shown on this trace.

This trace is always calculated from an OFDM symbol FFT taken from the center of the cyclic prefix. This is different from most Demod Trace Data and Layer Trace Data, which use the Symbol Timing Adjust parameter to determine the location of the symbol FFT. See the Symbol Timing Adjust topic for more information.

The MIMO Chan Eq Freq Resp trace is affected by the Normalize Chan. Freq. Resp. parameter. When Normalize Chan. Freq. Resp. is selected, the channel frequency response of each C-RS/Rx path is normalized to have an average per-subcarrier gain of 0 dB. In addition, any frequency, phase, or time offset present in the channel frequency responses is removed. When the Normalize Chan. Freq. Resp. parameter is cleared, only the channel frequency response of the reference C-RS/Rx path is normalized to have an average per-subcarrier gain of 0 dB. The relative power information among all the paths is maintained and any frequency, phase, or timing offset present is preserved.

Example `:DISP:EVM:TRAC1:FEED "MIMO CC0 Eq Chan Freq Resp1"`

For Downlink

MIMO Ch Freq Resp Diff

MIMO Eq Chan Freq Resp Diff shows the slope of the channel frequency response for all C-RS/Rx paths. Only results for antenna port transmissions that have been detected are shown on this trace.

This trace is always calculated from an OFDM symbol FFT taken from the center of the cyclic prefix. This is different from most Demod Trace Data and Layer Trace Data, which use the Symbol Timing Adjust parameter to determine the location of the symbol FFT. See the Symbol Timing Adjust topic for more information.

Example `:DISP:EVM:TRAC1:FEED "MIMO CC0 Eq Chan Freq Resp Diff1"`

For Downlink

MIMO EQ Impulse Resp

MIMO Eq Impulse Response shows the equalizer impulse response for all C-RS/Rx paths. Only results for antenna port transmissions that have been detected are shown on this trace.

This trace is always calculated from an OFDM symbol FFT taken from the center of the cyclic prefix. This is different from most Demod Trace Data and Layer Trace Data, which use the Symbol Timing Adjust parameter to determine the location of the symbol FFT.

Example	`:DISP:EVM:TRAC1:FEED "MIMO CC0 Eq Impulse Response1"` For Downlink

MIMO Common Tracking Error

MIMO Common Tracking Error shows the common tracking error data for all C-RS/Rx paths. Only results for antenna port transmissions that have been detected are shown on this trace. See the antenna detection threshold topic for more information.

MIMO Common Tracking Error trace data is always calculated from an OFDM symbol FFT taken from the center of the cyclic prefix. This is different from most Demod Trace Data and Layer Trace Data (including the non-MIMO Common Tracking Error trace) which use the Symbol Timing Adjust parameter to determine the location of the symbol FFT.

Example	`:DISP:EVM:TRAC1:FEED "MIMO CC0 Common Tracking Error1"` For Downlink

3.8.3.7 ACP

Provides access to ACP summary table data. These results are available when the ACP function is enabled for a particular trace, and it enables you to display the results in another trace.

You can use the following SCPI to set the display.

Example	`:DISP:EVM:TRAC3:FEED "Acp Summary For Trace2"`

3.8.3.8 OBW

Provides access to OBW summary table data. These results are available when the OBW function is enabled for a particular trace, and it enables you to display the results in another trace.

You can use the following SCPI to set the display.

Example	`:DISP:EVM:TRAC3:FEED "Obw Summary For Trace2"`

3.8.3.9 Marker Table

The marker table is shown.

The Marker should be turned on to show valid marker values.

Example	`:DISP:EVM:TRAC1:FEED "Marker"`

3.8.3.10 No Data

Enables you to turn off trace computations. Measurement results are not computed unless assigned to a trace. No Data lets you increase measurement speed by turning off post-processing calculations that are not needed.

Example	`:DISP:EVM:TRAC1:FEED "No Data"`

3.8.3.11 Config Window

Allows you to configure the window display and carrier parameters for ACP and OBW functions. There are three tabs on this Dialog:

- "DigitalDemod" on page 1347
- "ACPSetup" on page 1354
- "OBWSetup" on page 1360

Notes	This control is available for EVM measurement

DigitalDemod

Accesses settings that control certain elements of displays of digitally demodulated trace data.

Notes	This control is available for EVM measurement

Symbol Shape

Enables you to display dots, bars, or nothing (none) at symbol locations (if the trace contains demodulated time-domain data) for all time-domain displays except IQ diagrams. This parameter enables you to select the symbol shape for the selected trace.

If you select bars, vertical lines (bars) are drawn from the baseline to the symbol location on the trace. The baseline is 0 for all traces that have coordinates other than log (dB). The baseline is the bottom of the trace box for traces that have log (dB) coordinates.

With IQ diagrams, displaying vertical bars is meaningless. Therefore, selecting bars displays dots in IQ diagrams.

With constellation diagrams, selecting none is the same as selecting bars - you cannot turn off the dots in a constellation diagram.

Remote Command	`:DISPlay:EVM:WINDow[1]|2|…|6:DDEMod:SYMBol BARS | DOTS | OFF` `:DISPlay:EVM:WINDow[1]|2|…|6:DDEMod:SYMBol?`
Example	`:DISP:EVM:WIND2:DDEM:SYMB DOTS` `:DISP:EVM:WIND2:DDEM:SYMB?`
Preset	BARS
State Saved	Yes
Backwards Compatibility SCPI	`:DISPlay:EVM:TRACe[1]|2|…|6:DDEMod:SYMBol`

Ideal State Shape

Enables you to choose between a cross, circle, or none to represent the ideal state on the selected trace. Digital Demodulation shows you the location of all ideal symbol states in an I-Q or constellation diagram.

Remote Command	`:DISPlay:EVM:WINDow[1]|2|…|6:DDEMod:SYMBol:SHAPe CIRCle | CROSs | OFF` `:DISPlay:EVM:WINDow[1]|2|…|6:DDEMod:SYMBol:SHAPe?`
Example	`:DISP:EVM:WIND2:DDEM:SYMB:SHAP CIRC` `:DISP:EVM:WIND2:DDEM:SYMB:SHAP?`
Preset	CIRC
State Saved	Yes
Backwards Compatibility SCPI	`:DISPlay:EVM:TRACe[1]|2|…|6:DDEMod:SYMBol:SHAPe`

Ideal State Size

Determines the ideal state size, as a percentage of the maximum ideal state distance from the origin (the same way Error Vector Magnitude is defined). Ideal states are shown as circles or crosses in Vector and constellation diagrams, as determined by the Ideal State Shape setting.

The ideal state is where symbols occur if your signal is without error. Showing the ideal states gives a visual indication of the quality of your signal.

You can use this feature to determine if symbols have an EVM above a specified Value. For example, to see if any symbols have an EVM greater than 10%, set the state size to 10% and select Circle as the shape. Any symbols that fall outside of the circle (other than SYNC or PILOT symbols) have an EVM greater than 10%.

Remote Command	`:DISPlay:EVM:WINDow[1]|2|…|6:DDEMod:SYMBol:SIZE <real>` `:DISPlay:EVM:WINDow[1]|2|…|6:DDEMod:SYMBol:SIZE?`
Example	`:DISP:EVM:WIND2:DDEM:SYMB:SIZE 10` `:DISP:EVM:WIND2:DDEM:SYMB:SIZE?`
Notes	Parameter is interpreted as a percent, for example, if you want the ideal size to be 10%, send 10, not 0.1
Preset	5
State Saved	Yes
Min	0.1
Max	50
Backwards Compatibility SCPI	`:DISPlay:EVM:TRACe[1]|2|…|6:DDEMod:SYMBol:SIZE`

Symbol Table Format

Enables you to choose the format in which symbol table data is displayed, when the modulation format encodes 4 or more bits per symbol. You can choose binary or hexadecimal. Binary symbol data is padded with leading zeros to make a multiple of 4 bits before conversion to hexadecimal. For example, for 16 QAM format, each 4-bit symbol is displayed as 2 hex digits.

- Binary Format: The symbol data bit format is binary and each character represents a binary digit. The number to the left of each row indicates the bit offset of the first bit in the row.
- Hexadecimal Format: The symbol data bit format is hexadecimal and each character represents a hexadecimal digit. The number to the left of each row indicate the symbol offset of the first symbol in the row.

NOTE **There must be at least 4 bits per symbol to use the hexadecimal format, that is, symbols that have less than 4 bits per symbol are only displayed in binary format regardless of the Symbol Table Format setting.**

This parameter is valid only when:

- The active trace is a symbol table, and
- The current demodulation format supports hexadecimal, the demodulation format's bits per symbol is equal to or greater than four.

Remote Command	`:DISPlay:EVM:WINDow[1]|2|…|6:DDEMod:SYMBol:FORMat HEXadecimal | BINary` `:DISPlay:EVM:WINDow[1]|2|…|6:DDEMod:SYMBol:FORMat?`
Example	`:DISP:EVM:WIND2:DDEM:SYMB:FORM BIN` `:DISP:EVM:WIND2:DDEM:SYMB:FORM?`
Preset	HEX
Backwards Compatibility SCPI	`:DISPlay:EVM:TRACe[1]|2|…|6:DDEMod:SYMBol:FORMat`

Eye Length

Controls how wide (in symbol periods) the eye and trellis diagrams are, for the selected trace.

Remote Command	`:DISPlay:EVM:WINDow[1]|2|…|6:DDEMod:EYE:COUNt <real>` `:DISPlay:EVM:WINDow[1]|2|…|6:DDEMod:EYE:COUNt?`
Example	`:DISP:EVM:WIND2:DDEM:EYE:COUN 3` `:DISP:EVM:WIND2:DDEM:EYE:COUN?`
Preset	2
State Saved	Yes
Min	0.1
Max	40
Backwards Compatibility SCPI	`:DISPlay:EVM:TRACe[1]|2|…|6:DDEMod:EYE:COUNt`

Time Unit

Enables you to select the time units that are applied to x-axis annotations and marker readouts for the selected trace, whenever it is assigned data with (demodulation) symbol information. The available measurement units are sym (symbols) or sec (seconds).

Remote Command	`:DISPlay:EVM:WINDow[1]|2|…|6:DDEMod:UNIT:TIME SEC | SYMBol` `:DISPlay:EVM:WINDow[1]|2|…|6:DDEMod:UNIT:TIME?`
Example	`:DISP:EVM:WIND2:DDEM:UNIT:TIME SYMB` `:DISP:EVM:WIND2:DDEM:UNIT:TIME?`
Preset	SYMB
State Saved	Yes
Backwards Compatibility SCPI	`:DISPlay:EVM:TRACe[1]|2|…|6:DDEMod:UNIT:TIME`

Freq Unit

Enables you to select the frequency units that are applied to x-axis annotations and marker readouts for the selected trace, whenever it is assigned data with (demodulation) carrier information. The available measurement units are Carrier or Hz.

Remote Command	`:DISPlay:EVM:WINDow[1]|2|…|6:DDEMod:UNIT:FREQuency CARRier | HZ` `:DISPlay:EVM:WINDow[1]|2|…|6:DDEMod:UNIT:FREQuency?`
Example	`:DISP:EVM:WIND2:DDEM:UNIT:FREQ CARR` `:DISP:EVM:WIND2:DDEM:UNIT:FREQ?`
Preset	CARR
State Saved	Yes
Backwards Compatibility SCPI	`:DISPlay:EVM:TRACe[1]|2|…|6:DDEMod:UNIT:FREQuency`

Avg Line

Controls whether or not the average line is visible on certain demodulation analysis traces such as Error Vector Time and Error Vector Spectrum in Digital Demod measurements. These traces have 2-dimensional domains; typically subcarriers (frequency) and symbol times. Since the result can only be shown with one of these dimensions on the x-axis, the other dimension is placed on the z-axis. Since all the z-axis values are overlapped, an average is calculated for all z values at each x value and the average is normally displayed as a line in front of trace. The average line display can be turned on or off using this control.

Remote Command	`:DISPlay:EVM:WINDow[1]|2|…|6:DDEMod:ALINe OFF | ON | 0 | 1`

	`:DISPlay:EVM:WINDow[1]|2|…|6:DDEMod:ALIN?`
Example	`:DISP:EVM:WIND2:DDEM:ALIN OFF` `:DISP:EVM:WIND2:DDEM:ALIN?`
Preset	1
State Saved	Yes
Backwards Compatibility SCPI	`:DISPlay:EVM:TRACe[1]|2|…|6:DDEMod:ALINe`

Phase/Trellis Offset

Only used if the trace format is Wrap Phase, Unwrap Phase, or Trellis. For Unwrap Phase or Trellis traces, the phase offset value is added to the existing phase at each point. For example, if you are viewing an Unwrapped Phase trace, setting the Phase/Trellis Offset to 5 degrees moves the entire trace up 5 degrees (and changes the value displayed by a marker by the same amount). For Wrap Phase traces the phase offset only affects the phase wrap point, not the underlying data. The point at which the phase wraps is 180 degrees plus the phase offset. For example, suppose you have a marker on a Wrap Phase trace whose phase offset is 0 and the marker is showing -3 degrees. The trace data is all confined within (-180, 180] degrees. If you then change the phase offset to 180 degrees, then the Wrap Phase trace shows values within the interval (0, 360] degrees and the marker value is displayed as 357 degrees, which is the wrapped equivalent of -3 degrees.

Remote Command	`:DISPlay:EVM:WINDow[1]|2|…|6:FORMat:PHASe:OFFSet <real>` `:DISPlay:EVM:WINDow[1]|2|…|6:FORMat:PHASe:OFFSet?`
Example	`:DISP:EVM:WIND3:FORM:PHAS:OFFS 31` `:DISP:EVM:WIND3:FORM:PHAS:OFFS?`
Preset	0
State Saved	Yes
Min	-1E+8
Max	1E+8
Backwards Compatibility SCPI	`:DISPlay:EVM:TRACe[1]|2|…|6:FORMat:PHASe:OFFSet`

Unwrap Phase Ref

Enables you to designate the point (x-axis) value about which phase values are to be unwrapped. That is, the phase at the designated reference is within -180 to 180 degrees, and phase varies smoothly without jumps around that point.

Remote Command	`:DISPlay:EVM:WINDow[1]|2|…|6:FORMat:PHASe:UNWRap:REFerence <real>` `:DISPlay:EVM:WINDow[1]|2|…|6:FORMat:PHASe:UNWRap:REFerence?`
Example	`:DISP:EVM:WIND3:FORM:PHAS:UNWR:REF 24.5E6` `:DISP:EVM:WIND3:FORM:PHAS:UNWR:REF?`
Preset	0
State Saved	Yes
Min	-9.9e37
Max	9.9e37
Backwards Compatibility SCPI	`:DISPlay:EVM:TRACe[1]|2|…|6:FORMat:PHASe:UNWRap:REFerence`

Group Delay Aperture

Used when the trace format is Group Delay. The aperture is specified as a percentage of the current frequency span for frequency-domain data. It is specified as a percentage of the time-record length for time-domain data.

When group delay is calculated for a given point (which can be a time- or frequency-domain point), the aperture is centered at that point. Larger apertures decrease resolution, but they increase the smoothing of the group-delay trace.

The point plotted for group delay is located between the data points used to calculate it. For example, in the frequency domain, the group delay for 100 Hz can be calculated by measuring the change in phase between 90 and 110 Hz. If you had specified a start frequency of 90 Hz, 100 Hz would be the first point with group delay data. This results in a trace that does not extend to the edges of the screen (more noticeable as the delay aperture increases).

Note that the smallest aperture that you can select depends on the number of frequency points. If you select an invalid aperture, the analyzer automatically selects the smallest valid aperture.

Remote Command	`:DISPlay:EVM:WINDow[1]|2|…|6:FORMat:DELay:APERture <real>` `:DISPlay:EVM:WINDow[1]|2|…|6:FORMat:DELay:APERture?`
Example	`:DISP:EVM:WIND3:FORM:DEL:APER 1` `:DISP:EVM:WIND3:FORM:DEL:APER?`
Notes	Parameter is interpreted as a percent, e.g., if you want the group delay aperture to be 1%, send 1, not 0.01
Preset	0.5
State Saved	Yes
Min	0.00390625

Max	16
Backwards Compatibility SCPI	`:DISPlay:EVM:TRACe[1]|2|…|6:FORMat:DELay:APERture`

ACPSetup

This tab enables you to turn on the ACP function on the selected trace and set up carrier parameters. One reference channel and up to 5 offset frequencies can be defined, and ACP is calculated for bands both above and below the reference frequency for each offset.

The adjacent channel power (ACP) function calculates the power in a reference band of frequencies as well as bands of frequencies offset from the reference, and calculates the ratio of each offset band to the reference band power.

An ACP measurement can be defined for each trace, although it is only active on frequency-domain trace data. The reference and offset frequency bands defined by the ACP measurement are shown as gold bars overlaying the trace display. To see tabular data showing power and power ratio results, you can assign the ACP Summary (Trace m) to a different trace. For example, you can assign Spectrum data in Window 2, turn on and define an ACP measurement on Trace 2, assign the ACP Summary for Trace 2 to TRACe3, and use a 2x2 display to view both at the same time, as shown below.

```
Reference Bandwidth =  1.0000        MHz
Reference Alpha     =  ***
Reference Power     =  -10.          dBm

                    —1—       —2—    —3—    —4—    —5—
Offset   (Hz)       3.000  M*  ***    ***    ***    ***
BW(Hz)              1.000  M   ***    ***    ***    ***

Notes	This control is available for EVM measurement

ACP On/Off

Turns the ACP function on or off for the selected trace.

Remote Command	`:CALCulate:EVM:WINDow[1]|2|…|6:ACPower:STATe OFF | ON | 0 | 1` `:CALCulate:EVM:WINDow[1]|2|…|6:ACPower:STATe?`
Example	`:CALC:EVM:WIND1:ACP:STATE ON` `:CALC:EVM:WIND1:ACP:STATE?`
Preset	0
State Saved	Yes
Backwards Compatibility SCPI	`:CALCulate:EVM:TRACe[1]|2|…|6:ACPower:STATe`

Carrier Freq

Enables you to enter the carrier frequency of the reference channel for the ACP measurement. The carrier frequency is relative to the center frequency of the measurement. There is only one available reference carrier.

Remote Command	`:CALCulate:EVM:WINDow[1]|2|…|6:ACPower:CARRier:FREQuency <freq>` `:CALCulate:EVM:WINDow[1]|2|…|6:ACPower:CARRier:FREQuency?`
Example	`:CALC:EVM:WIND1:ACP:CARR:FREQ 100 KHZ` `:CALC:EVM:WIND1:ACP:CARR:FREQ?`
Preset	0
State Saved	Yes
Min	-9.9e37
Max	9.9e37
Backwards Compatibility SCPI	`:CALCulate:EVM:TRACe[1]|2|…|6:ACPower:CARRier:FREQuency`

Carrier Meas Noise BW

Enables you to define the measurement noise bandwidth of the reference channel.

Remote Command	`:CALCulate:EVM:WINDow[1]|2|…|6:ACPower:CARRier:BANDwidth|BWIDth:INTegration <bandwidth>` `:CALCulate:EVM:WINDow[1]|2|…|6:ACPower:CARRier:BANDwidth|BWIDth:INTegration?`
Example	`:CALC:EVM:WIND1:ACP:CARR:BAND:INT 1 MHZ`

	`:CALC:EVM:WIND1:ACP:CARR:BAND:INT?`
Preset	1000000
State Saved	Yes
Min	-9.9e37
Max	9.9e37
Backwards Compatibility SCPI	`:CALCulate:EVM:TRACe[1] | 2 | … | 6:ACPower:CARRier:BANDwidth | BWIDth:INTegration`

Carrier RRC Weighting

Turns on or off RRC weighting for the reference (carrier) power measurement.

Remote Command	`:CALCulate:EVM:WINDow[1]|2|…|6:ACPower:CARRier:FILTer:RRC:STATe OFF | ON | 0 | 1` `:CALCulate:EVM:WINDow[1]|2|…|6:ACPower:CARRier:FILTer:RRC:STATe?`
Example	`:CALC:EVM:WIND1:ACP:CARR:FILT:RRC:STAT ON` `:CALC:EVM:WIND1:ACP:CARR:FILT:RRC:STAT?`
Preset	0
State Saved	Yes
Backwards Compatibility SCPI	`:CALCulate:EVM:TRACe[1] | 2 | … | 6:ACPower:CARRier:FILTer:RRC:STATe`

Carrier Filter Alpha

Enables you to adjust the alpha of the RRC filter for the reference (carrier) power measurement.

Remote Command	`:CALCulate:EVM:WIND[1]|2|…|6:ACPower:CARRier:FILTer:RRC:ALPHa <real>` `:CALCulate:EVM:WIND[1]|2|…|6:ACPower:CARRier:FILTer:RRC:ALPHa?`
Example	`:CALC:EVM:WIND1:ACP:CARR:FILT:RRC:ALPH 0.22` `:CALC:EVM:WIND1:ACP:CARR:FILT:RRC:ALPH?`
Preset	0.35
State Saved	Yes
Min	0
Max	1
Backwards Compatibility SCPI	`:CALCulate:EVM:TRACe[1] | 2 | … | 6:ACPower:CARRier:FILTer:RRC:ALPHa`

RRC Weighting (All Offsets)

Turns on or off RRC weighting for the power measurement for all offsets. If RRC weighting is turned on, but you want to exclude RRC weighting for a particular offset, set its filter alpha to 0.

Remote Command	`:CALCulate:EVM:WINDow[1]|2|…|6:ACPower:OFFSet:FILTer:RRC:STATe OFF | ON | 0 | 1` `:CALCulate:EVM:WINDow[1]|2|…|6:ACPower:OFFSet:FILTer:RRC:STATe?`
Example	`:CALC:EVM:WIND1:ACP:OFFS:FILT:RRC:STAT ON` `:CALC:EVM:WIND1:ACP:OFFS:FILT:RRC:STAT?`
Preset	0
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:ACPower:FILTer[:RRC][:STATe] OFF | ON | 0 | 1` `:CALCulate:EVM:TRACe[1] | 2 | … | 6:ACPower:OFFSet:FILTer:RRC:STATe`

Offset Freq

Turns ACP analysis on or off for a selected offset and sets the offset frequency, which is relative to the carrier frequency.

Remote Command	`:CALCulate:EVM:WINDow[1]|2|…|6:ACPower:OFFSet:LIST:FREQuency <freq>,<freq>,<freq>,<freq>,<freq>`
	`:CALCulate:EVM:WINDow[1]|2|…|6:ACPower:OFFSet:LIST:FREQuency?`
	`:CALCulate:EVM:WINDow[1]|2|…|6:ACPower:OFFSet:LIST:STATe OFF | ON | 0 | 1,OFF | ON | 0 | 1,OFF | ON | 0 | 1,OFF | ON | 0 | 1,OFF | ON | 0 | 1`
	`:CALCulate:EVM:WINDow[1]|2|…|6:ACPower:OFFSet:LIST:STATe?`

Example	`:CALC:EVM:WIND1:ACP:OFFS:LIST:FREQ 1 MHZ,1 MHz,500 KHZ,500 KHz,1 MHZ`
	`:CALC:EVM:WINd1:ACP:OFFS:LIST:FREQ?`
	`:CALC:EVM:TRAC1:ACP:OFFS:LIST:STAT ON,OFF,OFF,ON,OFF`

Notes	If you send fewer than 5 frequencies in the parameter list, then the remaining offsets frequencies are set to 0 You can send a single on/off parameter or a comma-separated list of up to 5 parameters. These enable/disable each of the Offsets in sequence. Any remaining Offsets are disabled
Preset	3000000,0,0,0,0 1,0,0,0,0
State Saved	Yes Yes
Min	-9.9E+37

Max	9.9E+37

Backwards Compatibility SCPI	`[:SENSe]:ACPower:OFFSet[1]|2:LIST[:FREQuency] <freq>,…`
	`:CALCulate:EVM:TRACe[1]|2|…|6:ACPower:OFFSet:LIST:FREQuency`

	`:CALCulate:EVM:TRACe[1]|2|…|6:ACPower:OFFSet:LIST:STATe`

Offset Meas Noise BW

Enables you to set the measurement noise bandwidth for the power measurement of a selected offset band.

Remote Command	`:CALCulate:EVM:WINDow[1]|2|…|6:ACPower:OFFSet:LIST:BANDwidth|BWIDth:INTegration <bandwidth>,<bandwidth>,<bandwidth>,<bandwidth>,<bandwidth>` `:CALCulate:EVM:WINDow[1]|2|…|6:ACPower:OFFSet:LIST:BANDwidth|BWIDth:INTegration?`
Example	`:CALC:EVM:WIND1:ACP:OFFS:LIST:BAND:INT 1 MHZ,2 MHZ,3 MHZ,4 MHZ,5 MHZ` `:CALC:EVM:WIND1:ACP:OFFS:LIST:BAND:INT?`
Notes	If you send fewer than 5 bandwidth parameters in the list, then Measurement Noise Bandwidths for the remaining Offsets are set to 0
Preset	1000000,0,0,0,0
State Saved	Yes
Min	-9.9e37
Max	9.9e37

Backwards Compatibility SCPI	`[:SENSe]:ACPower:OFFSet[1]|2:LIST:BANDwidth[:INTegration]`
	`:<bandwidth>, …`
	`:CALCulate:EVM:TRACe[1] | 2 | … | 6:ACPower:OFFSet:LIST:BANDwidth | BWIDth:INTegration`

Offset Filter Alpha

Enables you to adjust the alpha of the RRC filter for the power measurement of the selected offset band.

Remote Command	`:CALCulate:EVM:WINDow[1]|2|…|6:ACPower:OFFSet:LIST:FILTer:RRC:ALPHa <real>,<real>,<real>,<real>,<real>` `:CALCulate:EVM:WINDow[1]|2|…|6:ACPower:OFFSet:LIST:FILTer:RRC:ALPHa?`
Example	`:CALC:EVM:WIND1:ACP:OFFS:LIST:FILT:RRC:ALPH 0.22,0.22,0.22,0.22,0.22` `:CALC:EVM:WIND1:ACP:OFFS:LIST:FILT:RRC:ALPH?`
Notes	You can send a single Filter Alpha for Offset A or a comma-separated list of up to 5 Filter Alpha parameters. These are assigned in sequence to the Offsets. Alpha for any remaining Offsets are set to 0

Preset	0.35,0.35,0.35,0.35,0.35
State Saved	Yes
Min	0
Max	1.0
Backwards Compatibility SCPI	`[:SENSe]:ACPower:FILTer[:RRC]:ALPHa <real>` `:CALCulate:EVM:TRACe[1] | 2 | … | 9:ACPower:OFFSet:LIST:FILTer:RRC:ALPHa`

Offset Relative Limit

Enables you to turn on/off a relative limit test and set the limit for the selected offset. The test shows a failure if the power in either the upper or lower band at the selected offset exceeds the reference power plus the relative test limit. For example, if the test limit is -60, the reference power is -4.5 dBm, a test failure would be shown if the power in the lower or upper band exceeds -64.5 dBm.

Remote Command	`:CALCulate:EVM:WINDow[1]|2|…|6:ACPower:OFFSet:LIST:RCARrier <real>,<real>,<real>,<real>,<real>`
	`:CALCulate:EVM:WINDow[1]|2|…|6:ACPower:OFFSet:LIST:RCARrier?`
	`:CALCulate:EVM:WINDow[1]|2|…|6:ACPower:OFFSet:LIST:RCARrier:TEST OFF | ON | 0 | 1,OFF | ON | 0 | 1,OFF | ON | 0 | 1,OFF | ON | 0 | 1,OFF | ON | 0 | 1`
	`:CALCulate:EVM:WINDow[1]|2|…|6:ACPower:OFFSet:LIST:RCARrier:TEST?`

Example	`:CALC:EVM:WIND1:ACP:OFFS:LIST:RCAR -50, -55, -60, -65, -80`
	`:CALC:EVM:WIND1:ACP:OFFS:LIST:RCAR?`
	`:CALC:EVM:WIND1:ACP:OFFS:LIST:RCAR:TEST 1, 1, 1, 1, 1`
	`:CALC:EVM:WIND1:ACP:OFFS:LIST:RCAR:TEST?`

Notes	You can send a single Limit for Offset A or a comma-separated list of up to 5 limit parameters. These are assigned in sequence to the Offset frequencies with the remaining limits being set to 0 You can send a single on/off parameter or a comma-separated list of up to 5 parameters. These turn the Limit Test on or off for each of the Offsets in sequence. For any remaining Offsets, the Limit test is turned off
Preset	-120,-120,-120,-120,-120 0,0,0,0,0
State Saved	Yes Yes
Range	On | Off
Min	50
Max	-200
Annunciation	If this or any other test is on, the pass/fail enunciator is active and shows fail if any test fails, otherwise shows pass

Backwards Compatibility SCPI	`:SENSe]:ACPower:OFFSet[1]|2:LIST:RCARrier <real>, …`

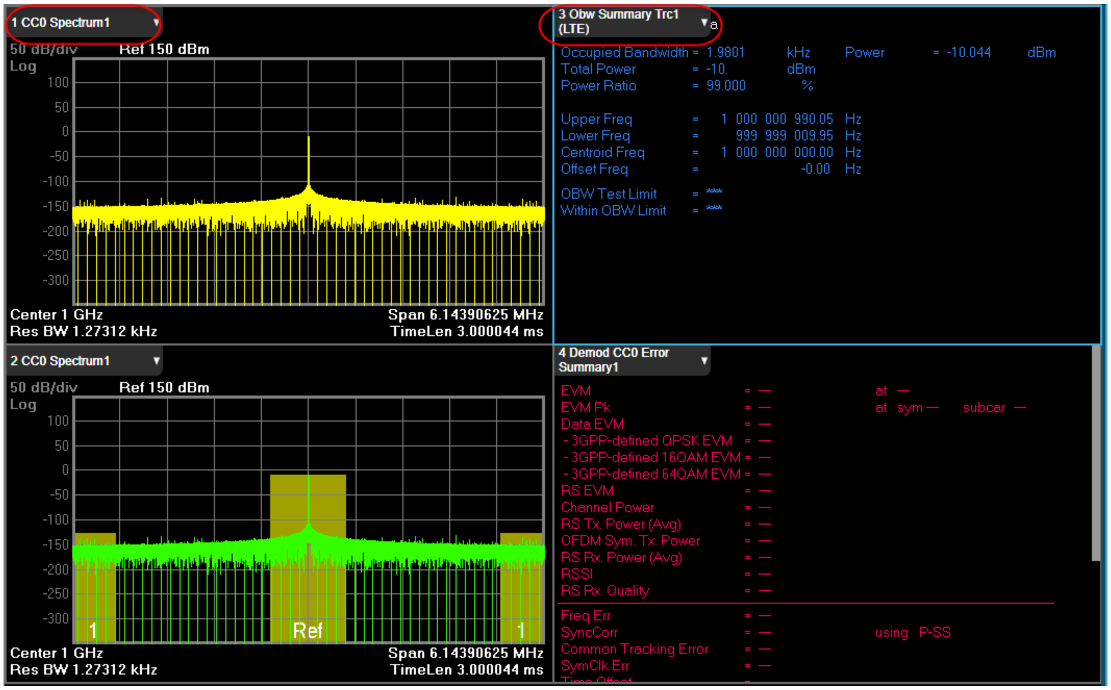
	`:CALCulate:EVM:TRACe[1]
		2	…	6:ACPower:OFFSet:LIST:RCARrier:TEST`

OBWSetup

This tab enables you to turn on the OBW function on the selected trace and set up carrier parameters.

The occupied bandwidth (OBW) function finds and displays the band of frequencies that contain a specified percentage of the total power within the measurement span.

An OBW measurement can be defined for each trace, although it is only active on frequency-domain trace data. The band defined by the OBW measurement is shown as a blue bar overlaying the trace display. To see tabular data showing the frequencies of the band limits, the total power, and so on, you can assign the OBW Summary (Trace m) to a different trace. For example, you can assign Spectrum data to trace 1, turn on OBW on trace 1, and assign the OBW Summary (Trace 1) to trace 3, as shown below.



```
Occupied Bandwidth = 1.9801        kHz    Power       = -10.044    dBm
Total Power        = -10.          dBm
Power Ratio        = 99.000         %

Upper Freq         =    1 000 000 990.05  Hz

Notes	This control is available for EVM measurement

OBW On/Off

Turns the OBW function on or off for the selected trace.

Remote Command	`:CALCulate:EVM:WINDow[1]|2|…|6:OBWidth:STATe OFF | ON | 0 | 1` `:CALCulate:EVM:WINDow[1]|2|…|6:OBWidth:STATe?`
Example	`:CALC:EVM:WIND1:OBW:STAT ON` `:CALC:EVM:WIND1:OBW:STAT?`
Preset	0
State Saved	Yes
Backwards Compatibility SCPI	`:CALCulate:EVM:TRACe[1]|2|…|6:OBWidth:STATe`

% of OBW Power

Specifies the percentage of power for determining the occupied BW for the selected trace.

Remote Command	`:CALCulate:EVM:WINDow[1]|2|…|6:OBWidth:PERCent <real>`
	`:CALCulate:EVM:WINDow[1]|2|…|6:OBWidth:PERCent?`
	`:CALCulate:EVM:WINDow[1]|2|…|6:OBWidth:STATe OFF | ON | 0 | 1`
	`:CALCulate:EVM:WINDow[1]|2|…|6:OBWidth:STATe?`

Example	`:CALC:EVM:WIND1:OBW:PERC 99`
	`:CALC:EVM:WIND1:OBW:PERC?`
	`:CALC:EVM:WIND1:OBW:STAT ON`
	`:CALC:EVM:WIND1:OBW:STAT?`

Notes	Parameter is interpreted as a percent, e.g., if you want the OBW to be 95% send 95, not 0.95
Couplings	Controls the presence or absence of data in the OBW Summary table for the selected trace
Preset	99.0 0
State Saved	Yes Yes
Min	0
Max	100
Backwards Compatibility SCPI	`:CALCulate:EVM:TRACe[1]|2|…|6:OBWidth:PERCent` `:CALCulate:EVM:TRACe[1]|2|…|6:OBWidth:STATe`

OBW Limit

Turns on or off limit testing for the Occupied BW test for the selected trace, and enables you to define the limit. Test pass or fail status appears in the OBW Summary table associated with the trace.

Remote Command	`:CALCulate:EVM:WINDow[1]|2|…|6:OBWidth:LIMit:FBLimit <freq>`
	`:CALCulate:EVM:WINDow[1]|2|…|6:OBWidth:LIMit:FBLimit?`
	`:CALCulate:EVM:WINDow[1]|2|…|6:OBWidth:LIMit[:TEST] OFF | ON | 0 | 1`
	`:CALCulate:EVM:WINDow[1]|2|…|6:OBWidth:LIMit[:TEST]?`

Example	`:CALC:EVM:WIND1:OBW:LIMIT:FBL 10 MHz`
	`:CALC:EVM:WIND1:OBW:LIMIT:FBL?`
	`:CALC:EVM:WIND1:OBW:LIMIT:TEST ON`
	`:CALC:EVM:WIND1:OBW:LIMIT:TEST?`

Preset	1000000 0
State Saved	Yes Yes
Min	1 Hz
Max	9.9e37 Hz

Backwards Compatibility SCPI	`:CALCulate:OBWidth:LIMit:FBLimit <freq>`
	`:CALCulate:EVM:TRACe[1]|2|…|6:OBWidth:LIMit:FBLimit`
	`:CALCulate:OBWidth:LIMit[:TEST] ON | OFF | 1 | 0`
	`:CALCulate:EVM:TRACe[1]|2|…|6:OBWidth:LIMit[:TEST]`

3.8.3.12 Format

Accesses a menu that enables you to choose the format of the selected trace. Any format can be assigned to any trace. For symbol tables and tabular data the format choice is ignored. If the data doesn't have defined symbol times, Constellation format is the same as I-Q, Eye formats are the same as Real or Imaginary, and Trellis format is the same as Unwrapped Phase.

The available formats are:

Format name	Description
Log Mag (dB)	Data is converted to decibel units and shown on a linear Y axis
Linear Mag (Abs Value)	Magnitude of the data is shown on a linear Y axis

Format name	Description
Real (I)	Real part of data is shown on a linear Y axis
Imaginary (Q)	Imaginary part of data is shown on linear Y axis
I-Q	Real part of data is shown on horizontal axis, imaginary part is shown on vertical axis, Independent variable (X axis) is normal to display
Constellation	Same as I-Q, but for data with symbols defined, only the symbol points are shown as dots with no connecting lines
Wrap Phase	Phase of complex data, limited to ± 180 deg, is shown on Y axis
Unwrap Phase	Phase of complex data is shown "unwrapped", that is, without discontinuities. Not limited to ± 180 degrees
I-Eye	Real part of data is shown with X axis segmented (generally into 2 symbol segments) and each segment is overlaid to show signal crossings at symbol boundaries
Q-Eye	Same as I-eye but imaginary part of data is shown
Trellis	Same as I-eye but uses unwrapped phase of data
Group Delay	Useful for frequency response displays. Shows the derivative of phase response with respect to frequency
Log Mag (Linear Unit)	Displays data with a logarithmic Y axis, but marker read outs are in linear magnitude units

Remote Command	`:DISPlay:EVM:TRACe[1]|2|…|6:FORMat MLOG | MLINear | REAL | IMAGinary | VECTor | CONS | PHASe | UPHase | IEYE | QEYE | TRELlis | GDELay | MLGLinear` `:DISPlay:EVM:TRACe[1]|2|…|6:FORMat?`
Example	`:DISP:EVM:TRAC1:FORM MLOG` `:DISP:EVM:TRAC2:FORM?`
Notes	This control is available for EVM measurement
Preset	Depends on trace and measurement
State Saved	Yes

3.8.3.13 Component Carrier (Display only)

Specifies for which component carrier the results are displayed.

Notes	Display only

3.8.3.14 Trace Data Queries (Remote Commands only)

Notes	Remote Commands only

The CALC:EVM:DATA<m> and CALCulate:EVM:DATA<m>:TABLe? commands enable you to retrieve any trace data or trace table. This family of commands also enable you to get information about the names of data results available and the units associated with them, as well as names and results of meta-data associated with traces, where <m> is a reference to the trace number, which can be mapped to the window number on the screen display. The results assigned to each trace vary depending on which tests are enabled.

Command	Returns	Parameters
`:CALCulate:EVM:DATA<m>? [Y | X | XY | LL | UL]`	The data in the designated trace as displayed	The optional parameters control what data is returned [Y]: is the same as that with no parameter. It returns an array of Y values [X]: returns an array of X values that correspond to the Y values above [XY]: returns interleaved X and Y data [LL|UL]: returns an array of Lower/Upper Limit values when Limit Test is enabled and the trace includes limit values
`:CALCulate:EVM:DATA<m>:RAW?`	This unformatted Y data in the designated trace	If Y data is complex, it is returned as <y_real1><y_imag1><y_real2><y_imag2> etc
:CALCulate:EVM:DATA<m>:RAW:COMPlex?	The flag to indicate whether the data retrieved by is complex	Returns 1 if the trace data is complex, 0 if it is real
`:CALCulate:EVM:DATA<m>:POINts?` `:CALCulate:EVM:DATA<m>:RAW:POINts?`	The number of points for the corresponding data retrieved SCPI commands	
CALCulate:EVM:DATA<m>:TABLe:NAMes?	Comma-separated list of all table data names	
CALCulate:EVM:DATA<m>:TABLe:UNIT?	Comma-separated list of all table data units	

CALCulate:EVM:DATA<m>:TABLe[:NUMBer]?	All table numeric data results (as an array)
`:CALCulate:EVM:DATA<m>:TABLe:STRing?`	All table string data results (as an array)
CALCulate:EVM:DATA<m>:TABLe[:NUMBer]? "<name>" :CALCulate:EVM:DATA<m>:TABLe:STRing? ”<name>”	The table numeric/string data result referred to by name

3.8.4 Amplitude

The Amplitude front-panel key activates the Amplitude menu and selects Reference Value as the active function.

3.8.4.1 Y Scale

The Y Scale Tab contains controls that pertain to the Y axis parameters of the measurement. These parameters control how data on the vertical (Y) axis is displayed and control instrument settings that affect the vertical axis.

Auto Scale

Changes the Y reference value and Scale per Division so the full trace is displayed without clipping.

Remote Command	`:DISPlay:EVM:WINDow[1]|2|…|9:Y[:SCALe]:AUTO:ONCE` Window number is based on window position, see number on window
Example	`:DISP:EVM:WIND1:Y:AUTO:ONCE`
Backwards Compatibility SCPI	`:DISPlay:EVM:TRACe[1]|2|…|6:Y[:SCALe]:AUTO:ONCE`

Couple Ref to Range

When Couple Ref to Range is on, Y scaling is adjusted when the Range changes. For example, on traces with Y units of dBm, the reference value changes by the same amount in dB as the Range does. On a trace with Y units of Volts, the Per Division setting changes by a factor of approximately 1.25 when the Range changes by 2 dB. This function can be turned on or off for each individual trace.

Remote Command	`:DISPlay:EVM:WINDow[1]|2|…|9:Y[:SCALe]:RLEVel:AUTO OFF | ON | 0 | 1` `:DISPlay:EVM:WINDow[1]|2|…|9:Y[:SCALe]:RLEVel:AUTO?`
Example	`:DISP:EVM:WIND1:Y:RLEV:AUTO ON` `:DISP:EVM:WIND1:Y:RLEV:AUTO?`
Notes	Range coupling is not available for Phase and Group delay traces
Preset	1
State Saved	Yes
Range	On | Off
Backwards Compatibility SCPI	`:DISPlay:EVM:TRACe[1]|2|…|6:Y[:SCALe]:RLEVel:AUTO OFF | ON | 0 | 1`

Ref Level

Controls the Y value of the selected trace at the Reference Position.

Remote Command	`:DISPlay:EVM:WINDow[1]|2|…|9:Y[:SCALe]:RLEVel <real>`
	`:DISPlay:EVM:WINDow[1]|2|…|9:Y[:SCALe]:RLEVel?`
	Window number is based on window position, see number on window

Example	`:DISP:EVM:WIND:Y:RLEV 20` `:DISP:EVM:WIND:Y:RLEV?`
Couplings	None. This does not affect any hardware input settings
Preset	Depends on trace
State Saved	Yes
Min	-9.9E+37
Max	9.9E+37
Annotation	Above trace grid toward the left side
Backwards Compatibility SCPI	`:DISPlay:EVM:TRACe[1]|2|…|6:Y[:SCALe]:RLEVel <real>`

Scale/Div

Controls the Y scale per division of the selected trace.

Remote Command	`:DISPlay:EVM:WINDow[1]|2|…|9:Y[:SCALe]:PDIVision <real>`
	`:DISPlay:EVM:WINDow[1]|2|…|9:Y[:SCALe]:PDIVision?`
	Window number is based on window position, see number on window

Example	`:DISP:EVM:TRAC:Y:PDIV 10`

	`:DISP:EVM:TRAC:Y:PDIV?`
Preset	Depends on trace
State Saved	Yes
Min	-9.9E+37
Max	9.9E+37
Annotation	Upper left corner of trace grid, same grey as grid. (see Display under Mode Overview)
Backwards Compatibility SCPI	`:DISPlay:EVM:TRACe[1]|2|…|6:Y[:SCALe]:PDIVision <real>`

Ref Position

Positions the reference level at the top, center, or bottom of the Y Scale display. Changing the reference position does not change the reference level value.

Remote Command	`:DISPlay:EVM:WINDow[1]|2|…|9:Y[:SCALe]:RPOSition TOP | CENTer | BOTTom`
	`:DISPlay:EVM:WINDow[1]|2|…|9:Y[:SCALe]:RPOSition?`
	Window number is based on window position, see number on window

Example	`:DISP:EVM:WIND1:Y:RPOS TOP` `:DISP:EVM:WIND1:Y:RPOS?`
Preset	Depends on trace format and trace data. Top for LogMag or most LinearMag traces, middle for Real, Imaginary, Vector displays, Eye diagrams, Phase, Delay, Bottom for Linear Mag EVM
State Saved	Saved in instrument state
Range	Top|Ctr|Bot
Annotation	The greater than (>) and less than (<) symbols are displayed on both sides of the graph to indicate the Reference Position

Ref Line

Controls whether the Y reference line is visible or not.

Remote Command	`:DISPlay:EVM:WINDow[1]|2|…|9:RLINe OFF | ON | 0 | 1` `:DISPlay:EVM:WINDow[1]|2|…|9:RLINe?`
Example	`:DISP:EVM:WIND1:RLIN ON` `:DISP:EVM:WIND1:RLIN?`
Preset	`OFF`
State Saved	Yes
Range	On|Off
Backwards Compatibility SCPI	`:DISPlay:EVM:TRACe[1]|2|…|6:RLINe OFF | ON | 0 | 1`

Y Unit Preference

Displays a menu that enables you to set the preferred Y unit for the selected trace. You can select Peak, RMS, Power units, or an automatic selection. The automatic selection uses Power units for frequency domain data and Peak units for time domain data.

Remote Command	`:DISPlay:EVM:WINDow[1]|2|…|9:Y:UNIT:PREFerence AUTO | PEAK | RMS | POWer | MRMS` `:DISPlay:EVM:WINDow[1]|2|…|9:Y:UNIT:PREFerence?`
Example	`:DISP:EVM:WIND1:Y:UNIT:PREF PEAK` `:DISP:EVM:WIND1:Y:UNIT:PREF?`
Preset	AUTO
State Saved	Yes
Range	`AUTO|PEAK|RMS|POW|MRMS`
Backwards Compatibility SCPI	`:DISPlay:EVM:TRACe[1]|2|…|6:Y:UNIT:PREFerence AUTO | PEAK | RMS | POWer | MRMS`

The following SCPI only command can be used to determine exactly which Y unit was chosen based on the setting of the above:

Remote Command	`:DISPlay:EVM:WINDow[1]|2|…|9:Y:UNIT?`
Example	`:DISP:EVM:WIND1:Y:UNIT?`

Vector Horiz Center

Sets the position of the origin for Vector trace formats such as I-Q and Constellation. When using one of these formats, you set the vertical (imaginary) axis scaling with the Y Reference Value, Y Reference Position, and Y Scale Per Division properties. The scaling of the horizontal axis is set to maintain an aspect ratio of 1:1.

Remote Command	`:DISPlay:EVM:WINDow[1]|2|…|9:VHCenter <real>` `:DISPlay:EVM:WINDow[1]|2|…|9:VHCenter?`
Example	`:DISP:EVM:WIND1:VHC 0.2` `:DISP:EVM:WIND1:VHC?`
Preset	0
State Saved	Yes
Min	-9.9E+37
Max	9.9E+37
Backwards Compatibility SCPI	`:DISPlay:EVM:TRACe[1]|2|…|6:VHCenter <real>`

Log Ratio

Enabled if the Trace Format is set to LogMag (Linear Unit). In this format type, you set the Y Log Ratio instead of Y Scale Per Division to determine Y scaling. It sets the ratio of the top of the Y axis to the bottom.

Remote Command	`:DISPlay:EVM:WINDow[1]|2|…|9:Y:LRATio <real>` `:DISPlay:EVM:WINDow[1]|2|…|9:Y:LRATio?`
Example	`:DISP:EVM:WIND1:Y:LRAT 10000` `:DISP:EVM:WIND1:Y:LRAT?`
Notes	This is grayed out if the trace format is not Log Mag (linear unit)
Preset	100000
State Saved	Yes
Min	1.001
Max	100e6
Backwards Compatibility SCPI	`:DISPlay:EVM:TRACe[1]|2|…|6:Y:LRATio <real>`

3.8.4.2 Attenuation

Controls the attenuator functions and interactions between the attenuation system components.

There are two attenuator configurations in the X-Series. One is a Dual-Attenuator configuration consisting of a mechanical attenuator and an optional electronic attenuator. The other configuration uses a single attenuator with combined mechanical and electronic sections that controls all the attenuation functions. Different models in the X-Series come with different configurations.

- See "Dual-Attenuator Configurations" on page 1370
- See "Single-Attenuator Configuration" on page 1370

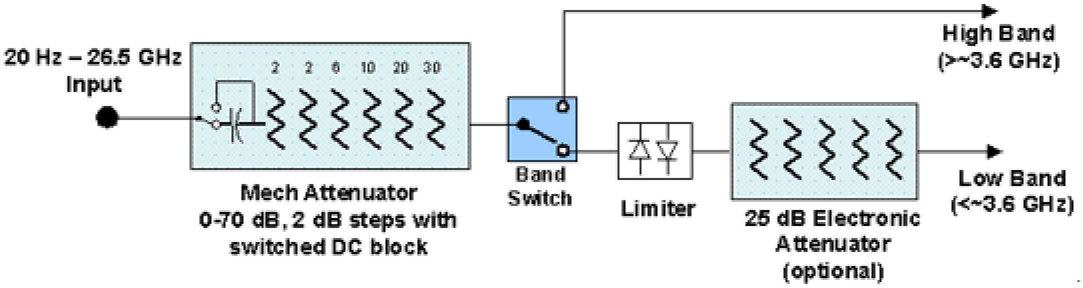
Most attenuation settings are the same for all measurements – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by **Meas Preset**.

Only available when the hardware set includes an input attenuator, which is typically only the case for Keysight’s benchtop instruments. For example, this tab does *not* appear in VXT models M9420A/10A/11A/15A/16A, M9410E/11E/15E/16E, nor in UXM. In UXM, all **Attenuation** and **Range** settings are disabled, as the expected input power level is handled by the Call Processing App that drives the DUT power control.

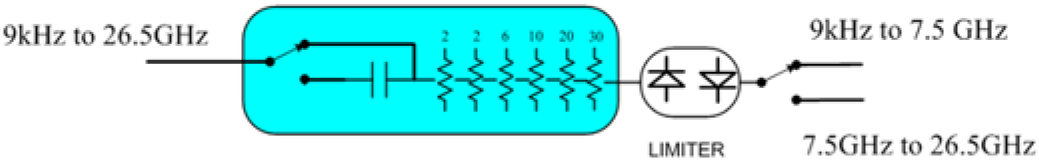
Dependencies	In measurements that support the I/Q inputs, unavailable when I/Q is the selected input. Replaced by the **Range** tab in that case

Dual-Attenuator Configurations

Configuration 1: Mechanical attenuator + optional electronic attenuator

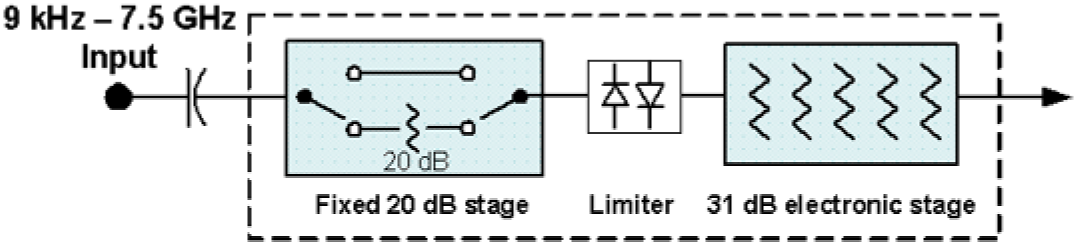


Configuration 2: Mechanical attenuator, no optional electronic attenuator

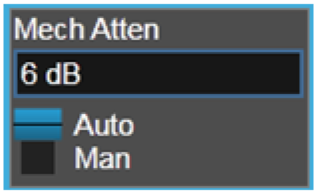


Note that Configuration 2 is not strictly speaking a dual-section attenuator, since there is no electronic section available. However, it behaves exactly like Configuration 1 without the Electronic Attenuator Option EA3, therefore for the sake of this document it is grouped into the “Dual-Attenuator” configuration.

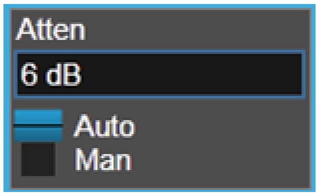
Single-Attenuator Configuration



You can tell which attenuator configuration you have by pressing the Attenuation tab, which (in most Modes) opens the Attenuation menu. If the first control in the Attenuation menu says **Mech Atten** you have the Dual-Attenuator configuration. If the first control says **Atten** you have the Single-Attenuator configuration.



Dual Attenuator



Single Attenuator

(Note that depending on the measurement, there may be no Auto/Man functionality on the Mech Atten control.)

In the Single-Attenuator configuration, you control the attenuation with a single control, as the fixed stage has only two states. In the Dual-Attenuator configuration, both stages have significant range, so you are given separate control of the mechanical and electronic attenuator stages.

When you have the Dual-Attenuator configuration, you may still have only a Single-Attenuator, because unless Option EA3 (the Electronic Attenuator option) is available, and you purchase it, you will have only the mechanical attenuator.

Full Range Atten

This control and **Attenuator Summary** only appear in N9041B, when the RF input is selected, the RF Input Port is set to RF Input 2, and the Full Range Attenuator is installed. The Full Range Attenuator adds a second input attenuator in front of RF Input 2, which enhances the protection and optimizes the performance of the extra internal mixers used by RF Input 2.

Remote Command	`[:SENSe]:POWer[:RF]:FRATten <rel_ampl>` `[:SENSe]:POWer[:RF]:FRATten?`
Example	`:POW:FRAT 14` `:POW:FRAT?`
Notes	When you enter an amplitude value that falls between valid values, the value will be incremented to the next smallest valid value
Dependencies	Only appears if input RF is selected, RF Input Port 2 is selected, and the Full Range Attenuator exists
Couplings	This value is never changed by any coupling, but other couplings use this value. See **Reference Level** and "Mech Atten" on page 2161 command descriptions
Preset	20 dB
State Saved	Saved in instrument state
Min	0 dB
Max	Only valid values are 0, 6, 14, 20 dB
Annotation	When the **Input** is **RF**, and the **Input Port** is **RF Input 2**, and the Full Range Attenuator is installed:

On the Meas Bar, the field “Atten” displays as follows:

- If the sweep is entirely < 50 GHz, the value shown after “Atten:” is equal to Mech Atten + Elec Atten + Full Range Atten
- If the sweep is entirely > 50 GHz, the value shown after “Atten:” is equal to Full Range Atten
- If the sweep straddles 50 GHz, the value shown after “Atten:” is preceded by the symbol “>=” and is equal to Full Range Atten

In the **Amplitude**, "Y Scale" on page 2153 menu, and the Atten **Meas Bar** dropdown menu panel, a summary is displayed as follows:

“Total Atten below 50 GHz” followed by the value of Full Range Atten + Mech Atten + Elec Atten

“Total Atten above 50 GHz” followed by the value of Full Range Atten

For example, if Mech Atten = 6 dB, Elec Atten = 4 dB, and Full Range Atten = 20 dB, the summary below is shown:

- Attenuator summary:
- Total Atten below 50 GHz: 30 dB
- Total Atten above 50 GHz: 20 dB

Mech Atten

Labeled **Mech Atten** in Dual-Attenuator models, and **Atten** in Single-Attenuator models. In the Dual-Attenuator configuration, this control only affects the mechanical attenuator.

Lets you modify the attenuation applied to the RF input signal path. This value is normally auto-coupled to **Ref Level**, "Internal Preamp" on page 2183 Gain, any External Gain that is entered, and **Max Mixer Level** (if available), as described in the table below.

See "Attenuator Configurations and Auto/Man" on page 1374

Remote Command	`[:SENSe]:POWer[:RF]:ATTenuation <rel_ampl>` `[:SENSe]:POWer[:RF]:ATTenuation?`
Example	`:POW:ATT 20` Dual-Attenuator configuration: sets the mechanical attenuator to 20 dB Single-Attenuator mode: sets the main attenuation to 20 dB (see below for definition of “main” attenuation) In either case, if the attenuator was in Auto, it is set to Manual
Dependencies	Some measurements do not support **Auto** setting of **Mech Atten.** In these measurements, the **Auto/Man** selection is not available, and the **Auto/Man** toggle function is not available In Dual-Attenuator configurations, when the electronic attenuator is enabled, the mechanical attenuator has no auto setting, and the **Auto/Man** toggle function is not available. The state of

<table>
<tr><td></td><td>**Auto/Man** is remembered and restored when the electronic attenuator is once again disabled. This is described in more detail in "Elec Atten" on page 2164
See "Attenuator Configurations and Auto/Man" on page 1374 for more information on the **Auto/Man** functionality</td></tr>
<tr><td>Couplings</td><td>If the RF Input Port is the RF Input:
– If the USB Preamp is connected to USB, use 0 dB for **Mech Atten**
– Otherwise compute the auto-selected value of **Mech Atten** based on **Reference Level**, **Int Preamp**, **External Gain**, **Ref Level Offset**, **Max Mixer Level**, **µW Path Control** and **IF Gain** settings. Limit this value to be no less than 6 dB (total attenuation below 6 dB can never be chosen by Auto)
– In N9041B, if the RF Input Port is RF Input 2, use the formula above and subtract the value of "Full Range Atten" on page 2160 from the result to determine the **Mech Atten**. Limit the value so that it is never lower than 0 dB and so that total attenuation, including **Full Range Atten**, is never less than 6 dB (total attenuation, including **Full Range Atten** below 6 dB, can never be chosen by Auto)
In External Mixing and BBIQ, where the attenuator is not in the signal path, the attenuator setting changes as described above when **Mech Atten** is in **Auto**, but no changes are made to the actual attenuator hardware setting until the input is changed back to the RF Input
For CXA-m with Option FSA (Fine-Step Attenuator or 2 dB steps), the FSA-like behavior is only available when the frequency setting is <= 7.5 GHz. So, when the frequency is changed from below 7.5 GHz to above 7.5 GHz, the attenuation setting changes to a multiple of 10 dB that is no smaller than the previous setting. For example, 4 dB attenuation changes to 10 dB</td></tr>
<tr><td>Preset</td><td>**Auto**
The Auto value is 10 dB</td></tr>
<tr><td>State Saved</td><td>Saved in instrument state</td></tr>
<tr><td>Min</td><td>0 dB
The attenuation set by this control cannot be decreased below 6 dB with the knob or step keys. Values below 6 dB must be directly entered from the keypad or via SCPI. This protects against setting a dangerously small attenuation value, which can put the instrument at risk of damage to input circuitry. If the current mechanical attenuation is below 6 dB, it can be increased with the knob and step keys, but not decreased</td></tr>
<tr><td>Max</td><td><table>
<tr><td>CXA Option 503 or 507</td><td>50 dB</td></tr>
<tr><td>EXA</td><td>60 dB</td></tr>
<tr><td>All other models</td><td>70 dB</td></tr>
</table>
Note that in the Single-Attenuator configuration, the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB</td></tr>
<tr><td>Annotation</td><td>The current value for Total Atten is displayed in the Measurement Bar at the top of the display. A value appears for Electronic Attenuation only if the Electronic Attenuator is enabled. The annotation appears as:
Atten: <total> dB (e<elec>)
The e letter is in amber in Single-Attenuator configurations</td></tr>
</table>

For example:

Dual-Attenuator configuration:

Atten: 24 dB (e14)

Indicating the total attenuation is at 24 dB and the electronic attenuation is at 14 dB

Single-Attenuator configuration:

A: 24 dB (e14)

Indicating the total attenuation is at 24 dB and the “soft” attenuation is at 14 dB (see below for definition of “soft” attenuation)

When in Manual, a # sign appears in front of Atten in the annotation

Auto Function

Remote Command	`[:SENSe]:POWer[:RF]:ATTenuation:AUTO OFF | ON | 0 | 1` `[:SENSe]:POWer[:RF]:ATTenuation:AUTO?`
Example	Turn **Auto Mech Atten**ON: `:POW:ATT:AUTO ON`
Dependencies	`:POW:ATT:AUTO` is only available in measurements that support **Auto**, such as Swept SA
Preset	`ON`

Attenuator Configurations and Auto/Man

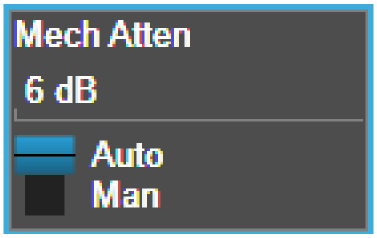
As described under "Attenuation" on page 2158, there are two distinct attenuator configurations available in the X-Series, the Single Attenuator and Dual-Attenuator configurations.

In Dual-Attenuator configurations, we have mechanical attenuation and electronic attenuation, and current total attenuation is the sum of electronic + mechanical attenuation.

In Single-Attenuator configurations, we refer to the attenuation set using "Mech Atten" on page 1372 (or `:POW:ATT`) as the “main” attenuation; and the attenuation that is set by `:POW:EATT` as the “soft” attenuation (`:POW:EATT` is honored even in the Single-Attenuator configuration, for compatibility purposes). Then current total attenuation is the sum of main + soft attenuation.

See "Elec Atten" on page 2164 for more about “soft” attenuation.

NOTE In some measurements, the **Mech Atten** control has an **Auto/Man** function. In these measurements, an **Auto/Man** switch is shown on the **Mech Atten** control:



Mech Atten

6 dB

Note that in configurations that include an Electronic Attenuator, this switch is only shown when the Electronic Attenuator is disabled.

In other measurements, **Mech Atten** has no **Auto/Man** function. In these measurements, no switch is shown on the **Mech Atten** control:

Mech Atten

10 dB

Mech Atten also appears with no switch, as above, in configurations that include an Electronic Attenuator but when the Electronic Attenuator is enabled.

Elec Atten

Controls the Electronic Attenuator in Dual-Attenuator configurations. Does not appear in Single-Attenuator configurations, because the control of both the mechanical and electronic stages of the Single-Attenuator is integrated into the single **Atten** control.

This control includes an **Enable/Disable** toggle switch; it is only possible to enter a value for the Electronic Attenuator when this switch is in the **Enable** position.

For more details of the Electronic Attenuator, see "More Information" on page 1377

Remote Command	`[:SENSe]:POWer[:RF]:EATTenuation <rel_ampl>` `[:SENSe]:POWer[:RF]:EATTenuation?`
Example	`:POW:EATT 10` `:POW:EATT?`
Notes	Electronic Attenuation's specification is defined only when **Mech Atten** is 6 dB
Dependencies	Only appears in Dual-Attenuator models with an Electronic Attenuator installed and licensed. Does not appear in models with the Single-Attenuator configuration, because in the Single-Attenuator configuration there is no "electronic attenuator"; there is only a single integrated attenuator (which has both a mechanical and electronic stage). However, in the Single-Attenuator configuration, `EATT` SCPI commands are accepted for compatibility with other X-series instruments, and set a "soft" attenuation. The "soft" attenuation is treated as an addition to the "main" attenuation value set by the **Attenuation** control or `:POW:ATT`, and affects the total attenuation displayed on the **Attenuation**

	control and the Meas Bar The electronic attenuator, and the “soft” attenuation function provided in Single-Attenuator configurations, are unavailable above the low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model). If the low band range is from 0-3.6 GHz, and Stop Frequency of the instrument is > 3.6 GHz, then the **Enabled/Disabled** section of the **Elec Atten** control will be `OFF` and grayed-out If "Internal Preamp" on page 2183 is `ON` (that is, set to Low Band or Full), the electronic attenuator (and the “soft” attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the **Enabled/Disabled** section of the **Elec Atten** control will be `OFF` and grayed-out If either of the above is true, and the SCPI command is sent, an error indicating that the electronic attenuator is unavailable is returned If both the above are true, pressing the control generates error message -221, in other words, the frequency range lockout takes precedence If the electronic/soft Attenuator is enabled, then the **Stop Freq** of the instrument is limited to 3.6 GHz and **Internal Preamp** is unavailable If "LNA" on page 2185 is `ON`, the electronic attenuator (and the “soft” attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the **Enabled/Disabled** section of the **Elec Atten** control will be `OFF` and grayed-out. This coupling works in the following modes/measurements: – Channel Power, Occupied BW, ACP, SEM, Spurious Emissions, Power Stat CCDF measurements in all Modes – Transmit On|Off Power measurement in 5GNR Mode – Power vs. Time and Transmit Power measurement in GSM/EDGE Mode – Burst Power measurement in Spectrum Analyzer Mode The SCPI-only “soft” electronic attenuation for the single-attenuator configuration is not available in all measurements; in particular, it is not available in the Swept SA measurement
Couplings	Enabling and disabling the Electronic Attenuator affects the setting of the Mechanical Attenuator (in Dual-Attenuator configurations). This is described in more detail below and in "Mechanical Attenuator Transition Rules" on page 1377
Preset	0 dB
State Saved	Saved in instrument state
Min	0 dB
Max	Dual-Attenuator configuration: 24 dB Single-Attenuator configuration: the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB
Annotation	See Annotation under the **Mech Atten** control description

Auto Function

Remote Command	`[:SENSe]:POWer[:RF]:EATTenuation:STATe OFF | ON | 0 | 1` `[:SENSe]:POWer[:RF]:EATTenuation:STATe?`
Example	`:POW:EATT:STAT ON`

	`:POW:EATT:STAT?`
Preset	`OFF` (Disabled) for Swept SA measurement `ON` (Enabled) for all other measurements that support the electronic attenuator

NOTE

The maximum **Center Frequency** for Low Band can change based on the selected IFBW for measurements that support IFBW (for example, Waveform measurement across all Modes that support it). In certain models (such as N9042B & N9032B), IFBW values <= 40 MHz have a maximum Low Band frequency of 3.6 GHz, while 40 MHz < IFBW <= 1 GHz have a maximum of 3.3 GHz, and 1 GHz < IFBW <= 1.5 GHz have a maximum of 3.5 GHz. This frequency is reflected in the disabled message displayed for Electrical Attenuator. For N9032B and N9042B IFBW values > 1.5 GHz do not support a **Center Frequency** that can reach the Low Band maximum frequency. In these cases, the Electrical Attenuator will remain disabled no matter the Center Frequency.

More Information

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear. These advantages primarily aid in remote operation and are negligible for front panel use. See "Using the Electronic Attenuator: Pros and Cons" on page 1378 for a detailed discussion of the pros and cons of using the electronic attenuator.

For the Single-Attenuator configuration, for SCPI backwards compatibility, the “soft” attenuation feature replaces the Dual-Attenuator configuration’s electronic attenuator. All the same couplings and limitations apply. See "Attenuator Configurations and Auto/Man" on page 2163

Mechanical Attenuator Transition Rules

When the Electronic Attenuator is enabled, the Mechanical Attenuator transitions to a state that has no Auto function. Below are the rules for transitioning the Mechanical Attenuator. Note that the information below *only* applies to the Dual-Attenuator configurations, and *only* when the Electronic Attenuator is installed:

When the Electronic Attenuation is enabled from a disabled state:

- The Mechanical Attenuator is initialized to 10 dB (this is its optimal performance setting). You can then set it as desired with SCPI, numeric keypad, step keys, or knob, and it behaves as it normally would in manual mode
- The Auto/Man state of (Mech) Atten is saved
- The Auto/Man toggle on the (Mech) Atten control disappears, and the auto rules are disabled

- The Electronic Attenuator is set to 10 dB less than the previous value of the Mechanical Attenuator, within the limitation that it must stay within the range of 0 to 24 dB of attenuation

Examples in the Dual-Attenuator configuration:

- Mech Atten at 20 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 10 dB. New total attenuation equals the value before Elec Atten enabled
- Mech Atten at 0 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 0 dB. New total attenuation does not equal the value before Elec Atten enabled
- Mech Atten at 40 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 24 dB. New total attenuation does not equal the value before Elec Atten enabled

When the Electronic Attenuation is disabled from an enabled state:

- The Elec Atten control is grayed out
- The Auto/Man state of (Mech) Atten is restored
- If now in Auto, (Mech) Atten recouples
- If now in Man, (Mech) Atten is set to the value of total attenuation that existed before the Elec Atten was disabled. The resulting value is rounded up to the smallest value possible given the (Mech) Atten Step setting - (That is, 57 dB changes to 58 dB when (Mech) Atten Step is 2 dB)

Using the Electronic Attenuator: Pros and Cons

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear.

The “finer steps” advantage of the electronic attenuator is beneficial in optimizing the alignment of the instrument dynamic range to the signal power in the front panel as well as remote use. Thus, you can achieve improved relative signal measurement accuracy. Compared to a mechanical attenuator with 2 dB steps, the 1 dB resolution of the electronic attenuator only gives better resolution when the odd-decibel steps are used. Those odd-decibel steps are less accurately calibrated than the even-decibel steps, so one tradeoff for this superior relative accuracy is reduced absolute amplitude accuracy.

Another disadvantage of the electronic attenuator is that the spectrum analyzer loses its “Auto” setting, making operation less convenient.

Also, the relationship between the dynamic range specifications (TOI, SHI, compression, and noise) and instrument performance are less well-known with the

electrical attenuator. With the mechanical attenuator, TOI, SHI, and compression threshold levels increase dB-for-dB with increasing attenuation, and the noise floor does as well. With the electronic attenuator, there is an excess attenuation of about 1 to 3 dB between 0 and 3.6 GHz, making the effective TOI, SHI, and so forth, less well known. Excess attenuation is the actual attenuation relative to stated attenuation. Excess attenuation is accounted for in the instrument calibration.

Adjust Atten for Min Clipping

Sets the combination of mechanical and electronic attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an immediate action function, that is, it executes once, when the control is pressed.

The algorithms that are used for the adjustment are documented under "Pre-Adjust for Min Clipping" on page 2168.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMediate`
Example	`:POW:RANG:OPT IMM`
Notes	Executing **Adjust Atten for Min Clipping** initiates the measurement
Dependencies	Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes

Adjust Atten

Allows you to select;

- Electric attenuator only
- Combination of Electric attenuator and Mechanical attenuator

when `[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMediate` is executed.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:OPTimize:TYPE EONLy | COMBined` `[:SENSe]:POWer[:RF]:RANGe:OPTimize:TYPE?`
Example	`:POW:RANG:OPT:TYPE EONL` `:POW:RANG:OPT:TYPE?`
Dependencies	Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes
Preset	`COMBined`
State Saved	Saved in instrument state

Pre-Adjust for Min Clipping

If this function is `ON`, it applies the adjustment described under "Adjust Atten for Min Clipping" on page 2167 each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

In Dual-Attenuator models, you can set **Elec+Mech Atten**, in which case both attenuators participate in the autoranging, or **Elec Atten Only**, in which case the mechanical attenuator does not participate in the autoranging. This latter case results in less wear on the mechanical attenuator and is usually faster.

See "Adjustment Algorithm" on page 1381

Selection	SCPI	Note
Off	`OFF`	This is the default setting
On	`ON`	Available in Single-Attenuator instruments. For compatibility with models that do not have an input attenuator, the `ON` parameter is supported and mapped to `COMBined`
Elec Atten Only	`ELECtrical`	Selects only the electric attenuator to participate in auto ranging. This offers less wear on the mechanical attenuator and is usually faster
Elec+Mech Atten	`COMBined`	In Dual-Attenuator models, this selects both attenuators to participate in the autoranging

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation OFF | ON | ELECtrical | COMBined` `[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation?`
Example	`:POW:RANG:OPT:ATT OFF` `:POW:RANG:OPT:ATT?`
Notes	The parameter option `ELECtrical` sets this function to `ON` in Single-Attenuator models The parameter option `COMBined` is mapped to `ELECtrical` in Single-Attenuator models. If you send `COMBined`, it sets the function to `ON` and returns `ELEC` to a query For SCPI compatibility with models that do not have an input attenuator, the `ON` parameter is honored and mapped to `COMBined`
Dependencies	Only appears in Dual-Attenuator models with an Electronic Attenuator installed In instruments with Dual-Attenuator model, when "Elec Atten" on page 2164 is `OFF` or grayed-out, "Pre-Adjust for Min Clipping" on page 1380 is grayed-out Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes
Preset	`OFF` when Elec Atten is Disabled at preset, otherwise `ELEC`
State Saved	Saved in instrument state

Range	Dual-Attenuator models:	Off | Elec Atten Only | Mech + Elec Atten
	Single-Attenuator models:	Off | On

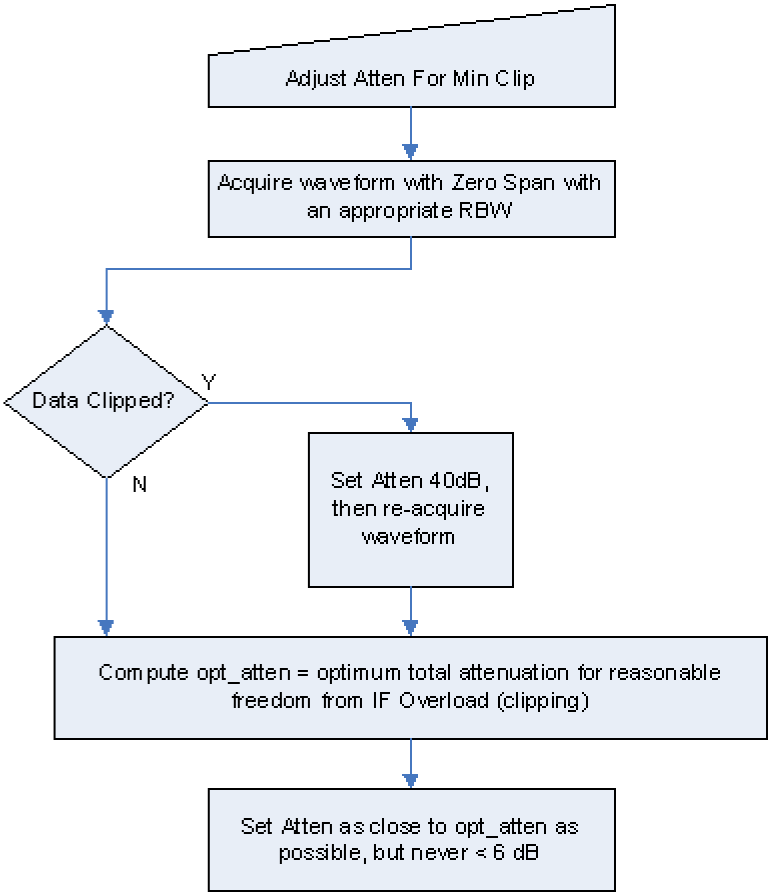
Backwards Compatibility Command

Notes	`ON` aliases to "Elec Atten Only" (`:POW:RANG:OPT:ATT ELEC`) `OFF` aliases to "Off" (`:POW:RANG:OPT:ATT OFF`) `:POW:RANG:AUTO?` returns true if `:POW:RANG:OPT:ATT` is not `OFF`
Backwards Compatibility SCPI	`[:SENSe]:POWer[:RF]:RANGe:AUTO ON | OFF | 1 | 0` `[:SENSe]:POWer[:RF]:RANGe:AUTO?`

Adjustment Algorithm

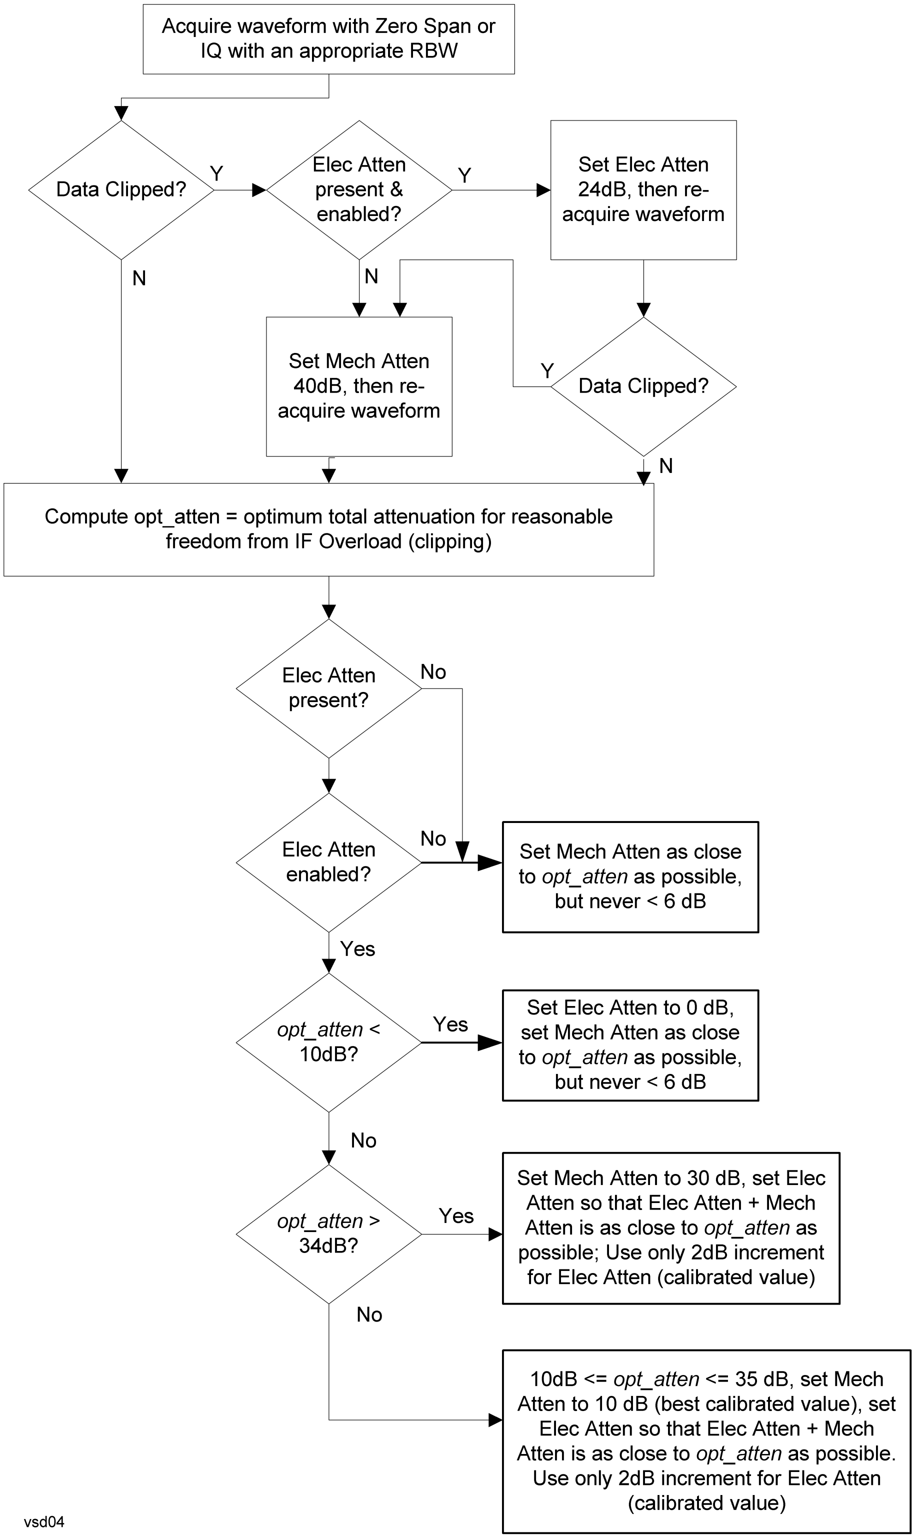
The algorithms for the adjustment are documented below:

Single-Attenuator Models



Dual-Attenuator models

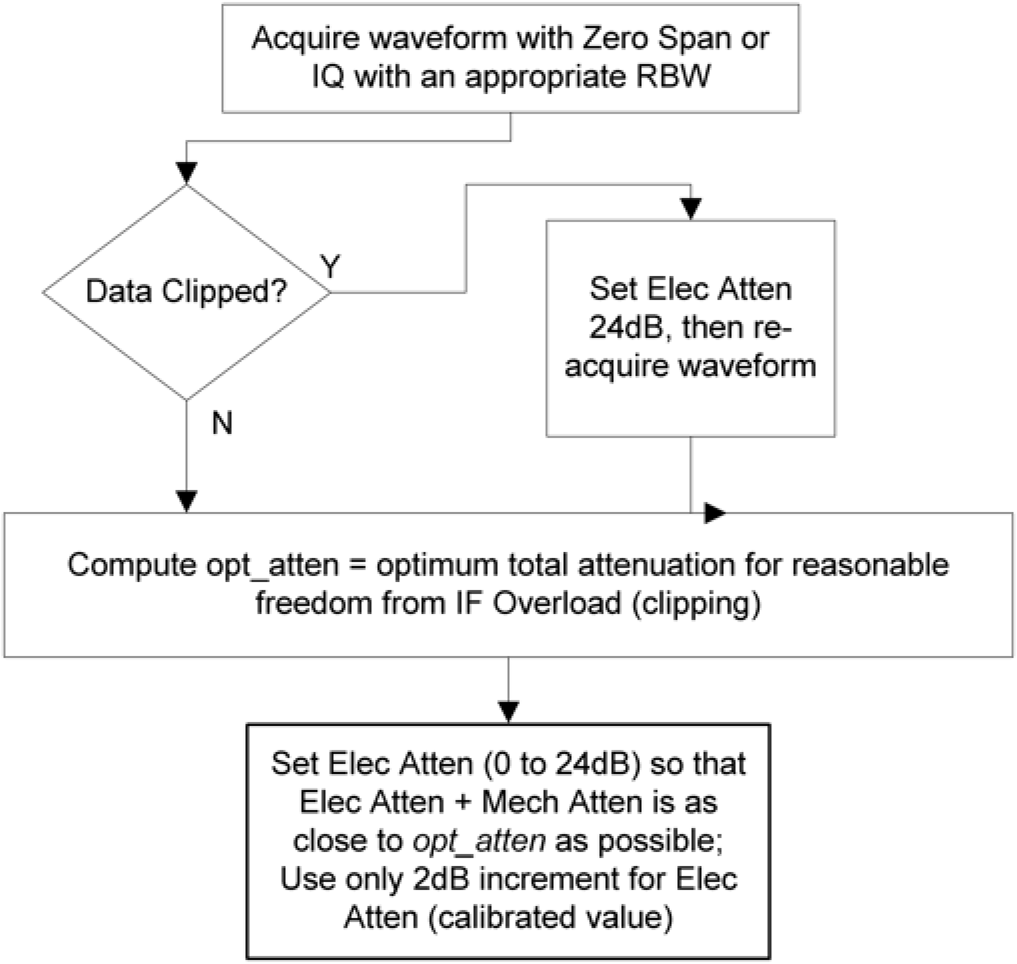
"Adjust Atten for Min Clipping" on page 2167 or "Pre-Adjust for Min Clipping" on page 1380 selection is Mech + Elec Atten:



Acquire waveform with Zero Span or IQ with an appropriate RBW
Data Clipped?
Y
N
Elec Atten present & enabled?
Y
N
Set Elec Atten 24dB, then re-acquire waveform
Set Mech Atten 40dB, then re-acquire waveform
Y
Data Clipped?
N
Compute opt_atten = optimum total attenuation for reasonable freedom from IF Overload (clipping)
Elec Atten present?
No
Elec Atten enabled?
No
Set Mech Atten as close to *opt_atten* as possible, but never < 6 dB
Yes
opt_atten < 10dB?
Yes
Set Elec Atten to 0 dB, set Mech Atten as close to *opt_atten* as possible, but never < 6 dB
No
opt_atten > 34dB?
Yes
Set Mech Atten to 30 dB, set Elec Atten so that Elec Atten + Mech Atten is as close to *opt_atten* as possible; Use only 2dB increment for Elec Atten (calibrated value)
No
10dB <= *opt_atten* <= 35 dB, set Mech Atten to 10 dB (best calibrated value), set Elec Atten so that Elec Atten + Mech Atten is as close to *opt_atten* as possible. Use only 2dB increment for Elec Atten (calibrated value)
vsd04

"Pre-Adjust for Min Clipping" on page 1380 selection is Elec Only.

Note that the **Mech Atten** value is not adjusted, and the value previously set is used. Therefore, there is a case that IF Overload is still observed depending on the input signal level and the Mech Atten setting.



Mech Atten Step

Controls the step size used when making adjustments to the input attenuation.

Labeled **Mech Atten Step** in Dual-Attenuator models and **Atten Step** in Single-Attenuator models. In the Dual-Attenuator configuration, only affects the step size of the mechanical attenuator.

Remote Command	`[:SENSe]:POWer[:RF]:ATTenuation:STEP[:INCRement] 10 dB | 2 dB`

	`[:SENSe]:POWer[:RF]:ATTenuation:STEP[:INCRement]?`
Example	`:POW:ATT:STEP 2` `:POW:ATT:STEP?`
Notes	Has a toggle control on the front panel, but takes a specific value (in dB) when used remotely. The only valid values are 2 and 10
Dependencies	Blanked in EXA, CXA and CXA-m if option FSA (2 dB steps) is not present. If blanked, attempts to set it via SCPI yield an error
Couplings	When the attenuation step size changes, the current mechanical attenuation value is adjusted (if necessary) to be quantized to the new step size. That is, if step is set to 10 dB, mech atten is increased if necessary so it is a multiple of 10 dB
Preset	EXA, CXA and CXA-m: 10 dB (2 dB with option FSA) All other models: 2 dB
State Saved	Saved in instrument state

3.8.4.3 Range (Non-attenuator models)

Only available for Keysight’s modular signal analyzers and certain other Keysight products, such as VXT and M941xE.

State Saved	No

Range

Represents the amplitude of the largest sinusoidal signal that could be present within the IF without being clipped by the ADC. For signals with high peak-to-average ratios, the range may need to exceed the rms signal power by a significant amount to avoid clipping.

This is a measurement global setting.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe <real>` `[:SENSe]:POWer[:RF]:RANGe?`
Example	`:POW:RANG 10 dBm` `:POW:RANG?`
Notes	The MIN and MAX values are affected by the External Gain parameters, and by the **Center Frequency** The hardware compensates for frequency response and alters the Range setting
Preset	0 dBm
State Saved	Yes
Min/Max	–/+100
Annotation	Meas Bar

Adjust Range for Min Clipping

Sets the combination of attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an "immediate action" function, that is, it executes once, when the key is pressed.

This key does not appear in measurements that do not support this functionality.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMediate`
Notes	Executing Adjust Range for Min Clipping initiates the measurement
Dependencies	Does not appear in the Swept SA and Monitor Spectrum measurements

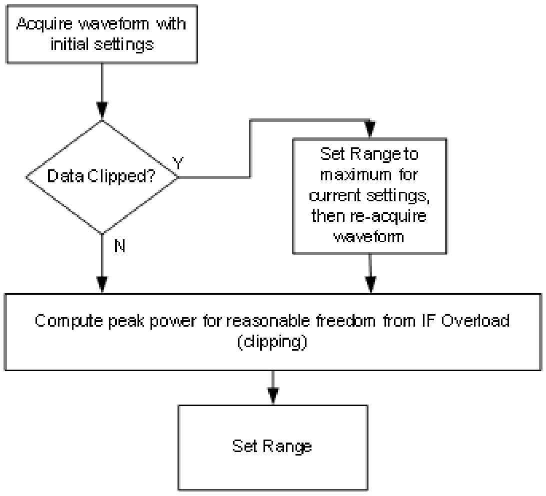
Pre-Adjust for Min Clipping

If this function is `ON`, it applies the adjustment described under Adjust Range For Min Clipping each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation OFF | ON | ELECtrical | COMBined` `[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation?`
Notes	Because there is no attenuator control available in these models, the control displays only `ON` and `OFF` choices. However, for SCPI compatibility with other platforms, all three parameters (`ELECtrical`, `COMBined`, and `ON`) are honored and all are mapped to `ELECtrical`, so if any of these three parameters is sent, a subsequent query will return `ELEC`
Dependencies	Does not appear in the Swept SA and Monitor Spectrum measurements
Preset	`OFF` for Swept SA measurement; `ON` for all other measurements that support **Pre-Adjust for Min Clipping**
State Saved	Saved in instrument state

Adjustment Algorithm

The algorithm for the adjustment is documented below:



Peak-to-Average Ratio

Used with "Range (Non-attenuator models)" on page 2177 to optimize the level control in the instrument. The value is the ratio, in dB, of the peak power to the average power of the signal to be measured. A ratio of 0 should be used for sinusoidal signals; for 802.11g OFDM signals use 9 dB.

All Modes show the current value of Peak-to-Average ratio on the control. However, some Modes do not permit changing the value. In these situations, the control is grayed-out.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:PARatio <real>` `[:SENSe]:POWer[:RF]:RANGe:PARatio?`
Example	`:POW:RANG:PAR 12 dB`
Notes	In some Modes, this parameter is read-only; meaning the value will appear on the control and query via SCPI, but is not changeable. In such applications the control is grayed-out. Attempts to change the value via SCPI are ignored, but no error message is generated
Dependencies	Does not appear in Spectrum Analyzer Mode
Preset	VXT Models M9410A/11A: 0 dB All Others: 10 dB
State Saved	Saved in instrument state
Min	0 dB
Max	VXT Models M9410A/11A: 50 dB All Others: 20 dB

Mixer Lvl Offset

This is an advanced setting to adjust target Range at the input mixer, which in turn affects the signal level in the instrument's IF. This setting can be used when additional optimization is needed after setting "Peak-to-Average Ratio" on page 2179. Positive values of offset optimize noise performance over distortion, negative values optimize distortion performance over noise.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet <real>` `[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet?`
Example	`:POW:RANG:MIX:OFFS -5 dB`
Preset	0 dB
State Saved	Saved in instrument state
Min	VXT Models M9410A/11A -34 dB All Others -35 dB
Max	30 dB

3.8.4.4 Range (Baseband Input models)

Only available when Option BBA is present (I/Q Baseband Inputs), the current measurement supports option BBA, and I/Q is the selected input. In these cases, replaces the **Attenuation** tab.

Each input channel (I and Q) has four internal gain ranges. The maximum allowed voltage in each gain range is slightly more than the nominal value, so the break point between ranges is a few millivolts higher than the nominal (setting a peak voltage of 0.502 mV will still map to the 0.5 V Peak range).

Gain Setting	Volts RMS	Volts Peak	Volts Peak - Peak	dBm (50Ω)	Break Point
0 dB	0.7071	1.0	2.0	10	n/a
6 dB	0.3536	0.5	1.0	4	0.502 V Peak
12 dB	0.1768	0.25	0.5	-2	0.252 V Peak
18 dB	0.0884	0.125	0.25	-8	0.127 V Peak

Dependencies	Available only when the selected input is I/Q. If the current measurement does not support baseband inputs, an error will be displayed: "No result; Meas invalid with I/Q inputs"
State Saved	No

Range Auto/Man

The **Auto** setting for **Range** causes the range to be set based on the Y Scale settings. When **Range** is **Auto**, the I & Q Range are set based on the top of the Y Scale when the Y scale is in dB units (for example, power), or to the max(abs(top), abs(bottom)) when the Y scale reference is not at the top of the screen.

Not all measurements support **Range Auto/Man**. If **Auto** is not supported in the current measurement, this control is grayed-out, displaying **Man**, and `MAN` is returned to a SCPI query, but this does *not* change the Auto/Man setting for **Range**. When you switch to a measurement that supports **Auto**, it goes back to **Auto** if it was previously in **Auto** mode.

Remote Command	`[:SENSe]:VOLTage:IQ:RANGe:AUTO OFF | ON | 0 | 1` `[:SENSe]:VOLTage:IQ:RANGe:AUTO?`

Example	Put the I Range and Q Range in manual
	`:VOLT:IQ:RANG:AUTO OFF`
	`:VOLT:IQ:RANG:AUTO?`

Dependencies	If **Auto** is not supported, sending the SCPI command generates an error
Couplings	When in **Auto**, both I Range and Q Range are set to the same value, computed as follows: Maximum absolute value is computed for the Y Scale. The top and bottom of the graph are computed based on Ref Value, Scale/Div, and Ref Position. Formula: YMax = max(abs(top), abs(bottom)) The I Range and Q Range are then set to YMax
Preset	`ON`
State Saved	Saved in instrument state
Annotation	When in Man, the Range annotation is preceded by "#"

This is an alternate form of the command to match the `POWer` form of the I Range and Q Range SCPI.

Remote Command	`[:SENSe]:POWer:IQ:RANGe:AUTO OFF | ON | 0 | 1` `[:SENSe]:POWer:IQ:RANGe:AUTO?`

Example	Put the I Range and Q Range in manual
	`:POW:IQ:RANG:AUTO OFF`
	`:POW:IQ:RANG:AUTO?`

Notes	`:POW:IQ:RANG:AUTO` is an alternate form of `:VOLT:IQ:RANG:AUTO`, to maintain consistency with I Range and Q Range, which support both the `POWer` and `VOLTage` forms of the command
Preset	`ON`
Range	Auto | Man

I Range

The internal gain range for the I channel when the Input Path is I Only or I and I/Q. Used for both the I and Q channels when the Input Path is I+jQ.

Remote Command	`[:SENSe]:VOLTage:IQ[:I]:RANGe[:UPPer] <voltage>` `[:SENSe]:VOLTage:IQ[:I]:RANGe[:UPPer]?`

Example	Set the I Range to 0.5 V Peak
	`:VOLT:IQ:RANG 0.5 V`
	`:VOLT:IQ:RANG?`

Notes	The numeric entries are mapped to the smallest gain range whose break point is greater than or equal to the value, or 1 V Peak if the value is greater than 1 V
Couplings	When "Q Same as I" on page 2177 is On, the **I Range** value will be copied to "Q Range" on page 2176 Changing the value also sets Range = Man
Preset	Complex `SPECtrum` Measurement: 0.5 V Peak All others: 1 V Peak
State Saved	Saved in instrument state
Range	1 V Peak (10 dBm @ 50 Ω) | 0.5 V Peak (4 dBm @ 50Ω) | 0.25 V Peak (-2 dBm @ 50Ω) | 0.125 V Peak (-8 dBm @ 50Ω)
Min	0.125 V
Max	1 V
Annotation	The Range annotation replaces the RF Input context's "Atten" annotation "Rng: <I Range>". When Range = Man the annotation is preceded by "#" The I Range is not annotated in Input Path Q Only. When I Range and Q Range are the same, the annotation is "Rng: <Range>". When I Range and Q Range are different and the Input Path is Ind I/Q, the annotation is "Rng: <I Range>, <Q Range>" and "Peak" is removed from the text. Examples: "Rng: 1 V Peak" the I Range is 1 V Peak "Rng: 1 V, 0.5 V " the I Range is 1 V Peak and the Q Range is 0.5 V Peak

This is an alternate form of the command to allow entry as a power.

Remote Command	`[:SENSe]:POWer:IQ[:I]:RANGe[:UPPer] <ampl>` `[:SENSe]:POWer:IQ[:I]:RANGe[:UPPer]?`

Example	Set the I Range to 0.5 V Peak when Reference Z is 50 Ω, and to 1.0 V Peak when Reference Z is 75 Ω
	`:POW:IQ:RANG 4 dBm`
	`:POW:IQ:RANG?`

Notes	The `POWer` form of the command is provided for convenience. It maps to the same underlying gain range parameter as the `VOLTage` form The Reference Z (not the I channel Input Z) is used to convert the power to peak voltage, which is then used to set the I Range as with the `VOLTage` form of the command. The power values of the 4 range

	states (1V Peak, 0.5V Peak, 0.25V Peak, and 0.125V Peak) will vary with Reference Z. Here are some examples: 50 Ω: 10, 4, -2, -8 75 Ω: 8.2, 2.2, -3.8, -9.8 600 Ω: -0.8, -6.8, -12.8, -18.9
Preset	10.0 dBm
Range	-20 dBm to 10 dBm
Min	-20 dBm
Max	10 dBm

Q Range

The internal gain range for the Q channel. **Q Range** only applies to Input Path Q Only and Ind I/Q. For input I+jQ "I Range" on page 2174 determines both I and Q channel range settings.

Remote Command	`[:SENSe]:VOLTage:IQ:Q:RANGe[:UPPer] <voltage>` `[:SENSe]:VOLTage:IQ:Q:RANGe[:UPPer]?`

Example	Set the Q Range to 0.5 V Peak:
	`:VOLT:IQ:Q:RANG 0.5 V`
	`:VOLT:IQ:Q:RANG?`

Notes	The numeric entries are mapped to the smallest gain range whose break point is greater than or equal to the value, or 1 V Peak if the value is greater than 1 V **Q Range** is only used for Input Path Q Only and Ind I/Q. For input I+jQ, "I Range" on page 2174 determines both I and Q channel range settings
Couplings	When "Q Same as I" on page 2177 is On, the "I Range" on page 2174 value is copied to **Q Range** and the range value keys are disabled Changing the value also sets Range = Man
Preset	1 V Peak
State Saved	Saved in instrument state
Range	1 V Peak (10 dBm @ 50Ω) | 0.5 V Peak (4 dBm @ 50Ω) | 0.25 V Peak (-2 dBm @ 50Ω) | 0.125 V Peak (-8 dBm @ 50Ω)
Min	0.125 V
Max	1 V
Annotation	The Range annotation replaces the RF Input context's "Atten" annotation "Rng: <Q Range>". When Range = Man the annotation is preceded by "#" The Q Range is not annotated in Input Path I Only or I+jQ. When I Range and Q Range are the same, the annotation is "Rng: <Range>". When I Range and Q Range are different and the Input Path is Ind I/Q, the annotation is "Rng: <I Range>, <Q Range>" and "Peak" is removed from the text. Examples: "Rng: 1 V Peak" the Q Range is 1 V Peak

	"Rng: 1 V, 0.5 V " the I Range is 1 V Peak and the Q Range is 0.5 V Peak

This is an alternate form of the command to allow entry as a power.

Remote Command	`[:SENSe]:POWer:IQ:Q:RANGe[:UPPer] <ampl>` `[:SENSe]:POWer:IQ:Q:RANGe[:UPPer]?`

Example	Sets the Q Range to 0.5 V Peak when Reference Z is 50 Ω , and to 1.0 V Peak when Reference Z is 75 Ω :
	`:POW:IQ:Q:RANG 4 dBm`
	`:POW:IQ:Q:RANG?`

Notes	The `POWer` form of the command is provided for convenience. It maps to the same underlying gain range parameter as the `VOLTage` form of the command The Reference Z (not the Q channel Input Z) is used to convert the power to peak voltage, which is then used to set the Q Range as with the `VOLTage` form of the command. The power values of the 4 range states (1V Peak, 0.5V Peak, 0.25V Peak, and 0.125V Peak) will vary with Reference Z. Here are some examples: 50 Ω: 10, 4, -2, -8 75 Ω: 8.2, 2.2, -3.8, -9.8 600 Ω: -0.8, -6.8, -12.8, -18.9
Preset	10.0 dBm
Range	-20 dBm to 10 dBm
Min	-20 dBm
Max	10 dBm

Q Same as I

Many, but not all, usages require the I and Q channels to have an identical setup. To simplify channel setup, **Q Same as I** causes the Q channel range to be mirrored from the I channel. That way, you only need to set up one channel (the I channel). The I channel values are copied to the Q channel, so at the time **Q Same as I** is Off, the I and Q channel setups will be identical.

Remote Command	`[:SENSe]:VOLTage|POWer:IQ:MIRRored OFF | ON | 0 | 1` `[:SENSe]:VOLTage|POWer:IQ:MIRRored?`

Example	Turn off the mirroring of I Range to Q Range
	`:VOLT:IQ:MIRR OFF`
	`:POW:IQ:MIRR OFF`

Couplings	When ON, the "I Range" on page 2174 value is mirrored (copied) to the "Q Range" on page 2176
Preset	ON
State Saved	Saved in instrument state
Range	OFF|ON

3.8.4.5 Signal Path

Contains controls that pertain to the routing of the signal through the frontend of the instrument.

In general, only appears in instruments whose hardware supports this signal routing. For example, this tab does not appear in many of the modular instrument products, including VXT Model M9420A, or UXM.

This tab *does* appear in VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E, because "Software Preselection" on page 2195 is under this tab, and VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E implement a version of Software Preselection.

Presel Center

Adjusts the centering of the preselector filter to optimize the amplitude accuracy at the frequency of the selected marker. If the selected marker is not on when **Presel Center** is pressed, the instrument turns on the selected marker, performs a peak search, and then performs centering on the marker’s center frequency. If the selected marker is already on and between the start and stop frequencies of the instrument, the instrument performs the preselector calibration on that marker’s frequency. If the selected marker is already on, but outside the frequency range between **Start Freq** and **Stop Freq**, the instrument first performs a peak search, and then performs centering on the marker’s center frequency.

The value displayed on **"Preselector Adjust" on page 2182** changes to reflect the new preselector tuning.

Certain considerations should be observed to ensure proper operation, as detailed in "Proper Preselector Operation" on page 1394.

Remote Command	`[:SENSe]:POWer[:RF]:PCENter`
Example	`:POW:PCEN`
Notes	The rules outlined above under the control description apply for the remote command as well as the key. The result of the command depends on marker position, etc. Any message generated by the control press is also generated in response to the remote command
Dependencies	Does not appear in CXA-m, nor in VXT Models M9410A/11A/15A/16A, M9410E/11E/15E/16E Grayed-out if the microwave preselector is off – If the selected marker’s frequency is below Band 1, an advisory message is generated “Preselector not used in this frequency range” and no action is taken – Grayed-out if entirely in Band 0, that is, if **Stop Freq** is below about 3.6 GHz Grayed-out if entirely above 50 GHz, that is, if **Start Freq** is above 50 GHz – Blanked in models that do not include a preselector, such as Option 503. If the remote command

	is sent in these instruments, accepted without error, and the query always returns 0 – Grayed-out in the **Spectrogram** View
Couplings	The active marker position determines where the centering will be attempted If the instrument is in a measurement such as averaging when centering is initiated, the act of centering the preselector restarts averaging, but the first average trace will not be taken until the centering is completed The offset applied to do the centering appears in "Preselector Adjust" on page 2182
Status Bits/OPC dependencies	When centering the preselector, `*OPC` does not return true until the process is complete and a subsequent measurement has completed, nor are results returned in response to `:READ` or `:MEASure` queries The `Measuring` bit remains set (true) while this command is operating, and does not go false until the subsequent sweep/measurement has completed

Proper Preselector Operation

Certain considerations should be observed to ensure proper operation:

1. If the selected marker is **Off**, the instrument turns on a marker, performs a peak search, and adjusts the preselector using the selected marker's frequency. It uses the "highest peak" peak search method unqualified by threshold or excursion, so that there is no chance of a ‘no peak found’ error. It continues with that peak, even if it is the peak of just noise. Therefore, for this operation to work properly, there should be a signal on-screen in a preselected range for the peak search to find
2. If the selected marker is already **On**, the instrument attempts the centering at that marker's frequency. There is no preselector for signals below about 3.6 GHz, so if the marker is on a signal below 3.6 GHz, no centering is attempted, and an advisory message is generated
3. In some models, the preselector can be bypassed. If it is bypassed, no centering is attempted in that range and a message is generated

Preselector Adjust

Lets you manually adjust the preselector filter frequency to optimize its response to the signal of interest. Only available when "Presel Center" on page 2181 is available.

For general purpose signal analysis, using **Presel Center** is recommended. Centering the filter minimizes the impact of long-term preselector drift. **Preselector Adjust** can be used instead to manually optimize the preselector. One application of manual optimization would be to peak the preselector response, which both optimizes the signal-to-noise ratio and minimizes amplitude variations due to small (short-term) preselector drifting.

When **Presel Center** is performed, the offset applied to do the centering becomes the new value of **Preselector Adjust**.

Remote Command	`[:SENSe]:POWer[:RF]:PADJust <freq>` `[:SENSe]:POWer[:RF]:PADJust?`
Example	`:POW:PADJ 100KHz` `:POW:PADJ?`
Notes	The value on the control is displayed to 0.1 MHz resolution
Dependencies	– Does not appear in CXA-m – Does not appear in VXT Models M9410A/11A/15A/16A – Does not appear in M9410E/11E/15E/16E – Grayed-out if microwave preselector is off – Grayed-out if entirely in Band 0, that is, if Stop Freq is lower than about 3.6 GHz – Grayed-out if entirely above 50 GHz, that is, if Start Freq is higher than 50 GHz – Blank in models that do not include a preselector, such as Option 503. If the command is sent in these instruments, it is accepted without error, and the query always returns 0 – Grayed-out in the **Spectrogram** View
Preset	0 MHz
State Saved	The **Preselector Adjust** value set by "Presel Center" on page 2181, or by manually adjusting **Preselector Adjust** Not saved in instrument state, and does not survive a Preset or power cycle
Min/Max	–/+500 MHz
Backwards Compatibility SCPI	`[:SENSe]:POWer[:RF]:MW:PADJust` `[:SENSe]:POWer[:RF]:MMW:PADJust`

Backwards Compatibility Command

Notes	The command has no effect, and the query always returns `MWAVe`
Backwards Compatibility SCPI	`[:SENSe]:POWer[:RF]:PADJust:PRESelector MWAVe | MMWave | EXTernal` `[:SENSe]:POWer[:RF]:PADJust:PRESelector?`

Internal Preamp

Accesses a menu of controls for the internal preamps. Turning on the preamp gives a better noise figure, but a poorer inter-modulation distortion (TOI) to noise floor dynamic range. You can optimize this setting for your measurement.

The instrument takes the preamp gain into account as it sweeps. If you sweep outside of the range of the preamp, the instrument will also account for that. The displayed result always reflects the correct gain.

For some measurements, when the preamp is on and any part of the displayed frequency range is below the lowest frequency for which the preamp has specifications, a warning condition message appears in the status line. For example, for a preamp with a 9 kHz lowest specified frequency: "Preamp: Accy unspec'd below 9 kHz".

Selection	Example	Note
Off	:POW:GAIN OFF	
Low Band	:POW:GAIN ON :POW:GAIN:BAND LOW	Sets the internal preamp to use only the low band. The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Low Band selection in the dropdown
Full Range	:POW:GAIN ON :POW:GAIN:BAND FULL	Sets the internal preamp to use its full range. The low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model) is supplied by the low band preamp and the frequencies above low band are supplied by the high band preamp The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Full Range selection in the dropdown. If the high band option is not installed the Full Range selection does not appear

NOTE

The maximum **Center Frequency** for **Low Band**, displayed in square brackets, can change based on the selected IFBW for measurements that support IFBW (for example, Waveform measurement across all Modes that support it). In certain models (such as N9042B & N9032B), IFBW values <= 40 MHz have a maximum **Low Band** frequency of 3.6 GHz, while 40 MHz < IFBW <= 1 GHz have a maximum of 3.3 GHz, and 1 GHz < IFBW <= 1.5 GHz have a maximum of 3.5 GHz. IFBW values > 1.5 GHz do not support a **Center Frequency** that can reach the **Low Band** maximum frequency. In these cases, **N/A** is displayed in the square brackets for **Low Band**.

Remote Command	`[:SENSe]:POWer[:RF]:GAIN:BAND LOW | FULL` `[:SENSe]:POWer[:RF]:GAIN:BAND?`
Example	`:POW:GAIN:BAND LOW` `:POW:GAIN:BAND?`
Dependencies	Not available on all hardware platforms. If the preamp is not present or is unlicensed, this control is not shown Does not appear in VXT Models M9410A/11A/15A/16A nor in M9410E/11E/15E/16E If `:POW:GAIN:BAND FULL` is sent when a low band preamp is available, the preamp band parameter is set to `LOW` instead of `FULL`, and an "Option not installed" message is generated

	Not available when the electronic/soft attenuator is enabled
Preset	`LOW`
State Saved	Saved in instrument state
Annotation	When the USB Preamp is not connected to USB, the Preamp annotation in the Meas Bar says “Off” if the preamp is off and displays the frequency range of the low band or full range preamp depending on the setting. For example, if the Preamp is set to Low Band and the Low Band is 3.6 GHz the annotation says “3.6 GHz”. If it is a 13.6 GHz preamp and it is set to Full Range the annotation says “13.6 GHz” When the USB Preamp is connected to USB, the Preamp annotation says “Preamp: USB” if the internal preamp is off or “Preamp: USB, Int” if the internal preamp is on (only for measurements that support the USB preamp)

Auto Function

Remote Command	`[:SENSe]:POWer[:RF]:GAIN[:STATe] OFF | ON | 0 | 1` `[:SENSe]:POWer[:RF]:GAIN[:STATe]?`
Example	`:POW:GAIN OFF` `:POW:GAIN?`
Preset	`OFF`

LNA

Lets you turn the Low Noise Amplifier (**LNA**) on or off.

LNA is an additional preamplifier that provides superior DANL and frequency range compared to "Internal Preamp" on page 2183. LNA provides lower system noise figure, especially at frequencies above 100 MHz, and can be operated up to the full range of 50 GHz instruments.

For best possible sensitivity, **LNA** can be turned on *together* with "Internal Preamp" on page 2183, although if you operate both preamps together, note that the TOI (distortion) specifications are impacted. The sensitivity improvement of this combination is substantial when operating in high band (frequencies above 3.6 GHz).

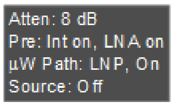
For more details about annotation, see "More Information" on page 1398

Remote Command	`[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe] OFF | ON | 0 | 1` `[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe]?`
Example	`:POW:GAIN:LNA ON`
Dependencies	Requires Option LNA, except for VXT models M9415A/16A Does not appear in VXT models M9420A/10A/11A M9410E/11E/15E/16E support LNA May not appear in some measurements **LNA** is not available when the electronic/soft attenuator is enabled

Preset	OFF
State Saved	Saved in State

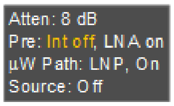
More Information

When **LNA** is installed, the preamp annotation changes to show the state of both **LNA** and **Internal Preamp**. Below is an example:



Atten: 8 dB
Pre: Int on, LNA on
µW Path: LNP, On
Source: Off

Note that when operating entirely in the low band (below about 3.6 GHz), if **LNA** is on, **Internal Preamp** is switched off (even if you have its switch set to ON). This is because the noise performance is actually degraded in low band if both preamps are on. In this case, the annotation reflects the actual state of the two preamps, but the **Internal Preamp** annotation displays in amber, to warn you that the actual state of **Internal Preamp** does not match its switch control display:



Atten: 8 dB
Pre: Int off, LNA on
µW Path: LNP, On
Source: Off

µW Path Control

Options for this control include **µW Preselector Bypass** (Option MPB), **Low Noise Path** (Option LNP) and **Full Bypass Enable** in the High Band path circuits.

When the µW Preselector is bypassed, flatness is improved, but will be subject to spurs from out of band interfering signals. When **Low Noise Path Enable** is selected, the instrument automatically bypasses certain circuitry in the high frequency bands that can contribute to noise, when it is appropriate based on other instrument settings.

For most applications, the preset state is **Standard Path**, which provides the best remote-control throughput, minimizes acoustic noise from switching and minimizes the risk of wear in the hardware switches, particularly in remote test scenarios where both low band and high band setups will follow in rapid succession. In this path, the bypass of the low band/high band switch and microwave preamp is never activated, which can cause some noise degradation but preserves the life of the bypass switch.

For applications that utilize the wideband IF paths, the preset state is **µW Preselector Bypas**s, if option MPB is present. This is because, when using a wideband IF such as the 140 MHz IF, the µW Preselector's bandwidth can be narrower than the available IF bandwidth, causing degraded amplitude flatness and phase linearity, so it is desirable to bypass the preselector in the default case.

You may choose **Low Noise Path Enable** for a lower noise floor, especially in the 21-26.5 GHz region, though without improving many measures of dynamic range, and without giving the best possible noise floor. The preamp, if purchased and used, gives better noise floor than does **Low Noise Path Enable**, but the preamp's compression threshold and third-order intercept are much poorer than that of **Low Noise Path Enable**.

A fourth choice is **Full Bypass Enable**, which combines **µW Preselector Bypass** and **Low Noise Path Enable**. Because this can bypass most of the circuitry between the input and the first mixer, care should be taken when using this setting to avoid damaging the mixer. **Full Bypass Enable** is only available if both options LNP and MPB are present, as well as option FBP.

Path	Example	Note
Standard Path	:POW:MW:PATH STD	Normal setting for most measurements. µW Preselector in circuit, Low Noise Path disabled
Low Noise Path Enable	:POW:MW:PATH LNP	See "Low Noise Path Enable" on page 1403
µW Preselector Bypass	:POW:MW:PATH MPB	See "µW Preselector Bypass" on page 1405
Full Bypass Enable	:POW:MW:PATH FULL	See "Full Bypass Enable" on page 1405

Remote Command	`[:SENSe]:POWer[:RF]:MW:PATH STD | LNPath | MPBypass | FULL` `[:SENSe]:POWer[:RF]:MW:PATH?`

Example	`:POW:MW:PATH LNP`
	Enables the Low Noise path
	`:POW:MW:PATH?`

Notes	When "Presel Center" on page 2181 is performed, the instrument momentarily switches to the Standard Path, regardless of the setting of **µW Path Control** The DC Block will always be switched in when the low noise path is switched in, to protect succeeding circuitry from DC. Note that this does not mean "when the low noise path is enabled" but when, based on the Low Noise Path rules, the path is actually switched in. This can happen when the selection is **Low Noise Path Enable** or **Full Bypass Enable.** In the case where the DC Block is switched in, the instrument is now AC-coupled. However, if you selected DC coupling, the UI would still behave as though it were DC-coupled, including all annunciation, warnings, status bits, and responses to SCPI queries. This is because, based on other settings, the instrument could switch out the low noise path at any time and hence go back to being DC-coupled Alignment switching ignores the settings in this menu, and restores them when finished
Dependencies	Does not appear in CXA-m, VXT Models M9410A/11A/15A/16A, nor in M9410E/11E/15E/16E, BBIQ and External Mixing – The **Low Noise Path Enable** selection does not appear unless Option LNP is present and licensed

- The **µW Preselector Bypass** selection does not appear unless Option MPB is present and licensed
- The **Full Bypass Enable** selection does not appear unless options LNP and MPB are both present as well as option FBP

In any of these cases, if the required options are not present and the SCPI command is sent, error -241, "Hardware missing; Option not installed" is generated

Low Noise Path Enable and **Full Bypass Enable** are grayed-out if the current measurement does not support them

Low Noise Path Enable and **Full Bypass Enable** are not supported in Avionics and MMR Modes (non-modulation measurements). In any of these cases (that is, the feature is not supported in either measurement or Mode), if the SCPI command is sent, the following error is generated: -221, “Setting Conflict; Feature not supported for this measurement”

Preset

Mode	Value
IQ Analyzer Pulse RTSA Avionics	MPB option present and licensed: `MPB` MPB option not present and licensed: `STD`
All other Modes	`STD`

–

State Saved	Save in instrument state
Range	Standard Path | Low Noise Path Enable | µW Presel Bypass | Full Bypass Enable
Annotation	In the Meas Bar, if the Standard path is chosen: µW Path: Standard If Low Noise Path is enabled but the LNP switch is not thrown: µW Path: LNP,Off If the Low Noise Path is enabled and the LNP switch *is* thrown: µW Path: LNP,On If the preselector is bypassed: µW Path: Bypass If Full Bypass Enable is selected but the LNP switch is not thrown: µW Path: FByp,Off If Full Bypass Enable is selected and the LNP switch *is* thrown: µW Path: FByp,On

µW Path Control Auto

In VMA, WLAN, 5G NR, CQM Modes, an **Auto/Man** switch is added to **µW Path Control**:

This allows the function to automatically switch based on certain Auto Rules as shown below:

VMA Mode

Measurement	µW Path Control Auto behavior
Digital Demod	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
Monitor Spectrum	Always Presel Bypass
IQ Waveform	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
Custom OFDM	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
Channel Power	Always Presel Bypass
Occupied BW	Always Presel Bypass
CCDF	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
ACP	Always Presel Bypass
SEM	Always Presel Bypass
Spurious Emissions	Always Standard Path

WLAN Mode

Measurement	µW Path Control Auto behavior
Modulation Analysis	Always Presel Bypass
Spectral Flatness	Always Presel Bypasss
Power vs Time	Always Presel Bypass
Monitor Spectrum	Always Presel Bypass
IQ Waveform	Always Presel Bypass
Channel Power	Always Presel Bypass
Occupied BW	Always Presel Bypass
CCDF	Always Presel Bypass
SEM	For 11be 320M, when ‘Enabled Wideband IF for FFT’ is OFF or ‘Sweep Type

Measurement	µW Path Control Auto behavior
	Rule' is Best Dynamic Range, auto µW path is standard For other cases, auto µW path is presel bypass if presel bypass is enabled, auto µW path is standard if presel bypass is not enabled
Spurious Emissions	Always Standard Path

5G NR Mode

Measurement	µW Path Control Auto behavior
Modulation Analysis	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Full Bypass if conditions warrant(FBP Option is available and "Allow Full Bypass in Auto" is On), otherwise choose Preselector Bypass
Monitor Spectrum	Always Standard Path
IQ Waveform	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Full Bypass if conditions warrant(FBP Option is available and "Allow Full Bypass in Auto" is On), otherwise choose Preselector Bypass
Channel Power	Always Standard Path
Occupied BW	Always Standard Path
CCDF	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
ACP	Always Standard Path
SEM	Always Standard Path
Spurious Emissions	Always Standard Path
Transmit On|Off Power	Use Standard Path unless tuned frequency > 3.6 GHz and Info BW > 15 MHz, in which case choose Preselector Bypass

Channel Quality Mode

Measurement	µW Path Control Auto behavior
Group Delay	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Full Bypass if conditions warrant(FBP Option is available and "Allow Full Bypass in Auto" is On), otherwise choose Preselector Bypass
Monitor Spectrum	Always Standard Path
IQ Waveform	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
CCDF	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass

Remote Command

```
[:SENSe]:POWer[:RF]:MW:PATH:AUTO ON | OFF | 1 | 0
[:SENSe]:POWer[:RF]:MW:PATH:AUTO?
```

Example

```
:POW:MW:PATH:AUTO ON
```

	`:POW:MW:PATH:AUTO?`
Dependencies	Only appears in VMA, WLAN, 5G NR and CQM Modes
Couplings	See "µW Path Control Auto" on page 1400 above
Preset	`ON`
Range	`ON|OFF`

Low Noise Path Enable

Low Noise Path Enable provides a lower noise floor under some circumstances, particularly when operating in the 21–26.5 GHz region. With the Low Noise Path enabled, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and
- the stop frequency is above 3.6 GHz
- The internal preamp is not installed, or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Low Noise Path Enable** is selected in the user interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Low Noise Path Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Low Noise Path Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

For measurements that use IQ acquisition, the low noise path is used when **Center Frequency** is in High Band (> 3.6 GHz) and no preamp is in use. In other words, the rules above are modified to use only the center frequency to qualify which path to switch in. This is not the case for FFTs in the Swept SA measurement; they use the same rules as swept measurements.

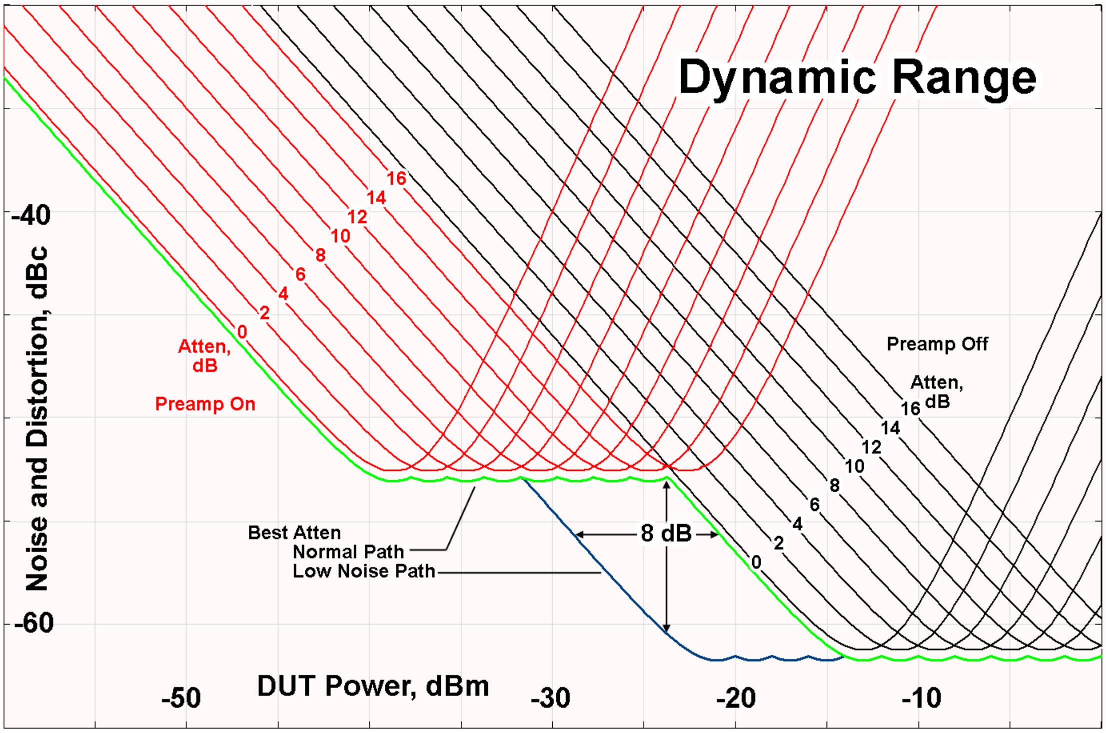
Note that the Low Noise Path, while giving improved DANL, has the disadvantage of decreased TOI performance and decreased gain compression performance relative to the standard path.

Note also that the bypass switch is a mechanical switch and has finite life, so if the **Low Noise Path Enable** is selected, it is possible to cause frequent cycling of this switch by frequently changing instrument settings such that the above conditions hold true only some of the time. A user making tests of this nature should consider opting for the **Standard Path**, which will never throw the bypass switch, at the expense of some degraded noise performance.

The low noise path is useful for situations where the signal level is so low that the instrument performance is dominated by noise even with 0 dB attenuation, but still high enough that the preamp option would have excessive third-order intermodulation or compression. The preamp, if purchased and used, gives better noise floor than does the “Low Noise Path.” However, its compression threshold and third-order intercept are much poorer than that of the non-preamp path.

There are some applications, typically for signals around −30 dBm, for which the third-order dynamic range of the standard path is good enough, but the noise floor is not low enough even with 0 dB input attenuation. When the third-order dynamic range of the preamp path is too little and the noise floor of the standard path is too high, the Low Noise Path can provide the best dynamic range

The graph below illustrates the concept. It shows, in red, the performance of an instrument at different attenuation settings, both with the preamp on and off, in a measurement that is affected by both instrument noise and instrument TOI. The green shows the best available dynamic range, offset by 0.5 dB for clarity. The blue shows how the best available dynamic range improves for moderate signal levels with the low noise path switched in. In this illustration, the preamp improves the noise floor by 15 dB while degrading the third-order intercept by 30 dB, and the low noise path reduces loss by 8 dB. The attenuator step size is 2 dB.



There are other times where selecting the low noise path improves performance, too. Compression-limited measurements such as finding the nulls in a pulsed-RF spectrum can profit from the low noise path in a way similar to the TOI-limited measurement illustrated. Accuracy can be improved when the low noise path allows the optimum attenuation to increase from a small amount like 0, 2 or 4 dB to a larger amount, giving better return loss at the instrument input. Harmonic measurements, such as second and third harmonic levels, are much improved using the low noise path because of the superiority of that path for harmonic (though not intermodulation) distortion performance.

µW Preselector Bypass

Toggles the preselector bypass switch for band 1 and higher. When the microwave presel is on, the signal path is preselected. When the microwave preselector is off, the signal path is not preselected. The preselected path is the normal path for the instrument.

The preselector is a tunable bandpass filter which prevents signals away from the frequency of interest from combining in the mixer to generate in-band spurious signals (images). The consequences of using a preselector filter are its limited bandwidth, the amplitude and phase ripple in its passband, and any amplitude and phase instability due to center frequency drift.

Option MPB or pre-selector bypass provides an unpreselected input mixer path for certain X-Series signal analyzers with frequency ranges above 3.6 GHz. This signal path allows a wider bandwidth and less amplitude variability, which is an advantage when doing modulation analysis and broadband signal analysis. The disadvantage is that, without the preselector, image signals will be displayed. Another disadvantage of bypassing the preselector is increased LO emission levels at the front panel input port.

Image responses are separated from the real signal by twice the 1st IF. For IF Paths of 10 MHz and 25 MHz, the 1st IF is 322.5 MHz, so the image response and the real signal will be separated by 645 MHz. The 1st IF will be different for other IF Path settings. When viewing a real signal and its corresponding image response in internal mixing, the image response will be to the left of the real signal.

Also, the image response and the real signal typically have the same amplitude and exhibit the same shape factor.

However, if Option FS1 (Fast Sweep Capability) is enabled, the image response in the Swept SA measurement appears lower in amplitude and has a much wider shape factor compared to the real signal.

Full Bypass Enable

With **Full Bypass Enable** selected, the microwave preselector is bypassed. In addition, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and

- the stop frequency is above 3.6 GHz.
- the internal preamp is not installed or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Full Bypass Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

CAUTION

When **Full Bypass Enable** is selected, and "Y Scale" on page 2153 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq >3.6 GHz and the Preamp is either not licensed, set to Low Band, or Off). This puts the first converter at considerable risk to be damaged by high AC power. Consequently, whenever **Full Bypass Enable** is selected, a warning message appears in the status bar:

“Full Bypass Enabled, maximum safe input power reduced”

Microwave Preselector Bypass Backwards Compatibility

Example	Bypass the microwave preselector: `:POW:MW:PRES OFF`
Notes	Included for Microwave Preselector Bypass backwards compatibility The `ON` parameter sets the `STD` path (`:POW:MW:PATH STD`) The `OFF` parameter sets path `MPB` (`:POW:MW:PATH MPB`)
Preset	`ON`
Backwards Compatibility SCPI	`[:SENSe]:POWer[:RF]:MW:PRESelector[:STATe] ON | OFF | 0 | 1` `[:SENSe]:POWer[:RF]:MW:PRESelector[:STATe]?`

Frequency Extender Preselection Bypass

Only applies to the high frequency path of the Frequency Extender, and only if the Frequency Extender allows it. For example, the V3050A high frequency path is 50 – 110 GHz and *does* allow control of the preselector bypass.

When the Frequency Extender’s preselection is bypassed, flatness is improved, but will be subject to spurs from out-of-band interfering signals. For bandwidths greater than 2.5 [GHz], it is recommended that the signal bypass the Frequency Extender Preselector since the max bandwidth of the Preselector can be as narrow as 2.5 [GHz].

For most applications, the preset state is `OFF`, which gives the best remote-control throughput, minimizes acoustic noise from switching, minimizes out of band spurs, and minimizes the risk of wear in the hardware switches.

Preselector and Bandwidth Conflict

When the Frequency Extender Preselector is applied and the signal bandwidth is greater than 2.5 [GHz], then a settings alert message will show to warn the user that the signal may be distorted due to the limitation of the Frequency Extender Preselector bandwidth.

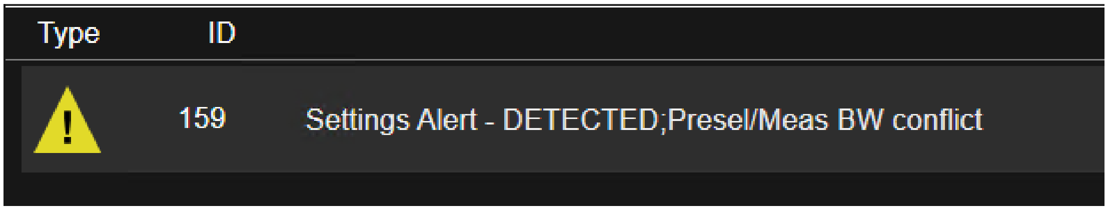
An example of the settings alert message is shown below.

Settings Alert message in the Status Bar at the bottom of the display.

1 Settings Alert;Presel/Meas BW conflict

Settings Alert message in the error queue

.



Type	ID	
!	159	Settings Alert - DETECTED;Presel/Meas BW conflict

Software Preselection

Provided in some instruments, either to compensate for issues with provided hardware preselection or to provide the preselection function when there is no hardware preselector.

N9041B

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

In N9041B, **Software Preselection** only applies for frequencies above 50 GHz, therefore it is only used for RF Input 2. Even if turned on, it is not used for other inputs, and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note “(>~50 GHz)”.

Note that in N9041B, in Swept SA measurement, **Software Preselection** works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT sweep type.

N9042B+V3050A

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

For N9042B+V3050A, Software Preselection only applies for frequencies above 50 GHz, therefore it is only used for External RF. Even if it is turned on, it will not be used for other inputs and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note “(>~50 GHz)”.

Note that for N9042B+V3050A, in the Swept SA measurement, Software Preselection works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT Sweep Type.

VXT models M9410A/11A/15A/16A

Software Preselection is used to provide the preselection function, as there is no hardware preselector in these models. Two background traces are taken and compared point by point, and the point with the lowest amplitude from the two traces is used. This provides a method to reduce spurs that are internally generated within the VXT, but you should note the following when using Software Preselection:

- There is some speed cost due to the need to take multiple captures
- Taking the point with the lowest amplitude in each trace will make the average noise level lower at all points that do not have a spur. This can reduce the accuracy of the measurement of noise and noise-like signals

Because of the difficulty in identifying spurs manually, you are recommended to leave Software Preselection ON at all times in VXT models M9410A/11A. If you turn it off in order to speed up your measurement or improve noise accuracy, be aware of unwanted onscreen spurs.

Remote Command	`[:SENSe]:POWer[:RF]:SWPResel:STATe 0 | 1 | ON | OFF` `[:SENSe]:POWer[:RF]:SWPresel:STAT?`
Example	`:POW:SWPR:STAT 1` `:POW:SWPR:STAT?`
Dependencies	Only appears in N9041B, N9042B+V2050A, VXT models M9410A/11A and M9410E/11E. Does not

	appear in all measurements
Couplings	Affects **Sweep Time** **Auto Tune** supports **Software Preselection**, so **Auto Tune** should be performed after setting the **Software Preselection** state
Preset	N9041B: `OFF` N9042B+V3050A: `ON` M9410A/11A: `ON`
State Saved	Saved in instrument state

SW Preselection Type

Specifies the algorithm used for software preselection.

Two hidden sweeps occur in succession. The second sweep is offset in LO frequency by 2 * IF / N. For each point in each trace, the smaller amplitude from the two traces is taken and placed in that point in the selected trace. The Peak detector is auto-selected to improve the image suppression effectiveness. Responses of each trace that lie on top of one another will remain and are valid signals. Other signals are images, which are suppressed. The action of taking the smaller of the two traces will make the average noise level lower in all points that do not have an image, thus reducing the accuracy of the measurement of noise and noise-like signals.

- `NORMal` - mathematically removes all image and multiple responses of signals present at the input
- `ADVanced` - any trace processing (such as “max hold” or trace averaging) is performed on the points of both candidate traces before the “select minimum” operation occurs. This form of processing works better for non-stationary signals, such as pulsed-RF signals

Remote Command	`[:SENSe]:POWer[:RF]:SWPResel NORMal | ADVanced` `[:SENSe]:POWer[:RF]:SWPResel?`
Example	`:POW:SWPR NORM` `:POW:SWPR?`
Dependencies	Only appears in N9041B and N9042B+V3050A. Only appears in measurements that use the Swept method Grayed-out when "Software Preselection" on page 2195 is `OFF`. The grayout message is “Unavailable unless SW Presel enabled”
Preset	N9041B: `ADVanced` N9042B+V3050A: `NORMal`

State Saved	Saved in instrument state

SW Preselection BW

Specifies the effective bandwidth to be used for Software Preselection.

The options are:

- `NORMal` – when making Swept measurements, a software preselection algorithm is used which takes up to 4 background acquisitions, then post-processes the result. This algorithm can remove images from signals with an occupied bandwidth up to around 3 GHz. (Default/Preset setting). When making FFT measurements, this algorithm is not used, instead the same algorithm is used as for `NARRow` (below)
- `NARRow`– a software preselection algorithm is used which takes two background acquisitions, then post-processes the result to detect and remove images from wideband signals with occupied bandwidths up to 2 GHz. This increases the risk of images failing to be rejected, but improves the measurement speed

Remote Command	`[:SENSe]:POWer[:RF]:SWPResel:BW NORMal | NARRow` `[:SENSe]:POWer[:RF]:SWPResel:BW?`
Example	`:POW:SWPR:BW NARR`
Dependencies	Only appears in N9041B and N9042B+V3050A. Only appears in measurements that use the Swept method Grayed-out when "Software Preselection" on page 2195 is `OFF`. The grayout message is “Unavailable unless SW Presel enabled” For N9042B+V3050A, the parameter is SCPI-only, and always set to `NARRow` when **Software Preselection** is enabled
Preset	N9041B: `NORMal` N9042B+V3050A: `NARRow`
State Saved	Saved in instrument state

High Freq Prefilter

Lets you set the state of Prefilter for center frequencies above 1310 MHz.

In VXT Models M9410A/11A and M9410E/11E in bypass frequency range (1310MHz~5GHz), the Receiver RF path has a bank of filters that come after the RF Attenuator in the signal path. Since this bank of filters precedes the mixer they are known as the “Prefilter” bank. Their purpose is to eliminate unwanted in-band mixing products by filtering out all but the desired frequencies before the signals get to the mixer. There are 13 prefilter bands to cover the frequencies between 9 kHz and 6000 MHz. The Prefilter provides the necessary rejection of the unwanted signal.

Remote Command	`[:SENSe]:<measurement>:PFILter[:STATe] ON | OFF | 1 | 0` `[:SENSe]:<measurement>:PFILter[:STATe]?`

Example	Enable High Freq Prefilter for the Complex Spectrum Measurement in `BASIC` Mode:
	`:SPEC:PFIL ON`
	Enable High Freq Prefilter for the IQ Waveform Measurement, in multiple Modes:
	`:WAV:PFIL ON`
	Enable High Freq Prefilter for the Swept SA Measurement in `SA` Mode:
	`:SAN:PFIL ON`

Dependencies	Only appears in VXT models M9410A/11A with center frequency above 1310 MHz, and M9410E/11E in frequency range 1310MHz~5GHz
Preset	See "Prefilter Presets" on page 1411 below
State Saved	Saved in instrument state

Prefilter Presets

Meas	Mode	Preset
SPEC	BASIC	OFF
WAV	BASIC, WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA	OFF
MON	WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA	OFF
RHO	WCDMA	OFF
CDP	WCDMA	OFF
PCON	WCDMA	OFF
EVMQ	WCDMA	OFF
CHP	WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA, SA	OFF
OBW	WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA, SA	OFF
ACP	WCDMA, LTEAFDD, LTEATDD, 5GNR, VMA, SA	OFF
SEM	WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA, SA	OFF
PST	WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA, SA	OFF
PVT	WLAN, LTEAFDD, LTEATDD, 5GNR	OFF
EVM	WLAN, LTEAFDD, LTEATDD, 5GNR	OFF
FLAT	WLAN	OFF
EVMM	WLAN	OFF
CEVM	LTEAFDD, LTEATDD	OFF
PAVT	5GNR, VMA	OFF
DDEM	VMA	OFF
OFDM	VMA	OFF
SAN	SA	ON
HARM	SA	ON

3.8.5 BW

BW function is not supported in LTE-A Modulation Analysis measurements.

3.8.6 Display

The Display key opens the Display Menu, which lets yu configure display items for the current Mode, Measurement View or Window.

3.8.6.1 Meas Display

The Meas Display tab contains controls for setting up the display layout. You can select to display up to six windows on the screen with various layout:

- Single layout has one window.
- Stack 2 layout has two windows, one on top of the other.
- Stack 3 layout has three windows that display, top to bottom
- Stack 4 layout has four windows that display, top to bottom
- Stack 6 layout has three windows that display, top to bottom
- Grid 2x2 layout has 4 windows, arranged 2x2.They display (in order top to bottom, left to right)
- Grid 2x3 layout has 2 rows of 3 windows that display all 6 traces in order, top to bottom, them left to right.
- Grid 3x2 layout has 3 rows of 2 windows that display all 6 traces in order, top to bottom, them left to right.

Remote Command	`:DISPlay:EVM:WINDow:FORMat SINGle | TWO | TRI | FOUR | SIX | QUAD | GR2X3 | GR3X2` `:DISPlay:EVM:WINDow:FORMat?`
Example	`:DISP:EVM:WIND:FORM GR2X3` `:DISP:EVM:WIND:FORM?`
Range	SINGle|TWO|TRI|FOUR|SIX|QUAD|GR2X3|GR3X2

3.8.6.2 View

Contains controls for selecting the current **View**, and for editing User Views.

Views

The Modulation Analysis measurement supports up to six views.

Some of these views are multiple-window views. When in a multiple-window view, you select a window by touching it. The menu controls may sometimes change depending on which window is selected.

Whenever the View changes, the default menu is Frequency, unless otherwise specified in the View description.

Remote Command	`:DISPlay:EVM:VIEW:PRESet BASic | SUMMary | RBSLot | SUBCarrier | MIMO | CROSs`

Example	`:DISP:EVM:VIEW:PRES BAS`
	sets the Basic view
	`:DISP:EVM:VIEW:PRES SUMM`
	sets the summary view
	`:DISP:EVM:VIEW:PRES RBSL`
	sets the RB Slot view
	`:DISP:EVM:VIEW:PRES SUBC`
	sets the Subcarrier view
	`:DISP:EVM:VIEW:PRES CROS`
	sets the Cross Carrier Summary view
	`:DISP:EVM:VIEW:PRES MIMO`
	sets the MIMO view

Preset	Basic
State Saved	Saved in instrument state

User View

Lets you choose a View from the saved User Views for the current measurement. This panel only appears if a User View exists for the current measurement.

Remote Command	`:DISPlay:VIEW:ADVanced:SELect <alphanumeric>` `:DISPlay:VIEW:ADVanced:SELect?`
Example	Select Baseband as the current View `:DISP:VIEW:ADV:SEL “Baseband”`
Notes	You must be in the measurement whose View you are trying to set to send the command. You can only set Views for the current measurement using this command For predefined views, the parameter is derived from the view name that is shown in the View list in the user interface. For example, if you are trying to select the Trace Zoom view in the Swept SA

	measurement, you send:
	`:DISP:VIEW:ADV:SEL "Trace Zoom"`
	because "Trace Zoom" is the name of the View as seen in the Mode/Meas dialog or in the Display, View menu
	You *cannot* use the legacy View parameter (which in this case would be `TZOom`) with `:DISP:VIEW:ADV:SEL`
	`<alphanumeric>` is case insensitive; you can specify mixed case, however the name will be evaluated on a single case. Thus, both of the following forms work:
	`:DISP:VIEW:ADV:SEL "Trace Zoom"`
	`:DISP:VIEW:ADV:SEL "TRACE ZOOM"`
	If the specified view is not a valid View, the query returns the error message "-224, Illegal parameter value; View with the name <alphanumeric> does not exist"
	If the display is disabled (via `:DISP:ENAB OFF`) then the error message "-221, Settings conflict; View SCPI cannot be used while Display is disabled" is generated

Backwards Compatibility SCPI	The legacy node `:DISPlay:VIEW[:SELect]` is retained for backwards compatibility, but it only supports predefined views

Restore Layout to Default

Restores the Layout to the default for Basic.

Modified Views are very temporary; if you exit the current measurement they are discarded, and they are not saved in State. To retain this View for later use, and to be able to return easily to your original Basic View, you can save your edited View as a "User View".

Save Layout as New View

Saves your new View as a User View. An alpha keyboard appears, which lets you name your new View; the default is the old View name plus a number.

Remote Command	`:DISPlay:VIEW:ADVanced:NAME <alphanumeric>`
Example	`:DISP:VIEW:ADV:NAME “Baseband”` Creates a new View named `Baseband` from the current View, and selects it as the current View
Notes	`<alphanumeric>` is case insensitive; you can specify mixed case, however the name will be evaluated on a single case If `<alphanumeric>` name already exists as a View, the error message "-224, Illegal parameter value; View <alphanumeric> already exists" is generated If the display is disabled (via `:DISP:ENAB OFF`) then the error message "-221, Settings conflict; User View SCPI cannot be used while Display is disabled" is generated

Re-Save User View

You can re-edit a User View; if you make changes, then an asterisk will appear next to the User View's name. You can then tap **Re-Save User View** to save it back to its existing name, or **Save Layout as New View** to add another, new User View.

This is a front panel function only, there is no remote command available to perform this function. To do this remotely, you must first perform **Save Layout as New View**, then delete the old User View and rename the new one with the name of the View you just deleted.

Rename User View

You can rename the current View by giving it a new unique name. Only User Views can be renamed, if the current View is a Predefined View, an error occurs.

Remote Command	`:DISPlay:VIEW:ADVanced:REName <alphanumeric>`
Example	`:DISP:VIEW:ADV:REN “Baseband”`
Notes	`<alphanumeric>` is case insensitive; you can specify mixed case, however the name will be evaluated on a single case If the `<alphanumeric>` specifying the new name is already present in the list of View names, the error message “-224, Illegal parameter value; View <alphanumeric> already exists” is generated If the current View is a Predefined View, the error message “-224, Illegal parameter value; Cannot rename a Predefined View” is generated If the display is disabled (via `:DISP:ENAB OFF`) then the error message “-221, Settings conflict; View SCPI cannot be used while Display is disabled” is generated

Delete User View

You can delete the current View if it is a User View. The default view becomes the current view for the Measurement.

Remote Command	`:DISPlay:VIEW:ADVanced:DELete`
Example	`:DISP:VIEW:ADV:DEL`
Notes	`<alphanumeric>` is case insensitive; you can specify mixed case, however the name will be evaluated on a single case If the `<alphanumeric>` is not present in the list of View names, the error message “-224, Illegal parameter value; View <alphanumeric> does not exist” is generated If the current View is a Predefined View, the error message “-224, Illegal parameter value; Cannot delete a Predefined View” is generated

	If the display is disabled (via `:DISP:ENAB OFF`) then the error message "-221, Settings conflict; View SCPI cannot be used while Display is disabled" is generated

Delete All User Views

Deletes all previously saved User Views. The default view becomes the current view for the Measurement if a User View was the current view when this command was executed.

Remote Command	`:DISPlay:VIEW:ADVanced:DELete:ALL`
Example	`:DISP:VIEW:ADV:DEL:ALL`
Notes	Disabled if there are no User Views

View Editor Remote Commands

The following remote commands help you manage Views and User Views. Note that the SCPI node for User Views handles both Predefined and User Views. The legacy nodes, `:DISPlay:VIEW[:SELect]` and `:DISPlay:VIEW:NSEL`, are retained for backwards compatibility, but they only support predefined views.

View Listing Query

Returns a string containing a comma-separated list of names for *all* the Views, including User Views, available for the current Measurement.

Remote Command	`:DISPlay:VIEW:ADVanced:CATalog?`
Example	`:DISP:VIEW:ADV:CAT?`
Notes	Returns a quoted string of the available Views for the current measurement, separated by commas. The list includes names for *all* the Views, including User Views, available for the current Measurement Example: `"Normal,Trace Zoom,Spectrogram,Baseband,myView1,yourView1"` No distinction is made between Predefined and User Views If you switch measurements with the display disabled (via `:DISP:ENAB OFF`), then query the list of available Views, the result is undefined

User View Listing Query

Returns a string containing a comma-separated list of names for *only* the User Views available for the current Measurement.

Remote Command	`:DISPlay:VIEW:ADVanced:USER:CATalog?`
Example	`:DISP:VIEW:ADV:USER:CAT?`
Notes	Returns a quoted string of the available User Views for the current measurement, separated by commas. Example: `"Baseband,myView1,yourView1"` If you switch measurements with the display disabled (see "Display Enable (Remote Command Only)" on page 2211), then query the list of available Views, the result is undefined

3.8.6.3 Annotation

Contains controls for setting up the annotation for the current Mode or Measurement.

Graticule

Turns the display graticule On or Off for all windows with graticules in all measurements in the current Mode. Also turns the graticule Y-Axis annotation on and off.

Remote Command	`:DISPlay:GRATicule[:STATe] OFF | ON | 0 | 1` `:DISPlay:GRATicule[:STATe]?`
Example	`:DISP:GRAT OFF`
Notes	The graticule is the set of horizontal and vertical lines that make up the grid/divisions for the X-Axis and Y-Axis
Preset	ON
State Saved	Saved in instrument state

Backwards Compatibility SCPI	`:DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe] OFF | ON | 0 | 1`
	`:DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe]?`
	This command is accepted for backwards compatibility with older instruments, but the `WINDow`, `TRACe` and `GRID` parameters are ignored

Screen Annotation

Controls the display of the annunciation and annotation around the graticule, including any annotation on lines (such as the display line, the threshold line, etc.) and the Y-Axis annotation, for all windows with screen annotation in all measurements in the current Mode.

This does *not* include marker annotation (or the N dB result). When `OFF`, the graticule expands to fill the entire graticule area, leaving only the 1.5% gap above the graticule, as described in the **Trace** section.

Remote Command	`:DISPlay:ANNotation:SCReen[:STATe] OFF | ON | 0 | 1` `:DISPlay:ANNotation:SCReen[:STATe]?`
Example	`:DISP:ANN:SCR OFF`
Dependencies	Grayed-out and forced to `OFF` when **System Display Settings**, **Annotation** is `OFF`
Preset	`ON` This remains `OFF` through a Preset when **System Display Settings**, **Annotation** is set to `OFF`
State Saved	Saved in instrument state

Trace Annotation

Turns on and off the labels on the traces, showing their detector (or their Math Mode) as described in the **Trace** section, for all windows in all measurements in the current Mode for which Trace Annotation on/off is supported.

If Trace Math is being performed on a trace, then the Trace Math annotation replaces the detector annotation.

For measurements that support limit lines, this key also turns on and off the labels on the Limit Lines. The label is the Limit number annotation and Limit Comment displayed on the graph. If the length of the comment is greater than 20 characters, the first 8 characters and the last 8 characters are displayed, joined with ….

Remote Command	`:DISPlay:ANNotation:TRACe[:STATe] ON | OFF | 1 | 0` `:DISPlay:ANNotation:TRACe[:STATe]?`
Example	`:DISP:ANN:TRAC OFF`
Preset	`OFF`
State Saved	Saved in instrument state

Control Annotation

Turns on and off the display of values on the Active Function controls for all measurements in the current Mode. This is a security feature.

Remote Command	`:DISPlay:ACTivefunc[:STATe] ON | OFF | 1 | 0` `:DISPlay:ACTivefunc[:STATe]?`
Example	`:DISP:ACT OFF`
Dependencies	Grayed out and forced to `OFF` when **System Display Settings**, **Annotation** is `OFF`
Preset	`ON`

	This remains `OFF` through a Preset when **System Display Settings**, **Annotation** is set to `OFF`
State Saved	Saved in instrument state

Meas Bar

Turns the Measurement Bar at the top of the screen on and off for all measurements in the current Mode. When `OFF`, the graticule area expands to fill the area formerly occupied by the Measurement Bar.

Remote Command	`:DISPlay:ANNotation:MBAR[:STATe] OFF | ON | 0 | 1` `:DISPlay:ANNotation:MBAR[:STATe]?`
Example	`:DISP:ANN:MBAR OFF`
Dependencies	Grayed out and forced to `OFF` when **System Display Settings**, **Annotation** is `OFF`
Preset	`ON` This remains `OFF` through a Preset when **System Display Settings**, **Annotation** is set to `OFF`
State Saved	Saved in instrument state

Display Enable (Remote Command Only)

Turns the display on/off, including the display drive circuitry. The backlight stays lit to confirm that the instrument is on. The display enable setting is mode global. Theare three reasons for turning the display off:

1. To increase speed as much as possible by freeing the instrument from having to update the display
2. To reduce emissions from the display, drive circuitry
3. For security purposes

If you have turned off the display:

- and you are in local operation, the display can be turned back on by pressing any key or by sending `:SYSTem:DEFaults MISC` or `:DISPlay:ENABle ON` (neither `*RST` nor :SYSTem:PRESet enable the display)
- and you are in remote operation, the display can be turned back on by pressing the **Local** or **Esc** keys, or by sending `:SYSTem:DEFaults MISC` or `:DISPlay:ENABle ON` (neither `*RST` nor `:SYSTem:PRESet` enable the display)
- and you are using either the `:SYSTem:KLOCk` command or GPIB local lockout, then *no* front-panel key press will turn the display back on. You must turn it back on remotely.

If the display is `OFF`, many SCPI commands related to User Views and Multiscreen functionality do not work, and return the error messages “-221, Settings conflict; Screen SCPI cannot be used when Display is disabled” or “221, Settings conflict; View SCPI cannot be used while Display is disabled”. These commands include:

Name	Command
Select User View	`:DISPlay:VIEW:ADVanced:SELect`
Rename User View	`:DISPlay:VIEW:ADVanced:REName`
Delete User View	`:DISPlay:VIEW:ADVanced:DELete`
Create User View	`:DISPlay:VIEW:ADVanced:NAME`
Select Screen	`:INSTrument:SCReen:SELect`
Delete Screen	`:INSTrument:SCReen:DELete`
Delete All But This Screen	`:INSTrument:SCReen:DELete:ALL`
Add Screen	`:INSTrument:SCReen:CREate`
Rename Screen	`:INSTrument:SCReen:REName`
Sequencer On/Off	`:SYSTem:SEQuencer`

Remote Command	`:DISPlay:ENABle OFF | ON | 0 | 1` `:DISPlay:ENABle?`
Example	`:DISP:ENAB OFF`
Couplings	`:DISP:ENAB OFF` turns Backlight `OFF` and `:DISP:ENAB ON` turns Backlight `ON`, but changing Backlight settings does *not* change the state of `:DISP:ENAB`
Preset	`ON` Set by `:SYST:DEF MISC`, but not affected by `*RST` or `:SYSTem:PRESet`
State Saved	Not saved in instrument state
Backwards Compatibility Notes	`:SYST:PRES` no longer turns on `:DISPlay:ENABle` as it did in legacy analyzers

3.8.7 Frequency

The Freq key opens the Frequency menu, which contains controls that allow you to control the Frequency and Channel parameters of the instrument.

Some features in the Frequency menu are the same for all measurements in the current Mode - they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by Meas Preset. For example, the Center Freq setting is the same for all measurements - it does not change as you change measurements.

3.8.7.1 Settings

The Settings Tab contains controls that pertain to the X axis parameters of the measurement. These parameters control how data on the vertical (X) axis is displayed and control instrument settings that affect the horizontal axis.

Carrier Reference Frequency

The parameter is set the reference frequency of all the carriers. The center frequencies of carriers are defined as offset frequency from this value.

If the following conditions are satisfied at the same time:

- the Number of Component Carrier equals to 1
- the Center Freq Offset equals to 0 Hz
- the mode of the Center Freq is Auto

the Center Freq is equivalent to Carrier Ref Freq.

When the Center Freq changes in such conditions, the mode of the Center Freq keeps as Auto and the Carrier Ref Freq is changed to same value. The major purpose of this coupling is to keep BWCC with legacy LTE/LTE TDD, in which :SENSe:FREQuency:CENTer sets the Frequency of the measurement.

Remote Command	`[:SENSe]:CCARrier:REFerence <freq>` `[:SENSe]:CCARrier:REFerence?`
Example	`:CCAR:REF 2GHz` `:CCAR:REF?`
Preset	1GHz
State Saved	Saved in instrument state
Min	Depends on instrument minimumcenter frequency Same as Center Frequency
Max	Depends on instrument maximum center frequency Same as Center Frequency

3.8.8 Marker

Accesses a menu that enables you to select, set up and control the markers for the current measurement. If there are no active markers, **Marker** selects marker 1, sets it to Normal and places it at the center of the display. If the selected marker is Off, it is set to Normal and placed it at the center of the screen on the trace determined by the Marker Trace rules.

For more detailed information on the types of Markers and the interaction between Markers, see the Marker section of the Swept SA measurement.

3.8.8.1 Select Marker

Specifies the selected marker. The term “selected marker” is used throughout this document to specify which marker is affected when you change marker settings, perform a Peak Search, and so on.

The Select Marker control appears above the menu panel, indicating that it applies to all controls in the Marker menu panels. Select Marker is blanked if you select a tab whose controls do not depend on the selected marker (such as, Counter).

On any menu tab for which Select Marker displays, the first control is always Marker Freqeuncy|Time.

Notes	The selected marker is remembered even when not in the Marker menu and is used if a Search is done or a Band Function is turned on or for Signal Track or Continuous Peak
Preset	Marker 1
State Saved	Saved in instrument state
Range	Marker 1 | Marker 2 | Marker 3 | Marker 4 | Marker 5 | Marker 6 | Marker 7 | Marker 8 | Marker 9 | Marker 10 | Marker 11 | Marker 12
Annunciation	Appears in the marker results block label for **Normal** and **Delta** markers

3.8.8.2 Markers

The controls on the Markers tab include the Marker active function and a radio button selection of the marker control mode (Normal, Delta, Fixed, or Off) for the selected marker, as well as additional functions that help you use markers.

Marker X

Set the X Axis value of the selected marker in the current X Axis Scale unit. If the marker mode is off, the SCPI command has no affect other than to cause the marker to become selected. Note that the X value can change if the marker is moved to a trace with a different domain.

The Marker X position is absolute if the marker mode is Normal or Fixed. If the mode is Delta, then the X position is relative to the reference marker. The valid X positions are the actual data points in the trace; the marker cannot be located between points. If a SCPI command attempts to place the marker between two points, the X value snaps to the closest point.

Note that for Vector or Constellation format, the X axis is perpendicular to the screen (because the screen axes are used to show the real and imaginary parts of the Y value), so adjusting the X value in this case only causes the marker to move horizontally if the real Y value changes. For Fixed markers on a trace with one of these formats, adjusting the X value does not cause horizontal motion of the marker at all. Instead, use the Marker Y and Marker Y (imag) controls to move the marker horizontally and vertically.

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:X <real>` `:CALCulate:EVM:MARKer[1]|2|…|12:X?`
Example	`:CALC:EVM:MARK:X 0.325` `:CALC:EVM:MARK:X?`
Notes	Marker X does not go outside the bounds of the data unless it is Fixed. If you attempt to set it to a value outside the bounds, it is clipped at the closest limit and error -222 Data Out of Range is generated If suffix is sent, it must match the X units for the trace the marker is on. Otherwise, error -138, "Suffix not allowed" is generated If you try to read or set the position of a Delta marker, remember that the position is in relative units
Couplings	See "Couple Markers" on page 1429, "Couple Markers" on page 1429 for Coupling of Delta and Reference Markers
Preset	None until marker is turned on
State Saved	Yes
Min	Depends on trace data
Max	Depends on trace data

SCPI only X position commands

Via SCPI, the marker position can also be set or queried in trace points. In this case, the position setting or reading is absolute regardless of control mode.

NOTE **The entered value in Trace Points is immediately translated into the current domain units for setting the value of the marker. The marker's value in domain units, NOT trace points, is preserved if a change is made to the X Axis scale settings. Thus, if you use this command to place a marker on point 500, which happens at that time to correspond to 13 GHz, and then you change the Start Frequency so that point 500 is no longer 13 GHz, the marker stays at 13 GHz, NOT at point 500.**

If the trace the marker is on has a 2-dimensional domain, then the points are numbered in the following way:

Starting at the minimum X and Z position, this point is numbered 0. Each time you increment the point number, increment the X value to the next available value. When X reaches the maximum X position, then reset X to the minimum and increment the Z value. Then continue incrementing the X position in the same manner as before.

Note that for symbol tables, which have no axes, incrementing the X position in points moves the marker consecutively through all table entries.

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12[:X]:POSition <real>` `:CALCulate:EVM:MARKer[1]|2|…|12[:X]:POSition?`
Example	`:CALC:EVM:MARK:POS 25` `:CALC:EVM:MARK:POS?`
Notes	When a marker mode is changed from off to any other mode, the X position is set to mid-screen
Preset	None until marker is turned on
State Saved	Yes
Min	Depends on trace data
Max	Depends on trace data

Marker X Unit can be queried via SCPI

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:X:UNIT?`
Example	`:CALC:EVM:MARK:X:UNIT?`
Notes	SCPI Query Only

Marker Z

Set the selected markers Z Axis value in the current Z Axis Scale unit for markers on traces with a 2-dimensional domain. In each case the marker that is addressed becomes the selected marker. It has no affect (other than to cause the marker to become selected) if the control mode is Off or if the trace has no Z domain. Note that the Z value can change or become irrelevant if the marker is moved to a trace with a different Z domain or no Z domain.

Note that this Z value is affected if the SCPI command to set marker point position is used.

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:Z <real>` `:CALCulate:EVM:MARKer[1]|2|…|12:Z?`
Example	`:CALC:EVM:MARK:Z 12` `:CALC:EVM:MARK:Z?`
Notes	Marker Z does not go outside the bounds of the data unless it is Fixed. If you attempt to set it to a value outside the bounds it is clipped at the closest limit, and error -222 Data Out of Range is generated If suffix is sent, it must match the Z units for the trace the marker is on. Otherwise, error -138, "Suffix not allowed" is generated
Couplings	See "Couple Markers" on page 1429, "Couple Markers" on page 1429 for Coupling of Delta and Reference Markers

Preset	None until marker is turned on
State Saved	Yes
Min	Depends on trace data
Max	Depends on trace data

Marker Z Unit can be queried via SCPI only.

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:Z:UNIT?`
Example	`:CALC:EVM:MARK:Z:UNIT?`
Notes	SCPI Query Only

Marker Y

Enables you to set or read back the selected marker's Y Axis value in the current Y Axis Scale unit. Setting the Y value has no affect (other than to cause the marker to become selected) if the control mode is other than fixed. The query form generates an error if the control mode is Off. Note that the Y value can change if the Y-axis units change, either from a change in format of the trace the marker is on or if the marker is moved to a different trace.

If the selected marker is on a trace that is displayed with Vector or Constellation format, this function controls only the real part of the Y value (i.e., the horizontal axis value). Use the Marker Y (imag) control to change the imaginary (vertical) value. Marker Y and Marker Y Imag always set or get the rectangular form of Y, regardless of whether the marker readout is polar or rectangular.

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:Y[:REAL] <real>` `:CALCulate:EVM:MARKer[1]|2|…|12:Y[:REAL]?`
Example	`:CALC:EVM:MARK2:Y 0.325` `:CALC:EVM:MARK2:Y?`
Notes	You cannot set Y unless the marker type is fixed. If the marker becomes fixed after a marker function is turned on, it is set to whatever the Y value was when the marker became fixed If suffix is sent, it must match the Y units for the trace the marker is on. Otherwise, error, "Suffix not allowed" is generated
Couplings	See "Couple Markers" on page 1429, "Couple Markers" on page 1429 for Coupling of Delta and Reference Markers
Preset	None until marker is turned on
State Saved	Yes
Min	Depends on trace data
Max	Depends on trace data

Marker Y Unit can be queried via SCPI.

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:Y:UNIT?`
Example	`:CALC:EVM:MARK:Y:UNIT?`
Notes	SCPI Query Only

Marker Y Imag

Enables you to set or read back the selected marker's quadrature (imaginary) Y value in the current Y Axis Scale unit. It has no affect (other than to cause the marker to become selected) if the control mode is other than fixed or if the current trace format is not complex (Vector or Constellation). The query form generates an error if it is used for a marker that is not on a complex trace. Marker Y Imag is not affected by whether the marker readout is polar or rectangular.

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:Y:IMAGinary <real>` `:CALCulate:EVM:MARKer[1]|2|…|12:Y:IMAGinary?`
Example	`:CALC:EVM:MARK2:Y:IMAG 0.425` `:CALC:EVM:MARK2:Y:IMAG?`
Notes	Grayed out unless the marker is fixed and on a vector display If suffix is sent, it must match the Y units for the trace the marker is on. Otherwise, an Invalid Suffix error is generated. Otherwise, error, "Suffix not allowed" is generated If query is sent while the marker is on a trace whose format is not vector or constellation, NaN (9.91E+37) is returned
Couplings	See "Couple Markers" on page 1429, "Couple Markers" on page 1429 for Coupling of Delta and Reference Markers
Preset	None until marker is turned on
State Saved	Yes
Min	Depends on trace data
Max	Depends on trace data

Marker Mode

There are four control modes for markers:

- Normal (POSition) - A marker that can be moved to any point on the X Axis by specifying its X Axis value, and who's absolute Y Axis value is then the value of the trace point at that X Axis value.
- Delta (DELTa) - A marker that can be moved to any point on the X Axis by specifying its X Axis offset from a reference marker, and whose absolute Y Axis value is then the value of the trace point at that X Axis value.

- Fixed (FIXed) - A marker whose X Axis and Y Axis values may be directly or indirectly specified by you, but whose Y Axis value remains fixed, once specified, and does not follow the trace. Fixed markers are useful as reference markers for Delta markers, as operands in a Peak Search operation, and as arbitrary reference points settable by you. These markers are represented on the display by an "X" rather than a diamond. Not every measurement supports Fixed markers.
- Off (OFF) - A marker which is not in use.

The SCPI command in the table below selects the marker and sets the marker control mode as described under **Normal**, **Delta**, **Fixed** and **Off**, below. All interactions and dependencies detailed under the control description are enforced when the remote command is sent.

See "More Information" on page 1428.

Remote Command	`:CALCulate:MARKer[1]|2|…|12:MODE POSition | DELTa | FIXed | OFF` `:CALCulate:MARKer[1]|2|…|12:MODE?`
Notes	Upon receipt of this command, for any parameter but **Off**, if the selected marker was **Off**, it is set to the specified mode and placed at the center of the screen on the trace specified by the marker's Trace attribute
Couplings	The marker addressed by this command becomes the selected marker on the front panel
Preset	OFF (all markers)
State Saved	The marker control mode (Normal, Delta, Fixed, Off) and X Axis value are saved in instrument state
Annunciation	Annunciation in the marker result block in the upper-right corner of the display indicates the X Axis value and Y-axis result of the marker

Backwards Compatibility SCPI	`:CALCulate:MARKer[1]|2|…|12:STATe ON | 1`
	Setting a marker which is OFF to ON or 1 selects the marker, puts it in Normal mode and places it at the center of the screen
	Setting a marker which is not OFF to ON has no effect (does not change its control mode)
	Example: CALC:MARK2:STAT ON sets Marker 2 to Normal if it was off; otherwise it does nothing
	The response to the query is ON unless the marker is OFF
	`:CALCulate:MARKer[1]|2|…|12:MODE SPAN | BAND`
	To support band function backwards compatibility, both of these legacy parameters are accepted and aliased to POSition. They are never returned to a query. See "Band Function" on page 1437"Band Function" on page 1437 for more information

Backwards Compatibility Notes	In legacy analyzers, only a Reference marker could be Fixed, and it was always Fixed. Additionally it could not be moved. In the X-Series, any marker can be set to Fixed and can be moved to any X or Y value In pre X-Series analyzers, pressing Delta (or sending the CALC:MARK:MODE:DELTa command) always moved the reference marker to the delta marker. Now it only does so if the marker was already a delta marker

Remote Command	`:CALCulate:MARKer[1]|2|…|12:STATe OFF | ON | 0 | 1` `:CALCulate:MARKer[1]|2|…|12:STATe?`
Preset	OFF

More Information

Value	Example	Notes
Normal	CALC:MARK2:MODE POS	**A Normal** marker can be moved to any point on the X Axis by specifying its X Axis value. Its absolute Y Axis value is then the value of the trace point at that X Axis value
Delta	:CALC:MARK2:MODE DELT	In Delta mode the marker result shows the relative result between the selected (Delta) marker and its reference marker. A delta marker can be moved to any point on the X Axis by specifying its X Axis offset from a reference marker. Its absolute Y Axis value is then the value of the trace point at that X Axis value
Fixed	:CALC:MARK2:MODE FIX	A fixed marker is fixed in the sense that it stays where you place it. It can be directly moved in both X and Y. It can be moved with a Peak Search. It can also be indirectly moved by re-zeroing the delta if it is a relative marker. If it is moved, it again becomes fixed at the X Axis point it moved to and it has a Y-axis result that it took on when it moved there. If a Normal or Delta marker is changed to Fixed it becomes fixed at the X Axis point it was at, and with the Y-axis result it had when it was set to Fixed In Fixed mode the marker result shows: – If no Marker Function is on, the absolute X Axis and Y axis value of the marker – If a Marker Function is on, the X Axis value and the Y-axis function result the marker had when it became fixed
Off	:CALC:MARK2:MODE OFF	Off turns off the marker, removes the marker annunciation from the display, turns off any active function and any marker function, and resets the following properties to their default value: – X Axis scale: Auto – Band Span: 0 – Auto Trace: On **Off** does not affect which marker is selected

Delta Marker (Reset Delta)

Pressing this button is exactly the same as pressing the “Delta” selection on the Marker Mode radio button. The selected marker becomes a Delta Marker. If the selected marker is already a Delta marker, the reference marker is moved to the current position of the selected marker, thus resetting the Delta to zero.

3.8.8.3 Settings

The controls on the Settings tab include the Marker active function and a radio button selection of the marker control mode (Normal, Delta, or Off) for the selected marker, as well as additional functions that help you use markers.

Marker X

The Marker Xcontrol is the fundamental control that you use to move a marker around on the trace. This is the same as "Marker X" on page 1422 on the Markers tab.

Marker Settings Diagram

The Marker Settings Diagram lets you configure the Marker system using a visual utility.

All Markers Off

Turns off all markers.

Remote Command	`:CALCulate:RHO:MARKer:AOFF`
Example	`:CALC:RHO:MARK:AOFF`

Couple Markers

When this function is On, moving any marker causes an equal X Axis movement of every other marker which is not Fixed or Off. By “equal X Axis movement” we mean that we preserve the difference between each marker’s X Axis value (in the fundamental x-axis units of the trace that marker is on) and the X Axis value of the marker being moved (in the same fundamental x-axis units).

Note that Fixed markers do not couple. They stay where they were while all the other markers move. Of course, if a Fixed marker is being moved, all the non-fixed markers do move with it.

This may result in markers going off screen.

Remote Command	`:CALCulate:EVM:MARKer:COUPle[:STATe] ON | OFF | 1 | 0` `:CALCulate:EVM:MARKer:COUPle[:STATe]?`
Example	`:CALC:EVM:MARK:COUP ON` `:CALC:EVM:MARK:COUP?`
Notes	In general, when coupling is turned on then all Normal or Delta markers with the same (or equivalent) domain as the selected marker move in the same manner as the selected marker. See "More Information" on page 1430
Preset	OFF, presets on Mode Preset and All Markers Off
State Saved	Saved in instrument state

More Information

Coupling is relative between markers on the same trace (so that their relative positions in the domain are maintained). Coupling can be absolute between markers on different traces that have equivalent domains. That is, they have the same position in the domain, if possible. (As an example of equivalent domains, demodulated symbol positions can be derived from time by using the current symbol rate). When you move the selected marker, then others on related traces track it. This enables you to correlate different measurement results. For example, you can place a marker at a particular symbol time on an error vector magnitude display, have tracking markers on the symbol table and pre-demod time trace showing you the symbol value, and the actual time-varying signal value at the same point in time.

Absolute coupling is performed only for the lowest numbered Normal or Delta marker on each trace. All other markers on a trace couple relatively. When you turn on marker coupling, the subset of markers that have the same domain as the selected marker track it and all other markers remain at their current location. The absolutely coupled markers within this subset is moved at this time to match the domain setting of the selected marker, with the relatively coupled markers following accordingly to maintain offsets within their respective traces. Those markers with different domains remain at their current location. When you select a marker with a different domain than the previously selected marker, the subset of markers with that domain go through the same procedure.

Any marker that coupling would move outside its range of X values, remains at the closest limiting value. If the coupled markers are on data that do not have the same domain resolution, then they are positioned as close to each other as possible.

If markers change mode or trace, or trace data is changed below them, the coupling rules are immediately applied to the new set.

3.8.8.4 Peak Search

The controls on the Peak Search tab allow you to move the marker to selected peaks of the signal, giving you enormous analysis capabilities, particularly when combined with the Delta Marker function.

NOTE **Pressing the Peak Search hardkey automatically moves you to the Peak Search page of the Marker menu AND performs a Peak Search.**

Pressing the Peak Search tab once you are already IN the Marker menu does NOT perform a Peak Search.

Marker X

The Marker X control is the fundamental control that you use to move a marker around on the trace. This is the same as "Marker X" on page 1422 on the Markers tab.

Peak Search

Pressing the Peak Search control moves the selected marker to the trace point which has the maximum y-axis value for that marker's trace.

NOTE **Pressing the Peak Search hardkey automatically moves you to the Peak Search page of the Marker menu AND performs a Peak Search.**

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:MAXimum`

Example	`:CALC:EVM:MARK2:MAX`
	`:SYST:ERR?`
	can be used to query the errors to determine if a peak is found. The message "No peak found" (-200) is returned after an unsuccessful search

Notes	Sending this command selects the subopcoded marker This command does not work when the selected marker is located on the polar trace. In this case, the command is ignored.

Next Peak (Next Lower Amp)

Pressing Next Peak moves the selected marker to the peak that is next lower in amplitude than the current marker value. Only peaks which meet all enabled peak criteria are considered. If there is no valid peak lower than the current marker position, a “No peak found” message is generated and the marker is not moved.

If the selected marker was off, then it is turned on as a normal marker and a peak search is performed.

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:MAXimum:NEXT`
Example	`:CALC:EVM:MARK2:MAX:NEXT`
Notes	Sending this command selects the subopcoded marker
State Saved	Not part of saved state

Next Higher Amplitude

Moves the marker to the peak next higher in Y value than the peak it is currently on. If the format is complex (vector or constellation) then the marker moves to the closest point that has a higher magnitude than the marker's current position. If this function is invoked via SCPI on a marker that is off, the result is the same as if you sent a Peak Search command.

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:MAXimum:PREVious`
Example	`:CALC:EVM:MARK2:MAX:PREV`

Next Pk Right

Pressing Next Pk Right moves the selected marker to the nearest peak right of the current marker that meets all enabled peak criteria. If there is no valid peak to the right of the current marker position, a “No peak found” message is generated and the marker is not moved.If the selected marker was off, then it is turned on as a normal marker and a peak search is performed.

Pressing this control moves the selected marker to the nearest active channel right of the current marker when Marker Trace is Code Domain Power. In other cases, pressing this control moves the selected marker to the highest peak right of the current marker.

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:MAXimum:RIGHt`
Example	`:CALC:EVM:MARK2:MAX:RIGH`
Notes	Sending this command selects the subopcoded marker
State Saved	Not part of saved state

Next Pk Left

Pressing Next Pk Left moves the selected marker to the nearest peak left of the current marker that meets all enabled peak criteria. If there is no valid peak to the left of the current marker position, a “No peak found” message is generated and the marker is not moved.If the selected marker was off, then it is turned on as a normal marker and a peak search is performed.

Pressing this control moves the selected marker to the nearest active channel left of the current marker when Marker Trace is Code Domain Power. In other cases, moves the selected marker to the highest peak left of the current marker.

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:MAXimum:LEFT`
Example	`:CALC:EVM:MARK2:MAX:LEFT`
State Saved	Not part of saved state

Minimum Peak

Moves the selected marker to the minimum y-axis value on the current trace. Minimum (negative) peak searches do not have to meet the peak search criteria. It just looks for the lowest y-axis value. If the selected marker is Off, it is turned on before the minimum search is performed.

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:MINimum`
Example	`:CALC:EVM:MARK:MIN`
Notes	Sending this command selects the subopcoded marker
State Saved	Not part of saved state

Mkr->CF

Assigns the selected marker’s frequency to the Center Frequency setting.

The control is duplicated here in the Peak Search Menu to allow you to conveniently perform a peak search and marker to CF without having to access two separate menus.

Mkr->Ref Lvl

Assigns the selected marker’s level to the Reference Level setting. See the Section “"Marker To" on page 1443” for the description of this function. The control is duplicated here in the Peak Search Menu to allow you to conveniently perform a peak search and marker to RL without having to access two separate menus.

Continuous Peak Search

Sets Continuous Peak Search to On or Off. When Continuous Peak Search is set to On, a peak search is automatically performed for the selected marker after each sweep. The rules for finding the peak are exactly the same as for **Peak Search,** including the peak criteria rules. If no valid peak is found, warning -200.2020 is generated after each sweep. If a valid peak is found, message 0.1400 is displayed after each sweep.

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:CPSearch[:STATe] ON | OFF | 1 | 0` `:CALCulate:EVM:MARKer[1]|2|…|12:CPSearch[:STATe]?`
Example	`:CALC:EVM:MARK1:CPS ON`
Notes	It is possible to have Couple Markers and Continuous Peak Search both on. If this is the case, it is recommended that Continuous Peak search be turned on for only one marker in any tracking set (that is, any set of markers with the same or equivalent domain). Otherwise, conflicts over marker position can cause that cause erratic marker movement
Couplings	The Continuous Peak Search key is grayed out when the selected marker is a **Fixed** marker. Also, if Continuous Peak Search is on and the selected marker becomes a fixed marker, then Continuous Peak Search is turned off and the key grayed out.Continuous Peak Search is turned off when the selected marker is turned off
Preset	OFF
State Saved	Yes
Range	Off|On

3.8.8.5 Properties

The controls on the Properties tab are used to set certain properties of the selected marker.

Marker X

The Marker X control is the fundamental control that you use to move a marker around on the trace. This is the same as "Marker X" on page 1422 on the Markers tab.

Relative To

Selects the marker to which the selected marker is relative (its reference marker).

Every marker has another marker to which it is relative. This marker is referred to as the “reference marker” for that marker. This attribute is set by the **Marker, Properties, Relative To** key. The marker must be a **Delta** marker to make this attribute relevant. If it is a **Delta** marker, the reference marker determines how the marker is controlled and how its value is displayed. A marker cannot be relative to itself.

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:REFerence <integer>`

	`:CALCulate:EVM:MARKer[1]|2|…|12:REFerence?`
Example	`:CALC:EVM:MARK:REF 5` `:CALC:EVM:MARK:REF?`
Notes	This command causes the marker specified with the subopcode to become selected Range (for SCPI command): 1 to 12. If the range is exceeded the value is clipped A marker cannot be relative to itself so that choice is not available, and if sent from SCPI generates error -221: “Settings conflict; marker cannot be relative to itself.” When queried a single value is returned (the specified marker numbers relative marker)
Couplings	If the reference marker is off it is turned on in **Normal** mode at the delta marker location
Preset	The preset default “Relative To” marker (reference marker) is the next higher numbered marker (current marker +1). For example, if marker 2 is selected, then it’s default reference marker is marker 3. The exception is marker 12, which has a default reference of marker 1 Set to the defaults by using **Restore Mode Defaults**. This is not reset by **Marker Off**, **All Markers Off**, or **Preset**
State Saved	Saved in instrument state Not affected by Marker Off and hence not affected by Preset or power cycle
Min	1
Max	12
Annunciation	Appears in the marker label of a **Delta** marker

Complex Format

Determine the format for the readout when a marker is placed on a complex display (vector or constellation). The choices are to read out in rectangular or polar coordinates. The readout format applies to the marker display and marker table only; there is no SCPI for reading out the marker value in polar form.

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:CFORmat RECTangular | POLar` `:CALCulate:EVM:MARKer[1]|2|…|12:CFORmat?`
Example	`:CALC:EVM:MARK1:CFOR RECT` `:CALC:EVM:MARK1:CFOR?`
Preset	RECT
State Saved	Yes
Range	Rect|Polar

Marker Window

Enables you to determine the window to which a marker is assigned. By default, when a marker is turned on it is assigned to the currently selected window. You can change that assignment using this control.

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:WINDow <integer>` `:CALCulate:EVM:MARKer[1]|2|…|12:WINDow?`
Example	`:CALC:VECT:MARK3:WIND 2` `:CALC:VECT:MARK3:WIND?`
Preset	1
State Saved	Yes
Range	Window 1| Window 2| Window 3| Window 4| Window 5| Window 6| Window 7| Window 8| Window 9
Min	1
Max	9
Backwards Compatibility SCPI	`:CALCulate:EVM:MARKer[1]|2|…|12:TRACe <integer>` `:In order to coordinate with window-adressing principle, changing the TRACe node to WINDow`

Marker Count

Enable the frequency counter algorithm on the selected marker. This algorithm can more precisely determine the frequency of a peak. The marker must be on a frequency domain trace, with data coming from hardware. Place the marker on a peak and enable the frequency counter. The marker readout then shows the calculated frequency rather than the marker X position. Only one marker can be counted at any time. Turning on marker count for any marker turns it off for all other markers.

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:FCOunt[:STATe] OFF | ON | 0 | 1` `:CALCulate:EVM:MARKer[1]|2|…|12:FCOunt[:STATe]?`
Example	`:CALC:EVM:MARK:FCO ON` `:CALC:EVM:MARK:FCO?`
Notes	Marker must be on a frequency-domain trace and data must be live, not recorded or simulated
Preset	OFF
State Saved	Yes
Range	Off|On

The frequency counter result must be read back with the following SCPI command. The Marker X query command only gets the marker's data point position, which is not as accurate as the frequency counter result.

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:FCOunt:X?`
Example	`:CALC:EVM:MARK:FCO:X?`
Notes	Query only. If the marker counter result is unavailable, NaN is returned

3.8.8.6 Marker Function

The controls on the Marker Function tab allow you to control the Marker Functions of the instrument. Marker Functions perform post-processing operations on marker data.

Band Center

Enable you to define the center of the band. That is, it enables you to adjust the marker position in absolute units (regardless of whether the marker mode is Normal or Delta).

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:FUNCtion:BAND:CENTer <real>` `:CALCulate:EVM:MARKer[1]|2|…|12:FUNCtion:BAND:CENTer?`
Example	`:CALC:EVM:MARK2:FUNC:BAND:CENT 1.23E+09` `:CALC:EVM:MARK2:FUNC:BAND:CENT?`
Preset	Center of screen
State Saved	Yes
Min	-9.9E+37
Max	9.9E+37

Band Function

Sets the marker control function type to one of the following:

- NOISe: Marker Noise
- BPOWer: Band Power
- BDENsity: Band Density
- OFF: Marker Function Off

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:FUNCtion BPOWer | BDENsity | OFF` `:CALCulate:EVM:MARKer[1]|2|…|12:FUNCtion?`
Example	`:CALC:EVM:MARK:FUNC BPOW` `:CALC:EVM:MARK:FUNC?`
Preset	OFF
State Saved	Yes
Range	Band Power|Band Density|Marker Function Off
Annotation	Mkr # <X value> and <Marker value> upper right on graph

Band Span

Set the width of the span for the selected marker. This function defines the span of frequencies or time. The marker position does not change when you adjust the span.

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:FUNCtion:BAND:SPAN <real>` `:CALCulate:EVM:MARKer[1]|2|…|12:FUNCtion:BAND:SPAN?`
Example	`:CALC:EVM:MARK2:FUNC:BAND:SPAN 1.23E+06` `:CALC:EVM:MARK2:FUNC:BAND:SPAN?`
Preset	When marker turned on, 1/20th of current span or displayed time length
State Saved	Yes
Min	-9.9E+37
Max	9.9E+37

Band Left

Enable you to adjust the left side of the band. In order to remain centered in the band, the marker position must also change as you change the left edge. The right edge is unaffected.

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:FUNCtion:BAND:LEFT <real>` `:CALCulate:EVM:MARKer[1]|2|…|12:FUNCtion:BAND:LEFT?`
Example	`:CALC:EVM:MARK2:FUNC:BAND:LEFT 1.23E+06` `:CALC:EVM:MARK2:FUNC:BAND:LEFT?`
Couplings	Changes marker X to keep the marker centered in the band
Preset	When marker turned on, 1/40th of current span or displayed time length left of the marker position
State Saved	Yes
Min	-9.9E+37
Max	9.9E+37

Band Right

Enable you to adjust the right side of the band. In order to remain centered in the band, the marker position must also change as you change the right edge. The left edge is unaffected.

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:FUNCtion:BAND:RIGHt <real>` `:CALCulate:EVM:MARKer[1]|2|…|12:FUNCtion:BAND:RIGHt?`
Example	`:CALC:EVM:MARK2:FUNC:BAND:RIGHT 1.23E+06`

	`:CALC:EVM:MARK2:FUNC:BAND:RIGHT?`
Couplings	Changes marker X to keep the marker centered in the band
Preset	When marker turned on, 1/40th of current span or displayed time length right of the marker position
State Saved	Yes
Min	-9.9E+37
Max	9.9E+37

Calc Power

Turn on the Band/Interval Power function for the selected marker. This function calculates the power within the band centered on the marker. The function works generally with frequency spectra, PSD, and time traces. On traces where band power is undefined, the result display shows “---" and CALC:<meas>:MARK[n]:Y? returns 9.91E+37 (NaN), although the band interval can still be defined.

Frequency-domain data

If the marker is on a frequency-domain trace, the result is total power within the band. This is true whether the underlying trace data is a power spectrum or power spectral density.

Time-domain data

If the marker is on a time-domain trace, the result is average power within the time interval, that is, the power at each time sample in the time interval is calculated, the powers are summed and the total divided by the number of samples.

The band power results can be shown in dBm, dBVrms, Watts, Volts RMS Squared or Volts RMS.

The detailed description sees "More Information" on page 1442.

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:FUNCtion:BPOWer:CTYPe MEAN	RMS` `:CALCulate:EVM:MARKer[1]|2|…|12:FUNCtion:BPOWer:CTYPe?`
Example	`:CALC:EVM:MARK1:FUNC:BPOW:CTYP MEAN` `:CALC:EVM:MARK1:FUNC:BPOW:CTYP?`
Preset	MEAN
State Saved	Yes
Range	Mean|RMS

More Information

When the band power calculation type is set to Mean, the display units is determined on the current format and Y units of the trace .

Trace data type	Trace Format	Y Unit	Result format
Spectrum, PSD, Time record	LogMag (dB)	Auto, Power	dBm
		Peak, RMS	dBVrms
		mRMS	dBmVrms
	Linear Mag, Real, Imag, Log Mag (lin)	Auto, Peak, RMS, mRMS	Vrms^2
	Linear Mag, Real, Imag, Log Mag(lin)	Power	W
	Wrap Phase, Unwrap Phase, Delay	Any	Vrms^2
	Vector, Constellation, Eye, Trellis	Any	blanked
Dimensionless (e.g., Frequency response, Impulse response, various Demodulation error types)	LogMag (dB)	Any	dBrms
	Linear Mag, Real, Imag, Wrap Phase, Unwrap Phase, Delay, Log Mag (lin)	Any	rms^2
General dimensions(e.g., Hz, %)	LogMag (dB)	Any	dB<unit>rms
	Linear Mag, Real, Imag, Wrap Phase, Unwrap Phase, Delay, Log Mag (lin)	Any	<unit>rms^2

If the band power calculation type is set to **RMS**, then the readout unit does not depend on trace format or Y unit. For Spectrums, PS, and Time record traces, the displayed unit is “Vrms”. For general units, the unit abbreviation is shown followed by “rms”.

The Band Power Calculation only controls the readout format for Normal and Fixed markers.

As For Delta markers, when either a Delta marker or its reference has a band power function turned on, the Delta marker readout always shows a ratio calculation. This enables you to perform common calculations like carrier to noise ratio or adjacent channel power ratio. The form of the ratio depends on the main marker function calculation type (Mean or RMS). If the main marker function calculation type is Mean, then when you change the marker to Delta the result is a power ratio. If the main marker function calculation type is RMS, then the Delta marker result is a voltage ratio. (If the main marker band power function is off, then the form of the ratio depends on the reference marker calculation type: If it is Mean you get a power ratio and if it is RMS you get a voltage ratio.)

For example, if the main marker function is Band/Interval Power with a calculation type of Mean and the reference marker function is Band/Interval Power with a calculation type of RMS, then the Delta marker shows the ratio of the main marker “Band/Interval Power Mean” value to the reference marker “Band/Interval Power Mean” (not RMS) value.

A dimensionless ratio (for example, Volt/Volt or Watt/Watt) is shown with units of “x”. The marker function calculation type indicates whether the ratio is voltage or power (see above). A dimensionless power ratio is shown with units of dB if the trace format is Log Mag (dB).

If the reference marker function is Band/Interval Density and the main marker is either Band/Interval Power or its function is turned off, then the ratio is not dimensionless, but has units of Hz (or dB-Hz) for power calculations or rtHz for voltage calculations. When the main marker function is Band/Interval Density and the reference is either Band/interval Power or its function is off, the units are /Hz (or dB/Hz) for power calculations or /rtHz for voltage calculations.

Calc Density

Turn on the Band/Interval Density function for the selected marker. If the selected marker is off, it is turned on in **Normal** marker mode and is located at the center of the screen.

If **Band/Interval Density** is selected while in the **Marker Function Off** state, the **Band Span** or **Interval Span** is initialized to 5% of the screen width.

If the detector mode for the detector on the marker’s trace is set to Auto, the average detector is selected. If the Average type is set to Auto, Power Averaging is selected. Other choices for the detector or Average type usually cause measurement inaccuracy.

Calculates the average power density within the band centered on the marker. The function works generally with frequency spectra, PSD, and time traces. On traces where band power cannot reasonably be defined, the result display shows “---" and CALC:<meas>:MARK[n]:Y? returns NaN (9.91E+37), although the band interval can still be defined.

Frequency-domain data

If the marker is on a frequency-domain trace, the result is the band power (as computed above) which divided by the bandwidth over which it is measured. This is true whether the underlying trace data is a power spectrum or power spectral density.

Time-domain data

If the marker is on a time-domain trace, the result is average power within the time interval (as computed above) divided by the equivalent noise bandwidth of the span.

A band/interval density calculation result can be shown in dBm/Hz, Volts RMS Squared, or Volts RMS. The detailed description sees "More Information" on page 1442.

Remote Command	`:CALCulate:EVM:MARKer[1]|2|…|12:FUNCtion:BDENsity:CTYPe MEAN | RMS` `:CALCulate:EVM:MARKer[1]|2|…|12:FUNCtion:BDENsity:CTYPe?`
Example	`:CALC:EVM:MARK1:FUNC:BDEN:CTYP RMS` `:CALC:EVM:MARK1:FUNC:BDEN:CTYP?`
Preset	MEAN
State Saved	Yes
Range	Mean|RMS

More Information

The following table shows the choice of display units if **Band Density Calculation** is set to **Mean**, depending on the current format of the trace the marker is on.

Trace data type	Trace Format	Result format
Spectrum, PSD, Time record	LogMag (dB)	dBm/Hz
	Linear Mag, Real, Imag, Wrap Phase, Unwrap Phase, Delay, Log Mag (lin)	Vrms^2/Hz
Dimensionless (e.g., Frequency response, Impulse response, various Demodulation error types)	LogMag (dB)	dBrms/Hz
	Linear Mag, Real, Imag, Wrap Phase, Unwrap Phase, Delay, Log Mag (lin)	rms^2/Hz
General dimensions (e.g., Hz, %)	LogMag (dB)	dB<unit>rms/Hz
	Linear Mag, Real, Imag, Wrap Phase, Unwrap Phase, Delay, Log Mag (lin)	<unit>rms^2/Hz

If the **Band Density Calculation** is set to **RMS**, then the readout unit does not depend on trace format. For Spectrum, PSD, and Time record traces, the displayed unit is "Vrms/rtHz". For general units, the unit abbreviation is shown followed by "rms/rtHz".

The Band Density Calculation only controls the readout format for Normal and Fixed markers. For Delta markers, see "Calc Power" on page 1439 - Band Power and Delta Markers.

3.8.8.7 Marker To

The controls on the Marker -> tab enable you to copy the current marker value into other instrument parameters (for example, Center Freq). The currently selected marker is made the active function on entry to this menu (if the currently selected marker is not on when you press this front panel key, it is turned on at the center of the screen as a normal type marker and then made the active function).

The **Marker ->** (or Marker To) feature is used to quickly assign a marker's x- or y-axis value to another parameter. For example, if a marker's x-axis value is 500 MHz and y-axis value is –20 dBm, pressing **Mkr -> CF** would assign 500 MHz to **Center Freq** and pressing **Mkr - >Ref Lvl** would assign –20 dBm to **Ref Level**.

All Marker To functions executed from the front panel use the selected marker's values, while all Marker To remote commands specify in the command which marker's value to use.

Marker X

Set the X Axis value of the selected marker in the current X Axis Scale unit. This is the same as "Marker X" on page 1422 on the Markers tab.

Mkr->CF

Sets the center frequency equal to the selected marker's absolute frequency. The marker must be on a frequency-domain trace. The absolute marker frequency is used regardless of whether its control mode is Normal, Delta, or Fixed.

If the currently selected marker is not on when this key is pressed, it is turned on at the center of the screen as a Normal type marker.

Notes	This function is only supported for manual operation, there is no equivalent remote command
Dependencies	This function is not available (control is grayed out) when x-axis is the time domain
Couplings	All the usual couplings associated with setting Center Frequency apply

Mkr->CF Step

Sets the center frequency step size equal to the selected marker's frequency. The marker must be on a frequency-domain trace. The absolute marker frequency is used regardless of whether its control mode is Normal, Delta, or Fixed.

If the currently selected marker is not on when this key is pressed, it is turned on at the center of the screen as a normal type marker.

Notes	This function is only supported for manual operation, there is no equivalent remote command
Dependencies	This function is not available (control is grayed out) when x-axis is the time domain
Couplings	All the usual couplings associated with setting CF Step apply

Mkr->Start

Sets the start frequency equal to the selected marker's frequency. The marker must be on a frequency-domain trace. The absolute marker frequency is used regardless of whether its control mode is Normal, Delta, or Fixed.

If the currently selected marker is not on when this key is pressed, it is turned on at the center of the screen as a normal type marker.

Notes	This function is only supported for manual operation, there is no equivalent remote command
Dependencies	This function is not available (control is grayed out) when x-axis is the time domain
Couplings	All the usual couplings associated with setting Start Frequency apply

Mkr->Stop

Sets the stop frequency equal to the selected marker's frequency. The marker must be on a frequency-domain trace. The absolute marker frequency is used regardless of whether its control mode is Normal, Delta, or Fixed.

If the currently selected marker is not on when this key is pressed, it is turned on at the center of the screen as a normal type marker.

Notes	This function is only supported for manual operation, there is no equivalent remote command
Dependencies	This function is not available (control is grayed out) when x-axis is the time domain
Couplings	All the usual couplings associated with setting Stop Frequency apply

Mkr->Ref Lvl

Sets the Y axis reference value equal to the selected marker's Y value. For example, if the reference position is at the top of the screen, the whole trace is moved up so that the marker appears at the top of the screen. Note that this is a display scaling function only. The input range remains the same.

Notes	This function is only supported for manual operation, there is no equivalent remote command

Mkr Delta->CF

Sets the center frequency equal to the difference in frequency between the selected Delta marker and its reference. The marker must be on a frequency-domain trace and the selected marker's control mode must be Delta.

Notes	This function is only supported for manual operation, there is no equivalent remote command
Dependencies	This function is only available when the selected marker is a delta marker. Otherwise the control is grayed out. In addition, this function is not available when x-axis is the time domain

Mkr Delta->Span

Sets the start and stop frequencies equal to the selected marker's frequency and that of its reference. That is, the measurement span is "zoomed in" so that the selected marker and its associated reference appear on the extreme left and right of the display. The marker must be on a frequency-domain trace and its control mode must be Delta.

Notes	This function is only supported for manual operation, there is no equivalent remote command
Dependencies	This function is only available when the selected marker is a delta marker. Otherwise the control is grayed out. In addition, this function is not available when x-axis is the time domain
Couplings	All the usual couplings associated with setting Span apply (see the Freq key documentation)

3.8.9 Meas Setup

The Meas Setup menu panel contains functions for setting up the measurement parameters and also contains functions for setting up parameters global to all measurements in the mode.

3.8.9.1 Component Carrier

This parameter specifies which component carrier’s configuration menu is displayed. This parameter decides which Component Carrier is the target CC when one parameter is changed through front panel. For example, when CC0 is selected, Sync Type is changed to PSS from front panel, and then measurement is aware that the Sync Type for CC0 is PSS, which is equivalent to sending the following SCPI command:

EVM:CCAR0:DLINk:SYNC:TYPE PSS

Remote Command	`[:SENSe]:EVM:SELected CC0 | … | CC4` `[:SENSe]:EVM:SELected?`

Example	`:EVM:SEL CC0` `:EVM:SEL?`
Dependencies	Component Carrier is coupled to Number of Component Carriers. For example, Component Carrier list includes CC0~CC1 if Number of Component Carriers is 2
Preset	CC0
State Saved	Saved in instrument state
Range	CC0|CC1|CC2|CC3|CC4

Settings

The Settings tab contains frequently used Meas Setup functions to which you want the fastest access.

Avg/Hold Num

Turns averaging on or off and sets the number of times record measurement results that are averaged.There are no SCPI/features unique to this measurement.

Remote Command	`[:SENSe]:EVM:AVERage:COUNt <integer>` `[:SENSe]:EVM:AVERage:COUNt?`
Example	`:EVM:AVER:COUN 20` `:EVM:AVER:COUN?`
Notes	If an averaged measurement is idle because the scan count is equal to the Avg Number and the Avg Number is increased, the measurement resumes until the new number of averages is satisfied
Preset	10
State Saved	Yes
Min	1
Max	2147483647

Averaging applies to a limited set of measurement results in LTE-Advanced Modulation Analysis for every Component Carrier, and averaging related settings applies to all component carriers. RMS and Max average types apply to the Spectrum and Ch Frequency Response traces. The behavior for these types is the same as in the Vector Analysis Measurement. Averaging of numeric error data in the Error Summary is described below:

Average Type	Average Mode	Effects of averaging
RMS	any (single sweep)	After each scan, the Error Summary shows a running (linear) average over past scans for each parameter in the table. Peak or position parameters are not averaged. Parameters that appear in the table in dB are converted to linear units in order to average

Average Type	Average Mode	Effects of averaging
		them. The measurement stops after the specified Avg Number of scans
RMS	repeat (continuous sweep)	Same as above, except that averages are reset after the specified Avg Number of scans, and the measurement continues
RMS	exponential (continuous sweep)	Same as the single sweep case until the specified Avg Number of scans is complete. After that, averaging continues using exponential weighting
Max	any	After each scan, compares each parameter in the table with the current scan's value and keeps the maximum. Symbol positions relate to the maximum peak value seen

Averaging On/Off

Turns averaging on or off.

Remote Command	`[:SENSe]:EVM:AVERage[:STATe] OFF | ON | 0 | 1` `[:SENSe]:EVM:AVERage[:STATe]?`
Example	`:EVM:AVER ON` `:EVM:AVER?`
Preset	OFF
State Saved	Yes
Range	On|Off

Acquisition Mode

This parameter specifies the data acquisition mode that is be used by analyzer to capture IQ data. When Acquisition mode is Sequential, The data capture is done for each CC sequentially. All the pre-demod traces show results based on individual CC BW. For example, the Span of spectrum trace for CC0 is based on BW setting of CC0. When Acquisition mode is Simultaneous, The data capture is done for every CC simultaneously using a bandwidth wide enough to accommodate every component carrier, all the pre-demod traces show results based on aggregated BW rather than individual CC BW. For example, the Span of spectrum trace is based on BWChannel_CA. If the required IFBW or BWChannel_CA (calculated by Fedge_high - Fedge_low) is wider than HW capability, a warning message such as “Setting conflict- Required Bandwidth is beyond hardware capability” is shown.

Remote Command	`[:SENSe]:EVM:ACQuisition SIMultaneous | SEQuential` `[:SENSe]:EVM:ACQuisition?`

Example	`:EVM:ACQ SEQ` `:EVM:ACQ?`
Preset	Sequential
State Saved	Saved in instrument state
Range	Simultaneous |Sequential

CC For All Windows

This parameter is very useful when you want to change all traces to display measurement results for specific Component Carrier. For example, when number of Component Carrier is 2, if you have 4 results showing contents like below:

Window 1	Demod CC0 Error Summary1
Window 2	CC0 Spectrum1
Window 3	Demod CC0 Frame Summary1
Window 4	MIMO CC0 Info Table1

After you select CC1for CC For All Traces, the contents of four traces are changed to :

Window 1	Demod CC1 Error Summary1
Window 2	CC1 Spectrum1
Window 3	Demod CC1 Frame Summary1
Window 4	MIMO CC1 Info Table1

Remote Command	`:DISPlay:EVM:TRACe:ALL:SELected CC0 | … | CC4`
Example	`:DISP:EVM:TRAC:ALL:SEL CC0`
Couplings	CC For All Traces is coupled to Number of Component Carriers. For example, CC For All Traces list include CC0~CC1 if the number Component Carriers is 2
Preset	CC0
State Saved	Yes
Range	CC0|CC1|CC2|CC3|CC4

Adjust Atten For

This parameter specifies how to adjust the attenuation when multiple Component Carriers are under test. For example, when CC0 is selected, the attenuation is set based on the peak power of CC0. When All is selected, the attenuation is adjusted for each CC.

Remote Command	`[:SENSe]:EVM:RANGe:OPTimize CC0 | CC1 | CC2 | CC3 | CC4 | All` `[:SENSe]:EVM:RANGe:OPTimize?`
Example	`:EVM:RANG:OPT CC0` `:EVM:RANG:OPT?`
Dependencies	Component Carrier is coupled to Number of Component Carriers. For example, Component Carrier list includes CC0 to CC1 if the number Component Carriers is 2.
Preset	CC0
State Saved	Saved in instrument state
Range	CC0|CC1|CC2|CC3|CC4|All

Copy CC To

This parameter provides parameter copy function of selected Component Carrier to another Component Carrier or all Component Carrier.

NOTE **This parameter copies LTE-Advanced demodulation parameters from one Component Carrier to other Component Carrier or all Component Carriers.**

Remote Command	`[:SENSe]:EVM:COPY CC0 | CC1 | CC2 | CC3 | CC4 | All`
Example	`:EVM:COPY All`
Couplings	Copy the parameters settings of selected Component Carrier to the target Component Carrier
Preset	All
State Saved	Yes
Range	CC0|CC1|CC2|CC3|CC4|All

Eq Ch Freq Resp -> Memory

This parameter performs the immediate action to store the following items in the Modulation Analysis measurement.

- Equalizer Channel Frequency Response
- Number of Points in Equalizer Channel Frequency Response
- Link Direction (Downlink or Uplink)

Remote Command	`:MEMory:EVM:STORe:ECFResponse`
Example	`:MEM:EVM:STOR:ECFR`
Notes	To use this parameter, Eq Ch Freq Resp under Trace > Data > Response must be assigned. Otherwise,

	an advisory message “'Eq Chan Freq Resp' needs to be assigned. Trace/Det - Data - Response” appears.
Dependencies	Available when Option BBA or N9080A-DP2 is installed

Advanced Settings

Sets up more advanced parameters, such as Average Type, Result Format, and so on.

Average Type

Enables you to select the type of averaging. The following table shows what measurement results are averaged for each average type. This applies in the Vector Measurement.

Average Type	Measurement result averaged
RMS	Spectrum, PSD: Power is averaged for each spectral line (i.e., this is a mean-square average of voltage). For the Spectrum result only, if the display transform is linear or real, the RMS result is displayed
Time	Main Time: Individual time samples in the current time record are averaged vectorially (not RMS) with corresponding points in previous time records. See Main Time for more details
Maximum	Spectrum, PSD: Not strictly an average. For each spectral line, power from the current measurement is compared to the average buffer value and the maximum is kept in the average buffer

Some measurement results are inherently averaged, and are not affected by the Average controls. These are: CCDF, CDF, and PDF. They average continuously until the next measurement restart.

Remote Command	`[:SENSe]:EVM:AVERage:TYPE RMS | TIME | MAXimum` `[:SENSe]:EVM:AVERage:TYPE?`
Example	`:EVM:AVER:TYPE RMS` `:EVM:AVER:TYPE?`
Preset	RMS
State Saved	Yes
Range	RMS|Time|Max

Fast Average

Controls the display of average data. If fast averaging is off, then the display is updated after each time record is processed. If fast averaging is on, then the display is only updated after every M records, where M is the Update Rate (see "Fast Average Update Rate" on page 1451). For example, if the fast average count is 10, then the running average is only displayed every 10th time record.

Remote Command	`[:SENSe]:EVM:AVERage:FAST OFF | ON | 0 | 1` `[:SENSe]:EVM:AVERage:FAST?`
Example	`:EVM:AVER:FAST ON` `:EVM:AVER:FAST?`
Preset	OFF
State Saved	Yes
Range	On|Off

Fast Average Update Rate

Controls how often the display updates when fast averaging is turned on. If the Fast Averaging State is MAX then the display is updated only after the full Average Count is reached. Otherwise, the display is updated whenever the average count is a multiple of the Update Rate.

Remote Command	`[:SENSe]:EVM:AVERage:FAST:URATe <integer>`
	`[:SENSe]:EVM:AVERage:FAST:URATe?`
	`[:SENSe]:EVM:AVERage:FAST:URATe:AUTO OFF | ON | 0 | 1`
	`[:SENSe]:EVM:AVERage:FAST:URATe:AUTO?`

Example	`:EVM:AVER:FAST:URAT 20`
	`:EVM:AVER:FAST:URAT?`
	`:EVM:AVER:FAST:URAT:AUTO ON`
	`:EVM:AVER:FAST:URAT:AUTO?`

Preset	10 ON
State Saved	Yes Yes
Range	Auto|Man
Min	1
Max	2147483647

Report EVM in DB

Switches the unit of EVM reporting between percentage and dB.

- When set to ON, EVM is reported in dB on all traces.
- When set to Off, EVM is reported in %rms according to the LTE standard.

The reference for EVM calculation in both cases is the ideal IQ points that are displayed on the IQ Ref and IQ Ref Time traces.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:REPort:DB OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:REPort:DB?`
Example	`:EVM:CCAR0:REP:DB OFF` `:EVM:CCAR0:REP:DB?`
Preset	OFF
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:REPort:DB`

Report Relative Power Levels

Switches the unit of Power reporting between in Absolute (dBm) and relative (dB).

The following traces are affected by this parameter:

- Error Vector Spectrum
- Error Vector Time
- IQ Freq Meas
- IQ Freq Ref
- IQ Meas
- IQ Meas Time
- IQ Ref
- IQ Ref Time
- RB Error Mag Spectrum
- RB Error Mag Time
- RB Power Spectrum
- RB Power Time

- RMS Error Vector Spectrum
- RMS Error Vector Time

The only summary table affected by this parameter is the Frame Summary table. The channel power is reported in dB when this parameter is selected and in dBm when this parameter is cleared. The power values reported on Error Summary and MIMO Info Table are not affected by this parameter.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:REPort:POWer:RELative OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:REPort:POWer:RELative?`
Example	`:EVM:CCAR0:REP:POW:REL OFF` `:EVM:CCAR0:REP:POW:REL?`
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:REPort:POWer:RELative`

Power Boost Normalize

Determines if Power Boost Normalize is used.

When Power Boost Normalize is enabled, results displayed on IQ traces are normalized by the power level (set for each channel in the LTE Allocation Editor) or power boost (in Downlink Control Channel Properties) settings of the corresponding channels so that each channel's average power is 0 dB.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:POWer:BOOSt:NORMalize OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:POWer:BOOSt:NORMalize?`
Example	`:EVM:CCAR0:POW:BOOS:NORM OFF` `:EVM:CCAR0:POW:BOOS:NORM?`
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:POWer:BOOSt:NORMalize`

Phase Noise Optimization

The Phase Noise Optimization setting affects the phase noise distribution on the analyzer's LO.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:FREQuency:SYNThesis[:STATe] 1 | 2 | 3` `[:SENSe]:EVM:CCARrier0|…|4:FREQuency:SYNThesis[:STATe]?`
Example	`:EVM:CCAR0:FREQ:SYNT 1` `:EVM:CCAR0:FREQ:SYNT?`
Notes	Parameter control: 1 - Best Close-in 2 - Best Wide-offset 3 - Fast Tuning Readback is Close-in|Wide-offset|FastTuning
Dependencies	This control does not appear in EXM, VXT, M9410E/11E/15E/16E , UXM, M9391A or M9393A
Preset	Default value is different depending on hardware configuration Models with option EP2 (available, for example, for MXA): 3 Others: 1 The preset value of PXA is determined by considering balance of speed and phase noise. Compared with Best Wide-offset, Best Close-in is faster, however, it has phase noise disadvantage
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:FREQuency:SYNThesis[:STATe]`

Number of Antenna Elements

Sets the number of antenna elements per antenna group.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:AENumber <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:AENumber?`
Example	`:EVM:CCAR0:DLIN:AEN 3` `:EVM:CCAR0:DLIN:AEN?`
Dependencies	Available when Direction is Downlink
Preset	2
State Saved	Yes
Min	2
Max	8
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:AENumber`

Antenna Element Spacing

Specifies the distance between the antennas in a linear antenna array. This parameter is used only for calculating the Antenna Beam Pattern trace, which shows the beam patterns applied to PDSCH user allocations.

This parameter is specified in units of wavelengths of the Center Frequency.

NOTE

NOTE **The LTE demodulator only supports vertical linear antenna arrays with uniform spacing.**

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:AESPacing <double>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:AESPacing?`
Example	`:EVM:CCAR0:DLIN:AESP 0` `:EVM:CCAR0:DLIN:AESP?`
Dependencies	Available when Direction is Downlink
Preset	0.5
State Saved	Yes
Min	0
Max	100
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:AESPacing`

Compensate Chan Freq Response

Determines whether the UE-RS weights are compensated for the channel calculated from the Reference Signal.

- On: the UE-RS weights are compensated for the channel frequency response which is shown in the Eq Chan Freq trace.
- Off: the UE-RS weights are not compensated for the channel frequency response.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:UERS:CFRCompen OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:UERS:CFRCompen?`
Example	`:EVM:CCAR0:DLIN:UERS:CFRC ON` `:EVM:CCAR0:DLIN:UERS:CFRC?`
Notes	Available when Direction is Downlink
Preset	ON
State Saved	Yes
Range	On|Off
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:UERS:CFRCompen`

Display Weights in Real/Imag

Determines whether the values of complex UE-RS weights are shown as real/imaginary pairs or as magnitude/phase pairs on the UE-Specific RS Weights summary table.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:UERS:WEIGhts:RIFormat OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:UERS:WEIGhts:RIFormat?`
Example	`:EVM:CCAR0:DLIN:UERS:WEIG:RIF ON` `:EVM:CCAR0:DLIN:UERS:WEIG:RIF?`
Notes	Available when Direction is Downlink
Preset	OFF
State Saved	Yes
Range	On|Off
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:UERS:WEIGhts:RIFormat`

Weights Display Mode

Determines how the UE-RS weights are shown in the UE-specific Weights summary table.

- PSUBcarrier - Per Subcarrier: the UE-RS weights are shown for each UE-RS subcarrier. UE-RS subcarrier weights are averaged over all subframes in the Measurement Interval. Weights Display Mode can be set to Per Subcarrier only by SCPI command, it is not accessible from front panel.
- PRB - Per RB: the UE-RS weights are shown for each resource block in frequency. A UE-RS weight for a resource block is averaged over the subcarriers in the resource block as well as all subframes in the Measure Interval.
- PUSer - Per User: UE-RS subcarrier weights are averaged over all UE-RS resource elements in the Measurement Interval for a user allocation and the averaged UE-RS is shown for each user.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:UERS:WEIGhts:DISPlay PSUBcarrier | PRB | PUSer` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:UERS:WEIGhts:DISPlay?`
Example	`:EVM:CCAR0:DLIN:UERS:WEIG:DISP PUSer` `:EVM:CCAR0:DLIN:UERS:WEIG:DISP?`
Notes	Available when Direction is Downlink

Preset	PUSer
State Saved	Yes
Range	PSUBcarrier|PRB|PUSer
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:UERS:WEIGhts:DISPlay`

Spur Avoidance

Because the VXT models M9410A/11A/15A and M9410E/11E/15E/16E are direct-conversion (zero-IF) receivers, feedthrough leakage from the local oscillator appears as a spurious signal (spur) at the center frequency. The Spur Avoidance function is provided to eliminate this spur, at the expense of some measurement speed.

When Spur Avoidance is enabled (the default), the analyzer uses a software algorithm to remove this spur from the displayed measurement data, but the algorithm only operates under certain conditions. Specifically, it only operates when the BW<= maxBW/2.5.

You can disable this function in order to speed up your measurement. When Spur Avoidance is turned Off, a warning message appears in the status bar as “Settings Alert;Spur Avoidance Off”. This is to alert you that measurement accuracy might be impacted because you have defeated the spur avoidance algorithm.

The spur avoidance function is not available for:

- M9410A/11A with EP6 option at frequency above 6 GHz
- M9415A/16A at frequency below 380 MHz and above 12.3 GHz
- M9410E/11E/15E/16E at frequency below 380 MHz and above 25.9 GHz

Remote Command	`[:SENSe]:EVM:SAVoid[:STATe] ON | OFF | 0 | 1` `[:SENSe]:EVM:SAVoid[:STATe]?`
Example	`:EVM:SAVoid ON` `:EVM:SAVoid?`
Dependencies	This control only appears in VXT models M9410A/11A/15A and M9410E/11E/15E/16E
Preset	ON
State Saved	Saved in instrument state
Range	On|Off

Meas Preset

Restores all the measurement parameters to their default values.

Remote Command	`:CONFigure:EVM`
Example	`:CONF:EVM`
Notes	Restore all defaults of parameters

Advanced Limit Setup

Accesses a menu that enables you to set parameters required to calculate the limit for Per Slot Freq Resp trace.

See "Spectrum Flatness Mask" on page 1458 for more information.

NOTE This control is available only when Direction is Uplink.

Spectrum Flatness Mask

Four parameters are required to calculate the limit for Per Slot Freq Resp trace, which can be used to perform the EVM equalizer spectrum flatness test defined in TS36-521 6.5.2.4

- Channel Condition - Specify under what environmental condition the test is performed. There two temperature conditions defined inTS36.101 Annex E, which are normal condition(+15°C to +35°C) and extreme condition(-10°C to +55°C).
- F_UL_Center - Specify the carrier frequency of the signal under test.
- F_UL_ Low - Specify the lower frequency of the E-UTRA operating band defined in TS36-521-1 Table 5.2.1
- F_UL_ High - Specify the upper frequency of the E-UTRA operating band defined in TS36-521-1 Table 5.2.1

Channel Condition

Specifies under what condition the test is performed. This parameter determines the minimum requirements for EVM equalizer spectrum flatness test.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:FLATness:CHANnel:CONDition NORMal | EXTReme` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:FLATness:CHANnel:CONDition?`
Example	`:EVM:CCAR0:ULIN:FLAT:CHAN:COND NORM` `:EVM:CCAR0:ULIN:FLAT:CHAN:COND?`

Dependencies	Available when Direction is uplink
Preset	NORMal
State Saved	Yes
Range	NORMal|EXTReme
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:FLATness:CHANnel:CONDition`

F_UL_CENTER (Center Frequency)

Specifies the carrier frequency of signal under test.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:FREQuency:CENTer <freq>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:FREQuency:CENTer?`
Example	`:EVM:CCAR0:ULIN:FREQ:CENT 1.95 GHz` `:EVM:CCAR0:ULIN:FREQ:CENT?`
Couplings	The value is clipped to F_UL_Low or F_UL_High If the value entered is greater than F_UL_High, it is set to the value of F_UL_High If the value entered is lower than F_UL_Low, it is set to the value of F_UL_Low
Preset	1.95GHz
State Saved	Saved in instrument state
Min	Depends on F_ UL_Low
Max	Depends on F_UL_High
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:FREQuency:CENTer`

F_UL_LOW (Lower Edge Freq)

Specifies the lower frequency of the E-UTRA operating band defined in TS36-521-1 Table 5.2.1.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:FREQuency:LOW <freq>STARt` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:FREQuency:LOW?`
Example	`:EVM:CCAR0:ULIN:FREQ:LOW 1.92 GHz` `:EVM:CCAR0:ULIN:FREQ:LOW?`
Couplings	If the value entered is greater than F_UL_High, F_UL_High is set to the value of F_UL_Low
Preset	1.92GHz
State Saved	Saved in instrument state

Min	0Hz
Max	Depends on F_UL_High
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:FREQuency:LOW`

F_UL_HIGH (Upper Edge Freq)

Specifies the upper frequency of the E-UTRA operating band defined in TS36-521-1 Table 5.2.1

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:FREQuency:HIGH <freq>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:FREQuency:HIGH?`
Example	`:EVM:CCAR0:ULIN:FREQ:HIGH 1.98 GHz` `:EVM:CCAR0:ULIN:FREQ:HIGH?`
Couplings	The value entered is lower than F_UL_Low, it is set to the F_UL_Low
Preset	1.98GHz
State Saved	Saved in instrument state
Min	Depends on F_UL_Low
Max	6 GHz
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:FREQuency:HIGH`

Meas Time

The Meas Time tab contains commonly used measurement time setup parameters.

Result Length

Sets the maximum result length for analysis.

Result Length determines how many slots are available for demodulation for each component carrier. This parameter is common to all component carriers, which means any change made to one component carrier is applied to all component carriers. Measurement Interval and Measurement Offset specify what part of the result length is demodulated.

The result data starts where the analysis boundary is found and ends after the amount of data specified by Result Length.

The length of the time capture (contained in Search Time) is longer than the result length by approximately the length of the Analysis Start Boundary (frame = 10 ms, slot = 0.5 ms, etc.) to enable for location of the analysis boundary within the time capture.

As NB-IoT NPRACH signal is in the unit of symbol group, the slot unit of the paramters (Result Length, Meas Interval Slot, Meas Offset Slot) in Meas Time Setup group is changed to symbol group. There are two NPRACH signal length per preamble format. One is 1.4 ms with preamble format 0, the other is 1.6ms with preamble format1.

Each NPRACH preamble contains 4 symbol groups, so the analysis start boundary for NPRACH is fixed to preamble and the analysis start boundary parameter under Meas time setup is out of scope when measuring NPRACH signal.

NOTE **For downlink, an entire slot containing S-SS must be present in the time capture (Raw Main Time) for demodulation to occur.**

NOTE **For LTEATDD, the maximum Result Length is 40 slots when Direction is set to Downlink, for Uplink, the maximum Result Length is 20 slots.**

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:TIME:RESult:LENGth <integer>` `[:SENSe]:EVM:CCARrier0|…|4:TIME:RESult:LENGth?`
Example	`:EVM:CCAR0:TIME:RES:LENG 20` `:EVM:CCAR0:TIME:RES:LENG?`
Preset	20 slots NB-IoT PRACH only: 20 sym groups
State Saved	Yes
Min	1 slot
Max	LTEAFDD: 20 slots LTEATDD: 40 slots for Downlink, 20 slots for Uplink
Backwards Compatibility SCPI	`[:SENSe]:EVM:TIME:RESult:LENGth`

Meas Interval Slot

Sets the Meas Interval Slot.

Measurement Interval determines how much data is sent to the demodulator, and can be specified in slots + symbols-times. The beginning of the measurement interval is specified as an offset from the Analysis Start Boundary. The offset is specified by the Measurement Offset parameter.

NOTE The Time Offset data result in the Error Summary trace shows the distance from the beginning of the Search Time trace to the beginning of the measurement interval.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:TIME:INTerval:SLOT <integer>` `[:SENSe]:EVM:CCARrier0|…|4:TIME:INTerval:SLOT?`
Example	`:EVM:CCAR0:TIME:INT:SLOT 1` `:EVM:CCAR0:TIME:INT:SLOT?`
Couplings	Max value determined by Result Length (refer to "Result Length" on page 1460)
Preset	LTEAFDD: 6 slots LTEATDD: 6 slots NB-IoT PRACH only: 6 sym groups
State Saved	Yes
Min	0 slot
Max	Determined by Result Length (refer to "Result Length" on page 1460)
Backwards Compatibility SCPI	`[:SENSe]:EVM:TIME:INTerval:SLOT`

Meas Interval Symbol

Sets the Meas Interval Symbol.

Measurement Interval determines how much data after the measurement offset is sent to the demodulator, and can be specified in slots + symbols-times.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:TIME:INTerval:SYMBol <integer>` `[:SENSe]:EVM:CCARrier0|…|4:TIME:INTerval:SYMBol?`
Example	`:EVM:CCAR0:TIME:INT:SYMB 0` `:EVM:CCAR0:TIME:INT:SYMB?`
Preset	0 symbols
State Saved	Yes
Min	0 symbols
Max	6 symbols
Backwards Compatibility SCPI	`[:SENSe]:EVM:TIME:INTerval:SYMBol`

Meas Offset Slot

Sets the Meas Offset Slot.

Measurement Offset Slot specifies the offset from the Analysis Start Boundary to the beginning of the Measurement Interval (the data sent to the demodulator), and can be specified in slots + symbols-times.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:TIME:OFFSet:SLOT <integer>` `[:SENSe]:EVM:CCARrier0|…|4:TIME:OFFSet:SLOT?`
Example	`:EVM:CCAR0:TIME:OFFS:SLOT 0` `:EVM:CCAR0:TIME:OFFS:SLOT?`
Couplings	Max value determined by Result Length (refer to "Result Length" on page 1460)
Preset	0 slots NB-IoT PRACH only: 0 sym groups
State Saved	Yes
Min	0 slots
Max	Determined by Result Length (refer to "Result Length" on page 1460)
Backwards Compatibility SCPI	`[:SENSe]:EVM:TIME:OFFSet:SLOT`

Meas Offset Symbol

Sets the Meas Offset Symbol.

Measurement Offset Symbol specifies the offset from the Analysis Start Boundary to the beginning of the Measurement Interval (the data sent to the demodulator), and can be specified in slots + symbols-times.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:TIME:OFFSet:SYMBol <integer>` `[:SENSe]:EVM:CCARrier0|…|4:TIME:OFFSet:SYMBol?`
Example	`:EVM:CCAR0:TIME:OFFS:SYMB 0` `:EVM:CCAR0:TIME:OFFS:SYMB?`
Preset	0 symbols
State Saved	Yes
Min	0 symbols
Max	6 symbols
Backwards Compatibility SCPI	`[:SENSe]:EVM:TIME:OFFSet:SYMBol`

Analysis Start Boundary

Sets the Analysis Start Boundary. Analysis Start Boundary specifies the alignment boundary of the Result Length time data. To ensure that this alignment can be achieved, the total amount of data acquired by the analyzer is equal to the Result Length plus the length of the alignment boundary specified by Analysis Start Boundary. For example, if Analysis Start Boundary is set to Half-Frame, the total acquisition is equal to ResultLength + 10 slots (and the Measurement Interval starts at a Half-Frame boundary).

Once the Result Length is located within the time capture, Measurement Offset and Measurement Interval determine the data that is to be analyzed. This data is also displayed on the Time trace.

This parameter cannot be set to Slot for downlink signals since MIMO Decoding must be applied beginning at a subframe boundary. This parameter is common to all component carriers, which means any change made to one component carrier is applied to all component carriers.

NOTE **Since uplink signals do not contain a separate synchronization channel, the demodulator cannot determine the frame boundary exactly unless there is a unique slot in a user mapping and that unique slot is present within the Search Time data.**

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:TIME:ASBoundary FRAMe | HALF | SUB | SLOT` `[:SENSe]:EVM:CCARrier0|…|4:TIME:ASBoundary?`
Example	`:EVM:CCAR0:TIME:ASB FRAM` `:EVM:CCAR0:TIME:ASB?`
Dependencies	When Direction is set to Downlink, SLOT cannot be selected and the control is grayed out When Direction is changed to Downlink from Uplink, this parameter is set to FRAMe
Preset	FRAMe
State Saved	Yes
Range	Frame|Half-Frame|SubFrame|Slot
Backwards Compatibility SCPI	`[:SENSe]:EVM:TIME:ASBoundary`

Capture Time Diagram

This control shows a dialog page to access commonly used measurement time setup parameters.

- "Result Length" on page 1460
- "Meas Interval Slot" on page 1461
- "Meas Interval Symbol" on page 1462
- "Meas Offset Slot" on page 1463
- "Meas Offset Symbol" on page 1463

Sync/Format

This tab contains commonly used functions for sync/format setup parameters.

Sync Type (FDD/TDD Downlink)

Selects the Sync Type.

- PSS - Selects Primary Sync Signal for Sync Type
- C-RS - Selects Cell-specific reference signal for Sync Type

Sync Type sets the channel or signal to be used for synchronization.

The LTE demodulator can be set to use either the Primary Sync signal (P-SS) or the Cell-specific reference signal (C-RS) to synchronize the downlink signal.

This synchronization is performed at the frame level. For smaller scale adjustments (such as at the symbol or slot level), see the EVM Minimization parameter.

P-SS is normally used for downlink synchronization. However, when P-SS is impaired in some way (for example, P-SS has a different Cell ID from RS), C-RS can be used for synchronization so that the signal can be demodulated.

NOTE **S-SS must be present in the time capture (Raw Main Time) for demodulation to occur, since finding S-SS is the only way to distinguish between the beginning and the middle of a frame.**

NOTE **When Sync Type is set to C-RS:**

The Error Summary data result SyncCorr shows which C-RS antenna port’s reference signal was used for synchronization to the right of the correlation value.

Auto detection of Cell ID and Custom RS-PRS are not supported.

The reference C-RS port must be specified, since the demodulator does not automatically search the input signal for all C-RS antenna ports when Sync Type is set to C-RS.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:SYNC:TYPE PSS | RS` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:SYNC:TYPE?`
Example	`:EVM:CCAR0:DLIN:SYNC:TYPE PSS` `:EVM:CCAR0:DLIN:SYNC:TYPE?`
Dependencies	When Sync Type is set to C-RS, auto detection of Cell ID and Custom RS-PRS are not supported
Preset	PSS
State Saved	Yes
Range	P-SS|C-RS
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:SYNC:TYPE`

P-SS

Selects P-SS Sync Type.

P-SS is the Primary Synchronization signal for an LTE downlink frame. The center 72 subcarriers (6 RB wide) are allocated to P-SS, but only the center 62 subcarriers are used. The unused subcarriers (the outer five on each side) are set to zero power during P-SS transmission. P-SS is not present in an uplink frame.

For FDD frame type 1, P-SS is present in the last symbol of slots 0 and 11 in every frame.

For TDD frame type 2, P-SS is present in the third symbol of slots 2 and 12 in every frame.

P-SS is transmitted as a Zadoff-Chu sequence and thus appears as irregularly spaced points on a circle in the IQ Meas constellation diagram.

C-RS

Selects C-RS (Cell-specific Ref Signal Sync Type.

C-RS is the downlink Cell-specific Reference Signal and is used for "EVM Minimization" on page 1493 and Equalizer Training, and it can be used for synchronization. The reference signal is also used as the power level reference for the rest of the signal.

The modulation type of C-RS is QPSK.

Sync Type (FDD/TDD Uplink)

Selects the Sync Type to use.

- RS - Selects PUSCH DM-RS as the Sync Type
- PUCCh - Selects PUCCH DM-RS as the Sync Type
- SRS - Selects S-RS as the Sync Type
- PRACh - Selects PRACH as the Sync Type

Sync Type sets the channel or signal to use for synchronization.

The demodulator can use PUSCH DM-RS, PUCCH DM-RS, S-RS, or PRACH for synchronization. Only the channels or signals that are defined for the current user (by selecting the Active to On for that signal in the User Mapping Editor) are available as synchronization options.

Note that PUSCH, PUCCH, PUSCH DM-RS, PUCCH DM-RS, and SRS powers in the User Mapping Editor are specified relative to the 0 dB level determined by the power of the channel chosen for synchronization. For example, when:

Sync Type is set to PUCCH DM-RS

- PUCCH DMRS Power (dB) = 3 dB
- PUSCH Power (dB) = 1.2 dB,

the demodulator sets 0 dB level to be 3 dB below the average power of PUCCH DM-RS and expect PUSCH average power to be 1.2 dB above the 0 dB level, which is equivalent to 1.8 dB below the average PUCCH DM-RS power.

Sync Type also determines which channel's Sync Slot parameter is used for frame boundary calculation.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:SYNC:TYPE RS | PUCCh | SRS | PRACh` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:SYNC:TYPE?`
Example	`:EVM:CCAR0:ULIN:SYNC:TYPE RS` `:EVM:CCAR0:ULIN:SYNC:TYPE?`
Dependencies	Only the channels or signals that are defined for the current user (by turn on Active for that signal in the LTE Allocation Editor) are available as synchronization options For example, if a user does not have a PUCCH allocation defined, the PUCCH DM-RS synchronization option is disabled
Preset	RS
State Saved	Yes

Range	PUSCH DM-RS|PUCCH DM-RS|S-RS|PRACH
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:SYNC:TYPE`

RS-PRS

Sets the RS-PRS.

- 3GPP - The demodulator expects the RS pseudorandom sequence to follow the formula given in the LTE standard in Section 6.10.1.1 of 3GPP TS 36.211.
- CUSTom - The demodulator autodetects the RS sequence (including non-standard sequences). Since the RS points can only be in certain positions, the demodulator assumes that the point closest to the measured point is the desired reference signal point and calculates the EVM and other metrics using the assumed reference signal constellation point.
- RS-PRS specifies whether or not the demodulator should expect the reference signal sequence to adhere to the standard.

NOTE

When Sync Type is set to RS, autodetecting of a Custom RS-PRS is not supported since the demodulator needs to know the RS-PRS to be able to synchronize the signal using RS.

When RS-PRS is set to Custom and any of the antenna port signals are phase delayed by more than 45 degrees, the demodulator autodetects a different RS-PRS. This causes equalization to be incorrect and demodulation fails. To ensure correct demodulation of signals containing an antenna port transmission with a phase rotation of more than 45 degrees, set RS-PRS to 3GPP to enable RS-PRS to be determined by Cell ID according to the standard.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:SYNC:RSPRs GPP | CUSTom` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:SYNC:RSPRs?`
Example	`:EVM:CCAR0:DLIN:SYNC:RSPR CUSTom` `:EVM:CCAR0:DLIN:SYNC:RSPR?`
Dependencies	When Sync Type for Downlink is set to RS, the Custom selection is disabled and the control is grayed out
Preset	GPP
State Saved	Yes
Range	3GPP|Custom
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:SYNC:RSPR`

Cell ID

Autodetects the Cell ID from the SSCH content or to manually select the Cell ID.

Cell ID sets the physical (PHY) layer Cell Identity. This PHY-layer Cell ID determines the Cell ID Group and Cell ID Sector. There are 168 possible Cell ID groups and 3 possible Cell ID sectors; therefore, there are 3 * 168 = 504 possible PHY-layer Cell IDs. When Cell ID is set to Auto, the analyzer automatically detects the Cell ID. When Cell ID is set to Manual, the PHY-layer Cell ID must be specified for successful demodulation.

The physical layer Cell ID can be calculated from the following formula:

PHY-layer Cell ID = 3*(Cell ID Group) + Cell ID Sector

When Sync Type is set to RS, the Cell ID Auto selection is disabled, and Cell ID must be specified manually. This is because the demodulator needs to know the values of the RS sequence to use for synchronization and because Cell ID determines these values. See "RS-PRS" on page 1468 for more information.

NOTE

Cell ID Sector and Group information can be found on the Error Summary trace.

Only cell-specific reference signals are supported by the LTE demod (MBSFN and UE-specific reference signals are not supported).

Cell ID Sector determines the Zadoff-Chu Root Index used to generate the Primary Synchronization Signal (P-SS):

- Cell ID sector 0 = ZC Root Index 25
- Cell ID sector 1 = ZC Root Index 29
- Cell ID sector 2 = ZC Root Index 34

Normally, the same sequence used to generate P-SS is used to generate RS, but a custom RS can be used by setting RS-PRS to Custom.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:SYNC:CID <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:SYNC:CID?`
Example	`:EVM:CCAR0:DLIN:SYNC:CID 0` `:EVM:CCAR0:DLIN:SYNC:CID?`
Dependencies	Available when direction is downlink and Sync Type for Downlink is set to RS, the Cell ID Auto selection is disabled and Cell ID must be specified manually
Preset	0
State Saved	Yes

Min	0
Max	503
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:SYNC:CID` `[:SENSe]:EVM:DLINk:SYNC:CID:AUTO`

Cell ID Mode

Set the Cell ID Mode type which determines how the Cell ID for each downlink component carrier is configured.

- Auto: the demodulator automatically detects the Cell ID from the synchrounous channel
- Manual: the PHY-layer Cell ID must be specified manually for successful demodulation.
- E-TM: Use 1 for LTE lowest configured component carrier, and auto-increment cell ID for each component carrier for LTE-Advanced in accordance with E-TM specifications

Use 103 for the lowest configured standalone NB-IoT carrier(s), and auto-increment cell ID by the equation NIDcell= 97+6*n for the nth configured NB-IoT stand-alone carrier. This rule only applies to multi-carriers only composed of NB-IoT standalone carriers.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:SYNC:CID:MODE AUTO | MANual | ETM` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:SYNC:CID:MODE?`
Example	`:EVM:CCAR0:DLIN:SYNC:CID:MODE ETM` `:EVM:CCAR0:DLIN:SYNC:CID:MODE?`
Notes	In 3GPP specification, it uses N-TM term for NB-IoT instead of E-TM to refer to test model. As the setting is shared by Lte carrier and NB-IoT carrier, so the label of enum item - ETM is changed to E (N)-TM with the required license
Dependencies	Available when direction is downlink and Sync Type for Downlink is set to RS, the Cell ID Mode is set to Manual automatically
Preset	AUTO
State Saved	Yes
Range	Auto|Manual|E(N)-TM
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:SYNC:CID:AUTO OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:SYNC:CID:AUTO OFF | ON | 0 | 1`

MIMO Decoding

Determines the MIMO decoding method.

- NONE - No decoding
- GPPMimo - Selects 3GPP MIMO decoding

MIMO Decoding determines how much of the transmit chain is decoded by the demodulator. The selection of this parameter directly affects what values are shown on the IQ Meas trace and all other traces that depend on the IQ Meas data (error vector traces).

MIMO Decoding applies to multi-antenna signals only.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:SYNC:MIMO:DECoding NONE | GPPMimo` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:SYNC:MIMO:DECoding?`
Example	`:EVM:CCAR0:DLIN:SYNC:MIMO:DEC NONE` `:EVM:CCAR0:DLIN:SYNC:MIMO:DEC?`
Preset	3GPP MIMO
State Saved	Yes
Range	None|3GPP MIMO
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:SYNC:MIMO:DECoding`

3GPP MIMO Decoding

When 3GPP MIMO Decoding is selected, the data points shown on the IQ Meas trace are equivalent to the data points before precoding was applied in the transmit chain. In other words, the demodulator stops MIMO precoding and shows the results on IQ Meas. Although the data points are mapped onto "subcarriers" when being shown on the layer traces, the data points do not have a one-to-one correspondence to the subcarrier that they are mapped onto. For instance, when there is a frequency null that affects a subcarrier, there are several (depending on the precoding) data points in IQ Meas that are affected. Another way of looking at this is that each subcarrier contains information from multiple data points after precoding is performed (this does not apply to RS, P-SS, and S-SS which do not undergo precoding).

For channels that undergo transmit diversity, the demodulator stop transmit diversity precoding along with codeword-to-layer mapping, and shows the resulting codeword data points in their respective resource elements, copied on all layer traces. That is, constellation points on layer traces for transmit diversity-precoded channels is the same for all layer traces.

When a signal uses Tx Diversity, the amount of data transmitted is not increased, but the reliability of the signal is increased by transmitting multiple copies of the data.

In two Tx Antenna mode, each antenna port transmission carries enough information to determine all the data.

In four Tx Antenna mode, each antenna port transmission only carries enough information to determine half the data. Any data that cannot be determined from the detected antenna ports is considered part of Non-Alloc signals and shown as blanks on the Symbol Table (unless the Non-Alloc parameter is selected; the data are shown as gray zeros).

For channels that undergo spatial multiplexing, the demodulator stops Spatial Multiplexing precoding only and shows the layer data points in their respective resource elements on the appropriate layer traces.

For precoded channels, subcarrier points on the layer traces do not have a one-to-one correspondence to on-air subcarriers. Rather, each subcarrier point is actually the demodulated value of a codeword data point present prior to the codeword-to-layer mapping at the transmitter.

NOTE **For LTE signals that contain more than one layer, the P-SS and S-SS subcarriers from the P-SS/S-SS Antenna Port are copied to all layer traces. RS subcarriers from all Tx antenna ports are copied to their respective subcarrier/symbol locations in all layer traces.**

No Decoding

When No Decoding is selected, no decoding or cross-channel equalization is performed on the measured IQ data. This means that, for LTE signals that have been precoded (multi-antenna signals), subcarrier points shown on measured IQ traces (IQ Meas and IQ MEas Time) are actually an addition of multiple modulation points, resulting in non-standard constellations.

For example, in a two antenna port signal, there are subcarrier points that are an addition of two QPSK points. The resulting diagram is a 9QAM constellation. These are effectively the points transmitted on the OFDM subcarriers.

Reference antenna path equalization are still performed when Equalizer Training is enabled (set to RS or RS+Data).

The No Decoding selection is useful for the case where you have four antenna signals, and you want to isolate channel effects from transmit chain effects (filters, mixers, and so on). You could connect each transmit port directly to your measurement instrument with identical cables. That way, any observed anomalies come primarily from the RF transmit chain.

NOTE **When No Decoding is selected, EVM results are not relevant since the ideal symbol points (shown on the IQ Ref and IQ Ref Time), which are used to** compute EVM, are still standard constellation points and hence may not match the non-standard constellation points of IQ Meas arising due to No Decoding.

PDSCH Cell Specific Ratio

Determines PDSCH cell-specific ratio ρ_B/ρ_A or cell-specific parameter PB. (3GPP TS 36.213 V8.5.0 5.2) PDSCH cell-specific ratio specifies the power ratio between PDSCH resource elements and cell-specific reference signal elements.

- R1 - Cell-specific ratio $\rho B/\rho A$ = always 1 (0 dB)
- PB0 - Cell-specific parameter PB = 0
- PB1 - Cell-specific parameter PB = 1
- PB2 - Cell-specific Parameter PB = 2
- PB3 - Cell-specific parameter PB = 3

When PB(x) is selected, the LTE parameter P_B is set to (x), and the ratio ρ_B/ρ_A is determined from Table 5.2-2 in 3GPP TS.36.213.

When R1 is selected, the cell-specific ratio ρ_B/ρ_A is set to 1.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PDSCh:CSRatio R1 | PB0 | PB1 | PB2 | PB3` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PDSCh:CSRatio?`
Example	`:EVM:CCAR0:DLIN:PDSC:CSR R1` `:EVM:CCAR0:DLIN:PDSC:CSR?`
Preset	$\rho_B/\rho_A = 1$
State Saved	Yes
Range	$\rho_B/\rho_A = 1\|PB = 0\|PB = 1\|PB = 2\|PB = 3$
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PDSCh:CSRatio`

Serving Cell Index

When one component carrier is acting as the Primary Component Carrier, which carries scheduling information about all other Secondary Component Carriers(SCC), this index is used by SCCs as the Scheduling Cell ID.

Remote	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:SCINdex`

Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:SCINdex?`
Example	`:EVM:CCAR0:DLIN:PROF:SCINdex 1` `:EVM:CCAR0:DLIN:PROF:SCINdex?`
Preset	0
State Saved	Yes
Min	0
Max	7

Half Subcarrier Shift

Sets the state of Half Carrier Shift. When Half Subcarrier Shift is selected, the demodulator expects the uplink signal to comply with the LTE-A standard regarding subcarrier shift and phase reset. The standard requires that the uplink subcarriers be spaced on either side of DC by half the subcarrier spacing. When this is done, a phase reset is also needed after each symbol.

To demodulate a signal that does not shift the subcarriers by half the subcarrier spacing (and therefore does not need a phase reset), set this parameter to OFF.

To demodulate a signal that conforms to the half subcarrier shift, but does not reset the phase each symbol, set this parameter to OFF. The signal is then demodulated correctly, but shows a frequency offset error of 7.5 KHz.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:SYNC:HSSHift OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:SYNC:HSSHift?`
Example	`:EVM:CCAR0:ULIN:SYNC:HSSH ON` `:EVM:CCAR0:ULIN:SYNC:HSSH?`
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:SYNC:HSSHift`

More Information

Downlink signals have an odd number of subcarriers, and the middle subcarrier, located at DC, is discarded, since recovering the data from a DC subcarrier is generally difficult. In contrast, uplink signals have one less subcarrier than the corresponding downlink signal and are shifted down in frequency by half the subcarrier spacing such that the subcarriers are symmetric about DC, causing less bandwidth to be wasted.

PUSCH DFT Swap

Sets the state of PUSCH DFT Swap. PUSCH DFT Swap influences how data is mapped to the subcarriers in the Physical Uplink Shared Channel after a discrete Fourier transform is performed. It can be turned on or off to provide two different interpretation of how data should be mapped to resource elements in PUSCH channels.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:SYNC:PDSWap OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:SYNC:PDSWap?`
Example	`:EVM:CCAR0:ULIN:SYNC:PDSW ON` `:EVM:CCAR0:ULIN:SYNC:PDSW?`
Preset	OFF
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:SYNC:PDSWap`

Carrier Allocated

Indicates whether the carrier is allocated, this parameter is used when in-band emission is measured for UEs supporting contiguous CA.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:PROFile:CARRier:ALLocated OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:PROFile:CARRier:ALLocated?`
Example	`:EVM:CCAR0:PROF:CARR:ALL ON` `:EVM:CCAR0:PROF:CARR:ALL?`
Preset	ON
State Saved	Yes

Tx Antenna (Downlink)

This control allows you to set up Antenna parameters for LTE-A or NB-IoT downlink signals.

Tx Antenna Tab

This control allows you to set up Antenna parameters for LTE-A signals.

Number of C-RS Ports

Selects the number of C-RS Ports.

- ANT1 - 1 Port: Selects one C-RS Port.
- ANT2 - 2 Ports: Selects two C-RS Port.
- ANT4 - 4 Ports: Selects four C-RS Ports.

Number of C-RS Ports specifies the number of C-RS (Cell-specific RS) antenna ports there are for the current LTE-A signal, and thus determines how many C-RS antenna port signals the demodulator searches for.

NOTE **When RS-PRS is set to Custom and any of the C-RS antenna port signals are phase delayed by more than 45 degrees, the demodulator auto-detects a different RS-PRS. This causes equalization to be incorrect and demodulation fails.**

To ensure correct demodulation of signals containing an antenna port transmission with a phase rotation of more than 45 degrees, set RS-PRS to 3GPP to enable RS-PRS to be determined by Cell ID according to the standard.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:SYNC:ANTenna:NUMBer ANT1 | ANT2 | ANT4` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:SYNC:ANTenna:NUMBer?`
Example	`:EVM:CCAR0:DLIN:SYNC:ANT:NUMB ANT1`
Dependencies	When Sync Type for Downlink is set to C-RS, the Custom selection is disabled and the control is grayed out
Preset	ANT1
State Saved	Yes
Range	1 Port|2 Ports|4 Ports
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:SYNC:ANTenna:NUMBer`

Reference C-RS Port

Selects which Reference C-RS Port to use.

P0 - C-RS Port 0

P1 - C-RS Port 1

P2 - C-RS Port 2

P3 - C-RS Port 3

Reference C-RS Port determines which C-RS path to use for synchronization and initial equalization and to show on certain non-MIMO traces (listed below). This parameter determines the transmitted Cell-specific RS antenna port.

Auto/Man selection enables you to specify whether the analyzer uses auto-detection or manual mode to determine the reference C-RS antenna port.

- Auto - The demodulator searches for the strongest C-RS antenna port signal and uses that C-RS port as the reference.
- Man - Selected C-RS port is used as the reference.

C-RS metrics for other C-RS/Rx paths are expressed relative to the C-RS metrics for the reference C-RS/Rx path. For example, when C-RS port 0 and Rx0 (Measurement Channel 1) are selected, the C-RS0/Rx0 section of the MIMO Info Table shows 0 dB for RSPwr and the other C-RS/Rx paths' RSPwr is expressed in dB relative to this 0 dB point.

NOTE In the absence of cross-channel paths (when connecting directory to the transmitter), make sure that the specified C-RS path is present; otherwise, the signal is not demodulated.

The **Sync Type parameter affects how the reference C-RS path must be specified.**

NOTE Sync Type = P-SS (note: Input Signal must contain P-SS)

NOTE Ref C-RS Port is Man: the demodulator uses the specified reference C-RS antenna port (which must be present on the Input Signal).

NOTE Ref C-RS Port is Auto: the demodulator automatically detects the strongest C-RS port signal to use for the reference C-RS port.

NOTE **when PUSCH is selected as the Sync Type**

NOTE = **RS:** reference path auto detection is not supported and the reference C-RS path must be specified manually.

This parameter also determines which C-RS path results are shown on the following traces:

- Eq Chan Freq Resp
- Eq Chan Freq Resp Diff
- Eq Impulse Response
- Common Tracking Error
- Inst Eq Chan Freq Resp
- Inst Eq Chan Freq Resp Diff
- Freq Err per Slot

To view show information for all detected antenna port signals, set the window to display "MIMO (Downlink)" on page 1344 traces.

NOTE **P-SS and S-SS must be present in the time capture (Raw Main Time) for successful demodulation to occur. For example, for two-channel transmit diversity signal that has P-SS and S-SS transmitted only on antenna 2, the demodulator can analyze antenna 2 without antenna 1 connected, but not vice versa.**

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:SYNC:ANTenna:PORT P0 | … | P3`
	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:SYNC:ANTenna:PORT?`
	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:SYNC:ANTenna:PORT:AUTO OFF | ON | 0 | 1`
	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:SYNC:ANTenna:PORT:AUTO?`

Example	`:EVM:CCAR0:DLIN:SYNC:ANT:PORT P0` `:EVM:CCAR0:DLIN:SYNC:ANT:PORT?`
Dependencies	When Number of C-RS Ports is 1 Port, only Port 0 is enabled and the others are disabled. When Number of C-RS Ports is 2 Ports, Port 0 and Port 1 are enabled and the others are disabled. When Number of C-RS Ports is 4 Ports, all Ports are enabled
Preset	P0 ON
State Saved	Yes Yes
Range	Port 0|Port 1|Port 2|Port 3
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:SYNC:ANTenna:PORT` `[:SENSe]:EVM:DLINk:SYNC:ANTenna:PORT:AUTO`

P-SS/S-SS Antenna

Selects the Antenna Port that is transmitting P-SS/S-SS when the Number of C-RS Ports is set to 2 Ports or 4 Ports.

When All Ports is selected, the Power Boost value for P-SS and S-SS entered in Downlink Control Channel Properties is assumed to be split equally among the transmit antennas.

For example, when P-SS Power Boost = 0.6 dB and P-SS/S-SS Antenna Port is set to All Ports for a four antenna port signal, the demodulator expects P-SS power on each antenna port to be 0.6 dB - 6.02 dB = -5.38 dB.

Otherwise, when Port 0, Port 1, Port 2, or Port 3 is selected, the entire power specified by the P-SS and S-SS Power Boost parameter is assumed to be transmitted on the selected antenna port.

- PORT0 - Port 0
- PORT1 - Port 1
- PORT2 - Port 2
- PORT3 - Port 3
- APORts - All Ports

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:SYNC:SS:ANTenna:PORT P0 | P1 | P2 | P3 | APORts` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:SYNC:SS:ANTenna:PORT?`
Example	`:EVM:CCAR0:DLIN:SYNC:SS:ANT:PORT P0` `:EVM:CCAR0:DLIN:SYNC:SS:ANT:PORT?`
Dependencies	Disabled when Number of C-RS Ports is 1 Port
Preset	P0
State Saved	Yes
Range	Port 0|Port 1|Port 2|Port 3|All Ports
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:SYNC:SS:ANTenna:PORT`

Antenna Detect Threshold

Sets the Antenna Detection Threshold.

Antenna Detection Threshold sets the threshold for transmit antenna port signal detection. The average RS power from a Tx antenna port has to be above the

Antenna Detection Threshold to be detected by the demodulator. The threshold is specified relative to the average RS subcarrier power level of the reference antenna path selected.

For example, a combination of the transmissions from Ports 0-3 are being received, Antenna Detection Threshold is set to -10 dB, Reference Tx Antenna Port is set to Port 1. The demodulator sets the detection threshold 10 dB below the average RS power level of the reference antenna path (Tx1). Any other antenna port transmission paths with an average RS power level that is at or below this threshold is not detected nor included in demodulation results. However, any undetected transmissions affects EVM since they are not equalized and act as noise.

NOTE

Include Inactive Antenna Paths shows information about all Tx paths on the MIMO trace.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:SYNC:ANTenna:DETect:THReshold <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:SYNC:ANTenna:DETect:THReshold?`
Example	`:EVM:CCAR0:DLIN:SYNC:ANT:DET:THR -10` `:EVM:CCAR0:DLIN:SYNC:ANT:DET:THR?`
Dependencies	This parameter is disabled when Number of C-RS Ports is 1 Port
Preset	-10
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:SYNC:ANTenna:DETect:THReshold`

Inactive Antenna Path

Selects whether or not inactive antenna paths are included in the result.

- Include - All Tx/Rx antenna paths are shown on the "MIMO (Downlink)" on page 1344 traces whether or not the path is present.
- Exclude - Only Tx/Rx antenna paths that have an average RS power above the antenna detection threshold is shown on the "MIMO (Downlink)" on page 1344 traces.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:SYNC:ANTenna:INACtive:PATHs INCLude | EXCLude` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:SYNC:ANTenna:INACtive:PATHs?`
Example	`:EVM:CCAR0:DLIN:SYNC:ANT:INAC:PATH INCL` `:EVM:CCAR0:DLIN:SYNC:ANT:INAC:PATH?`

Preset	EXCLude
State Saved	Yes
Range	Include|Exclude
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:SYNC:ANTenna:INACtive:PATHs`

NB-IoT Tx Antenna Tab

This control allows you to set up Antenna parameters for NB-IoT signals.

Inactive Antenna Path

See "Inactive Antenna Path" on page 1480.

Advanced Sync Setup

This control allows you to set up more parameters for sync setup.

Cyclic Prefix Length

Selects whether to automatically detect the Cyclic Prefix Length or specify the cyclic prefix length for Downlink or Uplink.

- AUTO - Auto detect the Cyclic Prefix Length
- NORMal - Specify Cyclic Prefix Length as Normal (7.03125% the length of the symbol)
- EXTended - Specify Cyclic Prefix Length as Extended (25% the length of the symbol)

Cyclic Prefix Length specifies the cyclic prefix mode. The current Cyclic Prefix Length mode is displayed in the Error Summary trace.

The Cyclic Prefix is added by the transmitter to each OFDM symbol by taking the last 7% (or 25% for extended Cyclic Prefix) of the OFDM symbol and appending it to the front. The addition of the Cyclic Prefix enables time for all the paths in a multipath environment to arrive at the receiver before the symbol is demodulated.

See "Symbol Time Adjust" on page 1490 for information about setting the location of the symbol FFT.

Remote	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:SYNC:CPLength AUTO | NORMal | EXTended`

Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:SYNC:CPLength AUTO | NORMal | EXTended`
	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:SYNC:CPLength?`
	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:SYNC:CPLength?`
	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:SYNC:CPLength:AUTO OFF | ON | 0 | 1`
	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:SYNC:CPLength:AUTO OFF | ON | 0 | 1`
	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:SYNC:CPLength:AUTO?`
	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:SYNC:CPLength:AUTO?`

Example	`:EVM:CCAR0:DLIN:SYNC:CPL NORM`
	`:EVM:CCAR0:DLIN:SYNC:CPL?`
	`:EVM:CCAR0:DLIN:SYNC:CPL:AUTO 1`
	`:EVM:CCAR0:DLIN:SYNC:CPL:AUTO?`

Preset	AUTO ON
State Saved	Yes Yes
Range	Normal|Extended
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:SYNC:CPLength` `[:SENSe]:EVM:ULINk:SYNC:CPLength`

Time Scale Factor

Sets Time Scale Factor.

Time Scale Factor sets the value by which to scale the bandwidth and time lengths of the measured signal. This setting can be used to compensate for mistuned crystals or to enable demodulation of signals at a lower rate, such as half rate or 1/10 rate.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:TIME:SCALe:FACTor <value>` `[:SENSe]:EVM:CCARrier0|…|4:TIME:SCALe:FACTor?`
Example	`:EVM:CCAR0:TIME:SCAL:FACT 1` `:EVM:CCAR0:TIME:SCAL:FACT?`
Preset	1
State Saved	Yes
Min	0.0625
Max	16
Backwards Compatibility SCPI	`[:SENSe]:EVM:TIME:SCALe:FACTor`

Multi Carrier Filter

Specifies whether or not to apply a filter to the received component carrier to filter out adjacent carriers.

When other carriers are expected to be adjacent to the component carrier of interest, this multi-carrier filter can be used to filter out the unwanted carrier and minimize leakage into the component carrier of interest.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:MCFilter:STATe OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:MCFilter:STATe?`
Example	`:EVM:CCAR0:MCF:STAT ON` `:EVM:CCAR0:MCF:STAT?`
Dependencies	Multi-Carrier Filter is coupled to Number of Component Carriers. If the number of Component Carriers is 1, the state of multi-carrier filter is OFF; If the number of Component Carriers is greater than 1, the state of multi-carrier filter per CC is ON
Preset	OFF|ON|ON|ON|ON
State Saved	Yes
Range	On|Off
Backwards Compatibility SCPI	`[:SENSe]:EVM:MCFilter:STATe OFF | ON | 0 | 1`

Opposite Direction Active (TDD only)

Specifies whether or not the signal for opposite direction is present in the signal under test. For example, when downlink signal is under test, if there is also uplink signal present in uplink subframe, set the Opposite Direction Active to On makes the measurement more accurate with the knowledge of possible interference from uplink subframes.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ODACtive OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ODACtive?`
Example	`:EVM:CCAR0:ODAC ON` `:EVM:CCAR0:ODAC?`
Preset	OFF
State Saved	Yes
Range	On|Off
Backwards Compatibility SCPI	`[:SENSe]:EVM:ODACtive`

Extended Freq Lock Range

Provides the ability to reduce the frequency lock range. When this parameter is on, the frequency lock range is two and a half times the subcarrier spacing or 37.5 kHz. When this parameter is off, it is reduced to one half the subcarrier spacing, or 7.5kHz, which enables faster processing time.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:EXTended:FREQuency:LOCK:RANGe OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:EXTended:FREQuency:LOCK:RANGe?`
Example	`:EVM:CCAR0:EXT:FREQ:LOCK:RANG OFF` `:EVM:CCAR0:EXT:FREQ:LOCK:RANG?`
Preset	OFF
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:EXTended:FREQuency:LOCK:RANGe`

Spectrum

Determines if the spectrum of the incoming data is mirrored or not. The actual mirroring is accomplished by conjugating the complex time data.

Note that only the Modulation Analysis measurement and Conformance EVM measurement support this feature.

Remote Command	`[:SENSe]:CCARrier0|…|4:SPECtrum NORMal | INVert` `[:SENSe]:CCARrier0|…|4:SPECtrum?`
Example	`:CCAR0:SPEC INV` `:CCAR0:SPEC?`
Preset	NORM
State Saved	Yes
Range	Normal | Invert
Backwards Compatibility SCPI	`[:SENSe]:SPECtrum`

Sync Slot

Specify the slot number as the synchronization reference to perform synchronization when the sync type is C-RS for the downlink signal. By default it still uses the zero slot as the synchronization reference.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:SYNC:SLOT <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:SYNC:SLOT?`
Example	`:EVM:CCAR0:DLIN:SYNC:SLOT 0` `:EVM:CCAR0:DLIN:SYNC:SLOT?`
Dependencies	Available when Direction is Downlink Enabled when downlink sync type is C-RS
Preset	0
State Saved	Yes
Min	0
Max	19

Exclude EVM Transient Time (TDD only)

Excludes the EVM results calculated from part of OFDM symbols during a PUSCH allocation change as specified by the standard.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:EETTime OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:EETTime?`
Example	`:EVM:CCAR0:EETT ON` `:EVM:CCAR0:EETT?`
Notes	Available when Direction is Uplink
Preset	OFF
State Saved	Yes
Range	On|Off
Backwards Compatibility SCPI	`[:SENSe]:EVM:EETTime`

Advanced Demod Setup

This control allows you to set up more parameters for demodulation.

Equalizer Training

Displays a menu that enables you to set whether or not to equalize the signal.

Channel equalization only applies to phase and amplitude. For information about signal-level timing correction, see "Sync Type (FDD/TDD Downlink)" on page 1465.

NOTE **Small-scale deviations (slot-by-slot or symbol-by-symbol) from the equalization channel frequency response are compensated by EVM Minimization.**

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:EQUalizer:TRAining OFF | RS | RSD` `[:SENSe]:EVM:CCARrier0|…|4:EQUalizer:TRAining?`
Example	`:EVM:CCAR0:EQU:TRA RS` `:EVM:CCAR0:EQU:TRA?`
Preset	RS
State Saved	Yes
Range	None | RS| RS + Data
Backwards Compatibility SCPI	`[:SENSe]:EVM:EQUalizer:TRAining`

More Information

Downlink:

The channel frequency response is computed over the entire Result Length, and the resulting coefficients are shown in the Eq Chan Freq Resp trace.

- OFF - When Off is selected, no equalization is applied to the signal.
- RS - When RS is selected, equalization is performed using the frequency response calculated from the reference signal for the reference antenna path. The channel frequency response for subcarriers between reference signals is linearly interpolated.
  For downlink, the standard only specifies using the reference signal for equalization. However, the LTE demodulator can apply a RS+Data equalization for single-channel downlink signals.
- RSD - When RS+Data is selected, equalization is performed using the frequency response calculated using the reference signal and the data subcarriers.
  RS+Data equalization is not supported for multi-antenna downlink signals (when number of input channels is greater than 1).

When including data (PDSCH) subcarriers in equalizer calculations:

1. The demodulator equalizes the signal using the reference signal and demodulates the data subcarrier values.
2. Using the demodulated signal, the demodulator calculates a reference LTE signal (shown in IQ Ref)

3. Then the demodulator calculates another equalizer channel frequency response by comparing all the measured PDSCH and RS subcarrier values with the corresponding reference subcarrier values
4. Finally, the channel frequency response including PDSCH is applied to the signal, the signal is demodulated, and the results of the demodulation are shown on the traces

A moving average can be applied to the RS subcarriers in frequency. For more information, see "Moving Average Filter (Downlink only)" on page 1488.

NOTE

To see the measured channel frequency response for the current Tx/Rx path, use the Eq Chan Freq Resp trace.

To see the measured channel frequency responses for all Tx/Rx paths, use the MIMO Eq Chan Freq Resp trace.

The **Equalizer Training** setting determines what subcarriers are used when the Tracking method of EVM Minimization is selected. See the "EVM Minimization" on page 1493 for more information.

Uplink:

Channel frequency responses are computed and equalization is applied on a slot-by-slot basis. These per-slot channel frequency responses are shown in the "Eq Ch Freq Resp Per Slot" on page 1343 trace. The Eq Ch Frequency Response trace however shows a single set of channel frequency response coefficients computed from the time data in the Search Time trace (capture length defined by "Result Length" on page 1460).

- OFF - When Off is selected, the channel frequency response is still calculated from the DM-RS subcarriers but is not applied to the signal.
- RS - When RS is selected, the signal is equalized using the channel frequency response calculated using the DM-RS subcarriers in the signal.
- RSD - When RS+Data is selected, the LTE demodulator calculates the equalizer channel frequency response according to the standard using the DM-RS subcarriers and the DFT-spread (SC-FDMA) subcarriers (PUSCH). The LTE standard specifies that an RS+Data equalization should be performed for uplink signals.

NOTE

PRACH equalization is done differently from the other uplink channels' equalization. First, the channel frequency response is calculated for a PRACH transmission by comparing the received preamble sequence to the reference preamble sequence. Then, the channel frequency response is averaged to a single correction value and this correction is applied to all subcarriers in the

PRACH preamble. Each PRACH transmission is equalized separately from the other PRACH transmissions.

PRACH equalization is done this way because if each PRACH subcarrier were corrected individually, the equalization simply removes the error from the PRACH transmission (resulting in near zero EVM) since the channel frequency response is calculated from the same subcarriers that are being equalized.

Equalizer Training Mode (Uplink only)

Selects the equalization method. This control is available only when Direction is set to Uplink.

- ZFORcing - Use Zero-Forcing equalizer
- LSQuares - Use Least Squares equalizer

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:EQUalizer:TRAining:MODE ZFORcing | LSQuares` `[:SENSe]:EVM:CCARrier0|…|4:EQUalizer:TRAining:MODE?`
Example	`:EVM:CCAR0:EQU:TRA:MODE ZFOR` `:EVM:CCAR0:EQU:TRA:MODE?`
Dependencies	Available only when Direction is Uplink. Disabled when Sync Type is PRACH
Preset	LSQuares
State Saved	Yes
Range	Zero Forcing|Least Squares
Backwards Compatibility SCPI	`[:SENSe]:EVM:EQUalizer:TRAining:MODE`

Moving Average Filter (Downlink only)

Sets the value and state of the Moving Avg Filter.

Moving Avg Filter specifies whether or not to perform a moving average (frequency smoothing) on the reference signals during equalization, as well as the number of RS subcarriers to use in each average.

When Equalizer Training is set to **RS**, a value of 5 RS means the value of an RS subcarrier is calculated as the average of the value of that subcarrier and the values of the next two and previous two RS subcarriers in frequency.

When Equalizer Training is set to **RS+Data**, data subcarriers (PDSCH) in between the RS subcarriers are included in the average. For example, a setting of 3 RS means that the value of an RS subcarrier is taken as the average of the next and previous

RS subcarrier in frequency and all data subcarriers that are in between the next and previous RS subcarriers.

For RS subcarrier locations that do not have enough RS subcarriers to one side or the other (those near the edge of the frequency spectrum), the average is taken over available reference signal subcarriers.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:EQUalizer:TRAining:MAFilter:LENGth <integer>`
	`[:SENSe]:EVM:CCARrier0|…|4:EQUalizer:TRAining:MAFilter:LENGth?`
	`[:SENSe]:EVM:CCARrier0|…|4:EQUalizer:TRAining:MAFilter OFF | ON | 0 | 1`

Example	`:EVM:CCAR0:EQU:TRA:MAF:LENG 19`
	`:EVM:CCAR0:EQU:TRA:MAF:LENG?`
	`:EVM:CCAR0:EQU:TRA:MAF ON`
	`:EVM:CCAR0:EQU:TRA:MAF?`

Notes	This parameter always clips to an odd number. Available when Direction is Downlink.
Preset	19 ON
State Saved	Yes Yes
Range	On|Off
Min	1
Max	399
Backwards Compatibility SCPI	`[:SENSe]:EVM:EQUalizer:TRAining:MAFilter:LENGth`

MIMO Channel Freq Normalize (Downlink only)

Selects normalized or non-normalized MIMO Ch Frequency Response trace data. Normalized trace data is scaled to show each MIMO channel antenna path frequency response trace centered around 0 db. For normalized traces, all MIMO Channel paths are individually normalized for magnitude, phase, and time offset. For non-normalized trace data, the trace data is not scaled or modified.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:EQUalizer:TRAining:MCFNormalize OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:EQUalizer:TRAining:MCFNormalize?`
Example	`:EVM:CCAR0:EQU:TRA:MCFN OFF` `:EVM:CCAR0:EQU:TRA:MCFN?`
Dependencies	Available only when Direction is Downlink

Preset	ON
State Saved	Yes
Range	On|Off
Backwards Compatibility SCPI	`[:SENSe]:EVM:EQUalizer:TRAining:MCFNormalize`

Symbol Time Adjust

Sets the demodulator to equalize the signal (that is, whether or not to compensate for measured channel frequency response).

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:SYMBol:TIMing:ADJust MAX | MIN | STARt | END | CENTer | FFTSize` `[:SENSe]:EVM:CCARrier0|…|4:SYMBol:TIMing:ADJust?`
Example	`:EVM:CCAR0:SYMB:TIM:ADJ MAX` `:EVM:CCAR0:SYMB:TIM:ADJ?`
Preset	MAX
State Saved	Yes
Range	Max of EVM Win Start/End|Min of EVM Win Start/End|EVM Window Start|EVM Window End|EVM Window Center|%FFT Size
Backwards Compatibility SCPI	`[:SENSe]:EVM:SYMBol:TIMing:ADJust`

More Information

- Max of EVM Window Start/End:
  Selects Max of EVM Window Start/End for Symbol Timing Adjust . When Max of EVM Window Start / End selected, the EVM for each subcarrier comes from the data set determined in the following manner: For each OFDM symbol, two FFTs are taken to determine the values of the subcarriers. The first FFT is taken starting at the beginning of the EVM Window. The second is taken starting at the end of the EVM Window. Two sets of EVMs are calculated for the subcarriers, one from each FFT. Then an RMS average is taken over each set. The set with the highest RMS average EVM is then chosen as the set to use in EVM and demodulation results.
- Min of EVM in Start/End:
  Selects Min of EVM Window Start/End for Symbol Timing Adjust. When Min of EVM Window Start / End is selected, the EVM for each subcarrier comes from the data set determined in the following manner: For each OFDM symbol, two

FFTs are taken to determine the values of the subcarriers. The first FFT is taken starting at the beginning of the EVM Window. The second is taken starting at the end of the EVM Window. Two sets of EVMs are calculated for the subcarriers, one from each FFT. Then an RMS average is taken over each set. The set with the highest RMS average EVM is then chosen as the set to use in EVM and demodulation results.

- EVM Window Start:
  Selects EVM Window Start for Symbol Timing Adjust .
- EVM Window End:
  Selects EVM Window Stop for Symbol Timing Adjust.
- EVM Window Center:
  Selects EVM Window Center for Symbol Timing Adjust.
- % FFT Size

% FFT Size

Selects %FFT Size for Symbol Timing Adjust which enables you to enter the value. When % of FFT Size is selected, the symbol FFT used for EVM and demodulation results begins at the specified location. A maximum value of 0% begins the FFT at the end of the CP (beginning of the Symbol). The minimum value of -7.125% (or -25% for extended CP Length) begins the FFT at the beginning of the cyclic prefix. Setting the value to 0% provides the maximum amount of time for all the paths in a multipath environment to arrive at the receiver before the symbol FFT is taken.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:SYMBol:TIMing:ADJust:USER <percent>` `[:SENSe]:EVM:CCARrier0|…|4:SYMBol:TIMing:ADJust:USER?`
Example	`:EVM:CCAR:SYMB:TIM:ADJ:USER -3.125` `:EVM:CCAR:SYMB:TIM:ADJ:USER?`
Preset	-3.125 %
State Saved	Yes
Min	-25 %
Max	0 %
Backwards Compatibility SCPI	`[:SENSe]:EVM:SYMBol:TIMing:ADJust:USER`

EVM Window

Selects the EVM Window Length.

EVM Window Length specifies the length of the window used for EVM calculations. The EVM window is centered in the cyclic prefix.

- 3GPP: Sets EVM Window Length according to the LTE standard for EVM measurements.
- Custom: The EVM window length can also be specified in the range of 1-512 samples. A value of 512 samples corresponds to the entire CP length for Extended CP on a 20 MHz signal.

The standard states that the EVM for an LTE signal's subcarriers should be taken from the higher of the two EVM RMS averages calculated from the FFTs taken from the start and from the end of the EVM window. For example, an EVM Window Length of 3 samples means that two FFTs are taken, one on either sample adjacent to the center sample of the CP. The EVMs for the subcarriers come from the FFT with the higher EVM RMS average. However, the location of the symbol FFT used for EVM calculations can be set specifically using the Symbol Timing Adjust parameter.

NOTE

A value of 1 sample causes the EVM to be measured from an FFT taken from the center of the cyclic prefix, since any other FFTs are just taken over the same sample points.

EVM Window Length does not apply when Symbol Timing Adjust is set to % of FFT Size or EVM Window Center since these settings cause only one FFT to be taken starting from the specified location within the cyclic prefix regardless of the EVM Window Length setting.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:WINDow:LENGth GPP | CUSTom` `[:SENSe]:EVM:CCARrier0|…|4:WINDow:LENGth?`
Example	`:EVM:CCAR0:WIND:LENG GPP` `:EVM:CCAR0:WIND:LENG?`
Preset	GPP
State Saved	Yes
Range	RS|None
Backwards Compatibility SCPI	`[:SENSe]:EVM:WINDow:LENGth`

Custom Length

Sets the EVM Window Length. This control is avaiable only when EVM Window Length is set to Custom.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:WINDow:LENGth:CUSTom <integer>` `[:SENSe]:EVM:CCARrier0|…|4:WINDow:LENGth:CUSTom?`

Example	`:EVM:CCAR0:WIND:LENG:CUST 1` `:EVM:CCAR0:WIND:LENG:CUST?`
Preset	32
State Saved	Yes
Min	1
Max	128 The max value differs depending on the Sync Type (Uplink) and BW that you selected
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:WINDow:LENGth:CUSTom`

BW	Max Length when Sync Type is PRACH	Max Length when Sync Type is NOT PRACH
1.4 MHz	1314	32
3 MHz	2628	64
5 MHz	5256	128
10 MHz	10512	256
15 MHz	15768	384
20 MHz	21024	512

EVM Minimization

Selects whether or not EVM Minimization algorithm are applied. EVM Minimization uses the reference signal to correct the signal.

- OFF - Disable EVM Minimization
- 3GPP - 3GPP EVM minimization, the demodulator calculates timing, frequency/phase and IQ offset corrections using the reference signal and the data subcarriers as defined in Section F.3.1 of 36.141 for DL and Section E.3.1 of 36.521 for UL. For downlink, the data subcarriers are from PDSCH, and for uplink the data subcarriers are from PUSCH and PUCCH.
  The demodulator applies the corrections on a slot-by-slot basis for uplink, or on a subframe-by-subframe basis for downlink, as defined by the LTE standard.
- TRACking - Tracking, the demodulator applies corrections on a symbol-by-symbol basis and the Equalizer Training parameter determines whether or not data subcarriers are included in calculating corrections. When Equalizer Training is set to RS+Data, EVM Minimization Tracking is performed using the reference signal and the PDSCH data subcarriers. When Equalizer Training is set to RS or Off, EVM Minimization Tracking is performed using only the reference signal.

Reference signal subcarriers are transmitted periodically in time and frequency. The demodulator compares the reference signals with the expected data sequence and computes an error, or correction value, that can be used to track phase, amplitude, and timing at the symbol level when Tracking is selected and at the slot or subframe level when 3GPP is selected. For subcarriers that do not have a corresponding reference subcarrier to compare to, the correction value is calculated by linearly interpolating between RS (and PDSCH, when Equalizer Training is set to RS+Data) subcarrier corrections.

When corrections are averaged and applied to a slot or subframe, the same correction is applied to each symbol in the slot or subframe.

There are four corrections that can be applied to the signal to minimize the EVM: Amplitude, Frequency/Phase, Timing, and IQ Offset (IQ Offset is only for Uplink). See "EVM Minimization Items" on page 1494 for more details.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:EVMMinimize OFF | GPP | TRACking` `[:SENSe]:EVM:CCARrier0|…|4:EVMMinimize?`
Example	`:EVM:CCAR0:EVMM OFF` `:EVM:CCAR0:EVMM?`
Dependencies	3GPP is available only when Number of C-RS Ports is set to 1 Port
Preset	3GPP
State Saved	Yes
Range	Off|3GPP|Tracking
Backwards Compatibility SCPI	`[:SENSe]:EVM:EVMMinimize`

EVM Minimization Items

Four types of corrections are available. They are calculated by comparing the measured reference signal to the ideal reference signal:

- Amplitude - When selected, the average reference signal amplitude error is used to correct the amplitudes of the subcarriers.
- Frequency/Phase - When selected, the average reference signal phase difference is used to adjust subcarrier phase.
- Timing - When selected, the average slope (average rate of change) of the RS phase in the frequency domain is used to correct the timing.
- IQ Offset (uplink, 3GPP only) - When selected, any IQ offset is compensated for on a slot-by-slot basis. This type of EVM minimization is only available when 3GPP is selected and the direction is uplink.

- IQ Imbalance - When selected, IQ gain, Quadrature error and Timing Skew are compensated. EVM result is minimized to exclude those IQ errors.

For uplink, both equalization and 3GPP EVM Minimization occur on a slot-by-slot basis, while for downlink, equalization occurs over the entire Measurement Interval and 3GPP EVM Minimization occurs on a subframe-by-subframe basis.

Timing

Selects whether or not Timing is to be used for EVM minimization algorithm.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:EVMMinimize:TIMing OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:EVMMinimize:TIMing?`
Example	`:EVM:CCAR0:EVMM:TIM OFF` `:EVM:CCAR0:EVMM:TIM?`
Dependencies	Enabled when EVM minimization is set to ON.
Preset	ON
State Saved	Yes

Backwards Compatibility SCPI	`[:SENSe]:EVM:CCARrier0|…|4:PILot:TRACk:TIMing`
	`[:SENSe]:EVM:EVMMinimize:TIMing`
	`[:SENSe]:EVM:PILot:TRACk:TIMing`

Frequency

Selects whether or not Frequency/Phase is to be used for EVM minimization algorithm.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:EVMMinimize:FREQuency OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:EVMMinimize:FREQuency?`
Example	`:EVM:CCAR0:EVMM:FREQ OFF` `:EVM:CCAR0:EVMM:FREQ?`
Dependencies	Enabled when EVM minimization is set to ON
Preset	ON
State Saved	Yes

Backwards Compatibility SCPI	`[:SENSe]:EVM:CCARrier0|…|4:PILot:TRACk:PHASe`
	`[:SENSe]:EVM:EVMMinimize:FREQuency`
	`[:SENSe]:EVM:PILot:TRACk:PHASe`

Amplitude

Selects whether or not Amplitude is to be used for EVM minimization algorithm.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:EVMMinimize:AMPLitude OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:EVMMinimize:AMPLitude?`
Example	`:EVM:CCAR0:EVMM:AMPL OFF` `:EVM:CCAR0:EVMM:AMPL?`
Dependencies	Enabled when EVM minimization is set to ON
Preset	OFF
State Saved	Yes

Backwards Compatibility SCPI	`[:SENSe]:EVM:CCARrier0|…|4:PILot:TRACk:AMPLitude`
	`[:SENSe]:EVM:EVMMinimize:AMPLitude`
	`[:SENSe]:EVM:PILot:TRACk:AMPLitude`

IQ Imbalance

Selects whether or not IQ Imbalance is to be used for EVM minimization algorithm.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:EVMMinimize:IQIMbalance OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:EVMMinimize:IQIMbalance?`
Example	`:EVM:CCAR0:EVMM:IQIM OFF` `:EVM:CCAR0:EVMM:IQIM?`
Dependencies	Enabled when EVM minimization is not OFF
Preset	`OFF`
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:EVMMinimize:IQIMbalance`

IQ Offset

Selects whether or not IQ Offset is to be used for EVM minimization algorithm.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:EVMMinimize:IQOFfset OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:EVMMinimize:IQOFfset?`
Example	`:EVM:CCAR0:EVMM:IQOF OFF` `:EVM:CCAR0:EVMM:IQOF?`
Notes	The parameter is shared by LTE and NB-IoT

	When in NB-IoT, whether IQ Offset is used for EVM minimization algorithm is available both for uplink signal and downlink signal
Dependencies	Available when EVM minimization is set to ON and Direction is Uplink for LTE Available both for downlink and uplink when EVM minimization is set ON for NB-IoT
Preset	`ON`
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:SYNC:IQOComp` `[:SENSe]:EVM:EVMMinimize:IQOFfset`

Higher Order Modulation

Enables the higher order modulation which is greater than 64 QAM on the physical channels.

When the state is on, the higher order modulation such as 256 QAM modulation is enabled; when it is off, it only supports the modulation of the physical channels which the modulation types are less than 256QAM.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:HOModulation:STATe OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:HOModulation:STATe?`
Example	`:EVM:CCAR0:HOM:STAT ON` `:EVM:CCAR0:HOM:STAT?`
Dependencies	Available when LTE-Advanced FDD/TDD license installed
Preset	`OFF`
State Saved	Yes
Range	`On|Off`

PDSCH Modulation&TBS Index Table

Selects Modulation and TBS Index Table for PDSCH, which helps to determine the modulation order in PDSCH.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PDSCh:MTITable T1 | T2 | T3` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PDSCh:MTITable?`
Example	`:EVM:CCAR0:DLIN:PDSC:MTIT T2` `:EVM:CCAR0:DLIN:PDSC:MTIT?`
Notes	The enum values are:

`T1`	Table 1	Modulation and TBS index table 7.1.7.1-1 in 36.213, which supports QPSK / 16QAM / 64QAM

`T2`	Table 2	Modulation and TBS index table 7.1.7.1-1A in 36.213, which supports QPSK / 16QAM / 64QAM / 256QAM
`T3`	Table 3	Modulation and TBS index table 7.1.7.1-1B in 36.213, which supports QPSK / 16QAM / 64QAM / 256QAM / 1024QAM

Dependencies	This parameter can be automatically set, depending on **Higher Order Modulation** and the corresponding license: When **Higher Order Modulation** is `OFF`, only Table 1 is enabled/visible When **Higher Order Modulation** is `ON`: – Table 1 and Table 2 are enabled/visible. The default value of the parameter is Table 2 – With 1024QAM support license, Table 1, Table 2, Table 3 are enabled/visible. The default value of the parameter is Table 3
Preset	`T1`
State Saved	Yes
Range	`T1|T2|T3`

PDSCH IQ Ref Mode (Downlink only)

Selects the source of the reference constellation points for PDSCH EVM calculation. By default, the reference constellation points are obtained from demodulation. This parameter allows you to specify that the IQ Reference alternatively comes from decoding or is based on the information symbols being all zeros.

Specifies the IQ Reference constellation points' generation mode for PDSCH.

- Demod: IQ reference constellation points are obtained from demodulation
- Decode: IQ reference constellation points come from the symbol decoding
- All Zeros: IQ reference constellation is generated based on the information symbols being all zeros.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PDSCh:IQ:REFerence DEMod | DECode | ZERO` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PDSCh:IQ:REFerence?`
Example	`:EVM:CCAR0:DLIN:PDSC:IQ:REF ZERO` `:EVM:CCAR0:DLIN:PDSC:IQ:REF?`
Dependencies	Available when Direction is Downlink
Preset	DEM
State Saved	Yes
Range	Demod|Decode|All Zeros

Number of Blank RBs

Sets the number of RBs to be blanked. By default, it is zero, and the EVM results are output for normal spectrum without being trimmed. When the number of blank RBs is greater than zero, the number of RBs on both edges of normal spectrum are blanked and they are forced to be excluded from EVM calculation, irrespective of the RB detect mode.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:BRBS:COUNt <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:BRBS:COUNt?`
Example	`:EVM:CCAR0:DLIN:BRBS:COUN 5` `:EVM:CCAR0:DLIN:BRBS:COUN?`
Dependencies	Available when Direction is Downlink
Preset	`0`
State Saved	Yes
Min	0
Max	The max value differs depending on the system bandwidth of the Component Carrier.

BW	PRBs	Max Number of Blank PRBs
1.4 MHz	6	0
3 MHz	15	0
5 MHz	25	10
10 MHz	50	20
15 MHz	75	20
20 MHz	100	40

Channel Profile (Downlink)

This tab contains commonly used functions for channel setup parameters.

RB Auto Detect

Determines whether or not the user allocations are detected automatically.

Downlink:

When set to On, the demodulator can perform power based auto detection or can auto detect allocations by decoding DCI. See the "RB Auto Detect Mode" on page 1500 for more information.

Uplink:

When set to On, PUSCH, PUCCH, SRS, and PRACH allocations can be auto-detected when the necessary parameters are defined.

To configure automatic sync slot detection, set "Auto Sync" on page 1634 to On on the Edit User Mapping.

To configure user-assigned auto detection, set "Auto Sync" on page 1634 to Off for a channel and define a "Sync Slot" on page 1635 with associated Per-slot Parameters (in the Edit User Mapping) to be used for initial synchronization.

NOTE **The LTE-A demodulator can perform sync slot auto detection or user-assigned auto detection for uplink signals.**

User-assigned auto detection results in faster measurements than automatic sync slot detection.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:PROFile:AUTO[:DETect] OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:PROFile:AUTO[:DETect]?`
Example	`:EVM:CCAR0:PROF:AUTO ON` `:EVM:CCAR0:PROF:AUTO?`
Couplings	This parameter is the same for Downlink and Uplink When Direction is Downlink, this parameter is coupled to the Include User (Downlink) menu. This menu is context sensitive and when Auto Include is On, you may include QPSK, 16QAM , 64QAM, 256QAM or 1024QAM channels. When Off, you may include any of the user defined PDSCH channels When direction is Uplink, this parameter is coupled to the Include User (Uplink) menu. This menu is context sensitive and when Auto Include is On the, you may include channels from the Auto Detected User. When Off, you may include channels from ONE of the user defined Users
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:PROFile:AUTO[:DETect]`

RB Auto Detect Mode

Sets the level of auto detection that the LTE-A demodulator uses. There are two levels of auto detection, described as below:

- Power Based - User allocations are detected using codeword power levels and MIMO parameters. Detected allocations are grouped according to modulation type (QPSK, 16QAM, 64QAM, 256QAM or 1024 QAM).
  The codeword powers (needed for EVM calculations) and "Precoding" on page 1573 type are not auto-detected and need to be specified.
  When SpatialMultiplexing is selected as the "Precoding" on page 1573 type, Section "# of Layers" on page 1574, "# of Layers" on page 1574, "# of

Codewords" on page 1575, "CDD" on page 1576, and "Code Book Index" on page 1577 must also be specified, and these parameters are assumed to apply to all auto-detected PDSCH channels.

- Decoded DCI - User allocations are determined by decoding PDCCH if eMTC analysis is disabled, and by decoding both MPDCCH and PDCCH if eMTC analysis is enabled. This selection is available only for downlink signals.

NOTE

By setting Auto Detect Power Levels to On, the demodulator can be configured to auto-detect 3GPP-defined codeword power levels. When codeword power levels are not auto-detected, they must be specified using the CW0/1 Power parameters in the Edit User Mapping for each expected user allocation. The number of expected user allocations is set by "Expected # Users" on page 1502 and by selecting the individual users.

This parameter is enabled when RB Auto Detect is set to On.

Only Power Based selection is available when Radio Direction is set to Uplink. There is no corresponding SCPI command for Uplink.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO[:DETect]:MODE POWer | DECoded` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO[:DETect]:MODE?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:MODE POW` `:EVM:CCAR0:DLIN:PROF:AUTO:MODE?`
Dependencies	Available when RB Auto Detect is On Only Power Based is available when Radio is set to Uplink
Preset	POWer
State Saved	Yes
Range	Power Based|Decoded DCI
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:AUTO[:DETect]:MODE`

Round to Standard Values

Determines whether the measured, relative power levels for PDSCH allocations are detected as one of the standard values or assumed to be equal to the measured power level.

When it’s set to On, the power levels are detected as the closest standard power level. Standard power levels are specified in 3GPP TS 36.331, section 6.3.2 under the PDSCH-Config parameter. These power levels are -6 dB, -4.77 dB, -3 dB, -1.77 dB, 0 dB, 1 dB, 2 dB, and 3 dB. When it’s set to Off, the measured power levels are used as the actual power levels.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO[:DETect]:POWer:ROUNd OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO[:DETect]:POWer:ROUNd?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:POW:ROUN ON` `:EVM:CCAR0:DLIN:PROF:AUTO:POW:ROUN?`
Dependencies	Available when the following conditions are met Direction: Downlink Detection: Auto RB Auto Detect Mode: Decoded DCI Auto Detect Power Levels: On
Preset	ON
State Saved	Yes
Range	On|Off
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:AUTO[:DETect]:POWer:ROUNd`

Expected # Users

Specifies the number of user allocations from 1 to 50 when RB Auto Detect Mode is set to Decoded DCI.

Other user allocations detected from PDCCH are shown on traces and included in calculations, but only the number of users specified with this control are included in the Composite Include menu, where they can be excluded from traces and calculations.

When Auto Detect Power Levels is set to OFF, PDSCH Decoded User Power Boost must be specified. This parameter limits the number of PDSCH user allocations for which codeword power levels can be manually defined. When there are more user allocations found in the signal than are specified by this parameter, any additional user allocation is assumed to have a PDSCH power level of 0 dB.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:EUSers:COUNt <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:EUSers:COUNt?`
Example	`:EVM:CCAR0:DLIN:PROF:EUS:COUN 1` `:EVM:CCAR0:DLIN:PROF:EUS:COUN?`
Dependencies	Available when RB Auto Detect is On and RB Auto Detect Mode is Decoded DCI
Preset	3
State Saved	Yes
Min	0
Max	50

Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:EUSers:COUNt`

Copy Auto -> Manual

Copies all autodetected allocations into the Resource Block Editor.

For Downlink, when Copy Auto -> Manual is pressed, each autodetected modulation group is assigned to a user. When RB Auto Detect Mode is set to Power Based, User_01 contains resource blocks with QPSK; User_02 contains resource blocks with 16QAM; and User_03 contains resource blocks with 64QAM; User_04 contains resource blocks with 256QAM.

When RB Auto Detect Mode is set to Decode PDCCH, the user allocations are copied into the LTE Allocation Editor as manual allocations.

For Uplink, when you click Copy Auto > Manual, User_01, which contains all autodetected channels, is copied into the LTE Allocation Editor.

This control is useful when you have two signals with identical allocations, where one has a fairly good SNR, but the other has a low SNR. In this case, RB Auto Detect may detect the allocations for the noisy signal incorrectly. To work around this, you can recall the clean signal, autodetect allocations, and press Copy Auto -> Manual. Then you can recall the noisy signal and don't need to rely on auto detection.

Note that existing manual user mappings are overwritten when you press this button.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:PROFile:COPY[:IMMediate]`
Example	`:EVM:CCAR0:PROF:COPY`
Notes	Available when RB Auto Detect is On
Backwards Compatibility SCPI	`[:SENSe]:EVM:PROFile:COPY[:IMMediate]`

Control and User Channels

Sets parameters for Control Channels and User Channels.

Basic Control Channels

Sets parameters for Basic Control Channels.

Composite Include All

Turns On all Downlink channels.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:INCLude:ALL`
Example	`:EVM:CCAR0:DLIN:PROF:INCL:ALL`
Couplings	Turns On the following parameters – Include P-SCH – Include S-SCH – Include PBCH – Include PCFICH – Include PHICH – Include RS – Include PDCCH All Users under the Include Users (Downlink) Menu
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:INCLude:ALL`

Composite Exclude All

Turns Off all Downlink channels.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:EXCLude:ALL`
Example	`:EVM:CCAR0:DLIN:PROF:EXCL:ALL`
Couplings	Turns Off the following parameters – Include P-SCH – Include S-SCH – Include PBCH – Include PCFICH – Include PHICH – Include RS – Include PDCCH – Include Non Allocation All Users under the Include Users (Downlink) Menu

Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:EXCLude:ALL`

Include P-SS

Includes the Primary Synchronization Channel in the results.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PSS INCLude | EXCLude` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PSS?`
Example	`:EVM:CCAR0:DLIN:PROF:PSS INCL` `:EVM:CCAR0:DLIN:PROF:PSS?`
Couplings	This parameter is set to Include when Downlink Include All is selected and set to Exclude when Downlink Exclude All is selected
Preset	INCLude
State Saved	Yes
Range	Include|Exclude
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PSS`

Include S-SS

Includes the Secondary Synchronization Channel in the results.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:SSS INCLude | EXCLude` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:SSS?`
Example	`:EVM:CCAR0:DLIN:PROF:SSS INCL` `:EVM:CCAR0:DLIN:PROF:SSS?`
Couplings	This parameter is set to Include when Downlink Include All is selected and set to Exclude when Downlink Exclude All is selected
Preset	INCLude
State Saved	Yes
Range	Include|Exclude
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:SSS`

Include PBCH

Includes PBCH in the results.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PBCH INCLude | EXCLude` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PBCH?`
Example	`:EVM:CCAR0:DLIN:PROF:PBCH INCL` `:EVM:CCAR0:DLIN:PROF:PBCH?`

Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PDCCh`

Include C-RS

Includes RS in the results.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:RS INCLude | EXCLude` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:RS?`
Example	`:EVM:CCAR0:DLIN:PROF:RS INCL` `:EVM:CCAR0:DLIN:PROF:RS?`
Couplings	This parameter is set to Include when Downlink Include All is selected and set to Exclude when Downlink Exclude All is selected
Preset	INCLude
State Saved	Yes
Range	Include|Exclude
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:RS`

Include Non-Allocated Symbols

Includes the inactive signals in the results.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:PROFile:NALLocation INCLude | EXCLude` `[:SENSe]:EVM:CCARrier0|…|4:PROFile:NALLocation?`
Example	`:EVM:CCAR0:PROF:NALL EXCL` `:EVM:CCAR0:PROF:NALL?`
Couplings	This parameter is same for Downlink and Uplink When either Downlink Exclude All or Uplink Exclude All is selected, this parameter is set to Exclude
Preset	EXCLude
State Saved	Yes
Range	Include|Exclude
Backwards Compatibility SCPI	`[:SENSe]:EVM:PROFile:NALLocation`

Edit Basic Control Channels

This control allows you to set up more parameters for Basic Control Channels.

Auto Detect Control Channel Pow Levels

Selects whether or not power levels are autodetected for control channels: P-SS, S-SS, PBCH, PCFICH, PDCCH and PHICH.

- ON – The power levels are auto detected for downlink control channels : P-SS, S-SS, PBCH, PCFICH, PDCCH and PHICH.
- OFF – The power boosts for downlink control channels need to be specified for EVM calculations to be correct.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO[:DETect]:CCPower OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO[:DETect]:CCPower?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:CCP ON` `:EVM:CCAR0:DLIN:PROF:AUTO:CCP?`
Preset	ON
State Saved	Yes
Range	On|Off

Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:AUTO[:DETect]:CCPower`

P-SS Power Boost

Sets the Power Boost value for the P-SS.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PSS:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PSS:PWRBoost?`
Example	`:EVM:CCAR0:DLIN:PROF:PSS:PWRB 0.65` `:EVM:CCAR0:DLIN:PROF:PSS:PWRB?`
Preset	0 dB
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PSS:PWRBoost`

S-SS Power Boost

Sets the Power Boost value for the S-SS.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:SSS:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:SSS:PWRBoost?`
Example	`:EVM:CCAR0:DLIN:PROF:SSS:PWRB 0.65` `:EVM:CCAR0:DLIN:PROF:SSS:PWRB?`
Preset	0 dB
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:SSS:PWRBoost`

PBCH Power Boost

Sets the Power Boost value for the PBCH.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PBCH:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PBCH:PWRBoost?`
Example	`:EVM:CCAR0:DLIN:PROF:PBCH:PWRB 0` `:EVM:CCAR0:DLIN:PROF:PBCH:PWRB?`
Preset	0 dB
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PBCH:PWRBoost`

PCFICH Power Boost

Sets the Power Boost value for the PCFICH.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PCFich:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PCFich:PWRBoost?`
Example	`:EVM:CCAR0:DLIN:PROF:PCF:PWRB 0` `:EVM:CCAR0:DLIN:PROF:PCF:PWRB?`
Preset	0 dB
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PCFich:PWRBoost`

C-RS Power Boost

Sets the Power Boost value for the C-RS.

The 0 dB level is set by C-RS Power Boost. A value of 2.5 dB for C-RS Power Boost specifies that the 0 dB level is set to be 2.5 dB below the measured C-RS power level. Other Power Boosts (P-SS, S-SS, PBCH, PCFICH, PDCCH and PHICH) are set relative to the 0 dB level. For example, setting PBCH Power Boost to 0.5 dB when C-RS Power Boost is set to 2.5 dB tells the demodulator to expect the average PBCH power level to be 0.5 dB above the 0 dB level (which is 2.5 dB below the measured C-RS power level).

Remote	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:RS:PWRBoost <rel_ampl>`

Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:RS:PWRBoost?`
Example	`:EVM:CCAR0:DLIN:PROF:RS:PWRB 2.50` `:EVM:CCAR0:DLIN:PROF:RS:PWRB?`
Preset	0 dB
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:RS:PWRBoost`

PHICH Power Boost

Sets the Power Boost value for the PHICH.

PHICH power boost specifies the BPSK symbol power of each PHICH sequence (unlike the Power Boost for the other channels, which are per-subcarrier). Since each PHICH sequence can potentially have a different BPSK symbol power, provision has been made to auto-detect it by specifying a starting value in this parameter and setting the granularity of the search in the PHICH Power Boost Step. The demodulator detects each PHICH sequence’s BPSK symbol power as

PHICH power = (PHICH Power Boost + k * PHICH Power Boost Step)

where k in the range -10 dB £ k*PHICH Power Boost Step £ 10 dB is the value that brings the equation closest to the actual PHICH BPSK symbol power. Note that setting the PHICH Power Boost Step to 0 dB effective turns off auto-detection of power.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PHICh:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PHICh:PWRBoost?`
Example	`:EVM:CCAR0:DLIN:PROF:PHIC:PWRB 0` `:EVM:CCAR0:DLIN:PROF:PHIC:PWRB?`
Preset	0 dB
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PHICh:PWRBoost`

PHICH +/- Increments

Sets the Power Boost Step value for the PHICH. See "PHICH Power Boost" on page 1511 for details.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PHICh:PWRBoost:STEP <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PHICh:PWRBoost:STEP?`
Example	`:EVM:CCAR0:DLIN:PROF:PHIC:PWRB:STEP 0` `:EVM:CCAR0:DLIN:PROF:PHIC:PWRB:STEP?`
Preset	1 dB
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:ROFile:PHICh:PWRBoost:STEP`

Despread IQ Orthog Sequence Index

Determines the state of Despread IQ Orthogonal Sequence Index.

When set to OFF, displays the PHICH constellation points as received. These points are the summation of all weighted PHICH sequences within the same PHICH group.

When set to ON, the traces to show PHICH constellation points after despreading. Despreading arbitrarily remaps the demodulated values of individual PHICH sequences onto the I and Q values of the subcarriers containing those sequences.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PHICh:DESPread OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PHICh:DESPread?`
Example	`:EVM:CCAR0:DLIN:PROF:PHIC:DESP OFF` `:EVM:CCAR0:DLIN:PROF:PHIC:DESP?`
Preset	OFF
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PHICh:DESPread`

More Information

NOTE **Only the IQ Meas, IQ Meas Time, IQ Ref, and IQ Ref Time traces are affected when this parameter is selected.**

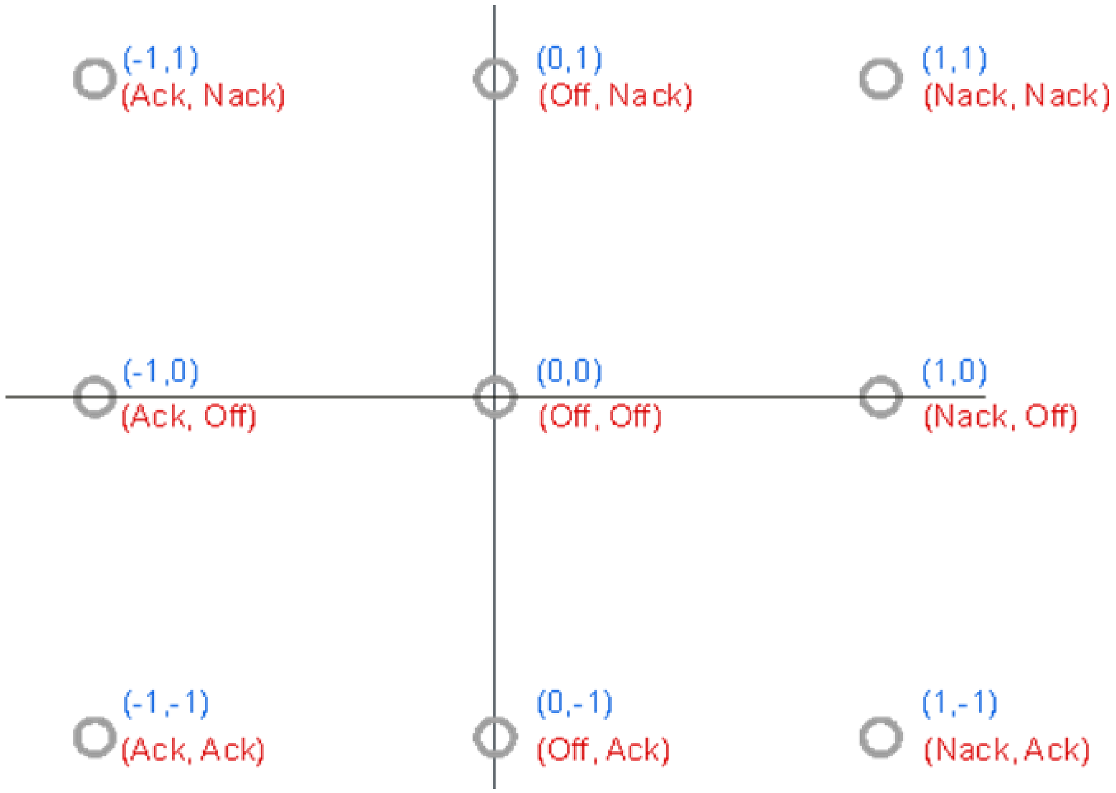
EVM measurements are always calculated from PHICH IQ points before despreading.

Each PHICH can take on values in the set \{-1, 0, 1\} which is translated as \{NACK, Inactive, ACK\}.

PHICH mapping for Normal CP Length		
Subcarrier in a PHICH group	Re\{Subcarrier x\} value	Imag\{Subcarrier x\} value
Subcarrier 0	PHICH0	PHICH4
Subcarrier 1	PHICH1	PHICH5
Subcarrier 2	PHICH2	PHICH6
Subcarrier 3	PHICH3	PHICH7

PHICH mapping for Extended CP Length		
Subcarrier in a PHICH group	Re\{Subcarrier x\} value	Imag\{Subcarrier x\} value
Subcarrier 0	PHICH0	PHICH2
Subcarrier 1	PHICH1	PHICH3

Each PHICH subcarrier IQ point represents the values for the two PHICHs determined by the tables above. The image below provides a quick reference to the actual PHICH values for each constellation point in the form (I,Q).



For example, the Subcarrier 1 IQ point in a PHICH group is at (1,0). For a signal with Normal PHICH duration, Subcarrier 1 contains the values for PHICH1 and PHICH5; therefore, PHICH1=Nack and PHICH5=Off.

NOTE

Each de-spread PHICH IQ constellation point represents the Ack/Nack/Off values of two PHICH's, but does not accurately represent their BPSK symbol power levels.

NOTE

You can also view the PHICH values in the Symbol Table. PHICH values are from the set \{0, 1, 3\} which is mapped to \{NACK, ACK, OFF\}.

The PHICH sequence values are mapped to the hex digits in the following order for each PHICH group:

For Normal CP, the order is PHICH index\{0, 4, 1, 5, 2, 6, 3, 7\}

For Extended CP, the order is PHICH index \{0, 2, 1, 3\}

When the Symbol Table format is shown in binary, the same mapping order and values are used, but the even-indexed hex digits are truncated to two bits.

For example, a PHICH group (Normal CP) may show the value 010011 000011 1100 11110011... In this case, the first two bits, 01, indicate an ACK for PHICH0. The next four bits, 0011, indicate OFF for PHICH4. The next two bits, 00, indicate NACK for PHICH1. The next four bits, 0011, indicate OFF for PHICH5, and so on.

The actual ACK/NACK/Inactive information contained in PHICH can also be viewed in the DL Decode Info table.

PHICH Allocation (Ng)

Selects the Ng value used in computing the number of resource element groups. Allocation (Ng) is a higher layer parameter configured from the set (1/6, 1/2, 1, 2) that determines the number of PHICH groups per subframe.

- ADETect - Allocation (Ng) is detected from PBCH.
- R1BY6 - Ng = 1/6
- R1BY2 - Ng = 1/2
- R1 - Ng = 1
- R2 - Ng = 2

The number of PHICH groups in a subframe is given by the equation for N^{group}_{PHICH} in Section 6.9 of 3GPP TS 36.211.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PHICh:ALLocation:RATio ADETect | R1BY6 | R1BY2 | R1 | R2` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PHICh:ALLocation:RATio?`
Example	`:EVM:CCAR0:DLIN:PROF:PHIC:ALL:RAT R1` `:EVM:CCAR0:DLIN:PROF:PHIC:ALL:RAT?`
Dependencies	Available when Direction is Downlink
Preset	ADETect
State Saved	Yes
Range	Auto Detect|Ng 1/6|Ng 1/2|Ng 1|Ng 2
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PHICh:ALLocation:RATio`

PHICH Duration

Selects the number of symbols used in each PHICH subframe.

PHICH duration is a higher layer parameter configured either as Normal or Extended that tells the demodulator how many symbols per subframe are used by PHICH.

- ADETect - PHICH Duration can be autodetected from PBCH
- NORMal - There are 8 PHICH sequences in one PHICH group
- EXTended - There are 4 PHICH sequences in one PHICH group

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PHICh:DURation ADETect | NORMal | EXTended` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PHICh:DURation?`
Example	`:EVM:CCAR0:DLIN:PROF:PHIC:DUR NORM` `:EVM:CCAR0:DLIN:PROF:PHIC:DUR?`
Dependencies	Available when Direction is Downlink
Preset	ADETect
State Saved	Yes
Range	Auto Detect|Normal|Extended
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PHICh:DURation`

M_i Definition (TDD only)

Selects which specification the factor M_i is set to. The factor M_i is originally defined in 3GPP TS36.211 Table 6.9-1 and it is used to specify the number of PHICH groups which may vary between downlink subframes.

The M_i parameter determines how many PHICH groups are in each downlink subframe for TDD mode. The values for M_i depend on the uplink-downlink configuration and are given by Table 6.9-1 in 3GPP TS 36.211. However, 3GPP TS 36.141, section 6.1.2.6 specifies that M_i must be set to 1 when performing E-TM tests. This is to provide consistency between FDD and TDD test results.

- STD - Standard, the expected values of Mi are given by Table 6.9-1 in 3GPP TS36.211
- ETM - E-TM, Mi is expected to equal 1 in all downlink subframes

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PHICh:MIDefinition STD | ETM` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PHICh:MIDefinition?`
Example	`:EVM:CCAR0:DLIN:PROF:PHIC:MID STD`
Notes	LTEATDD only
Dependencies	Available when Direction is Downlink LTEATDD only
Preset	STD

State Saved	Yes
Range	Standard|E-TM
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PHICh:MIDefinition`

Edit PDCCH Control Channels

Displays a menu that enables the configuration of PDCCH parameters.

Auto Detect Control Channel Pow Levels

See Section "Auto Detect Control Channel Pow Levels" on page 1508"Auto Detect Control Channel Pow Levels" on page 1508.

PDCCH Allocation Auto Detect

Determines whether or not the number of PDCCH symbols is autodetected. When On, the analyzer autodetects the PDCCH allocations by decoding PCFICH.

To view the detected number of PDCCH allocations per subframe, use the # PDCCPMCH Power BoostH SymPerSubframe data result on the DL Decode Info summary table.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PDCCh:ALLocation:AUTO[:DETect] OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PDCCh:ALLocation:AUTO[:DETect]?`
Example	`:EVM:CCAR0:DLIN:PROF:PDCC:ALL:AUTO 1` `:EVM:CCAR0:DLIN:PROF:PDCC:ALL:AUTO?`
Preset	ON
State Saved	Yes
Range	On|Off
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PDCCh:ALLocation:AUTO[:DETect]`

PDCCH Allocation Subframe 0

Sets the PDCCH Allocation (Symbols per Subframe) for Subframe 0.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PDCCh:ALLocation:SUBFrame0:SYMBols <integer>`

	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PDCCh:ALLocation:SUBFrame0:SYMBols?`
Example	`:EVM:CCAR0:DLIN:PROF:PDCC:ALL:SUBF0:SYMB 1` `:EVM:CCAR0:DLIN:PROF:PDCC:ALL:SUBF0:SYMB?`
Dependencies	When PDCCH Allocation Constant is On, all subframes uses this value. Available when PDCCH Allocation Auto Detect is Off
Preset	3
State Saved	Yes
Min	0
Max	Max value depends on the bandwidth: 3 - Bandwidth 3 MHz, 5 MHz, 10 MHz, 15 MHz, 20 MHz 4 - Bandwidth 1.4 MHz
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PDCCh:ALLocation:SUBFrame0:SYMBols`

PDCCH Allocation Subframe 1

Sets the PDCCH Allocation (Symbols per Subframe) for Subframe 1.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PDCCh:ALLocation:SUBFrame1:SYMBols <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PDCCh:ALLocation:SUBFrame1:SYMBols?`
Example	`:EVM:CCAR0:DLIN:PROF:PDCC:ALL:SUBF1:SYMB 1` `:EVM:CCAR0:DLIN:PROF:PDCC:ALL:SUBF1:SYMB?`
Dependencies	Available when both PDCCH Allocation Auto Detect and PDCCH Allocation Constant are OFF
Preset	3
State Saved	Yes
Min	0
Max	Max value depends on the bandwidth: 3 - Bandwidth 3 MHz, 5 MHz, 10 MHz, 15 MHz, 20 MHz 4 - Bandwidth 1.4 MHz
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PDCCh:ALLocation:SUBFrame1:SYMBols`

PDCCH Allocation Subframe 2

Sets the PDCCH Allocation (Symbols per Subframe) for Subframe 2.

Remote	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PDCCh:ALLocation:SUBFrame2:SYMBols`

Command	`<integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PDCCh:ALLocation:SUBFrame2:SYMBols?`
Example	`:EVM:CCAR0:DLIN:PROF:PDCC:ALL:SUBF2:SYMB 1` `:EVM:CCAR0:DLIN:PROF:PDCC:ALL:SUBF2:SYMB?`
Dependencies	Available when both PDCCH Allocation Auto Detect and PDCCH Allocation Constant are OFF
Preset	3
State Saved	Yes
Min	0
Max	Max value depends on the bandwidth: 3 - Bandwidth 3 MHz, 5 MHz, 10 MHz, 15 MHz, 20 MHz 4 - Bandwidth 1.4 MHz
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PDCCh:ALLocation:SUBFrame2:SYMBols`

PDCCH Allocation Subframe 3

Sets the PDCCH Allocation (Symbols per Subframe) for Subframe 3.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PDCCh:ALLocation:SUBFrame3:SYMBols <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PDCCh:ALLocation:SUBFrame3:SYMBols?`
Example	`:EVM:CCAR0:DLIN:PROF:PDCC:ALL:SUBF3:SYMB 1` `:EVM:CCAR0:DLIN:PROF:PDCC:ALL:SUBF3:SYMB?`
Dependencies	Available when both PDCCH Allocation Auto Detect and PDCCH Allocation Constant are OFF
Preset	3
State Saved	Yes
Min	0
Max	Max value depends on the bandwidth: 3 - Bandwidth 3 MHz, 5 MHz, 10 MHz, 15 MHz, 20 MHz 4 - Bandwidth 1.4 MHz
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PDCCh:ALLocation:SUBFrame3:SYMBols`

PDCCH Allocation Subframe 4

Sets the PDCCH Allocation (Symbols per Subframe) for Subframe 4.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PDCCh:ALLocation:SUBFrame4:SYMBols <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PDCCh:ALLocation:SUBFrame4:SYMBols?`
Example	`:EVM:CCAR0:DLIN:PROF:PDCC:ALL:SUBF4:SYMB 1` `:EVM:CCAR0:DLIN:PROF:PDCC:ALL:SUBF4:SYMB?`
Dependencies	Available when both PDCCH Allocation Auto Detect and PDCCH Allocation Constant are OFF
Preset	3
State Saved	Yes
Min	0
Max	Max value depends on the bandwidth: 3 - Bandwidth 3 MHz, 5 MHz, 10 MHz, 15 MHz, 20 MHz 4 - Bandwidth 1.4 MHz
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PDCCh:ALLocation:SUBFrame4:SYMBols`

PDCCH Allocation Subframe 5

Sets the PDCCH Allocation (Symbols per Subframe) for Subframe 5.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PDCCh:ALLocation:SUBFrame5:SYMBols <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PDCCh:ALLocation:SUBFrame5:SYMBols?`
Example	`:EVM:CCAR0:DLIN:PROF:PDCC:ALL:SUBF5:SYMB 1` `:EVM:CCAR0:DLIN:PROF:PDCC:ALL:SUBF5:SYMB?`
Dependencies	Available when both PDCCH Allocation Auto Detect and PDCCH Allocation Constant are OFF
Preset	3
State Saved	Yes
Min	0
Max	Max value depends on the bandwidth: 3 - Bandwidth 3 MHz, 5 MHz, 10 MHz, 15 MHz, 20 MHz 4 - Bandwidth 1.4 MHz
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PDCCh:ALLocation:SUBFrame5:SYMBols`

PDCCH Allocation Subframe 6

Sets the PDCCH Allocation (Symbols per Subframe) for Subframe 6.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PDCCh:ALLocation:SUBFrame6:SYMBols <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PDCCh:ALLocation:SUBFrame6:SYMBols?`
Example	`:EVM:CCAR0:DLIN:PROF:PDCC:ALL:SUBF6:SYMB 1` `:EVM:CCAR0:DLIN:PROF:PDCC:ALL:SUBF6:SYMB?`
Dependencies	Available when both PDCCH Allocation Auto Detect and PDCCH Allocation Constant are OFF
Preset	3
State Saved	Yes
Min	0
Max	Max value depends on the bandwidth: 3 - Bandwidth 3 MHz, 5 MHz, 10 MHz, 15 MHz, 20 MHz 4 - Bandwidth 1.4 MHz
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PDCCh:ALLocation:SUBFrame6:SYMBols`

PDCCH Allocation Subframe 7

Sets the PDCCH Allocation (Symbols per Subframe) for Subframe 7.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PDCCh:ALLocation:SUBFrame7:SYMBols <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PDCCh:ALLocation:SUBFrame7:SYMBols?`
Example	`:EVM:CCAR0:DLIN:PROF:PDCC:ALL:SUBF7:SYMB 1` `:EVM:CCAR0:DLIN:PROF:PDCC:ALL:SUBF7:SYMB?`
Dependencies	Available when both PDCCH Allocation Auto Detect and PDCCH Allocation Constant are OFF
Preset	3
State Saved	Yes
Min	0
Max	Max value depends on the bandwidth: 3 - Bandwidth 3 MHz, 5 MHz, 10 MHz, 15 MHz, 20 MHz 4 - Bandwidth 1.4 MHz
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PDCCh:ALLocation:SUBFrame7:SYMBols`

PDCCH Allocation Subframe 8

Sets the PDCCH Allocation (Symbols per Subframe) for Subframe 8.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PDCCh:ALLocation:SUBFrame8:SYMBols <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PDCCh:ALLocation:SUBFrame8:SYMBols?`
Example	`:EVM:CCAR0:DLIN:PROF:PDCC:ALL:SUBF8:SYMB 1` `:EVM:CCAR0:DLIN:PROF:PDCC:ALL:SUBF8:SYMB?`
Dependencies	Available when both PDCCH Allocation Auto Detect and PDCCH Allocation Constant are OFF
Preset	3
State Saved	Yes
Min	0
Max	Max value depends on the bandwidth: 3 - Bandwidth 3 MHz, 5 MHz, 10 MHz, 15 MHz, 20 MHz 4 - Bandwidth 1.4 MHz
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PDCCh:ALLocation:SUBFrame8:SYMBols`

PDCCH Allocation Subframe 9

Sets the PDCCH Allocation (Symbols per Subframe) for Subframe 9.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PDCCh:ALLocation:SUBFrame9:SYMBols <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PDCCh:ALLocation:SUBFrame9:SYMBols?`
Example	`:EVM:CCAR0:DLIN:PROF:PDCC:ALL:SUBF9:SYMB 1` `:EVM:CCAR0:DLIN:PROF:PDCC:ALL:SUBF9:SYMB?`
Dependencies	Available when both PDCCH Allocation Auto Detect and PDCCH Allocation Constant are OFF
Preset	3
State Saved	Yes
Min	0
Max	Max value depends on the bandwidth: 3 - Bandwidth 3 MHz, 5 MHz, 10 MHz, 15 MHz, 20 MHz 4 - Bandwidth 1.4 MHz
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PDCCh:ALLocation:SUBFrame9:SYMBols`

PDCCH Power Boost

Sets the Power Boost value for the PDCCH.

When RB Auto Detect Mode is set to Decoded DCI, PDCCH power boost (see the section Edit Control Channels for description of Power Boost parameters) can be auto detected by specifying a starting value in this parameter and setting the granularity of the search in the PDCCH Power Boost Step. The demodulator detects PDCCH power as

PDCCH power = (PDCCH Power Boost + k * PDCCH Power Boost Step)

where k in the range -10 dB £ k * PDCCH Power Boost Step £ 10 dB is the value that brings the equation closest to the actual PDCCH power.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PDCCh:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PDCCh:PWRBoost?`
Example	`:EVM:CCAR0:DLIN:PROF:PDCC:PWRB 0` `:EVM:CCAR0:DLIN:PROF:PDCC:PWRB?`
Preset	0 dB
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PDCCh:PWRBoost`

PDCCH +/- Increments

Sets the Power Boost Step value for the PDCCH. See section "PDCCH Power Boost" on page 1522 for more details.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PDCCh:PWRBoost:STEP <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PDCCh:PWRBoost:STEP?`
Example	`:EVM:CCAR0:DLIN:PROF:PDCC:PWRB:STEP 0` `:EVM:CCAR0:DLIN:PROF:PDCC:PWRB:STEP?`
Dependencies	Available when RB Auto Detect is On and RB Auto Detect Mode is Decoded DCI, or RB Auto Detect is On and PDCCH Decoding is other than NONE
Preset	1 dB
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PDCCh:PWRBoost:STEP`

Cross-carrier Scheduling

Determines whether or not Cross-Carrier Scheduling is enabled for this Component Carrier.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PDCCh:CCSCheduling OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PDCCh:CCSCheduling?`
Example	`:EVM:CCAR0:DLIN:PROF:PDCC:CCSC 1` `:EVM:CCAR0:DLIN:PROF:PDCC:CCSC?`
Preset	OFF
State Saved	Yes
Range	On|Off

CIF Presence

Indicates whether carrier indicator field (CIF) is present (TRUE) or not (FALSE) in PDCCH DCI formats of this component carrier.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PDCCh:CIFPresence OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PDCCh:CIFPresence?`
Example	`:EVM:CCAR0:DLIN:PROF:PDCC:CIFP ON` `:EVM:CCAR0:DLIN:PROF:PDCC:CIFP?`
Dependencies	Available when Cross Carrier Scheduling is enabled
Preset	OFF
State Saved	Yes

Scheduling Cell Id

Indicates which cell signals the downlink allocations and uplink grants, if applicable, for the concerned Serving Cell.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PDCCh:SCID <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PDCCh:SCID?`
Example	`:EVM:CCAR0:DLIN:PROF:PDCC:SCID 1` `:EVM:CCAR0:DLIN:PROF:PDCC:SCID?`
Dependencies	Available when Cross Carrier Scheduling is enabled
Preset	0
State Saved	Yes

Min	0
Max	7

PDSCH Start OFDM Symbol

Indicates the starting OFDM symbol of PDSCH for the concerned Serving Cell. If CIF presence = TRUE, this value needs to be set. If CIF presence = FALSE, PCFICH has the information of the number of PDCCH symbols.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PDCCh:PSOSymbol` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PDCCh:PSOSymbol?`
Example	`:EVM:CCAR0:DLIN:PROF:PDCC:PSOS 1` `:EVM:CCAR0:DLIN:PROF:PDCC:PSOS?`
Dependencies	Available when Cross Carrier Scheduling is enabled
Preset	1
State Saved	Yes
Min	1
Max	4

Add MPDCCH

Adds an MPDCCH channel.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:EMTC:PROFile:ADD:MPDCch`
Example	`:EVM:CCAR0:DLIN:EMTC:PROF:ADD:MPDCch`
Dependencies	The new User is added at the end of the currently defined MPDCCH channels. (Disabled once the number of channels reaches the maximum value of 12.)

Delete MPDCCH

Deletes an MPDCCH channel.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:EMTC:PROFile:MPDCch<n>:DELete`
Example	`:EVM:CCAR0:DLIN:EMTC:PROF:MPDC2:DELete`
Dependencies	Disabled when there is only one MPDCCH channel The range of sub op code <n> values is determined by the number of MPDCCH channels you have configured. If you attempt to remotely delete a sub op code that is out of range, this results in an error message

Set Index (Display Only)

Specifies of which set the Set Parameters to be displayed in the row.

- #0: Display the Set Paramters for Set 0. When Set # 0 Enable is checked, you can change any of Set Paramters for Set 0.
- #1: Display the Set Paramters for Set 1. When Set # 1 Enable is checked, you can change any of Set Paramters for Set 1.

The Set Parameters include NB Index, RB Alloc. Index, PRB Pairs Number, Tx. Type, Scrambling Sequence, Frequency Hopping, Rep. Num., and Max Rep. Num.

Other Control Channels

Allows you to set up parameters for Other Control Channels.

Composite Include All

See "Composite Include All" on page 1503.

Composite Exclude All

See "Composite Exclude All" on page 1504.

P-RS Include

Includes the Position Reference Channel in the results.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PRS INCLude | EXCLude` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PRS?`
Example	`:EVM:CCAR0:DLIN:PROF:PRS INCL` `:EVM:CCAR0:DLIN:PROF:PRS?`
Dependencies	Available when P-RS Active is On. Otherwise, this control is grayed out
Couplings	This parameter is set to Include when Downlink Include All is selected and set to Exclude when Downlink Exclude All is selected
Preset	EXCLude
State Saved	Yes
Range	Include|Exclude
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PRS`

P-RS Active

See "P-RS Active" on page 1540"P-RS Active" on page 1540.

MBSFN–RS Include

Includes the MBSFN-RS channel in the results.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:MBSFn INCLude | EXCLude` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:MBSFn?`
Example	`:EVM:CCAR0:DLIN:PROF:MBSF INCL` `:EVM:CCAR0:DLIN:PROF:MBSF?`
Dependencies	Available when MBSFN Active is On. Otherwise, this control is grayed out
Couplings	This parameter is set to Include when Downlink Include All is selected and set to Exclude when Downlink Exclude All is selected
Preset	EXCLude
State Saved	Yes
Range	Include|Exclude
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:MBSFn`

MBSFN-RS Active

See "MBSFN Active" on page 1528"MBSFN Active" on page 1528.

PMCH Include

Includes the PMCH channel in the results.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PMCH INCLude | EXCLude` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PMCH?`
Example	`:EVM:CCAR0:DLIN:PROF:PMCH INCL` `:EVM:CCAR0:DLIN:PROF:PMCH?`
Dependencies	Available when MBSFN Active is On. Otherwise, this control is grayed out
Couplings	This parameter is set to Include when Downlink Include All is selected and set to Exclude when Downlink Exclude All is selected
Preset	EXCLude
State Saved	Yes

Range	Include|Exclude
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PMCH`

Include CSI-RS

Includes the CSI-RS in the results.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:CSIRs INCLude | EXCLude` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:CSIRs?`
Example	`:EVM:CCAR0:DLIN:PROF:CSIR INCL` `:EVM:CCAR0:DLIN:PROF:CSIR?`
Dependencies	Available when CSI-RS Active is On. Otherwise, this control is grayed out
Couplings	This parameter is set to Include when Downlink Include All is selected and set to Exclude when Downlink Exclude All is selected
Preset	EXCLude
State Saved	Yes
Range	Include|Exclude
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:CSIRs`

CSI-RS Active

See "CSI-RS Active" on page 1542.

Edit P-RS/MBMS Control Channels

This control allows you to set up more parameters for P-RS/MBMS Control Channels.

RB Auto Detect

See "RB Auto Detect" on page 1499.

MBSFN Active

Selects whether or not the MBSFN signal exists for this downlink user in the input signal.

Remote	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:MBSFn:ACTive OFF | ON | 0 | 1`

Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:MBSFn:ACTive?`
Example	`:EVM:CCAR0:DLIN:PROF:MBSF:ACT OFF` `:EVM:CCAR0:DLIN:PROF:MBSF:ACT?`
Preset	OFF
State Saved	Yes
Range	On|Off
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:ROFile:MBSFn:ACTive`

MBSFN-RS Power Boost

Sets the Power Boost value for MBSFN-RS channel.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:MBSFn:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:MBSFn:PWRBoost?`
Example	`:EVM:CCAR0:DLIN:PROF:MBSF:PWRB 10.0` `:EVM:CCAR0:DLIN:PROF:MBSF:PWRB?`
Dependencies	Available when MBSFN-RS Active is On. Otherwise, this control is grayed out
Preset	0.0 dB
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:MBSFn:PWRBoost`

MBSFN Area ID

Sets a value for Multimedia Broadcast Multicast Service Single Frequency Network Reference Signal (MBSFN) Area ID which identifies the MBSFN Area . It is used for the scrambling of the MBSFN Reference Signals and the Physical Multicast Channel (PMCH).

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:MBSFn:AID <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:MBSFn:AID?`
Example	`:EVM:CCAR0:DLIN:PROF:MBSF:AID 1` `:EVM:CCAR0:DLIN:PROF:MBSF:AID?`
Dependencies	Available when MBSFN Active is On. Otherwise, this control is grayed out
Preset	0

State Saved	Yes
Min	0
Max	255
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:MBSFn:AID`

Non-MBSFN Region Length

Sets a value for Non-MBSFN region’s symbol number.

A subset of the downlink subframes in a radio frame on a carrier supporting PDSCH transmission can be configured as MBSFN subframes by higher layers. Each MBSFN subframe is divided into a non-MBSFN region and an MBSFN region.

- The non-MBSFN region spans the first one or two OFDM symbols in an MBSFN. Transmission in the non-MBSFN region shall use the same cyclic prefix length as used for subframe 0.
- The MBSFN region in an MBSFN subframe is defined as the OFDM symbols not used for the non-MBSFN region.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:MBSFn:NMRLength <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:MBSFN:NMRLength?`
Example	`:EVM:CCAR0:DLIN:PROF:MBSF:NMRL 2` `:EVM:CCAR0:DLIN:PROF:MBSF:NMRL?`
Dependencies	Available when MBSFN Active is On, grayed out otherwise
Preset	1
State Saved	Yes
Min	1
Max	2
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:MBSFn:NMRLength`

MBSFN Subframe3 Active

Sets Subframe3 to be reserved for MBSFN in downlink when RB Auto Detect is Off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:MBSFn:SUBFrame3:ACTive OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:MBSFn:SUBFrame3:ACTive?`
Example	`:EVM:CCAR0:DLIN:PROF:MBSF:SUBF3:ACT ON` `:EVM:CCAR0:DLIN:PROF:MBSF:SUBF3:ACT?`

Dependencies	Available when MBSFN Active is On. Otherwise, this control is grayed out
Preset	OFF
State Saved	Yes
Range	On|Off
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:MBSFn:SUBFrame3:ACTive`

MBSFN Subframe4 Active (TDD only)

Sets Subframe4 to be reserved for MBSFN in downlink when RB Auto Detect is Off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:MBSFn:SUBFrame4:ACTive OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:MBSFn:SUBFrame4:ACTive?`
Example	`:EVM:CCAR0:DLIN:PROF:MBSF:SUBF4:ACT ON` `:EVM:CCAR0:DLIN:PROF:MBSF:SUBF4:ACT?`
Dependencies	Available when Mode is LTEATDD Available when MBSFN Active is On. Otherwise, this control is grayed out
Preset	OFF
State Saved	Yes
Range	On|Off
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:MBSFn:SUBFrame4:ACTive`

MBSFN Subframe7 Active

Sets Subframe7 to be reserved for MBSFN in downlink when RB Auto Detect is Off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:MBSFn:SUBFrame7:ACTive OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:MBSFn:SUBFrame7:ACTive?`
Example	`:EVM:CCAR0:DLIN:PROF:MBSF:SUBF7:ACT ON` `:EVM:CCAR0:DLIN:PROF:MBSF:SUBF7:ACT?`
Dependencies	Available when MBSFN Active is On. Otherwise, this control is grayed out
Preset	OFF
State Saved	Yes
Range	On|Off
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:MBSFn:SUBFrame7:ACTive`

MBSFN Subframe8 Active

Sets Subframe8 to be reserved for MBSFN in downlink when RB Auto Detect is Off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:MBSFn:SUBFrame8:ACTive OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:MBSFn:SUBFrame8:ACTive?`
Example	`:EVM:CCAR0:DLIN:PROF:MBSF:SUBF8:ACT ON` `:EVM:CCAR0:DLIN:PROF:MBSF:SUBF8:ACT?`
Dependencies	Available when MBSFN Active is On. Otherwise, this control is grayed out
Preset	OFF
State Saved	Yes
Range	On|Off
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:MBSFn:SUBFrame8:ACTive`

MBSFN Subframe9 Active (TDD only)

Sets Subframe9 to be reserved for MBSFN in downlink when RB Auto Detect is Off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:MBSFn:SUBFrame9:ACTive OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:MBSFn:SUBFrame9:ACTive?`
Example	`:EVM:CCAR0:DLIN:PROF:MBSF:SUBF9:ACT ON` `:EVM:CCAR0:DLIN:PROF:MBSF:SUBF9:ACT?`
Dependencies	Available when Mode is LTEATDD Available when MBSFN Active is On. Otherwise, this control is grayed out
Preset	OFF
State Saved	Yes
Range	On|Off
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:MBSFn:SUBFrame9:ACTive`

PMCH Subframe3 Present

Sets weather or not PMCH channel presents in Subframe3 when RB Auto Detect is Off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PMCH:SUBFrame3:ACTive OFF | ON | 0 | 1`

	[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PMCH:SUBFrame3:ACTive?
Example	:EVM:CCAR0:DLIN:PROF:PMCH:SUBF3:ACT ON :EVM:CCAR0:DLIN:PROF:PMCH:SUBF3:ACT?
Dependencies	Available when MBSFN Active is On and MBSFN Subframe3 is On. Otherwise, this control is grayed out
Preset	OFF
State Saved	Yes
Range	On|Off
Backwards Compatibility SCPI	[:SENSe]:EVM:DLINk:PROFile:PMCH:SUBFrame3:ACTive

PMCH Subframe4 Active (TDD only)

Sets weather or not PMCH channel presents in Subframe4 when RB Auto Detect is Off.

Remote Command	[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PMCH:SUBFrame4:ACTive OFF | ON | 0 | 1 [:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PMCH:SUBFrame4:ACTive?
Example	:EVM:CCAR0:DLIN:PROF:PMCH:SUBF4:ACT ON :EVM:CCAR0:DLIN:PROF:PMCH:SUBF4:ACT?
Dependencies	Available when mode is LTEATDD Available when MBSFN Active is On and MBSFN Subframe4 is On. Otherwise, this control is grayed out
Preset	OFF
State Saved	Yes
Range	On|Off
Backwards Compatibility SCPI	[:SENSe]:EVM:DLINk:PROFile:PMCH:SUBFrame4:ACTive

PMCH Subframe7 Present

Sets weather or not PMCH channel presents in Subframe7 when RB Auto Detect is Off.

Remote Command	[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PMCH:SUBFrame7:ACTive OFF | ON | 0 | 1 [:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PMCH:SUBFrame7:ACTive?
Example	:EVM:CCAR0:DLIN:PROF:PMCH:SUBF7:ACT ON :EVM:CCAR0:DLIN:PROF:PMCH:SUBF7:ACT?

Dependencies	Available when MBSFN Active is On and MBSFN Subframe7 is On. Otherwise, this control is grayed out
Preset	OFF
State Saved	Yes
Range	On|Off
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PMCH:SUBFrame7:ACTive`

PMCH Subframe8 Present

Sets weather or not PMCH channel presents in Subframe8 when RB Auto Detect is Off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PMCH:SUBFrame8:ACTive OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PMCH:SUBFrame8:ACTive?`
Example	`:EVM:CCAR0:DLIN:PROF:PMCH:SUBF8:ACT ON` `:EVM:CCAR0:DLIN:PROF:PMCH:SUBF8:ACT?`
Dependencies	Available when MBSFN Active is On and MBSFN Subframe8 is On. Otherwise, this control is grayed out
Preset	OFF
State Saved	Yes
Range	On|Off
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PMCH:SUBFrame8:ACTive`

PMCH Subframe9 Present (TDD only)

Sets weather or not PMCH channel presents in Subframe9 when RB Auto Detect is Off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PMCH:SUBFrame9:ACTive OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PMCH:SUBFrame9:ACTive?`
Example	`:EVM:CCAR0:DLIN:PROF:PMCH:SUBF9:ACT ON` `:EVM:CCAR0:DLIN:PROF:PMCH:SUBF9:ACT?`
Dependencies	Available when mode is LTEATDD Available when MBSFN Active is On and MBSFN Subframe9 is On. Otherwise, this control is grayed out
Preset	OFF

State Saved	Yes
Range	On|Off
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PMCH:SUBFrame9:ACTive`

PMCH Power Boost (RB Auto Detect On)

Sets the Power Boost value for the PMCH Channel when RB Auto Detect is set to On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PMCH:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PMCH:PWRBoost?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:PMCH:PWRB 3.0` `:EVM:CCAR0:DLIN:PROF:AUTO:PMCH:PWRB?`
Dependencies	Available when RB Auto Detect is On and when MBSFN Active is On Otherwise, this key is grayed out
Preset	0.0 dB
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:AUTO:PMCH:PWRBoost`

PMCH Subframe3 Power Boost

Sets PMCH's Power Boost for Subframe3 when RB Auto Detect is Off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PMCH:SUBFrame3:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PMCH:SUBFrame3:PWRBoost?`
Example	`:EVM:CCAR0:DLIN:PROF:PMCH:SUBF3:PWRB 6.0` `:EVM:CCAR0:DLIN:PROF:PMCH:SUBF3:PWRB?`
Dependencies	Available when MBSFN Active is On , MBSFN Subframe3 is On and PMCH Subframe3 is On. Otherwise, this control is grayed out
Preset	0.0 dB
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PMCH:SUBFrame3:PWRBoost`

PMCH Subframe4 Power Boost (TDD only)

Sets PMCH's Power Boost for Subframe4 when RB Auto Detect is Off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PMCH:SUBFrame4:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PMCH:SUBFrame4:PWRBoost?`
Example	`:EVM:CCAR0:DLIN:PROF:PMCH:SUBF4:PWRB 6.0` `:EVM:CCAR0:DLIN:PROF:PMCH:SUBF4:PWRB?`
Dependencies	Available when Mode is LTEATDD Available when MBSFN Active is On , MBSFN Subframe4 is On and PMCH Subframe4 is On. Otherwise, this control is grayed out
Preset	0.0 dB
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PMCH:SUBFrame4:PWRBoost`

PMCH Subframe7 Power Boost

Sets PMCH's Power Boost for Subframe7 when RB Auto Detect is Off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PMCH:SUBFrame7:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PMCH:SUBFrame7:PWRBoost?`
Example	`:EVM:CCAR0:DLIN:PROF:PMCH:SUBF7:PWRB 6.0` `:EVM:CCAR0:DLIN:PROF:PMCH:SUBF7:PWRB?`
Dependencies	Available when MBSFN Active is On , MBSFN Subframe7 is On and PMCH Subframe7 is On. Otherwise, this control is grayed out
Preset	0.0 dB
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PMCH:SUBFrame7:PWRBoost`

PMCH Subframe8 Power Boost

Sets PMCH's Power Boost for Subframe8 when RB Auto Detect is Off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PMCH:SUBFrame8:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PMCH:SUBFrame8:PWRBoost?`
Example	`:EVM:CCAR0:DLIN:PROF:PMCH:SUBF8:PWRB 6.0` `:EVM:CCAR0:DLIN:PROF:PMCH:SUBF8:PWRB?`
Dependencies	Available when MBSFN Active is On , MBSFN Subframe8 is On and PMCH Subframe8 is On. Otherwise, this control is grayed out
Preset	0.0 dB
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PMCH:SUBFrame8:PWRBoost`

PMCH Subframe9 Power Boost (TDD only)

Sets PMCH's Power Boost for Subframe9 when RB Auto Detect is Off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PMCH:SUBFrame9:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PMCH:SUBFrame9:PWRBoost?`
Example	`:EVM:CCAR0:DLIN:PROF:PMCH:SUBF9:PWRB 6.0` `:EVM:CCAR0:DLIN:PROF:PMCH:SUBF9:PWRB?`
Dependencies	Available when Mode is LTEATDD Available when MBSFN Active is On , MBSFN Subframe9 is On and PMCH Subframe9 is On. Otherwise, this control is grayed out
Preset	0.0 dB
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PMCH:SUBFrame9:PWRBoost`

PMCH Subframe3 Mod Type

Selects PMCH channel's Modulation Type for Subframe3 when RB Auto Detect is Off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PMCH:SUBFrame3:MODulation:TYPE QPSK | QAM16 | QAM64 | QAM256 | QAM1024` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PMCH:SUBFrame3:MODulation:TYPE?`

Example	`:EVM:CCAR0:DLIN:PROF:PMCH:SUBF3:MOD:TYPE QAM16` `:EVM:CCAR0:DLIN:PROF:PMCH:SUBF3:MOD:TYPE?`
Dependencies	Available when MBSFN Active is On , MBSFN Subframe3 is On and PMCH Subframe3 is On. Otherwise, this control is grayed out 256QAM and 1024QAM are available when "Higher Order Modulation" on page 1497 is set to On
Preset	QPSK
State Saved	Yes
Range	QPSK|16QAM|64QAM|256QAM|1024QAM
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PMCH:SUBFrame3:MODulation:TYPE`

PMCH Subframe4 Mod Type (TDD only)

Selects PMCH channel’s Modulation Type for Subframe4 when RB Auto Detect is Off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PMCH:SUBFrame4:MODulation:TYPE QPSK | QAM16 | QAM64 | QAM256 | QAM1024` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PMCH:SUBFrame4:MODulation:TYPE?`
Example	`:EVM:CCAR0:DLIN:PROF:PMCH:SUBF4:MOD:TYPE QAM16` `:EVM:CCAR0:DLIN:PROF:PMCH:SUBF4:MOD:TYPE?`
Dependencies	Available when Mode is LTEATDD Available when MBSFN Active is On , MBSFN Subframe4 is On and PMCH Subframe4 is On. Otherwise, this control is grayed out 256QAM and 1024QAM are available when "Higher Order Modulation" on page 1497 is set to On
Preset	QPSK
State Saved	Yes
Range	QPSK|16QAM|64QAM|256QAM|1024QAM
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PMCH:SUBFrame4:MODulation:TYPE`

PMCH Subframe7 Mod Type

Selects PMCH channel’s Modulation Type for Subframe7 when RB Auto Detect is Off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PMCH:SUBFrame7:MODulation:TYPE QPSK | QAM16 | QAM64 | QAM256 | QAM1024` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PMCH:SUBFrame7:MODulation:TYPE?`
Example	`:EVM:CCAR0:DLIN:PROF:PMCH:SUBF7:MOD:TYPE QAM16`

	`:EVM:CCAR0:DLIN:PROF:PMCH:SUBF7:MOD:TYPE?`
Dependencies	Available when MBSFN Active is On , MBSFN Subframe7 is On and PMCH Subframe7 is On. Otherwise, this control is grayed out 256QAM and 1024QAM are available when"Higher Order Modulation" on page 1497 is set to On
Preset	QPSK
State Saved	Yes
Range	QPSK|16QAM|64QAM|256QAM|1024QAM
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PMCH:SUBFrame7:MODulation:TYPE`

PMCH Subframe8 Mod Type

Selects PMCH channel’s Modulation Type for Subframe8 when RB Auto Detect is Off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PMCH:SUBFrame8:MODulation:TYPE QPSK | QAM16 | QAM64 | QAM256 | QAM1024` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PMCH:SUBFrame8:MODulation:TYPE?`
Example	`:EVM:CCAR0:DLIN:PROF:PMCH:SUBF8:MOD:TYPE QAM16` `:EVM:CCAR0:DLIN:PROF:PMCH:SUBF8:MOD:TYPE?`
Dependencies	Available when MBSFN Active is On , MBSFN Subframe8 is On and PMCH Subframe8 is On. Otherwise, this control is grayed out 256QAM and 1024QAM are available when "Higher Order Modulation" on page 1497 is set to On
Preset	QPSK
State Saved	Yes
Range	QPSK|16QAM|64QAM|256QAM|1024QAM
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PMCH:SUBFrame8:MODulation:TYPE`

PMCH Subframe9 Mod Type (TDD only)

Selects PMCH channel’s Modulation Type for Subframe9 when RB Auto Detect is Off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PMCH:SUBFrame9:MODulation:TYPE QPSK | QAM16 | QAM64 | QAM256 | QAM1024` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PMCH:SUBFrame9:MODulation:TYPE?`
Example	`:EVM:CCAR0:DLIN:PROF:PMCH:SUBF9:MOD:TYPE QAM16` `:EVM:CCAR0:DLIN:PROF:PMCH:SUBF9:MOD:TYPE?`
Dependencies	Available when Mode is LTEATDD

	Available when MBSFN Active is On, MBSFN Subframe9 is On and PMCH Subframe9 is On. Otherwise, this control is grayed out 256QAM and 1024QAM are available when "Higher Order Modulation" on page 1497 is set to On
Preset	QPSK
State Saved	Yes
Range	QPSK|16QAM|64QAM|256QAM|1024QAM
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PMCH:SUBFrame9:MODulation:TYPE`

P-RS Active

Selects whether or not the Positioning Reference Signal (P-RS) exists in the input signal.

P-RS parameters are transmitted on antenna port 6 at regularly spaced time and frequency locations. The measurement provides support for analysis of P-RS transmitted on normal subframes. P-RS transmitted on MBSFN subframes is not analyzed.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PRS:ACTive OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PRS:ACTive?`
Example	`:EVM:CCAR0:DLIN:PROF:PRS:ACT OFF` `:EVM:CCAR0:DLIN:PROF:PRS:ACT?`
Preset	OFF
State Saved	Yes
Range	On|Off
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PRS:ACTive`

P-RS Bandwidth

Sets the Bandwidth of the position reference signal, its unit is RBs.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PRS:BANDwidth B1M4 | B3M | B5M | B10M | B15M | B20M` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PRS:BANDwidth?`
Example	`:EVM:CCAR0:DLIN:PROF:PRS:BAND B10M` `:EVM:CCAR0:DLIN:PROF:PRS:BAND?`
Dependencies	Available when P-RS Active is On. It is needed to set P-RS Active to On in advance. Otherwise, this control is grayed out

Preset	B5M
State Saved	Yes
Range	1.4 MHz (6 RB) | 3 MHz (15 RB) | 5 MHz (25 RB) | 10 MHz (50 RB) | 15 MHz (75 RB) | 20 MHz (100 RB)
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PRS:BANDwidth`

P-RS Power Boost

Sets the Power Boost value for the P-RS channel.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PRS:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PRS:PWRBoost?`
Example	`:EVM:CCAR0:DLIN:PROF:PRS:PWRB 2.0` `:EVM:CCAR0:DLIN:PROF:PRS:PWRB?`
Dependencies	Available when P-RS Active is On, grayed out other wise
Preset	0.0 dB
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PRS:PWRBoost`

P-RS Config Index

Sets the configuration index of the position reference signal.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PRS:INDex <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PRS:INDex?`
Example	`:EVM:CCAR0:DLIN:PROF:PRS:IND 160` `:EVM:CCAR0:DLIN:PROF:PRS:IND?`
Dependencies	Available when P-RS Active is On. Otherwise, this control is grayed out
Preset	0
State Saved	Yes
Min	0
Max	2399
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PRS:INDex`

N-PRS

Sets the number (N_{PRS}) of consecutive downlink subframes that the position reference signal shall be transmitted.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PRS:SUBFrame:NUMBer N1 | N2 | N4 | N6` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:PRS:SUBFrame:NUMBer?`
Example	`:EVM:CCAR0:DLIN:PROF:PRS:SUBF:NUMB N6` `:EVM:CCAR0:DLIN:PROF:PRS:SUBF:NUMB?`
Notes	N1 means the consecutive downlink subframes number is 1 N2 means the consecutive downlink subframes number is 2 N4 means the consecutive downlink subframes number is 4 N6 means the consecutive downlink subframes number is 6
Dependencies	Available when P-RS Active is On. Otherwise, this control is grayed out
Preset	N1
State Saved	Yes
Range	N1|N2|N4|N6
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:PRS:SUBFrame:NUMBer`

Edit CSI-RS Control Channels

This control allows you to set up more parameters for CSI-RS Control Channels.

CSI-RS Active

Selects whether or not the CSI reference signal exists in the input signal. When CSI-RS is active, the LTE demodulator expects there to be one non-zero power CSI-RS present in the signal and no zero-power CSI-RS. Although the LTE standard allows there to be multiple CSI-RS configurations to be present (only one with non-zero power), these signals are not supported by demodulator.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:CSIRs:ACTive OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:CSIRs:ACTive?`
Example	`:EVM:CCAR0:DLIN:PROF:CSIR:ACT OFF` `:EVM:CCAR0:DLIN:PROF:CSIR:ACT?`
Preset	OFF
State Saved	Yes

Range	On|Off
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:CSIRs:ACTive`

Num. of Antenna Ports

Indicates the number of CSI-RS antenna ports being used by the CSI-RS transmission. This value is not restricted to the number of measurement channels since it is possible that all 8 CSI-RS antenna ports be transmitted on the same physical antenna.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:CSIRs:PORTs:NUMBer PORT1 | PORT2 | PORT4 | PORT8` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:CSIRs:PORTs:NUMBer?`
Example	`:EVM:CCAR0:DLIN:PROF:CSIRs:PORTs:NUMB PORT1` `:EVM:CCAR0:DLIN:PROF:CSIR:PORT:NUMB?`
Dependencies	Available when CSI-RS Active is On
Preset	PORT1
State Saved	Yes
Range	PORT1|PORT2|PORT4|PORT8
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:CSIRs:PORTs:NUMBer`

CSI-RS Power Boost

Specifies the power of CSI-RS relative to the average power of the LTE signal.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:CSIRs:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:CSIRs:PWRBoost?`
Example	`:EVM:CCAR0:DLIN:PROF:CSIR:PWRB 2.0` `:EVM:CCAR0:DLIN:PROF:CSIR:PWRB?`
Dependencies	Available when CSI-RS Active is On, grayed out other wise
Preset	0.0 dB
State Saved	Yes
Min	-100 dB
Max	100 dB

CSI-RS Config Index

Specifies the channel state information reference signal configuration index, which along with Number of Antenna Ports determines the subcarrier/symbol location of CSI-RS within a subframe.

Subframe Config. Index

Specifies the value of ICSI-RS which determines the CSI-RS subframe periodicity and offset according to Table 6.10.5.3-1 in 3GPP Technical Specification 36.211.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:CSIRs:INDex <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:CSIRs:INDex?`
Example	`:EVM:CCAR0:DLIN:PROF:CSIRs:IND 1` `:EVM:CCAR0:DLIN:PROF:CSIRs:IND?`
Dependencies	Available when CSI-RS Active is On. Otherwise, this key is grayed out
Preset	0
State Saved	Yes
Min	0
Max	31
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:CSIRs:INDex`

CSI-RS Subframe Config Index

Specifies the value which determines the CSI-RS subframe periodicity and offset according to Table 6.10.5.3-1 in 3GPP Technical Specification 36.211.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:CSIRs:SUBFrame:INDex <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:CSIRs:SUBFrame:INDex?`
Example	`:EVM:CCAR0:DLIN:PROF:CSIRs:SUBFrame:IND 1` `:EVM:CCAR0:DLIN:PROF:CSIRs:SUBFrame:IND?`
Dependencies	Available when CSI-RS Active is On. Otherwise, this key is grayed out
Preset	0
State Saved	Yes
Min	0
Max	154
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:CSIRs:SUBFrame:INDex`

User Channels

Allows you to set up parameters for User Channels.

Composite Include All

See "Composite Include All" on page 1503.

Composite Exclude All

See "Composite Exclude All" on page 1504.

RB Auto Detect

See "RB Auto Detect" on page 1499.

RB Auto Detect Mode

See "RB Auto Detect Mode" on page 1500.

Expected # Users

See "Expected # Users" on page 1502.

Include PDSCH

Includes the user defined channel PDSCH in the results.

NOTE **Available when:**

NOTE RB Auto Detect is Off

NOTE there is at least one user (to "Add User" on page 1555 under "User Channel Summary" on page 1554).

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh INCLude | EXCLude` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh?`

Example	`:EVM:CCAR0:DLIN:PROF:USER1:PDSC EXCL` `:EVM:CCAR0:DLIN:PROF:USER1:PDSC?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Available when RB Auto Detect is Off. You need to set allocations to the user in advance. Otherwise, this control is grayed out
Couplings	This parameter is set to Include when Composite Include All is selected and set to Exclude when Composite Exclude All is selected
Preset	EXCLude
State Saved	Yes
Range	Include|Exclude
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:USER<n>:PDSCh`

Include Decoded PDSCH

Includes the user defined channel Decoded PDSCH in the results.

NOTE Available when RB Auto Detect is On and RB Auto Detect Mode is Decoded DCI.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:DECoded:PDSCh INCLude | EXCLude` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:DECoded:PDSCh?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:DEC:PDSC EXCL` `:EVM:CCAR0:DLIN:PROF:USER1:DEC:PDSC?`
Notes	As an LTE user can be configured as an eMTC user, the parameter is shared with eMTC. In Edit eMTC Channels dialog, the parameter is out of scope and greyed out on UI when eMTC User Channel Type is Others.
Dependencies	The range of sub op code <n> values is determined by the Number of Expected DL Users you have configured. If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Available When RB Auto Detect is On, RB Auto Detect Mode is Decoded DCI, User and Decoded PDSCH are available
Couplings	This parameter is set to Include when Composite Include All is selected, and set to Exclude when Composite Exclude All is selected
Preset	INCLude
State Saved	Yes
Range	Include|Exclude
Backwards	`[:SENSe]:EVM:DLINk:PROFile:USER<n>:DECoded:PDSCh`

Compatibility SCPI

Include QPSK

Includes channels using QPSK Mod Type in the results.

NOTE Available when RB Auto Detect is On and RB Auto Detect Mode is Power Based.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QPSK INCLude | EXCLude` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QPSK?`
Example	`:EVM:CCAR0:DLIN:PROF:QPSK INCL` `:EVM:CCAR0:DLIN:PROF:QPSK?`
Dependencies	Enabled when PDSCH RB Auto Detect is On
Couplings	This parameter is set to Include when Composite Include All is selected and set to Exclude when Composite Exclude All is selected
Preset	INCLude
State Saved	Yes
Range	Include|Exclude
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:QPSK`

Include 16QAM

Includes channels using 16QAM Mod Type in the results.

NOTE Available when RB Auto Detect is On and RB Auto Detect Mode is Power Based.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM16 INCLude | EXCLude` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM16?`
Example	`:EVM:CCAR0:DLIN:PROF:QAM16 INCL` `:EVM:CCAR0:DLIN:PROF:QAM16?`
Dependencies	Enabled when PDSCH RB Auto Detect is On
Couplings	This parameter is set to Include when Composite Include All is selected and set to Exclude when Composite Exclude All is selected
Preset	INCLude
State Saved	Yes
Range	Include|Exclude
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:QAM16`

Include 64QAM

Includes channels using 64QAM Mod Type in the results.

NOTE **Available when RB Auto Detect is On and RB Auto Detect Mode is Power Based.**

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM64 INCLude | EXCLude` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM64?`
Example	`:EVM:CCAR0:DLIN:PROF:QAM64 INCL` `:EVM:CCAR0:DLIN:PROF:QAM64?`
Dependencies	Enabled when Downlink RB Auto Detect is On
Couplings	This parameter is set to Include when Composite Include All is selected and set to Exclude when Composite Exclude All is selected
Preset	INCLude
State Saved	Yes
Range	Include|Exclude
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:QAM64`

Include 256QAM

Includes channels using 256QAM Mod Type in the results.

NOTE **Available when Higher Order Modulation is On, RB Auto Detect is On and RB Auto Detect Mode is Power Based.**

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM256 INCLude | EXCLude` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM256?`
Example	`:EVM:CCAR0:DLIN:PROF:QAM256 INCL` `:EVM:CCAR0:DLIN:PROF:QAM256?`
Dependencies	Enabled when Downlink RB Auto Detect is On Available when Higher Order Modulation is enabled
Couplings	This parameter is set to Include when Composite Include All is selected and set to Exclude when Composite Exclude All is selected
Preset	INCLude
State Saved	Yes
Range	Include|Exclude

Include 1024QAM

Includes channels using 1024QAM Mod Type in the results.

NOTE **Available when Higher Order Modulation is On, RB Auto Detect is On and RB Auto Detect Mode is Power Based.**

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM1024 INCLude | EXCLude` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM1024?`
Example	`:EVM:CCAR0:DLIN:PROF:QAM1024 INCL` `:EVM:CCAR0:DLIN:PROF:QAM1024?`
Dependencies	Enabled when Downlink RB Auto Detect is On Available when Higher Order Modulation is enabled with the required license
Couplings	This parameter is set to Include when Composite Include All is selected and set to Exclude when Composite Exclude All is selected
Preset	INCLude
State Saved	Yes
Range	Include|Exclude

Edit User Mapping

Enables you to edit the Downlink channel parameters.

More Information

This table lists all the parameters available to set up downlink PDSCH user allocations.

Parameter	Description
RB Auto Detect	When On, the demodulator autodetects PDSCH user allocations. The only parameter needed is Power Boost (for EVM calculations) RB Auto Detect groups resource blocks that contain the same modulation type into a user so that there are possible users: QPSK, QAM16, QAM64, QAM256 and QAM1024
RB Auto Detect Mode	Specifies how the LTE-A demodulator detects user allocations when RB Auto Detect is On
Auto Detect Power Levels	Selects whether or not power levels are autodetected. Enabled only when RB Auto Detect is On and RB Auto Detect Mode is Decoded DCI
Use Per Antenna EPRE	Determins whether the EPRE is interpreted as energy per annenna port or the sum total of energies contributed by all antenna ports involved . When it is On, EPRE is interpreted as energy per annenna port

Parameter	Description
Multi-Frame Analysis	When On, the demodulator enables user to setup PDSCH allocations for two continuous frames. This parameter needs to be set to On when the signal under analysis is complied with E-UTRA TDD Test Models defined in 3GPP TS36.141 6.1.1 V8.2.0
Show Mapping	Specifies which frame's allocation is shown in RB Mapping diagram when Multi-Frame Analysis is On
Include	When this check box is selected, the corresponding user mapping is displayed on appropriate traces. When cleared, only the Frame Summary trace displays the user mapping
Add User	Adds a user mapping
Delete User	Deletes the selected user mapping
RNTI	Sets the radio network temporary identifier for the user. Enabled only when RB Auto Detect is Off. (TDD only)
UE-RS Active	Selects whether the UE-specific reference signal is present in the signal under test. Enabled only when RB Auto Detect is Off. (TDD only)
UE-RS Include	Selects whether the UE-specific reference signal is included in the analysis results. Enabled only when UE-RS Active is On and RB Auto Detect is Off. (TDD only)
UE-RS Power	Specifies the power boost for the UE-specific reference signal. Enabled only when RB Auto Detect is Off. (TDD only)
UE-RS Port	Specifies on which logical antenna port UE-RS is transmitted for the selected PDSCH user allocation. (TDD only)
UE-RS nSCID	Specifies downlink user's scrambling identity value nSCID. (TDD only)
Precoding Parameters	
Precoding	Specifies the type of shared channel precoding method that the demodulator should expect
Number of layers	Specifies the number of layers. It's less than or equal to the number of antenna ports used for transmission of the physical channel
Number of codewords	Specifies the number of codewords
CDD	Specifies whether precoding is done with or without CDD (cyclic delay diversity) for spatial multiplexing
Codebook Index	Specifies the Codebook index for spatial multiplexing precoding
PDSCH Per-allocation Parameters	
Couple	Certain parameters can be coupled across all RB allocation groups for a user or can be set independently for each RB allocation group. Selecting the checkbox next to a parameter couples that parameter across all RB allocation groups
RB Start	Specifies the RB start boundary of the current allocation group for the current user
RB End	Specifies the RB end boundary of the current allocation group for the current user

Parameter	Description
Slot Start	Specifies the slot start boundary of the current allocation group for the current user
Slot End	Specifies the slot end boundary of the current allocation group for the current user
Allocation EPRE	Sets the EPRE value for the selected Allocation
Codeword 0 Mod Type	Modulation type for codeword 0: QPSK, QAM16, QAM64, QAM256 or QAM1024
Codeword 1 Mod Type	Modulation type for codeword 1: QPSK, QAM16, QAM64, QAM256 or QAM1024
Codeword 0 Power Boost	The power of the subcarriers relative to the 0 dB level determined by the RS power level for codeword 0
Codeword 1 Power Boost	The power of the subcarriers relative to the 0 dB level determined by the RS power level for codeword 1
Frame Index	Specifies which frame of the current allocation for the current user belongs to
Add Allocation	Adds an allocation to the selected user
Delete Allocation	Deletes the selected allocation

RB Auto Detect

Allows you to set the parameters for RB Auto Detection.

RB Auto Detect

See Section "RB Auto Detect" on page 1499"RB Auto Detect" on page 1499

RB Auto Detect Mode

See Section "RB Auto Detect Mode" on page 1500"RB Auto Detect Mode" on page 1500

Auto Detect Power Levels

Selects whether or not power levels are autodetected. This setting depends on the RB Auto Detect Mode setting.

Power Based Mode

Selects whether or not power levels are autodetected when RB Auto Detect is On and RB Auto Detect Mode is Power-based.

- ON - Detected allocations are grouped according to modulation type (QPSK, 16QAM, 64QAM or 256QAM).
  The codeword power levels are detected also.
- OFF - The codeword power levels for each user allocation must be specified for EVM calculations to be correct.

The power levels are detected as one of the levels specified by the standard in 3GPP TS 36.331, section 6.3.2 under the PDSCH-Config parameter.

These power levels are -6 dB, -4.77 dB, -3 dB, -1.77 dB, 0 dB, 1 dB, 2 dB, and 3 dB.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO[:DETect]:POWer:PMODe OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO[:DETect]:POWer:PMODe?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:POW:PMOD ON` `:EVM:CCAR0:DLIN:PROF:AUTO:POW:PMOD?`
Notes	When you enter the Edit User Mapping form, the RB Auto Detect Mode selection that you set before entering the form appears. You can switch the mode between Decoded DCI and Power Based on the Editor, however, the Auto Detect Power Levels state on the form and its control are still for the mode you set before entering the form and do not change even if you change the mode
Dependencies	Applicable when RB Auto Detect is On and RB Auto Detect Mode is Power based.
Preset	ON
State Saved	Yes
Range	On|Off
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:AUTO[:DETect]:POWer:PMODe`

Decoded DCI Mode

Selects whether or not power levels are autodetected.

- ON - Detects the relative PDSCH power level for each user allocation (PA). RB Auto Detect Mode must be set to Decode PDCCH for power levels to be autodetected.
- OFF - The codeword power levels for each user allocation need to be specified for EVM calculations to be correct. The Expected Num. of Users parameter

determines the number of users listed in the LTE Allocation Editor for which the power levels can be defined.

The power levels are detected as one of the levels specified by the standard in 3GPP TS 36.331, section 6.3.2 under the PDSCH-Config parameter.

These power levels are -6 dB, -4.77 dB, -3 dB, -1.77 dB, 0 dB, 1 dB, 2 dB, and 3 dB.

The autodetected power levels (P_A(n)) can be viewed on the DL Decode Info trace.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO[:DETect]:POWer OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO[:DETect]:POWer?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:POW ON` `:EVM:CCAR0:DLIN:PROF:AUTO:POW?`
Notes	When you enter the Edit User Mapping form, the RB Auto Detect Mode selection that you set before entering the form appears. You can switch the mode between Decoded DCI and Power Based on the Editor, however, the Auto Detect Power Levels state on the form and its control are still for the mode you set before entering the form and do not change even if you change the mode.
Dependencies	Applicable when RB Auto Detect is On and RB Auto Detect Mode is Decoded DCI
Preset	ON
State Saved	Yes
Range	On|Off
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:AUTO[:DETect]:POWer`

Use Per Antenna EPRE

Determines whether the Energy Per Resource Element (EPRE) is interpreted as energy per antenna port or the sum total of energies contributed by all antenna ports involved . When it is On, EPRE is interpreted as energy per antenna port.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:EPRE:PANTenna OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:EPRE:PANTenna?`
Example	`:EVM:CCAR0:DLINk:PROF:EPRE:PANT ON` `:EVM:CCAR0:DLINk:PROF:EPRE:PANT?`
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:EPRE:PANTenna`

Multi-Frame Analysis (TDD only)

Determines whether to allow multi-frame allocations..

When it is set to On, the demodulator sets PDSCH allocations for two continuous frames. This parameter needs to be set to On when the signal under analysis is complied with E-UTRA TDD Test Models defined in 3GPP TS36.141 6.1.1 V8.2.0.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:PROFile:MFANalysis OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:PROFile:MFANalysis?`
Example	`:EVM:CCAR0:PROF:MFAN ON` `:EVM:CCAR0:PROF:MFAN?`
Dependencies	Available only for LTEATDD downlink. Enabled when RB Auto Detect is Off and Input Channel is 1
Preset	OFF
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:PROFile:MFANalysis`

Show Mapping (TDD only)

Selects which frame’s allocations you want to see in RB mapping diagram when Multi Frame Analysis is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:PROFile:SMAPping[:SELect] F0 | F1` `[:SENSe]:EVM:CCARrier0|…|4:PROFile:SMAPping[:SELect]?`
Example	`:EVM:CCAR0:PROF:SMAP F0` `:EVM:CCAR0:PROF:SMAP?`
Dependencies	Available only for LTEATDD Downlink Enabled when Multi-Frame Analysis is ON
Preset	F0
State Saved	Yes
Range	F0|F1
Backwards Compatibility SCPI	`[:SENSe]:EVM:PROFile:SMAPping[:SELect]`

User Channel Summary

Allows you to set the parameters for User Channels.

Add User

Adds a new User and the new entry becomes the selected User. The new User contains by default one Allocation that has the associated parameters set to the default values.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:ADD:USER`
Example	`:EVM:CCAR0:DLIN:PROF:ADD:USER`
Dependencies	The new User is added at the end of the currently defined Users. Disabled once the number of Users reaches 50, the max number
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:ADD:USER`

Delete User

Deletes the current selected User.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:DELete`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:DEL`
Dependencies	Disabled when there is only one User. The range of sub op code <n> values is determined by the number of Users you have configured. If you attempt to remotely delete a sub op code that is out of range, this results in an error message
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:USER<n>:DELete`

Include PDSCH

Determines whether or not the PDSCH is included in the results.

Couplings	This parameter provides the Include/Exclude status of the currently selected User, therefore the SCPI commands associated with this parameter changes as the User is changed When RB Auto Detect is On and Mode is Power Based: when selected User is QPSK, refer to "Include QPSK" on page 1547 when selected User is 16QAM, refer to "Include 16QAM" on page 1547 when selected User is 64QAM, refer to "Include 64QAM" on page 1548 when selected User is 256QAM, refer to "Include 256QAM" on page 1548 When RB Auto Detect is On and Mode is Decoded DCI, refer to "Include Decoded PDSCH" on page 1546. When RB Auto Detect is Off, refer to "Include PDSCH" on page 1545.
Preset	EXCLude

State Saved	Yes
Range	Include|Exclude

RNTI

Sets downlink user's Radio Network Temporary Identifier (RNTI) which is used for demodulating UE-specific Reference Signals.

NOTE **Available when RB Auto Detect is Off, UE-RS Present is On and UE-RS Port is Port5.**

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:RNTI <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:RNTI?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:RNTI 1` `:EVM:CCAR0:DLIN:PROF:USER1:RNTI?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Available when RB Auto Detect is Off, UE-RS Present is On and UE-RS Port is Port5
Preset	1
State Saved	Yes
Min	0
Max	65535
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:USER<n>:RNTI`

Auto Detect RNTI for QPSK

Sets radio network temporary identifier for the QPSK modulation when RB Auto Detect is On.

NOTE **Available when RB Auto Detect is On, RB Auto Detect Mode is Power Based, UE-RS Present is On, and UE-RS Port is Port5.**

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QPSK:RNTI <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QPSK:RNTI?`
Example	`:EVM:CCAR0:DLIN:PROF:QPSK:RNTI 1` `:EVM:CCAR0:DLIN:PROF:QPSK:RNTI?`
Dependencies	Available when RB Auto Detect is On, RB Auto Detect Mode is Power Based, UE-RS Present is On, and

	UE-RS Port is Port5
Preset	1
State Saved	Yes
Min	0
Max	65535
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:QPSK:RNTI`

Auto Detect RNTI for 16QAM

Sets radio network temporary identifier for the 16QAM modulation when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM16:RNTI <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM16:RNTI?`
Example	`:EVM:CCAR0:DLIN:PROF:QAM16:RNTI 1` `:EVM:CCAR0:DLIN:PROF:QAM16:RNTI?`
Dependencies	Available when RB Auto Detect is On, RB Auto Detect Mode is Power Based, UE-RS Active is On, and UE-RS Port is Port5
Preset	1
State Saved	Yes
Min	0
Max	65535
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:QAM16:RNTI`

Auto Detect RNTI for 64QAM

Sets radio network temporary identifier for the 64QAM modulation when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM64:RNTI <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM64:RNTI?`
Example	`:EVM:CCAR0:DLIN:PROF:QAM64:RNTI 1` `:EVM:CCAR0:DLIN:PROF:QAM64:RNTI?`
Dependencies	Available when RB Auto Detect is On, RB Auto Detect Mode is Power Based, UE-RS Active is On, and UE-RS Port is Port5
Preset	1
State Saved	Yes

Min	0
Max	65535
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:QAM64:RNTI`

Auto Detect RNTI for 256QAM

Sets radio network temporary identifier for the 256QAM modulation when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM256:RNTI <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM256:RNTI?`
Example	`:EVM:CCAR0:DLIN:PROF:QAM256:RNTI 1` `:EVM:CCAR0:DLIN:PROF:QAM256:RNTI?`
Dependencies	Available when RB Auto Detect is On, RB Auto Detect Mode is Power Based, UE-RS Active is On, and UE-RS Port is Port5 and Higher Order Modulation is On
Preset	1
State Saved	Yes
Min	0
Max	65535

Auto Detect RNTI for 1024QAM

Sets radio network temporary identifier for the 1024QAM modulation when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM1024:RNTI <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM1024:RNTI?`
Example	`:EVM:CCAR0:DLIN:PROF:QAM1024:RNTI 1` `:EVM:CCAR0:DLIN:PROF:QAM1024:RNTI?`
Dependencies	Available when RB Auto Detect is On, RB Auto Detect Mode is Power Based, UE-RS Active is On, and UE-RS Port is Port5 and Higher Order Modulation is On
Preset	1
State Saved	Yes
Min	0
Max	65535

UE-RS Present

Selects whether or not the UE specific reference signal exists for this downlink user in the input signal. When this is selected, the demodulator to search for UE-specific RS.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:UERS:ACTive OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:UERS:ACTive?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:UERS:ACT OFF` `:EVM:CCAR0:DLIN:PROF:USER1:UERS:ACT?`
Dependencies	Available when RB Auto Detect is Off All controls for UE-RS parameters are grayed out when this parameter is set to OFF
Preset	OFF
State Saved	Yes
Range	On|Off
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:USER1|50:UERS:ACTive`

Auto Detect UE-RS Present for QPSK

Selects whether or not the UE specific reference signal exists for the QPSK modulation when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QPSK:UERS:ACTive OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QPSK:UERS:ACTive?`
Example	`:EVM:CCAR0:DLIN:PROF:QPSK:UERS:ACT OFF` `:EVM:CCAR0:DLIN:PROF:QPSK:UERS:ACT?`
Dependencies	Available when RB Auto Detect is On. All controls for UE-RS parameters are grayed out when this parameter is set to OFF
Preset	OFF
State Saved	Yes
Range	On|Off
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:QPSK:UERS:ACTive`

Auto Detect UE-RS Present for 16QAM

Selects whether or not the UE specific reference signal exists for the 16QAM modulation when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM16:UERS:ACTive OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM16:UERS:ACTive?`
Example	`:EVM:CCAR0:DLIN:PROF:QAM16:UERS:ACT OFF` `:EVM:CCAR0:DLIN:PROF:QAM16:UERS:ACT?`
Dependencies	Available when RB Auto Detect is On. All controls for UE-RS parameters are grayed out when this parameter is set to OFF
Preset	OFF
State Saved	Yes
Range	On|Off
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:QAM16:UERS:ACTive`

Auto Detect UE-RS Present for 64QAM

Selects whether or not the UE specific reference signal exists for 64QAM modulation when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM64:UERS:ACTive OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM64:UERS:ACTive?`
Example	`:EVM:CCAR0:DLIN:PROF:QAM64:UERS:ACT OFF` `:EVM:CCAR0:DLIN:PROF:QAM64:UERS:ACT?`
Dependencies	Available when RB Auto Detect is On. All controls for UE-RS parameters are grayed out when this parameter is set to OFF
Preset	OFF
State Saved	Yes
Range	On|Off
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:QAM64:UERS:ACTive`

Auto Detect UE-RS Present for 256QAM

Selects whether or not the UE specific reference signal exists for 256QAM modulation when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM256:UERS:ACTive OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM256:UERS:ACTive?`
Example	`:EVM:CCAR0:DLIN:PROF:QAM256:UERS:ACT OFF` `:EVM:CCAR0:DLIN:PROF:QAM256:UERS:ACT?`
Dependencies	Available when RB Auto Detect is On and Higher Order Modulation is On. All UE-RS parameters are grayed out when this parameter is set to OFF.
Preset	OFF
State Saved	Yes
Range	On|Off

Auto Detect UE-RS Present for 1024QAM

Selects whether or not the UE specific reference signal exists for 1024QAM modulation when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM1024:UERS:ACTive OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM1024:UERS:ACTive?`
Example	`:EVM:CCAR0:DLIN:PROF:QAM1024:UERS:ACT OFF` `:EVM:CCAR0:DLIN:PROF:QAM1024:UERS:ACT?`
Dependencies	Available when RB Auto Detect is On and Higher Order Modulation is On. All UE-RS parameters are grayed out when this parameter is set to OFF
Preset	OFF
State Saved	Yes
Range	On|Off

Include UE-RS

Includes the user defined channel PDSCH's UE specific reference signal in the results. The UE-specific RS is shown on appropriate traces and included in error metric calculations.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:UERS INCLude | EXCLude` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:UERS?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:UERS EXCL` `:EVM:CCAR0:DLIN:PROF:USER1:UERS?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Available when UE-RS Active is ON and RB Auto Detect is Off

Couplings	This parameter is set to Include when Composite Include All is selected and set to Exclude when Composite Exclude All is selected
Preset	EXCLude
State Saved	Yes
Range	Include|Exclude
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:USER<n>:UERS`

Auto Detect Include UE-RS for QPSK

Includes UE specific reference signal for the QPSK modulation in the results when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QPSK:UERS INCLude | EXCLude` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QPSK:UERS?`
Example	`:EVM:CCAR0:DLIN:PROF:QPSK:UERS EXCL` `:EVM:CCAR0:DLIN:PROF:QPSK:UERS?`
Dependencies	Available when UE-RS Active is ON and RB Auto Detect is On
Couplings	This parameter is set to Include when Composite Include All is selected and set to Exclude when Composite Exclude All is selected
Preset	EXCLude
State Saved	Yes
Range	Include|Exclude
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:QPSK:UERS`

Auto Detect Include UE-RS for 16QAM

Includes UE specific reference signal for the 16QAM modulation in the results when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM16:UERS INCLude | EXCLude` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM16:UERS?`
Example	`:EVM:CCAR0:DLIN:PROF:QAM16:UERS EXCL` `:EVM:CCAR0:DLIN:PROF:QAM16:UERS?`
Dependencies	Available when UE-RS Active is ON and RB Auto Detect is On
Couplings	This parameter is set to Include when Composite Include All is selected and set to Exclude when Composite Exclude All is selected

Preset	EXCLude
State Saved	Yes
Range	Include|Exclude
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:QAM16:UERS`

Auto Detect Include UE-RS for 64QAM

Includes UE specific reference signal for the 64QAM modulation in the results when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM64:UERS INCLude | EXCLude` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM64:UERS?`
Example	`:EVM:CCAR0:DLIN:PROF:QAM64:UERS EXCL` `:EVM:CCAR0:DLIN:PROF:QAM64:UERS?`
Dependencies	Available when UE-RS Active is ON and RB Auto Detect is On
Couplings	This parameter is set to Include when Composite Include All is selected and set to Exclude when Composite Exclude All is selected
Preset	EXCLude
State Saved	Yes
Range	Include|Exclude
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:QAM64:UERS`

Auto Detect Include UE-RS for 256QAM

Includes UE specific reference signal for the 256QAM modulation in the results when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM256:UERS INCLude | EXCLude` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM256:UERS?`
Example	`:EVM:CCAR0:DLIN:PROF:QAM256:UERS EXCL` `:EVM:CCAR0:DLIN:PROF:QAM256:UERS?`
Dependencies	Available when UE-RS Active is ON and RB Auto Detect is On and Higher Order Modulation is On
Couplings	This parameter is set to Include when Composite Include All is selected and set to Exclude when Composite Exclude All is selected
Preset	EXCLude
State Saved	Yes
Range	Include|Exclude

Auto Detect Include UE-RS for 1024QAM

Includes UE specific reference signal for the 1024QAM modulation in the results when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM1024:UERS INCLude | EXCLude` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM1024:UERS?`
Example	`:EVM:CCAR0:DLIN:PROF:QAM1024:UERS EXCL` `:EVM:CCAR0:DLIN:PROF:QAM1024:UERS?`
Dependencies	Available when UE-RS Active is ON and RB Auto Detect is On and Higher Order Modulation is On
Couplings	This parameter is set to Include when Composite Include All is selected and set to Exclude when Composite Exclude All is selected
Preset	EXCLude
State Saved	Yes
Range	Include|Exclude

UE-RS Power Boost

Sets the Power Boost value for the specified user. Power Boost value specifies the average power for the UE-specific reference signal.

The average power of the UE-RS power is relative to the 0 dB level determined by the cell-specific RS power level.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:UERS:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:UERS:PWRBoost?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:UERS:PWRB 0` `:EVM:CCAR0:DLIN:PROF:USER1:UERS:PWRB?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n=50 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Available when RB Auto Detect is Off.
Preset	0 dB
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:USER<n>:UERS:PWRBoost`

Auto Detect UE-RS Power Boost for QPSK

Determines the Power Boost value for the QPSK modulation when RB Auto Detect is On. Power Boost value specifies the average power for the UE-specific reference signal. The average power of the UE-RS power is relative to the 0 dB level determined by the cell-specific RS power level.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QPSK:UERS:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QPSK:UERS:PWRBoost?`
Example	`:EVM:CCAR0:DLIN:PROF:QPSK:UERS:PWRB 0` `:EVM:CCAR0:DLIN:PROF:QPSK:UERS:PWRB?`
Dependencies	Available when RB Auto Detect is On
Preset	0 dB
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:QPSK:UERS:PWRBoost`

Auto Detect UE-RS Power Boost for 16QAM

Determine the Power Boost value for the 16QAM modulation when RB Auto Detect is On. Power Boost value specifies the average power for the UE-specific reference signal. The average power of the UE-RS power is relative to the 0 dB level determined by the cell-specific RS power level.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM16:UERS:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM16:UERS:PWRBoost?`
Example	`:EVM:CCAR0:DLIN:PROF:QAM16:UERS:PWRB 0` `:EVM:CCAR0:DLIN:PROF:QAM16:UERS:PWRB?`
Dependencies	Available when RB Auto Detect is On
Preset	0 dB
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:QAM16:UERS:PWRBoost`

Auto Detect UE-RS Power Boost for 64QAM

Determines the Power Boost value for the 64QAM modulation when Detectio is Auto. Power Boost value specifies the average power for the UE-specific reference signal. The average power of the UE-RS power is relative to the 0 dB level determined by the cell-specific RS power level.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM64:UERS:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM64:UERS:PWRBoost?`
Example	`:EVM:CCAR0:DLIN:PROF:QAM64:UERS:PWRB 0` `:EVM:CCAR0:DLIN:PROF:QAM64:UERS:PWRB?`
Dependencies	Available when RB Auto Detect is On
Preset	0 dB
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:QAM64:UERS:PWRBoost`

Auto Detect UE-RS Power Boost for 256QAM

Determines the Power Boost value for the 256QAM modulation when Detectio is Auto. Power Boost value specifies the average power for the UE-specific reference signal. The average power of the UE-RS power is relative to the 0 dB level determined by the cell-specific RS power level.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM256:UERS:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM256:UERS:PWRBoost?`
Example	`:EVM:CCAR0:DLIN:PROF:QAM256:UERS:PWRB 0` `:EVM:CCAR0:DLIN:PROF:QAM256:UERS:PWRB?`
Dependencies	Available when RB Auto Detect is On and Higher Order Modulation is On
Preset	0 dB
State Saved	Yes
Min	-100 dB
Max	100 dB

Auto Detect UE-RS Power Boost for 1024QAM

Determines the Power Boost value for the 1024QAM modulation when Detectio is Auto. Power Boost value specifies the average power for the UE-specific reference signal. The average power of the UE-RS power is relative to the 0 dB level determined by the cell-specific RS power level.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM1024:UERS:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM1024:UERS:PWRBoost?`
Example	`:EVM:CCAR0:DLIN:PROF:QAM1024:UERS:PWRB 0` `:EVM:CCAR0:DLIN:PROF:QAM1024:UERS:PWRB?`
Dependencies	Available when RB Auto Detect is On and Higher Order Modulation is On
Preset	0 dB
State Saved	Yes
Min	-100 dB
Max	100 dB

UE-RS Port

Specifies on which logical antenna port UE-RS is transmitted for the selected PDSCH user allocation.

Possible selections for single-layer beamforming are as follows:

- Port 5
- Port 7
- Port 8

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:UERS:PORT P5 | P7 | P8` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:UERS:PORT?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:UERS:PORT P5` `:EVM:CCAR0:DLIN:PROF:USER1:UERS:PORT?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n= 50. If you attempt to remotely set or query a sub op code that is out of range, this results in an error message. Enabled when RB Auto Detect is Off, and UE-RS Active is On.
Preset	P5

State Saved	Yes
Range	P5|P7|P8
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:USER<n>:UERS:PORT`

Auto Detect UE-RS Port for QPSK

Specifies on which logical antenna port UE-RS is transmitted for the QPSK modulation when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QPSK:UERS:PORT P5 | P7 | P8` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QPSK:UERS:PORT?`
Example	`:EVM:CCAR0:DLIN:PROF:QPSK:UERS:PORT P5` `:EVM:CCAR0:DLIN:PROF:QPSK:UERS:PORT?`
Dependencies	Enabled when RB Auto Detect is On, and UE-RS Active is On
Preset	P5
State Saved	Yes
Range	P5|P7|P8
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:QPSK:UERS:PORT`

Auto Detect UE-RS Port for 16QAM

Specifies on which logical antenna port UE-RS is transmitted for the 16QAM modulation when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM16:UERS:PORT P5 | P7 | P8` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM16:UERS:PORT?`
Example	`:EVM:CCAR0:DLIN:PROF:QAM16:UERS:PORT P5` `:EVM:CCAR0:DLIN:PROF:QAM16:UERS:PORT?`
Dependencies	Enabled when RB Auto Detect is On, and UE-RS Active is On
Preset	P5
State Saved	Yes
Range	P5|P7|P8
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:QAM16:UERS:PORT`

Auto Detect UE-RS Port for 64QAM

Specifies on which logical antenna port UE-RS is transmitted for the 64QAM modulation when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM64:UERS:PORT P5 | P7 | P8` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM64:UERS:PORT?`
Example	`:EVM:CCAR0:DLIN:PROF:QAM64:UERS:PORT P5` `:EVM:CCAR0:DLIN:PROF:QAM64:UERS:PORT?`
Dependencies	Enabled when RB Auto Detect is On, and UE-RS Active is On
Preset	P5
State Saved	Yes
Range	P5|P7|P8
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:QAM64:UERS:PORT`

Auto Detect UE-RS Port for 256QAM

Specifies on which logical antenna port UE-RS is transmitted for the 256QAM modulation when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM256:UERS:PORT P5 | P7 | P8` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM256:UERS:PORT?`
Example	`:EVM:CCAR0:DLIN:PROF:QAM256:UERS:PORT P5` `:EVM:CCAR0:DLIN:PROF:QAM256:UERS:PORT?`
Dependencies	Enabled when RB Auto Detect is On, and UE-RS Active is On and Higher Order Modulation is On
Preset	P5
State Saved	Yes
Range	P5|P7|P8

Auto Detect UE-RS Port for 1024QAM

Specifies on which logical antenna port UE-RS is transmitted for the 1024QAM modulation when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM1024:UERS:PORT P5 | P7 | P8` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM1024:UERS:PORT?`
Example	`:EVM:CCAR0:DLIN:PROF:QAM1024:UERS:PORT P5`

	`:EVM:CCAR0:DLIN:PROF:QAM1024:UERS:PORT?`
Dependencies	Enabled when RB Auto Detect is On, and UE-RS Active is On and Higher Order Modulation is On
Preset	P5
State Saved	Yes
Range	P5|P7|P8

UE-RS n_{SCID}

Specifies downlink user's scrambling identity value n_{SCID} when RB Auto Detect is Off. This is enabled when the UE-RS Port is set to Port 7 or Port 8.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:UERS:SCID <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:UERS:SCID?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:UERS:SCID 0` `:EVM:CCAR0:DLIN:PROF:USER1:UERS:SCID?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. If you attempt to remotely set or query a sub op code that is out of range, this results in an error message. Available when RB Auto Detect is Off and UE-RS Active is On and UE-RS Port is not Port5.
Preset	0
State Saved	Yes
Min	0
Max	1
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:USER<n>:UERS:SCID`

Auto Detect UE-RS n_{SCID} for QPSK

Specifies scrambling identity value n_{SCID} for the QPSK modulation when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QPSK:UERS:SCID <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QPSK:UERS:SCID?`
Example	`:EVM:CCAR0:DLIN:PROF:QPSK:UERS:SCID 0` `:EVM:CCAR0:DLIN:PROF:QPSK:UERS:SCID?`
Dependencies	Available when RB Auto Detect is On, RB Auto Detect Mode is Power Based, UE-RS Active is On, and UE-RS Port is not Port5.
Preset	0

State Saved	Yes
Min	0
Max	1
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:QPSK:UERS:SCID`

Auto Detect UE-RS n_{SCID} for 16QAM

Specifies scrambling identity value n_{SCID} for the 16QAM modulation when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM16:UERS:SCID <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM16:UERS:SCID?`
Example	`:EVM:CCAR0:DLIN:PROF:QAM16:UERS:SCID 0` `:EVM:CCAR0:DLIN:PROF:QAM16:UERS:SCID?`
Dependencies	Available when RB Auto Detect is On, RB Auto Detect Mode is Power Based, UE-RS Active is On, and UE-RS Port is not Port5.
Preset	0
State Saved	Yes
Min	0
Max	1
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:QAM16:UERS:SCID`

Auto Detect UE-RS n_{SCID} for 64QAM

Specifies scrambling identity value n_{SCID} for the 64QAM modulation when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM64:UERS:SCID <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM64:UERS:SCID?`
Example	`:EVM:CCAR0:DLIN:PROF:QAM64:UERS:SCID 0` `:EVM:CCAR0:DLIN:PROF:QAM64:UERS:SCID?`
Dependencies	Available when RB Auto Detect is On, RB Auto Detect Mode is Power Based, UE-RS Active is On, and UE-RS Port is not Port5
Preset	0
State Saved	Yes
Min	0

Max	1
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:QAM64:UERS:SCID`

Auto Detect UE-RS n_{SCID} for 256QAM

Specifies scrambling identity value n_{SCID} for the 256QAM modulation when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM256:UERS:SCID <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM256:UERS:SCID?`
Example	`:EVM:CCAR0:DLIN:PROF:QAM256:UERS:SCID 0` `:EVM:CCAR0:DLIN:PROF:QAM256:UERS:SCID?`
Dependencies	Available when RB Auto Detect is On, RB Auto Detect Mode is Power Based, UE-RS Active is On, and UE-RS Port is not Port5 and Higher Order Modulation is On
Preset	0
State Saved	Yes
Min	0
Max	1

Auto Detect UE-RS n_{SCID} for 1024QAM

Specifies scrambling identity value n_{SCID} for the 1024QAM modulation when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM1024:UERS:SCID <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:QAM1024:UERS:SCID?`
Example	`:EVM:CCAR0:DLIN:PROF:QAM1024:UERS:SCID 0` `:EVM:CCAR0:DLIN:PROF:QAM1024:UERS:SCID?`
Dependencies	Available when RB Auto Detect is On, RB Auto Detect Mode is Power Based, UE-RS Active is On, and UE-RS Port is not Port5 and Higher Order Modulation is On
Preset	0
State Saved	Yes
Min	0
Max	1

PDSCH

Allows you to set the parameters for PDSCH Channels.

Number of C-RS Ports

See Section "Number of C-RS Ports" on page 1476"Number of C-RS Ports" on page 1476

Precoding

Selects the Precoding method for each User when RB Auto Detect is Off.

This parameter specifies the type of MIMO precoding performed on the current user's data. The possible choices are:

- Off
- Tx Diversity
- Spatial Multiplexing

When Spatial Multiplexing is selected, the parameters Number of Layers, Number of Codewords, CDD, and Codebook Index must also be specified.

NOTE **RB Auto Detection can detect allocations of either Spatial Multiplexing or TxDiversity, but not both. When RB Auto Detect is On, this parameter determines which type of Precoding the demodulator looks for.**

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:PRECoding OFF | TXDiversity | SMULtiplex` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:PRECoding?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:PDSC:PREC TXD` `:EVM:CCAR0:DLIN:PROF:USER1:PDSC:PREC?`
Dependencies	Enabled when RB Auto Detect is Off and Number of C-RS Ports is set to more than 1 Port
Preset	Off
State Saved	Yes
Range	Off|Tx Diversity|Spatial Multiplexing
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:USER<n>:PDSCh:PRECoding`

Auto Detect Precoding

Selects the Precoding method when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:PRECoding OFF |`

	`TXDiversity | SMULtiplex` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:PRECoding?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:PREC TXD` `:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:PREC?`
Dependencies	Enabled when RB Auto Detect is On, Detection Mode is Power Based, and Number of C-RS Ports is set to more than 1 Port
Preset	Off
State Saved	Yes
Range	Off|Tx Diversity|Spatial Multiplexing
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:AUTO:PDSCh:PRECoding`

of Layers

Specifies the number of layers for the current user when RB Auto Detect is Off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER1|50:PDSCh:NLAYers <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER1|50:PDSCh:NLAYers?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:PDSC:NLAY 1` `:EVM:CCAR0:DLIN:PROF:USER1:PDSC:NLAY?`
Notes	Always 1 since this instrument supports only one RF input
Dependencies	Enabled only when RB Auto Detect is Off, Number of C-RS Ports is more than 1 Port and Precoding is set to Spatial Multiplexing
Couplings	Coupled with Number of C-RS Ports, Precoding
Preset	1
State Saved	Yes
Min	1
Max	4
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:USER1|50:PDSCh:NLAYers`

Auto Detect Number of Layers

Sets the number of layers when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:NLAYers <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:NLAYers?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:NLAY 1` `:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:NLAY?`

Notes	Always 1 since this instrument supports only one RF input
Dependencies	Enabled only when RB Auto Detect is On, Number of C-RS Ports is more than 1 Port and Auto Detect Precoding is set to Spatial Multiplexing
Couplings	Coupled with Number of C-RS Ports, Precoding
Preset	1
State Saved	Yes
Min	1
Max	4
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:AUTO:PDSCh:NLAYers`

of Codewords

Specifies the number of code words (1 or 2) for the current user. The selections available are dependent on the number of layers and multiplexing mode, according to the standard. Sets the number of codewords when RB Auto Detect is Off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:NCODewords <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:NCODewords?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:PDSC:NCOD 1` `:EVM:CCAR0:DLIN:PROF:USER1:PDSC:NCOD?`
Dependencies	Enabled only when all the following conditions are met: – Number of C-RS Ports is set to more than 1 Port – Precoding is set to Spatial Multiplexing – Number of Layers is set to more than 1 Max value of this parameter depends on Precoding. When Precoding is set to Tx Diversity, Max value is 1. When Precoding is set to Spatial Multiplexing, Max value is 2
Couplings	Coupled with Precoding
Preset	1
State Saved	Yes
Min	1
Max	2
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:USER<n>:PDSCh:NCODewords`

Auto Detect Number of Codewords

Sets the number of codewords when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:NCODewords <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:NCODewords?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:NCOD 1` `:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:NCOD?`
Dependencies	Enabled only when all the following conditions are met: – Number of C-RS Ports is set to more than 1 Port – Auto Detect Precoding is set to Spatial Multiplexing – Number of Layers is set to more than 1 Max value of this parameter depends on Precoding. When Precoding is set to Tx Diversity, Max value is 1. When Precoding is set to Spatial Multiplexing, Max value is 2
Couplings	Coupled with Precoding
Preset	1
State Saved	Yes
Min	1
Max	2
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:AUTO:PDSCh:NCODewords`

CDD

Sets whether precoding is done without Cyclic Delay Diversity (CDD) or with large delay CDD for spatial multiplexing when RB Auto Detect is Off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:CDD WOCDd | LDCDd` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:CDD?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:PDSC:CDD WOCD` `:EVM:CCAR0:DLIN:PROF:USER1:PDSC:CDD?`
Notes	Applicable only when the instrument supports more than one RF input
Dependencies	Enabled only when all the following conditions are met – RB Auto Detect is Off – Number of C-RS Ports is set to more than 1 Port – Precoding is set to Spatial Multiplexing – Number of Layers is set to more than 1
Preset	WOCDd
State Saved	Yes

Range	Without CDD|Large Delay CDD
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:USER<n>:PDSCh:CDD`

Auto Detect Precoding CDD

Determines whether precoding is done without cyclic delay diversity (CDD) or with large delay CDD for spatial multiplexing when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:CDD WOCDd | LDCDd` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:CDD?`
Example	`:EVM:CCAR0:DLIN:PROFile:AUTO:PDSC:CDD WOCD` `:EVM:CCAR0:DLIN:PROFile:AUTO:PDSC:CDD?`
Notes	Applicable only when the instrument supports more than one RF input
Dependencies	Enabled only when all the following conditions are met – RB Auto Detect is On – Number of C-RS Ports is set to more than 1 Port – Precoding is set to Spatial Multiplexing – Number of Layers is set to more than 1
Preset	WOCDd
State Saved	Yes
Range	Without CDD|Large Delay CDD
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:AUTO:PDSCh:CDD`

Code Book Index

Sets the Codebook Index number for spatial multiplexing precoding when RB Auto Detect is Off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:CBINdex <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:CBINdex?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:PDSC:CBIN 1` `:EVM:CCAR0:DLIN:PROF:USER1:PDSC:CBIN?`
Dependencies	Max value of this parameter depends on Number of C-RS Ports. When Number of C-RS Ports is set to 2 Ports, Max value is 3. When Number of C-RS Ports is set to 4 Ports, Max value is 15 Enabled only when RB Auto Detect is Off, Number of C-RS Ports is set to more than 1 Port, and Precoding is set to Spatial Multiplexing

Couplings	Coupled with Number of C-RS Ports
Preset	0
State Saved	Yes
Min	0
Max	15 Max value depends on the port number: 3 - when Number of C-RS Ports is set to 2 Ports 15 - when Number of C-RS Ports is set to 4 Ports
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:USER<n>:PDSCh:CBINdex`

Auto Detect Codebook Index

Sets the Codebook Index number for spatial multiplexing precoding when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:CBINdex <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:CBINdex?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:CBIN 1` `:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:CBIN?`
Dependencies	Max value of this parameter depends on Number of C-RS Ports. When Number of C-RS Ports is set to 2 Ports, Max value is 3. When Number of C-RS Ports is set to 4 Ports, Max value is 15 Enabled only when RB Auto Detect is On, Precoding is set to Spatial Multiplexing and Number of C-RS Ports is set to more than 1 Port
Couplings	Coupled with Number of C-RS Ports
Preset	0
State Saved	Yes
Min	0
Max	15 Max value depends on the port number: 3 - when Number of C-RS Ports is set to 2 Ports 15 - when Number of C-RS Ports is set to 4 Ports
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:AUTO:PDSCh:CBINdex`

Modulation Format (Display Only)

Selects one of the Modulation Formats to be displayed when RB Auto Detect is On and RB Auto Detect Mode is Power Based.

- QPSK
- 16QAM
- 64QAM
- 256QAM
- 1024QAM

User Index (Display Only)

Selects the User Index to be displayed when RB Auto Detect is On and RB Auto Detect Mode is Decoded DCI, or when RB Auto Detect is Off.

EPRE (Auto Detect Off)

Sets the per-antenna Energy Per Resource Element (EPRE) value for all the Allocations when RB Auto Detect is Off and EPRE Couple is On.

When ERPE Couple is Off, refer to "EPRE" on page 1610.

The average power per antenna port is relative to the 0 dB level of the RS power when its value is 0 dB.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:EPRE <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:EPRE?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:PDSC:EPRE 0` `:EVM:CCAR0:DLIN:PROF:USER1:PDSC:EPRE?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured Max value for n=50. If you attempt to remotely set or query a sub op code that is out of range, this results in an error message. Enabled when RB Auto Detect is Off, EPRE Couple is ON, and Use Per Antenna EPRE is On.
Preset	0 dB
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:USER<n>:PDSCh:EPRE`

Couple for EPRE

Determines whether or not all the Allocations use the EPRE value.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:EPRE:COUPle OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:EPRE:COUPle?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:PDSC:EPRE:COUP 0` `:EVM:CCAR0:DLIN:PROF:USER1:PDSC:EPRE:COUP?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n=50. If you attempt to remotely set or query a sub op code that is out of range, this results in an error message. Enabled when Use Per Antenna EPRE is On and RB Auto Detect is Off.
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:USER<n>:PDSCh:EPRE:COUPle`

EPRE (Auto Detect On, Power Based Mode, QPSK)

Sets the EPRE value for PDSCH QPSK Mod Type when RB Auto Detect is On and Use Per Antenna EPRE is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QPSK:EPRE <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QPSK:EPRE?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QPSK:EPRE 0` `:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QPSK:EPRE?`
Dependencies	Enabled when RB Auto Detect is On and Use Per Antenna EPRE is On.
Preset	0
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:AUTO:PDSCh:QPSK:EPRE`

EPRE (Auto Detect On, Power Based Mode, 16QAM)

Sets the EPRE value for PDSCH 16QAM Mod Type when RB Auto Detect is On and Use Per Antenna EPRE is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM16:EPRE <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM16:EPRE?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM16:EPRE 0` `:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM16:EPRE?`
Dependencies	Enabled when RB Auto Detect is On and Use Per Antenna EPRE is On.
Preset	0
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:AUTO:PDSCh:QAM16:EPRE`

EPRE (Auto Detect On, Power Based Mode, 64QAM)

Sets the EPRE value for PDSCH 64QAM Mod Type when RB Auto Detect is On and Use Per Antenna EPRE is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM64:EPRE <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM64:EPRE?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM64:EPRE 0` `:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM64:EPRE?`
Dependencies	Enabled when RB Auto Detect is On and Use Per Antenna EPRE is On
Preset	0
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:AUTO:PDSCh:QAM64:EPRE`

EPRE (Auto Detect On, Power Based Mode, 256QAM)

Sets the EPRE value for PDSCH 256QAM Mod Type when RB Auto Detect is On, Use Per Antenna EPRE is On and Higher Order Modulation is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM256:EPRE <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM256:EPRE?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM256:EPRE 0` `:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM256:EPRE?`
Dependencies	Enabled when RB Auto Detect is On, Use Per Antenna EPRE is On and Higher Order Modulation is enabled
Preset	0
State Saved	Yes
Min	-100
Max	100

EPRE (Auto Detect On, Power Based Mode, 1024QAM)

Sets the EPRE value for PDSCH 1024QAM Mod Type when RB Auto Detect is On, Use Per Antenna EPRE is On and Higher Order Modulation is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM1024:EPRE <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM1024:EPRE?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM1024:EPRE 0` `:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM1024:EPRE?`
Dependencies	Enabled when RB Auto Detect is On and Use Per Antenna EPRE is On and Higher Order Modulation is On
Preset	0
State Saved	Yes
Min	-100
Max	100

EPRE (Auto Detect On, Decoded DCI Mode)

Sets the EPRE value for the specified user.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:DECoded:PDSCh:EPRE <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:DECoded:PDSCh:EPRE?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:DEC:PDSC:EPRE 0` `:EVM:CCAR0:DLIN:PROF:USER1:DEC:PDSC:EPRE?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured Max value for n=50. If you attempt to remotely set or query a sub op code that is out of range, this results in an error message.

	Available when all the following conditions are met: – Direction is Downlink – RB Auto Detect is On – RB Auto Detect Mode is Decoded DCI – Use Per Antenna EPRE is On – Auto-detect Power Levels is Off
Preset	0 dB
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:USER<n>:DECoded:PDSCh:EPRE`

CW0 Enable (Auto Detect Off)

Enables parameters for Codeword 0 and includes Codeword 0 in the analysis when RB Auto Detect is Off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:CWZero:ENABle ON	OFF	0	1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:CWZero:ENABle?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:PDSC:CWZ:ENAB ON` `:EVM:CCAR0:DLIN:PROF:USER1:PDSC:CWZ:ENAB?`
Dependencies	Enabled when RB Auto Detect is Off
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:USER<n>:PDSCh:CWZero:ENABle`

CW0 Enable (Auto Detect On, Power Based Mode, QPSK)

Enables parameters for Codeword 0 for QPSK modulation when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QPSK:CWZero:ENABle ON	OFF	0	1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QPSK:CWZero:ENABle?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QPSK:CWZ:ENAB ON`

	`:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QPSK:CWZ:ENAB?`
Dependencies	Enabled when RB Auto Detect is On
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:AUTO:PDSCh:QPSK:CWZero:ENABle`

CW0 Enable (Auto Detect On, Power Based Mode, 16QAM)

Enables parameters for Codeword 0 for 16QAM modulation when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM16:CWZero:ENABle ON | OFF | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM16:CWZero:ENABle?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM16:CWZ:ENAB ON` `:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM16:CWZ:ENAB?`
Dependencies	Enabled when RB Auto Detect is On
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:AUTO:PDSCh:QAM16:CWZero:ENABle`

CW0 Enable (Auto Detect On, Power Based Mode, 64QAM)

Enables parameters for Codeword 0 for 64QAM modulation when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM64:CWZero:ENABle ON | OFF | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM64:CWZero:ENABle?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM64:CWZ:ENAB ON` `:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM64:CWZ:ENAB?`
Dependencies	Enabled when RB Auto Detect is On
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:AUTO:PDSCh:QAM64:CWZero:ENABle`

CW0 Enable (Auto Detect On, Power Based Mode, 256QAM)

Enables parameters for Codeword 0 for 256QAM modulation when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM256:CWZero:ENABle ON | OFF | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM256:CWZero:ENABle?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM256:CWZ:ENAB ON` `:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM256:CWZ:ENAB?`
Dependencies	Enabled when RB Auto Detect is On Available when Higher Order Modulation is On
Preset	ON
State Saved	Yes

CW0 Enable (Auto Detect On, Power Based Mode, 1024QAM)

Enables parameters for Codeword 0 for 1024QAM modulation when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM1024:CWZero:ENABle ON | OFF | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM1024:CWZero:ENABle?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM1024:CWZ:ENAB ON` `:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM1024:CWZ:ENAB?`
Dependencies	Enabled when RB Auto Detect is On Available when Higher Order Modulation is On
Preset	ON
State Saved	Yes

CW0 Enable (Auto Detect On, Decoded DCI Mode)

Enables parameters for Codeword 0 and includes Codeword 0 in the analysis.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:DECoded:PDSCh:CWZero:ENABle ON | OFF | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:DECoded:PDSCh:CWZero:ENABle?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:DEC:PDSC:CWZ:ENAB ON` `:EVM:CCAR0:DLIN:PROF:USER1:DEC:PDSC:CWZ:ENAB?`

Dependencies	Available when RB Auto Detect is On, RB Auto Detect Mode is Decoded DCI and Auto Detect Power Levels is Off.
Preset	ON
State Saved	Yes
Range	On|Off
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:USER<n>:DECoded:PDSCh:CWZero:ENABle`

CW0 Mod Type (Auto Detect Off)

Selects the Modulation Type for all the Allocations when Mod Type Couple is On.

When Couple is Off, refer to "CW0 Mod Type" on page 1611.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:MODulation:TYPE QPSK | QAM16 | QAM64 | QAM256` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:MODulation:TYPE?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:PDSC:MOD:TYPE QPSK` `:EVM:CCAR0:DLIN:PROF:USER1:PDSC:MOD:TYPE?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n= 50. If you attempt to remotely set or query a sub op code that is out of range, this results in an error message. Enabled when RB Auto Detect is Off, Codeword 0 Enable is ON and Mod Type Couple is ON. QAM256 and QAM1024 options are available only when Higher Order Modulation is On.
Preset	QPSK
State Saved	Yes
Range	QPSK|16QAM|64QAM|256QAM|1024QAM
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:USER<n>:PDSCh:MODulation:TYPE`

Couple for CW0 Mod Type

Determines whether or not all the Allocations use the Common Mod Type value.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:MODulation:TYPE:COUPle OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:MODulation:TYPE:COUPle?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:PDSC:MOD:TYPE:COUP ON`

	`:EVM:CCAR0:DLIN:PROF:USER1:PDSC:MOD:TYPE:COUP?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n=50. If you attempt to remotely set or query a sub op code that is out of range, this results in an error message. Enabled when RB Auto Detect is Off and CW0 Enable is On.
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:USER<n>:PDSCh:MODulation:TYPE:COUPle`

CW0 Power (dB) (Auto Detect Off)

Sets the Power Boost value for all the Allocations when Power Boost Couple is On.

Power Boost value specifies the average power for the codeword symbols.

The average power of the codeword modulation symbols (d(q)(i)) is relative to the 0 dB level determined by the RS power level.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:PWRBoost?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:PDSC:PWRB 0` `:EVM:CCAR0:DLIN:PROF:USER1:PDSC:PWRB?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured Max value for n=50. If you attempt to remotely set or query a sub op code that is out of range, this results in an error message. Enabled when RB Auto Detect is Off, Use "Per-antenna" EPRE is OFF, Power Boost Couple is ON, and Codeword 0 Enable is ON.
Preset	0 dB
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:USER<n>:PDSCh:PWRBoost`

Couple for CW0 Power

Determines whether or not all the Allocations use the Common Power Boost value.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:PWRBoost:COUPle OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:PWRBoost:COUPle?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:PDSC:PWRB:COUP 0` `:EVM:CCAR0:DLIN:PROF:USER1:PDSC:PWRB:COUP?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n=50. If you attempt to remotely set or query a sub op code that is out of range, this results in an error message. Enabled when RB Auto Detect is Off, Use "Per-antenna" EPRE is OFF and Codeword 0 Enable is ON.
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:USER<n>:PDSCh:PWRBoost:COUPle`

CW0 Power (dB) (Auto Detect On, Power Based Mode, QPSK)

Sets the Power Boost value for PDSCH QPSK Mod Type when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QPSK:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QPSK:PWRBoost?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QPSK:PWRB 0` `:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QPSK:PWRB?`
Dependencies	Enabled when RB Auto Detect is On, Use "Per-antenna" EPRE is OFF and Auto Detect Codeword 0 for QPSK|QAM16|QAM64|QAM256 is ON.
Preset	0
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:AUTO:PDSCh:QPSK:PWRBoost`

CW0 Power (dB) (Auto Detect On, Power Based Mode, 16QAM)

Sets the Power Boost value for PDSCH 16QAM Mod Type when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM16:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM16:PWRBoost?`

Example	`:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM16:PWRB 0` `:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM16:PWRB?`
Dependencies	Enabled when RB Auto Detect is On, Use "Per-antenna" EPRE is OFF and Auto Detect Codeword 0 for QPSK|QAM16|QAM64|QAM256 is ON.
Preset	0
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:AUTO:PDSCh:QAM16:PWRBoost`

CW0 Power (dB) (Auto Detect On, Power Based Mode, 64QAM)

Sets the Power Boost value for PDSCH 64QAM Mod Type when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM64:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM64:PWRBoost?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM64:PWRB 0` `:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM64:PWRB?`
Dependencies	Enabled when RB Auto Detect is On, Use "Per-antenna" EPRE is OFF and Auto Detect Codeword 0 for QPSK|QAM16|QAM64 is ON.
Preset	0
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:AUTO:PDSCh:QAM64:PWRBoost`

CW0 Power (dB) (Auto Detect On, Power Based Mode, 256QAM

Sets the Power Boost value for PDSCH 256QAM Mod Type when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM256:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM256:PWRBoost?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM256:PWRB 0` `:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM256:PWRB?`

Dependencies	Enabled when RB Auto Detect is On, Use Per-antenna EPRE is OFF. Available when Higher Order Modulation is On.
Preset	0
State Saved	Yes
Min	-100
Max	100

CW0 Power (dB) (Auto Detect On, Power Based Mode, 1024QAM

Sets the Power Boost value for PDSCH 1024QAM Mod Type when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM1024:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM1024:PWRBoost?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM1024:PWRB 0` `:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM1024:PWRB?`
Dependencies	Enabled when RB Auto Detect is On, Use Per-antenna EPRE is OFF Available when Higher Order Modulation is enabled
Preset	0
State Saved	Yes
Min	-100
Max	100

CW0 Power (dB) (Auto Detect On, Decoded DCI Mode)

Sets the Power Boost value for the specified user.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:DECoded:PDSCh:CWZero:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:DECoded:PDSCh:CWZero:PWRBoost?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:DEC:PDSC:CWZ:PWRB 0` `:EVM:CCAR0:DLIN:PROF:USER1:DEC:PDSC:CWZ:PWRB?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured Max value for n=50. If you attempt to remotely set or query a sub op code that is out of range, this results in an error message. Available when all the following conditions are met: – Direction is Downlink

	– RB Auto Detect is On – RB Auto Detect Mode is Decoded DCI – Auto-detect Power Levels is OFF – Use "Pre-antenna" EPRE is OFF – Codeword 0 Enable is ON
Preset	0 dB
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:USER<n>:DECoded:PDSCh:CWZero:PWRBoost`

CW1 Enable (Auto Detect Off)

Enables parameters for Codeword 1 and includes Codeword 1 in the analysis when RB Auto Detect is Off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:CWONe:ENABle ON | OFF | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:CWONe:ENABle?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:PDSC:CWON:ENAB ON`
Notes	This parameter is applicable only when the instrument supports more than one RF input
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:USER<n>:PDSCh:CWONe:ENABle`

CW1 Enable (Auto Detect On, Power Based Mode, QPSK)

Enables parameters for Codeword 1 for QPSK modulation when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QPSK:CWONe:ENABle ON | OFF | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QPSK:CWONe:ENABle?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QPSK:CWON:ENAB ON` `:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QPSK:CWON:ENAB?`

Notes	This parameter is applicable only when the instrument supports more than one RF input
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:AUTO:PDSCh:QPSK:CWONe:ENABle`

CW1 Enable (Auto Detect On, Power Based Mode, 16QAM)

Enables parameters for Codeword 1 for 16QAM modulation when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM16:CWONe:ENABle ON | OFF | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM16:CWONe:ENABle?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM16:CWON:ENAB ON` `:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM16:CWON:ENAB?`
Notes	This parameter is applicable only when the instrument supports more than one RF input
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:AUTO:PDSCh:QAM16:CWONe:ENABle`

CW1 Enable (Auto Detect On, Power Based Mode, 64QAM)

Enables parameters for Codeword 1 for 64QAM modulation when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM64:CWONe:ENABle ON | OFF | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM64:CWONe:ENABle?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM64:CWON:ENAB ON` `:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM64:CWON:ENAB?`
Notes	This parameter is applicable only when the instrument supports more than one RF input
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:AUTO:PDSCh:QAM64:CWONe:ENABle`

CW1 Enable (Auto Detect On, Power Based Mode, 256QAM)

Enables parameters for Codeword 1 for 256QAM modulation when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM256:CWONe:ENABle ON | OFF | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM256:CWONe:ENABle?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM256:CWON:ENAB ON` `:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM256:CWON:ENAB?`
Notes	This parameter is applicable only when the instrument supports more than one RF input
Dependencies	Available when Higher Order Modulation is enabled
Preset	ON
State Saved	Yes

CW1 Enable (Auto Detect On, Power Based Mode, 1024QAM)

Enables parameters for Codeword 1 for 1024QAM modulation when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM1024:CWONe:ENABle ON | OFF | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM1024:CWONe:ENABle?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM1024:CWON:ENAB ON` `:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM1024:CWON:ENAB?`
Notes	Applicable only when the instrument supports more than one RF input
Dependencies	Always grayed out since this instrument supports only one RF input Available when Higher Order Modulation is enabled
Preset	ON
State Saved	Yes

CW1 Enable (Auto Detect On, Decoded DCI Mode)

Enables parameters for Codeword 1and includes Codeword 1 in the analysis.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:DECoded:PDSCh:CWONe:ENABle ON | OFF | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:DECoded:PDSCh:CWONe:ENABle?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:DEC:PDSC:CWON:ENAB ON` `:EVM:CCAR0:DLIN:PROF:USER1:DEC:PDSC:CWON:ENAB?`

Dependencies	Available when RB Auto Detect is On, RB Auto Detect Mode is Decoded DCI, and Auto-detect Power Levels is Off
Preset	ON
State Saved	Yes
Range	On|Off
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:USER<n>:DECoded:PDSCh:CWONe:ENABle`

CW1 Mod Type (Auto Detect Off)

Selects the Modulation Type for Codeword 1 for all the Allocations when Mod Type Couple is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:CWONe:MODulation:TYPE QPSK | QAM16 | QAM64 | QAM256 | QAM1024` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:CWONe:MODulation:TYPE?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:PDSC:CWON:MOD:TYPE QPSK` `:EVM:CCAR0:DLIN:PROF:USER1:PDSC:CWON:MOD:TYPE?`
Notes	Applicable only when the instrument supports more than one RF input.
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n= 50. If you attempt to remotely set or query a sub op code that is out of range, this results in an error message. Enabled when RB Auto Detect is Off, CW1 Enable is On and Mod Type Couple is ON. QAM256 and QAM1024 options are available only when Higher Order Modulation is On.
Preset	QPSK
State Saved	Yes
Range	QPSK|16QAM|64QAM|256QAM|1024QAM
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:USER<n>:PDSCh:CWONe:MODulation:TYPE`

Couple for CW1 Mod Type

Determines whether or not all the Allocations use the Common Mod Type value for Codeword 1.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:CWONe:MODulation:TYPE:COUPle OFF | ON | 0`

	`| 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:CWONe:MODulation:TYPE:COUPle?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:PDSC:CWON:MOD:TYPE:COUP ON` `:EVM:CCAR0:DLIN:PROF:USER1:PDSC:CWON:MOD:TYPE:COUP?`
Notes	This parameter is applicable only when the instrument supports more than one RF input
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n= 50. If you attempt to remotely set or query a sub op code that is out of range, this results in an error message. Enabled when RB Auto Detect is Off, CW1 Enable is On and Mod Type Couple is ON
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:USER<n>:PDSCh:CWONe:MODulation:TYPE:COUPle`

CW1 Power (dB) (Auto Detect Off)

Sets the Power Boost value for Codeword 1 for all the Allocations when Power Boost Couple is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:CWONe:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:CWONe:PWRBoost?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:PDSC:CWON:PWRB 0` `:EVM:CCAR0:DLIN:PROF:USER1:PDSC:CWON:PWRB?`
Notes	This parameter is applicable only when the instrument supports more than one RF input
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured Max value for n=50 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message
Preset	0 dB
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:USER<n>:PDSCh:CWONe:PWRBoost`

Couple for CW1 Power

Determines whether or not all the Allocations use the Common Power Boost value for Codeword 1.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:CWONe:PWRBoost:COUPle OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:CWONe:PWRBoost:COUPle?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:PDSC:CWON:PWRB:COUP 0` `:EVM:CCAR0:DLIN:PROF:USER1:PDSC:CWON:PWRB:COUP?`
Notes	Applicable only when the instrument supports more than one RF input
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n=50 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:USER<n>:PDSCh:CWONe:PWRBoost:COUPle`

CW1 Power (dB) (Auto Detect On, Power Based Mode, QPSK)

Sets the Power Boost value for PDSCH QPSK Mod Type for Codeword 1 when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QPSK:CWONe:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QPSK:CWONe:PWRBoost?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QPSK:CWON:PWRB 0` `:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QPSK:CWON:PWRB?`
Notes	This parameter is applicable only when the instrument supports more than one RF input
Dependencies	Enabled when RB Auto Detect is On
Preset	0
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:AUTO:PDSCh:QPSK:CWONe:PWRBoost`

CW1 Power (dB) (Auto Detect On, Power Based Mode, 16QAM)

Sets the Power Boost value for PDSCH 16QAM Mod Type for Codeword 1 when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM16:CWONe:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM16:CWONe:PWRBoost?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM16:CWON:PWRB 0` `:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM16:CWON:PWRB?`
Notes	This parameter is applicable only when the instrument supports more than one RF input
Dependencies	Enabled when RB Auto Detect is On
Preset	0
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:AUTO:PDSCh:QAM16:CWONe:PWRBoost`

CW1 Power (dB) (Auto Detect On, Power Based Mode, 64QAM)

Sets the Power Boost value for PDSCH 64QAM Mod Type for Codeword 1 when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM64:CWONe:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM64:CWONe:PWRBoost?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM64:CWON:PWRB 0` `:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM64:CWON:PWRB?`
Notes	Applicable only when the instrument supports more than one RF input
Dependencies	Enabled when RB Auto Detect is On
Preset	0
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:AUTO:PDSCh:QAM64:CWONe:PWRBoost`

CW1 Power (dB) (Auto Detect On, Power Based Mode, 256QAM)

Sets the Power Boost value for PDSCH 256QAM Mod Type for Codeword 1 when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM256:CWONe:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM256:CWONe:PWRBoost?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM256:CWON:PWRB 0` `:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM256:CWON:PWRB?`
Notes	Applicable only when the instrument supports more than one RF input
Dependencies	Enabled when RB Auto Detect is On Available when Higher Order Modulation is enabled
Preset	0
State Saved	Yes
Min	-100
Max	100

CW1 Power (dB) (Auto Detect On, Power Based Mode, 1024QAM)

Sets the Power Boost value for PDSCH 1024QAM Mod Type for Codeword 1 when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM1024:CWONe:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM1024:CWONe:PWRBoost?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM1024:CWON:PWRB 0` `:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM1024:CWON:PWRB?`
Notes	Applicable only when the instrument supports more than one RF input
Dependencies	Enabled when RB Auto Detect is On Available when Higher Order Modulation is enabled
Preset	0
State Saved	Yes
Min	-100
Max	100

CW1 Power (dB) (Auto Detect On, Decoded DCI Mode)

Sets the Power Boost value for the specified user.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:DECoded:PDSCh:CWONe:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:DECoded:PDSCh:CWONe:PWRBoost?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:DEC:PDSC:CWON:PWRB 0`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured Max value for n=50. If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Available when all the following conditions are met: – Direction is Downlink – RB Auto Detect is On – RB Auto Detect Mode is Decoded DCI – Auto-detect Power Levels is OFF – Use "Pre-antenna" EPRE is OFF – Codeword 1 Enable for Decoded User is ON
Preset	0 dB
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:USER<n>:DECoded:PDSCh:CWONe:PWRBoost`

Frame Index (TDD only)

Select the Frame Index for all the Allocations when Frame Index Couple is On.

Enabled when all the following conditions are met.

- RB Auto Detect is Off.
- Multi-Frame Analysis is ON.
- Frame Index Couple is ON.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:FINDex F0 | F1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:FINDex?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:PDSC:FIND F0`

	`:EVM:CCAR0:DLIN:PROF:USER1:PDSC:FIND?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n= 50. If you attempt to remotely set or query a sub op code that is out of range, this results in an error message.
Preset	F0
State Saved	Yes
Range	F0|F1
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:USER<n>:PDSCh:FINDex`

Couple for Frame Index

Sets all the Allocations to use the Common Frame Index value.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:FINDex:COUPle OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:FINDex:COUPle?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:PDSC:FIND:COUP ON` `:EVM:CCAR0:DLIN:PROF:USER1:PDSC:FIND:COUP?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n=50. If you attempt to remotely set or query a sub op code that is out of range, this results in an error message. Enabled when the Mode is LTEATDD, RB Auto Detect is Off, and Multi-Frame Analysis is ON.
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:USER<n>:PDSCh:FINDex:COUPle`

CW0 MCS Index (Auto Detect Off)

Sets the MCS Index value for all the Allocations when auto-detect is off and MCS Index Couple is On.

Specifies the MCS Index for decoding of the PDSCH for the codeword symbols in the absence of PDCCH decoding Downlink Control Information.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:MCS <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:MCS?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:PDSC:MCS 0`

	`:EVM:CCAR0:DLIN:PROF:USER1:PDSC:MCS?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured Max value for n=50. If you attempt to remotely set or query a sub op code that is out of range, this results in an error message. Enabled when RB Auto Detect is Off, MCS Index Couple is ON, and Codeword 0 Enable is ON.
Preset	0
State Saved	Yes
Min	0
Max	63

CW0 MCS Index (Auto Detect On, Power Based Mode, QPSK)

Sets the MCS Index value for PDSCH QPSK Mod Type when RB Auto Detect is on and power-based mode.

Specifies the MCS Index for decoding of the PDSCH for the codeword symbols in the absence of PDCCH decoding Downlink Control Information.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QPSK:MCS <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QPSK:MCS?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QPSK:MCS 0` `:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QPSK:MCS?`
Dependencies	Enabled when RB Auto Detect is On and power-based mode, and Auto Detect Codeword 0 for QPSK|QAM16|QAM64|QAM256|QAM1024 is ON
Preset	0
State Saved	Yes
Min	0
Max	63

CW0 MCS Index (Auto Detect On, Power Based Mode, 16QAM)

Sets the MCS Index value for PDSCH 16QAM Mod Type when RB Auto Detect is On and power-based mode.

Specifies the MCS Index for decoding of the PDSCH for the codeword symbols in the absence of PDCCH decoding Downlink Control Information.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM16:MCS <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM16:MCS?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM16:MCS 0`

	`:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM16:MCS?`
Dependencies	Enabled when RB Auto Detect is On and power-based mode, Auto Detect Codeword 0 for QPSK|QAM16|QAM64|QAM256|QAM1024 is ON
Preset	0
State Saved	Yes
Min	0
Max	63

CW0 MCS Index (Auto Detect On, Power Based Mode, 64QAM)

Sets the MCS Index value for PDSCH 64QAM Mod Type when RB Auto Detect is On and power-based mode.

Specifies the MCS Index for decoding of the PDSCH for the codeword symbols in the absence of PDCCH decoding Downlink Control Information.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM64:MCS <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM64:MCS?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM64:MCS 0` `:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM64:MCS?`
Dependencies	Enabled when RB Auto Detect is On and power-based mode and Auto Detect Codeword 0 for QPSK|QAM16|QAM64|QAM256|QAM1024 is ON
Preset	0
State Saved	Yes
Min	0
Max	63

CW0 MCS Index (Auto Detect On, Power Based Mode, 256QAM)

Sets the MCS Index value for PDSCH 256QAM Mod Type when RB Auto Detect is On and power-based mode.

Specifies the MCS Index for decoding of the PDSCH for the codeword symbols in the absence of PDCCH decoding Downlink Control Information.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM256:MCS <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM256:MCS?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM256:MCS 0` `:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM256:MCS?`
Dependencies	Enabled when RB Auto Detect is On and power-based mode and Auto Detect Codeword 0 for QPSK|QAM16|QAM64|QAM256|QAM1024 is ON

	Available when Higher Order Modulation is On.
Preset	0
State Saved	Yes
Min	0
Max	63

CW0 MCS Index (Auto Detect On, Power Based Mode, 1024QAM)

Sets the MCS Index value for PDSCH 1024QAM Mod Type when RB Auto Detect is On and power-based mode.

Specifies the MCS Index for decoding of the PDSCH for the codeword symbols in the absence of PDCCH decodingDownlink Control Information.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM1024:MCS <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM1024:MCS?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM1024:MCS 0` `:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM1024:MCS?`
Dependencies	Enabled when RB Auto Detect is On and power-based mode and Auto Detect Codeword 0 for QPSK|QAM16|QAM64|QAM256|QAM1024 is ON Available when Higher Order Modulation is enabled
Preset	0
State Saved	Yes
Min	0
Max	63

CW1 MCS Index (Auto Detect Off)

Sets the MCS Index value for Codeword 1 for all the Allocations when CW1 MCS Index Couple is On and auto-detect is off.

Specifies the MCS Index for decoding of the PDSCH for the codeword symbols in the absence of PDCCH decoding Downlink Control Information.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:CWONe:MCS <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:CWONe:MCS?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:PDSC:CWON:MCS 0` `:EVM:CCAR0:DLIN:PROF:USER1:PDSC:CWON:MCS?`
Notes	This parameter is applicable only when the instrument supports more than one RF input
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured Max value for n=50

	If you attempt to remotely set or query a sub op code that is out of range, this results in an error message
Preset	0
State Saved	Yes
Min	0
Max	63

Couple for CW1 MCS Index

Determines whether all the Allocations use the Common MCS Index value for Codeword 1.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:CWONe:MCS:COUPle OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:CWONe:MCS:COUPle?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:PDSC:CWON:MCS:COUP 0` `:EVM:CCAR0:DLIN:PROF:USER1:PDSC:CWON:MCS:COUP?`
Notes	Applicable only when the instrument supports more than one RF input.
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n=50. If you attempt to remotely set or query a sub op code that is out of range, this results in an error message.
Preset	ON
State Saved	Yes

CW1 MCS Index (Auto Detect On, Power Based Mode, QPSK)

Sets the MCS Index value for PDSCH QPSK Mod Type for Codeword 1 when RB Auto Detect is On and power-based mode.

Specifies the MCS Index for decoding of the PDSCH for the codeword symbols in the absence of PDCCH decoding Downlink Control Information.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QPSK:CWONe:MCS <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QPSK:CWONe:MCS?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QPSK:CWON:MCS 0` `:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QPSK:CWON:MCS?`
Notes	Applicable only when the instrument supports more than one RF input.
Dependencies	Enabled when RB Auto Detect is On and power-based mode.

Preset	0
State Saved	Yes
Min	0
Max	63

CW1 MCS Index (Auto Detect On, Power Based Mode, 16QAM)

Sets the MCS Index value for PDSCH 16QAM Mod Type for Codeword 1 when RB Auto Detect is On and power-based mode.

Specifies the MCS Index for decoding of the PDSCH for the codeword symbols in the absence of PDCCH decoding Downlink Control Information.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM16:CWONe:MCS <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM16:CWONe:MCS?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM16:CWON:MCS 0` `:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM16:CWON:MCS?`
Notes	Applicable only when the instrument supports more than one RF input
Dependencies	Enabled when RB Auto Detect is On and power-based mode
Preset	0
State Saved	Yes
Min	0
Max	63

CW1 MCS Index (Auto Detect On, Power Based Mode, 64QAM)

Sets the MCS Index value for PDSCH 64QAM Mod Type for Codeword 1 when RB Auto Detect is On and power-based mode.

Specifies the MCS Index for decoding of the PDSCH for the codeword symbols in the absence of PDCCH decodingDownlink Control Information.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM64:CWONe:MCS <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM64:CWONe:MCS?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM64:CWON:MCS 0` `:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM64:CWON:MCS?`
Notes	This parameter is applicable only when the instrument supports more than one RF input
Dependencies	Enabled when RB Auto Detect is On and power-based mode

Preset	0
State Saved	Yes
Min	0
Max	63

CW1 MCS Index (Auto Detect On, Power Based Mode, 256QAM)

Sets the MCS Index value for PDSCH 256QAM Mod Type for Codeword 1 when RB Auto Detect is On and power-based mode.

Specifies the MCS Index for decoding of the PDSCH for the codeword symbols in the absence of PDCCH decodingDownlink Control Information. A value of 0 indicates that the parameter is not used

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM256:CWONe:MCS <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM256:CWONe:MCS?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM256:CWON:MCS 0` `:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM256:CWON:MCS?`
Notes	This parameter is applicable only when the instrument supports more than one RF input
Dependencies	Enabled when RB Auto Detect is On and power-based mode Available when Higher Order Modulation is enabled
Preset	0
State Saved	Yes
Min	0
Max	63

CW1 MCS Index (Auto Detect On, Power Based Mode, 1024QAM)

Sets the MCS Index value for PDSCH 1024QAM Mod Type for Codeword 1 when RB Auto Detect is On and power-based mode.

Specifies the MCS Index for decoding of the PDSCH for the codeword symbols in the absence of PDCCH decodingDownlink Control Information.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM1024:CWONe:MCS <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:AUTO:PDSCh:QAM1024:CWONe:MCS?`
Example	`:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM1024:CWON:MCS 0` `:EVM:CCAR0:DLIN:PROF:AUTO:PDSC:QAM1024:CWON:MCS?`
Notes	This parameter is applicable only when the instrument supports more than one RF input

Dependencies	Enabled when RB Auto Detect is On and power-based mode Available when Higher Order Modulation is enabled
Preset	0
State Saved	Yes
Min	0
Max	63

PDSCH Per Allocation Parameters

Allows you to set the parameters for specific allocations.

User Channel (Display Only)

Displays the selected User Channel.

Allocation (Display Only)

Displays the Allocation Index.

Add Allocation

Adds a new Allocation after the currently selected Allocation and the new entry becomes the selected Allocation. The parameters for the new Allocation are set to the default values.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:ADD:ALLocation`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:PDSC:ADD:ALL`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. The new Allocation is added to the end of the currently defined Allocation. Disabled once the number of Allocations reaches to 250 (max).
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:USER<n>:PDSCh:ADD:ALLocation`

Delete Allocation

Deletes the currently selected Allocation.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:RBALloc<m>:DELete`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:PDSC:RBAL1:DEL`

<table>
<tr><td>Dependencies</td><td>Disabled when there is only one Allocation.
The range of sub op code <n> values is determined by the number of Users you have configured. The range of sub op code <m> values is determined by the number of Allocations you have configured. Max value for n=50. Max Value for m=250.
If you attempt to delete a Slot that does not exist, an error message is generated.</td></tr>
<tr><td>Backwards Compatibility SCPI</td><td><code>[:SENSe]:EVM:CCARrier0 | … | 4:DLINk:PROFile:USER<n>:PDSCh:ALLocation<m>:DELete (Max value for n=50 and m=50)</code></td></tr>
</table>

RB Start

Sets the Resource Block start boundary of the selected Allocation.

<table>
<tr><td>Remote Command</td><td><code>[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:RBALloc<m>:RB:STARt <integer></code>
<code>[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:RBALloc<m>RB:STARt?</code></td></tr>
<tr><td>Example</td><td><code>:EVM:CCAR0:DLIN:PROF:USER1:PDSC:RBAL1:RB:STAR 0</code>
<code>:EVM:CCAR0:DLIN:PROF:USER1:PDSC:RBAL1:RB:STAR?</code></td></tr>

</table>

RB End

Sets the Resource Block stop boundary of the selected Allocation.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:RBALloc<m>:RB:END <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:RBALloc<m>:RB:END?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:PDSC:RBAL1:RB:END 0` `:EVM:CCAR0:DLIN:PROF:USER1:PDSC:RBAL1:RB:END?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. The range of sub op code <m> values is determined by the number of Allocations you have configured. If you attempt to remotely set or query a sub op code that is out of range, this results in an error message
Couplings	If you attempt to set a RB End value less than the RB Start value, both values are set to the RB End value or clipped to the min or max value if the entered value is out of range
Preset	0
State Saved	Yes
Min	0
Max	Max valude depends on the bandwidth: 5 - Bandwidth 1.4 MHz 14 - Bandwidth 3 MHz 24 - Bandwidth 5 MHz 49 - Bandwidth 10 MHz 74 - Bandwidth 15 MHz 99 - Bandwidth 20 MHz
Backwards Compatibility SCPI	`[:SENSe]:EVM:CCARrier0 | … | 4:DLINk:PROFile:USER<n>:PDSCh:ALLocation<m>:RB:END (Max value for n=50 and m=50)` `[:SENSe]:EVM:DLINk:PROFile:USER<n>:PDSCh:RBALloc<m>:RB:END`

Slot Start

Sets the Slot start boundary of the selected Allocation.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:RBALloc<m>:SLOT:STARt <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:RBALloc<m>:SLOT:STARt?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:PDSC:RBAL1:SLOT:STAR 0` `:EVM:CCAR0:DLIN:PROF:USER1:PDSC:RBAL1:SLOT:STAR?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. The range of sub op code <m> values is determined by the number of Allocations you have configured Max value for n=50. Max Value for m=250 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message
Couplings	If you attempt to set a Slot Start value greater than the Slot End value, both values are set to the Slot

	Start value or clipped to the min or max value if the entered value is out of range
Preset	0
State Saved	Yes
Min	0
Max	19
Backwards Compatibility SCPI	`[:SENSe]:EVM:CCARrier0 | … | 4:DLINk:PROFile:USER<n>:PDSCh:ALLocation<m>:SLOT:STARt (Max value for n=50 and m=50)` `[:SENSe]:EVM:DLINk:PROFile:USER<n>:PDSCh:RBALloc<m>:SLOT:STARt`

Slot End

Sets the Slot end boundary of the selected Allocation.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:RBALloc<m>:SLOT:END <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:RBALloc<m>:SLOT:END?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:PDSC:RBAL1:SLOT:END 1` `:EVM:CCAR0:DLIN:PROF:USER1:PDSC:RBAL1:SLOT:END?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. The range of sub op code <m> values is determined by the number of Allocations you have configured. If you attempt to remotely set or query a sub op code that is out of range, this results in an error message
Couplings	If you attempt to set a Slot End value less than the Slot Start value, both values are set to the Slot End value or clipped to the min or max value if the entered value is out of range
Preset	0
State Saved	Yes
Min	0
Max	19
Backwards Compatibility SCPI	`[:SENSe]:EVM:CCARrier0 | … | 4:DLINk:PROFile:USER<n>:PDSCh:ALLocation<m>:SLOT:END (Max value for n=50 and m=50)` `[:SENSe]:EVM:DLINk:PROFile:USER<n>:PDSCh:RBALloc<m>:SLOT:END`

EPRE

Sets the EPRE value for the selected Allocation.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:RBALloc<m>:EPRE <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:RBALloc<m>:EPRE?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:PDSC:RBAL1:EPRE 0`

	`:EVM:CCAR0:DLIN:PROF:USER1:PDSC:RBAL1:EPRE?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. The range of sub op code <m> values is determined by the number of Allocations you have configured Max value for n=50. Max Value for m=250 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off, Use Per Antenna EPRE is On, EPRE Couple is Off and Add Allocation at least once
Preset	0 dB
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:USER<n>:PDSCh:RBALloc<m>:EPRE`

CW0 Mod Type

Selects the Modulation Type for the selected Allocation.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:RBALloc<m>:MODulation:TYPE QPSK | QAM16 | QAM64 | QAM256 | QAM1024` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:RBALloc<m>:MODulation:TYPE?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:PDSC:RBAL1:MOD:TYPE QPSK` `:EVM:CCAR0:DLIN:PROF:USER1:PDSC:RBAL1:MOD:TYPE?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. The range of sub op code <m> values is determined by the number of Allocations you have configured Max value for n=50. Max Value for m=250 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when Mod Type Couple is Off and Codeword 0 Enable is On QAM256 and QAM1024 options are available only when Higher Order Modulation is On
Preset	QPSK
State Saved	Yes
Range	QPSK|16QAM|64QAM|QAM256|1024QAM
Backwards Compatibility SCPI	`[:SENSe]:EVM:CCARrier0 | … | 4:DLINk:PROFile:USER<n>:PDSCh:ALLocation<m>:MODulation:TYPE QPSK | QAM16 | QAM64 (Max value for n=50 and m=50)` `[:SENSe]:EVM:DLINk:PROFile:USER<n>:PDSCh:RBALloc<m>:MODulation:TYPE`

CW0 Power (dB)

Sets the Power Boost value for the selected Allocation.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:RBALloc<m>:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:RBALloc<m>:PWRBoost?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:PDSC:RBAL1:PWRB 0` `:EVM:CCAR0:DLIN:PROF:USER1:PDSC:RBAL1:PWRB?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. The range of sub op code <m> values is determined by the number of Allocations you have configured. Max value for n=50. Max Value for m=250. If you attempt to remotely set or query a sub op code that is out of range, this results in an error message. Enabled when RB Auto Detect is Off, Use "Per-antenna" EPRE is OFF, Codeword 0 Enable is ON and Power Boost Couple is OFF.
Preset	0 dB
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:CCARrier0 | … | 4:DLINk:PROFile:USER<n>:PDSCh:ALLocation<m>:PWRBoost (Max value for n=50 and m=50)` `[:SENSe]:EVM:DLINk:PROFile:USER<n>:PDSCh:RBALloc<m>:PWRBoost`

CW1 Mod Type

Selects the Modulation Type of Codeword 1 for the selected Allocation.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:RBALloc<m>:CWONe:MODulation:TYPE QPSK | QAM16 | QAM64 | QAM256 | QAM1024` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:RBALloc<m>:CWONe:MODulation:TYPE?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:PDSC:RBAL1:CWON:MOD:TYPE QPSK` `:EVM:CCAR0:DLIN:PROF:USER1:PDSC:RBAL1:CWON:MOD:TYPE?`
Notes	This parameter is applicable only when the instrument supports more than one RF input
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. The range of sub op code <m> values is determined by the number of Allocations you have configured. Max value for n=50. Max Value for m=250 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message QAM256 and QAM1024 options are available only when Higher Order Modulation is On

Preset	QPSK
State Saved	Yes
Range	QPSK|16QAM|64QAM|256QAM|1024QAM
Backwards Compatibility SCPI	`[:SENSe]:EVM:CCARrier0 | … | 4:DLINk:PROFile:USER<n>:PDSCh:ALLocation<m>:CWONe:MODulation:TYPE QPSK | QAM16 | QAM64 (Max value for n=50 and m=50)` `[:SENSe]:EVM:DLINk:PROFile:USER<n>:PDSCh:RBALloc<m>:CWONe:MODulation:TYPE`

CW1 Power (dB)

Sets the Power Boost value of Codeword 1 for the selected Allocation.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:RBALloc<m>:CWONe:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:RBALloc<m>:CWONe:PWRBoost?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:PDSC:RBAL1:CWON:PWRB 0` `:EVM:CCAR0:DLIN:PROF:USER1:PDSC:RBAL1:CWON:PWRB?`
Notes	This parameter is applicable only when the instrument supports more than one RF input
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. The range of sub op code <m> values is determined by the number of Allocations you have configured. Max value for n=50. Max Value for m=250 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message
Preset	0 dB
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:CCARrier0 | … | 4:DLINk:PROFile:USER<n>:PDSCh:ALLocation<m>:CWONe:PWRBoost (Max value for n=50 and m=50)` `[:SENSe]:EVM:DLINk:PROFile:USER<n>:PDSCh:RBALloc<m>:CWONe:PWRBoost`

Frame Index (TDD only)

Specifies the Frame Index for the selected Allocation.

NOTE **Enabled only for the LTE TDD mode.**

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:RBALloc<m>:FINDex F0 | F1`

	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:RBALloc<m>:FINDex?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:PDSC:RBAL1:FIND F0` `:EVM:CCAR0:DLIN:PROF:USER1:PDSC:RBAL1:FIND?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. The range of sub op code <m> values is determined by the number of Allocations you have configured Max value for n=50. Max Value for m=250 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled only for the LTE TDD mode Enabled when RB Auto Detect is Off, Multi –Frame Analysis is ON, and Frame Index Couple is OFF
Preset	F0
State Saved	Yes
Range	F0|F1
Backwards Compatibility SCPI	`[:SENSe]:EVM:CCARrier0	…	4:DLINk:PROFile:USER<n>:PDSCh:ALLocation<m>:FINDex F0	F1 (Max value for n=50 and m=50)` `[:SENSe]:EVM:DLINk:PROFile:USER<n>:PDSCh:RBALloc<m>:FINDex`

Count Number of Users (Remote Command Only)

Returns the number of added users.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:COUNt?`
Example	`:EVM:CCAR0:DLIN:PROF:COUN?`
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:COUNt`

Count Number of PDSCH Allocations (Remote Command Only)

This command returns the number of added PDSCH allocations.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:COUNt?`
Example	`:EVM:CCAR0:DLIN:PROF:USER2:PDSC:COUN?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured If you attempt to remotely set or query a sub op code that is out of range, this results in an error message
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:PROFile:USER<n>:PDSCh:COUNt`

CW0 MCS Index

Sets the MCS Index value for Codeword 0 for the selected Allocation when CW0 MCS Index Couple is Off and auto-detect is off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:RBALloc<m>:MCS <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:RBALloc<m>:MCS?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:PDSC:RBAL1:MCS 0` `:EVM:CCAR0:DLIN:PROF:USER1:PDSC:RBAL1:MCS?`
Dependencies	The range of sub op code <n> values is determined by the number of Users the user has configured. The range of sub op code <m> values is determined by the number of Allocations you have configured Max value for n=50. Max Value for m=250 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off, Codeword 0 Enable is ON and MCS Index Couple is OFF.
Preset	0
State Saved	Yes
Min	0
Max	63

CW1 MCS Index

Sets the MCS Index value for Codeword 1 for the selected Allocation when CW1 MCS Index Couple is Off and auto-detect is off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:RBALloc<m>:CWONe:MCS <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:PROFile:USER<n>:PDSCh:RBALloc<m>:CWONe:MCS?`
Example	`:EVM:CCAR0:DLIN:PROF:USER1:PDSC:RBAL1:CWONe:MCS 0` `:EVM:CCAR0:DLIN:PROF:USER1:PDSC:RBAL1:CWONe:MCS?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. The range of sub op code <m> values is determined by the number of Allocations you have configured. Max value for n=50. Max Value for m=250 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off, Codeword 0 Enable is ON and CW1 MCS Index Couple is OFF
Preset	0
State Saved	Yes

Min	0
Max	63

Edit NB-IoT Channels (NB-IoT only)

This control allows you to set up parameters for NB-IoT Channels.

Cell ID

Shared the LTE Cell ID. See "Cell ID" on page 1469

Reference Component Carrier

This key specifies which E-UTRA component carrier the downlink NB-IoT occupies.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:NIOT:DLINk:INBand:REFerence CC0 | … | CC4` `[:SENSe]:EVM:CCARrier0|…|4:NIOT:DLINk:INBand:REFerence?`
Example	`:EVM:CCAR0:NIOT:DLIN:INB:REF CC1` `:EVM:CCAR0:NIOT:DLIN:INB:REF?`
Dependencies	Enabled when Direction is Downlink and Modes of Operation is In-Band with Same PCI and In-Band with Different PCI. Reference Component Carrier is coupled to Number of Component Carriers. For example, reference configuration list includes CC0~CC1 if the number of Component Carriers is 2.
Preset	CC0
State Saved	Yes
Range	CC0|CC1|CC2|CC3|CC4

Carrier Freq Offset Auto Calc.

The setting indicates whether to open the functionality of NB-IoT Carrier Frequency Offset auto calculation.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:NIOT:DLINk:INBand:FOFFset:CALCulate[:STATe] OFF | ON` `[:SENSe]:EVM:CCARrier0|…|4:NIOT:DLINk:INBand:FOFFset:CALCulate[:STATe]?`
Example	`:EVM:CCAR0:NIOT:DLIN:INB:FOFF:CALC ON` `:EVM:CCAR0:NIOT:DLIN:INB:FOFF:CALC?`
Notes	When the state is ON, the NB-IoT carrier frequency offset can be calculated automatically based on the reference E-UTRA component carrier center frequency and RB Offset which NB-IoT carrier in E-UTRA component carrier. Otherwise, NB-IoT carrier frequency offset needs to set manually

Dependencies	Enabled when Direction is Downlink and Modes of Operation is In-Band with Same PCI and In-Band with Different PCI, and Number of Component Carriers > 1
Preset	OFF
State Saved	Yes
Range	OFF|ON

MPDCCH

This tab provides an alternative way to configure the MPDCCH parameters for eMTC users.

See Edit MPDCCH Control Channels.

Other Control Channels

This control allows you to set up parameters for Other Control Channels.

Channel Profile(Uplink)

This tab contains commonly used functions for channel setup parameters.

RB Auto Detect

See "RB Auto Detect" on page 1499

RB Auto Detect Mode

See "RB Auto Detect Mode" on page 1500

Auto Detect Power Levels

Selects whether or not power levels are auto detected when Direction is Uplink.

When this parameter is set to on, the LTEA demodulator detects the relative uplink channel power levels for PUCCH, PUSCH, SRS and PRACH. When this parameter is set to off, the power levels for uplink channels must be specified.

Remote Command

```
[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO[:DETect]:POWer OFF | ON | 0 |
1
[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO[:DETect]:POWer?
```

Example

```
:EVM:CCAR0:ULIN:PROF:AUTO:POW ON
```

	`:EVM:CCAR0:ULIN:PROF:AUTO:POW?`
Dependencies	Available when Direction is Uplink and RB Auto Detect is On.
Preset	OFF
State Saved	Yes
Range	On|Off
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO[:DETect]:POWer`

Non-Allocated Symbols

Includes the inactive signals in the results.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:PROFile:NALLocation INCLude | EXCLude` `[:SENSe]:EVM:CCARrier0|…|4:PROFile:NALLocation?`
Example	`:EVM:CCAR0:PROF:NALL EXCL` `:EVM:CCAR0:PROF:NALL?`
Couplings	This parameter is same for Downlink and Uplink. When either Downlink Exclude All or Uplink Exclude All is selected, this parameter is set to Exclude.
Preset	EXCLude
State Saved	Yes
Range	Include|Exclude
Backwards Compatibility SCPI	`[:SENSe]:EVM:PROFile:NALLocation`

Copy Auto -> Manual

See "Copy Auto -> Manual" on page 1503.

Edit User Mapping

See "Edit User Mapping" on page 1549.

This is for Uplink.

RB Auto Detect

This tab allows you to set up the parameters for RB Auto Detection.

RB Auto Detect

See "RB Auto Detect" on page 1499

RB Auto Detect Mode

See "RB Auto Detect Mode" on page 1500

Auto Detect Power Levels

See "Auto Detect Power Levels" on page 1617.

User Summary

Add User

Adds a new User and the new entry becomes the selected User. All parameters of channels for the new User are set to the default values.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:ADD:USER`
Example	`:EVM:CCAR0:ULIN:PROF:ADD:USER`
Dependencies	The new User is added at the end of the currently defined Users Disabled once the number of Slots reaches to 50, the max number
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:ADD:USER`

Delete User

Deletes the current selected User.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:DELete`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:DEL`
Notes	Once a User is deleted, subsequent Users are renumbered to keep User numbering sequential
Dependencies	The range of sub op code (n) values is determined by the number of Users you have configured. If you attempt to remotely delete a sub op code that is out of range, this results in an error message Disabled when there is only one User
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:DELete`

Cell ID

Sets uplink user's physical-layer Cell ID when Detection is Man.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:CID <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:CID?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:CID 1` `:EVM:CCAR0:ULIN:PROF:USER1:CID?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off
Preset	0
State Saved	Yes
Min	0
Max	503
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:CID`

Auto Detect Cell ID

Sets uplink user's physical-layer Cell ID when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:CID <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:CID?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:CID 1` `:EVM:CCAR0:ULIN:PROF:AUTO:CID?`
Dependencies	Enabled when RB Auto Detect is On
Preset	0
State Saved	Yes
Min	0
Max	503
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:CID`

RNTI

Sets uplink user's radio network temporary identifier.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:RNTI <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:RNTI?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:RNTI 1` `:EVM:CCAR0:ULIN:PROF:USER1:RNTI?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. If you attempt to remotely set or query a sub op code that is out of range, this results in an error message. Available when Direction is Uplink and RB Auto Detect is Off.
Preset	1
State Saved	Yes
Min	0
Max	65535
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:RNTI`

Auto Detect RNTI

Sets uplink user's radio network temporary identifier.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:RNTI <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:RNTI?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:RNTI 1` `:EVM:CCAR0:ULIN:PROF:AUTO:RNTI?`
Dependencies	Available when Direction is Uplink and RB Auto Detect is On
Preset	0
State Saved	Yes
Min	0
Max	65535
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:RNTI`

Frame No.

Sets uplink user's System Frame Number when Detection is Man.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:SFNumber <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:SFNumber?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:SFN 0` `:EVM:CCAR0:ULIN:PROF:USER1:SFN?`

Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off
Preset	0
State Saved	Yes
Min	0
Max	1023
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:SFNumber`

Auto Detect Frame No.

Sets uplink user's System Frame Number when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:SFNumber <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:SFNumber?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:SFN 0` `:EVM:CCAR0:ULIN:PROF:AUTO:SFN?`
Dependencies	Enabled when RB Auto Detect is On
Preset	0
State Saved	Yes

Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:SFNumber`

Group Hop

Determines if Group Hopping is enabled when RB Auto Detect is Off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:HOPPing:GROup OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:HOPPing:GROup?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:HOPP:GRO OFF` `:EVM:CCAR0:ULIN:PROF:USER1:HOPP:GRO?`
Dependencies	Enabled when RB Auto Detect is Off
Couplings	Enabling Group Hopping disables Sequence Hopping
Preset	OFF

State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:HOPPing:GROup`

Auto Detect Group Hop

Determines if Group Hopping is enabled when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:HOPPing:GROup OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:HOPPing:GROup?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:HOPP:GRO OFF` `:EVM:CCAR0:ULIN:PROF:USER1:HOPP:GRO?`
Dependencies	Enabled when RB Auto Detect is On
Couplings	Enabling Group Hopping disables Sequence Hopping
Preset	OFF
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:HOPPing:GROup`

Seq Hop

Determines if Seq Hopping is enabled when RB Auto Detect is Off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:HOPPing:SEQuence OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:HOPPing:SEQuence?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:HOPP:SEQ OFF` `:EVM:CCAR0:ULIN:PROF:USER1:HOPP:SEQ?`
Dependencies	The range of sub op code <n> values is determined by the number of Users the user has configured Enabled when RB Auto Detect is Off
Couplings	Enabling Sequence Hopping disables Group Hopping
Preset	OFF
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:HOPPing:SEQuence`

Auto Detect Seq Hop

Determines if Seq Hopping is enabled when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:HOPPing:SEQuence OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:HOPPing:SEQuence?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:HOPP:SEQ OFF` `:EVM:CCAR0:ULIN:PROF:AUTO:HOPP:SEQ?`
Dependencies	Enabled when RB Auto Detect is On
Couplings	Enabling Sequence Hopping disables Group Hopping
Preset	OFF
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:HOPPing:SEQuence`

DMRS CSH ID

Sets nDMRS-CSH-Identity-r11 aka. $N^{csh\_DMRS}_{ID}$,when the RB auto detection is OFF. This parameter is used by the calculation of c_{init}, which is used for further calculating the cyclic shift for each slot. The detailed information can be found in section 5.5.2.1.1 in 3GPP TS 36.211.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:DCID <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:DCID?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:DCID 1` `:EVM:CCAR0:ULIN:PROF:USER1:DCID?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. If you attempt to remotely set or query a sub op code that is out of range, this results in an error message The column DMRS CSH ID is only enabled when DMRS CSH ID enable is ON amd the RB auto detection is OFF, and is disabled otherwise
Preset	0
State Saved	Yes
Min	0
Max	109

Auto Detect DMRS CSH ID

Sets uplink user's DMRS CSH ID when the RB auto detection is ON.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:DCID <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:DCID?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:DCID 1`

	`:EVM:CCAR0:ULIN:PROF:AUTO:DCID?`
Dependencies	Enabled when RB auto detection is ON and auto detect DMRS CSH ID enable is ON
Preset	0
State Saved	Yes
Min	0
Max	109

DMRS CSH ID Enable

Determines if DMRS CSH ID is used for calculating cyclic shift for each slot when the RB auto detection is OFF. DMRS CSH ID is not used if this parameter is OFF.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:DCID:ENABle OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:DCID:ENABle?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:DCID:ENAB OFF` `:EVM:CCAR0:ULIN:PROF:USER1:DCID:ENAB?`
Dependencies	Enabled when RB auto detection is OFF
Couplings	Enables DMRS CSH ID when this parameter is ON. Disable DMRS CSH ID otherwise
Preset	OFF
State Saved	Yes

Auto Detect DMRS CSH ID Enable

Determines if DMRS CSH ID is used when the RB auto detection is ON.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:DCID:ENABle OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:DCID:ENABle?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:DCID:ENAB OFF` `:EVM:CCAR0:ULIN:PROF:AUTO:DCID:ENAB?`
Dependencies	Enabled when the RB auto detection is ON
Couplings	Enables auto detect DMRS CSH ID when this parameter is ON. Disable auto detect DMRS CSH ID otherwise
Preset	OFF
State Saved	Yes

User Channel Summary

This tab allows you to set up the parameters for User Channels.

PUSCH Present

Selects whether or not PUSCH exists in the input signal when RB Auto Detect is Off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER1|50:PUSCh:ACTive OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER1|50:PUSCh:ACTive?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUSC:ACT OFF` `:EVM:CCAR0:ULIN:PROF:USER1:PUSC:ACT?`
Dependencies	Enabled when RB Auto Detect is Off All controls for PUSCH parameters are grayed out when this parameter is set to OFF
Preset	OFF
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER1|50:PUSCh:ACTive`

Auto Detect PUSCH Present

Selects whether or not PUSCH exists in the input signal when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUSCh:ACTive OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUSCh:ACTive?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUSC:ACT OFF` `:EVM:CCAR0:ULIN:PROF:AUTO:PUSC:ACT?`
Dependencies	Enabled when RB Auto Detect is On
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:PUSCh:ACTive`

Include PUSCH

Includes PUSCH in the results.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh INCLude | EXCLude` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUSC INCL` `:EVM:CCAR0:ULIN:PROF:USER1:PUSC?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. If

	you attempt to remotely set or query a sub op code that is out of range, this results in an error message. Disabled when RB Auto Detect is On, PUSCH Present is OFF or no slot is added. Only one user can be included at the same time.
Couplings	This parameter is set to Exclude when Uplink Exclude All is selected. When this parameter is set to Include, PUSCH of the other users and PRACH of all users are set to Exclude.
Preset	EXCLude
State Saved	Yes
Range	Include|Exclude
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUSCh`

Include Auto Detect PUSCH

Includes Auto Detected PUSCH in the results.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUSCh INCLude | EXCLude` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUSCh?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUSC INCL` `:EVM:CCAR0:ULIN:PROF:AUTO:PUSC?`
Dependencies	Enabled when RB Auto Detect is On and Auto Detect PUSCH Present is ON
Couplings	This parameter is set to Exclude when Uplink Exclude All is selected. When this parameter is set to Include, Auto Detect PRACH is set to Exclude
Preset	INCLude
State Saved	Yes
Range	Include|Exclude
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:PUSCh`

Include PUSCH DM-RS

Includes PUSCH DM-RS in the results.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:DMRS INCLude | EXCLude` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:DMRS?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUSC:DMRS INCL` `:EVM:CCAR0:ULIN:PROF:USER1:PUSC:DMRS?`

Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off Only one user can be included at the same time
Couplings	This parameter is set to Exclude when Uplink Exclude All is selected When this parameter is set to Include, PUSCH DMRS of the other users and PRACH of all users are set to Exclude
Preset	EXCLude
State Saved	Yes
Range	Include|Exclude
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUSCh:DMRS`

Include Auto Detect PUSCH DM-RS

Includes Auto Detected PUSCH DM-RS in the results.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUSCh:DMRS INCLude | EXCLude` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUSCh:DMRS?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUSC:DMRS INCL` `:EVM:CCAR0:ULIN:PROF:AUTO:PUSC:DMRS?`
Dependencies	Enabled when RB Auto Detect is On
Couplings	This parameter is set to Exclude when Uplink Exclude All is selected. When this parameter is set to Include, Auto Detect PRACH is set to Exclude.
Preset	INCLude
State Saved	Yes
Range	Include|Exclude
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:PUSCh:DMRS`

PUCCH Present

Selects whether or not PUCCH exists in the input signal when RB Auto Detect is Off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:ACTive OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:ACTive?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:ACT OFF`

	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:ACT?`
Dependencies	Enabled when RB Auto Detect is Off All soft keys for PUCCH parameter are grayed out when this parameter is OFF
Preset	OFF
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUCCh:ACTive`

Auto Detect PUCCH Active

Selects whether or not PUCCH exists in the input signal when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:ACTive OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:ACTive?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUCC:ACT OFF` `:EVM:CCAR0:ULIN:PROF:AUTO:PUCC:ACT?`
Dependencies	Enabled when RB Auto Detect is On
Preset	OFF
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:PUCCh:ACTive`

Include PUCCH

Includes PUCCH in the results.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh INCLude | EXCLude` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC INCL` `:EVM:CCAR0:ULIN:PROF:USER1:PUCC?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. If you attempt to remotely set or query a sub op code that is out of range, this results in an error message. Enabled when PUCCH Present is On, one or more slots are added, and RB Auto Detect is Off. Only one user can be included at the same time.
Couplings	This parameter is set to Exclude when Uplink Exclude All is selected. When this parameter is set to Include, PUCCH of another user, PUSCH, PRACH and S-RS are set to Exclude.
Preset	EXCLude

State Saved	Yes
Range	Include|Exclude
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUCCh`

Include Auto Detect PUCCH

Includes Auto Detected PUCCH in the results.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh INCLude | EXCLude` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUCC INCL` `:EVM:CCAR0:ULIN:PROF:AUTO:PUCC?`
Dependencies	Enabled when RB Auto Detect is On and Auto Detect PUCCH Present is On.
Couplings	This parameter is set to Exclude when Uplink Exclude All is selected. When this parameter is set to Include, Auto Detect PRACH is set to Exclude.
Preset	EXCLude
State Saved	Yes
Range	Include|Exclude
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:PUCCh`

Include PUCCH DM-RS

Includes PUCCH DM-RS in the results.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:DMRS INCLude | EXCLude` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:DMRS?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:DMRS INCL` `:EVM:CCAR0:ULIN:PROF:USER1:PUCC:DMRS?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off Only one user can be included at the same time
Couplings	This parameter is set to Exclude when Uplink Exclude All is selected When this parameter is set to Include, PUCCH DMRS of the other users and PRACH of all users are set to Exclude

Preset	EXCLude
State Saved	Yes
Range	Include|Exclude
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUCCh:DMRS`

Include Auto Detect PUCCH DM-RS

Includes Auto Detected PUSCH DM-RS in the results.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:DMRS INCLude | EXCLude` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:DMRS?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUCC:DMRS INCL` `:EVM:CCAR0:ULIN:PROF:AUTO:PUCC:DMRS?`
Dependencies	Enabled when RB Auto Detect is On
Couplings	This parameter is set to Exclude when Uplink Exclude All is selected When this parameter is set to Include, Auto Detect PRACH is set to Exclude
Preset	EXCLude
State Saved	Yes
Range	Include|Exclude
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:PUCCh:DMRS`

SRS Present

Selects whether or not S-RS exists in the input signal when RB Auto Detect is Off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER1|50:SRS:ACTive OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER1|50:SRS:ACTive?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:SRS:ACT OFF` `:EVM:CCAR0:ULIN:PROF:USER1:SRS:ACT?`
Dependencies	Enabled when RB Auto Detect is Off When this parameter is set to OFF, all of soft keys for S-RS parameter are grayed out
Preset	OFF
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER1|50:SRS:ACTive`

Auto Detect SRS Active

Selects whether or not S-RS exists in the input signal when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:SRS:ACTive OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:SRS:ACTive?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:SRS:ACT OFF` `:EVM:CCAR0:ULIN:PROF:AUTO:SRS:ACT?`
Dependencies	Enabled when RB Auto Detect is On
Preset	OFF
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:SRS:ACTive`

Include SRS

Includes S-RS in the results.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:SRS INCLude | EXCLude` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:SRS?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:SRS INCL` `:EVM:CCAR0:ULIN:PROF:USER1:SRS?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off and S-RS Active is ON
Couplings	This parameter is set to Exclude when Uplink Exclude All is selected When this parameter is set to Include, PRACH is set to Exclude
Preset	EXCLude
State Saved	Yes
Range	Include|Exclude
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:SRS`

Include Auto Detect SRS

Includes Auto Detected S-RS in the results.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:SRS INCLude | EXCLude` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:SRS?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:SRS INCL` `:EVM:CCAR0:ULIN:PROF:AUTO:SRS?`
Dependencies	Enabled when RB Auto Detect is On and Auto Detect S-RS Active is ON
Couplings	This parameter is set to Exclude when Uplink Exclude All is selected When this parameter is set to Include, Auto Detect PRACH is set to Exclude
Preset	EXCLude
State Saved	Yes
Range	Include|Exclude
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:SRS`

PRACH Present

Selects whether or not PRACH exists in the input signal when RB Auto Detect is Off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PRACh:ACTive OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PRACh:ACTive?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PRAC:ACT OFF` `:EVM:CCAR0:ULIN:PROF:USER1:PRAC:ACT?`
Dependencies	Enabled when RB Auto Detect is Off When this parameter is set to OFF, all of soft keys for PRACH parameter are grayed out
Preset	OFF
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PRACh:ACTive`

Auto Detect PRACH Active

Selects whether or not PRACH exists in the input signal when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PRACh:ACTive OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PRACh:ACTive?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PRAC:ACT OFF` `:EVM:CCAR0:ULIN:PROF:AUTO:PRAC:ACT?`
Dependencies	Enabled when RB Auto Detect is On
Preset	OFF

State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:PRACh:ACTive`

Include PRACH

Includes PRACH in the results.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PRACh INCLude | EXCLude` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PRACh?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PRAC INCL` `:EVM:CCAR0:ULIN:PROF:USER1:PRAC?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when Direction is Manual and PRACH Present is ON
Couplings	This parameter is set to Exclude when Uplink Exclude All is selected When this parameter is set to Include, PUSCH, PUCCH and S-RS are set to Exclude
Preset	EXCLude
State Saved	Yes
Range	Include|Exclude
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PRACh`

PUSCH

NOTE **To enable the parameter settings when RB Auto Detect is Off, Add User in the User Summary and Add Allocation in PUSCH Per Slot Parameters.**

User Channel (Display Only)

Displays the selected User Channel.

Auto Sync

When Auto Sync is set to On, the demod algorithm may automatically determine the best time slot to synchronize to. This approach simplifies parameter entry and provides easier setup. However, the complexity of the algorithm makes it rather slow and prone to errors in the presence of noise.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER1|50:PUSCh:SSLot:AUTO OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER1|50:PUSCh:SSLot:AUTO?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUSC:SSL:AUTO 1` `:EVM:CCAR0:ULIN:PROF:USER1:PUSC:SSL:AUTO?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n=50. If you attempt to remotely set or query a sub op code that is out of range, this results in an error message PUSCH Sync Slot is enabled when PUSCH Present is ON, RB Auto Detect is Off and PUSCH Auto Sync is OFF
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUSCh:SSLot` `[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUSCh:SSLot:AUTO`

Sync Slot

Sets the Sync Slot for all PUSCH Slots when RB Auto Detect is Off.

Sync Slot specifies the index of the slot to use for initial synchronization when PUSCH is selected as the Sync Type. The demodulator searches for the slot with the characteristics specified in Per-slot Parameters and the slot that matches the Per-slot Parameters with the highest correlation is assigned the slot number given in the Sync Slot parameter.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER1|50:PUSCh:SSLot <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER1|50:PUSCh:SSLot?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUSC:SSL 1` `:EVM:CCAR0:ULIN:PROF:USER1:PUSC:SSL?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n=50 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message PUSCH Sync Slot is enabled when PUSCH Active is ON, RB Auto Detect is Off and PUSCH Auto Sync is OFF
Preset	0
State Saved	Yes
Min	0
Max	19

Auto Detect PUSCH Sync Slot

Sets the Sync Slot for all PUSCH Slots when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUSCh:SSLot <integer>`
	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUSCh:SSLot?`
	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUSCh:SSLot:AUTO OFF | ON | 0 | 1`
	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUSCh:SSLot:AUTO?`

Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUSC:SSL 1`
	`:EVM:CCAR0:ULIN:PROF:AUTO:PUSC:SSL?`
	`:EVM:CCAR0:ULIN:PROF:AUTO:PUSC:SSL:AUTO 1`
	`:EVM:CCAR0:ULIN:PROF:AUTO:PUSC:SSL:AUTO?`

Dependencies	Auto Detect PUSCH Sync Slot is enabled when Auto Detect PUSCH Present is ON, RB Auto Detect is On and Auto Detect PUSCH Sync Slot Auto is OFF Auto Detect PUSCH Sync Slot Auto is enabled when Auto Detect PUSCH Present is ON and RB Auto Detect is On
Preset	0 ON
State Saved	Yes Yes
Min	0
Max	19
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:PUSCh:SSLot` `[:SENSe]:EVM:ULINk:PROFile:AUTO:PUSCh:SSLot:AUTO`

Use CS from DCI

Indicates whether $n_{DMRS}(2)$ for selected user mapping is given by the cyclic shift for DMRS field in most recent uplink-related DCI. See Section 5.5.2.1.1 of 3GPP TS 36.211 for more information.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER1|50:PUSCh:CSFDci OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER1|50:PUSCh:CSFDci?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUSCh:CSFD ON` `:EVM:CCAR0:ULIN:PROF:USER1:PUSCh:CSFD?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. If you attempt to remotely set or query a sub op code that is out of range, this results in an error

	message. When this parameter is on, CS Field and Layer(λ) are enabled n DMRS (2) and OCC are disabled When this parameter is off, CS Field and Layer(λ)are disabled and n DMRS (2) and OCC are enabled
Preset	OFF
State Saved	Yes

Auto Detect Use CS from DCI

Indicates when RB Auto Detect is Off, whether $n_{DMRS}(2)$ used by selected user mapping is given by the cyclic shift for DMRS field in most recent uplink-related DCI. See Section 5.5.2.1.1 of 3GPP TS 36.211 for more information.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUSCh:CSFDci OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUSCh:CSFDci?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUSC:CSFD ON` `:EVM:CCAR0:ULIN:PROF:AUTO:PUSC:CSFD?`
Dependencies	If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is On, Auto Detect DMRS Params is On, and Auto Detect PUSCH Present is ON
Preset	OFF
State Saved	Yes

CS Field

Sets the value of Cyclic Shift Field in uplink related DCI format, See Section 5.5.2.1.1 of 3GPP TS 36.211 for more information.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:CSField <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:CSField?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUSC:CSF 1` `:EVM:CCAR0:ULIN:PROF:USER1:PUSC:CSF?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n = 50 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off, DMRS Params is On, and PUSCH Present is ON
Preset	0

State Saved	Yes
Min	0
Max	7

Auto Detect CS Field

Sets the value of Cyclic Shift Field in uplink related DCI format used by the selected user mapping when RB Auto Detect is On, See Section 5.5.2.1.1 of 3GPP TS 36.211 for more information.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUSCh:CSField <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUSCh:CSField?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUSC:CSF 1` `:EVM:CCAR0:ULIN:PROF:AUTO:PUSC:CSF?`
Dependencies	If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is On, Auto Detect DMRS Params is On, and Auto Detect PUSCH Present is ON
Preset	0
State Saved	Yes
Min	0
Max	7

Layer Index

Sets the value of Layer Index with which PUSCH demodulation reference signal associates. See Section 5.5.2.1.1 of 3GPP TS 36.211 for more information.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:LINDex <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:LINDex?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUSC:LIND 1` `:EVM:CCAR0:ULIN:PROF:USER1:PUSC:LIND?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n = 50 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off, DMRS Params is On, and PUSCH Present is ON
Preset	0
State Saved	Yes

Min	0
Max	3

Auto Detect PUSCH Layer Index

Sets the value of Layer Index with which PUSCH demodulation reference signal associates when RB Auto Detect is On. See Section 5.5.2.1.1 of 3GPP TS 36.211 for more information.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUSCh:LINDex <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUSCh:LINDex?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUSC:LINDex 1` `:EVM:CCAR0:ULIN:PROF:AUTO:PUSC:LINDex?`
Dependencies	If you attempt to remotely set or query a sub op code that is out of range, this results in an error message. Enabled when RB Auto Detect is On, Auto Detect DMRS Params is On, and Auto Detect PUSCH Present is ON.
Preset	0
State Saved	Yes
Min	0
Max	3

N DMRS(2)

Sets the value of $n_{DMRS}(2)$ used by the selected user mapping when RB Auto Detect is Off. The value is used to calculate the cyclic shift when DMRS parameters is on.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:DMRS:TWO <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:DMRS:TWO?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUSC:DMRS:TWO 1` `:EVM:CCAR0:ULIN:PROF:USER1:PUSC:DMRS:TWO?`
Notes	The values [0|2|3|4|6|8|9|10] of n DMRS(2) are valid according to 3GPP 36.211 table 5.5.2.1.1-2
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n = 50. If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off, DMRS Params is On, and PUSCH Present is ON
Preset	0
State Saved	Yes
Min	0

Max	10
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUSCh:DMRS:TWO`

Auto Detect n DMRS (2)

Sets the value of $n_{DMRS}(2)$ used by the selected user mapping when RB Auto Detect is On. The value is used to calculate the cyclic shift when Auto-Detect DMRS parameters is on.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUSCh:DMRS:TWO <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUSCh:DMRS:TWO?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUSC:DMRS:TWO 1` `:EVM:CCAR0:ULIN:PROF:AUTO:PUSC:DMRS:TWO?`
Notes	The values [0|2|3|4|6|8|9|10] of n DMRS(2) are valid according to 3GPP 36.211 table 5.5.2.1.1-2
Dependencies	If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is On and Auto Detect DMRS Params is On, and Auto Detect PUSCH Present is ON
Preset	0
State Saved	Yes
Min	0
Max	10
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:PUSCh:DMRS:TWO`

OCC

Selects the Orthogonal Cover Code to construct the PUSCH demodulation reference signal sequence. When P1P1 is selected, orthogonal sequence is [1 1]. When P1M1 is selected, orthogonal sequence is [1 -1]. See Section 5.5.2.1.1 of 3GPP TS 36.211 for more information.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:OCCode P1P1 | P1M1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:OCCode?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUSC:OCC P1P1` `:EVM:CCAR0:ULIN:PROF:USER1:PUSC:OCC?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured If you attempt to remotely set or query a sub op code that is out of range, this results in an error message

	Available when RB Auto Detect is Off
Preset	P1P1
State Saved	Yes
Range	P1P1|P1M1

Auto Detect Orthogonal Cover Code

Selects the Orthogonal Cover Code, which is used to construct the PUSCH demodulation reference signal sequence, when RB Auto Detect is On. See Section 5.5.2.1.1 of 3GPP TS 36.211 for more information. (3GPP TS 36.211 5.3.4)

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUSCh:OCCode P1P1 | P1M1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUSCh:OCCode?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUSC:OCC P1P1` `:EVM:CCAR0:ULIN:PROF:AUTO:PUSC:OCC?`
Dependencies	Available when RB Auto Detect is On and Auto Detect PUSCH Present is ON
Preset	P1M1
State Saved	Yes
Range	P1P1|P1M1

Auto-calc. per-slot Params

Determines if all DMRS parameters are common to all Slots or if they are to be defined on a per Slot basis when RB Auto Detect is Off.

Enabling this parameter causes DMRS Group, DMRS Seq, and DMRS Cyclic Shift to be set automatically using $n_{DMRS}(1)$, $n_{DMRS}(2)$ and DSS.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:DMRS:PARams OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:DMRS:PARams?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUSC:DMRS:PAR OFF` `:EVM:CCAR0:ULIN:PROF:USER1:PUSC:DMRS:PAR?`
Notes	This control label was “DMRS Params” before XA21
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured If you attempt to remotely set or query a sub op code that is out of range, this results in an error message When this parameter is on, n DMRS (1), n DMRS (2) and Δ SS are enabled and DMRS Group (u), DMRS Seq (v) and DMRS Cyclic Shift are disabled When this parameter is off, n DMRS (1), n DMRS (2) and Δ SS are disabled and DMRS Group (u),

	DMRS Seq (v) and DMRS Cyclic Shift are enabled
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUSCh:DMRS:PARams`

Auto Detect Auto-calc. per-slot Params

Determines if all DMRS parameters to be used are common to all Slots or if they are to be defined on a per Slot basis when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUSCh:DMRS:PARams OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUSCh:DMRS:PARams?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUSC:DMRS:PAR OFF` `:EVM:CCAR0:ULIN:PROF:AUTO:PUSC:DMRS:PAR?`
Dependencies	When this parameter is on n DMRS (1), n DMRS (2) and Δ SS are enabled and DMRS Group (u), DMRS Seq (v) and DMRS Cyclic Shift are disabled When this parameter is off, n DMRS (1), n DMRS (2) and Δ SS are disabled and DMRS Group (u), DMRS Seq (v) and DMRS Cyclic Shift are enabled
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:PUSCh:DMRS:PARams`

N DMRS(1)

Sets the value of $n_{DMRS}(1)$ used by the selected user mapping when RB Auto Detect is Off. The value is used to calculate the cyclic shift when DMRS parameters is on.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:DMRS:ONE <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:DMRS:ONE?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUSC:DMRS:ONE 1` `:EVM:CCAR0:ULIN:PROF:USER1:PUSC:DMRS:ONE?`
Notes	The values [0|2|3|4|6|8|9|10] of N DMRS(1) are valid according to 3GPP 36.211 table 5.5.2.1.1-2
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n = 50 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off, DMRS Params is On, and PUSCH Present is ON

Preset	0
State Saved	Yes
Min	0
Max	10
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUSCh:DMRS:ONE`

Auto Detect n DMRS (1)

Sets the value of $n_{DMRS}(1)$ used by the selected user mapping when RB Auto Detect is On. The value is used to calculate the cyclic shift when Auto-Detect DMRS parameters is on.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUSCh:DMRS:ONE <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUSCh:DMRS:ONE?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUSC:DMRS:ONE 1` `:EVM:CCAR0:ULIN:PROF:AUTO:PUSC:DMRS:ONE?`
Notes	The values [0|2|3|4|6|8|9|10] of n DMRS(1) are valid according to 3GPP 36.211 table 5.5.2.1.1-2
Dependencies	If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is On, Auto Detect DMRS Params is On, and Auto Detect PUSCH Present is ON
Preset	0
State Saved	Yes
Min	0
Max	10
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:PUSCh:DMRS:ONE`

Delta SS

Sets the value of Delta SS used by the selected user mapping when RB Auto Detect is Off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:DSS <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:DSS?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUSC:DSS 1` `:EVM:CCAR0:ULIN:PROF:USER1:PUSC:DSS?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max

	value for n = 50 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off, DMRS Params is On, and PUSCH Present is ON
Preset	0
State Saved	Yes
Min	0
Max	29
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUSCh:DSS`

Auto Detect Delta SS

Sets the value of Delta SS used by the selected user mapping when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUSCh:DSS <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUSCh:DSS?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUSC:DSS 1` `:EVM:CCAR0:ULIN:PROF:AUTO:PUSC:DSS?`
Dependencies	If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is On, Auto Detect DMRS Params is On, and Auto Detect PUSCH Present is ON
Preset	0
State Saved	Yes
Min	0
Max	29
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:PUSCh:DSS`

N PUSCH ID Enable

Determines if N^{PUSCH}_{ID} is used for calculating cyclic shift for each slot when RB auto detection is OFF. N^{PUSCH}_{ID} is not used if this parameter is OFF.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:ID:ENABle OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:ID:ENABle?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUSC:ID:ENAB OFF`

	`:EVM:CCAR0:ULIN:PROF:USER1:PUSC:ID:ENAB?`
Dependencies	Enabled when RB auto detection is OFF and Auto-calc. Per-slot Params is ON
Couplings	Enables N PUSCH ID when the value of this parameter is On. Disables N PUSCH ID otherwise
Preset	OFF
State Saved	Yes
Range	On|Off

Auto Detect N PUSCH ID Enable

Determines if N^{PUSCH}_{ID} is used when the RB auto detection is ON.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUSCh:ID:ENABle OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUSCh:ID:ENABle?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUSC:ID:ENAB OFF` `:EVM:CCAR0:ULIN:PROF:AUTO:PUSC:ID:ENAB?`
Dependencies	Enabled when RB auto detection is ON and Auto-calc. Per-slot Params is ON
Couplings	Enables Auto Detect N PUSCH ID when this parameter is ON. Disables Auto Detect N PUSCH ID otherwise
Preset	OFF
State Saved	Yes
Range	On|Off

N PUSCH ID

Sets N^{PUSCH}_{ID},when RB auto detection is OFF. This parameter is used by the calculation of c_{init}, which is used for further calculating the cyclic shift for each slot. The detailed information can be found in section 5.5.1.5 in 3GPP TS 36.211.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:ID <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:ID?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUSC:ID 1` `:EVM:CCAR0:ULIN:PROF:USER1:PUSC:ID?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. If you attempt to remotely set or query a sub op code that is out of range, this results in an error message The control is enabled only when the following conditions are met: Use N PUSCH ID is ON, RB auto detection is OFF, Auto-calc. per-slot Parm. is ON,

	and is disabled otherwise
Preset	0
State Saved	Yes
Min	0
Max	509

Auto Detect N PUSCH ID

Sets N^{PUSCH}_{ID},when RB auto detection is ON.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUSCh:ID <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUSCh:ID?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUSCh:ID 1` `:EVM:CCAR0:ULIN:PROF:AUTO:PUSCh:ID?`
Dependencies	The control is enabled only when the following conditions are met: Auto Detect N PUSCH ID Enable is ON, RB auto detection is ON, Auto-calc. per-slot Parm. is ON, and is disabled otherwise
Preset	0
State Saved	Yes
Min	0
Max	509

Frequency Hopping

Selects the frequency hopping type or disables frequency hopping. (3GPP TS 36.211 V8.5.0 5.3.4)

The following table shows the combination and its corresponding Freq Hopping selection.

NOTE **“Type 1, +1/4” and “Type 1, -1/4” are available only when Bandwidth is set to 10 MHz or higher.**

	Frequency Hopping				
	Off	Type1, +1/4	Type 1, -1/4	Type 1, +1/2	Type 2

Frequency Hopping Mode	Intra- SF	OFF	T1ISF00	T1ISF01	T1ISF10	T2ISF
	Intra/Inter-SF	OFF	T1IISF00	T1IISF01	T1IISF10	T2IISF

<table>
<tr><td>Remote Command</td><td><code>[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER1|50:PUSCh:FHOPping OFF | T1ISF00 | T1IISF00 | T1ISF01 | T1IISF01 | T1ISF10 | T1IISF10 | T2ISF | T2IISF</code>

</table>

Hopping Mode

Selects the frequency hopping mode. (3GPP TS 36.211 V8.5.0 5.3.4).

Dependencies	Available when PUSCH Present is ON
Preset	OFF
State Saved	Yes
Range	Inter-SF|Intra/Inter-SF

Hopping Offset

Sets the value of Hopping Offset (N_{RB}^{HO}) when RB Auto Detect is Off. Hopping Offset is the offset used for PUSCH frequency hopping, expressed in number of resource blocks. (3GPP TS 36.211 V8.5.0 5.3.4).

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:NRBHo <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:NRBHo?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUSC:NRBH 1` `:EVM:CCAR0:ULIN:PROF:USER1:PUSC:NRBH?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. If you attempt to remotely set or query a sub op code that is out of range, this results in an error message. Enabled when RB Auto Detect is Off, Frequency Hopping is not OFF, and PUSCH Present is ON.
Couplings	Hopping Offset should always be less than or equal to the total RB number of the selected Bandwidth
Preset	0
State Saved	Yes
Min	0
Max	Max value depends on the bandwidth: 6 - Bandwidth 1.4 MHz 15 - Bandwidth 3 MHz 25 - Bandwidth 5 MHz 50 - Bandwidth 10 MHz 75 - Bandwidth 15 MHz 100 - Bandwidth 20 MHz
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUSCh:NRBHo`

Auto Detect Hopping Offset

Sets the value of Hopping Offset (N_{RB}^{HO}) when RB Auto Detect is On. Hopping Offset is the offset used for PUSCH frequency hopping, expressed in number of resource blocks. (3GPP TS 36.211 V8.5.0 5.3.4).

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUSCh:NRBHo <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUSCh:NRBHo?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUSC:NRBH 1` `:EVM:CCAR0:ULIN:PROF:AUTO:PUSC:NRBH?`
Dependencies	Enabled when RB Auto Detect is On, Auto Detect Frequency Hopping is not OFF, and Auto Detect PUSCH Present is ON.
Couplings	Hopping Offset should always be less than or equal to the total RB number of the selected Bandwidth.
Preset	0
State Saved	Yes
Min	0
Max	Max value depends on the bandwidth: 6 - Bandwidth 1.4 MHz 15 - Bandwidth 3 MHz 25 - Bandwidth 5 MHz 50 - Bandwidth 10 MHz 75 - Bandwidth 15 MHz 100 - Bandwidth 20 MHz
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:PUSCh:NRBHo`

Number of SubBand

Sets the number of sub-bands (N_{sb}) when RB Auto Detect is Off. (3GPP TS 36.211 V8.5.0 5.3.4).

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:NSB <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:NSB?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUSC:NSB 1` `:EVM:CCAR0:ULIN:PROF:USER1:PUSC:NSB?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. If you attempt to remotely set or query a sub op code that is out of range, this results in an error message. Enabled when RB Auto Detect is Off, Frequency Hopping is set to either Type2InterSF or Type2InterIntraSF, and PUSCH Present is ON.
Couplings	Nsb should always be less than or equal to the total RB number of the selected Bandwidth
Preset	1
State Saved	Yes
Min	1

Max	4
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUSCh:NSB`

Auto Detect Number of SubBand

Sets the Number of Sub-bands (N_{sb}) when RB Auto Detect is On. (3GPP TS 36.211 V8.5.0 5.3.4).

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUSCh:NSB <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUSCh:NSB?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUSC:NSB 1` `:EVM:CCAR0:ULIN:PROF:AUTO:PUSC:NSB?`
Dependencies	Enabled when RB Auto Detect is On, Auto Detect Frequency Hopping is set to either Type2InterSF or Type2InterIntraSF, and Auto Detect PUSCH Present is ON
Couplings	Nsb should always be less than or equal to the total RB number of the selected Bandwidth
Preset	1
State Saved	Yes
Min	1
Max	4
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:PUSCh:NSB`

PUSCH Per Slot Parameters

When the Couple checkbox next to a parameter is checked, the parameter of this allocation couples to the common slot parameter, as shown in the second row of Common. Common parameters apply to all RB allocations.

When Couple is unchecked, this allocation uses its specific slot parameter, as shown in the third row with specific Slot position.

User Channel (Display Only)

See "User Channel (Display Only)" on page 1634

Allocation (Display Only)

This parameter shows the selected Allocation in the PUSCH allocation list. This value equals the Allocation Index plus one.

Add Allocation

Adds a new allocation in the slot position specified, if available. The parameters for the new allocation are set to the default values. It is put into a collection of allocations in ascending order of slot position. The SCPI commands that follow are used to set slot allocation parameters, such as RB start and end. They all contain the mnemonic SLOT<m>, where <m> is an index into the collection of allocations. The index ranges from 0 to a maximum of 39.

NOTE **The Allocation Iindex is not the same as the Slot Position.**

To avoid confusion, you should make PUSCH allocations in ascending order of slot position.

For example, if you wished to add 4 allocations for User1 at slot positions 2, 4, 7, and 10, use the following commands in order:

```
EVM:CCAR0:ULIN:PROF:USER1:PUSC:ADD:SLOT 2
EVM:CCAR0:ULIN:PROF:USER1:PUSC:ADD:SLOT 4
EVM:CCAR0:ULIN:PROF:USER1:PUSC:ADD:SLOT 7
EVM:CCAR0:ULIN:PROF:USER1:PUSC:ADD:SLOT 10
```

You now have four allocations. Allocation 0 is at slot position 2, allocation 1 at slot position 4, allocation 2 at slot position 7, and allocation 3 at slot position 10. The allocations are referenced as SLOT0, SLOT1, SLOT2, and SLOT3 in the commands that follow. For example, if you want to verify the slot position of the third allocation, send the query:

```
EVM:CCAR0:ULIN:PROF:USER1:PUSC:SLOT2:POS?
```

This returns 7 for the example above.

Note that if you delete an allocation, the indices of the allocations above it reduce by 1. To continue the previous example, if you send the command:

```
EVM:CCAR0:ULIN:PROF:USER1:PUSC:SLOT1:DEL
```

This removes the allocation at slot position 4. The allocations at slot positions 7 and 10 are now referenced as SLOT1 and SLOT2, whereas before they were referenced as SLOT2 and SLOT3.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER1|50:PUSCh:ADD:SLOT <integer>`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUSC:ADD:SLOT 0`
Notes	The control for this parameter is an Immediate Action control. The value that is passed in by the SCPI command enables the user to position the allocation at a particular slot
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured If you attempt to add a Slot to a User and the slot is already allocated, an error message is generated

	Disabled once the number of Slots reaches to 40, the max number
Preset	0
State Saved	Yes
Min	0
Max	19
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUSCh:ADD:SLOT`

Delete Allocation

Deletes the currently selected slot allocation.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:SLOT<m>:DELete`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUSC:SLOT1:DEL`
Notes	The index <m> in the above SCPI command is the allocation index, not the slot position. See the "Add Allocation" on page 1651 command for an explanation of the difference
Dependencies	Disabled when there is only one Slot. The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n=50 The range of sub op code <m> values is determined by the number of Slots you have configured. The range of <m> is 0 – 39. If you attempt to delete a Slot that does not exist, an error message is generated
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUSCh:SLOT<m>:DELete`

Slot Up

Moves the currently selected Slot up.

See also "Slot Position (Remote Command Only)" on page 1653 query.

Dependencies	Disabled when there are no Slots defined or if the slot is at Slot19

Slot Down

Moves the currently selected Slot down .

See also "Slot Position (Remote Command Only)" on page 1653 query.

Dependencies	Disabled when there are no Slots defined or if the slot is at Slot0

Slot Position (Remote Command Only)

Queries the PUSCH slot start position.

This parameter is shown as in Slot column. You can use Slot Up or Slot Down to adjust the position.

When a slot is assigned to a RB allocation, the Slot Position is binded to that Allocation Index.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:SLOT<m>:POSition?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUSC:SLOT0:POS?`
Notes	The index <m> in the above SCPI command is the allocation index, not the slot position. See "Add Allocation" on page 1651 command for an explanation of the difference
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. The range of sub op code <m> values is determined by the number of Slots you have configured. Max value for n = 50. The range of sub op code <m> values is 0 – 39.

Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUSCh:SLOT<m>:POSition?`

RB Start Common

Sets the Start Resource Block for all the PUSCH Slots when RB Start Couple is On and when RB Auto Detect is Off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:RB:STARt <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:RB:STARt?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUSC:RB:STAR 0` `:EVM:CCAR0:ULIN:PROF:USER1:PUSC:RB:STAR?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n = 50 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off, RB Start Couple is ON, and PUSCH Present is ON
Couplings	If you attempt to set a RB Start value greater than the RB Stop value, both values are set to the RB Start value or clipped to the min or max value if the entered value is out of range
Preset	0

State Saved	Yes
Min	0
Max	Max value depends on the bandwidth: 5 - Bandwidth 1.4 MHz 14 - Bandwidth 3 MHz 24 - Bandwidth 5 MHz 49 - Bandwidth 10 MHz 74 - Bandwidth 15 MHz 99 - Bandwidth 20 MHz
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUSCh:RB:STARt`

Auto Detect RB Start

Sets the Start Resource Block for all the PUSCH Slots when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUSCh:RB:STARt <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUSCh:RB:STARt?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUSC:RB:STAR 0` `:EVM:CCAR0:ULIN:PROF:AUTO:PUSC:RB:STAR?`
Dependencies	Enabled when RB Auto Detect is On and Auto Detect PUSCH Auto Sync Slot is OFF, and Auto Detect PUSCH Present is ON
Couplings	If you attempt to set a RB Start value greater than the RB Stop value, both values are set to the RB Start value or clipped to the min or max value if the entered value is out of range
Preset	0
State Saved	Yes
Min	0
Max	Max value depends on the bandwidth: 5 - Bandwidth 1.4 MHz 14 - Bandwidth 3 MHz 24 - Bandwidth 5 MHz 49 - Bandwidth 10 MHz 74 - Bandwidth 15 MHz 99 - Bandwidth 20 MHz
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:PUSCh:RB:STARt`

RB Start Couple

Determines whether or not all the PUSCH Slots use the Common RB Start value.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:RB:STARt:COUPle OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:RB:STARt:COUPle?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUSC:RB:STAR:COUP ON` `:EVM:CCAR0:ULIN:PROF:USER1:PUSC:RB:STAR:COUP?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n = 50. If you attempt to remotely set or query a sub op code that is out of range, this results in an error message. Enabled when RB Auto Detect is Off, and PUSCH Present is ON.
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUSCh:RB:STARt:COUPle`

RB Start Slot

Sets the Start Resource Block for the selected PUSCH Slot.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:SLOT<m>:RB:STARt <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:SLOT<m>:RB:STARt?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUSC:SLOT0:RB:STAR 0` `:EVM:CCAR0:ULIN:PROF:USER1:PUSC:SLOT0:RB:STAR?`
Notes	The index <m> in the above SCPI command is the allocation index, not the slot position. See the "Add Allocation" on page 1651 command for an explanation of the difference.
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. The range of sub op code <m> values is determined by the number of Slots you have configured. . Max value for n=50. The range of sub op code <m> values is 0 – 39. If you attempt to remotely set or query a sub op code that is out of range, this results in an error message. Enabled when RB Start Couple is OFF and PUSCH Present is ON.
Couplings	If you attempt to set a RB Start value greater than the RB End value, both values are set to the RB Start value or clipped to the min or max value if the entered value is out of range. Max value is dependent on Bandwidth.
Preset	0

State Saved	Yes
Min	0
Max	Max value depends on the bandwidth: 5 - Bandwidth 1.4 MHz 14 - Bandwidth 3 MHz 24 - Bandwidth 5 MHz 49 - Bandwidth 10 MHz 74 - Bandwidth 15 MHz 99 - Bandwidth 20 MHz
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUSCh:SLOT<m>:RB:STARt`

RB End Common

Sets the End Resource Block for all the PUSCH Slots when RB End Couple is On and when RB Auto Detect is Off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:RB:END <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:RB:END?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUSC:RB:END 0` `:EVM:CCAR0:ULIN:PROF:USER1:PUSC:RB:END?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n = 50 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off, RB End Couple is ON, and PUSCH Present is ON
Couplings	If you attempt to set a RB End value less than the RB Start value, both values are set to the RB End value or clipped to the min or max value if the entered value is out of range
Preset	0

Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUSCh:DMRS:GROup`

Auto Detect DMRS Group

Sets the DMRS Group for all the PUSCH Slots when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUSCh:DMRS:GROup <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUSCh:DMRS:GROup?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUSC:DMRS:GRO 1` `:EVM:CCAR0:ULIN:PROF:AUTO:PUSC:DMRS:GRO?`

Dependencies	Enabled when RB Auto Detect is On, Auto Detect DMRS Params is Off, and Auto Detect PUSCH Present is ON
Preset	0
State Saved	Yes
Min	0
Max	29
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:PUSCh:DMRS:GROup`

DMRS Group Couple

Determines whether or not all the PUSCH Slots use the Common DMRS Group value.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:DMRS:GROup:COUPle OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:DMRS:GROup:COUPle?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUSC:DMRS:GRO:COUP ON` `:EVM:CCAR0:ULIN:PROF:USER1:PUSC:DMRS:GRO:COUP?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n = 50. If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off, DMRS Params is Off, PUSCH Present is ON, and PUSCH Present is ON
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUSCh:DMRS:GROup:COUPle`

DMRS Group Slot

Specifies the DMRS Group for the selected PUSCH Slot.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:SLOT<m>:DMRS:GROup <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:SLOT<m>:DMRS:GROup?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUSC:SLOT0:DMRS:GRO 1` `:EVM:CCAR0:ULIN:PROF:USER1:PUSC:SLOT0:DMRS:GRO?`
Notes	The index <m> in the above SCPI command is the allocation index, not the slot position. See the "Add Allocation" on page 1651 command for an explanation of the difference.

Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. The range of sub op code <m> values is determined by the number of Slots you have configured. . Max value for n = 50. The range of sub op code <m> values is 0 - 39. If you attempt to remotely set or query a sub op code that is out of range, this results in an error message. Enabled when DMRS Params is OFF, DMRS Group Couple is OFF, and PUSCH Present is ON.
Preset	0
State Saved	Yes
Min	0
Max	29
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUSCh:SLOT<m>:DMRS:GROup`

DMRS Sequence Common

Sets the DMRS Sequence (v) for all the PUSCH Slots when DMRS Sequence Couple is On and when RB Auto Detect is Off. DMRS Sequence or v, is the sequence number within the group and can take on values from 0 to floor(NZCRS/30)-1, where NZCRS is the largest prime number less than MSCRS

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:DMRS:SEQuence <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:DMRS:SEQuence?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUSC:DMRS:SEQ 1` `:EVM:CCAR0:ULIN:PROF:USER1:PUSC:DMRS:SEQ?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n = 50 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off, DMRS Params is Off, DMRS Sequence Couple is On, and PUSCH Present is ON
Preset	0
State Saved	Yes
Min	0
Max	1
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUSCh:DMRS:SEQuence`

Auto Detect DMRS Sequence

Sets the DMRS Sequence (v) for all the PUSCH Slots when RB Auto Detect is On. DMRS Sequence or v, is the sequence number within the group and can take on values from 0 to floor(NZCRS/30)-1, where NZCRS is the largest prime number less than MSCRS

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUSCh:DMRS:SEQuence <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUSCh:DMRS:SEQuence?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUSC:DMRS:SEQ 1` `:EVM:CCAR0:ULIN:PROF:AUTO:PUSC:DMRS:SEQ?`
Dependencies	Enabled when RB Auto Detect is On, Auto Detect DMRS Params is Off, and Auto Detect PUSCH Present is ON
Preset	0
State Saved	Yes
Min	0
Max	floor(N_{ZC}^{RS}/30)-1 (can be restricted based on bandwidth)
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:PUSCh:DMRS:SEQuence`

DMRS Sequence Couple

Determines whether or not all the PUSCH Slots use the Common DMRS Sequence value.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:DMRS:SEQuence:COUPle OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:DMRS:SEQuence:COUPle?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUSC:DMRS:SEQ:COUP ON` `:EVM:CCAR0:ULIN:PROF:USER1:PUSC:DMRS:SEQ:COUP?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n = 50.If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off, DMRS Params is OFF, and PUSCH Present is ON
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUSCh:DMRS:SEQuence:COUPle`

DMRS Sequence Slot

Specifies the DMRS Sequence (v) for the selected PUSCH. DMRS Sequence or v, is the sequence number within the group and can take on values from 0 to floor (N_{ZC}^{RS}/30)-1, where N_{ZC}^{RS} is the largest prime number less than M_{SC}^{RS}

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:SLOT<m>:DMRS:SEQuence <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:SLOT<m>:DMRS:SEQuence?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUSC:SLOT0:DMRS:SEQ 1` `:EVM:CCAR0:ULIN:PROF:USER1:PUSC:SLOT0:DMRS:SEQ?`
Notes	The index <m> in the above SCPI command is the allocation index, not the slot position. See the "Add Allocation" on page 1651 command for an explanation of the difference.
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. The range of sub op code <m> values is determined by the number of Slots you have configured. . Max value for n = 50. The range of sub op code <m> values is 0 - 39 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when DMRS Params is OFF, DMRS Sequence Couple is OFF and PUSCH Present is ON
Preset	0
State Saved	Yes

DMRS Power Common

Sets the DMRS Power Boost value for all the PUSCH Slots when DMRS Power Boost Couple is On and RB Auto Detect is Off.

NOTE **All channel and signal powers are relative to the power of the channel/signal chosen for synchronization.**

For example, when PUSCH DMRS is chosen for synchronization, setting PUSCH DMRS Power = 2 dB and PUSCH Power = 0.1 dB means that the demodulator expects PUSCH average power level to be 1.9 dB below the average DMRS power level.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:DMRS:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:DMRS:PWRBoost?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUSC:DMRS:PWRB 0` `:EVM:CCAR0:ULIN:PROF:USER1:PUSC:DMRS:PWRB?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n = 50 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off, DMRS Power Boost Couple is ON, and PUSCH Present is ON
Preset	0 dB
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUSCh:DMRS:PWRBoost`

Auto Detect DMRS Power Boost

Sets the DMRS Power Boost value for all the PUSCH Slots when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUSCh:DMRS:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUSCh:DMRS:PWRBoost?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUSC:DMRS:PWRB 0` `:EVM:CCAR0:ULIN:PROF:AUTO:PUSC:DMRS:PWRB?`
Dependencies	Enabled when RB Auto Detect is On and Auto Detect PUSCH Present is ON
Preset	0 dB
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:PUSCh:DMRS:PWRBoost`

DMRS Power Couple

Determines whether or not all the PUSCH Slots use the Common DMRS Power Boost value.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:DMRS:PWRBoost:COUPle OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:DMRS:PWRBoost:COUPle?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUSC:DMRS:PWRB:COUP ON` `:EVM:CCAR0:ULIN:PROF:USER1:PUSC:DMRS:PWRB:COUP?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n = 50 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off and PUSCH Present is ON
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUSCh:DMRS:PWRBoost:COUPle`

DMRS Power Slot

Sets the DMRS Power Boost value for the selected PUSCH Slot.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:SLOT<m>:DMRS:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:SLOT<m>:DMRS:PWRBoost?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUSC:SLOT0:DMRS:PWRB 0` `:EVM:CCAR0:ULIN:PROF:USER1:PUSC:SLOT0:DMRS:PWRB?`
Notes	The index <m> in the above SCPI command is the allocation index, not the slot position. See the "Add Allocation" on page 1651 command for an explanation of the difference

Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUSCh:SLOT<m>:DMRS:PWRBoost`

Mirror Common

Selects CURRENT_TX_NB when RB Auto Detect is Off.

CUURENT_TX_NB specifies whether or not allocation is mirrored.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER1|50:PUSCh:CTNB EVEN | ODD`
	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER1|50:PUSCh:CTNB?`
	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:CTNB EVEN | ODD`
	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:CTNB?`

Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUSC:CTNB EVEN` `:EVM:CCAR0:ULIN:PROF:USER1:PUSC:CTNB?`
Dependencies	Enabled when RB Auto Detect is Off, PUSCH Present is ON, and CURRENT_TX_NB Couple is ON Disabled when Intra/Inter-SF hopping is selected for Frequency Hopping Mode
Preset	EVEN
State Saved	Yes
Range	Even|Odd
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUSCh:CTNB`

Mirror Couple

Determines whether or not all the PUSCH Slots use the Common CURRENT_TX_NB value.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:CTNB:COUPle OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:CTNB:COUPle?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUSC:CTNB:COUP OFF` `:EVM:CCAR0:ULIN:PROF:USER1:PUSC:CTNB:COUP?`
Dependencies	Enabled when RB Auto Detect is Off and PUSCH Present is ON
Preset	ON

State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUSCh:CTNB:COUPle`

Mirror Slot

Sets the CURRENT_TX_NB for the selected PUSCH Slot.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:SLOT<m>:CTNB EVEN | ODD` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUSCh:SLOT<m>:CTNB?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUSC:SLOT0:CTNB EVEN` `:EVM:CCAR0:ULIN:PROF:USER1:PUSC:SLOT0:CTNB?`
Notes	The range of sub op code <n> values is determined by the number of Users you have configured. The range of sub op code <m> values is determined by the number of Slots you have configured. . Max value for n = 50. The range of sub op code <m> values is 0 – 39.
Dependencies	Enabled when RB Auto Detect is Off, Current TX NB Couple is OFF, and PUSCH Present is ON Disabled when Intra/Inter-SF hopping is selected for Frequency Hopping Mode
Preset	EVEN
State Saved	Yes
Range	Even|Odd
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUSCh:SLOT<m>:CTNB`

PUCCH

This tab allows you to set up the parameters for PUCCH.

User Channel (Display Only)

Display the selected User Channel.

Auto Sync

When Sync Slot is set to Auto, the demod algorithm may automatically determine the best time slot to synchronies to. This approach simplifies parameter entry and provides easier setup. However, the complexity of the algorithm makes it rather slow and prone to errors in the presence of noise.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:SSLot:AUTO OFF | ON | 0 | 1`

	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:SSLot:AUTO?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:SSL:AUTO 1` `:EVM:CCAR0:ULIN:PROF:USER1:PUCC:SSL:AUTO?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n=50 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message PUCCH Auto Sync is enabled when RB Auto Detect is Off and PUCCH Present is ON
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUCCh:SSLot:AUTO`

Sync Slot

Sets the Sync Slot for all PUCCH Slots when RB Auto Detect is Off.

Sync Slot specifies the index of the slot to use for initial synchronization. The demodulator searches for the slot with the characteristics specified in Per-slot Parameters and the slot that matches the Per-slot Parameters with the highest correlation is assigned the slot number given in the Sync Slot parameter.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:SSLot <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:SSLot?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:SSL 1` `:EVM:CCAR0:ULIN:PROF:USER1:PUCC:SSL?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n=50 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message PUCCH Sync Slot is enabled when RB Auto Detect is Off, PUCCH Present is On, and PUCCH Sync Slot Auto is OFF PUCCH Sync Slot Auto is enabled when RB Auto Detect is Off and PUCCH Present is On
Preset	0
State Saved	Yes
Min	0
Max	19
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUCCh:SSLot` `:`

Auto Detect PUCCH Sync Slot

Sets the Sync Slot for all PUCCH Slots when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:SSLot <integer>`
	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:SSLot?`
	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:SSLot:AUTO OFF | ON | 0 | 1`
	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:SSLot:AUTO?`

Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUCC:SSL 1`
	`:EVM:CCAR0:ULIN:PROF:AUTO:PUCC:SSL?`
	`:EVM:CCAR0:ULIN:PROF:AUTO:PUCC:SSL:AUTO 1`
	`:EVM:CCAR0:ULIN:PROF:AUTO:PUCC:SSL:AUTO?`

Dependencies	Auto Detect PUCCH Sync Slot is enabled when RB Auto Detect is On, Auto Detect PUCCH Present is On, and Auto Detect PUCCH Sync Slot Auto is OFF Auto Detect PUCCH Sync Slot Auto is enabled when RB Auto Detect is On and Auto Detect PUCCH Present is On
Preset	0 OFF
State Saved	Yes Yes
Min	0
Max	19
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:PUCCh:SSLot` `[:SENSe]:EVM:ULINk:PROFile:AUTO:PUCCh:SSLot:AUTO`

Auto Detect PUCCH

This parameter enables the auto detection of PUCCH Format,$n_{PUCCH}^{(1)}$, and $n_{PUCCH}^{(3)}$, $n_{PUCCH}^{(4)}$, $n_{PUCCH}^{(5)}$, $M^{PUCCH4}{}_{RB}$ for all subframes when the RB auto detection is ON. This parameter takes no effect when the RB auto detection is OFF.This is useful when some of the following value vary for each subframe: format, $n_{PUCCH}^{(1)}$, $n_{PUCCH}^{(3)}$, $n_{PUCCH}^{(4)}$, $n_{PUCCH}^{(5)}$, $M^{PUCCH4}{}_{RB}$. When this parameter is set to OFF, PUCCH parameters are still automatically detected, though PUCCH Format, $n_{PUCCH}^{(1)}$, $n_{PUCCH}^{(3)}$, $n_{PUCCH}^{(4)}$, $n_{PUCCH}^{(5)}$, and $M^{PUCCH4}{}_{RB}$ are expected to be constant for the entire frame. When this parameter is set to ON, the parameter Auto Detect PUCCH Auto Sync is ignored. If the sync type is PUCCH DMRS, a sync slot must be defined by setting an index in the parameter Auto Detect PUCCH Sync Slot and setting up the per-slot parameters corresponding to the slot index.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:FNPucch:AUTO OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:FNPucch:AUTO?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUCC:FNP:AUTO 1` `:EVM:CCAR0:ULIN:PROF:AUTO:PUCC:FNP:AUTO?`
Dependencies	Enabled when RB Auto Detect is On and Auto Detect PUCCH Present is On
Preset	ON
State Saved	Yes
Range	On|Off
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk::PROFile:AUTO:PUCCh:FNPucch:AUTO`

PUCCH Format 4/5 Active

Without some higher level instruction, it is impossible to tell a PUSCH channel and a PUCCH channel, of which the format is 4 or 5, apart in some worst case senarios. To be more specific, if the a PUSCH channel uses the same DMRS sequence with a PUCCH channel, of which the format is 4 or 5, and the RB allocation of the PUSCH channel looks exactly analogous to a PUCCH channel (format 4 or 5), and there's no PUCCH (format 1/2/3) detected in the subframe where the PUSCH channel locates, there could be ambiguities. In such a case, an instruction from the users would be helpful for prioritizing the order in the process of demodulation. Hence this parameter.

In the certain extreme case senarios, if the value of the parameter is “On”, the ambiguous RB allocations are seen as a PUCCH channel, of which the format is 4 or 5. Otherwise, the ambiguous RB allcoations are seen as a PUSCH channel, and the detected PUCCH channels (format 4/5) are seen as inactive channels.

This parameter only takes effect when the RB auto detection is ON.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:FORMat45:ACTive OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:FORMat45:ACTive?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUCC:FORM45:ACT ON` `:EVM:CCAR0:ULIN:PROF:AUTO:PUCC:FORM45:ACT?`
Dependencies	Enabled when RB Auto Detect is On and Auto Detect PUCCH Present is On
Preset	On
State Saved	Yes
Range	On|Off

Auto-Calc. per-Slot Parameters

This parameter is used for determining if the per-slot parameters (first RB, cyclic shift, OS, and DMRS group (u)) are automatically calculated based on $N_{RB}^{(2)}$, $N_{CS}^{(1)}$, $n_{PUCCH}^{(1)}$, $n_{PUCCH}^{(2)}$, $n_{PUCCH}^{(3)}$, $n_{PUCCH}^{(4)}$, $n_{PUCCH}^{(5)}$, M^{PUCCH4}_{RB}, and Δ_{shift}^{PUCCH}.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:DMRS:PARams OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:DMRS:PARams?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:DMRS:PAR OFF` `:EVM:CCAR0:ULIN:PROF:USER1:PUCC:DMRS:PAR?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured If you attempt to remotely set or query a sub op code that is out of range, this results in an error message When this parameter is ON, N_{RB}(2), N_{CS} (1), $n_{PUCCH}^{(1)}$, $n_{PUCCH}^{(2)}$, $n_{PUCCH}^{(3)}$, ,$n_{PUCCH}^{(4)}$, $n_{PUCCH}^{(5)}$, M^{PUCCH4}_{RB}, and Δ_{shift}^{PUCCH} are enabled and First RB, Cyclic Shift, OS and DMRS Group (u) are disabled Enabled when RB Auto Detect is Off and PUCCH Present is On
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUCCh:DMRS:PARams`

Auto Detect Auto-Calc. per-Slot Parameters

Determines if all DMRS parameters are common to all slots for PUCCH or if they are to be defined on a per slot basis when RB auto detection is ON.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:DMRS:PARams OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:DMRS:PARams?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUCC:DMRS:PAR OFF` `:EVM:CCAR0:ULIN:PROF:AUTO:PUCC:DMRS:PAR?`
Dependencies	When this parameter is on, N_{RB}(2), N_{CS} (1), $n_{PUCCH}^{(1)}$, $n_{PUCCH}^{(2)}$, $n_{PUCCH}^{(3)}$, ,$n_{PUCCH}^{(4)}$, $n_{PUCCH}^{(5)}$, M^{PUCCH4}_{RB} , Δ_{shift}^{PUCCH} are enabled and First RB, Cyclic Shift, OS and DMRS Group (u) are disabled Enabled when the RB auto detection is OFF and Auto Detect PUCCH Present is On
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:PUCCh:DMRS:PARams`

N RB (2)

Sets the $N_{RB}(2)$ for all PUCCH Slots when RB Auto Detect is Off.

$N_{RB}(2)$ specifies the number of resource blocks per slot that are available for PUCCH type 2/2a/2b transmissions.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:NRB:TWO <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:NRB:TWO?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCCh:NRB:TWO 1` `:EVM:CCAR0:ULIN:PROF:USER1:PUCCh:NRB:TWO?`
Notes	The max value of this parameter doesn't really couple with the bandwith, which should be a defect
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off, Auto-Calc. per-Slot Parametersis On, and PUCCH Present is On
Couplings	$N_{RB}(2)$ should always be less than the total RB number of selected Bandwidth Selection
Preset	0
State Saved	Yes
Min	0
Max	Max value depends on the bandwidth: 5 - Bandwidth 1.4 MHz 14 - Bandwidth 3 MHz 24 - Bandwidth 5 MHz 49 - Bandwidth 10 MHz 74 - Bandwidth 15 MHz 99 - Bandwidth 20 MHz
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUCCh:NRB:TWO`

Auto Detect N RB (2)

Sets the $N_{RB}(2)$ for all PUCCH Slots when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:NRB:TWO <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:NRB:TWO?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUCC:NRB:TWO 1` `:EVM:CCAR0:ULIN:PROF:AUTO:PUCC:NRB:TWO?`

Notes	The max value of this parameter doesn't really couple with the bandwith, which should be a defect
Dependencies	If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is On, Auto Detect auto-calc. per-slot params is On, and Auto Detect PUCCH Present is On
Couplings	$N_{RB}(2)$ should always be less than the total RB number of selected Bandwidth Selection
Preset	0
State Saved	Yes
Min	0
Max	Max value depends on the bandwidth: 5 - Bandwidth 1.4 MHz 14 - Bandwidth 3 MHz 24 - Bandwidth 5 MHz 49 - Bandwidth 10 MHz 74 - Bandwidth 15 MHz 99 - Bandwidth 20 MHz
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:PUCCh:NRB:TWO`

N CS (1)

Sets the $N_{CS}(1)$ for all PUCCH Slots when RB Auto Detect is Off.

$N_{CS}(1)$ specifies the number of cyclic shifts used for PUCCH formats 1/1a/1b in a resource block with a mix of formats 1/1a/1b and 2/2a/2b.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:NCS:ONE <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:NCS:ONE?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCCh:NCS:ONE 1` `:EVM:CCAR0:ULIN:PROF:USER1:PUCCh:NCS:ONE?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off, auto-calc. per-slot parameters is On, and PUCCH Present is On
Preset	0
State Saved	Yes
Min	0
Max	7
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUCCh:NCS:ONE`

Auto Detect N CS (1)

Sets the $N_{CS}(1)$ for all PUCCH Slots when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:NCS:ONE <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:NCS:ONE?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUCCh:NCS:ONE 1` `:EVM:CCAR0:ULIN:PROF:AUTO:PUCCh:NCS:ONE?`
Dependencies	If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is On, Auto Detect auto-calc. per-slot params is On, and Auto Detect PUCCH Present is On
Preset	0
State Saved	Yes
Min	0
Max	7
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:PUCCh:NCS:ONE`

N PUCCH (2)

Sets the higher level parameter cqi-PUCCH-ResourceIndex for all PUCCH Slots when RB Auto Detect is Off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:N:TWO <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:N:TWO?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCCh:N:TWO 1` `:EVM:CCAR0:ULIN:PROF:USER1:PUCCh:N:TWO?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off, auto-calc. per-slot params is On, and PUCCH Present is On
Couplings	$N_{PUCCH}(2)$ should always be less than the total available subcarrier number of current bandwidth selection
Preset	0
State Saved	Yes
Min	0
Max	1197 Max value is calculated as below:

	$n^{(2)}_{\text{PUCCH}} < N^{(2)}_{\text{RB}} N^{\text{RB}}_{\text{sc}} + \left\lceil \frac{N^{(1)}_{\text{cs}}}{8} \right\rceil \cdot (N^{\text{RB}}_{\text{sc}} - N^{(1)}_{\text{cs}} - 2)$
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUCCh:N:TWO`

Auto Detect N PUCCH (2)

Sets the higher level parameter cqi-PUCCH-ResourceIndex for all PUCCH Slots when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:N:TWO <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:N:TWO?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUCCh:N:TWO 1` `:EVM:CCAR0:ULIN:PROF:AUTO:PUCCh:N:TWO?`
Dependencies	If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is On, Auto Detect Auto-Calc. per-Slot Parameters is On, and Auto Detect PUCCH Present is On
Couplings	$N_{\text{PUCCH}}(2)$ should always be less than the total available subcarrier number of current bandwidth selection
Preset	0
State Saved	Yes
Min	0
Max	1197 Max value is calculated as below: $n^{(2)}_{\text{PUCCH}} < N^{(2)}_{\text{RB}} N^{\text{RB}}_{\text{sc}} + \left\lceil \frac{N^{(1)}_{\text{cs}}}{8} \right\rceil \cdot (N^{\text{RB}}_{\text{sc}} - N^{(1)}_{\text{cs}} - 2)$
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:PUCCh:N:TWO`

Delta Shift PUCCH

Sets the PUCCH Shift for all PUCCH Slots when RB Auto Detect is Off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:SHIFt <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:SHIFt?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCCh:SHIF 1`

	`:EVM:CCAR0:ULIN:PROF:USER1:PUCCh:SHIF?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off and auto-calc. per-slot params is On
Preset	1
State Saved	Yes
Min	1
Max	3
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUCCh:SHIFt`

Auto Detect PUCCH Shift

Sets the PUCCH Shift for all PUCCH Slots when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:SHIFt <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:SHIFt?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUCC:SHIF 1` `:EVM:CCAR0:ULIN:PROF:AUTO:PUCC:SHIF?`
Dependencies	Enabled when RB Auto Detect is On and Auto Detect auto-calc. per-slot params is On
Preset	1
State Saved	Yes
Min	1
Max	3
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:PUCCh:SHIFt`

N PUCCH ID Enable

Determines if N^{PUCCH}_{ID} is used for calculating cyclic shift for each slot when RB auto detection is OFF. N^{PUCCH}_{ID} is not used if this parameter is OFF.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:ID:ENABle OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:ID:ENABle?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:ID:ENAB OFF` `:EVM:CCAR0:ULIN:PROF:USER1:PUCC:ID:ENAB?`
Dependencies	Enabled when RB auto detection is OFF and Auto-calc. Per-slot Params is ON

Couplings	Enables N PUCCH ID when the value of this parameter is On. Disables N PUCCH ID otherwise
Preset	OFF
State Saved	Yes
Range	On|Off

Auto Detect N PUCCH ID Enable

Determines if N^{PUCCH}_{ID} is used when the RB auto detection is ON.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:ID:ENABle OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:ID:ENABle?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUCC:ID:ENAB OFF` `:EVM:CCAR0:ULIN:PROF:AUTO:PUCC:ID:ENAB?`
Dependencies	Enabled when RB auto detection is ON and Auto-calc. Per-slot Params is ON
Couplings	Enables Auto Detect N PUCCH ID when this parameter is ON. Disables Auto Detect N PUCCH ID otherwise
Preset	OFF
State Saved	Yes
Range	On|Off

N PUCCH ID

Sets N^{PUCCH}_{ID},when RB auto detection is OFF. This parameter is used by the calculation of c_{init}, which is used for further calculating the cyclic shift for each slot. The detailed information can be found in section 5.5.1.5 in 3GPP TS 36.211.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:ID <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:ID?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:ID 1` `:EVM:CCAR0:ULIN:PROF:USER1:PUCC:ID?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. If you attempt to remotely set or query a sub op code that is out of range, this results in an error message The control is enabled only when the following conditions are met: Use N PUCCH ID is ON, RB auto detection is OFF, Auto-calc. per-slot Parm. is ON, and is disabled otherwise

Preset	0
State Saved	Yes
Min	0
Max	509

Auto Detect N PUCCH ID

Sets N^{PUCCH}_{ID},when RB auto detection is ON.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:ID <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:ID?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUCC:ID 1` `:EVM:CCAR0:ULIN:PROF:AUTO:PUCC:ID?`
Dependencies	The control is enabled only when the following conditions are met: Auto Detect N PUCCH ID Enable is ON, RB auto detection is ON, Auto-calc. per-slot Parm. is ON, and is disabled otherwise
Preset	0
State Saved	Yes
Min	0
Max	509

PUCCH Per Slot Parameters

When the Couple checkbox next to a parameter is checked, the parameter of this allocation couples to the common slot parameter, as shown in the second row of Common. Common parameters apply to all RB allocations.

When Couple is unchecked, this allocation uses its specific slot parameter, as shown in the third row with specific Slot position.

User Channel (Display Only)

"User Channel (Display Only)" on page 1673.

Allocation (Display Only)

This parameter shows the selected Allocation in the PUCCH allocation list. This value equals the Allocation Index plus one.

Add

Adds a new PUCCH allocation pair. One of the allocations is in the slot position specified, if available. The other is in the slot immediately following if the parameter is even, or the slot immediately preceding if the parameter is odd. The parameters for the new allocations are set to default values. They are put into a collection of allocations in ascending order of slot position. The allocation at the even numbered slot gets the lower index. The SCPI commands that follow are used to set slot allocation parameters, such as RB. They all contain the mnemonic SLOT<m>, where <m> is an index into the collection of allocations. The index ranges from 0 to a maximum of 19. Do not confuse the allocation index with the slot position.

To avoid confusion, you should make PUCCH allocations in ascending order of even slot positions.

For example, suppose you sent the following commands in order (and no previous allocations were made):

```
EVM:CCAR0:ULIN:PROF:USER1:PUCC:ADD:SLOT 0
```

```
EVM:CCAR0:ULIN:PROF:USER1:PUCC:ADD:SLOT 8
```

```
EVM:CCAR0:ULIN:PROF:USER1:PUCC:ADD:SLOT 10
```

You now have six allocations. Allocation 0 is at slot position 0, allocation 1 is made automatically at slot position 1, allocations 2 and 3 are at slot positions 8 and 9, and allocations 4 and 5 at slot positions 10 and 11. The allocations are referenced as SLOT0, SLOT1, SLOT2, etc. in the commands that follow. For example, if you want to verify the slot position of the third allocation, send the following query:

```
EVM:CCAR0:ULIN:PROF:USER1:PUCC:SLOT2:POS?
```

This returns 8 for this example, and the following query returns 9:

```
EVM:CCAR0:ULIN:PROF:USER1:PUCC:SLOT3:POS?
```

Note that if you delete an allocation, its paired companion is deleted also. It is recommended that you only delete even indices. To continue the previous example, send the following command:

```
EVM:CCAR0:ULIN:PROF:USER1:PUCC:SLOT2:DEL
```

This removes the allocations at slot positions 8 and 9. The allocations at slot positions 10 and 11 are now referenced as SLOT2 and SLOT3, where before they were referenced as SLOT4 and SLOT5.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:ADD:SLOT <integer>`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:ADD:SLOT 0`
Notes	The control for this parameter is an Immediate Action control. The value that is passed in by the SCPI command enables you to specify the slot position As PUCCH has subframes, adding a slot adds the slot specified, if available, and the second slot in the subframe
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. If you attempt to add a Slot to a User and the slot is already allocated an error message is generated Disabled once the number of slot allocations reaches to 20 (max)
Preset	0
State Saved	Yes
Min	0
Max	19
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUCCh:ADD:SLOT`

Delete

Deletes the currently selected slot allocation and its paired slot allocation.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:SLOT<m>:DELete`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:SLOT0:DEL`
Notes	The index <m> in the above SCPI command is the allocation index, not the slot position. See "Add" on page 1685 command for an explanation of the difference
Dependencies	Disabled when there's no slot allocation The range of sub op code <n> values is determined by the number of Users you have configured. The range of sub op code <m> values is determined by the number of Slots you have configured. . Max value for n=50. The range of sub op code <m> values is 0 - 19 If you attempt to delete a Slot that does not exist, an error message is generated
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUCCh:SLOT<m>:DELete`

Subframe Up

Moves up the slot indecies of both the selected allocation and its paird allocation.

See also "Slot Position (Remote Command Only)" on page 1687query.

Dependencies	Disabled when there are no Slots defined or if the slot is at Slot19

Subframe Down

Moves down the slot indecies of both the selected allocation and its paird allocation. See also "Slot Position (Remote Command Only)" on page 1687 query.

Dependencies	Disabled when there are no Slots defined or if the slot is at Slot0

Slot Position (Remote Command Only)

Queries the PUCCH slot start position.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:SLOT<m>:POSition?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:SLOT0:POS?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. The range of sub op code <m> values is determined by the number of Slots you have configured. . Max value for n=50. The range of sub op code <m> values is 0 - 19
Preset	0
State Saved	Yes
Min	0
Max	19
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUCCh:SLOT<m>:POSition?`

First RB Common

Sets the First Resource Block for all the PUCCH Slots when First RB Couple is On and RB auto detect is OFF.

This value sets the RB index of the selected user's PUCCH allocation for this slot. The next or previous (see Notes below) slot's PUCCH allocation is automatically set according to the LTE standard (mirrored in frequency).

For example, in a 5 MHz LTE signal (25 RBs), when Slot 0 contains a PUCCH allocation at RB 0, Slot 1 is set to have a PUCCH allocation at RB 24.

NOTE **A user can only have one RB allocated to PUCCH per slot.**

When RB Auto Detect is On and Sync Slot is odd, this parameter sets the RB index for the second slot in a PUCCH subframe, causing the previous (instead of the next) slot to contain a mirrored PUCCH allocation for the current user.

See also: "Auto Detect First RB" on page 1688

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:RB <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:RB?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:RB 0` `:EVM:CCAR0:ULIN:PROF:USER1:PUCC:RB?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n = 50 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off, First RB Couple is ON, auto-calc. per-slot parametersis OFF, and PUCCH Present is On
Couplings	Max value dependent on Bandwidth
Preset	0
State Saved	Yes
Min	0
Max	Max value depends on the bandwidth: 5 - Bandwidth 1.4 MHz 14 - Bandwidth 3 MHz 24 - Bandwidth 5 MHz 49 - Bandwidth 10 MHz 74 - Bandwidth 15 MHz 99 - Bandwidth 20 MHz
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUCCh:RB`

Auto Detect First RB

Sets the First Resource Block for all the PUCCH Slots when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:RB <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:RB?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUCC:RB 0` `:EVM:CCAR0:ULIN:PROF:AUTO:PUCC:RB?`
Dependencies	Enabled when RB Auto Detect is On, First RB Couple is ON, Auto Detect auto calc. per-slot parameters is OFF, and Auto Detect PUCCH Present is On
Preset	0
State Saved	Yes
Min	0
Max	Max value depends on the bandwidth: 5 - Bandwidth 1.4 MHz

	14 - Bandwidth 3 MHz 24 - Bandwidth 5 MHz 49 - Bandwidth 10 MHz 74 - Bandwidth 15 MHz 99 - Bandwidth 20 MHz
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:PUCCh:RB`

First RB Couple

Determines whether or not all the PUCCH Slots uses the Common First RB value when RB auto detect is OFF

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:RB:COUPle OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:RB:COUPle?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:RB:COUP ON` `:EVM:CCAR0:ULIN:PROF:USER1:PUCC:RB:COUP?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n = 50 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off, auto-calc. per-slot parameters is OFF, and PUCCH Present is On
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUCCh:RB:COUPle`

First RB Slot

Sets the First Resource Block for the selected PUCCH slot allocation.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:SLOT<m>:RB <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:SLOT<m>:RB?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:SLOT0:RB 0` `:EVM:CCAR0:ULIN:PROF:USER1:PUCC:SLOT0:RB?`
Notes	The index <m> in the above SCPI command is the allocation index, not the slot position. See the "Add" on page 1685 command for an explanation of the difference
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. The range of sub op code <m> values is determined by the number of Slots you have configured. Max value for n= 50. The range of sub op code <m> values is 0 - 19

	If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when First RB Couple is OFF, auto calc. per-slot params is Off, and PUCCH Present is On
Couplings	Max value dependes on Bandwidth
Preset	0
State Saved	Yes
Min	0
Max	Max value depends on the bandwidth: 5 - Bandwidth 1.4 MHz 14 - Bandwidth 3 MHz 24 - Bandwidth 5 MHz 49 - Bandwidth 10 MHz 74 - Bandwidth 15 MHz 99 - Bandwidth 20 MHz
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUCCh:SLOT<m>:RB`

Format Common

Selects the PUCCH Format type for all the PUCCH Slots when Format Couple is On and RB auto detect is OFF.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:FORMat T1 | T1A | T1B | T2 | T2A | T2B | T1S | T1AS | T1BS | T3 | T3S | T4 | T4S | T5 | T5S` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:FORMat?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:FORM T1` `:EVM:CCAR0:ULIN:PROF:USER1:PUCC:FORM?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n = 50 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off and Format Couple is ON, and PUCCH Present is On
Preset	T1
State Saved	Yes
Range	Type 1 | Type 1a | Type 1b | Type 2 | Type 2a | Type 2b | Type 1 Short | Type 1a Short | Type 1b Short| Type 3 | Type 3 Short | Type 4 | Type 4 Short | Type 5 | Type 5 Short
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUCCh:FORMat`

Auto Detect Format

Selects the PUCCH Format type for all the PUCCH Slots when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:FORMat T1 | T1A | T1B | T2 | T2A | T2B | T1S | T1AS | T1BS | T3 | T3S | T4 | T4S | T5 | T5S` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:FORMat?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUCC:FORM T1` `:EVM:CCAR0:ULIN:PROF:AUTO:PUCC:FORM?`
Dependencies	Enabled when RB Auto Detect is On and Auto Detect PUCCH Present is On
Preset	T1
State Saved	Yes
Range	Type 1 | Type 1a | Type 1b | Type 2 | Type 2a | Type 2b| Type 1 Short | Type 1a Short | Type 1b Short | Type 3 | Type 3 Short | Type 4 | Type 4 Short | Type 5 | Type 5 Short
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:PUCCh:FORMat`

Format Couple

Determines whether or not all the PUCCH Slots use the Common Format value when RB auto detect is OFF

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:FORMat:COUPle OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:FORMat:COUPle?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:FORM:COUP ON` `:EVM:CCAR0:ULIN:PROF:USER1:PUCC:FORM:COUP?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n = 50 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off and PUCCH Present is On
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUCCh:FORMat:COUPle`

Format Slot

Selects the PUCCH Format type to be used for the selected PUCCH Slot.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:SLOT<m>:FORMat T1 | T1A | T1B | T2 | T2A | T2B | T1S | T1AS | T1BS | T3 | T3S | T4 | T4S | T5 | T5S` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:SLOT<m>:FORMat?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:SLOT0:FORMAT T1` `:EVM:CCAR0:ULIN:PROF:USER1:PUCC:SLOT0:FORMAT?`
Notes	The index <m> in the above SCPI command is the allocation index, not the slot position. See the "Add" on page 1685 command for an explanation of the difference
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. The range of sub op code <m> values is determined by the number of Slots you have configured. . Max value for n=50. The range of sub op code <m> values is 0 - 19 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when Format Couple is OFF
Preset	T1
State Saved	Yes
Range	Type 1 | Type 1a | Type 1b | Type 2 | Type 2a | Type 2b | Type 1 Short | Type 1a Short | Type 1b Short | Type 3 | Type 3 Short | Type 4 | Type 4 Short | Type 5 | Type 5 Short
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUCCh:SLOT<m>:FORMat`

CS Common

Sets the Cyclic Shift for all the PUCCH Slots when Cyclic Shift Couple is On and RB auto detect is OFF.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:CSHift <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:CSHift?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:CSH 1` `:EVM:CCAR0:ULIN:PROF:USER1:PUCC:CSH`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n = 50 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off, Cyclic Shift Couple is ON, auto-calc. per-slot parameters is OFF, and PUCCH Present is On
Preset	0
State Saved	Yes
Min	0
Max	11

Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUCCh:CSHift`

Auto Detect Cyclic Shift

Sets the Cyclic Shift for all the PUCCH Slots when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:CSHift <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:CSHift?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUCC:CSH 1` `:EVM:CCAR0:ULIN:PROF:AUTO:PUCC:CSH?`
Notes	Enabled when RB Auto Detect is On, Auto Detect auto-calc. per slot params is OFF and Auto Detect PUCCH Present is On
Preset	0
State Saved	Yes
Min	0
Max	11
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:PUCCh:CSHift`

CS Couple

Determines whether or not all the PUCCH Slots use the Common Cyclic Shift value when RB auto detect is OFF.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:CSHift:COUPle OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:CSHift:COUPle?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:CSH:COUP ON` `:EVM:CCAR0:ULIN:PROF:USER1:PUCC:CSH:COUP?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n = 50 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off, auto-calc. per-slot parameters is OFF, and PUCCH Present is On
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:ULINk:PROFile:USER<n>:PUCCh:CSHift:COUPle`

CS Slot

Sets the Cyclic Shift for the selected PUCCH Slot.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:SLOT<m>:CSHift <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:SLOT<m>:CSHift?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:SLOT0:CSH 1` `:EVM:CCAR0:ULIN:PROF:USER1:PUCC:SLOT0:CSH?`
Notes	The index <m> in the above SCPI command is the allocation index, not the slot position. See the "Add" on page 1685 command for an explanation of the difference
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. The range of sub op code <m> values is determined by the number of Slots you have configured. . Max value for n=50. The range of sub op code <m> values is 0 - 19 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when Cyclic Shift Couple is OFF, auto calc. per-slot params is OFF and PUCCH Present is On
Preset	0
State Saved	Yes
Min	0
Max	11
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUCCh:SLOT<m>:CSHift`

OS Common

Sets the higher layer parameter n_{OC} (orthogonal sequence index) for all the PUCCH slots when the RB auto detection is OFF. OS is used by PUCCH format 1, 3, and 5.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:OS INDex0 | … | INDex4` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:OS?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:OS IND0` `:EVM:CCAR0:ULIN:PROF:USER1:PUCC:OS?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n = 50 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when all the following conditions are met: RB Auto Detect is Off,

<table>
<tr><td></td><td>auto calc. per-slot params is OFF,
OS Couple is ON,
PUCCH Present is On
This parameter should’ve been enabled only when the common format is PUCCH format 1/3/5. And the range of the parameter should’ve varied with the common format in the way shown in the table below. But the coupling is not actually supported. User discretion is advised when users are setting this parameter
<table>
<tr><th>PUCCH format</th><th>n_{oc} range</th></tr>
<tr><td>1</td><td>0-2</td></tr>
<tr><td>3</td><td>0-4</td></tr>
<tr><td>5</td><td>0,1</td></tr>
</table>
</td></tr>
<tr><td>Preset</td><td>IND0</td></tr>
<tr><td>State Saved</td><td>Yes</td></tr>
<tr><td>Range</td><td>Index 0 | Index1 | Index2</td></tr>
<tr><td>Backwards Compatibility SCPI</td><td>`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUCCh:OS`</td></tr>
</table>

Auto Detect OS

Sets the Orthogonal Sequence index for all the PUCCH Slots when RB Auto Detect is On.

<table>
<tr><td>Remote Command</td><td>`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:OS INDex0 | … | INDex4`
`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:OS?`</td></tr>
<tr><td>Example</td><td>`:EVM:CCAR0:ULIN:PROF:AUTO:PUCC:OS IND0`
`:EVM:CCAR0:ULIN:PROF:AUTO:PUCC:OS?`</td></tr>
<tr><td>Dependencies</td><td>
<table>
<tr><th>PUCCH format</th><th>noc range</th></tr>
<tr><td>1</td><td>0-2</td></tr>
<tr><td>3</td><td>0-4</td></tr>
<tr><td>5</td><td>0,1</td></tr>
</table>
RB Auto Detect is On</td></tr>
<tr><td>Preset</td><td>IND0</td></tr>
<tr><td>State Saved</td><td>Yes</td></tr>
<tr><td>Range</td><td>Index 0 | Index1 | Index2</td></tr>
<tr><td>Backwards Compatibility SCPI</td><td>`[:SENSe]:EVM:ULINk:PROFile:AUTO:PUCCh:OS`</td></tr>
</table>

OS Couple

Determines whether or not all the PUCCH Slots use the Common OS value when RB auto detect is OFF.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:OS:COUPle OFF | ON | 0 | 1 [:SENSe]:EVM:CCARrier0 | … | 4:ULINk:PROFile:USER<n>:PUCCh:OS:COUPle?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:OS:COUP ON` `:EVM:CCAR0:ULIN:PROF:USER1:PUCC:OS:COUP?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n = 50 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off, auto calc. per-slot params is OFF, and PUCCH Present is On.
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUCCh:OS:COUPle`

OS Slot

Sets the Orthogonal Sequence index for the selected PUCCH Slot. OS is used for PUCCH format 1, 3, and5.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:SLOT<m>:OS INDex0 | … | INDex4` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:SLOT<m>:OS?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:SLOT0:OS IND0` `:EVM:CCAR0:ULIN:PROF:USER1:PUCC:SLOT0:OS?`
Notes	The index <m> in the above SCPI command is the allocation index, not the slot position. See the "Add" on page 1685 command for an explanation of the difference
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n=50. The range of sub op code <m> values is 0 - 19 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when all of the following conditions are met: Auto calc. per-slot params is OFF; OS Couple is OFF; and PUCCH Present is On Slot format is PUCCH format 1/3/5 The range of the parameter should vary with slot format in the way shown in the table below:

PUCCH format	n_{oc} range
1	0-2
3	0-4
5	0,1

Preset	IND0
State Saved	Yes
Range	Index 0 | Index1 | Index2 | Index3 | Index4
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUCCh:SLOT<m>:OS`

Power Common

Sets the Power Boost value for all the PUCCH Slots when Power Boost Couple is On and Auto Detect is Off.

Power Boost specifies the average PUCCH DMRS power for a slot.

NOTE **All channel and signal powers are relative to the 0 dB level determined by the power of the channel/signal chosen for synchronization.**

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:PWRBoost?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:PWRB 0` `:EVM:CCAR0:ULIN:PROF:USER1:PUCC:PWRB?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n = 50 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when Power Boost Couple is On, RB Auto Detect is Off, and PUCCH Present is On
Preset	0 dB
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUCCh:PWRBoost`

Auto Detect Power Boost

Sets the Power Boost value for all the PUCCH Slots when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:PWRBoost?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUCC:PWRB 0` `:EVM:CCAR0:ULIN:PROF:AUTO:PUCC:PWRB?`
Dependencies	Enabled when RB Auto Detect is On and Auto Detect PUCCH Present is On
Preset	0 dB
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:PUCCh:PWRBoost`

Power Couple

Determines whether or not all the PUCCH Slots use the Common Power Boost value when RB auto detect is OFF

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:PWRBoost:COUPle OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:PWRBoost:COUPle?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:PWRB:COUP ON` `:EVM:CCAR0:ULIN:PROF:USER1:PUCC:PWRB:COUP?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n = 50 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off, and PUCCH Present is On
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUCCh:PWRBoost:COUPle`

Power Slot

Sets the Power Boost value for the selected PUCCH Slot.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:SLOT<m>:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:SLOT<m>:PWRBoost?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:SLOT0:PWRB 0`

	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:SLOT0:PWRB?`
Notes	The index <m> in the above SCPI command is the allocation index, not the slot position. See the "Add" on page 1685 command for an explanation of the difference
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. The range of sub op code <m> values is determined by the number of Slots you have configured. . Max value for n=50. The range of sub op code <m> values is 0 - 19 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when Power Boost Couple is OFF and PUCCH Present is On
Preset	0 dB
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUCCh:SLOT<m>:PWRBoost`

M(4) Common

Sets the M^{PUCCH4}_{RB} value, aka. numberOfPRB-format4-r13 for all PUCCH slots when RB auto detection is OFF. For non-BL/CE UEs, $n_{PUCCH}^{(4)}$ along with M^{PUCCH4}_{RB} and the slot number get to decide the RB allocation for each slot applying PUCCH formt 4. See section 5.4.3 in 3GPP TS 36.211 for detailed information.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:M:FOUR M1 | M2 | M3 | M4 | M5 | M6 | M8` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:M:FOUR?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCCh:M:FOUR M1` `:EVM:CCAR0:ULIN:PROF:USER1:PUCCh:M:FOUR?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when all of the following conditions are met: RB auto detection is OFF; Auto calc. per-slot params is ON; PUCCH Present is On
Preset	M1
State Saved	Yes
Range	M1|M2|M3|M4|M5|M6|M8

Auto Detect M PUCCH (4) RB

Sets the M^{PUCCH4}_{RB} value for all PUCCH slots when the RB auto detection is ON.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:M:FOUR M1 | M2 | M3 | M4 | M5 | M6 | M8` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:M:FOUR?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUCCh:M:FOUR M1` `:EVM:CCAR0:ULIN:PROF:AUTO:PUCCh:M:FOUR?`
Dependencies	If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when all the three conditions are met: RB auto detection is ON; Auto detect auto calc. per-slot params is ON; Auto detect PUCCH Present is On
Preset	M1
State Saved	Yes
Range	M1|M2|M3|M4|M5|M6|M8|MREServe

M(4) Couple

Determines if all the PUCCH slots are using the common M PUCCH4 RB value when the RB auto detection is OFF.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:M:FOUR:COUPle OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:M:FOUR:COUPle?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:M:FOUR:COUP ON` `:EVM:CCAR0:ULIN:PROF:USER1:PUCC:M:FOUR:COUP?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n = 50 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when all the three conditions are met: RB auto detection is OFF; PUCCH Present is On; Auto calc. per-slot params is ON
Preset	ON
State Saved	Yes

M(4) Slot

Sets the M^{PUCCH4}_{RB} value for the selected PUCCH slot when RB auto detection is OFF. For non-BL/CE UEs, $n_{PUCCH}^{(4)}$ along with M^{PUCCH4}_{RB} and the slot number get to decide the RB allocation for each slot applying PUCCH formt 4. See section 5.4.3 in 3GPP TS 36.211 for detailed information.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:SLOT<m>:M:FOUR M1 | M2 | M3 | M4 | M5 | M6 | M8` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:SLOT<m>:M:FOUR?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:SLOT1:M:FOUR M1` `:EVM:CCAR0:ULIN:PROF:USER1:PUCC:SLOT1:M:FOUR?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. The range of sub op code <m> values is determined by the number of Slots you have configured. . Max value for n=50. The range of sub op code <m> values is 0 - 19 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when the RB auto detection is OFF, PUCCH Present is On, auto calc. per-slot params is ON and M PUCCH (4) RB Couple is OFF
Preset	M1
State Saved	Yes
Range	M1|M2|M3|M4|M5|M6|M8

DMRS Group Common

Sets the group number for the PUCCH demodulation reference signal (DMRS) when DMRS Group Couple is On and RB Auto Detect is Off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:DMRS:GROup <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:DMRS:GROup?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:DMRS:GRO 1` `:EVM:CCAR0:ULIN:PROF:USER1:PUCC:DMRS:GRO?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n = 50 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off, DMRS Group Couple is ON, auto calc. per-slot params is OFF, and PUCCH Present is On
Preset	0
State Saved	Yes

Min	0
Max	29
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUCCh:DMRS:GROup`

Auto Detect DMRS Group

Sets the group number for the PUCCH demodulation reference signal (DMRS) when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:DMRS:GROup <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:DMRS:GROup?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUCC:DMRS:GRO 1` `:EVM:CCAR0:ULIN:PROF:AUTO:PUCC:DMRS:GRO?`
Dependencies	Enabled when RB Auto Detect is On, Auto Detect auto calc. per-slot params is OFF, and Auto Detect PUCCH Present is On
Preset	0
State Saved	Yes
Min	0
Max	29
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:PUCCh:DMRS:GROup`

DMRS Group Couple

Determines whether or not all the PUCCH Slots use the DMRS Group All value when RB auto detect is OFF

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:DMRS:GROup:COUPle OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:DMRS:GROup:COUPle?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:DMRS:GRO:COUP ON` `:EVM:CCAR0:ULIN:PROF:USER1:PUCC:DMRS:GRO:COUP?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n = 50 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off, auto calc. per-slot params is OFF and PUCCH Present is On
Preset	ON

State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUCCh:DMRS:GROup:COUPle`

DMRS Group Slot

Selects the DMRS Group for the selected PUCCH Slot.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:SLOT<m>:DMRS:GROup <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:SLOT<m>:DMRS:GROup?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:SLOT0:DMRS:GRO 1` `:EVM:CCAR0:ULIN:PROF:USER1:PUCC:SLOT0:DMRS:GRO?`
Notes	The index <m> in the above SCPI command is the allocation index, not the slot position. See the "Add" on page 1685 command for an explanation of the difference
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. The range of sub op code <m> values is determined by the number of Slots you have configured. Max value for n=50. The range of sub op code <m> values is 0 - 19 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when auto calc. per-slot params is OFF, DMRS Group Couple is OFF and PUCCH Present is On
Preset	0
State Saved	Yes
Min	0
Max	29
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUCCh:SLOT<m>:DMRS:GROup`

DMRS Power Common

Sets the DMRS Power Boost value for all the PUCCH Slots when DMRS Power Boost Couple is On and RB Auto Detect is Off.

This value sets the power level for the PUCCH demodulation reference signal (DMRS) of the selected subframe. PUCCH Power is set relative to the 0 dB point determined by this parameter.

For example, setting DMRS Power = 2 dB and PUCCH Power = 0.1 dB means that the demodulator expects PUCCH average power level to be 1.9 dB below the average DMRS power level.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:DMRS:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:DMRS:PWRBoost?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:PWRB 0` `:EVM:CCAR0:ULIN:PROF:USER1:PUCC:PWRB?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n = 50 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when DMRS Power Boost Couple is On, RB Auto Detect is Off, and PUCCH Present is On
Preset	0 dB
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUCCh:DMRS:PWRBoost`

Auto Detect DMRS Power Boost

Sets the DMRS Power Boost value for all the PUCCH Slots when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:DMRS:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:DMRS:PWRBoost?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUCC:PWRB 0` `:EVM:CCAR0:ULIN:PROF:AUTO:PUCC:PWRB?`
Dependencies	Enabled when RB Auto Detect is On and Auto Detect PUCCH Present is On
Preset	0 dB
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:PUCCh:DMRS:PWRBoost`

DMRS Power Couple

Determines whether or not all the PUCCH Slots use the Common DMRS Power Boost value when RB auto detect is OFF

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:DMRS:PWRBoost:COUPle OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:DMRS:PWRBoost:COUPle?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:DMRS:PWRB:COUP ON` `:EVM:CCAR0:ULIN:PROF:USER1:PUCC:DMRS:PWRB:COUP?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n = 50 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off and PUCCH Present is On
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUCCh:DMRS:PWRBoost:COUPle`

DMRS Power Slot

Sets the DMRS Power Boost value for the selected PUCCH Slot.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:SLOT<m>:DMRS:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:SLOT<m>:DMRS:PWRBoost?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:SLOT0:DMRS:PWRB 0` `:EVM:CCAR0:ULIN:PROF:USER1:PUCC:SLOT0:DMRS:PWRB?`
Notes	The index <m> in the above SCPI command is the allocation index, not the slot position. See the "Add" on page 1685 command for an explanation of the difference
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. The range of sub op code <m> values is determined by the number of Slots you have configured. . Max value for n=50. The range of sub op code <m> values is 0 - 19 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when Power Boost Couple is OFF and PUCCH Present is On
Preset	0 dB
State Saved	Yes
Min	-100 dB
Max	100 dB
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUCCh:SLOT<m>:DMRS:PWRBoost`

N PUCCH (1) Common

Sets the $n_{PUCCH}(1)$ for all PUCCH Slots when RB Auto Detect is Off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:N:ONE <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:N:ONE?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCCh:N:ONE 1` `:EVM:CCAR0:ULIN:PROF:USER1:PUCCh:N:ONE?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off, auto calc. per-slot params is On, and PUCCH Present is On
Couplings	$n_{PUCCH}(1)$ should always be less than the total available subcarrier number of current bandwidth selection
Preset	0
State Saved	Yes
Min	0
Max	3599 3599 - Bandwidth 20 MHz
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUCCh:N:ONE`

Auto Detect N PUCCH (1)

Sets the $n_{PUCCH}(1)$ for all PUCCH Slots when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:N:ONE <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:N:ONE?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUCCh:N:ONE 1` `:EVM:CCAR0:ULIN:PROF:AUTO:PUCCh:N:ONE?`
Dependencies	If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is On, Auto Detect auto calc. per-slot params is On, and Auto Detect PUCCH Present is On
Couplings	$n_{PUCCH}(1)$ should always be less than the total available subcarrier number of current bandwidth selection
Preset	0
State Saved	Yes

Min	0
Max	Max value depends on the bandwidth: 215 - Bandwidth 1.4 MHz 539 - Bandwidth 3 MHz 899 - Bandwidth 5 MHz 1799 - Bandwidth 10 MHz 2699 - Bandwidth 15 MHz 3599 - Bandwidth 20 MHz
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:PUCCh:N:ONE`

N PUCCH (1) Couple

Determines whether or not all the PUCCH Slots use the Common N PUCCH (1) value when RB auto detect is OFF

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:N:ONE:COUPle OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:N:ONE:COUPle?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:N:ONE:COUP ON` `:EVM:CCAR0:ULIN:PROF:USER1:PUCC:N:ONE:COUP?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n = 50 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off, PUCCH Present is On and auto calc. per-slot paramsis ON
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUCCh:N:ONE:COUPle`

N PUCCH (1) Slot

Sets the N PUCCH (1) value for the selected PUCCH Slot.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:SLOT<m>:N:ONE <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:SLOT<m>:N:ONE?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:SLOT1:N:ONE 1` `:EVM:CCAR0:ULIN:PROF:USER1:PUCC:SLOT1:N:ONE?`

Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. The range of sub op code <m> values is determined by the number of Slots you have configured. . Max value for n=50. The range of sub op code <m> values is 0 - 19 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off, PUCCH Present is On, auto calc. per-slot params is ON and N PUCCH (1) Couple is OFF
Couplings	$n_{PUCCH}(1)$ should be less than the total available subcarrier number of the current bandwidth selection
Preset	0
State Saved	Yes
Min	0
Max	1199
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUCCh:SLOT<m>:N:ONE`

N PUCCH (3) Common

Sets the $n_{PUCCH}(3)$ for all PUCCH Slots when RB Auto Detect is Off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:N:THRee <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:N:THRee?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCCh:N:THRee 1` `:EVM:CCAR0:ULIN:PROF:USER1:PUCCh:N:TREee?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off, auto calc. per-slot params is On, and PUCCH Present is On
Preset	0
State Saved	Yes
Min	0
Max	549
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUCCh:N:THRee`

Auto Detect N PUCCH (3)

Sets the $n_{PUCCH}(3)$ for all PUCCH Slots when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:N:THRee <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:N:THRee?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUCCh:N:THRee 1` `:EVM:CCAR0:ULIN:PROF:AUTO:PUCCh:N:THRee?`
Dependencies	If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is On, Auto Detect auto calc. per-slot params is On, and Auto Detect PUCCH Present is On
Preset	0
State Saved	Yes
Min	0
Max	549
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:PUCCh:N:THRee`

N PUCCH (3) Couple

Determines whether or not all the PUCCH Slots use the Common N PUCCH (3) value when RB auto detect is OFF

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:N:THRee:COUPle OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:N:THRee:COUPle?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:N:THRee:COUP ON` `:EVM:CCAR0:ULIN:PROF:USER1:PUCC:N:THRee:COUP?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n = 50 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off, PUCCH Present is On and auto calc. per-slot params is ON
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUCCh:N:THRee:COUPle`

N PUCCH (3) Slot

Sets the N PUCCH (3) value for the selected PUCCH Slot.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:SLOT<m>:N:THRee`

	`<integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:SLOT<m>:N:THRee?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:SLOT1:N:THRee 1` `:EVM:CCAR0:ULIN:PROF:USER1:PUCC:SLOT1:N:THRee?`
Notes	The parameter can be enabled with 9080B/9082B-2FP license
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. The range of sub op code <m> values is determined by the number of Slots you have configured. . Max value for n=50. The range of sub op code <m> values is 0 - 19 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off, PUCCH Present is On, auto calc. per-slot params is ON and N PUCCH (3) Couple is OFF
Preset	0
State Saved	Yes
Min	0
Max	549
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PUCCh:SLOT<m>:N:THRee`

N PUCCH (4) Common

Sets the $n_{PUCCH}^{(4)}$ value aka. startingPRB-format4-r13 for all PUCCH slots when RB auto detection is OFF. For non-BL/CE UEs, $n_{PUCCH}^{(4)}$ along with M^{PUCCH4}_{RB} and the slot number get to decide the RB allocation for each slot applying PUCCH formt 4. See section 5.4.3 in 3GPP TS 36.211 for detailed information.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:N:FOUR <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:N:FOUR?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCCh:N:FOUR 1` `:EVM:CCAR0:ULIN:PROF:USER1:PUCCh:N:FOUR?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when all of the following conditions are met: RB auto detection is OFF; Auto calc. per-slot params is ON; PUCCH Present is On
Couplings	$n_{PUCCH}(4)$ is supposed to be less than the total available RB number of the current bandwidth selection
Preset	0

State Saved	Yes
Min	0
Max	0 / 109 99 - Bandwidth 20 MHz

Auto Detect N PUCCH (4)

Sets the $n_{PUCCH}(4)$ value for all PUCCH slots when the RB auto detection is ON.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:N:FOUR <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:N:FOUR?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUCCh:N:FOUR 1` `:EVM:CCAR0:ULIN:PROF:AUTO:PUCCh:N:FOUR?`
Dependencies	If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when all the three conditions are met: RB auto detection is ON; Auto detect auto calc. per-slot params is ON; Auto detect PUCCH Present is On
Couplings	$n_{PUCCH}(4)$ is supposed to be less than the total available RB number of the current bandwidth selection
Preset	0
State Saved	Yes
Min	0
Max	109 99 - Bandwidth 20 MHz

N PUCCH (4) Couple

Determines if all the PUCCH slots are using the common N PUCCH (4) value when the RB auto detection is OFF.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:N:FOUR:COUPle OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:N:FOUR:COUPle?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:N:FOUR:COUP ON` `:EVM:CCAR0:ULIN:PROF:USER1:PUCC:N:FOUR:COUP?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n = 50

	If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when all the three conditions are met: RB auto detection is OFF; PUCCH Present is On; Auto calc. per-slot params is ON
Preset	ON
State Saved	Yes

N PUCCH (4) Slot

Sets the $n_{PUCCH}^{(4)}$ value for the selected PUCCH slot when the RB auto detection is OFF. For non-BL/CE UEs, $n_{PUCCH}^{(4)}$ along with M^{PUCCH4}_{RB} and the slot number get to decide the RB allocation for each slot applying PUCCH formt 4. See section 5.4.3 in 3GPP TS 36.211 for detailed information.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:SLOT<m>:N:FOUR <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:SLOT<m>:N:FOUR?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:SLOT1:N:FOUR 1` `:EVM:CCAR0:ULIN:PROF:USER1:PUCC:SLOT1:N:FOUR?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. The range of sub op code <m> values is determined by the number of Slots you have configured. . Max value for n=50. The range of sub op code <m> values is 0 - 19 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when the RB auto detection is OFF, PUCCH Present is On, auto calc. per-slot params is ON and N PUCCH (4) Couple is OFF
Couplings	$n_{PUCCH}^{(4)}$ is supposed to be less than the total available RB number of the current bandwidth selection
Preset	0
State Saved	Yes
Min	0
Max	109 99 - Bandwidth 20 MHz

N PUCCH (5) Common

Sets the $n_{PUCCH}^{(5)}$ value, aka. startingPRB-format5-r13 for all PUCCH slots when RB auto detection is OFF. For non-BL/CE UEs, $n_{PUCCH}^{(5)}$ and the subframe index get to decide the RB assigned for a PUCCH slot of format 5. See section 5.4.3 in 3GPP TS 36.211 for detailed information.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:N:FIVE <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:N:FIVE?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCCh:N:FIVE 1` `:EVM:CCAR0:ULIN:PROF:USER1:PUCCh:N:FIVE?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when all of the following conditions are met: RB auto detection is OFF; Auto calc. per-slot params is ON; PUCCH Present is On
Couplings	n_{PUCCH}(5) is supposed to be less than the total available RB number of the current bandwidth selection
Preset	0
State Saved	Yes
Min	0
Max	109 99 - Bandwidth 20 MHz

Auto Detect N PUCCH (5)

Sets the n_{PUCCH}(5) value for all PUCCH slots when the RB auto detection is ON.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:N:FIVE <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PUCCh:N:FIVE?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PUCCh:N:FIVE 1` `:EVM:CCAR0:ULIN:PROF:AUTO:PUCCh:N:FIVE?`
Dependencies	If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when all the three conditions are met: RB auto detection is ON; Auto detect auto calc. per-slot params is ON; Auto detect PUCCH Present is On
Couplings	n_{PUCCH}(5) is supposed to be less than the total available RB number of the current bandwidth selection
Preset	0

State Saved	Yes
Min	0
Max	109 99 - Bandwidth 20 MHz

N PUCCH (5) Couple

Determines if all the PUCCH slots are using the common N PUCCH (5) value when the RB auto detection is OFF.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:N:FIVE:COUPle OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:N:FIVE:COUPle?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:N:FIVE:COUP ON` `:EVM:CCAR0:ULIN:PROF:USER1:PUCC:N:FIVE:COUP?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n = 50 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when all the three conditions are met: RB auto detection is OFF; PUCCH Present is On; Auto calc. per-slot params is ON
Preset	ON
State Saved	Yes

N PUCCH (5) Slot

Sets the $n_{PUCCH}^{(5)}$ value for the selected PUCCH slot when RB auto detection is OFF. For non-BL/CE UEs, $n_{PUCCH}^{(5)}$ and the subframe index get to decide the RB assigned for a PUCCH slot of format 5. See section 5.4.3 in 3GPP TS 36.211 for detailed information.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:SLOT<m>:N:FIVE <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PUCCh:SLOT<m>:N:FIVE?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PUCC:SLOT1:N:FIVE 1` `:EVM:CCAR0:ULIN:PROF:USER1:PUCC:SLOT1:N:FIVE?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. The range of sub op code <m> values is determined by the number of Slots you have configured. . Max value for n=50. The range of sub op code <m> values is 0 - 19

	If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when the RB auto detection is OFF, PUCCH Present is On, auto calc. per-slot params is ON and N PUCCH (5) Couple is OFF
Couplings	$n_{PUCCH}^{(5)}$ is supposed to be less than the total available RB number of the current bandwidth selection
Preset	0
State Saved	Yes
Min	0
Max	0 / 109 99 - Bandwidth 20 MHz

SRS

This tab allows you to set up the parameters for SRS.

User Channel (Display Only)

"User Channel (Display Only)" on page 1673.

Auto Sync

When Sync Slot is set to Auto, the demod algorithm may automatically determine the best time slot to synchronies to. This approach simplifies parameter entry and provides easier setup. However, the complexity of the algorithm makes it rather slow and prone to errors in the presence of noise.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:SRS:SSLot:AUTO OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:SRS:SSLot:AUTO?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:SRS:SSL:AUTO 1` `:EVM:CCAR0:ULIN:PROF:USER1:SRS:SSL:AUTO?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n=50 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message SRS Auto Sync is enabled when RB Auto Detect is Off and SRS Present is ON
Preset	ON
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:SRS:SSLot:AUTO`

Sync Slot

Sets the S-RS Sync Slot when RB Auto Detect is Off.

This value specifies the index of the slot to use for initial synchronization. The demodulator searches for the slot with the characteristics specified in Channel Parameters and the slot that matches the Channel Parameters with the highest correlation are assigned the slot number given in the Sync Slot parameter.

When Sync Slot is set to Auto, the demod algorithm may automatically determine the best time slot to synchronize to. This approach simplifies parameter entry and provides easier setup. However, the complexity of the algorithm makes it rather slow and prone to errors in the presence of noise.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:SRS:SSLot <integer>`
	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:SRS:SSLot?`
	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:SRS:SSLot:AUTO OFF | ON | 0 | 1`
	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:SRS:SSLot:AUTO?`

Example	`:EVM:CCAR0:ULIN:PROF:USER1:SRS:SSL 1`
	`:EVM:CCAR0:ULIN:PROF:USER1:SRS:SSL?`
	`:EVM:CCAR0:ULIN:PROF:USER1:SRS:SSL:AUTO 1`
	`:EVM:CCAR0:ULIN:PROF:USER1:SRS:SSL:AUTO?`

Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n=50 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message S-RS Sync Slot is enabled when S-RS Active is ON, RB Auto Detect is Off and S-RS Sync Slot Auto is OFF S-RS Sync Slot Auto is enabled when S-RS Active is ON and RB Auto Detect is Off
Preset	1 ON
State Saved	Yes Yes
Min	1
Max	19
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:SRS:SSLot`

Auto Detect S-RS Sync Slot

Sets the S-RS Sync Slot when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:SRS:SSLot <integer>`
	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:SRS:SSLot?`
	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:SRS:SSLot:AUTO OFF | ON | 0 | 1`
	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:SRS:SSLot:AUTO?`

Example	`:EVM:CCAR0:ULIN:PROF:AUTO:SRS:SSL 1`
	`:EVM:CCAR0:ULIN:PROF:AUTO:SRS:SSL?`
	`:EVM:CCAR0:ULIN:PROF:AUTO:SRS:SSL:AUTO 1`
	`:EVM:CCAR0:ULIN:PROF:AUTO:SRS:SSL:AUTO?`

Dependencies	Enabled when RB Auto Detect is On and Auto Detect S-RS Active is ON
Preset	1 ON
State Saved	Yes Yes
Min	1
Max	19
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:SRS:SSLot` `[:SENSe]:EVM:ULINk:PROFile:AUTO:SRS:SSLot:AUTO`

Cyclic Shift

Sets S-RS Cyclic Shift (n_{SRS}^{CS}) when RB Auto Detect is Off. This value determines the cyclic shift of R-RS.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:SRS:CSHift <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:SRS:CSHift?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:SRS:CSH 1` `:EVM:CCAR0:ULIN:PROF:USER1:SRS:CSH?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off and S-RS Present is ON
Preset	0
State Saved	Yes
Min	0
Max	7
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:SRS:CSHift`

Auto Detect Cyclic Shift

Sets S-RS Cyclic Shift when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:SRS:CSHift <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:SRS:CSHift?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:SRS:CSH 1` `:EVM:CCAR0:ULIN:PROF:AUTO:SRS:CSH?`
Dependencies	Enabled when RB Auto Detect is On and Auto Detect S-RS Active is ON
Preset	0
State Saved	Yes
Min	0
Max	7
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:SRS:CSHift`

Power (dB)

Sets S-RS Power Boost value when RB Auto Detect is Off.

This value specifies the average power for SRS.

NOTE **All channel and signal powers are relative to the 0 dB level determined by the power of the channel/signal chosen for synchronization.**

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:SRS:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:SRS:PWRBoost?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:SRS:PWRB 1` `:EVM:CCAR0:ULIN:PROF:USER1:SRS:PWRB?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off and S-RS Active is ON
Preset	0
State Saved	Yes
Min	-100
Max	100
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:SRS:PWRBoost`

Auto Detect S-RS Power Boost

Sets the S-RS Power Boost value when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:SRS:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:SRS:PWRBoost?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:SRS:PWRB 1` `:EVM:CCAR0:ULIN:PROF:AUTO:SRS:PWRB?`
Dependencies	Enabled when RB Auto Detect is On and Auto Detect S-RS Active is ON
Preset	0
State Saved	Yes
Min	-100
Max	100
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:SRS:PWRBoost`

SRS Bandwidth

Sets S-RS Bandwidth (B_{SRS}) when RB Auto Detect is Off. This parameter, along with C_{SRS}, determines the values of $m_{SRS,b}$ and N_b from tables 5.5.3.2-1 through 5.5.3.2-4 in TS 36.211.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:SRS:BWIDth <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:SRS:BWIDth?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:SRS:BWID 1` `:EVM:CCAR0:ULIN:PROF:USER1:SRS:BWID?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off, and S-RS Active is ON
Preset	0
State Saved	Yes
Min	0
Max	3
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:SRS:BWIDth`

Auto Detect Bandwidth (B_{SRS})

Sets S-RS Bandwidth (B_{SRS}) when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:SRS:BWIDth <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:SRS:BWIDth?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:SRS:BWID 1` `:EVM:CCAR0:ULIN:PROF:AUTO:SRS:BWID?`
Dependencies	Enabled when RB Auto Detect is On and Auto Detect S-RS Active is ON
Preset	0
State Saved	Yes
Min	0
Max	3
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:SRS:BWIDth`

SRS BW Config

Sets S-RS Bandwidth Configuration (C_{SRS}) when RB Auto Detect is Off.

This parameter, along with B_{SRS}, determines the values of $m_{SRS,b}$ and N_b from tables 5.5.3.2-1 through 5.5.3.2-4 in TS 36.211.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:SRS:BCONfig <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:SRS:BCONfig?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:SRS:BCON 1` `:EVM:CCAR0:ULIN:PROF:USER1:SRS:BCON?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off and S-RS Active is ON
Preset	7
State Saved	Yes
Min	0
Max	7
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:SRS:BCONfig`

Auto Detect Bandwidth Configuration (C_{SRS})

Sets S-RS Bandwidth Configuration (C_{SRS}) when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:SRS:BCONfig <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:SRS:BCONfig?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:SRS:BCON 1` `:EVM:CCAR0:ULIN:PROF:AUTO:SRS:BCON?`
Dependencies	Enabled when RB Auto Detect is On and Auto Detect S-RS Active is ON
Preset	7
State Saved	Yes
Min	0
Max	7
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:SRS:BCONfig`

Subframe Config

Sets the value for srsSubframeConfiguration in Table 5.5.3.3-1 (FDD) or Table 5.5.3.3-2 (TDD) in TS 36.211when RB Auto Detect is Off.

srsSubframeConfiguration determines T_{SFC} and D_{SFC}.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:SRS:SFConfig <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:SRS:SFConfig?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:SRS:SFC 1` `:EVM:CCAR0:ULIN:PROF:USER1:SRS:SFC?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off and S-RS Active is ON
Preset	0
State Saved	Yes
Min	0
Max	15
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:SRS:SFConfig`

Auto Detect Subframe Configuration

Sets the value for srsSubframeConfiguration in Table 5.5.3.3-1 (FDD) or Table 5.5.3.3-2 (TDD) in TS 36.211 when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:SRS:SFConfig <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:SRS:SFConfig?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:SRS:SFC 1` `:EVM:CCAR0:ULIN:PROF:AUTO:SRS:SFC?`
Dependencies	Enabled when RB Auto Detect is On and Auto Detect S-RS Active is ON
Preset	0
State Saved	Yes
Min	0
Max	15
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:SRS:SFConfig`

Config Index

Sets the S-RS Configuration Index (I_{SRS}) when RB Auto Detect is Off. (3GPP TS 36.213 V8.5.0 8.2 Table 8.2-1~2)

The S-RS Configuration Index value determines S-RS periodicity and subframe offset configuration from Table 8.2-1 for FDD and Table 8.2-2 for TDD in 3GPP TS 36.213.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:SRS:CINDex <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:SRS:CINDex?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:SRS:CIND 1` `:EVM:CCAR0:ULIN:PROF:USER1:SRS:CIND?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off and S-RS Active is ON
Preset	0
State Saved	Yes
Min	0
Max	1023
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:SRS:CINDex`

Auto Detect Configuration Index (I_{SRS})

Sets the S-RS Configuration Index (I_{SRS}) when RB Auto Detect is On. (3GPP TS 36.213 V8.5.0 8.2 Table 8.2-1~2)

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:SRS:CINDex <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:SRS:CINDex?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:SRS:CIND 1` `:EVM:CCAR0:ULIN:PROF:AUTO:SRS:CIND?`
Dependencies	Enabled when RB Auto Detect is On and Auto Detect S-RS Active is ON
Preset	0
State Saved	Yes
Min	0
Max	1023
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:SRS:CINDex`

SRS Hopping BW

Sets S-RS Hopping Bandwidth (b_{hop}) when RB Auto Detect is Off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:SRS:HBWidth <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:SRS:HBWidth?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:SRS:HBW 1` `:EVM:CCAR0:ULIN:PROF:USER1:SRS:HBW?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off and S-RS Active is ON
Preset	3
State Saved	Yes
Min	0
Max	3
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:SRS:HBWidth`

Auto Detect Hopping Bandwidth (b_{hop})

Sets S-RS Hopping Bandwidth (b_{hop}) when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:SRS:HBWidth <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:SRS:HBWidth?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:SRS:HBW 1` `:EVM:CCAR0:ULIN:PROF:AUTO:SRS:HBW?`
Dependencies	Enabled when RB Auto Detect is On and Auto Detect S-RS Active is ON
Preset	3
State Saved	Yes
Min	0
Max	3
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:SRS:HBWidth`

Tx Comb

Sets Transmission Comb (k_{TC}) of S-RS when RB Auto Detect is Off.

This parameter influences the starting frequency location of S-RS.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:SRS:TCOMb <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:SRS:TCOMb?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:SRS:TCOM 1` `:EVM:CCAR0:ULIN:PROF:USER1:SRS:TCOM?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off and S-RS Active is ON
Preset	0
State Saved	Yes
Min	0
Max	1
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:SRS:TCOMb`

Auto Detect Transmission Comb (k_{TC})

Sets Transmission Comb (k_{TC}) of S-RS when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:SRS:TCOMb <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:SRS:TCOMb?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:SRS:TCOM 1` `:EVM:CCAR0:ULIN:PROF:AUTO:SRS:TCOM?`
Dependencies	Enabled when RB Auto Detect is On and Auto Detect S-RS Active is ON
Preset	0
State Saved	Yes
Min	0
Max	1
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:SRS:TCOMb`

Frequency Domain Position

Sets the S-RS Frequency Domain Position (n_{RRC}) when RB Auto Detect is Off.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:SRS:FDPosition <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:SRS:FDPosition?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:SRS:FDP 1` `:EVM:CCAR0:ULIN:PROF:USER1:SRS:FDP?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off and S-RS Active is ON
Preset	0
State Saved	Yes
Min	0
Max	23
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:SRS:FDPosition`

Auto Detect Frequency Domain Position (n_{RRC})

Sets the S-RS Frequency Domain Position (n_{RRC}) when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:SRS:FDPosition <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:SRS:FDPosition?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:SRS:FDP 1` `:EVM:CCAR0:ULIN:PROF:AUTO:SRS:FDP?`
Dependencies	Enabled when RB Auto Detect is On and Auto Detect S-RS Active is ON
Preset	0
State Saved	Yes
Min	0
Max	23
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:SRS:FDPosition`

SRS Max UpPTS (TDD only)

Sets the value of srsMaxUpPts to indicate whether or not $m_{SRS,0}$ reconfiguration is enabled for UpPTS when RB Auto Detect is Off, where $m_{SRS,0}$ is given by Table 5.5.3.2-1 through Table 5.5.3.2-4 for each uplink bandwidth in 3GPP TS36.211 v8.5.0.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:SRS:MUPTs OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0 | … | 4:ULINk:PROFile:USER<n>:SRS:MUPTs?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:SRS:MUPT 0` `:EVM:CCAR0:ULIN:PROF:USER1:SRS:MUPT?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured Enabled when the mode is LTEATDD, RB Auto Detect is Off, and S-RS Active is ON
Preset	OFF
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:SRS:MUPTs`

Auto Detect SRS Max UpPTS

Sets MaxUpPTS to give the srsMaxUpPts value which indicates whether or not $m_{SRS,0}$ reconfiguration is enabled for UpPTS when RB Auto Detect is On, where $m_{SRS,0}$ is given by Table 5.5.3.2-1 through Table 5.5.3.2-4 for each uplink bandwidth in 3GPP TS36.211 v8.5.0.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:SRS:MUPTs OFF | ON | 0 | 1` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:SRS:MUPTs?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:SRS:MUPT 0` `:EVM:CCAR0:ULIN:PROF:AUTO:SRS:MUPT?`

Dependencies	Enabled when the mode is LTEATDD, RB Auto Detect is On, and Auto Detect S-RS Active is ON
Preset	OFF
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:SRS:MUPTs`

S-RS Nra S1 (TDD only)

Sets the format number for PRACH in subframe1's UpPTS, which is derived from 3GPP TS 36.211 V8.5.0 5.7 Table5.7.1-4.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:SRS:NRA:SONE <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:SRS:NRA:SONE?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:SRS:NRA:SONE 1` `:EVM:CCAR0:ULIN:PROF:USER1:SRS:NRA:SONE?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured. Max value for n=50 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when the mode is LTE TDD, RB Auto Detect is Off and S-RS Active is ON
Preset	0
State Saved	Yes
Min	0
Max	6
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:SRS:NRA:SONE`

Auto Detect SRS Nra S1

Sets S-RS NraS1 when Auto Detection is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:SRS:NRA:SONE <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:SRS:NRA:SONE?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:SRS:NRA:SON 1` `:EVM:CCAR0:ULIN:PROF:AUTO:SRS:NRA:SON?`
Dependencies	Enabled when the mode is LTEATDD, RB Auto Detect is On and Auto Detect S-RS Active is ON
Preset	0
State Saved	Yes

Min	0
Max	6
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:SRS:NRA:SONE`

S-RS Nra S6 (TDD only)

Sets the format number for PRACH in subframe6’s UpPTS, which is derived from 3GPP TS 36.211 V8.5.0 5.7 Table5.7.1-4.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:SRS:NRA:SSIX <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:SRS:NRA:SSIX?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:SRS:NRA:SSIX 1` `:EVM:CCAR0:ULIN:PROF:USER1:SRS:NRA:SSIX?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured Max value for n=50 If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when the mode is LTEATDD, RB Auto Detect is Off and SRS Active is ON
Preset	0
State Saved	Yes
Min	0
Max	6
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:SRS:NRA:SSIX`

Auto Detect SRS Nra S6

Sets S-RS NraS6 when Auto Detection is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:SRS:NRA:SSIX <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:SRS:NRA:SSIX?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:SRS:NRA:SSIX 1` `:EVM:CCAR0:ULIN:PROF:AUTO:SRS:NRA:SSIX?`
Dependencies	Enabled when the mode is LTEATDD, RB Auto Detect is On and Auto Detect S-RS Active is ON
Preset	0
State Saved	Yes
Min	0

Max	6
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:SRS:NRA:SSIX`

PRACH

This tab allows you to set up the parameters for PRACH.

User Channel (Display Only)

"User Channel (Display Only)" on page 1673.

N RA PRB Offset

Sets the number of Resource Block that PRACH is offset from 0 in the frequency domain (n^{RA}_{PRB}) when RB Auto Detect is Off. (3GPP TS 36.211 V8.5.0 5.7)

For PRACH preamble formats 0-3, this parameter is used to calculate the start location in frequency for the PRACH preamble. This parameter does not affect the start location of format 4 preamble.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PRACh:NRAPrb <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PRACh:NRAPrb?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PRACh:NRAP 1` `:EVM:CCAR0:ULIN:PROF:USER1:PRACh:NRAP?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured If you attempt to remotely set or query a sub op code that is out of range, this results in an error message The maximum value is [number of resource blocks in a slot] - 6 Enabled when RB Auto Detect is Off and PRACH Present is ON
Preset	0
State Saved	Yes
Min	0
Max	The maximum value is [number of resource blocks in a slot] - 6 [number of resource blocks in a slot] is determined by Bandwidth setting 0 - Bandwidth 1.4 MHz 9 - Bandwidth 3 MHz 19 - Bandwidth 5 MHz 44 - Bandwidth 10 MHz 69 - Bandwidth 15 MHz

	94 - Bandwidth 20 MHz
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PRACh:NRAPrb`

Auto Detect Resource Block Offset (n^{RA}_{PRB})

Sets the number of Resource Block that PRACH is offset from 0 in the frequency domain (nRAPRB) when RB Auto Detect is On. (3GPP TS 36.211 V8.5.0 5.7)

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PRACh:NRAPrb <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PRACh:NRAPrb?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PRACh:NRAP 1` `:EVM:CCAR0:ULIN:PROF:AUTO:PRACh:NRAP?`
Dependencies	Enabled when RB Auto Detect is On and Auto Detect PRACH Present is ON
Preset	0
State Saved	Yes
Min	0
Max	The maximum value is [number of resource blocks in a slot] - 6 [number of resource blocks in a slot] is determined by Bandwidth setting 0 - Bandwidth 1.4 MHz 9 - Bandwidth 3 MHz 19 - Bandwidth 5 MHz 44 - Bandwidth 10 MHz 69 - Bandwidth 15 MHz 94 - Bandwidth 20 MHz
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:PRACh:NRAPrb`

Configuration Index

Sets PRACH Configuration Index to give frame structure when RB Auto Detect is Off. (3GPP TS 36.211 V8.5.0 5.7)

This parameter determines the PRACH preamble format and the locations where PRACH can be transmitted in the frame.

This information is given in table 5.7.1-2 for frame type 1 FDD signals and in table 5.7.1-3 for frame type 2 TDD signals in 3GPP TS 36.211.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PRACh:CINDex <integer>`

	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PRACh:CINDex?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PRACh:CIND 1` `:EVM:CCAR0:ULIN:PROF:USER1:PRACh:CIND?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off and PRACH Present is ON
Preset	0
State Saved	Yes
Min	0
Max	LTEAFDD: 63 LTEATDD: 57
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PRACh:CINDex`

Auto Detect Configuration Index

Sets the PRACH Configuration Index to give frame structure when RB Auto Detect is On. (3GPP TS 36.211 V8.5.0 5.7)

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PRACh:CINDex <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PRACh:CINDex?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PRACh:CIND 1` `:EVM:CCAR0:ULIN:PROF:AUTO:PRACh:CIND?`
Dependencies	Enabled when RB Auto Detect is On and Auto Detect PRACH Present is ON
Preset	0
State Saved	Yes
Min	0
Max	LTEAFDD: 63 LTEATDD: 57
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:PRACh:CINDex`

Logical Root Seq Index

Sets the Logical Root Seq Index to give root Zadoff-Chu sequence order when RB Auto Detect is Off. (3GPP TS 36.211 V8.5.0 5.7)

For preamble formats 0-3, there are 838 total logical indexes. For preamble format 4, there are 138 logical indexes.

The mapping between logical and physical Zadoff-Chu indexes is given in Table 5.7.2-4 for preamble formats 0-3 and in Table 5.7.2-5 for preamble format 4 in TS 36.211.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PRACh:LRSindex <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PRACh:LRSindex?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PRACh:LRS 1` `:EVM:CCAR0:ULIN:PROF:USER1:PRACh:LRS?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off and PRACH Present is ON
Preset	0
State Saved	Yes
Min	0
Max	837
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PRACh:LRSindex`

Auto Detect Logical Root Seq Index

Sets Logical Root Seq Index to give root Zadoff-Chu sequence order when RB Auto Detect is On. (3GPP TS 36.211 V8.5.0 5.7)

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PRACh:LRSindex <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PRACh:LRSindex?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PRACh:LRS 1` `:EVM:CCAR0:ULIN:PROF:AUTO:PRACh:LRS?`
Dependencies	Enabled when RB Auto Detect is On and Auto Detect PRACH Present is ON
Preset	0
State Saved	Yes
Min	0
Max	837
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:PRACh:LRSindex`

Cyclic Shift Set

Sets Cyclic Shift Set to give N_{CS} (Number of Cyclic Shifts) for PRACH preamble sequence generation when RB Auto Detect is Off. Value of N_{CS} is determined by this selection and value of N_{CS} Configuration. (3GPP TS 36.211 V8.5.0 Table 5.7.2-2)

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PRACh:CSSet UNRestricted | RESTricted` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PRACh:CSSet?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PRAC:CSS UNR` `:EVM:CCAR0:ULIN:PROF:USER1:PRAC:CSS?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured Enabled when RB Auto Detect is Off and PRACH Present is ON
Preset	UNRestricted
State Saved	Yes
Range	Unrestricted|Restricted
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PRACh:CSSet`

Auto Detect Cyclic Shift Set

Sets Cyclic Shift Set to give N_{CS} (Number of Cyclic Shifts) for PRACH preamble sequence generation when RB Auto Detect is On. Value of N_{CS} is determined by this selection and value of N_{CS} Configuration. (3GPP TS 36.211 V8.5.0 Table 5.7.2-3)

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PRACh:CSSet UNRestricted | RESTricted` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PRACh:CSSet?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PRAC:CSS UNR` `:EVM:CCAR0:ULIN:PROF:AUTO:PRAC:CSS?`
Dependencies	Enabled when RB Auto Detect is On and Auto Detect PRACH Present is ON
Preset	UNRestricted
State Saved	Yes
Range	Unrestricted|Restricted
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:PRACh:CSSet`

N_{CS} Configuration

Sets the Cyclic Shift Configuration Number to give N_{CS} (Number of Cyclic Shifts) PRACH preamble sequence generation when RB Auto Detect is Off. Value of N_{CS} is determined by this value and selection of Cyclic Shift Set. (3GPP TS 36.211 V8.5.0 Table 5.7.2-2,3)

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PRACh:NCSConfig <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PRACh:NCSConfig?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PRACh:NCSC 1` `:EVM:CCAR0:ULIN:PROF:USER1:PRACh:NCSC?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off and PRACH Present is ON
Preset	0
State Saved	Yes
Min	0
Max	15
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PRACh:NCSConfig`

Auto Detect N_{CS} Configuration

Sets the Cyclic Shift Configuration Number to give N_{CS} (Number of Cyclic Shifts) PRACH preamble sequence generation when RB Auto Detect is On. Value of N_{CS} is determined by this value and selection of Cyclic Shift Set. (3GPP TS 36.211 V8.5.0 Table 5.7.2-3)

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PRACh:NCSConfig <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PRACh:NCSConfig?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PRAC:NCSC 1` `:EVM:CCAR0:ULIN:PROF:AUTO:PRAC:NCSC?`
Dependencies	Enabled when RB Auto Detect is On and Auto Detect PRACH Present is ON
Preset	0
State Saved	Yes
Min	0
Max	15
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:PRACh:NCSConfig`

Preamble Index

Sets the Preamble Index when RB Auto Detect is Off. Preamble sequence generation is presented on 3GPP TS 36.211 V8.5.0 - 5.7.2.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PRACh:PINDex <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PRACh:PINDex?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PRACh:PIND 1` `:EVM:CCAR0:ULIN:PROF:USER1:PRACh:PIND?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off and PRACH Present is ON
Preset	0
State Saved	Yes
Min	0
Max	63
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PRACh:PINDex`

Auto Detect Preamble Index

Sets the Preamble Index when RB Auto Detect is On. Preamble sequence generation is presented on 3GPP TS 36.211 V8.5.0 - 5.7.2.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PRACh:PINDex <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PRACh:PINDex?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PRAC:PIND 1` `:EVM:CCAR0:ULIN:PROF:AUTO:PRAC:PIND?`
Dependencies	Enabled when RB Auto Detect is On and Auto Detect PRACH Present is ON
Preset	0
State Saved	Yes
Min	0
Max	63
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:PRACh:PINDex`

PRACH Power (dB)

Sets the PRACH Power Boost value when RB Auto Detect is Off.

This parameter specifies the average power of PRACH subcarriers.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PRACh:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PRACh:PWRBoost?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PRAC:PWRB 1` `:EVM:CCAR0:ULIN:PROF:USER1:PRAC:PWRB?`
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when RB Auto Detect is Off and PRACH Present is ON
Preset	0
State Saved	Yes
Min	-100
Max	100
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PRACh:PWRBoost`

Auto Detect PRACH Power Boost

Sets the PRACH Power Boost value when RB Auto Detect is On.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PRACh:PWRBoost <rel_ampl>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PRACh:PWRBoost?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PRACh:PWRB 1` `:EVM:CCAR0:ULIN:PROF:AUTO:PRACh:PWRB?`
Dependencies	Enabled when RB Auto Detect is On and Auto Detect PRACH Present is ON
Preset	0
State Saved	Yes
Min	-100
Max	100
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:PRACh:PWRBoost`

Sync Resource (TDD only)

Sets the index value for random access resource, which is used as a synchronization reference when RB Auto Detect is Off. Random access preamble mapping is presented on 3GPP TS 36.211 V8.5.0 5.7 Table 5.7.1-4.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PRACh:SRESource <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:USER<n>:PRACh:SRESource?`
Example	`:EVM:CCAR0:ULIN:PROF:USER1:PRAC:SRES 0` `:EVM:CCAR0:ULIN:PROF:USER1:PRAC:SRES?`
Notes	Max value of this parameter depends on Configuration Index and UL/DL Configuration Disabled when the combination of Configuration Index and UL/DL Configuration results in the N/A in 3GPP TS 36.211 V8.5.0 5.7 Table5.7.1-4
Dependencies	The range of sub op code <n> values is determined by the number of Users you have configured If you attempt to remotely set or query a sub op code that is out of range, this results in an error message Enabled when the mode is LTEATDD, RB Auto Detect is Off, and PRACH Present is ON
Preset	0
State Saved	Yes
Min	0
Max	5
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:USER<n>:PRACh:SRESource`

Auto Detect Sync Resource

Sets the index value for random access resource, which is used as synchronization reference when RB Auto Detect is On. Random access preamble mapping is presented on 3GPP TS 36.211 V8.5.0 5.7 Table 5.7.1-4.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PRACh:SRESource <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:PROFile:AUTO:PRACh:SRESource?`
Example	`:EVM:CCAR0:ULIN:PROF:AUTO:PRACh:SRES 0` `:EVM:CCAR0:ULIN:PROF:AUTO:PRACh:SRES?`
Notes	Max value of this parameter depends on Configuration Index and UL/DL Configuration. This parameter is disabled when the combination of Configuration Index and UL/DL Configuration results in the N/A in 3GPP TS 36.211 V8.5.0 5.7 Table5.7.1-4
Dependencies	Enabled when the mode is LTEATDD, RB Auto Detect is On and Auto Detect PRACH Present is ON
Preset	0

State Saved	Yes
Min	0
Max	5
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:PROFile:AUTO:PRACh:SRESource`

Edit eMTC Channels

This control allows you to set up more eMTC parameters.

This is for Uplink.

eMTC Analysis

Enable/Disable eMTC analysis function. This control performs the same function as that in the Radio tab.

See eMTC Analysis under Radio.

Decode

This tab contains commonly used functions for decode setup parameters.

PBCH Bits

Selects the decoding type of the PBCH. It specifies how much coding to undo before showing the Master Information Block (MIB) bits from PBCH on the Decoded Symbol Table. See 3GPP TS 36.212, Section 5.3.1 for a diagram of the coding operations performed on PBCH.

The following is a list of the available PBCH decoding type selections and the resulting bits:

- NONE - None, no bits for this channel are shown on the Decoded Symbol Table.
- DESCrambled - Descrambled,
  - LTE:480 (Normal CP) or 432 (Extended CP) descrambled (rate-matched) bits for each subframe 0 in a frame
  - NB-IoT: 200 descrambled (rate-matched) bits for each subframe 0 in a frame
- DRMatched - DeRateMatched

  - LTE: 120 deratematched (channel coded) bits for each subframe 0 in a frame
  - NB-IoT: 150 deratematched (channel coded) bits for each subframe 0 in a frame
- DECoded
  - LTE: 40 (information bits + CRC) bits for each subframe 0 in a frame
  - NB-IoT:50 (34 information bits + 16 CRC) bits for each subframe 0 in a frame

NOTE **For LTE: The PBCH Decoder is On when PBCH Bits is set a value other than None or when "PHICH Duration" on page 1515 or "PHICH Allocation (Ng)" on page 1515 are set to Auto Detect. You can check the status of PBCH Decoder in the window of "Downlink Decode Info" on page 1327.**

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:DECode:PBCH NONE | DESCrambled | DRMatched | DECoded` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:DECode:PBCH?`
Example	`:EVM:CCAR0:DLIN:DEC:PBCH NONE` `:EVM:CCAR0:DLIN:DEC:PBCH?`
Notes	Available when Direction is Downlink The setting is shared by LTE and NB-IoT
State Saved	Yes
Range	None|Descrambled|DeRateMatched|Decoded
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:DECode:PBCH`

PCFICH Bits

Selects the decoding type of the PCFICH. It specifies how much coding to undo before showing the bits from PCFICH on the Decoded Symbol Table. See 3GPP TS 36.212, Section 5.3.4 for a diagram of the coding operations performed to PCFICH. The following is a list of the available PCFICH decoding type selections and the resulting bits:

- NONE - None, no bits for this channel are shown on the Decoded Symbol Table
- DESCrambled - Descrambled, 32 descrambled (channel coded) bits per subframe
- DECoded - Decoded, 2 decoded bits (CFI) per subframe

NOTE The PCFICH Decoder is On when PCFICH Bits is not set to None or when "PDCCH Allocation Auto Detect" on page 1517 is set to On. You can check the status of PCFICH Decoder in "Downlink Decode Info" on page 1327.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:DECode:PCFich NONE | DESCrambled | DECoded` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:DECode:PCFich?`
Example	`:EVM:CCAR0:DLIN:DEC:PCF NONE` `:EVM:CCAR0:DLIN:DEC:PCF?`
Notes	Available when Direction is Downlink
State Saved	Yes
Range	None|Descrambled|Decoded
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:DECode:PCFich`

PDCCH Bits

Selects the decoding type of the PDCCH. It specifies how much coding to undo before showing the bits from PDCCH on the Decoded Symbol Table. See 3GPP TS 36.212, Section 5.3.3 for a diagram of the coding operations performed on PDCCH. The following is a list of the available PDCCH Bits selections and the resulting bits. N_{REG} is the number of resource element groups not allocated for PHICH or PCFICH in a subframe.

- NONE (None) - no PDCCH bits are shown in the Decoded Symbol Table.
- DEMapped (Demapped) - NREG*8 demapped (interleaved) DCI format bits for each subframe
- DINTerleaved (Deinterleaved) - NREG*8 deinterleaved (scrambled) DCI format bits for each subframe
- DESCrambled (Descrambled) - NREG*8 descrambled (rate-matched) bits for each subframe
- DRMatched (DeRateMatched) - S(8 + LENi) bits for each subframe
  Each set of bits for an active PDCCH transmission consists of an 8-bit length field (LENi) followed by the deratematched (channel coded) bits.
  LENi indicates the number of deratematched bits for the ith PDCCH transmission in a subframe and can be used to determine where a PDCCH ends and the next PDCCH begins in the Decoded Symbol Table.
  LENi = 3 * (DCI Payload Length + CRC Length)
- DECoded (Decoded) - S(8 + LENi) bits for each subframe
  Each set of bits for an active PDCCH transmission consists of an 8-bit length

field (LENi), the decoded (DCI payload + CRC) bits, and the 16-bit CRC. LENi indicates the number of decoded bits (including CRC) for the ith PDCCH transmission in a subframe and can be used to determine where a PDCCH ends and the next PDCCH begins in the Decoded Symbol Table.
LENi = DCI Payload Length + CRC Length

NOTE **When PDCCH Bits is set to Deratematched or Decoded, the LTE-A demodulator auto-detects the number of active PDCCH transmitted within each subframe, nPDCCH.**

The PDCCH Decoder is On when PDCCH Bits is set to a value other than None or when "RB Auto Detect Mode" on page 1500 is set to Decode DCI. You can check the status of PDCCH Decoder in "Downlink Decode Info" on page 1327.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:DECode:PDCCh NONE | DEMapped | DINTerleaved | DESCrambled | DRMatched | DECoded` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:DECode:PDCCh?`
Example	`:EVM:CCAR0:DLIN:DEC:PDCC NONE` `:EVM:CCAR0:DLIN:DEC:PDCC?`
Notes	Available when Direction is Downlink The setting is shared by LTE and NB-IoT As for NB-IoT, the data carried on NPDCCH channel is not interleaved, therefore, when the Deinterleaved option is selected, the data shown in Decoded Symbol Table is same as that which the Demapped option is selected
State Saved	Yes
Range	None | Demapped | Deinterleaved | Descrambled | DeRateMatched | Decoded
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:DECode:PDCCh`

PDSCH Bits

This parameter is not available for BL/CE Ues.

Selects the decoding type of the PDSCH. It specifies how much coding to undo before showing the bits from PDSCH on the Decoded Symbol Table. See 3GPP TS 36.212, Section 5.3.2 for a diagram of the coding operations performed on PDSCH. The following is a list of the available PDSCH decoding type selections and the resulting bits:

- NONE - None, no bits for this channel are shown on the Decoded Symbol Table.
- DESCrambled - Descrambled, descrambled (rate-matched) bits for each subframe

- DRMatched - DeRateMatched, S(16 + LENi) bits per subframe
  Each set of bits for a PDSCH transmission consists of an 16-bit length field (LENi) followed by the deratematched (channel coded) bits.
  LENi indicates the number of deratematched bits for the ith PDSCH allocation in a subframe and can be used to determine where one set of deratematched bits ends and the next set begins in the Decoded Symbol Table.
  LENi = 3 * (Codeblock Length + CRC Length + Trellis Termination Bit Length) where Trellis Termination Bit Length = 4.
- DCBLock - Decoded CB, S(16 + LENi) bits per subframe
  Each set of bits for a PDSCH codeblock consists of a 16-bit length field (LENi), the decoded codeblock bits, and a 24-bit CRC. When codeblock segmentation is not performed (Transport Block Size (TBS(n)) is less than 6144), the codeblock + CRC bits shown are the same as the transport block + CRC bits.
  LENi indicates the number of decoded bits (including CRC) for the ith PDSCH codeblock in a subframe and can be used to determine where a set of codeblock bits ends and the next set begins in the Decoded Symbol Table.
- DTBLock - Decoded TB, S(Transport Block Sizes + 24) decoded transport block bits (including CRCs) per subframe
  Each set of bits consists of the decoded transport block bits followed by a 24-bit CRC. There is no LEN field for decoded transport block bits since the Transport Block Size for each PDSCH allocation is shown on the DL Decode Info table in the TBS(n) data result.

NOTE **The PDSCH Decoder is turning on when "PDSCH Bits" on page 1741 is set to a value other than None. PDSCH decoding is available when RB Auto Detect Mode is Decoded DCI.**

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:DECode:PDSCh NONE | DESCrambled | DRMatched | DCBLock | DTBLock` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:DECode:PDSCh?`
Example	`:EVM:CCAR0:DLIN:DEC:PDSC NONE` `:EVM:CCAR0:DLIN:DEC:PDSC?`
Dependencies	Available when Direction is Downlink PDSCH data is decoded when RB Auto Detect is On and RB Auto Detect Mode is Decoded DCI NB-IoT supports NPDSCH decoding when both RB Auto Detect is On and RB Auto Detect Mode is Power-based, or RB Auto Detect is Off NB-IoT provides NPDSCH decoding configuration parameters under NPDSCH dialog of Edit NB-IoT Channels
State Saved	Yes
Range	None|Descrambled| DeRateMatched|Decoded Code Block|Decoded Tx Port Block
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:DECode:PDSCh`

RNTI DCI Settings

Enable you to adjust the RNTI DCI parameters.

Transmission Mode Included in DCI Decoding

Specifies which Transmission Modes are included, so that decoding the appropriate DCI Format may be attempted. This property is useful in detecting the correct DCI Format. Multiple transmission modes can be included through a bitwise OR operation. TM5 and TM6 cannot be included simultaneously, as simultaneous detection of DCI Formats 1B and 1D is not possible. TM3 and TM8 cannot be included simultaneously, as simultaneous detection of DCI Formats 2A and 2B is not possible TM3 and TM9 cannot be included simultaneously, as simultaneous detection of DCI Formats 2A and 2C is not possible

See the table below for bitmapping.

Transmission mode	**Bit**
TM1	0
TM2	1
TM3	2
TM4	3
TM5	4
TM6	5
TM7	6
TM8	7
TM9	8

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:DECode:TMINclude <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:DECode:TMINclude?`
Example	`:EVM:CCAR0:DLIN:DEC:TMIN 235` `:EVM:CCAR0:DLIN:DEC:TMIN?`
Notes	The parameter requires a decimal entry. For example, if TM1 and TM3 are going to be included in the decoding, then the Bit Mask for this combination is 101, and the value of this parameter is the decimal number ‘5’ By default, TM1, TM2, TM4, TM6, TM7 and TM8 are included, the Bit Mask for this combination is 11101011, and the value of this parameter is the decimal number’235’.
Preset	235
Min	0
Max	511

DCI Format 1/1A Include

Specifies which DCI Format a PDCCH with ambiguous length is to be decoded as.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:DECode:DF1A:INCLude F1 | F1A` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:DECode:DF1A:INCLude?`
Example	`:EVM:CCAR0:DLIN:DEC:DF1A:INCL F1` `:EVM:CCAR0:DLIN:DEC:DF1A:INCL?`
Dependencies	Available when Direction is Downlink
Preset	F1
State Saved	Yes
Range	Format1|Format1A

Uplink Bandwidth

Specify the uplink bandwidth to be used in decoding certain DCI Formats.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:DECode:ULBW B1M4 | B3M | B5M | B10M | B15M | B20M | B200K` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:DECode:ULBW?`
Example	`:EVM:CCAR0:DLIN:DEC:ULBW B20M` `:EVM:CCAR0:DLIN:DEC:ULBW?`
Preset	B5M
State Saved	Yes
Range	1.4 MHz (6 RB) | 3 MHz (15 RB) | 5 MHz (25 RB) | 10 MHz (50 RB) | 15 MHz (75 RB) | 20 MHz (100 RB) | 200 kHz (NB-IoT)

RA-RNTI Range (Min Value)

Sets the minimum value of the RA-RNTI range.

RA-RNTI Range specifies the range of RNTI values that are assumed to be RA-RNTIs when decoding PDCCH transmissions. This parameter is needed to unambiguously decode the contents of DCI Format 1A.

NOTE

Zero is not a valid RA-RNTI value, but is used to indicate that there are no RA-RNTI contained in the LTE signal when both the Min and Max values are set to 0.

Any PDCCH, whose CRC is scrambled with an RNTI that is not contained in either the RA-RNTI or TPC-RNTI ranges and cannot be determined to be a SI-RNTI or P-RNTI, is demodulated as a C-RNTI PDCCH.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:DECode:RNTI:MINimum:RA <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:DECode:RNTI:MINimum:RA?`
Example	`:EVM:CCAR0:DLIN:DEC:RNTI:MIN:RA 0` `:EVM:CCAR0:DLIN:DEC:RNTI:MIN:RA?`
Notes	The value should be less than or equal to RA-RNTI Range Max Value
Dependencies	Available when Direction is Downlink
Preset	0
State Saved	Yes
Min	0
Max	60
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:DECode:RNTI:MINimum:RA`

RA-RNTI Range (Max Value)

Sets the maximum value of the RA-RNTI range.

RA-RNTI Range specifies the range of RNTI values that are assumed to be RA-RNTIs when decoding PDCCH transmissions. This parameter is needed to unambiguously decode the contents of DCI Format 1A.

NOTE

Zero is not a valid RA-RNTI value, but is used to indicate that there are no RA-RNTI contained in the LTE signal when both the Min and Max values are set to 0.

Any PDCCH, whose CRC is scrambled with an RNTI that is not contained in either the RA-RNTI or TPC-RNTI ranges and cannot be determined to be a SI-RNTI or P-RNTI, is demodulated as a C-RNTI PDCCH.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:DECode:RNTI:MAXimum:RA <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:DECode:RNTI:MAXimum:RA?`
Example	`:EVM:CCAR0:DLIN:DEC:RNTI:MAX:RA 0` `:EVM:CCAR0:DLIN:DEC:RNTI:MAX:RA?`
Notes	The value should be greater than or equal to the RA-RNTI Range Min Value
Dependencies	Available only when Direction is Downlink
Preset	0
State Saved	Yes
Min	0
Max	60
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:DECode:RNTI:MAXimum:RA`

TPC-RNTI Range (Min Value)

Sets the minimum value of the TPC-RNTI range.

TPC-RNTI Range specifies the range of RNTI values that are assumed to be TPC-RNTIs when decoding PDCCH transmissions.

DCI Formats 3 and 3A have the same message payload size as DCI Formats 0 and 1A. Any PDCCHs with a RNTI falling within the specified TPC-RNTI Range are decoded as DCI Format 3/3A transmit power control commands.

NOTE **Any PDCCH, whose CRC is scrambled with an RNTI that is not contained in either the RA-RNTI or TPC-RNTI ranges and cannot be determined to be a SI-RNTI or P-RNTI, is demodulated as a C-RNTI PDCCH.**

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:DECode:RNTI:MINimum:TPC <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:DECode:RNTI:MINimum:TPC?`
Example	`:EVM:CCAR0:DLIN:DEC:RNTI:MIN:TPC 0` `:EVM:CCAR0:DLIN:DEC:RNTI:MIN:TPC?`
Notes	The value should be less than or equal to TPC-RNTI Range Max Value
Dependencies	Available only when Direction is Downlink
Preset	0
State Saved	Yes
Min	0
Max	65523
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:DECode:RNTI:MINimum:TPC`

TPC-RNTI Range (Max Value)

Sets the maximum value of the TPC-RNTI range.

TPC-RNTI Range specifies the range of RNTI values that are assumed to be TPC-RNTIs when decoding PDCCH transmissions.

DCI Formats 3 and 3A have the same message payload size as DCI Formats 0 and 1A. Any PDCCHs with a RNTI falling within the specified TPC-RNTI Range are decoded as DCI Format 3/3A transmit power control commands.

NOTE **Any PDCCH, whose CRC is scrambled with an RNTI that is not contained in either the RA-RNTI or TPC-RNTI ranges and cannot be determined to be a SI-RNTI or P-RNTI, is demodulated as a C-RNTI PDCCH.**

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:DECode:RNTI:MAXimum:TPC <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:DECode:RNTI:MAXimum:TPC?`
Example	`:EVM:CCAR0:DLIN:DEC:RNTI:MAX:TPC 0` `:EVM:CCAR0:DLIN:DEC:RNTI:MAX:TPC?`
Notes	The value should be greater than or equal to the TPC-RNTI Range Min Value
Dependencies	Available only when Direction is Downlink
Preset	0
State Saved	Yes
Min	0
Max	65523
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:DECode:RNTI:MAXimum:TPC`

Latest PMI Report on PUSCH

Specify the latest Precoding Matrix Indicator(s) (PMI) reported by the UE. The latest PMI report can be specified for PDSCH allocations using 1, 2, 3, or 4 layers. Valid PMI reports are shown in the table below:

Num. of Layers	2 Tx Antenna Ports	4 Tx Antenna Ports
1	0-3	0-15
2	0-1	0-15
3	n/a	0-15
4	n/a	0-15

When Format 2 DCI is used to specify PDSCH RB allocations for a user, the eNodeB can explicitly specify the precoding that was applied to the PDSCH allocations, or can indicate that the last PMI report from the UE was used. In the latter case, the LTE demodulator needs to know what PMI that the UE reported to be able to completely decode the contents of the DCI payload as well as decode the corresponding PDSCH user allocation.

More information about DCI Format 2 can be found in 3GPP TS 36.211, Section 5.3.3.1.5.

Latest PMI Report on PUSCH using 1 Layer

Specifies the latest Precoding Matrix Indicator(s) (PMI) reported by the UE.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:DECode:DFTWo:PRONe <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:DECode:DFTWo:PRONe?`

Example	`:EVM:CCAR0:DLIN:DEC:DFTW:PRON 1` `:EVM:CCAR0:DLIN:DEC:DFTW:PRON?`
Dependencies	Available when Direction is Downlink and Number of C-RS Ports is set to 2 or 4 Ports The number of valid PMI reports differs depending on the Number of C-RS Ports 2 Ports : 0-3 4 Ports: 0-15
Preset	0
State Saved	Yes
Min	0
Max	3 Depends on the Number of C-RS Ports 2 Ports: 3 4 Ports: 15
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:DECode:DFTWo:PRONe`

Latest PMI Report on PUSCH using 2 Layers

Specifies the latest Precoding Matrix Indicator(s) (PMI) reported by the UE.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:DECode:DFTWo:PRTWo <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:DECode:DFTWo:PRTWo?`
Example	`:EVM:CCAR0:DLIN:DEC:DFTW:PRTW 1` `:EVM:CCAR0:DLIN:DEC:DFTW:PRTW?`
Dependencies	Available when Direction is Downlink and Number of C-RS Ports is set to 2 or 4 Ports The number of valid PMI reports differs depending on Number of C-RS Ports 2 Ports: 0-1 4 Ports: 0-15
Preset	0
State Saved	Yes
Min	0
Max	1 Depends on the Number of C-RS Ports 2 Ports: 1 4 Ports: 15
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:DECode:DFTWo:PRTWo`

Latest PMI Report on PUSCH using 3 Layers

Specifies the latest Precoding Matrix Indicator(s) (PMI) reported by the UE.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:DECode:DFTWo:PRTHree <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:DECode:DFTWo:PRTHree?`
Example	`:EVM:CCAR0:DLIN:DEC:DFTW:PRTH 1` `:EVM:CCAR0:DLIN:DEC:DFTW:PRTH?`
Dependencies	Available when Direction is Downlink and Number of C-RS Ports is set to 4 Ports The number of valid PMI reports differs depending on Number of C-RS Ports
Preset	0
State Saved	Yes
Min	0
Max	15
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:DECode:DFTWo:PRTHree`

Latest PMI Report on PUSCH using 4 Layers

Specifies the latest Precoding Matrix Indicator(s) (PMI) reported by the UE.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:DLINk:DECode:DFTWo:PRFour <integer>` `[:SENSe]:EVM:CCARrier0|…|4:DLINk:DECode:DFTWo:PRFour?`
Example	`:EVM:CCAR0:DLIN:DEC:DFTW:PRF 1` `:EVM:CCAR0:DLIN:DEC:DFTW:PRF?`
Dependencies	Available when Direction is Downlink and Number of C-RS Ports is set to 4 Ports.
Preset	0
State Saved	Yes
Min	0
Max	15
Backwards Compatibility SCPI	`[:SENSe]:EVM:DLINk:DECode:DFTWo:PRFour`

PUSCH Bits

Selects the decoding type of the PUSCH. It determines the level of decoding for PUSCH bits shown in the Decoded Symbol Table.

- NONE - None, no decoding is performed on PUCCH bits. Mapped bits are shown in the Symbol Table.
- DESCrambled - Descrambled, descrambled (rate-matched) bits for each subframe are shown in the Decoded Symbol Table.
- DRMatched - DeRateMatched, S (16 + LENi) bits per subframe.
  Each set of bits for a PUSCH transmission consists of a 16-bit length field (LENi) followed by the deratematched (channel coded) bits for each codeblock.
  LENi indicates the number of deratematched bits for the ith codeblock in a subframe and can be used to determine where one set of deratematched codeblock bits ends and the next set begins in the Decoded Symbol Table.
  LEN = 3 * (Codeblock Length + CRC Length + Trellis Termination Bit Length) bits, where Codeblock Length is transmission dependent, CRC Length = 24 bits, and Trellis Termination Bit Length = 4 bits.
- DCBLock - Decoded CB, S (16 + LENi) bits per subframe.
  Each set of bits for a PUSCH codeblock consists of a 16-bit length field (LEN), the decoded codeblock bits, and a 24-bit CRC. When codeblock segmentation is not performed (Transport Block Size (TBS(n)) is less than 6144), the codeblock + CRC bits shown are the same as the transport block + CRC bits.
  LENi indicates the number of decoded bits (including CRC) for the ith codeblock in a subframe and can be used to determine where a set of codeblock bits ends and the next set begins in the Decoded Symbol Table. LENi = Codeblock Length + CRC Length, where Codeblock Length is transmission dependent, and CRC Length = 24 bits.
- DTBLock - Decoded TB, (Transport Block Size + 24) decoded transport block bits (including CRCs) per subframe.
  The number of bits shown on the Decoded Symbol Table for a PUSCH channel allocation when PUSCH Bits is set to Decoded is equal to the sum of the Size metrics (HARQ Size, CQI/PMI Size, SR Size, etc.) plus the Transport Block Size (TBS) for the corresponding decoded PUSCH allocation listed in the UL Decode Info trace.

NOTE **RNTI needs to be specified for a user allocation for PUSCH descrambling to be performed.**

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:DECode:PUSCh NONE | DESCrambled | DRMatched | DCBLock | DTBLock` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:DECode:PUSCh?`
Example	`:EVM:CCAR0:ULIN:DEC:PUSC NONE` `:EVM:CCAR0:ULIN:DEC:PUSC?`
Notes	Available when Direction is Uplink RNTI needs to be specified for a user allocation in the LTE Allocation Editor for PUSCH descrambling to be performed

State Saved	Yes
Range	None|Descrambled|DeRatematched|Decoded Code Block|Decoded Tx Port Block
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:DECode:PUSCh`

PUCCH Bits

Selects the decoding type of the PUCCH. It determines how much coding to undo before showing the bits from PUCCH on the Decoded Symbol Table. See 3GPP TS 36.212, Section 5.2.3 for a diagram of the coding operations performed on PUCCH.

- NONE - None, raw PUCCH bits are mapped to resource element locations and shown in the Symbol Table. No PUCCH bits are shown in the Decoded Symbol Table.
- DESCrambled –Descrambled, descrambled (channel coded) bits for each subframe are shown on the Decoded Symbol Table.
- DECoded - Decoded, decoded bits for each subframe are shown in the Decoded Symbol Table.

NOTE **For PUCCH Format 2/2a/2b, where both CQI/PMI and HARQ-ACK bits are jointly encoded, CQI/PMI information bits are listed first in a set of PUCCH bits, followed by HARQ-ACK information bits.**

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:DECode:PUCCh NONE | DESCrambled | DECoded` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:DECode:PUCCh?`
Example	`:EVM:CCAR0:ULIN:DEC:PUCC NONE` `:EVM:CCAR0:ULIN:DEC:PUCC?`
Notes	Available when Direction is Uplink
State Saved	Yes
Range	None|Descrambled|Decoded
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:DECode:PUCCh`

PUSCH & PUCCH Decode Parameters

Displays a menu that enables you to configure decoding of HARQ-ACK, RI, and CQI/PMI information bits.

Available when Direction is Uplink.

Info Size parameter

Specifies the number of bits for all PUSCH transmissions for the selected uplink user allocation.

When AutoDet is selected for HARQ-ACK, RI, or CQI/PMI, the corresponding information bit size is auto detected as far as possible.

The possible range of information bits are listed as follows:

- HARQ-ACK bits range: 0-11 bits
- RI bits range: 0-2 bits
- CQI-PMI bits range: 0-128 bits

TIP **For best demodulation performance, specify Info Size manually.**

Offset Index parameter

Specifies the value of Ioffset for HARQ-ACK, RI, and CQI in the tables listed in 3GPP TS 36.213, Section 8.6.3.

The possible range of Offset Index values are as follows:

- HARQ-ACK bits range: 0-14 bits
- RI bits range: 0-12 bits
- CQI-PMI bits range: 2-15 bits

PUSCH HARQ-ACK Info Size

Specifies the HARQ-ACK information size in bits.

When AutoDet is selected, information size is auto detected as far as possible.

TIP **For the best demodulation performance, specify Info Size manually.**

Remote Command

```
[:SENSe]:EVM:CCARrier0|…|4:ULINk:DECode:PUSCh:HARQ:ISIZe <integer>
[:SENSe]:EVM:CCARrier0|…|4:ULINk:DECode:PUSCh:HARQ:ISIZe?
[:SENSe]:EVM:CCARrier0|…|4:ULINk:DECode:PUSCh:HARQ:ISIZe:AUTO OFF | ON | 0
| 1
```

	[:SENSe]:EVM:CCARrier0|…|4:ULINk:DECode:PUSCh:HARQ:ISIZe:AUTO?
Example	:EVM:CCAR0:ULIN:DEC:PUSC:HARQ:ISIZ 0 :EVM:CCAR0:ULIN:DEC:PUSC:HARQ:ISIZ? :EVM:CCAR0:ULIN:DEC:PUSC:HARQ:ISIZ:AUTO 0 :EVM:CCAR0:ULIN:DEC:PUSC:HARQ:ISIZ:AUTO?
Dependencies	Available when Direction is Uplink and PUSCH HARQ-ACK Info Size Auto Detect is OFF
Preset	0 ON
State Saved	Yes Yes
Min	0
Max	11
Backwards Compatibility SCPI	[:SENSe]:EVM:ULINk:DECode:PUSCh:HARQ:ISIZe [:SENSe]:EVM:ULINk:DECode:PUSCh:HARQ:ISIZe:AUTO

PUSCH HARQ-ACK Offset Index

Specifies the value of I_{offset} for HARQ-ACK in the tables listed in 3GPP TS 36.213, Section 8.6.3.

Remote Command	[:SENSe]:EVM:CCARrier0|…|4:ULINk:DECode:PUSCh:HARQ:OFFSet <integer> [:SENSe]:EVM:CCARrier0|…|4:ULINk:DECode:PUSCh:HARQ:OFFSet?
Example	:EVM:CCAR0:ULIN:DEC:PUSC:HARQ:OFFS 0 :EVM:CCAR0:ULIN:DEC:PUSC:HARQ:OFFS?
Dependencies	Available when Direction is Uplink
Preset	0
State Saved	Yes
Min	0
Max	14
Backwards Compatibility SCPI	[:SENSe]:EVM:ULINk:DECode:PUSCh:HARQ:OFFSet

PUSCH RI Info Size

Specifies the RI information size in bits.

When AutoDet is selected, information size is auto detected as far as possible.

TIP For the best demodulation performance, specify Info Size manually.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:DECode:PUSCh:RI:ISIZe <integer>`
	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:DECode:PUSCh:RI:ISIZe?`
	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:DECode:PUSCh:RI:ISIZe:AUTO OFF | ON | 0 | 1`
	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:DECode:PUSCh:RI:ISIZe:AUTO?`

Example	`:EVM:CCAR0:ULIN:DEC:PUSC:RI:ISIZ 0`
	`:EVM:CCAR0:ULIN:DEC:PUSC:RI:ISIZ?`
	`:EVM:CCAR0:ULIN:DEC:PUSC:RI:ISIZ:AUTO 1`
	`:EVM:CCAR0:ULIN:DEC:PUSC:RI:ISIZ:AUTO?`

Dependencies	Available when Direction is Uplink and PUSCH RI Info Size Auto Detect is Off
Preset	0 ON
State Saved	Yes Yes
Min	0
Max	2
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:DECode:PUSCh:RI:ISIZe`

PUSCH RI Offset Index

Specifies the value of I_{offset} for RI in the tables listed in 3GPP TS 36.213, Section 8.6.3.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:DECode:PUSCh:RI:OFFSet <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:DECode:PUSCh:RI:OFFSet?`
Example	`:EVM:CCAR0:ULIN:DEC:PUSC:RI:OFFS 1` `:EVM:CCAR0:ULIN:DEC:PUSC:RI:OFFS?`
Dependencies	Available when Direction is Uplink
Preset	0
State Saved	Yes
Min	0
Max	12
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:DECode:PUSCh:RI:OFFSet`

PUSCH CQI/PMI Info Size

Specifies the CQI/PMI information size in bits.

When AutoDet is selected, information size is auto detected as far as possible.

TIP **For the best demodulation performance, specify Info Size manually.**

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:DECode:PUSCh:CQI:ISIZe <integer>`
	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:DECode:PUSCh:CQI:ISIZe?`
	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:DECode:PUSCh:CQI:ISIZe:AUTO OFF | ON | 0 | 1`
	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:DECode:PUSCh:CQI:ISIZe:AUTO?`

Example	`:EVM:CCAR0:ULIN:DEC:PUSC:CQI:ISIZ 1`
	`:EVM:CCAR0:ULIN:DEC:PUSC:CQI:ISIZ?`
	`:EVM:CCAR0:ULIN:DEC:PUSC:CQI:ISIZ:AUTO OFF`
	`:EVM:CCAR0:ULIN:DEC:PUSC:CQI:ISIZ:AUTO?`

Dependencies	Available when Direction is Uplink and PUSCH CQI/RI Info Size Auto Detect is Off
Preset	0 ON
State Saved	Yes Yes
Min	0
Max	128
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:DECode:PUSCh:CQI:ISIZe` `[:SENSe]:EVM:ULINk:DECode:PUSCh:CQI:ISIZe:AUTO`

PUSCH CQI/PMI Offset Index

Specifies the value of I_{offset} for CQI/PMI in the tables listed in 3GPP TS 36.213, Section 8.6.3.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:DECode:PUSCh:CQI:OFFSet <integer>` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:DECode:PUSCh:CQI:OFFSet?`
Example	`:EVM:CCAR0:ULIN:DEC:PUSC:CQI:OFFS 2` `:EVM:CCAR0:ULIN:DEC:PUSC:CQI:OFFS?`
Preset	2
State Saved	Yes

Min	2
Max	15
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:DECode:PUSCh:CQI:OFFSet`

PUCCH HARQ-ACK Info Size

Specifies the HARQ-ACK information size in bits.

When AutoDet is selected, information size is auto detected as far as possible.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:DECode:PUCCh:HARQ:ISIZe <integer>`
	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:DECode:PUCCh:HARQ:ISIZe?`
	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:DECode:PUCCh:HARQ:ISIZe:AUTO OFF | ON | 0 | 1`
	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:DECode:PUCCh:HARQ:ISIZe:AUTO?`

Example	`:EVM:CCAR0:ULIN:DEC:PUCC:HARQ:ISIZ 0`
	`:EVM:CCAR0:ULIN:DEC:PUCC:HARQ:ISIZ?`
	`:EVM:CCAR0:ULIN:DEC:PUCC:HARQ:ISIZ:AUTO 0`
	`:EVM:CCAR0:ULIN:DEC:PUCC:HARQ:ISIZ:AUTO?`

Dependencies	Available when Direction is Uplink and PUCCH HARQ-ACK Info Size Auto Detect is Off
Preset	0 ON
State Saved	Yes Yes
Min	0
Max	2
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:DECode:PUCCh:HARQ:ISIZe` `[:SENSe]:EVM:ULINk:DECode:PUCCh:HARQ:ISIZe:AUTO`

Info Size parameter

Specifies the number of bits for all PUCCH transmissions for the selected uplink user allocation.

When AutoDet is selected for HARQ-ACK or CQI/PMI, the corresponding information bit size is auto detected as far as possible.

The possible range of information bits are listed as follows:

- HARQ-ACK bits range: 0-2 bits
- CQI-PMI bits range: 0-11 bits

TIP **For best demodulation performance, specify Info Size manually.**

PUCCH CQI/PMI Info Size

Specifies the CQI/PMI information size in bits.

When AutoDet is selected, information size is auto detected as far as possible.

TIP **For the best demodulation performance, specify Info Size manually.**

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:DECode:PUCCh:CQI:ISIZe <integer>`
	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:DECode:PUCCh:CQI:ISIZe?`
	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:DECode:PUCCh:CQI:ISIZe:AUTO OFF | ON | 0 | 1`
	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:DECode:PUCCh:CQI:ISIZe:AUTO?`

Example	`:EVM:CCAR0:ULIN:DEC:PUCC:CQI:ISIZ 0`
	`:EVM:CCAR0:ULIN:DEC:PUCC:CQI:ISIZ?`
	`:EVM:CCAR0:ULIN:DEC:PUCC:CQI:ISIZ:AUTO 0`
	`:EVM:CCAR0:ULIN:DEC:PUCC:CQI:ISIZ:AUTO?`

Dependencies	Available when Direction is Uplink and PUCCH HARQ-ACK Info Size Auto Detect is Off
Preset	0 ON
State Saved	Yes Yes
Min	0
Max	11
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:DECode:PUCCh:CQI:ISIZe` `[:SENSe]:EVM:ULINk:DECode:PUCCh:CQI:ISIZe:AUTO`

TDD ACK/NACK Feedback Mode

Specifies whether the current HARQ ACK/NACK feedback mode is ACK/NACK multiplexing or ACK/NACK bundling. See 3GPP TS 36.212, Section 5.2.2.6 and 3GPP TS 36.213, Section 7.3 for more information.

Remote Command	`[:SENSe]:EVM:CCARrier0|…|4:ULINk:DECode:ANFMode MULTiplexing | BUNDling` `[:SENSe]:EVM:CCARrier0|…|4:ULINk:DECode:ANFMode?`
Example	`:EVM:CCAR0:ULIN:DEC:ANFM MULT` `:EVM:CCAR0:ULIN:DEC:ANFM?`
Dependencies	Available when Direction is Uplink
Preset	MULTiplexing
State Saved	Yes
Range	BUNDling | MULTiplexing
Backwards Compatibility SCPI	`[:SENSe]:EVM:ULINk:DECode:ANFMode`

3.8.9.2 Radio

Contains controls to select link direction.

Direction

Specifies whether the LTE-Advanced signal is an uplink signal or a downlink signal.

The choice of link direction determines the Sync/Format, Chan Profile and Time. Advanced menus all change based on the link direction selected. Also, since downlink and uplink signals use OFDMA and SC-FDMA respectively, the list of trace results available and the default traces presented change based on the link direction parameter.

Remote Command	`[:SENSe]:RADio:STANdard:DIRection DLINk | ULINk` `[:SENSe]:RADio:STANdard:DIRection?`
Example	`:RAD:STAN:DIR DLIN`
Couplings	TDD: Changing direction affects the sync source of periodic trigger source or gate source If Direction is uplink, the sync source is RF burst If Direction is downlink, the sync source is External1 If direction is downlink, the menu Measure PRACH/SRS is disabled and the value is off FDD/TDD: Changing Direction affects many other modulation analysis setup parameters
Preset	DLIN ULIN on E6640A DLIN on E6650A
State Saved	Yes
Range	Downlink|Uplink For E6640A, Direction is restricted to Uplink only, Downlink is not selectable For E6650A, Direction is restricted to Downlink only, Uplink is not selectable

3.8.9.3 Component Carriers

Contains settings that let you configure the analyzer to match the component carriers in your LTE-A signal.

Number of Component Carriers

Specifies how many component carriers are included in LTE-Advanced TDD/FDD measurements. Each component carrier complies with the LTE specifications.

LTE-Advanced TDD/FDD supports a maximum of five component carriers, so the maximum transmission bandwidth is up to 100 MHz.

Remote Command	`[:SENSe]:CCARrier:COUNt <integer>` `[:SENSe]:CCARrier:COUNt?`
Example	`:CCAR:COUN 1` `:CCAR:COUN?`
Notes	The max number of Component carriers can be set greater than one with 9080B/9082B-2FP license
Preset	1
State Saved	Yes
Min	1
Max	5

Carrier Allocation

Specifies the carrier frequency allocation. There are two types of allocation, contiguous and non-contiguous. Non-Contiguous frequency allocation is defined as an allocation where two sub-blocks are separated with a sub-block gap:

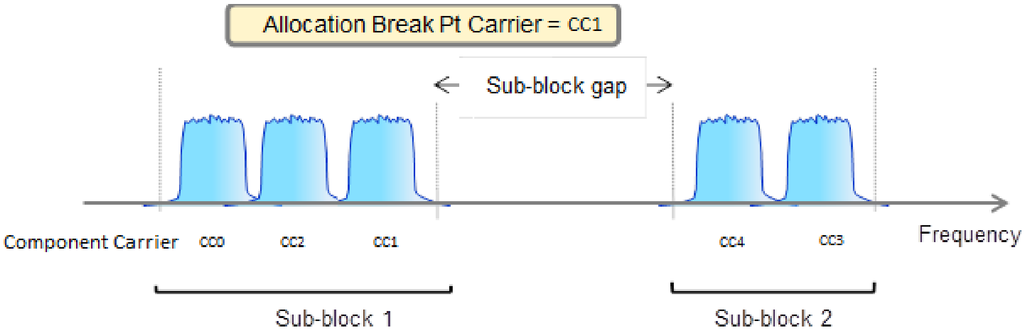
- CONTiguous – All the component carriers belong to one block and no sub-block gap exists
- NCONtiguous – Component carriers are separated into two sub-blocks. Allocation Break Pt Carrier determines how sub-blocks are configured

Remote Command	`[:SENSe]:CCARrier:CONFig:ALLocation CONTiguous | NCONtiguous` `[:SENSe]:CCARrier:CONFig:ALLocation?`
Example	`:CCAR:CONF:ALL CONT` `:CCAR:CONF:ALL?`
Preset	CONTiguous
State Saved	Saved in instrument state
Range	Contiguous|Non-Contiguous

Non-Contiguous Break at

Specifies an allocation break point in non-contiguous carrier allocation. First sub-block starts from the lowest frequency carrier and stops at the allocation break point carrier. Next sub-block starts from the next upper frequency carrier and ends at the highest frequency carrier.

one example is shown below. In the example carrier indices are not in the order of carrier frequency. In the example, Allocation Break Pt Carrier is CC1. It means that sub-block 1 ends at carrier CC1 and sub-block 2 starts at carrier CC4. Sub-block gap is located between carrier CC1 and CC4.



Remote Command	`[:SENSe]:CCARrier:CONFig:ALLocation:NCONtiguous:ABPoint CC0 | … | CC4` `[:SENSe]:CCARrier:CONFig:ALLocation:NCONtiguous:ABPoint?`
Example	`:CCAR:CONF:ALL:NCON:ABP CC0` `:CCAR:CONF:ALL:NCON:ABP?`
Notes	The options CC1~CC4 can be enabled with 9080B/9082B-2FP license
Dependencies	Allocation Break Point is coupled to Number of Component Carriers. For example, Allocation Break Point list will include CC0~CC1 if the number of Component Carriers is 2
Preset	CC0
State Saved	Saved in instrument state
Range	CC0|CC1|CC2|CC3|CC4

Configure Comp Carriers

Lets you perform a detailed configuration of your component carriers, including number of carriers, presets, bandwidth, offset, integration bandwidth, etc.

Configure CCs

Lets you configure System Bandwidth, frequency offsets, and integration bandwidth, and also lets you exclude certain carriers from the measurement.

Number of Component Carriers

See "Number of Component Carriers" on page 2245.

Carrier Allocation

See "Carrier Allocation" on page 2245.

Non-Contiguous Break at

See "Non-Contiguous Break at" on page 2246.

System BW

Enables you to set the system bandwidth of each component carrier for LTE-Advanced / NB-IoT signal (which also determines the total number of resource blocks for Modulation Analysis measurement).

Remote Command	`[:SENSe]:CCARrier0|…|4:RADio:STANdard:BANDwidth B1M4 | B3M | B5M | B10M | B15M | B20M | B200K` `[:SENSe]:CCARrier0|…|4:RADio:STANdard:BANDwidth?`
Example	`:CCAR4:RAD:STAN:BAND B5M`
Preset	B5M
State Saved	Yes
Range	1.4 MHz (6 RB) | 3 MHz (15 RB) | 5 MHz (25 RB) | 10 MHz (50 RB) | 15 MHz (75 RB) | 20 MHz (100 RB) | 200kHz (NB-IoT)
Backwards Compatibility SCPI	`[:SENSe]:RADio:STANdard:BANDwidth`

Measure Carrier

Sets whether to measure this component carrier or not.

Remote	`[:SENSe]:CCARrier0|…|4[:STATe] OFF | ON | 0 | 1`

Command	`[:SENSe]:CCARrier0|…|4[:STATe]?`
Example	`:CCAR0 ON` `:CCAR0?`
Notes	The command is used with a sub-op code <n> (default=0) to specify the component carrier for configuration. The range of the sub-op code is determined by the number of component carriers
Preset	ON
State Saved	Saved in instrument state
Range	On|Off

Frequency Offset

Sets the component carrier center frequency as offset from the Carrier Ref Frequency.

Remote Command	`[:SENSe]:CCARrier<n>:FREQuency:OFFSet <freq>` `[:SENSe]:CCARrier<n>:FREQuency:OFFSet?`
Example	`:CCAR4:FREQ:OFFS 10MHz` `:CCAR4:FREQ:OFFS?`
Notes	Used with a sub-op code <n> (default=0) to specify the component carrier for configuration. The range of the sub-op code is determined by the number of component carriers
Preset	0Hz
State Saved	Saved in instrument state
Min	-3.5GHz
Max	3.5GHz

Spectrum

Determines if the spectrum of the incoming data is mirrored or not. The actual mirroring is accomplished by conjugating the complex time data.

Note that only the Modulation Analysis measurement and Conformance EVM measurement support this feature.

Remote Command	`[:SENSe]:CCARrier0|…|4:SPECtrum NORMal | INVert` `[:SENSe]:CCARrier0|…|4:SPECtrum?`
Example	`:CCAR0:SPEC INV` `:CCAR0:SPEC?`
Preset	NORM
State Saved	Yes

Range	Normal | Invert
Backwards Compatibility SCPI	`[:SENSe]:SPECtrum`

UL/DL Configuration

Allows you to set the Uplink and Downlink allocation configuration of the signal being measured. The choice of link direction will determine which slot in the frame is used for uplink transmission, and which slot for downlink transmission.

Remote Command	`[:SENSe]:CCARrier0|…|4:RADio:STANdard:ULDL CONF0 | … | CONF6` `[:SENSe]:CCARrier0|…|4:RADio:STANdard:ULDL?`
Example	`:CCAR0:RAD:STAN:ULDL CONF0`
Notes	CONF0: Configuration 0 (DSUUUDSUUU) CONF1: Configuration 1 (DSUUDDSUUD) CONF2: Configuration 2 (DSUDDDSUDD) CONF3: Configuration 3 (DSUUUDDDDD) CONF4: Configuration 4 (DSUUDDDDDD) CONF5: Configuration 5 (DSUDDDDDDD) CONF6: Configuration 6 (DSUUUDSUUD)
Preset	CONF0
State Saved	Yes
Range	Configuration 0|Configuration 1|Configuration 2|Configuration 3|Configuration 4|Configuration 5|Configuration 6
Backwards Compatibility SCPI	`[:SENSe]:RADio:STANdard:ULDL`

Dw/GP/Up Len

This control allows you to set the DwPTS/GP/UpPTS length configuration of the signal being measured. The choice of link direction will determine the length of DwPTS, GP and UpPTS in the Special Subframe.

Remote Command	`[:SENSe]:CCARrier0|…|4:RADio:STANdard:DGPU CONF0 | … | CONF9` `[:SENSe]:CCARrier0|…|4:RADio:STANdard:DGPU?`
Example	`:CCAR0:RAD:STAN:DGPU CONF0`
Notes	CONF0: Configuration 0 CONF1: Configuration 1 CONF2: Configuration 2

	CONF3: Configuration 3 CONF4: Configuration 4 CONF5: Configuration 5 CONF6: Configuration 6 CONF7: Configuration 7 CONF8: Configuration 8 CONF9: Configuration 9
Dependencies	The special sub-frame configuration 9 is only enabled when it is LTE-Advanced TDD
Preset	CONF0
State Saved	Yes
Range	Configuration 0|Configuration 1|Configuration 2|Configuration 3|Configuration 4|Configuration 5|Configuration 6|Configuration 7|Configuration 8|Configuration 9
Backwards Compatibility SCPI	`[:SENSe]:RADio:STANdard:DGPU`

CHP Power Integ BW

Specifies the range of integration used in calculating the power in the component carrier s in the CHP measurement.

Remote Command	`[:SENSe]:CCARrier0|…|4:CHPower:BANDwidth:INTegration <freq>` `[:SENSe]:CCARrier0|…|4:CHPower:BANDwidth:INTegration?`
Example	`:CCAR0:CHP:BAND:INT 20MHz` `:CCAR0:CHP:BAND:INT?`
Notes	You must be in LTEATDD/LTEAFDD Mode to use this command. Use :INSTrument:SELect to set the mode
Couplings	When System Bandwidth of the parameter set is changed, the value of this parameter also changes as shown in the following table.

System Bandwidth	CHP Integ BW
1.4 MHz (B1M4)	1.4 MHz
3 MHz (B3M)	3 MHz
5 MHz (B5M)	5 MHz
10 MHz (B10M)	10 MHz
15 MHz (B15M)	15 MHz
20 MHz (B20M)	20 MHz
200 kHz(B200K)	200 kHz

Preset	5 MHz
State Saved	Saved in instrument state

Min	100 kHz
Max	20 MHz
Backwards Compatibility SCPI	`[:SENSe]:CHPower:BANDwidth:INTegration` `[:SENSe]:CHPower:BWIDth:INTegration`

ACP Power Integ BW

Specifies the Measurement Noise Bandwidth used to calculate the power in the component carriers in the ACP measurement.

Remote Command	`[:SENSe]:CCARrier0|…|4:ACPower:BANDwidth[1]|2:INTegration <freq>` `[:SENSe]:CCARrier0|…|4:ACPower:BANDwidth[1]|2:INTegration?`
Example	`:CCAR0:ACP:BAND:INT 20MHz` `:CCAR0:ACP:BAND:INT?`
Notes	Carrier sub op code, 1 is for BTS, 2 for MS. Default is BTS You must be in the LTEATDD/LTEAFDD mode. Use :INSTrument:SELect to set the mode
Couplings	When System Bandwidth of the parameter set is changed, the value of this parameter also changes as shown in the following table.

System Bandwidth	BTS ACP Meas Noise BW	MS ACP Meas Noise BW
1.4 MHz (B1M4)	1.095 MHz	1.08 MHz
3 MHz (B3M)	2.715 MHz	2.7 MHz
5 MHz (B5M)	4.515 MHz	4.5 MHz
10 MHz (B10M)	9.015 MHz	9.0 MHz
15 MHz (B15M)	13.515 MHz	13.5 MHz
20 MHz (B20M)	18.015 MHz	18.0 MHz
200 kHz(B200K)	180 kHz	180 kHz

Preset	4.515 MHz|4.5 MHz
State Saved	Yes
Min	100 kHz
Max	20 MHz
Backwards Compatibility SCPI	`[:SENSe]:ACPower:CARRier[1]|2:LIST:BANDwidth[:INTegration]` `[:SENSe]:ACPower:CARRier[1]|2:LIST:BWIDth[:INTegration]`

SEM Power Integ BW

Specifies the integration bandwidth used to calculate the power in the component carriers in SEM measurement.

Remote Command	`[:SENSe]:CCARrier0|…|4:SEMask:BANDwidth[1]|2:INTegration <freq>` `[:SENSe]:CCARrier0|…|4:SEMask:BANDwidth[1]|2:INTegration?`
Example	`:CCAR0:SEM:BAND:INT 20MHz` `:CCAR0:SEM:BAND:INT?`
Notes	Bandwidth sub op code, 1 is for BTS, 2 for MS. Default is BTS You must be in LTEATDD/LTEAFDD Mode to use this command. Use :INSTrument:SELect to set the mode
Couplings	When System Bandwidth of the parameter set is changed, the value of this parameter also changes as shown in the following table. Note that you cannot set the value exceeding the corresponding System Bandwidth

System Bandwidth	BTS SEM Integ BW	MS SEM Integ BW
1.4 MHz (B1M4)	1.095 MHz	1.08 MHz
3 MHz (B3M)	2.715 MHz	2.7 MHz
5 MHz (B5M)	4.515 MHz	4.5 MHz
10 MHz (B10M)	9.015 MHz	9.0 MHz
15 MHz (B15M)	13.515 MHz	13.5 MHz
20 MHz (B20M)	18.015 MHz	18.0 MHz
200 kHz(B200K)	180 kHz	180 kHz

Preset	4.515 MHz|4.5 MHz
State Saved	Saved in instrument state
Min	100 kHz
Max	20 MHz
Backwards Compatibility SCPI	`[:SENSe]:SEMask:BANDwidth[1]|2:INTegration`

Carrier Config Presets

Lets you configure the Component Carrier presets.

Max BTS RF Bandwidth

Sets max BS RF bandwidth used when the carrier configuration preset runs. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:RFBW <freq>` `[:SENSe]:CCARrier:CONFig:RFBW?`
Example	`:CCAR:CONF:RFBW 40MHz` `:CCAR:CONF:RFBW?`
Preset	40MHz
State Saved	Saved in instrument state
Min	1.4MHz
Max	200 MHz

Preset ETC

The ETC configuration is applied. The component carrier parameters are dynamically changed using values of the parameters of each test configuration under Carrier Config Presets menu when some test configuration is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig NONE | ETC1 | ETC2 | ETC3` `[:SENSe]:CCARrier:CONFig?`
Example	`:CCAR:CONF ETC1` `:CCAR:CONF?`
Notes	The control for NONE is not available
State Saved	Saved in instrument state
Range	ETC1|ETC2|ETC3

Carrier Spacing Delta

Sets delta channel spacing used when the carrier configuration preset runs. Channel spacing is determined from this value and the default channel spacing defined in the standard, i.e. Channel spacing = $(BW_{chan1} + BW_{chan2}) * 0.5 +$ [the delta spacing]. Since this value is a difference from the default spacing, this value can be negative to allow narrower channel spacing. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:SPACing:DELTa <freq>` `[:SENSe]:CCARrier:CONFig:SPACing:DELTa?`
Example	`:CCAR:CONF:SPAC:DELT -200kHz`

	`:CCAR:CONF:SPAC:DELT?`
Preset	0Hz
State Saved	Saved in instrument state
Min	-1.0 MHz
Max	10.0 MHz

ETC1 Attributes

Sets ETC1 carrier configuration.

Max Number of Component Carriers

Sets max component carriers placed when the ETC1 carrier configuration preset runs. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:ETC1:CMAX <integer>` `[:SENSe]:CCARrier:CONFig:ETC1:CMAX?`
Example	`:CCAR:CONF:ETC1:CMAX 5` `:CCAR:CONF:ETC1:CMAX?`
Preset	5
State Saved	Saved in instrument state
Max	5
Min/Max	1

Component Carrier System BW

Sets bandwidth of the component carriers placed when the ETC1carrier configuration preset runs. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:ETC1:BANDwidth B1M4 | B3M | B5M | B10M | B15M | B20M | B200K` `[:SENSe]:CCARrier:CONFig:ETC1:BANDwidth?`
Example	`:CCAR:CONF:ETC1:BAND B5M` `:CCAR:CONF:ETC1:BAND?`
Preset	B5M
State Saved	Saved in instrument state
Range	1.4MHz|3MHz|5MHz|10MHz|15MHz|20MHz|200kHz

Component Carrier Narrowest BW

Sets narrowest bandwidth of the component carriers placed when the ETC1 carrier configuration preset runs. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:ETC1:BANDwidth:NARRowest B1M4 | B3M | B5M | B10M | B15M | B20M | B200K` `[:SENSe]:CCARrier:CONFig:ETC1:BANDwidth:NARRowest?`
Example	`:CCAR:CONF:ETC1:BAND:NARR B1M4` `:CCAR:CONF:ETC1:BAND:NARR?`
Preset	B1M4
State Saved	Saved in instrument state
Range	1.4MHz|3MHz|5MHz|10MHz|15MHz|20MHz|200kHz

ETC2 Attributes

Sets ETC2 carrier configuration.

Max Number of Component Carriers

Sets max component carriers placed when the ETC2 carrier configuration preset runs. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:ETC2:CMAX <integer>` `[:SENSe]:CCARrier:CONFig:ETC2:CMAX?`
Example	`:CCAR:CONF:ETC2:CMAX 5` `:CCAR:CONF:ETC2:CMAX?`
Preset	5
State Saved	Saved in instrument state
Min	1
Max	5

Carrier Side (with BTS RF BW)

Select the side of RF bandwidth to place the ETC2 component carriers. When this value is changed, the carrier configuration preset is initiated.

- NEGative - Negative (lower) edge of RF bandwidth. If the option is selected, the available component carriers will be placed sequentially from the lower edge of the RF bandwidth starting from first
- POSitive - Positive (upper) edge of RF bandwidth, If the option is selected, the available component carriers will be placed sequentially from the upper edge of the RF bandwidth starting from first

Remote Command	`[:SENSe]:CCARrier:CONFig:ETC2:BANDwidth:SIDE NEGative | POSitive` `[:SENSe]:CCARrier:CONFig:ETC2:BANDwidth:SIDE?`
Example	`:CCAR:CONF:ETC2:BAND:SIDE NEG` `:CCAR:CONF:ETC2:BAND:SIDE?`
Preset	NEGative
State Saved	Saved in instrument state
Range	NEGative|POSitive

Component Carrier System BW

Sets carrier bandwidth of the component carriers placed when the ETC2 carrier configuration preset runs. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:ETC2:BANDwidth:CARRier[1]|2|…|5 B1M4 | B3M | B5M | B10M | B15M | B20M | B200K` `[:SENSe]:CCARrier:CONFig:ETC2:BANDwidth:CARRier?`
Example	`:CCAR:CONF:ETC2:BAND:CARR B5M` `:CCAR:CONF:ETC2:BAND:CARR?`
Dependencies	The Carrier Bandwidth is coupled to Max Component Carriers. The settings are enabled following the Max Component Carriers. For example, the 1st Carrier Bandwidth and 2nd Carrier Bandwidth will be available if the Max Component Carriers is 2
Preset	B5M
State Saved	Saved in instrument state
Range	1.4MHz|3MHz|5MHz|10MHz|15MHz|20MHz|200kHz

ETC3 CC Bandwidth

Sets the bandwidth of the component carriers placed when the ETC3 carrier configuration preset runs. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:ETC3:BANDwidth B1M4 | B3M | B5M | B10M | B15M | B20M | B200K`

	`[:SENSe]:CCARrier:CONFig:ETC3:BANDwidth?`
Example	`:CCAR:CONF:ETC3:BAND B5M` `:CCAR:CONF:ETC3:BAND?`
Preset	B5M
State Saved	Saved in instrument state
Range	1.4MHz|3MHz|5MHz|10MHz|15MHz|20MHz|200kHz

3.8.9.4 Meas Standard

Enables you to access Preset to Standard functions.

In LTE-Advanced TDD Mode, the parameters under Predefined Params impact the gate or trigger length and delay of the following measurements:

- Monitor Spectrum
- Channel Power
- ACP
- Power Stat CCDF
- Occupied BW
- Spectrum Emission Mask
- Spurious Emission

In LTE-Advanced FDD Mode, the Predefined Parameters in this section are used in the Transmit On/Off Power measurement. The Modulation Analysis measurement has its specific Predefined Parameters setting.

In LTE V2X Mode, Predefined parameters apply to all LTE V2X measurements.

System BW

Sets the demodulator to the specified bandwidth and configures the settings of every component carrier according to the default values listed in table for the current direction (Uplink or Downlink).

For example, when Number of Component is 3, after executing the command RAD:STAN:PRES B5M or selecting corresponding Bandwidth in the dropdown menu, all the 3 component carriers are configured as 5Mhz bandwidth, and all the settings of these 3 component carriers are set according to the table.

Remote	`[:SENSe]:RADio:STANdard:PRESet B1M4 | B3M | B5M | B10M | B15M | B20M | B200K`

Command	
Example	`:RAD:STAN:PRES B5M`
Notes	B200K selection is available in LTE-A FDD mode B200K option is for NB-IoT which requires N9080EM3E license
Couplings	Preset To Standard presets parameter values listed in section “Values for each Preset To Standard”. And the system bandwidth of each component carrier under the Component Carrier Setup will be preset to the selected one
Preset	B5M
State Saved	Yes
Range	1.4 MHz (6 RB) | 3 MHz (15 RB) | 5 MHz (25 RB) | 10 MHz (50 RB) | 15 MHz (75 RB) | 20 MHz (100 RB) | 200 kHz (NB-IoT)

UL/DL Config

Sets the TDD UL/DL Allocation parameter of each carrier to the selected value.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:ULDL CONF0 | … | CONF6` `[:SENSe]:RADio:STANdard:PRESet:ULDL?`
Example	`:RAD:STAN:PRES:ULDL CONF0`
Notes	CONF0: Configuration 0 (DSUUUDSUUU) CONF1: Configuration 1 (DSUUDDSUUD) CONF2: Configuration 2 (DSUDDDSUDD) CONF3: Configuration 3 (DSUUUDDDDD) CONF4: Configuration 4 (DSUUDDDDDD) CONF5: Configuration 5 (DSUDDDDDDD) CONF6: Configuration 6 (DSUUUDSUUD)
Dependencies	When the setting is selected, the ULDL Alloc per component carrier under the Component carrier Setup will be preset to the selected value
Preset	CONF0
State Saved	Yes
Range	Configuration 0|Configuration 1|Configuration 2|Configuration 3|Configuration 4|Configuration 5|Configuration 6

Dw/GP/Up Len

Sets the TDD special sub-frame configuration of each component carrier to the selected value.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:DGPU CONF0 | … | CONF9` `[:SENSe]:RADio:STANdard:PRESet:DGPU?`

Example	`:RAD:STAN:PRES:DGPU CONF0`
Notes	CONF0: Configuration 0 CONF1: Configuration 1 CONF2: Configuration 2 CONF3: Configuration 3 CONF4: Configuration 4 CONF5: Configuration 5 CONF6: Configuration 6 CONF7: Configuration 7 CONF8: Configuration 8 CONF9: Configuration 9
Dependencies	When the setting is selected, the Dw/GP/Up Len per Component Carrier under the Component Carrier Setup will be preset to the selected value The special sub-frame configuration 9 is only enabled when it is LTE-Advanced TDD
Preset	CONF0
State Saved	Yes
Range	Configuration 0|Configuration 1|Configuration 2|Configuration 3|Configuration 4|Configuration 5|Configuration 6|Configuration 7|Configuration 8|Configuration 9

Analysis Slot

Specifies the starting analysis slot. The measurement will adjust the gate delay or trigger delay according to this parameter.

Remote Command	`[:SENSe]:RADio:SLOT TS0 | TS1 | DPTS1 | UPTS1 | TS4 | TS5 | TS6 | TS7 | TS8 | TS9 | TS10 | TS11 | TS12 | TS13 | TS14 | TS15 | TS16 | TS17 | TS18 | TS19` `[:SENSe]:RADio:SLOT?`
Example	`:RAD:SLOT TS0`
Couplings	Measurement's gate length or meas interval will couple to the parameter
Preset	TS0
State Saved	Yes
Range	TS0 | TS1 | DwPTS1 | UpPTS1 | TS4 | TS5 | TS6 | TS7 | TS8 | TS9 | TS10 | TS11 | TS12(DwPTS2) | TS13 (UpPTS2) | TS14 | TS15 | TS16 | TS17 | TS18 | TS19

Meas Interval

This parameter specifies the desired slots count that needs to be analyzed. The measurement will adjust the gate length or meas interval according to this parameter.

For NB-IoT uplink cases scenarios, when Measure NPRACH is Off, this parameter indicates not only the slots' count to be analyzed, but the time elapse of the off power measurements as well.

In LTE-A FDD Mode, this parameter only appears in the Transmit On|Off Power measurement.

Remote Command	`[:SENSe]:RADio:MINTerval <integer>` `[:SENSe]:RADio:MINTerval`
Example	`:RAD:MINT 1`
Notes	The backwards compatible command [:SENSe]:PVTime:MINTerval is available in LTE FDD & LTE-A FDD Modes
Dependencies	This parameter is disabled when all the below conditions are met at the same time: – System BW is “200 kHz (NB-IoT)” – Direction is “uplink” – NB-IoT Subcarrier Spacing is “3.75kHz” – Meas NPRACH is “OFF”
Couplings	Disabled when the “Measure PRACH” is in scope and its value is not off, then the actual meas interval is the length PRACH or SRS channel For NB-IoT case scenario, when the parameter is disabled, its value is automatically determined by both Meas NPRACH:
Preset	1
State Saved	Yes
Min	1
Max	20, when System BW is NOT “200 kHz (NB-IoT) 16, otherwise
Backwards Compatibility SCPI	LTE: `[:SENSe]:PVTime:MINTerval`

Meas NPRACH	Meas Interval
Preamble0	3 slots
Preamble1	4 slots

CP Length

Specifies whether the cyclic prefix is configured as NORMal or EXTended for power measurement. The parameter will affect the gate length or meas interval parameters.

In LTE-A FDD Mode, this parameter only appears in the Transmit On|Off Power measurement.

Remote Command	`[:SENSe]:RADio:CPLength NORMal | EXTended` `[:SENSe]:RADio:CPLength?`
Example	`:RAD:CPL NORM`
Notes	The backwards compatible SCPI command [:SENSe]:PVTime:CPLength is available in LTE FDD & LTE-A FDD Modes
Dependencies	Disabled when System BW is set to “200 kHz (NB-IoT)” and Direction is “uplink”
Couplings	Set to NORMal when System BW is set to “200 kHz (NB-IoT)”
Preset	NORMal
State Saved	Yes
Range	Normal|Extended
Backwards Compatibility SCPI	LTE: `[:SENSe]:PVTime:CPLength`

Measure PRACH/SRS

Specifies whether the analysis slot is used for PRACH channel or SRS and the PRACH preamble format of the analysis slot.

The measurement will adjust the gate length or meas interval according to this parameter.

Remote Command	`[:SENSe]:RADio:MEASure OFF | PPF0 | PPF1 | PPF2 | PPF3 | PPF4 | SRS | DSRS` `[:SENSe]:RADio:MEASure?`
Example	`:RAD:MEAS OFF`
Couplings	If direction is downlink, the control is disabled and the value is set to off If this control value is not off, Meas Interval is disabled
Preset	OFF
State Saved	Yes
Range	Off|Preamble 0|Preamble 1|Preamble 2|Preamble 3|Preamble 4|SRS|DSRS

Reference Config

Specifies which component carrier’s ULDL Allocation Configuration and Dw/Up Length Configuration settings are used to adjust time slot to be measured automatically. For Modulation Analysis measurement, this control specifies which CC is used as the reference CC for time alignment results.

In LTE-A FDD Mode, this parameter only appears in the Transmit On|Off Power and Modulation Analysis measurements.

Remote Command	`[:SENSe]:RADio:RCONfig CC0 | … | CC4`

	`[:SENSe]:RADio:RCONfig?`
Example	`:RAD:RCON CC0`
Notes	The options CC1~CC4 can be enabled with 9080B/9082B-2FP license
Dependencies	Reference Configuration is coupled to Number of Component Carriers. For example, reference configuration list will include CC0~CC1 if the number of Component Carriers is 2
Preset	CC0
State Saved	Yes
Range	CC0|CC1|CC2|CC3|CC4

3.8.9.5 Global

The controls in this menu apply to all Modes in the instrument.

Some controls (for example, "Global Center Freq" on page 2276) allow you to switch certain Meas Global parameters to a Mode Global state. These switches apply to all Modes that support global settings. For example, no matter what Mode you are in when you set **Global Center Freq** to `ON`, it applies to all Modes that support Global settings.

Other controls (for example, **Extend Low Band**) are actually set in this menu, but apply to all Modes.

Global Center Freq

The software maintains a Mode Global value called **Global Center Freq**.

When **Global Center Freq** is switched `ON`, the current Mode’s center frequency is copied into the **Global Center Frequency**, and from then on all Modes that support global settings use the **Global Center Frequency**, so you can switch between any of these Modes and the **Center Frequency** remains unchanged.

Adjusting the **Center Frequency** of any Mode that supports Global Settings, while **Global Center Freq** is `ON`, modifies the **Global Center Freq**.

When **Global Center Freq** is switched `OFF`, the **Center Frequency** of the current Mode is unchanged, but now the **Center Frequency** of each Mode is once again independent.

When **Mode Preset** is pressed while **Global Center Freq** is `ON`, the **Global Center Freq** is preset to the preset **Center Frequency** of the current Mode.

This function resets to `OFF` when "Restore Defaults" on page 2278 is pressed, or when **System**, **Restore Defaults**, **All Modes** is pressed.

Remote Command	`:INSTrument:COUPle:FREQuency:CENTer ALL | NONE` `:INSTrument:COUPle:FREQuency:CENTer?`

Example	`:INST:COUP:FREQ:CENT ALL` `:INST:COUP:FREQ:CENT?`
Preset	Set to `OFF` on **Global** Settings, **Restore Defaults** and **System, Restore Defaults, All Modes**
Range	`ALL|NONE`

Preset	`OFF`
Backwards Compatibility SCPI	`:GLOBal:FREQuency:CENTer[:STATe] 1 | 0 | ON | OFF` `:GLOBal:FREQuency:CENTer[:STATe]?`

Global EMC Std

When this control is switched `ON`, the current Mode's EMC Std is copied into the **Global EMC Std**, and from then on all Modes that support global settings use the **Global EMC Std**, so you can switch between any of these Modes and the EMC Std remains unchanged.

Adjusting the EMC Std of any Mode that supports Global settings, while **Global EMC Std** is `ON` modifies the **Global EMC Std**.

When **Global EMC Std** is switched `OFF`, the EMC Std of the current Mode remains unchanged, but now the EMC Std of each Mode is once again independent. When **Mode Preset** is pressed while **Global EMC Std** is `ON`, **Global EMC Std** is preset to the preset EMC Std of the current Mode.

This function resets to `OFF` when "Restore Defaults" on page 2278 is pressed, or when **System, Restore Defaults, All Modes** is pressed.

Remote Command	`:INSTrument:COUPle:EMC:STANdard ALL | NONE` `:INSTrument:COUPle:EMC:STANdard?`
Example	`:INST:COUP:EMC:STAN ALL` `:INST:COUP:EMC:STAN?`
Dependencies	Only available if Option EMC is installed
Preset	Set to `OFF` on **Global** Settings, **Restore Defaults** and **System, Restore Defaults, All Modes**
Range	`ALL | NONE`

Extend Low Band

The software maintains a Mode Global value called **Extend Low Band**.

Under the current sweep configuration crossing over two bands, when **Extend Low Band** is turned `ON`, the instrument checks whether one band can cover the whole sweep frequency range or not. If it can, then the instrument locks the band; otherwise, it does nothing (the band crossover occurs).

This function does *not* work when **Band Lock** under **System** > **Service** > **Lock Functions** is not -1 (no Band Lock). In that case, **Band Lock** takes priority over **Extend Low Band**.

This function resets to `OFF` when "Restore Defaults" on page 2278 is pressed, or when **System**, **Restore Defaults**, **All Modes** is pressed.

Remote Command	`:INSTrument:COUPle:FREQuency:BAND:EXTend 0 | 1 | ON | OFF` `:INSTrument:COUPle:FREQuency:BAND:EXTend?`
Example	`:INST:COUP:FREQ:BAND:EXT 1` `:INST:COUP:FREQ:BAND:EXT?`
Preset	Set to `OFF` by **Global** Settings > **Restore Defaults** and **System** > **Restore Defaults** > **All Modes**
Range	`ON|OFF`

Restore Defaults

Resets all functions in the **Global** settings menu to `OFF`. Pressing **System**, **Restore Defaults**, **All Modes** has the same effect.

Remote Command	`:INSTrument:COUPle:DEFault`
Example	`:INST:COUP:DEF`
Backwards Compatibility SCPI	`:GLOBal:DEFault`

3.8.10 Sweep

The Sweep key contains controls which allow you to control the sweep and measurement functions of the analyzer, such as in Single sweep/measure or Continuous sweep/measure mode.

3.8.10.1 Sweep/Control

This tab accesses controls that enable you to operate the Sweep and Control functions of the analyzer.

Sweep/Measure

Allows you to toggle between Continuous and Single sweep or measurement operation. The single/continuous state is Meas Global so the setting affects all measurements.

The front-panel key **Single/Cont** performs this exact same function

See "More Information" on page 1779

Remote Command	`:INITiate:CONTinuous OFF | ON | 0 | 1` `:INITiate:CONTinuous?`

Example	`:INIT:CONT 0 !puts analyzer in Single measurement operation`
	`:INIT:CONT OFF !puts analyzer in Single measurement operation`
	`:INIT:CONT 1 !puts analyzer in Continuous measurement operation`
	`:INIT:CONT ON !puts analyzer in Continuous measurement operation`

Preset	ON (Note that SYST:PRESet sets INIT:CONT to ON but *RST sets INIT:CONT to OFF)
State Saved	Saved in instrument state
Annunciation	The Single/Continuous icon in the Meas Bar changes depending on the setting. A line with an arrow is single, a loop with an arrow is Continuous
Backwards Compatibility Notes	See the description of this control in the Swept SA measurement

More Information

With **Avg/Hold Num** (in the **Meas Setup** menu) set to **Off** or set to **On** with a value of 1, a sweep is taken after the trigger condition is met; and the analyzer continues to take new sweeps after the current sweep has completed and the trigger condition is again met. However, with **Avg/Hold Num** set to On with a value >1, multiple sweeps (data acquisitions) are taken for the measurement. The trigger condition must be met prior to each sweep. The sweep is not stopped when the average count k equals the number N set for Avg/Hold Num is reached, but the number k stops incrementing. A measurement average usually applies to all traces, marker results, and numeric results. But sometimes it only applies to the numeric results.

If the analyzer is in Single measurement, pressing the **Cont/Single** toggle control does not change k and does not cause the sweep to be reset; the only action is to put the analyzer into Continuous measurement operation.

If it is already in continuous sweep:

- the INIT:CONT 1 command has no effect
- the INIT:CONT 0 command places the analyzer in Single Sweep but has no effect on the current sequence until k = N, at which point the current sequence stops and the instrument goes to the idle state.

See "Restart " on page 1780"Restart " on page 1780 control description for details on the INIT:IMMediate (Restart) function.

If you are already in single sweep, the INIT:CONT OFF command has no effect.

If you are already in Single Sweep, pressing the **Cont/Single** toggle control in the middle of a sweep does not restart the sweep or sequence. Similarly, pressing the **Cont/Single** toggle control does not restart the sweep or sequence if the sweep is not in the idle state (for example, if you are taking a very slow sweep, or the analyzer is waiting for a trigger). Even though pressing the **Cont/Single** toggle control in the middle of a sweep does not restart the sweep, sending INIT:IMMediate does reset it.

Restart

The Restart function restarts the current sweep, or measurement, or set of averaged/held sweeps or measurements. If you are Paused, pressing Restart does a Resume.

The front-panel key **Restart** performs this exact same function

The Restart function is accessed in several ways:

- Pressing the Restart key
- Sending the remote command INIT:IMMediate
- Sending the remote command INIT:RESTart

See "More Information" on page 1781

Remote Command	`:INITiate[:IMMediate]` `:INITiate:RESTart`
Example	`:INIT:IMM` `:INIT:REST`
Notes	:INITiate:RESTart and :INITiate:IMMediate perform exactly the same function
Couplings	Resets average/hold count k. For the first sweep overwrites all active (update=on) traces with new current data. For application modes, it resets other parameters as required by the measurement
Status Bits/OPC dependencies	This is an Overlapped command The STATus:OPERation register bits 0 through 8 are cleared The STATus:QUEStionable register bit 9 (INTegrity sum) is cleared The SWEEPING bit is set The MEASURING bit is set
Backwards Compatibility Notes	For Spectrum Analysis mode in ESA and PSA, the **Restart** hardkey and the INITiate:RESTart command restart trace averages (displayed average count reset to 1) for a trace in **Clear Write**, but did not restart **Max Hold** and **Min Hold** In the X-Series, the **Restart** hardkey and the INITiate:RESTart command restart not only **Trace Average**, but **MaxHold** and **MinHold** traces as well For wireless comms modes in ESA and PSA, the **Restart** hardkey and the INITiate:RESTart command restart every measurement, which includes all traces and numeric results. There is no change to this operation

More Information

The **Restart** function first aborts the current sweep or measurement as quickly as possible. It then resets the sweep and trigger systems, sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the analyzer is in the process of aligning when a Restart is executed, the alignment finishes before the restart function is performed.

Even when set for Single operation, multiple sweeps may be taken when Restart is pressed (for example, when averaging/holding is on). Thus when we say that Restart "restarts a measurement," we may mean:

- It restarts the current sweep
- It restarts the current measurement
- It restarts the current set of sweeps if any trace is in Trace Average, Max Hold or Min Hold
- It restarts the current set of measurements if Averaging, or Max Hold, or Min Hold is on for the measurement depending on the current settings.

With Average/Hold Number (in Meas Setup menu) set to 1, or Averaging off, or no trace in Trace Average or Hold, a single sweep is equivalent to a single measurement. A single sweep is taken after the trigger condition is met; and the analyzer stops sweeping once that sweep has completed. However, with Average/Hold Number >1 and at least one trace set to Trace Average, Max Hold, or Min Hold (SA Measurement) or Averaging on (most other measurements), multiple sweeps/data acquisitions are taken for a single measurement. The trigger condition must be met prior to each sweep. The sweep is stopped when the average count k equals the number N set for Average/Hold Number. A measurement average usually applies to all traces, marker results, and numeric results; but sometimes it only applies to the numeric results.

Once the full set of sweeps has been taken, the analyzer enters into an idle state. To take one more sweep without resetting the average count, increment the average count by 1, by pressing the step up key while Average/Hold Number is the active function, or sending the remote command CALC:AVER:TCON UP.

Pause/Resume

Pauses a measurement after the current data acquisition is complete.

When Paused, the label on the control changes to Resume. Pressing Resume un-pauses the measurement. When you are Paused, pressing **Restart** does a Resume.

Remote Command	`:INITiate:PAUSe`
Example	`:INIT:PAUS`
Dependencies	Not displayed in Modes that do not support Pausing
Annotation	Only on control

Remote Command	`:INITiate:RESume`
Example	`:INIT:RES`
Dependencies	Not displayed in Modes that do not support Pausing
Annotation	Only on control

Abort (Remote Command Only)

This command is used to stop the current measurement. It aborts the current measurement as quickly as possible, resets the sweep and trigger systems, and puts the measurement into an "idle" state. If the analyzer is in the process of aligning when ABORt is sent, the alignment finishes before the abort function is performed. So ABORt does not abort an alignment.

If the analyzer is set for Continuous measurement, it sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the analyzer is set for Single measurement, it remains in the "idle" state until an :INIT:IMM command is received.

Remote Command	`:ABORt`
Example	`:ABOR`
Notes	If :INITiate:CONTinuous is ON, then a new continuous measurement starts immediately, with sweep (data acquisition) occurring once the trigger condition has been met If :INITiate:CONTinuous is OFF, then :INITiate:IMMediate is used to start a single measurement, with sweep (data acquisition) occurring once the trigger condition has been met
Dependencies	For continuous measurement, ABORt is equivalent to the Restart key Not all measurements support the abort command
Status Bits/OPC dependencies	The STATus:OPERation register bits 0 through 8 are cleared The STATus:QUEStionable register bit 9 (INTegrity sum) is cleared Since all the bits that feed into OPC are cleared by the ABORt, the ABORt causes the *OPC query to return true

3.8.10.2 X Scale

This tab accesses controls that enable you to set the horizontal scale parameters.

Auto Scaling

Causes the trace to display all available trace data when set to Auto.

Remote Command	`:DISPlay:EVM:WINdow[1]|2|…|9:X[:SCALe]:COUPle OFF | ON | 0 | 1` `:DISPlay:EVM:WINdow[1]|2|…|9:X[:SCALe]:COUPle?`
Example	`:DISP:EVM:WIN1:X:COUP ON` `:DISP:EVM:WIN1:X:COUP?`
Couplings	When Auto Scaling is On and the Restart front-panel key is pressed, this function automatically determines XReference Value and X Width values based on the measurement results When X Reference Value or X Width is set by user manually, Auto Scaling automatically changes to Off
Preset	ON
State Saved	Saved in instrument state
Range	On|Off
Backwards Compatibility SCPI	`:DISPlay:EVM:TRACe[1]|2|…|6:X[:SCALe]:COUPle OFF | ON | 0 | 1`

Ref Value

Controls the X value of the selected trace at the chosen X Reference Position.

Remote Command	`:DISPlay:EVM:WINDow[1]|2|…|9:X[:SCALe]:RLEVel <real>` `:DISPlay:EVM:WINDow[1]|2|…|9:X[:SCALe]:RLEVel?`
Example	`:DISP:EVM:WIND:X:RLEV 1e9` `:DISP:EVM:WIND:X:RLEV?`
Couplings	If X Scale is set to Auto, the X Reference Value is determined by the trace data and this key is grayed out.
Preset	Depends on trace
State Saved	Yes
Min	-9.9E+37
Max	9.9E+37
Backwards Compatibility SCPI	`:DISPlay:EVM:TRACe[1]|2|…|6:X[:SCALe]:RLEVel <real>`

Width

Set the width of the X axis which is displayed for the selected trace. The X width can be set less than the Span for frequency-domain traces, enabling you to zoom in on just a portion of the measured values. Likewise, it can be less than time span covered by time-domain data. This plus the X Reference Value and X Reference Position control the range of X values that can be displayed on a trace. For example, if the X Reference position is Center, the X Reference value is 1 GHz and the X Width is 20 MHz.

Remote Command	`:DISPlay:EVM:WINDow[1]|2|…|9:X[:SCALe]:SPAN <real>` `:DISPlay:EVM:WINDow[1]|2|…|9:X[:SCALe]:SPAN?`
Example	`:DISP:EVM:WIND:X:SPAN 10e6` `:DISP:EVM:WIND:X:SPAN?`
Couplings	If X Scale is set to Auto, the X Width is determined by the trace data and this key is grayed out.
Preset	Depends on trace
State Saved	Yes
Min	-9.9E+37
Max	9.9E+37
Backwards Compatibility SCPI	`:DISPlay:EVM:TRACe[1]|2|…|6:X[:SCALe]:SPAN <real>`

Ref Position

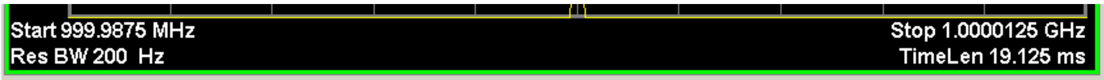
Determines the position from which the X scaling is calculated for the selected trace. It can be set to the left side, center, or right side of the grid.

Remote Command	`:DISPlay:EVM:WINDow[1]|2|…|9:X[:SCALe]:RPOSition LEFT | CENTer | RIGHt` `:DISPlay:EVM:WINDow[1]|2|…|9:X[:SCALe]:RPOSition?`
Example	`:DISP:EVM:WIND1:X:RPOS LEFT` `:DISP:EVM:WIND1:X:RPOS?`
Couplings	If X Scale is set to Auto, the X Reference Position is determined by the trace data and this key is grayed out.
Preset	CENT
State Saved	Yes
Range	Left|Ctr|Right
Backwards Compatibility SCPI	`:DISPlay:EVM:TRACe[1]|2|…|6:X[:SCALe]:RPOSition LEFT | CENTer | RIGHt`

Freq Annotation

Controls how Spectrum and PSD traces are annotated when their X Scale is set to Auto. If Freq Annotation is set to Center/Span, the X-axes on windows containing frequency domain traces are labeled with the center frequency on the left and the span on the right. If the Freq Annotation is set to Start/Stop, then the start and stop frequencies appear in place of center and span. If the X Scale is manual, then this annotation style does not apply.

Center 1 GHz
Res BW 200 Hz
Span 25 kHz
TimeLen 19.125 ms



Start 999.9875 MHz
Res BW 200 Hz
Stop 1.0000125 GHz
TimeLen 19.125 ms

Remote Command	`:DISPlay:EVM:FANNotation CSPan | SSTop` `:DISPlay:EVM:FANNotation?`
Example	`:DISP:EVM:FANN CSP` `:DISP:EVM:FANN?`
Preset	CSP
State Saved	Yes
Range	Center/Span | Start/Stop
Annotation	Depending on setting, frequency domain axes are labeled Center <number> <unit prefix>Hz Span <number> <unit prefix>Hz or Start <number> <unit prefix>Hz Stop <number> <unit prefix>Hz This annotation only applies to a frequency-domain trace if X Scale is set to Auto for that trace

All Frequency Points

Spectrum trace data (and PSD) are based on the FFT algorithm. By default, the outer edges of the spectrum are not displayed because they can show spurious results that are aliases of real signals that are not completely filtered out by the IF filter. For example, in the case of a 1024 point FFT only 801 points are displayed. If you want to view the additional FFT points at the edges of spectral displays, turn this function on. It is global to all traces, not specific to a single trace.

Remote Command	`:DISPlay:EVM:AFPoints OFF | ON | 0 | 1` `:DISPlay:EVM:AFPoints?`
Example	`:DISP:EVM:AFP ON` `:DISP:EVM:AFP?`

Couplings	Only applies if trace is showing Spectrum or PSD results
Preset	OFF
State Saved	Yes
Range	On | Off
Annunciation	Spectrum and PSD traces show the "ALL POINTS" enunciator in the upper right corner of the grid when this function is on. This metadata is saved with the trace if it is copied to a register or saved in a file

3.8.10.3 Recording

Displays the Sample Rate, Sample Points and Sample Time of the saved IQ data file.

Recording and playback of signal data files is a multi-step process that involves controls in several menus:

- **Save**, **Recording** (under the **Save** hardkey or the **Save** icon in the **File** panel)
- **Recall**, **Recording** (under the **Recall** hardkey or the **Recall** icon in the **File** panel)
- **Sweep**, **Recording** (this tab)
- **Sweep**, "Playback" on page 1787
- **Input/Output**, "Data Source" on page 2649

NOTE A complete tutorial for **Record/Playback** functionality, including how to load and save recording files, can be found in the help for the tab "Data Source" on page 2649 under **Input/Output**.

This menu includes the following display-only fields:

Sample Rate

Displays the sample rate of the saved IQ data file. If you have not saved an IQ data file, the value is 0.

Sample Points

Displays the total number of sample points in the saved IQ data file. If you have not saved an IQ data file, the value is 0.

Sampling Time

Displays the total sample time of the saved IQ data file. If you have not saved an IQ data file, the value is 0.

Saved Channels [Mode: 5GNR, VMA, WLAN]

Displays the channel index/number of the saved IQ data file. If you have not saved an IQ data file, no value is displayed.

This control is designed for multi-channel I/Q data recording and playback.

3.8.10.4 Playback

Contains parameters for playback of saved recording files recalled to the instrument.

Recording and playback of signal data files is a multi-step process that involves controls in several menus:

- **Save**, **Recording** (under the **Save** hardkey or the **Save** icon in the **File** panel)
- **Recall**, **Recording** (under the **Recall** hardkey or the **Recall** icon in the **File** panel)
- **Sweep**, "Recording" on page 1786
- **Sweep**, **Playback** (this tab)
- **Input/Output**, "Data Source" on page 2649

NOTE

A complete tutorial for **Record/Playback** functionality, including how to load and save recording files, can be found in the help for the tab "Data Source" on page 2649 under the **Input/Output** menu.

This menu includes the following display-only fields:

Sample Points

Displays the total number of sample points in the recalled IQ data file. If you have not recalled an IQ data file, the value is 0.

Sampling Time

Displays the total sample time of the recalled IQ data file. If you have not recalled an IQ data file, the value is 0.

Input Channels [Mode: 5GNR, VMA, WLAN]

Displays the input channel number of the recalled IQ data file. If you have not recalled an IQ data file, the default value of 1 is displayed.

This control is designed for multi-channel I/Q data recording and playback.

Playback Mode

Specifies the mode of IQ data to be played back and analyzed:

- Fixed: Playback Stop value is ignored. Measurement will analyze the first chunk of IQ data start from Playback Start repeatedly
- Iterative: Measurement will analyze the IQ data chunk by chunk between Playback Start and Playback Stop, if the last chunk is not complete it will be ignored and start from the first chunk again

Remote Command	`:CALCulate:<meas>:PLAY:MODE FIXed | ITERative`
	`:CALCulate:<meas>:PLAY:MODE?`
	Where `<meas>` is the mnemonic for the current measurement, for example, `EVM`

Example	For EVM measurement in 5G NR Mode:
	`:CALC:EVM:PLAY:MODE CONT`
	`:CALC:EVM:PLAY:MODE?`

Preset	`FIX`
State Saved	Saved in instrument state
Range	Fixed | Iterative

Playback Start

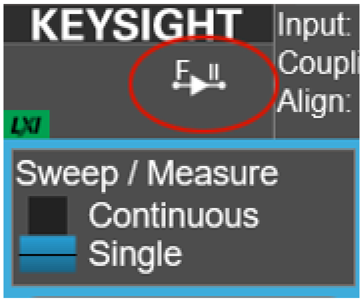
Once you have loaded an IQ data file using **Recall**, **Recording**, this control enables you to specify the start position of the IQ data playback range to be analyzed. If its value is less than zero, an additional zero is inserted at the beginning of the IQ data.

To go to a specific location in the recalled I/Q data, enter the desired **Playback Start** point.

You can use this control to examine the data you recalled from the recording file. How you proceed depends on whether you are in **Continuous** or **Single** mode. To determine which mode you are in, look at the first panel on the left in the **Meas Bar** above the data display.

If the panel looks like this, you are in **Continuous** mode:

If the panel looks like this, you are in **Single** mode:



The **F** indicates that the instrument is using data from a file (if you wish to return to looking at data at the analyzer input, change the **Data Source** control in the **Input/Output**, **Data Source** menu from **File** back to **Input**.)

To examine the data you loaded:

Continuous mode

In this mode, turn the knob or use the **Up/Down** keys on the front panel to move through records in the recording. You will see **Playback Start** change from 0 to successively higher values as you move deeper into the data.

Single mode

In this mode, you can only look at one record. Set the **Playback Start** time to the desired offset from zero, then press **Restart**. A single record will be displayed. Note that until you press **Restart**, the “invalid data” indicator (yellow asterisk) is displayed in each window. After you press **Restart**, the invalid data indicator disappears.

Remote Command	`:CALCulate:<meas>:PLAY:STARt <time>`
	`:CALCulate:<meas>:PLAY:STARt?`
	Where `<meas>` is the mnemonic for the current measurement, for example, `EVM`

Example	For EVM measurement in 5G NR Mode:
	`:CALC:EVM:PLAY:STAR 0.01 s`
	`:CALC:EVM:PLAY:STAR?`

Preset	0
State Saved	Saved in instrument state
Min/Max	–/+Sample Points in IQ file / Sample Rate in IQ file

Playback Stop

Specifies the stop position of the IQ data playback range to be analyzed, when “Playback Mode” is iterative.

Remote Command	`:CALCulate:<meas>:PLAY:STOP <time>`
	`:CALCulate:<meas>:PLAY:STOP?`
	Where `<meas>` is the mnemonic for the current measurement, for example, `EVM`

Example	For EVM measurement in 5G NR Mode:
	`:CALC:EVM:PLAY:STOP 0.01 s`
	`:CALC:EVM:PLAY:STOP?`

Preset	0
State Saved	No
Min	0
Max	Sample Points in IQ file x Sample Rate

Step Forward

Move to next chunk of IQ data when "Playback Mode" on page 1788 is iterative.

Remote Command	`:CALCulate:<meas>:PLAY:STEP:FORWard` Where `<meas>` is the mnemonic for the current measurement, for example, `EVM`
Example	For EVM measurement in 5G NR Mode: `:CALC:EVM:PLAY:STEP:FORW`
State Saved	Saved in instrument state

Sample Rate

Displays the sample rate of the recalled IQ data file if the recalled file format contains sampling rate information (`.csv`, `.sdf`, `.txt`). In this case, the *control* is grayed-out.

`BIN` and `BINX` files do not include sampling rate information inside the file, so after recalling one of these files, you must set **Sample Rate** manually. When you save a file in these formats, you must specify the sample rate, as displayed under **Sweep**, **Recording**.

Remote Command	`:CALCulate:<meas>:PLAY:SRATe <freq>`
	`:CALCulate:<meas>:PLAY:SRATe?`
	Where `<meas>` is the mnemonic for the current measurement, for example, `EVM`

Example	For EVM measurement in 5G NR Mode:
	`:CALC:EVM:PLAY:SRAT 122.88MHz`
	`:CALC:EVM:PLAY:SRAT?`

Couplings	Displays only after recalling `.csv`, `.sdf`, or `.txt` files Settable after recalling `.bin` or `.binx` files
Preset	0
State Saved	No
Min	0

3.8.11 Trace

Trace function is not supported in LTE & LTE-A FDD Modulation Analysis measurements.

3.9 Conformance EVM

The LTE-Advanced Conformance EVM measurement (CEVM) focuses on speed. The core functionality is almost the same as the LTE-Advanced Modulation Analysis measurement (EVM); however, the measurement algorithm and the items of result are tailored for the speed and therefore some of the functionalities and results are excluded or limited. The user can get the same result as the Error Summary on EVM for every component carrier.

All available measurement parameters are accessible through RUI (SCPI). CEVM doesn't have controls for setting parameters except for some common keys. The measurement has four views. Three views are shown in tabular form.

LTE-Advanced aggregates multiple LTE carriers (up to 5) to obtain a collective transmission bandwidth of up to 100 MHz. The CEVM measurement supports aggregated carriers and allows you to measure LTE-Advanced signals according to 3GPP TS 36.211. Once you have configured the measurement, you can use these commands to initiate the measurement and retrieve the measurement results.

"Measurement Commands for CEVM " on page 1792

"Remote Command Results for LTE-A CEVM Measurement" on page 1792

"Remote Command Results for NB-IoT CEVM Measurement" on page 1800

"Remote Command Results for LTE V2X CEVM Measurement" on page 1802

Measurement Commands for CEVM

This section details remote commands and results. For the front-panel configuration and results, see "Display" on page 1856. For more SCPI commands that are supported in CEVM measurements, see "CEVM SCPI List" on page 1805.

```
:CONFigure:CEVM
:CONFigure:CEVM:NDEFault
:FETCh:CEVM[n]?
:INITiate:CEVM
:MEASure:CEVM[n]?
:READ:CEVM[n]?
```

Remote Command Results for LTE-A CEVM Measurement

The following table denotes the Conformance EVM specific results returned from the (FETCh|MEASure|READ):CEVM commands, indexed by subopcode.

MEASure:CEVM<n> is equivalent to CONF:CEVM;INIT:IMM:FETCh:CEVM<n>,which gets you the default measurement, that is, 5 MHz downlink with auto detection of allocations.

For queries listed in section, the results returned depend on the value of n, as follows.

Index N	Results Returned
Not specified or n=1	Returns measurement results of Component Carriers 0 when it is active. All the return values are floating points. **LTE-Advanced Downlink Results For Each Component Carrier** The result contents are customizable. See Downlink Result Output Selection (SCPI only) section for details. If no result is available, NaN (9.91E+37) is returned. 1. EVM (%) 2. EVM Symbol Time Adjust 3. 1: Window Start 4. 2: Window End 5. 3: Center 6. 4: Custom 7. EVM Pk (%) 8. EVM Pk Index 9. EVM Peak Sub Car Index 10. Data EVM (%) – Not available when Detection is Manual and no User is added. 11. 3GPP-defined QPSK EVM (%) 12. 3GPP-defined 16QAM EVM (%) 13. 3GPP-defined 64QAM EVM (%) 14. RS EVM (%) 15. RS Tx. Power (dBm) 16. OFDM Symbol Tx. Power (dBm) 17. Frequency Error (Hz) 18. Sync Correlation (%) 19. Sync Type 20. 1: P-SS

Index N	Results Returned
	21. 20: Ant Port 0 RS
	22. 21: Ant Port 1 RS
	23. 22: Ant Port 2 RS
	24. 23: Ant Port 3 RS
	25. Common Tracking Error (%)
	26. Symbol Clock Error (ppm)
	27. Time Offset (s)
	28. IQ Offset (dB)
	29. IQ Gain Imbalance (dB)
	30. IQ Quad Error (deg)
	31. IQ Timing Skew (s)
	32. CP Length Mode
	33. 1: Normal
	34. 2: Extended
	35. Cell ID
	36. Cell ID Group/Sector
	37. Integer part: Cell ID Group, After the decimal point: Cell ID Sector
	38. RS-OS/PRS
	39. 1: 3GPP
	40. 4: Custom
	41. Reference Signal Rx Power (dBm)
	42. Reference Signal Rx Quality (dB)
	43. Received Signal Strength Indicator (dBm)
	44. Channel Power(dBm)
	45. 3GPP-defined 256QAM EVM (%)
	46. 3GPP-defined 1024QAM EVM (%rms) The result is available only when higher order modulation is enabled with the required license in LTE-Advanced applications

Index N	Results Returned
	LTE-Advanced Uplink Results For Each Component Carrier The result contents are customizable. See Uplink Result Output Selection for details. If no result is available, NaN (9.91E+37) is returned. 1. EVM (%) 2. EVM Symbol Time Adjust 3. 1: Window Start 4. 2: Window End 5. 3: Center 6. 4: Custom 7. EVM Pk (%) 8. EVM Pk Index 9. EVM Peak Sub Car Index 10. Data EVM (%) – Not available when Detection is Manual and no User is added. 11. 3GPP-defined QPSK EVM (%) 12. 3GPP-defined 16QAM EVM (%) 13. 3GPP-defined 64QAM EVM (%) 14. RS EVM (%) 15. NaN (9.91E+37) returned. 16. NaN (9.91E+37) returned. 17. Frequency Error (Hz) 18. Sync Correlation (%) 19. Sync Type 20. 2: PUSCH-DMRS 21. 3: PUCCH-DMRS 22. 4: SRS 23. 5: PRACH 24. Common Tracking Error (%) 25. Symbol Clock Error (ppm)

Index N	Results Returned
	26. Time Offset (s) 27. IQ Offset (dB) 28. IQ Gain Imbalance (dB) 29. IQ Quad Error (deg) 30. IQ Timing Skew (s) 31. CP Length Mode 32. 1: Normal 33. 2: Extended 34. Channel Power (dBm) 35. In-band Emissions Result 0: PASS 1: FAIL 36. In-band Emissions worst Margin (dB) 37. In-band Emissions worst Slot 38. In-band Emissions worst RB 39. Spectral Flatness Result 0: PASS 1: FAIL 40. Spectral Flatness worst Margin (dB) 41. Spectral Flatness worst Slot 42. Spectral Flatness worst Subcarrier 43. 3GPP-defined 256QAM EVM (%)
2	Returns result of Equalizer Frequency Response Per Slot for CC0. The result length varies depending on the Bandwidth and Measurement Interval. For example, BW=5MHz and Result Length & Meas Interval Slot=20 slots, 12,000 points are returned. The first 600 points are 300 IQ pairs of EQ response of Slot 0 from the lowest to the highest frequency, and the second 600 points are those of Slot 1, and so on. Each slot (=EC(f)) is divided into EC_1(f) for Range1 and EC_2(f) for Range2, and then RP1, RP2, RP12 or RP21 is calculated in each region.
3	**Error Information of each Component Carrier** Returns total error information of each **Component Carrier**. The values are bitwise OR operated on the Error Information as follows:

<table>
<tr><th>Index N</th><th>Results Returned</th></tr>
<tr><td></td><td><table><tr><td>Error Information</td><td>Decimal</td><td>Binary</td></tr><tr><td>No Error</td><td>0</td><td>0x00000000</td></tr><tr><td>Parameter Setting Conflict</td><td>1</td><td>0x00000001</td></tr><tr><td>ADC OverRange</td><td>2</td><td>0x00000010</td></tr><tr><td>Sync Error</td><td>4</td><td>0x00000100</td></tr><tr><td>Demod Error</td><td>8</td><td>0x00001000</td></tr><tr><td>Burst Not Found</td><td>16</td><td>0x00010000</td></tr></table>For example, if ADC Over Range and Sync Error occurred, the value is 6.
The total result length is variable. The returned contents vary depending on the total number of Component Carriers, which is specified by Num Component Carriers in Component Carriers Setup.
Returns the following scalar results:
1. **Total Error Information of CC0.**
2. **Total Error Information of CC1.**
3. ...
nCarr. Total Error Information of the last carrier.
Where nCarr is the number of carriers to be measured.</td></tr>
<tr><td>4</td><td>Returns cross-carriers results like Time Alignment Error.
The first result indicate the max TAE between all component carriers, it is calculated by comparing the Time Offset of every component carrier with all the other component carriers, then calculate the time alignment error between the two with biggest difference.
The second result indicates the two component carriers which have the max TAE among all component carriers. The result is given out in the form of one floating point number. Integer part is the index of one Component Carrier, After the decimal point is the index for the other Component Carrier.
1. TAE Max (s)
2. TAE Max is between.
3. Integer part: the index of one Component Carrier, After the decimal point: the index for the other Component Carrier.

Remote Command Results for NB-IoT CEVM Measurement

For queries listed in section, the results returned depend on the value of n, as follows.

N	Results Returned
Not specified or n=1	Returns measurement results for NB-IoT Carrier when it is active. All the return values are floating points. NB-IoT Downlink Results If no result is available, NaN (9.91E+37) is returned.

1. EVM (%)
2. EVM Pk (%)
3. EVM Pk Index
4. EVM Peak Sub Car Index
5. Data EVM (%) – Not available when Detection is Manual and no User is added.
6. RS EVM (%)
7. RS Tx. Power(dBm)
8. OFDM Symbol Tx. Power (dBm)
9. Frequency Error (Hz)
10. Sync Correlation (%)
11. Common Tracking Error (%)
12. Symbol Clock Error (ppm)
13. Time Offset (s)
14. IQ Offset (dB)
15. IQ Gain Imbalance (dB)
16. IQ Quad Error (deg)
17. IQ Timing Skew (s)
18. Cell ID
19. Cell ID Group/Sector

Integer part: Cell ID Group, After the decimal point: Cell ID Sector

20. Reference Signal Rx Power (dBm)

21. Reference Signal Rx Quality(dB)
22. Received Signal Strength Indicator (dBm)
23. Channel Power (dBm)
24. EVM Symbol Time Adjust [1: Window Start; 2: Window End; 3: Center; 4: Custom]

NB-IoT Uplink Results

If no result is available, NaN (9.91E+37) is returned.

1. EVM (%)
2. EVM Pk (%)
3. EVM Pk Index
4. EVM Peak Sub Car Index
5. Data EVM (%) – Not available when Detection is Manual and no User is added.
6. RS EVM (%)
7. NaN (9.91E+37) returned.
8. NaN (9.91E+37) returned.
9. Frequency Error (Hz)
10. Sync Correlation (%)
11. Common Tracking Error (%)
12. Symbol Clock Error (ppm)
13. Time Offset (s)
14. IQ Offset (dB)
15. IQ Gain Imbalance (dB)
16. IQ Quad Error (deg)
17. IQ Timing Skew (s)
18. Channel Power (dBm)
19. In-band Emissions Result
20. In-band Emissions Worst Margin (dB)
21. In-band Emissions Worst Slot
22. In-band Emissions Worst subcarrier

23. RU Index for Single tone (NaN(9.91E+37) for Multi-tone)
24. EVM Symbol Time Adjust [1: Window Start; 2: Window End; 3: Center; 4: Custom]
25. RU Tones (N_RU_sc) [0: 1 Tone; 1: 3 Tones; 2: 6 Tones; 3:12 Tones]
26. Subcarrier Spacing (Δ f) [0:3.75 kHz; 1:15 kHz]
27. NPUSCH Format
28. NPUSCH Subcarrier Indication Filed (Isc)
29. Base Sequence Index (u)
30. NPUSCH T1 Modulation Type [1003: pi/2 BPSK; 1004: pi/4 QPSK]

Remote Command Results for LTE V2X CEVM Measurement

The following table denotes the Conformance EVM specific results returned from the (FETCh|MEASure|READ):CEVM commands, indexed by sub-opcode. MEASure:CEVM<n> is equivalent to CONF:CEVM; INIT:IMM:FETCh:CEVM<n>, which gets you the default measurement, that is, 5 MHz uplink with auto detection of allocations.

For queries listed in section, the results returned depend on the value of n, as follows.

Index N	Results Returned
Not specified or n=1	Sidelink Results If no result is available, NaN (9.91E+37) is returned. 1. EVM (%) 2. EVM Symbol Time Adjust 1: Window Start 2: Window End 3: Center 4: Custom 3. EVM Pk (%) 4. EVM Pk Index 5. EVM Peak Sub Car Index 6. Data EVM (%) – Not available when Detection is Manual and no User is added. 7. 3GPP-defined QPSK EVM (%)

Index N	Results Returned
	8. 3GPP-defined 16QAM EVM (%) 9. 3GPP-defined 64QAM EVM (%) 10. RS EVM (%) 11. NaN (9.91E+37) returned (Reserved for future) 12. NaN (9.91E+37) returned (Reserved for future) 13. Frequency Error (Hz) 14. Sync Correlation (%) 15. Sync Type 11: DM-RS 12: PSSS 16. Common Tracking Error (%) 17. Symbol Clock Error (ppm) 18. Time Offset (s) 19. IQ Offset (dB) 20. IQ Gain Imbalance (dB) 21. IQ Quad Error (deg) 22. IQ Timing Skew (s) 23. NaN (9.91E+37) returned (Reserved for future) 24. Channel Power (dBm) 25. In-band Emissions Result 26. In-band Emissions worst Margin (dB) 27. In-band Emissions worst Slot 28. In-band Emissions worst RB 29. Spectral Flatness Result 30. Spectral Flatness worst Margin (dB) 31. Spectral Flatness worst Slot 32. Spectral Flatness worst Subcarrier 33. NaN (9.91E+37) returned (Reserved for future)

Index N	Results Returned	
	34. Sidelink ID	
6	Returns the results of Inband Emission Power per RB for CC0. The result length varies depending on the number of RBs.	
	1	Average Power of Active RBs - the average absolute power of allocated RBs in dBm
	2	Number of RBs - the number of RBs in current configuration
	3~ (2+Number of RBs)	Power Per RB - the absolute power (dBm) per RB.
	3+Number of RBs	Power of General (dB) – the ratio of the average power of all unallocated RBs to the average power of all allocated RBs
	4+Number of RBs	Power of IQ Image + General (dB) – the ratio of the average power of the General and IQ Image to the average power of all allocated RBs. IQ Image measures one of unallocated RBs symmetry to the carrier.
	5+Number of RBs	Power of Carrier leakage + General(dB) – the ratio of the average power of the General and Carrier leakage to the average power of all allocated RBs. Carrier leakage measures one or two of unallocated RBs adjacent to DC frequency.
7	Returns the results of Inband Emission Power per RB for CC0. The result length varies depending on the number of RBs	
	1	Minimal Inband Margin - Inband margin is the difference between the inband emission limit mask and actual measured power per non-allocated RB. Which means the margin = (Limit – Power) in dB, and a negative margin stands for the power exceeds the limit.
	2	Minimal Inband Margin Index – the RB index of minimal margin results (ZERO based)
	3	Number of RBs - the number of RBs in current configuration
	4~(3+Number of RBs)	Inband Margin per RB - The Margin result of each RB. If the RB is active (allocated), the inband margin result will be set to NAN.
8	Returns the results of Spectral Flatness Ripple for CC0.	
	9. RP 1 Value - maximum Ripple in Range 1	
	10. RP 2 Value - maximum Ripple in Range 2	
	11. RP 12 Value - the maximum ripple between the upper side of Range 1 and lower side of Range 2	
	12. RP 21 Value - the maximum ripple between the upper side of Range 2 and lower

3.9.2 Views

The Conformance EVM measurement has 4 predefined views:

- `RESult` – "Result Metrics" on page 1812
- `MLISt` - "Measurement List" on page 1812
- `PARameter` – "Parameter List" on page 1812
- `RFENvelope` - "RF Envelope" on page 1812

Some of these are multiple-window views. When in a multiple-window view, you select a window by touching it. The menu controls may sometimes change depending on which window is selected.

Remote Command	`:DISPlay:CEVM:VIEW[:SELect] MLISt | PARameter | RESult | RFENvelope` `:DISPlay:CEVM:VIEW[:SELect]?`
Example	`:DISP:CEVM:VIEW RES` `:DISP:CEVM:VIEW?`
Preset	`RESult`
State Saved	Yes
Range	Measurement List | Parameter List | Result Metrics | RF Envelope

3.9.2.1 Parameter List

Shows name, remote command, and value of available commands for this measurement. You can verify and change values by using the menu, the front panel keys or by using a mouse and keyboard.

3.9.2.2 Measurement List

By default, this view shows the current status of enabled measurements and results.

When **Show All Items** is enabled, all available measurements and items are displayed. The measurement name and items which belong to the unavailable measurements are grayed-out.

3.9.2.3 Result Metrics

Shows measurement results in the same order as the remote command measurement results returned when index (n = 1) is sent.

3.9.2.4 RF Envelope

For diagnostic purposes, the RF Envelope view shows a time-domain magnitude plot of selected Component Carrier.

3.9.3 Windows

The measurement provides 4 window types:

#	Window
1	"Measurement List" on page 1813
2	"Parameter List" on page 1813
3	"Result Metrics" on page 1813
4	"RF Envelope" on page 1814

3.9.3.1 Measurement List

Window #1

Shows the current status of enabled measurements and items.

If the “Show All Items” parameter is enabled via its control, all available measurements and items are displayed. When the measurement is disabled, measurement name and items that belong to the measurement are grayed out.

Combination view of the I/Q demodulated signals using vector lines to connect the chip dots.

Example	`:DISP:CEVM:VIEW MLIS`

3.9.3.2 Parameter List

Window #2

Shows the name, remote command, and value of available commands for this measurement. The user can verify and change values by using menu and front panel keys.

Example	`:DISP:CEVM:VIEW PAR`

3.9.3.3 Result Metrics

Window #3

Displays measurement results in the same order as they are returned by the remote results (n=1) query.

Example	`:DISP:CEVM:VIEW RES`

3.9.3.4 RF Envelope

Window #4

For diagnostic purposes, the RF Envelope view shows a time-domain magnitude plot of selected Component Carrier.

Example	`:DISP:CEVM:VIEW RFEN`

3.9.4 Amplitude

The Amplitude front-panel key activates the Amplitude menu and selects Reference Value as the active function.

3.9.4.1 Attenuation

Controls the attenuator functions and interactions between the attenuation system components.

There are two attenuator configurations in the X-Series. One is a Dual-Attenuator configuration consisting of a mechanical attenuator and an optional electronic attenuator. The other configuration uses a single attenuator with combined mechanical and electronic sections that controls all the attenuation functions. Different models in the X-Series come with different configurations.

- See "Dual-Attenuator Configurations" on page 1814
- See "Single-Attenuator Configuration" on page 1815

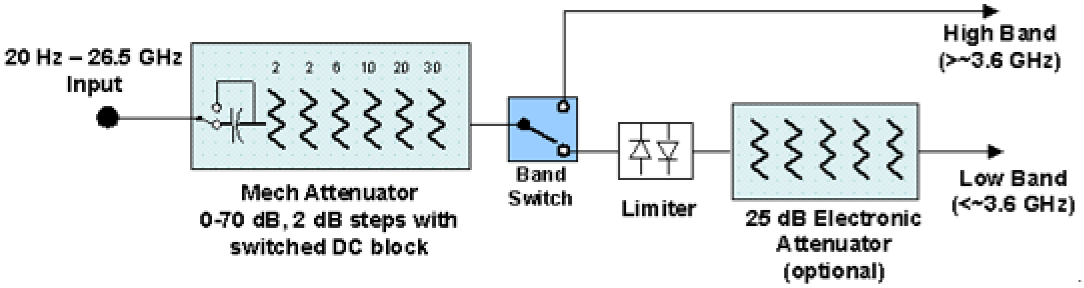
Most attenuation settings are the same for all measurements – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by **Meas Preset**.

Only available when the hardware set includes an input attenuator, which is typically only the case for Keysight’s benchtop instruments. For example, this tab does *not* appear in VXT models M9420A/10A/11A/15A/16A, M9410E/11E/15E/16E, nor in UXM. In UXM, all **Attenuation** and **Range** settings are disabled, as the expected input power level is handled by the Call Processing App that drives the DUT power control.

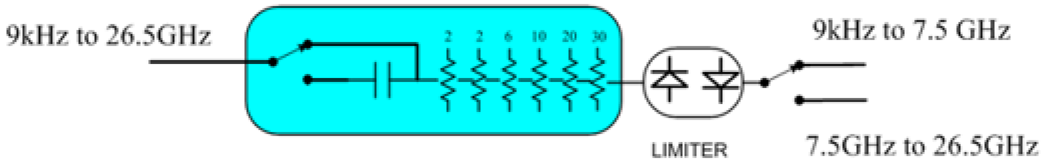
Dependencies	In measurements that support the I/Q inputs, unavailable when I/Q is the selected input. Replaced by the **Range** tab in that case

Dual-Attenuator Configurations

Configuration 1: Mechanical attenuator + optional electronic attenuator

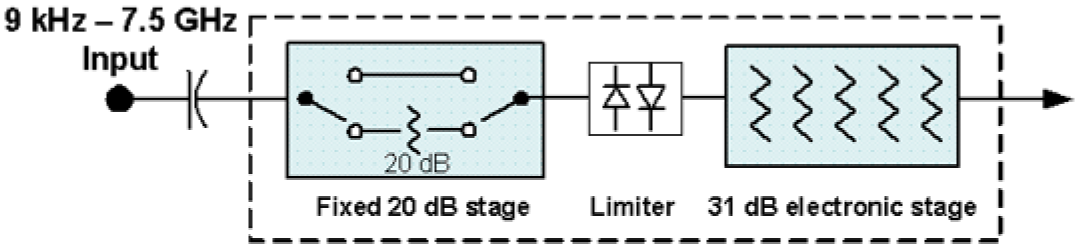


Configuration 2: Mechanical attenuator, no optional electronic attenuator

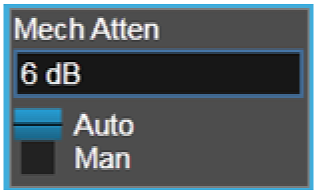


Note that Configuration 2 is not strictly speaking a dual-section attenuator, since there is no electronic section available. However, it behaves exactly like Configuration 1 without the Electronic Attenuator Option EA3, therefore for the sake of this document it is grouped into the “Dual-Attenuator” configuration.

Single-Attenuator Configuration

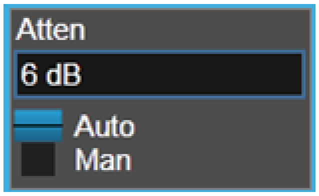


You can tell which attenuator configuration you have by pressing the Attenuation tab, which (in most Modes) opens the Attenuation menu. If the first control in the Attenuation menu says **Mech Atten** you have the Dual-Attenuator configuration. If the first control says **Atten** you have the Single-Attenuator configuration.



Mech Atten
6 dB
● Auto
○ Man

Dual Attenuator



Atten
6 dB
● Auto
○ Man

Single Attenuator

(Note that depending on the measurement, there may be no Auto/Man functionality on the Mech Atten control.)

In the Single-Attenuator configuration, you control the attenuation with a single control, as the fixed stage has only two states. In the Dual-Attenuator configuration, both stages have significant range, so you are given separate control of the mechanical and electronic attenuator stages.

When you have the Dual-Attenuator configuration, you may still have only a Single-Attenuator, because unless Option EA3 (the Electronic Attenuator option) is available, and you purchase it, you will have only the mechanical attenuator.

Full Range Atten

This control and **Attenuator Summary** only appear in N9041B, when the RF input is selected, the RF Input Port is set to RF Input 2, and the Full Range Attenuator is installed. The Full Range Attenuator adds a second input attenuator in front of RF Input 2, which enhances the protection and optimizes the performance of the extra internal mixers used by RF Input 2.

Remote Command	`[:SENSe]:POWer[:RF]:FRATten <rel_ampl>` `[:SENSe]:POWer[:RF]:FRATten?`
Example	`:POW:FRAT 14` `:POW:FRAT?`
Notes	When you enter an amplitude value that falls between valid values, the value will be incremented to the next smallest valid value
Dependencies	Only appears if input RF is selected, RF Input Port 2 is selected, and the Full Range Attenuator exists
Couplings	This value is never changed by any coupling, but other couplings use this value. See **Reference Level** and "Mech Atten" on page 2161 command descriptions
Preset	20 dB
State Saved	Saved in instrument state
Min	0 dB
Max	Only valid values are 0, 6, 14, 20 dB
Annotation	When the **Input** is **RF**, and the **Input Port** is **RF Input 2**, and the Full Range Attenuator is installed: On the Meas Bar, the field "Atten" displays as follows: – If the sweep is entirely < 50 GHz, the value shown after "Atten:" is equal to Mech Atten + Elec Atten + Full Range Atten – If the sweep is entirely > 50 GHz, the value shown after "Atten:" is equal to Full Range Atten – If the sweep straddles 50 GHz, the value shown after "Atten:" is preceded by the symbol ">=" and is equal to Full Range Atten

In the **Amplitude**, "Y Scale" on page 2153 menu, and the Atten **Meas Bar** dropdown menu panel, a summary is displayed as follows:

“Total Atten below 50 GHz” followed by the value of Full Range Atten + Mech Atten + Elec Atten

“Total Atten above 50 GHz” followed by the value of Full Range Atten

For example, if Mech Atten = 6 dB, Elec Atten = 4 dB, and Full Range Atten = 20 dB, the summary below is shown:

- Attenuator summary:
- Total Atten below 50 GHz: 30 dB
- Total Atten above 50 GHz: 20 dB

Mech Atten

Labeled **Mech Atten** in Dual-Attenuator models, and **Atten** in Single-Attenuator models. In the Dual-Attenuator configuration, this control only affects the mechanical attenuator.

Lets you modify the attenuation applied to the RF input signal path. This value is normally auto-coupled to **Ref Level**, "Internal Preamp" on page 2183 Gain, any External Gain that is entered, and **Max Mixer Level** (if available), as described in the table below.

See "Attenuator Configurations and Auto/Man" on page 1819

Remote Command	`[:SENSe]:POWer[:RF]:ATTenuation <rel_ampl>` `[:SENSe]:POWer[:RF]:ATTenuation?`
Example	`:POW:ATT 20` Dual-Attenuator configuration: sets the mechanical attenuator to 20 dB Single-Attenuator mode: sets the main attenuation to 20 dB (see below for definition of “main” attenuation) In either case, if the attenuator was in Auto, it is set to Manual
Dependencies	Some measurements do not support **Auto** setting of **Mech Atten**. In these measurements, the **Auto/Man** selection is not available, and the **Auto/Man** toggle function is not available In Dual-Attenuator configurations, when the electronic attenuator is enabled, the mechanical attenuator has no auto setting, and the **Auto/Man** toggle function is not available. The state of **Auto/Man** is remembered and restored when the electronic attenuator is once again disabled. This is described in more detail in "Elec Atten" on page 2164 See "Attenuator Configurations and Auto/Man" on page 1819 for more information on the **Auto/Man** functionality
Couplings	If the RF Input Port is the RF Input: – If the USB Preamp is connected to USB, use 0 dB for **Mech Atten** – Otherwise compute the auto-selected value of **Mech Atten** based on **Reference Level**, **Int Preamp**,

<table>
<tr><td></td><td>External Gain, Ref Level Offset, Max Mixer Level, µW Path Control and IF Gain settings. Limit this value to be no less than 6 dB (total attenuation below 6 dB can never be chosen by Auto)
– In N9041B, if the RF Input Port is RF Input 2, use the formula above and subtract the value of "Full Range Atten" on page 2160 from the result to determine the Mech Atten. Limit the value so that it is never lower than 0 dB and so that total attenuation, including Full Range Atten, is never less than 6 dB (total attenuation, including Full Range Atten below 6 dB, can never be chosen by Auto)
In External Mixing and BBIQ, where the attenuator is not in the signal path, the attenuator setting changes as described above when Mech Atten is in Auto, but no changes are made to the actual attenuator hardware setting until the input is changed back to the RF Input
For CXA-m with Option FSA (Fine-Step Attenuator or 2 dB steps), the FSA-like behavior is only available when the frequency setting is <= 7.5 GHz. So, when the frequency is changed from below 7.5 GHz to above 7.5 GHz, the attenuation setting changes to a multiple of 10 dB that is no smaller than the previous setting. For example, 4 dB attenuation changes to 10 dB</td></tr>
<tr><td>Preset</td><td>Auto
The Auto value is 10 dB</td></tr>
<tr><td>State Saved</td><td>Saved in instrument state</td></tr>
<tr><td>Min</td><td>0 dB
The attenuation set by this control cannot be decreased below 6 dB with the knob or step keys. Values below 6 dB must be directly entered from the keypad or via SCPI. This protects against setting a dangerously small attenuation value, which can put the instrument at risk of damage to input circuitry. If the current mechanical attenuation is below 6 dB, it can be increased with the knob and step keys, but not decreased</td></tr>
<tr><td>Max</td><td><table><tr><td>CXA Option 503 or 507</td><td>50 dB</td></tr><tr><td>EXA</td><td>60 dB</td></tr><tr><td>All other models</td><td>70 dB</td></tr></table>Note that in the Single-Attenuator configuration, the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB</td></tr>
<tr><td>Annotation</td><td>The current value for Total Atten is displayed in the Measurement Bar at the top of the display. A value appears for Electronic Attenuation only if the Electronic Attenuator is enabled. The annotation appears as:
<i>Atten: <total> dB (e<elec>)</i>
The e letter is in amber in Single-Attenuator configurations
For example:
Dual-Attenuator configuration:
<i>Atten: 24 dB (e14)</i>
Indicating the total attenuation is at 24 dB and the electronic attenuation is at 14 dB
Single-Attenuator configuration:
<i>A: 24 dB (e14)</i>
Indicating the total attenuation is at 24 dB and the “soft” attenuation is at 14 dB (see below for definition of “soft” attenuation)</td></tr>
</table>

	When in Manual, a # sign appears in front of Atten in the annotation

Auto Function

Remote Command	`[:SENSe]:POWer[:RF]:ATTenuation:AUTO OFF | ON | 0 | 1` `[:SENSe]:POWer[:RF]:ATTenuation:AUTO?`
Example	Turn **Auto Mech Atten** ON: `:POW:ATT:AUTO ON`
Dependencies	`:POW:ATT:AUTO` is only available in measurements that support **Auto**, such as Swept SA
Preset	ON

Attenuator Configurations and Auto/Man

As described under "Attenuation" on page 2158, there are two distinct attenuator configurations available in the X-Series, the Single Attenuator and Dual-Attenuator configurations.

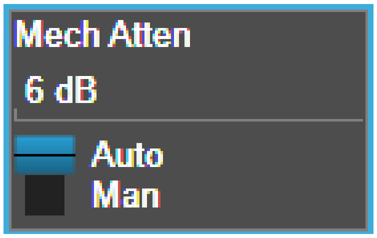
In Dual-Attenuator configurations, we have mechanical attenuation and electronic attenuation, and current total attenuation is the sum of electronic + mechanical attenuation.

In Single-Attenuator configurations, we refer to the attenuation set using "Mech Atten" on page 1817 (or `:POW:ATT`) as the “main” attenuation; and the attenuation that is set by `:POW:EATT` as the “soft” attenuation (`:POW:EATT` is honored even in the Single-Attenuator configuration, for compatibility purposes). Then current total attenuation is the sum of main + soft attenuation.

See "Elec Atten" on page 2164 for more about “soft” attenuation.

NOTE

In some measurements, the **Mech Atten** control has an **Auto/Man** function. In these measurements, an **Auto/Man** switch is shown on the **Mech Atten** control:



Note that in configurations that include an Electronic Attenuator, this switch is only shown when the Electronic Attenuator is disabled.

In other measurements, **Mech Atten** has no **Auto/Man** function. In these measurements, no switch is shown on the **Mech Atten** control:

Mech Atten also appears with no switch, as above, in configurations that include an Electronic Attenuator but when the Electronic Attenuator is enabled.

Elec Atten

Controls the Electronic Attenuator in Dual-Attenuator configurations. Does not appear in Single-Attenuator configurations, because the control of both the mechanical and electronic stages of the Single-Attenuator is integrated into the single **Atten** control.

This control includes an **Enable/Disable** toggle switch; it is only possible to enter a value for the Electronic Attenuator when this switch is in the **Enable** position.

For more details of the Electronic Attenuator, see "More Information" on page 1822

Remote Command	`[:SENSe]:POWer[:RF]:EATTenuation <rel_ampl>` `[:SENSe]:POWer[:RF]:EATTenuation?`
Example	`:POW:EATT 10` `:POW:EATT?`
Notes	Electronic Attenuation's specification is defined only when **Mech Atten** is 6 dB
Dependencies	Only appears in Dual-Attenuator models with an Electronic Attenuator installed and licensed. Does not appear in models with the Single-Attenuator configuration, because in the Single-Attenuator configuration there is no "electronic attenuator"; there is only a single integrated attenuator (which has both a mechanical and electronic stage). However, in the Single-Attenuator configuration, `EATT` SCPI commands are accepted for compatibility with other X-series instruments, and set a "soft" attenuation. The "soft" attenuation is treated as an addition to the "main" attenuation value set by the **Attenuation** control or `:POW:ATT`, and affects the total attenuation displayed on the **Attenuation** control and the Meas Bar The electronic attenuator, and the "soft" attenuation function provided in Single-Attenuator configurations, are unavailable above the low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model). If the low band range is from 0-3.6 GHz, and Stop Frequency of the instrument is > 3.6 GHz, then the **Enabled/Disabled** section of the **Elec Atten** control will be `OFF` and grayed-out If "Internal Preamp" on page 2183 is `ON` (that is, set to Low Band or Full), the electronic attenuator (and the "soft" attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the **Enabled/Disabled** section of the **Elec Atten** control will be `OFF` and grayed-out If either of the above is true, and the SCPI command is sent, an error indicating that the electronic attenuator is unavailable is returned If both the above are true, pressing the control generates error message -221, in other words, the

	frequency range lockout takes precedence If the electronic/soft Attenuator is enabled, then the **Stop Freq** of the instrument is limited to 3.6 GHz and **Internal Preamp** is unavailable If "LNA" on page 2185 is `ON`, the electronic attenuator (and the "soft" attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the **Enabled/Disabled** section of the **Elec Atten** control will be `OFF` and grayed-out. This coupling works in the following modes/measurements: – Channel Power, Occupied BW, ACP, SEM, Spurious Emissions, Power Stat CCDF measurements in all Modes – Transmit On|Off Power measurement in 5GNR Mode – Power vs. Time and Transmit Power measurement in GSM/EDGE Mode – Burst Power measurement in Spectrum Analyzer Mode The SCPI-only "soft" electronic attenuation for the single-attenuator configuration is not available in all measurements; in particular, it is not available in the Swept SA measurement
Couplings	Enabling and disabling the Electronic Attenuator affects the setting of the Mechanical Attenuator (in Dual-Attenuator configurations). This is described in more detail below and in "Mechanical Attenuator Transition Rules" on page 1822
Preset	0 dB
State Saved	Saved in instrument state
Min	0 dB
Max	Dual-Attenuator configuration: 24 dB Single-Attenuator configuration: the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB
Annotation	See Annotation under the **Mech Atten** control description

Auto Function

Remote Command	`[:SENSe]:POWer[:RF]:EATTenuation:STATe OFF | ON | 0 | 1` `[:SENSe]:POWer[:RF]:EATTenuation:STATe?`
Example	`:POW:EATT:STAT ON` `:POW:EATT:STAT?`
Preset	`OFF` (Disabled) for Swept SA measurement `ON` (Enabled) for all other measurements that support the electronic attenuator

NOTE

The maximum **Center Frequency** for Low Band can change based on the selected IFBW for measurements that support IFBW (for example, Waveform measurement across all Modes that support it). In certain models (such as N9042B & N9032B), IFBW values <= 40 MHz have a maximum Low Band frequency of 3.6 GHz, while 40 MHz < IFBW <= 1 GHz have a maximum of

3.3 GHz, and 1 GHz < IFBW <= 1.5 GHz have a maximum of 3.5 GHz. This frequency is reflected in the disabled message displayed for Electrical Attenuator. For N9032B and N9042B IFBW values > 1.5 GHz do not support a **Center Frequency** that can reach the Low Band maximum frequency. In these cases, the Electrical Attenuator will remain disabled no matter the Center Frequency.

More Information

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear. These advantages primarily aid in remote operation and are negligible for front panel use. See "Using the Electronic Attenuator: Pros and Cons" on page 1823 for a detailed discussion of the pros and cons of using the electronic attenuator.

For the Single-Attenuator configuration, for SCPI backwards compatibility, the “soft” attenuation feature replaces the Dual-Attenuator configuration’s electronic attenuator. All the same couplings and limitations apply. See "Attenuator Configurations and Auto/Man" on page 2163

Mechanical Attenuator Transition Rules

When the Electronic Attenuator is enabled, the Mechanical Attenuator transitions to a state that has no Auto function. Below are the rules for transitioning the Mechanical Attenuator. Note that the information below *only* applies to the Dual-Attenuator configurations, and *only* when the Electronic Attenuator is installed:

When the Electronic Attenuation is enabled from a disabled state:

- The Mechanical Attenuator is initialized to 10 dB (this is its optimal performance setting). You can then set it as desired with SCPI, numeric keypad, step keys, or knob, and it behaves as it normally would in manual mode
- The Auto/Man state of (Mech) Atten is saved
- The Auto/Man toggle on the (Mech) Atten control disappears, and the auto rules are disabled
- The Electronic Attenuator is set to 10 dB less than the previous value of the Mechanical Attenuator, within the limitation that it must stay within the range of 0 to 24 dB of attenuation

Examples in the Dual-Attenuator configuration:

- Mech Atten at 20 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 10 dB. New total attenuation equals the value before Elec Atten enabled

- Mech Atten at 0 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 0 dB. New total attenuation does not equal the value before Elec Atten enabled
- Mech Atten at 40 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 24 dB. New total attenuation does not equal the value before Elec Atten enabled

When the Electronic Attenuation is disabled from an enabled state:

- The Elec Atten control is grayed out
- The Auto/Man state of (Mech) Atten is restored
- If now in Auto, (Mech) Atten recouples
- If now in Man, (Mech) Atten is set to the value of total attenuation that existed before the Elec Atten was disabled. The resulting value is rounded up to the smallest value possible given the (Mech) Atten Step setting - (That is, 57 dB changes to 58 dB when (Mech) Atten Step is 2 dB)

Using the Electronic Attenuator: Pros and Cons

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear.

The “finer steps” advantage of the electronic attenuator is beneficial in optimizing the alignment of the instrument dynamic range to the signal power in the front panel as well as remote use. Thus, you can achieve improved relative signal measurement accuracy. Compared to a mechanical attenuator with 2 dB steps, the 1 dB resolution of the electronic attenuator only gives better resolution when the odd-decibel steps are used. Those odd-decibel steps are less accurately calibrated than the even-decibel steps, so one tradeoff for this superior relative accuracy is reduced absolute amplitude accuracy.

Another disadvantage of the electronic attenuator is that the spectrum analyzer loses its “Auto” setting, making operation less convenient.

Also, the relationship between the dynamic range specifications (TOI, SHI, compression, and noise) and instrument performance are less well-known with the electrical attenuator. With the mechanical attenuator, TOI, SHI, and compression threshold levels increase dB-for-dB with increasing attenuation, and the noise floor does as well. With the electronic attenuator, there is an excess attenuation of about 1 to 3 dB between 0 and 3.6 GHz, making the effective TOI, SHI, and so forth, less well known. Excess attenuation is the actual attenuation relative to stated attenuation. Excess attenuation is accounted for in the instrument calibration.

Adjust Atten for Min Clipping

Sets the combination of mechanical and electronic attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an immediate action function, that is, it executes once, when the control is pressed.

The algorithms that are used for the adjustment are documented under "Pre-Adjust for Min Clipping" on page 2168.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMediate`
Example	`:POW:RANG:OPT IMM`
Notes	Executing **Adjust Atten for Min Clipping** initiates the measurement
Dependencies	Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes

Adjust Atten

Allows you to select;

- Electric attenuator only
- Combination of Electric attenuator and Mechanical attenuator

when `[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMediate` is executed.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:OPTimize:TYPE EONLy | COMBined` `[:SENSe]:POWer[:RF]:RANGe:OPTimize:TYPE?`
Example	`:POW:RANG:OPT:TYPE EONL` `:POW:RANG:OPT:TYPE?`
Dependencies	Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes
Preset	`COMBined`
State Saved	Saved in instrument state

Pre-Adjust for Min Clipping

If this function is `ON`, it applies the adjustment described under "Adjust Atten for Min Clipping" on page 2167 each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

In Dual-Attenuator models, you can set **Elec+Mech Atten**, in which case both attenuators participate in the autoranging, or **Elec Atten Only**, in which case the mechanical attenuator does not participate in the autoranging. This latter case results in less wear on the mechanical attenuator and is usually faster.

See "Adjustment Algorithm" on page 1826

Selection	SCPI	Note
Off	`OFF`	This is the default setting
On	`ON`	Available in Single-Attenuator instruments. For compatibility with models that do not have an input attenuator, the `ON` parameter is supported and mapped to `COMBined`
Elec Atten Only	`ELECtrical`	Selects only the electric attenuator to participate in auto ranging. This offers less wear on the mechanical attenuator and is usually faster
Elec+Mech Atten	`COMBined`	In Dual-Attenuator models, this selects both attenuators to participate in the autoranging

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation OFF | ON | ELECtrical | COMBined` `[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation?`
Example	`:POW:RANG:OPT:ATT OFF` `:POW:RANG:OPT:ATT?`
Notes	The parameter option `ELECtrical` sets this function to `ON` in Single-Attenuator models The parameter option `COMBined` is mapped to `ELECtrical` in Single-Attenuator models. If you send `COMBined`, it sets the function to `ON` and returns `ELEC` to a query For SCPI compatibility with models that do not have an input attenuator, the `ON` parameter is honored and mapped to `COMBined`
Dependencies	Only appears in Dual-Attenuator models with an Electronic Attenuator installed In instruments with Dual-Attenuator model, when "Elec Atten" on page 2164 is `OFF` or grayed-out, "Pre-Adjust for Min Clipping" on page 1824 is grayed-out Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes
Preset	`OFF` when Elec Atten is Disabled at preset, otherwise `ELEC`
State Saved	Saved in instrument state
Range	Dual-Attenuator models: Off | Elec Atten Only | Mech + Elec Atten Single-Attenuator models: Off | On

Backwards Compatibility Command

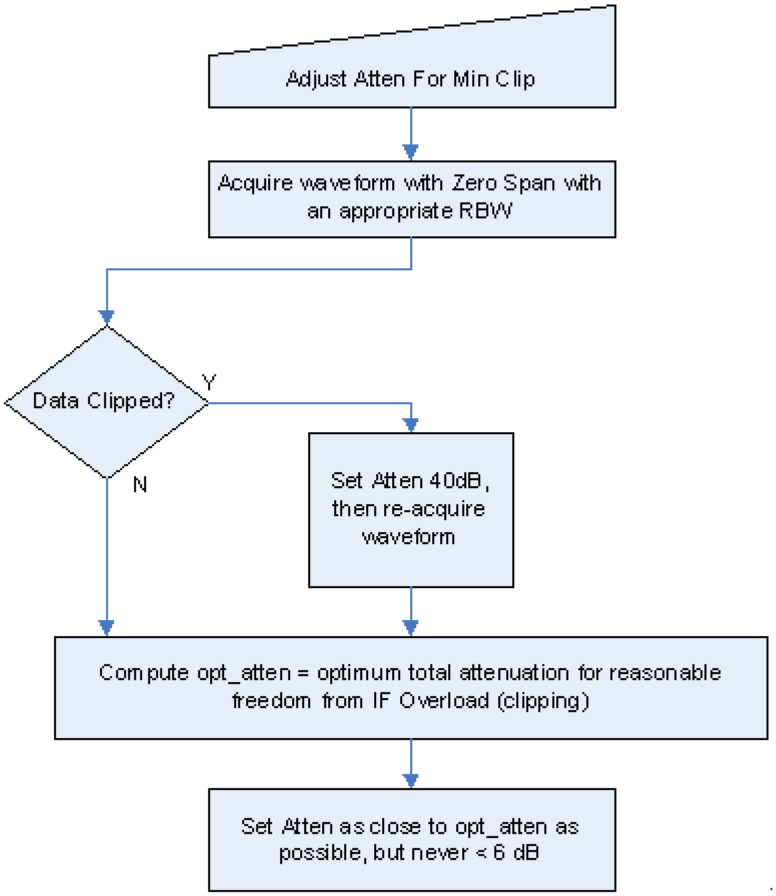
Notes	`ON` aliases to "Elec Atten Only" (`:POW:RANG:OPT:ATT ELEC`) `OFF` aliases to "Off" (`:POW:RANG:OPT:ATT OFF`)

	`:POW:RANG:AUTO?` returns true if `:POW:RANG:OPT:ATT` is not `OFF`
Backwards Compatibility SCPI	`[:SENSe]:POWer[:RF]:RANGe:AUTO ON | OFF | 1 | 0` `[:SENSe]:POWer[:RF]:RANGe:AUTO?`

Adjustment Algorithm

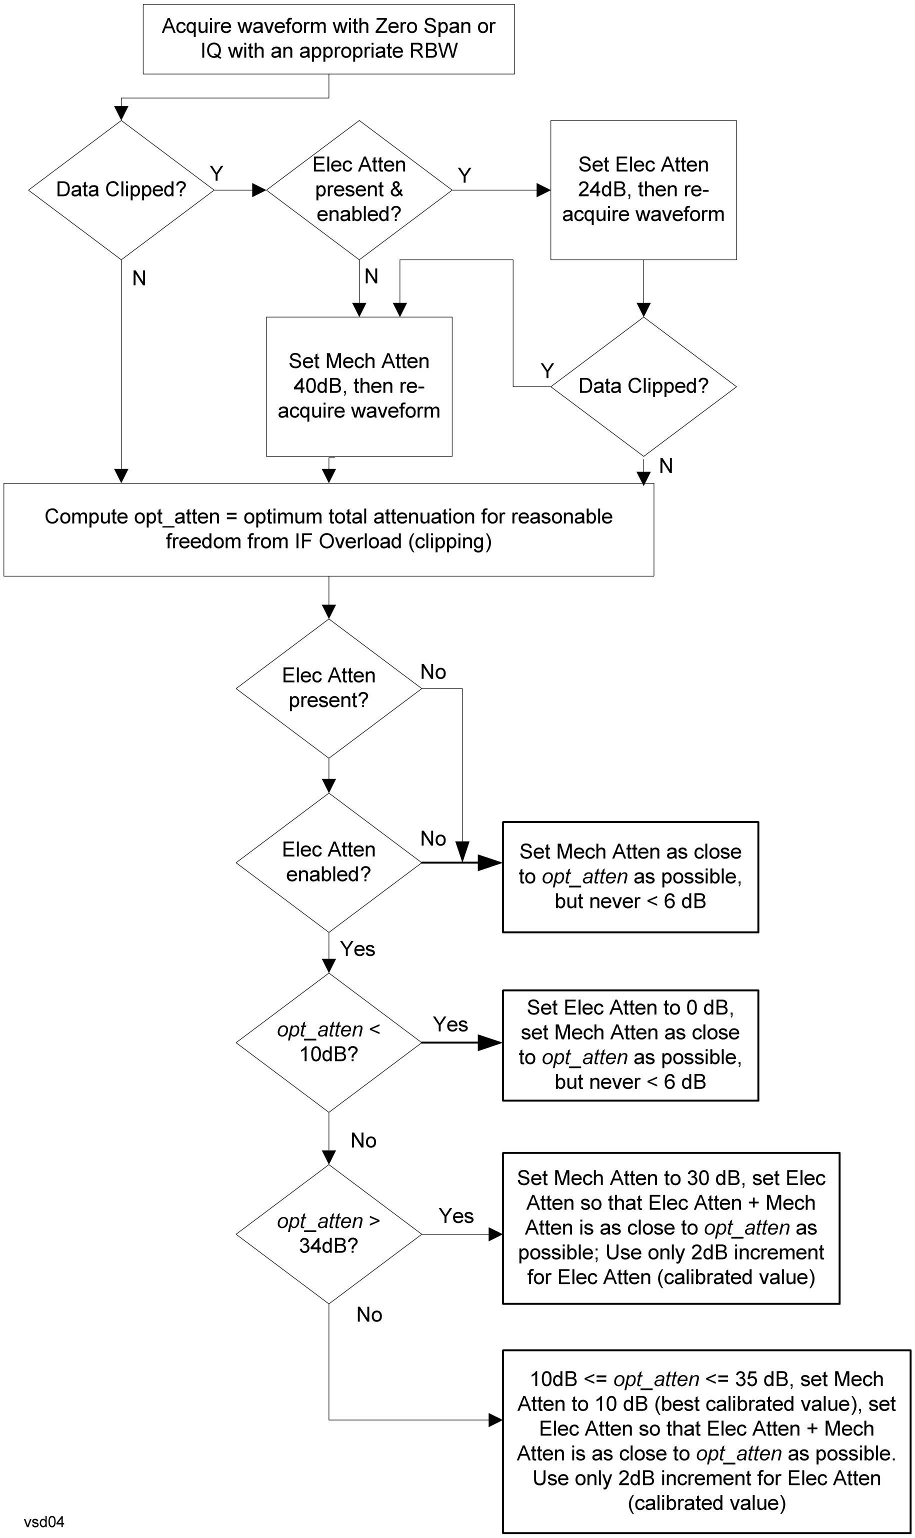
The algorithms for the adjustment are documented below:

Single-Attenuator Models



Dual-Attenuator models

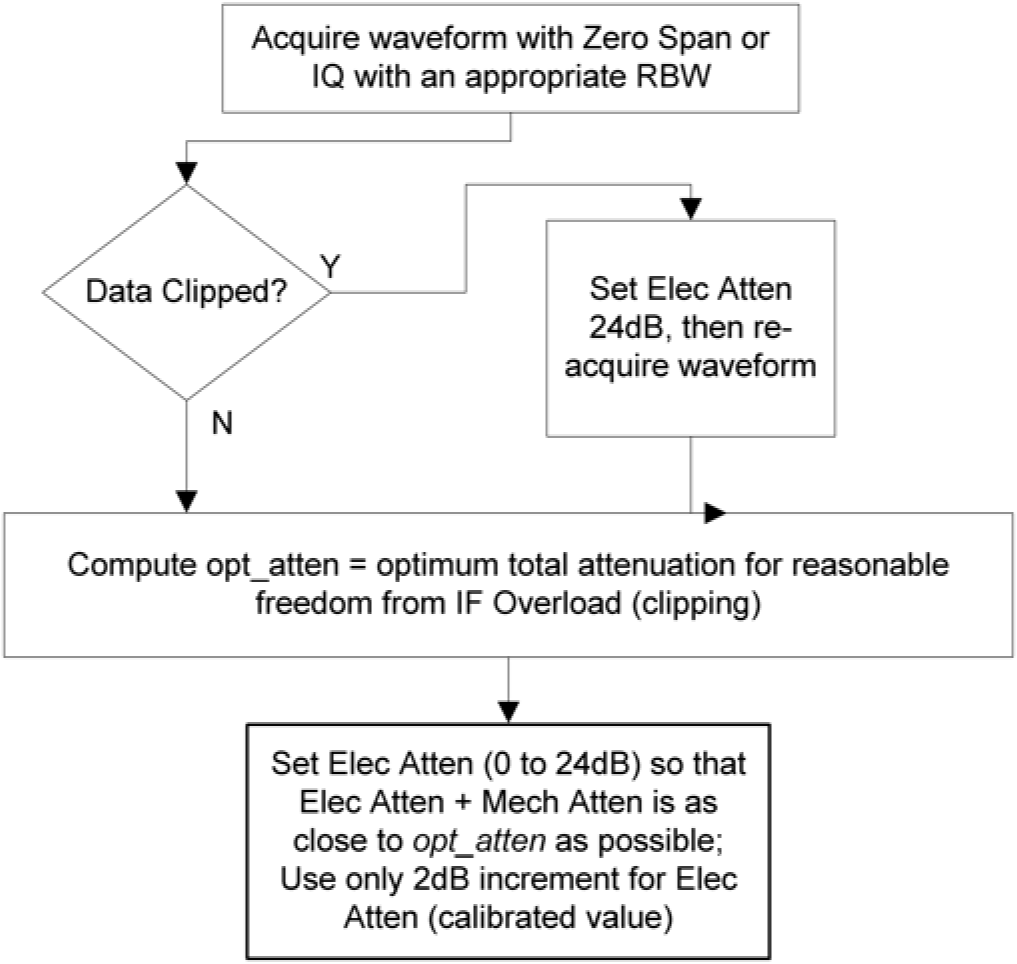
"Adjust Atten for Min Clipping" on page 2167 or "Pre-Adjust for Min Clipping" on page 1824 selection is Mech + Elec Atten:



Acquire waveform with Zero Span or IQ with an appropriate RBW
Data Clipped?
Y
N
Elec Atten present & enabled?
Y
N
Set Elec Atten 24dB, then re-acquire waveform
Set Mech Atten 40dB, then re-acquire waveform
Y
Data Clipped?
N
Compute opt_atten = optimum total attenuation for reasonable freedom from IF Overload (clipping)
Elec Atten present?
No
Elec Atten enabled?
No
Set Mech Atten as close to opt_atten as possible, but never < 6 dB
Yes
opt_atten < 10dB?
Yes
Set Elec Atten to 0 dB, set Mech Atten as close to opt_atten as possible, but never < 6 dB
No
opt_atten > 34dB?
Yes
Set Mech Atten to 30 dB, set Elec Atten so that Elec Atten + Mech Atten is as close to opt_atten as possible; Use only 2dB increment for Elec Atten (calibrated value)
No
10dB <= opt_atten <= 35 dB, set Mech Atten to 10 dB (best calibrated value), set Elec Atten so that Elec Atten + Mech Atten is as close to opt_atten as possible. Use only 2dB increment for Elec Atten (calibrated value)
vsd04

"Pre-Adjust for Min Clipping" on page 1824 selection is Elec Only.

Note that the **Mech Atten** value is not adjusted, and the value previously set is used. Therefore, there is a case that IF Overload is still observed depending on the input signal level and the Mech Atten setting.



Mech Atten Step

Controls the step size used when making adjustments to the input attenuation.

Labeled **Mech Atten Step** in Dual-Attenuator models and **Atten Step** in Single-Attenuator models. In the Dual-Attenuator configuration, only affects the step size of the mechanical attenuator.

Remote Command	`[:SENSe]:POWer[:RF]:ATTenuation:STEP[:INCRement] 10 dB | 2 dB`

	`[:SENSe]:POWer[:RF]:ATTenuation:STEP[:INCRement]?`
Example	`:POW:ATT:STEP 2` `:POW:ATT:STEP?`
Notes	Has a toggle control on the front panel, but takes a specific value (in dB) when used remotely. The only valid values are 2 and 10
Dependencies	Blanked in EXA, CXA and CXA-m if option FSA (2 dB steps) is not present. If blanked, attempts to set it via SCPI yield an error
Couplings	When the attenuation step size changes, the current mechanical attenuation value is adjusted (if necessary) to be quantized to the new step size. That is, if step is set to 10 dB, mech atten is increased if necessary so it is a multiple of 10 dB
Preset	EXA, CXA and CXA-m: 10 dB (2 dB with option FSA) All other models: 2 dB
State Saved	Saved in instrument state

3.9.4.2 Range (Non-attenuator models)

Only available for Keysight’s modular signal analyzers and certain other Keysight products, such as VXT and M941xE.

State Saved	No

Range

Represents the amplitude of the largest sinusoidal signal that could be present within the IF without being clipped by the ADC. For signals with high peak-to-average ratios, the range may need to exceed the rms signal power by a significant amount to avoid clipping.

This is a measurement global setting.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe <real>` `[:SENSe]:POWer[:RF]:RANGe?`
Example	`:POW:RANG 10 dBm` `:POW:RANG?`
Notes	The MIN and MAX values are affected by the External Gain parameters, and by the **Center Frequency** The hardware compensates for frequency response and alters the Range setting
Preset	0 dBm
State Saved	Yes
Min/Max	–/+100
Annotation	Meas Bar

Adjust Range for Min Clipping

Sets the combination of attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an "immediate action" function, that is, it executes once, when the key is pressed.

This key does not appear in measurements that do not support this functionality.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMediate`
Notes	Executing Adjust Range for Min Clipping initiates the measurement
Dependencies	Does not appear in the Swept SA and Monitor Spectrum measurements

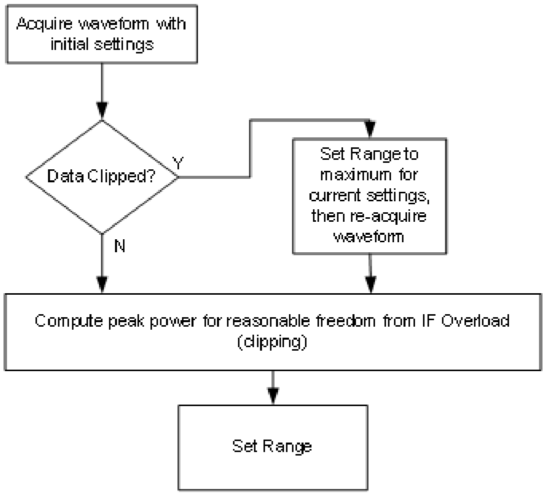
Pre-Adjust for Min Clipping

If this function is `ON`, it applies the adjustment described under Adjust Range For Min Clipping each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation OFF | ON | ELECtrical | COMBined` `[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation?`
Notes	Because there is no attenuator control available in these models, the control displays only `ON` and `OFF` choices. However, for SCPI compatibility with other platforms, all three parameters (`ELECtrical`, `COMBined`, and `ON`) are honored and all are mapped to `ELECtrical`, so if any of these three parameters is sent, a subsequent query will return `ELEC`
Dependencies	Does not appear in the Swept SA and Monitor Spectrum measurements
Preset	`OFF` for Swept SA measurement; `ON` for all other measurements that support **Pre-Adjust for Min Clipping**
State Saved	Saved in instrument state

Adjustment Algorithm

The algorithm for the adjustment is documented below:



Peak-to-Average Ratio

Used with "Range (Non-attenuator models)" on page 2177 to optimize the level control in the instrument. The value is the ratio, in dB, of the peak power to the average power of the signal to be measured. A ratio of 0 should be used for sinusoidal signals; for 802.11g OFDM signals use 9 dB.

All Modes show the current value of Peak-to-Average ratio on the control. However, some Modes do not permit changing the value. In these situations, the control is grayed-out.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:PARatio <real>` `[:SENSe]:POWer[:RF]:RANGe:PARatio?`	
Example	`:POW:RANG:PAR 12 dB`	
Notes	In some Modes, this parameter is read-only; meaning the value will appear on the control and query via SCPI, but is not changeable. In such applications the control is grayed-out. Attempts to change the value via SCPI are ignored, but no error message is generated	
Dependencies	Does not appear in Spectrum Analyzer Mode	
Preset	VXT Models M9410A/11A	0 dB
	All Others	10 dB
State Saved	Saved in instrument state	
Min	0 dB	
Max	VXT Models M9410A/11A	50 dB
	All Others	20 dB

Mixer Lvl Offset

This is an advanced setting to adjust target Range at the input mixer, which in turn affects the signal level in the instrument’s IF. This setting can be used when additional optimization is needed after setting "Peak-to-Average Ratio" on page 2179. Positive values of offset optimize noise performance over distortion, negative values optimize distortion performance over noise.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet <real>` `[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet?`
Example	`:POW:RANG:MIX:OFFS -5 dB`
Preset	0 dB
State Saved	Saved in instrument state
Min	VXT Models M9410A/11A: -34 dB All Others: -35 dB
Max	30 dB

3.9.4.3 Range (Baseband Input models)

Only available when Option BBA is present (I/Q Baseband Inputs), the current measurement supports option BBA, and I/Q is the selected input. In these cases, replaces the **Attenuation** tab.

Each input channel (I and Q) has four internal gain ranges. The maximum allowed voltage in each gain range is slightly more than the nominal value, so the break point between ranges is a few millivolts higher than the nominal (setting a peak voltage of 0.502 mV will still map to the 0.5 V Peak range).

Gain Setting	Volts RMS	Volts Peak	Volts Peak - Peak	dBm (50Ω)	Break Point
0 dB	0.7071	1.0	2.0	10	n/a
6 dB	0.3536	0.5	1.0	4	0.502 V Peak
12 dB	0.1768	0.25	0.5	-2	0.252 V Peak
18 dB	0.0884	0.125	0.25	-8	0.127 V Peak

Dependencies	Available only when the selected input is I/Q. If the current measurement does not support baseband inputs, an error will be displayed: “No result; Meas invalid with I/Q inputs”
State Saved	No

Range Auto/Man

The **Auto** setting for **Range** causes the range to be set based on the Y Scale settings. When **Range** is **Auto**, the I & Q Range are set based on the top of the Y Scale when the Y scale is in dB units (for example, power), or to the max(abs(top), abs(bottom)) when the Y scale reference is not at the top of the screen.

Not all measurements support **Range Auto/Man**. If **Auto** is not supported in the current measurement, this control is grayed-out, displaying **Man**, and `MAN` is returned to a SCPI query, but this does *not* change the Auto/Man setting for **Range**. When you switch to a measurement that supports **Auto**, it goes back to **Auto** if it was previously in **Auto** mode.

Remote Command	`[:SENSe]:VOLTage:IQ:RANGe:AUTO OFF | ON | 0 | 1` `[:SENSe]:VOLTage:IQ:RANGe:AUTO?`

Example	Put the I Range and Q Range in manual
	`:VOLT:IQ:RANG:AUTO OFF`
	`:VOLT:IQ:RANG:AUTO?`

Dependencies	If **Auto** is not supported, sending the SCPI command generates an error
Couplings	When in **Auto**, both I Range and Q Range are set to the same value, computed as follows: Maximum absolute value is computed for the Y Scale. The top and bottom of the graph are computed based on Ref Value, Scale/Div, and Ref Position. Formula: YMax = max(abs(top), abs(bottom)) The I Range and Q Range are then set to YMax
Preset	`ON`
State Saved	Saved in instrument state
Annotation	When in Man, the Range annotation is preceded by "#"

This is an alternate form of the command to match the `POWer` form of the I Range and Q Range SCPI.

Remote Command	`[:SENSe]:POWer:IQ:RANGe:AUTO OFF | ON | 0 | 1` `[:SENSe]:POWer:IQ:RANGe:AUTO?`

Example	Put the I Range and Q Range in manual
	`:POW:IQ:RANG:AUTO OFF`
	`:POW:IQ:RANG:AUTO?`

Notes	`:POW:IQ:RANG:AUTO` is an alternate form of `:VOLT:IQ:RANG:AUTO`, to maintain consistency with I Range and Q Range, which support both the `POWer` and `VOLTage` forms of the command
Preset	`ON`
Range	Auto | Man

I Range

The internal gain range for the I channel when the Input Path is I Only or I and I/Q. Used for both the I and Q channels when the Input Path is I+jQ.

Remote Command	`[:SENSe]:VOLTage:IQ[:I]:RANGe[:UPPer] <voltage>` `[:SENSe]:VOLTage:IQ[:I]:RANGe[:UPPer]?`

Example	Set the I Range to 0.5 V Peak
	`:VOLT:IQ:RANG 0.5 V`
	`:VOLT:IQ:RANG?`

Notes	The numeric entries are mapped to the smallest gain range whose break point is greater than or equal to the value, or 1 V Peak if the value is greater than 1 V
Couplings	When "Q Same as I" on page 2177 is On, the **I Range** value will be copied to "Q Range" on page 2176 Changing the value also sets Range = Man
Preset	Complex `SPECtrum` Measurement: 0.5 V Peak All others: 1 V Peak
State Saved	Saved in instrument state
Range	1 V Peak (10 dBm @ 50 Ω) | 0.5 V Peak (4 dBm @ 50Ω) | 0.25 V Peak (-2 dBm @ 50Ω) | 0.125 V Peak (-8 dBm @ 50Ω)
Min	0.125 V
Max	1 V
Annotation	The Range annotation replaces the RF Input context's "Atten" annotation "Rng: <I Range>". When Range = Man the annotation is preceded by "#" The I Range is not annotated in Input Path Q Only. When I Range and Q Range are the same, the annotation is "Rng: <Range>". When I Range and Q Range are different and the Input Path is Ind I/Q, the annotation is "Rng: <I Range>, <Q Range>" and "Peak" is removed from the text. Examples: "Rng: 1 V Peak" the I Range is 1 V Peak "Rng: 1 V, 0.5 V " the I Range is 1 V Peak and the Q Range is 0.5 V Peak

This is an alternate form of the command to allow entry as a power.

Remote Command	`[:SENSe]:POWer:IQ[:I]:RANGe[:UPPer] <ampl>` `[:SENSe]:POWer:IQ[:I]:RANGe[:UPPer]?`

Example	Set the I Range to 0.5 V Peak when Reference Z is 50 Ω, and to 1.0 V Peak when Reference Z is 75 Ω
	`:POW:IQ:RANG 4 dBm`
	`:POW:IQ:RANG?`

Notes	The `POWer` form of the command is provided for convenience. It maps to the same underlying gain range parameter as the `VOLTage` form The Reference Z (not the I channel Input Z) is used to convert the power to peak voltage, which is then used to set the I Range as with the `VOLTage` form of the command. The power values of the 4 range

	states (1V Peak, 0.5V Peak, 0.25V Peak, and 0.125V Peak) will vary with Reference Z. Here are some examples: 50 Ω: 10, 4, -2, -8 75 Ω: 8.2, 2.2, -3.8, -9.8 600 Ω: -0.8, -6.8, -12.8, -18.9
Preset	10.0 dBm
Range	-20 dBm to 10 dBm
Min	-20 dBm
Max	10 dBm

Q Range

The internal gain range for the Q channel. **Q Range** only applies to Input Path Q Only and Ind I/Q. For input I+jQ "I Range" on page 2174 determines both I and Q channel range settings.

Remote Command	`[:SENSe]:VOLTage:IQ:Q:RANGe[:UPPer] <voltage>` `[:SENSe]:VOLTage:IQ:Q:RANGe[:UPPer]?`

Example	Set the Q Range to 0.5 V Peak:
	`:VOLT:IQ:Q:RANG 0.5 V`
	`:VOLT:IQ:Q:RANG?`

Notes	The numeric entries are mapped to the smallest gain range whose break point is greater than or equal to the value, or 1 V Peak if the value is greater than 1 V **Q Range** is only used for Input Path Q Only and Ind I/Q. For input I+jQ, "I Range" on page 2174 determines both I and Q channel range settings
Couplings	When "Q Same as I" on page 2177 is On, the "I Range" on page 2174 value is copied to **Q Range** and the range value keys are disabled Changing the value also sets Range = Man
Preset	1 V Peak
State Saved	Saved in instrument state
Range	1 V Peak (10 dBm @ 50Ω) | 0.5 V Peak (4 dBm @ 50Ω) | 0.25 V Peak (-2 dBm @ 50Ω) | 0.125 V Peak (-8 dBm @ 50Ω)
Min	0.125 V
Max	1 V
Annotation	The Range annotation replaces the RF Input context's "Atten" annotation "Rng: <Q Range>". When Range = Man the annotation is preceded by "#" The Q Range is not annotated in Input Path I Only or I+jQ. When I Range and Q Range are the same, the annotation is "Rng: <Range>". When I Range and Q Range are different and the Input Path is Ind I/Q, the annotation is "Rng: <I Range>, <Q Range>" and "Peak" is removed from the text. Examples: "Rng: 1 V Peak" the Q Range is 1 V Peak

"Rng: 1 V, 0.5 V " the I Range is 1 V Peak and the Q Range is 0.5 V Peak

This is an alternate form of the command to allow entry as a power.

Remote Command	`[:SENSe]:POWer:IQ:Q:RANGe[:UPPer] <ampl>` `[:SENSe]:POWer:IQ:Q:RANGe[:UPPer]?`

Example	Sets the Q Range to 0.5 V Peak when Reference Z is 50 Ω , and to 1.0 V Peak when Reference Z is 75 Ω :
	`:POW:IQ:Q:RANG 4 dBm`
	`:POW:IQ:Q:RANG?`

Notes	The `POWer` form of the command is provided for convenience. It maps to the same underlying gain range parameter as the `VOLTage` form of the command The Reference Z (not the Q channel Input Z) is used to convert the power to peak voltage, which is then used to set the Q Range as with the `VOLTage` form of the command. The power values of the 4 range states (1V Peak, 0.5V Peak, 0.25V Peak, and 0.125V Peak) will vary with Reference Z. Here are some examples: 50 Ω: 10, 4, -2, -8 75 Ω: 8.2, 2.2, -3.8, -9.8 600 Ω: -0.8, -6.8, -12.8, -18.9
Preset	10.0 dBm
Range	-20 dBm to 10 dBm
Min	-20 dBm
Max	10 dBm

Q Same as I

Many, but not all, usages require the I and Q channels to have an identical setup. To simplify channel setup, **Q Same as I** causes the Q channel range to be mirrored from the I channel. That way, you only need to set up one channel (the I channel). The I channel values are copied to the Q channel, so at the time **Q Same as I** is Off, the I and Q channel setups will be identical.

Remote Command	`[:SENSe]:VOLTage|POWer:IQ:MIRRored OFF | ON | 0 | 1` `[:SENSe]:VOLTage|POWer:IQ:MIRRored?`

Example	Turn off the mirroring of I Range to Q Range
	`:VOLT:IQ:MIRR OFF`
	`:POW:IQ:MIRR OFF`

Couplings	When ON, the "I Range" on page 2174 value is mirrored (copied) to the "Q Range" on page 2176
Preset	ON
State Saved	Saved in instrument state
Range	OFF|ON

3.9.4.4 Signal Path

Contains controls that pertain to the routing of the signal through the frontend of the instrument.

In general, only appears in instruments whose hardware supports this signal routing. For example, this tab does not appear in many of the modular instrument products, including VXT Model M9420A, or UXM.

This tab *does* appear in VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E, because "Software Preselection" on page 2195 is under this tab, and VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E implement a version of Software Preselection.

Presel Center

Adjusts the centering of the preselector filter to optimize the amplitude accuracy at the frequency of the selected marker. If the selected marker is not on when **Presel Center** is pressed, the instrument turns on the selected marker, performs a peak search, and then performs centering on the marker's center frequency. If the selected marker is already on and between the start and stop frequencies of the instrument, the instrument performs the preselector calibration on that marker's frequency. If the selected marker is already on, but outside the frequency range between **Start Freq** and **Stop Freq**, the instrument first performs a peak search, and then performs centering on the marker's center frequency.

The value displayed on "Preselector Adjust" on page 2182 changes to reflect the new preselector tuning.

Certain considerations should be observed to ensure proper operation, as detailed in "Proper Preselector Operation" on page 1838.

Remote Command	`[:SENSe]:POWer[:RF]:PCENter`
Example	`:POW:PCEN`
Notes	The rules outlined above under the control description apply for the remote command as well as the key. The result of the command depends on marker position, etc. Any message generated by the control press is also generated in response to the remote command
Dependencies	Does not appear in CXA-m, nor in VXT Models M9410A/11A/15A/16A, M9410E/11E/15E/16E Grayed-out if the microwave preselector is off – If the selected marker's frequency is below Band 1, an advisory message is generated "Preselector not used in this frequency range" and no action is taken – Grayed-out if entirely in Band 0, that is, if **Stop Freq** is below about 3.6 GHz Grayed-out if entirely above 50 GHz, that is, if **Start Freq** is above 50 GHz – Blanked in models that do not include a preselector, such as Option 503. If the remote command

	is sent in these instruments, accepted without error, and the query always returns 0 – Grayed-out in the **Spectrogram** View
Couplings	The active marker position determines where the centering will be attempted If the instrument is in a measurement such as averaging when centering is initiated, the act of centering the preselector restarts averaging, but the first average trace will not be taken until the centering is completed The offset applied to do the centering appears in "Preselector Adjust" on page 2182
Status Bits/OPC dependencies	When centering the preselector, `*OPC` does not return true until the process is complete and a subsequent measurement has completed, nor are results returned in response to `:READ` or `:MEASure` queries The `Measuring` bit remains set (true) while this command is operating, and does not go false until the subsequent sweep/measurement has completed

Proper Preselector Operation

Certain considerations should be observed to ensure proper operation:

1. If the selected marker is **Off**, the instrument turns on a marker, performs a peak search, and adjusts the preselector using the selected marker's frequency. It uses the "highest peak" peak search method unqualified by threshold or excursion, so that there is no chance of a 'no peak found' error. It continues with that peak, even if it is the peak of just noise. Therefore, for this operation to work properly, there should be a signal on-screen in a preselected range for the peak search to find
2. If the selected marker is already **On**, the instrument attempts the centering at that marker's frequency. There is no preselector for signals below about 3.6 GHz, so if the marker is on a signal below 3.6 GHz, no centering is attempted, and an advisory message is generated
3. In some models, the preselector can be bypassed. If it is bypassed, no centering is attempted in that range and a message is generated

Preselector Adjust

Lets you manually adjust the preselector filter frequency to optimize its response to the signal of interest. Only available when "Presel Center" on page 2181 is available.

For general purpose signal analysis, using **Presel Center** is recommended. Centering the filter minimizes the impact of long-term preselector drift. **Preselector Adjust** can be used instead to manually optimize the preselector. One application of manual optimization would be to peak the preselector response, which both optimizes the signal-to-noise ratio and minimizes amplitude variations due to small (short-term) preselector drifting.

When **Presel Center** is performed, the offset applied to do the centering becomes the new value of **Preselector Adjust**.

Remote Command	`[:SENSe]:POWer[:RF]:PADJust <freq>` `[:SENSe]:POWer[:RF]:PADJust?`
Example	`:POW:PADJ 100KHz` `:POW:PADJ?`
Notes	The value on the control is displayed to 0.1 MHz resolution
Dependencies	– Does not appear in CXA-m – Does not appear in VXT Models M9410A/11A/15A/16A – Does not appear in M9410E/11E/15E/16E – Grayed-out if microwave preselector is off – Grayed-out if entirely in Band 0, that is, if Stop Freq is lower than about 3.6 GHz – Grayed-out if entirely above 50 GHz, that is, if Start Freq is higher than 50 GHz – Blank in models that do not include a preselector, such as Option 503. If the command is sent in these instruments, it is accepted without error, and the query always returns 0 – Grayed-out in the **Spectrogram** View
Preset	0 MHz
State Saved	The **Preselector Adjust** value set by "Presel Center" on page 2181, or by manually adjusting **Preselector Adjust** Not saved in instrument state, and does not survive a Preset or power cycle
Min/Max	–/+500 MHz
Backwards Compatibility SCPI	`[:SENSe]:POWer[:RF]:MW:PADJust` `[:SENSe]:POWer[:RF]:MMW:PADJust`

Backwards Compatibility Command

Notes	The command has no effect, and the query always returns `MWAVe`
Backwards Compatibility SCPI	`[:SENSe]:POWer[:RF]:PADJust:PRESelector MWAVe | MMWave | EXTernal` `[:SENSe]:POWer[:RF]:PADJust:PRESelector?`

Internal Preamp

Accesses a menu of controls for the internal preamps. Turning on the preamp gives a better noise figure, but a poorer inter-modulation distortion (TOI) to noise floor dynamic range. You can optimize this setting for your measurement.

The instrument takes the preamp gain into account as it sweeps. If you sweep outside of the range of the preamp, the instrument will also account for that. The displayed result always reflects the correct gain.

For some measurements, when the preamp is on and any part of the displayed frequency range is below the lowest frequency for which the preamp has specifications, a warning condition message appears in the status line. For example, for a preamp with a 9 kHz lowest specified frequency: "Preamp: Accy unspec'd below 9 kHz".

Selection	Example	Note
Off	:POW:GAIN OFF	
Low Band	:POW:GAIN ON :POW:GAIN:BAND LOW	Sets the internal preamp to use only the low band. The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Low Band selection in the dropdown
Full Range	:POW:GAIN ON :POW:GAIN:BAND FULL	Sets the internal preamp to use its full range. The low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model) is supplied by the low band preamp and the frequencies above low band are supplied by the high band preamp The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Full Range selection in the dropdown. If the high band option is not installed the Full Range selection does not appear

NOTE The maximum **Center Frequency** for **Low Band**, displayed in square brackets, can change based on the selected IFBW for measurements that support IFBW (for example, Waveform measurement across all Modes that support it). In certain models (such as N9042B & N9032B), IFBW values <= 40 MHz have a maximum **Low Band** frequency of 3.6 GHz, while 40 MHz < IFBW <= 1 GHz have a maximum of 3.3 GHz, and 1 GHz < IFBW <= 1.5 GHz have a maximum of 3.5 GHz. IFBW values > 1.5 GHz do not support a **Center Frequency** that can reach the **Low Band** maximum frequency. In these cases, **N/A** is displayed in the square brackets for **Low Band**.

Remote Command	`[:SENSe]:POWer[:RF]:GAIN:BAND LOW | FULL` `[:SENSe]:POWer[:RF]:GAIN:BAND?`
Example	`:POW:GAIN:BAND LOW` `:POW:GAIN:BAND?`
Dependencies	Not available on all hardware platforms. If the preamp is not present or is unlicensed, this control is not shown Does not appear in VXT Models M9410A/11A/15A/16A nor in M9410E/11E/15E/16E If `:POW:GAIN:BAND FULL` is sent when a low band preamp is available, the preamp band parameter is set to `LOW` instead of `FULL`, and an "Option not installed" message is generated

	Not available when the electronic/soft attenuator is enabled
Preset	`LOW`
State Saved	Saved in instrument state
Annotation	When the USB Preamp is not connected to USB, the Preamp annotation in the Meas Bar says “Off” if the preamp is off and displays the frequency range of the low band or full range preamp depending on the setting. For example, if the Preamp is set to Low Band and the Low Band is 3.6 GHz the annotation says “3.6 GHz”. If it is a 13.6 GHz preamp and it is set to Full Range the annotation says “13.6 GHz” When the USB Preamp is connected to USB, the Preamp annotation says “Preamp: USB” if the internal preamp is off or “Preamp: USB, Int” if the internal preamp is on (only for measurements that support the USB preamp)

Auto Function

Remote Command	`[:SENSe]:POWer[:RF]:GAIN[:STATe] OFF | ON | 0 | 1` `[:SENSe]:POWer[:RF]:GAIN[:STATe]?`
Example	`:POW:GAIN OFF` `:POW:GAIN?`
Preset	`OFF`

LNA

Lets you turn the Low Noise Amplifier (**LNA**) on or off.

LNA is an additional preamplifier that provides superior DANL and frequency range compared to "Internal Preamp" on page 2183. LNA provides lower system noise figure, especially at frequencies above 100 MHz, and can be operated up to the full range of 50 GHz instruments.

For best possible sensitivity, **LNA** can be turned on *together* with "Internal Preamp" on page 2183, although if you operate both preamps together, note that the TOI (distortion) specifications are impacted. The sensitivity improvement of this combination is substantial when operating in high band (frequencies above 3.6 GHz).

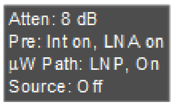
For more details about annotation, see "More Information" on page 1842

Remote Command	`[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe] OFF | ON | 0 | 1` `[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe]?`
Example	`:POW:GAIN:LNA ON`
Dependencies	Requires Option LNA, except for VXT models M9415A/16A Does not appear in VXT models M9420A/10A/11A M9410E/11E/15E/16E support LNA May not appear in some measurements **LNA** is not available when the electronic/soft attenuator is enabled

Preset	`OFF`
State Saved	Saved in State

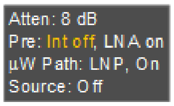
More Information

When **LNA** is installed, the preamp annotation changes to show the state of both **LNA** and **Internal Preamp**. Below is an example:



Atten: 8 dB
Pre: Int on, LNA on
µW Path: LNP, On
Source: Off

Note that when operating entirely in the low band (below about 3.6 GHz), if **LNA** is on, **Internal Preamp** is switched off (even if you have its switch set to `ON`). This is because the noise performance is actually degraded in low band if both preamps are on. In this case, the annotation reflects the actual state of the two preamps, but the **Internal Preamp** annotation displays in amber, to warn you that the actual state of **Internal Preamp** does not match its switch control display:



Atten: 8 dB
Pre: Int off, LNA on
µW Path: LNP, On
Source: Off

µW Path Control

Options for this control include **µW Preselector Bypass** (Option MPB), **Low Noise Path** (Option LNP) and **Full Bypass Enable** in the High Band path circuits.

When the µW Preselector is bypassed, flatness is improved, but will be subject to spurs from out of band interfering signals. When **Low Noise Path Enable** is selected, the instrument automatically bypasses certain circuitry in the high frequency bands that can contribute to noise, when it is appropriate based on other instrument settings.

For most applications, the preset state is **Standard Path**, which provides the best remote-control throughput, minimizes acoustic noise from switching and minimizes the risk of wear in the hardware switches, particularly in remote test scenarios where both low band and high band setups will follow in rapid succession. In this path, the bypass of the low band/high band switch and microwave preamp is never activated, which can cause some noise degradation but preserves the life of the bypass switch.

For applications that utilize the wideband IF paths, the preset state is **µW Preselector Bypas**s, if option MPB is present. This is because, when using a wideband IF such as the 140 MHz IF, the µW Preselector's bandwidth can be narrower than the available IF bandwidth, causing degraded amplitude flatness and phase linearity, so it is desirable to bypass the preselector in the default case.

You may choose **Low Noise Path Enable** for a lower noise floor, especially in the 21-26.5 GHz region, though without improving many measures of dynamic range, and without giving the best possible noise floor. The preamp, if purchased and used, gives better noise floor than does **Low Noise Path Enable**, but the preamp's compression threshold and third-order intercept are much poorer than that of **Low Noise Path Enable**.

A fourth choice is **Full Bypass Enable**, which combines **µW Preselector Bypass** and **Low Noise Path Enable**. Because this can bypass most of the circuitry between the input and the first mixer, care should be taken when using this setting to avoid damaging the mixer. **Full Bypass Enable** is only available if both options LNP and MPB are present, as well as option FBP.

Path	Example	Note
Standard Path	:POW:MW:PATH STD	Normal setting for most measurements. µW Preselector in circuit, Low Noise Path disabled
Low Noise Path Enable	:POW:MW:PATH LNP	See "Low Noise Path Enable" on page 1847
µW Preselector Bypass	:POW:MW:PATH MPB	See "µW Preselector Bypass" on page 1849
Full Bypass Enable	:POW:MW:PATH FULL	See "Full Bypass Enable" on page 1849

Remote Command	`[:SENSe]:POWer[:RF]:MW:PATH STD | LNPath | MPBypass | FULL` `[:SENSe]:POWer[:RF]:MW:PATH?`

Example	`:POW:MW:PATH LNP`
	Enables the Low Noise path
	`:POW:MW:PATH?`

Notes	When "Presel Center" on page 2181 is performed, the instrument momentarily switches to the Standard Path, regardless of the setting of **µW Path Control** The DC Block will always be switched in when the low noise path is switched in, to protect succeeding circuitry from DC. Note that this does not mean "when the low noise path is enabled" but when, based on the Low Noise Path rules, the path is actually switched in. This can happen when the selection is **Low Noise Path Enable** or **Full Bypass Enable.** In the case where the DC Block is switched in, the instrument is now AC-coupled. However, if you selected DC coupling, the UI would still behave as though it were DC-coupled, including all annunciation, warnings, status bits, and responses to SCPI queries. This is because, based on other settings, the instrument could switch out the low noise path at any time and hence go back to being DC-coupled Alignment switching ignores the settings in this menu, and restores them when finished
Dependencies	Does not appear in CXA-m, VXT Models M9410A/11A/15A/16A, nor in M9410E/11E/15E/16E, BBIQ and External Mixing – The **Low Noise Path Enable** selection does not appear unless Option LNP is present and licensed

- The **µW Preselector Bypass** selection does not appear unless Option MPB is present and licensed
- The **Full Bypass Enable** selection does not appear unless options LNP and MPB are both present as well as option FBP

In any of these cases, if the required options are not present and the SCPI command is sent, error -241, "Hardware missing; Option not installed" is generated

Low Noise Path Enable and **Full Bypass Enable** are grayed-out if the current measurement does not support them

Low Noise Path Enable and **Full Bypass Enable** are not supported in Avionics and MMR Modes (non-modulation measurements). In any of these cases (that is, the feature is not supported in either measurement or Mode), if the SCPI command is sent, the following error is generated: -221, “Setting Conflict; Feature not supported for this measurement”

Preset

Mode	Value
IQ Analyzer Pulse RTSA Avionics	MPB option present and licensed: `MPB` MPB option not present and licensed: `STD`
All other Modes	`STD`

–

Annotation	In the Meas Bar, if the Standard path is chosen: µW Path: Standard If Low Noise Path is enabled but the LNP switch is not thrown: µW Path: LNP,Off If the Low Noise Path is enabled and the LNP switch *is* thrown: µW Path: LNP,On If the preselector is bypassed: µW Path: Bypass If Full Bypass Enable is selected but the LNP switch is not thrown: µW Path: FByp,Off If Full Bypass Enable is selected and the LNP switch *is* thrown: µW Path: FByp,On

µW Path Control Auto

In VMA, WLAN, 5G NR, CQM Modes, an **Auto/Man** switch is added to **µW Path Control**:

This allows the function to automatically switch based on certain Auto Rules as shown below:

VMA Mode

Measurement	µW Path Control Auto behavior
Digital Demod	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
Monitor Spectrum	Always Presel Bypass
IQ Waveform	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
Custom OFDM	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
Channel Power	Always Presel Bypass
Occupied BW	Always Presel Bypass
CCDF	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
ACP	Always Presel Bypass
SEM	Always Presel Bypass
Spurious Emissions	Always Standard Path

WLAN Mode

Measurement	µW Path Control Auto behavior
Modulation Analysis	Always Presel Bypass
Spectral Flatness	Always Presel Bypasss
Power vs Time	Always Presel Bypass
Monitor Spectrum	Always Presel Bypass
IQ Waveform	Always Presel Bypass
Channel Power	Always Presel Bypass
Occupied BW	Always Presel Bypass
CCDF	Always Presel Bypass
SEM	For 11be 320M, when ‘Enabled Wideband IF for FFT’ is OFF or ‘Sweep Type

Measurement	µW Path Control Auto behavior
	Rule' is Best Dynamic Range, auto µW path is standard For other cases, auto µW path is presel bypass if presel bypass is enabled, auto µW path is standard if presel bypass is not enabled
Spurious Emissions	Always Standard Path

5G NR Mode

Measurement	µW Path Control Auto behavior
Modulation Analysis	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Full Bypass if conditions warrant(FBP Option is available and "Allow Full Bypass in Auto" is On), otherwise choose Preselector Bypass
Monitor Spectrum	Always Standard Path
IQ Waveform	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Full Bypass if conditions warrant(FBP Option is available and "Allow Full Bypass in Auto" is On), otherwise choose Preselector Bypass
Channel Power	Always Standard Path
Occupied BW	Always Standard Path
CCDF	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
ACP	Always Standard Path
SEM	Always Standard Path
Spurious Emissions	Always Standard Path
Transmit On|Off Power	Use Standard Path unless tuned frequency > 3.6 GHz and Info BW > 15 MHz, in which case choose Preselector Bypass

Channel Quality Mode

Measurement	µW Path Control Auto behavior
Group Delay	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Full Bypass if conditions warrant(FBP Option is available and "Allow Full Bypass in Auto" is On), otherwise choose Preselector Bypass
Monitor Spectrum	Always Standard Path
IQ Waveform	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
CCDF	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass

Remote Command

```
[:SENSe]:POWer[:RF]:MW:PATH:AUTO ON | OFF | 1 | 0
[:SENSe]:POWer[:RF]:MW:PATH:AUTO?
```

Example

```
:POW:MW:PATH:AUTO ON
```

	`:POW:MW:PATH:AUTO?`
Dependencies	Only appears in VMA, WLAN, 5G NR and CQM Modes
Couplings	See "µW Path Control Auto" on page 1844 above
Preset	`ON`
Range	`ON|OFF`

Low Noise Path Enable

Low Noise Path Enable provides a lower noise floor under some circumstances, particularly when operating in the 21–26.5 GHz region. With the Low Noise Path enabled, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and
- the stop frequency is above 3.6 GHz
- The internal preamp is not installed, or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Low Noise Path Enable** is selected in the user interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Low Noise Path Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Low Noise Path Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

For measurements that use IQ acquisition, the low noise path is used when **Center Frequency** is in High Band (> 3.6 GHz) and no preamp is in use. In other words, the rules above are modified to use only the center frequency to qualify which path to switch in. This is not the case for FFTs in the Swept SA measurement; they use the same rules as swept measurements.

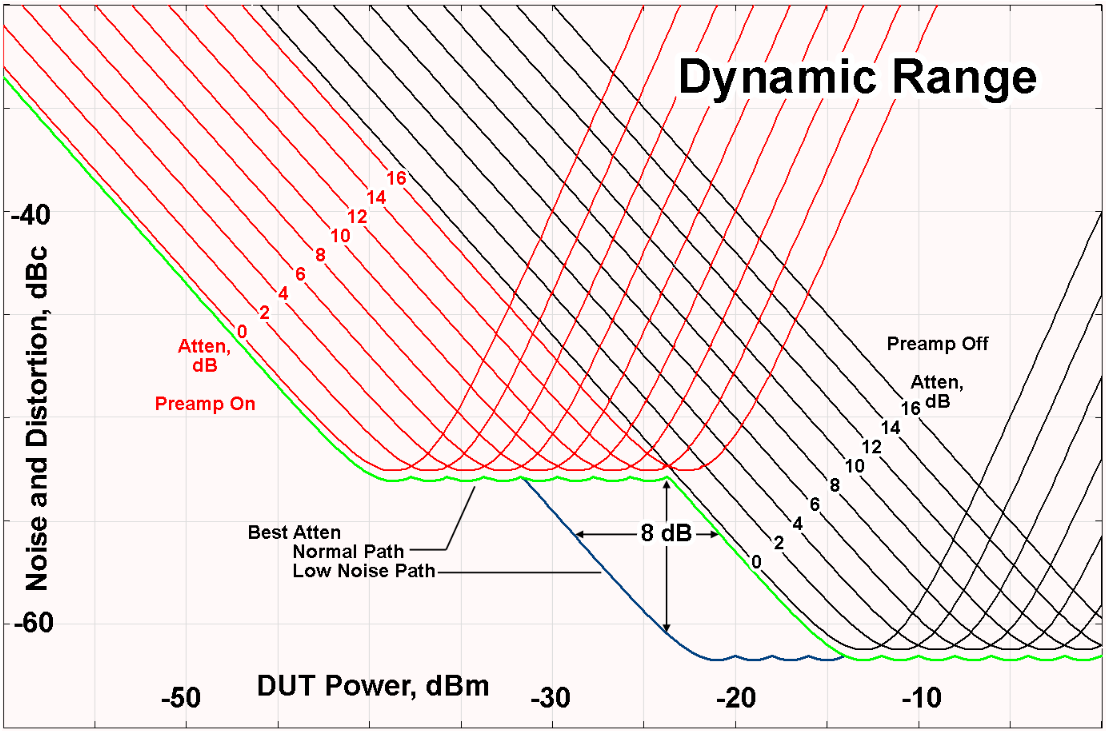
Note that the Low Noise Path, while giving improved DANL, has the disadvantage of decreased TOI performance and decreased gain compression performance relative to the standard path.

Note also that the bypass switch is a mechanical switch and has finite life, so if the **Low Noise Path Enable** is selected, it is possible to cause frequent cycling of this switch by frequently changing instrument settings such that the above conditions hold true only some of the time. A user making tests of this nature should consider opting for the **Standard Path**, which will never throw the bypass switch, at the expense of some degraded noise performance.

The low noise path is useful for situations where the signal level is so low that the instrument performance is dominated by noise even with 0 dB attenuation, but still high enough that the preamp option would have excessive third-order intermodulation or compression. The preamp, if purchased and used, gives better noise floor than does the “Low Noise Path.” However, its compression threshold and third-order intercept are much poorer than that of the non-preamp path.

There are some applications, typically for signals around −30 dBm, for which the third-order dynamic range of the standard path is good enough, but the noise floor is not low enough even with 0 dB input attenuation. When the third-order dynamic range of the preamp path is too little and the noise floor of the standard path is too high, the Low Noise Path can provide the best dynamic range

The graph below illustrates the concept. It shows, in red, the performance of an instrument at different attenuation settings, both with the preamp on and off, in a measurement that is affected by both instrument noise and instrument TOI. The green shows the best available dynamic range, offset by 0.5 dB for clarity. The blue shows how the best available dynamic range improves for moderate signal levels with the low noise path switched in. In this illustration, the preamp improves the noise floor by 15 dB while degrading the third-order intercept by 30 dB, and the low noise path reduces loss by 8 dB. The attenuator step size is 2 dB.



There are other times where selecting the low noise path improves performance, too. Compression-limited measurements such as finding the nulls in a pulsed-RF spectrum can profit from the low noise path in a way similar to the TOI-limited measurement illustrated. Accuracy can be improved when the low noise path allows the optimum attenuation to increase from a small amount like 0, 2 or 4 dB to a larger amount, giving better return loss at the instrument input. Harmonic measurements, such as second and third harmonic levels, are much improved using the low noise path because of the superiority of that path for harmonic (though not intermodulation) distortion performance.

µW Preselector Bypass

Toggles the preselector bypass switch for band 1 and higher. When the microwave presel is on, the signal path is preselected. When the microwave preselector is off, the signal path is not preselected. The preselected path is the normal path for the instrument.

The preselector is a tunable bandpass filter which prevents signals away from the frequency of interest from combining in the mixer to generate in-band spurious signals (images). The consequences of using a preselector filter are its limited bandwidth, the amplitude and phase ripple in its passband, and any amplitude and phase instability due to center frequency drift.

Option MPB or pre-selector bypass provides an unpreselected input mixer path for certain X-Series signal analyzers with frequency ranges above 3.6 GHz. This signal path allows a wider bandwidth and less amplitude variability, which is an advantage when doing modulation analysis and broadband signal analysis. The disadvantage is that, without the preselector, image signals will be displayed. Another disadvantage of bypassing the preselector is increased LO emission levels at the front panel input port.

Image responses are separated from the real signal by twice the 1st IF. For IF Paths of 10 MHz and 25 MHz, the 1st IF is 322.5 MHz, so the image response and the real signal will be separated by 645 MHz. The 1st IF will be different for other IF Path settings. When viewing a real signal and its corresponding image response in internal mixing, the image response will be to the left of the real signal.

Also, the image response and the real signal typically have the same amplitude and exhibit the same shape factor.

However, if Option FS1 (Fast Sweep Capability) is enabled, the image response in the Swept SA measurement appears lower in amplitude and has a much wider shape factor compared to the real signal.

Full Bypass Enable

With **Full Bypass Enable** selected, the microwave preselector is bypassed. In addition, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and

- the stop frequency is above 3.6 GHz.
- the internal preamp is not installed or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Full Bypass Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

CAUTION When **Full Bypass Enable** is selected, and "Y Scale" on page 2153 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq >3.6 GHz and the Preamp is either not licensed, set to Low Band, or Off). This puts the first converter at considerable risk to be damaged by high AC power. Consequently, whenever **Full Bypass Enable** is selected, a warning message appears in the status bar:

"Full Bypass Enabled, maximum safe input power reduced"

Microwave Preselector Bypass Backwards Compatibility

Example	Bypass the microwave preselector: `:POW:MW:PRES OFF`
Notes	Included for Microwave Preselector Bypass backwards compatibility The `ON` parameter sets the `STD` path (`:POW:MW:PATH STD`) The `OFF` parameter sets path `MPB` (`:POW:MW:PATH MPB`)
Preset	`ON`
Backwards Compatibility SCPI	`[:SENSe]:POWer[:RF]:MW:PRESelector[:STATe] ON | OFF | 0 | 1` `[:SENSe]:POWer[:RF]:MW:PRESelector[:STATe]?`

Frequency Extender Preselection Bypass

Only applies to the high frequency path of the Frequency Extender, and only if the Frequency Extender allows it. For example, the V3050A high frequency path is 50 – 110 GHz and *does* allow control of the preselector bypass.

When the Frequency Extender's preselection is bypassed, flatness is improved, but will be subject to spurs from out-of-band interfering signals. For bandwidths greater than 2.5 [GHz], it is recommended that the signal bypass the Frequency Extender Preselector since the max bandwidth of the Preselector can be as narrow as 2.5 [GHz].

For most applications, the preset state is `OFF`, which gives the best remote-control throughput, minimizes acoustic noise from switching, minimizes out of band spurs, and minimizes the risk of wear in the hardware switches.

Preselector and Bandwidth Conflict

When the Frequency Extender Preselector is applied and the signal bandwidth is greater than 2.5 [GHz], then a settings alert message will show to warn the user that the signal may be distorted due to the limitation of the Frequency Extender Preselector bandwidth.

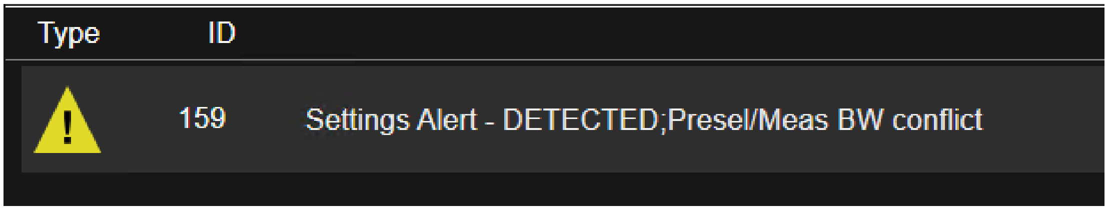
An example of the settings alert message is shown below.

Settings Alert message in the Status Bar at the bottom of the display.

1 Settings Alert;Presel/Meas BW conflict

Settings Alert message in the error queue

.



Type	ID	
!	159	Settings Alert - DETECTED;Presel/Meas BW conflict

Software Preselection

Provided in some instruments, either to compensate for issues with provided hardware preselection or to provide the preselection function when there is no hardware preselector.

N9041B

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

In N9041B, **Software Preselection** only applies for frequencies above 50 GHz, therefore it is only used for RF Input 2. Even if turned on, it is not used for other inputs, and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note “(>~50 GHz)”.

Note that in N9041B, in Swept SA measurement, **Software Preselection** works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT sweep type.

N9042B+V3050A

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

For N9042B+V3050A, Software Preselection only applies for frequencies above 50 GHz, therefore it is only used for External RF. Even if it is turned on, it will not be used for other inputs and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note “(>~50 GHz)”.

Note that for N9042B+V3050A, in the Swept SA measurement, Software Preselection works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT Sweep Type.

VXT models M9410A/11A/15A/16A

Software Preselection is used to provide the preselection function, as there is no hardware preselector in these models. Two background traces are taken and compared point by point, and the point with the lowest amplitude from the two traces is used. This provides a method to reduce spurs that are internally generated within the VXT, but you should note the following when using Software Preselection:

- There is some speed cost due to the need to take multiple captures
- Taking the point with the lowest amplitude in each trace will make the average noise level lower at all points that do not have a spur. This can reduce the accuracy of the measurement of noise and noise-like signals

Because of the difficulty in identifying spurs manually, you are recommended to leave Software Preselection ON at all times in VXT models M9410A/11A. If you turn it off in order to speed up your measurement or improve noise accuracy, be aware of unwanted onscreen spurs.

Remote Command	`[:SENSe]:POWer[:RF]:SWPResel:STATe 0 | 1 | ON | OFF` `[:SENSe]:POWer[:RF]:SWPresel:STAT?`
Example	`:POW:SWPR:STAT 1` `:POW:SWPR:STAT?`
Dependencies	Only appears in N9041B, N9042B+V2050A, VXT models M9410A/11A and M9410E/11E. Does not

	appear in all measurements
Couplings	Affects **Sweep Time** **Auto Tune** supports **Software Preselection**, so **Auto Tune** should be performed after setting the **Software Preselection** state
Preset	N9041B: `OFF` N9042B+V3050A: `ON` M9410A/11A: `ON`
State Saved	Saved in instrument state

SW Preselection Type

Specifies the algorithm used for software preselection.

Two hidden sweeps occur in succession. The second sweep is offset in LO frequency by 2 * IF / N. For each point in each trace, the smaller amplitude from the two traces is taken and placed in that point in the selected trace. The Peak detector is auto-selected to improve the image suppression effectiveness. Responses of each trace that lie on top of one another will remain and are valid signals. Other signals are images, which are suppressed. The action of taking the smaller of the two traces will make the average noise level lower in all points that do not have an image, thus reducing the accuracy of the measurement of noise and noise-like signals.

– `NORMal` - mathematically removes all image and multiple responses of signals present at the input

– `ADVanced` - any trace processing (such as “max hold” or trace averaging) is performed on the points of both candidate traces before the “select minimum” operation occurs. This form of processing works better for non-stationary signals, such as pulsed-RF signals

Remote Command	`[:SENSe]:POWer[:RF]:SWPResel NORMal | ADVanced` `[:SENSe]:POWer[:RF]:SWPResel?`
Example	`:POW:SWPR NORM` `:POW:SWPR?`
Dependencies	Only appears in N9041B and N9042B+V3050A. Only appears in measurements that use the Swept method Grayed-out when "Software Preselection" on page 2195 is `OFF`. The grayout message is “Unavailable unless SW Presel enabled”
Preset	N9041B: `ADVanced` N9042B+V3050A: `NORMal`

State Saved	Saved in instrument state

SW Preselection BW

Specifies the effective bandwidth to be used for Software Preselection.

The options are:

- `NORMal` – when making Swept measurements, a software preselection algorithm is used which takes up to 4 background acquisitions, then post-processes the result. This algorithm can remove images from signals with an occupied bandwidth up to around 3 GHz. (Default/Preset setting). When making FFT measurements, this algorithm is not used, instead the same algorithm is used as for `NARRow` (below)
- `NARRow`– a software preselection algorithm is used which takes two background acquisitions, then post-processes the result to detect and remove images from wideband signals with occupied bandwidths up to 2 GHz. This increases the risk of images failing to be rejected, but improves the measurement speed

Remote Command	`[:SENSe]:POWer[:RF]:SWPResel:BW NORMal | NARRow` `[:SENSe]:POWer[:RF]:SWPResel:BW?`
Example	`:POW:SWPR:BW NARR`
Dependencies	Only appears in N9041B and N9042B+V3050A. Only appears in measurements that use the Swept method Grayed-out when "Software Preselection" on page 2195 is `OFF`. The grayout message is “Unavailable unless SW Presel enabled” For N9042B+V3050A, the parameter is SCPI-only, and always set to `NARRow` when **Software Preselection** is enabled
Preset	N9041B: `NORMal` N9042B+V3050A: `NARRow`
State Saved	Saved in instrument state

High Freq Prefilter

Lets you set the state of Prefilter for center frequencies above 1310 MHz.

In VXT Models M9410A/11A and M9410E/11E in bypass frequency range (1310MHz~5GHz), the Receiver RF path has a bank of filters that come after the RF Attenuator in the signal path. Since this bank of filters precedes the mixer they are known as the “Prefilter” bank. Their purpose is to eliminate unwanted in-band mixing products by filtering out all but the desired frequencies before the signals get to the mixer. There are 13 prefilter bands to cover the frequencies between 9 kHz and 6000 MHz. The Prefilter provides the necessary rejection of the unwanted signal.

Remote Command	`[:SENSe]:<measurement>:PFILter[:STATe] ON | OFF | 1 | 0` `[:SENSe]:<measurement>:PFILter[:STATe]?`

Example	Enable High Freq Prefilter for the Complex Spectrum Measurement in `BASIC` Mode:
	`:SPEC:PFIL ON`
	Enable High Freq Prefilter for the IQ Waveform Measurement, in multiple Modes:
	`:WAV:PFIL ON`
	Enable High Freq Prefilter for the Swept SA Measurement in `SA` Mode:
	`:SAN:PFIL ON`

Dependencies	Only appears in VXT models M9410A/11A with center frequency above 1310 MHz, and M9410E/11E in frequency range 1310MHz~5GHz
Preset	See "Prefilter Presets" on page 1855 below
State Saved	Saved in instrument state

3.9.5 BW

Not supported in this measurement.

3.9.6 Display

Opens the **Display** menu, which lets you configure display items for the current Mode, View, or Window.

3.9.6.1 Meas Display

Contains controls for setting up the display for the current Measurement, View, or Window.

Selected Component Carrier

Selects which component carrier is the source Component Carrier when Copy CC To operation is performed, it also specifies which component carrier's parameter list will be shown when Parameter List view is selected.

Remote Command	`[:SENSe]:CEVM:SELected CC0 | … | CC4` `[:SENSe]:CEVM:SELected?`
Example	`:CEVM:SEL CC0` `:CEVM:SEL?`
Dependencies	Coupled to Number of Component Carriers. For example, Component Carrier list will include CC0~CC1 if the number Component Carriers is 2
Preset	`CC0`
State Saved	Saved in instrument state
Range	`CC0|…|CC4`

Copy CC To

Lets you copy the selected Component Carrier to another Component Carrier, or All Component carriers.

NOTE **This parameter copies LTE-Advanced demodulation parameters from one component carrier to other component carrier.**

Remote	`[:SENSe]:CEVM:COPY CC0 | CC1 | CC2 | CC3 | CC4 | ALL`

Command	
Example	`:CEVM:COPY ALL`
Couplings	Copy the parameters settings of selected Component Carrier to the target Component Carrier
Preset	`ALL`
State Saved	Saved in instrument state
Range	`CC0|CC1|CC2|CC3|CC4|ALL`

Index

Sets the subopcode for the selected SCPI command. The range is defined variously according to the range in curly braces in the commands.

State Saved	Saved in instrument state

Argument

Sets the slot position.

State Saved	Saved in instrument state

Value

Allows you to refer to and modify the value on the selected row.

The range is defined variously according to the selected commands.

State Saved	Saved in instrument state

Immediate Action

This means the selected SCPI command does not have any parameters and will take effect immediately.

Show All Items

When enabled, all available measurements and items are displayed.

The measurement name and items that apply to unavailable measurements are grayed out.

For display only.

3.9.6.2 View

Contains controls for selecting the current **View**, and for editing User Views.

View

See "Views" on page 1811.

User View

Lets you choose a View from the saved User Views for the current measurement. This panel only appears if a User View exists for the current measurement.

Remote Command	`:DISPlay:VIEW:ADVanced:SELect <alphanumeric>` `:DISPlay:VIEW:ADVanced:SELect?`
Example	Select Baseband as the current View `:DISP:VIEW:ADV:SEL “Baseband”`

Notes	You must be in the measurement whose View you are trying to set to send the command. You can only set Views for the current measurement using this command
	For predefined views, the parameter is derived from the view name that is shown in the View list in the user interface. For example, if you are trying to select the Trace Zoom view in the Swept SA measurement, you send:
	`:DISP:VIEW:ADV:SEL "Trace Zoom"`
	because “Trace Zoom” is the name of the View as seen in the Mode/Meas dialog or in the Display, View menu
	You *cannot* use the legacy View parameter (which in this case would be `TZOom`) with `:DISP:VIEW:ADV:SEL`
	`<alphanumeric>` is case insensitive; you can specify mixed case, however the name will be evaluated on a single case. Thus, both of the following forms work:
	`:DISP:VIEW:ADV:SEL "Trace Zoom"`
	`:DISP:VIEW:ADV:SEL "TRACE ZOOM"`
	If the specified view is not a valid View, the query returns the error message “-224, Illegal parameter value; View with the name <alphanumeric> does not exist”
	If the display is disabled (via `:DISP:ENAB OFF`) then the error message “-221, Settings conflict; View SCPI cannot be used while Display is disabled” is generated

Backwards Compatibility SCPI	The legacy node `:DISPlay:VIEW[:SELect]` is retained for backwards compatibility, but it only supports predefined views

Restore Layout to Default

Restores the Layout to the default for Basic.

Modified Views are very temporary; if you exit the current measurement they are discarded, and they are not saved in State. To retain this View for later use, and to be able to return easily to your original Basic View, you can save your edited View as a “User View”.

Save Layout as New View

Saves your new View as a User View. An alpha keyboard appears, which lets you name your new View; the default is the old View name plus a number.

Remote Command	`:DISPlay:VIEW:ADVanced:NAME <alphanumeric>`
Example	`:DISP:VIEW:ADV:NAME “Baseband”` Creates a new View named `Baseband` from the current View, and selects it as the current View
Notes	`<alphanumeric>` is case insensitive; you can specify mixed case, however the name will be evaluated on a single case If `<alphanumeric>` name already exists as a View, the error message “-224, Illegal parameter value; View <alphanumeric> already exists” is generated If the display is disabled (via `:DISP:ENAB OFF`) then the error message “-221, Settings conflict; User View SCPI cannot be used while Display is disabled” is generated

Re-Save User View

You can re-edit a User View; if you make changes, then an asterisk will appear next to the User View’s name. You can then tap **Re-Save User View** to save it back to its existing name, or **Save Layout as New View** to add another, new User View.

This is a front panel function only, there is no remote command available to perform this function. To do this remotely, you must first perform **Save Layout as New View**, then delete the old User View and rename the new one with the name of the View you just deleted.

Rename User View

You can rename the current View by giving it a new unique name. Only User Views can be renamed, if the current View is a Predefined View, an error occurs.

Remote Command	`:DISPlay:VIEW:ADVanced:REName <alphanumeric>`

Example	`:DISP:VIEW:ADV:REN “Baseband”`
Notes	`<alphanumeric>` is case insensitive; you can specify mixed case, however the name will be evaluated on a single case If the `<alphanumeric>` specifying the new name is already present in the list of View names, the error message “-224, Illegal parameter value; View <alphanumeric> already exists” is generated If the current View is a Predefined View, the error message “-224, Illegal parameter value; Cannot rename a Predefined View” is generated If the display is disabled (via `:DISP:ENAB OFF`) then the error message “-221, Settings conflict; View SCPI cannot be used while Display is disabled” is generated

Delete User View

You can delete the current View if it is a User View. The default view becomes the current view for the Measurement.

Remote Command	`:DISPlay:VIEW:ADVanced:DELete`
Example	`:DISP:VIEW:ADV:DEL`
Notes	`<alphanumeric>` is case insensitive; you can specify mixed case, however the name will be evaluated on a single case If the `<alphanumeric>` is not present in the list of View names, the error message “-224, Illegal parameter value; View <alphanumeric> does not exist” is generated If the current View is a Predefined View, the error message “-224, Illegal parameter value; Cannot delete a Predefined View” is generated If the display is disabled (via `:DISP:ENAB OFF`) then the error message “-221, Settings conflict; View SCPI cannot be used while Display is disabled” is generated

Delete All User Views

Deletes all previously saved User Views. The default view becomes the current view for the Measurement if a User View was the current view when this command was executed.

Remote Command	`:DISPlay:VIEW:ADVanced:DELete:ALL`
Example	`:DISP:VIEW:ADV:DEL:ALL`
Notes	Disabled if there are no User Views

View Editor Remote Commands

The following remote commands help you manage Views and User Views. Note that the SCPI node for User Views handles both Predefined and User Views. The legacy

nodes, `:DISPlay:VIEW[:SELect]` and `:DISPlay:VIEW:NSEL`, are retained for backwards compatibility, but they only support predefined views.

View Listing Query

Returns a string containing a comma-separated list of names for *all* the Views, including User Views, available for the current Measurement.

Remote Command	`:DISPlay:VIEW:ADVanced:CATalog?`
Example	`:DISP:VIEW:ADV:CAT?`
Notes	Returns a quoted string of the available Views for the current measurement, separated by commas. The list includes names for *all* the Views, including User Views, available for the current Measurement Example: `"Normal,Trace Zoom,Spectrogram,Baseband,myView1,yourView1"` No distinction is made between Predefined and User Views If you switch measurements with the display disabled (via `:DISP:ENAB OFF`), then query the list of available Views, the result is undefined

User View Listing Query

Returns a string containing a comma-separated list of names for *only* the User Views available for the current Measurement.

Remote Command	`:DISPlay:VIEW:ADVanced:USER:CATalog?`
Example	`:DISP:VIEW:ADV:USER:CAT?`
Notes	Returns a quoted string of the available User Views for the current measurement, separated by commas. Example: `"Baseband,myView1,yourView1"` If you switch measurements with the display disabled (see "Display Enable (Remote Command Only)" on page 2211), then query the list of available Views, the result is undefined

3.9.6.3 Annotation

Contains controls for setting up the annotation for the current Mode or Measurement.

Graticule

Turns the display graticule On or Off for all windows with graticules in all measurements in the current Mode. Also turns the graticule Y-Axis annotation on and off.

Remote Command	`:DISPlay:GRATicule[:STATe] OFF | ON | 0 | 1` `:DISPlay:GRATicule[:STATe]?`
Example	`:DISP:GRAT OFF`
Notes	The graticule is the set of horizontal and vertical lines that make up the grid/divisions for the X-Axis and Y-Axis
Preset	`ON`
State Saved	Saved in instrument state

Backwards Compatibility SCPI	`:DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe] OFF | ON | 0 | 1`
	`:DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe]?`
	This command is accepted for backwards compatibility with older instruments, but the `WINDow`, `TRACe` and `GRID` parameters are ignored

Screen Annotation

Controls the display of the annunciation and annotation around the graticule, including any annotation on lines (such as the display line, the threshold line, etc.) and the Y-Axis annotation, for all windows with screen annotation in all measurements in the current Mode.

This does *not* include marker annotation (or the N dB result). When `OFF`, the graticule expands to fill the entire graticule area, leaving only the 1.5% gap above the graticule, as described in the **Trace** section.

Remote Command	`:DISPlay:ANNotation:SCReen[:STATe] OFF | ON | 0 | 1` `:DISPlay:ANNotation:SCReen[:STATe]?`
Example	`:DISP:ANN:SCR OFF`
Dependencies	Grayed-out and forced to `OFF` when **System Display Settings**, **Annotation** is `OFF`
Preset	`ON` This remains `OFF` through a Preset when **System Display Settings**, **Annotation** is set to `OFF`
State Saved	Saved in instrument state

Trace Annotation

Turns on and off the labels on the traces, showing their detector (or their Math Mode) as described in the **Trace** section, for all windows in all measurements in the current Mode for which Trace Annotation on/off is supported.

If Trace Math is being performed on a trace, then the Trace Math annotation replaces the detector annotation.

For measurements that support limit lines, this key also turns on and off the labels on the Limit Lines. The label is the Limit number annotation and Limit Comment displayed on the graph. If the length of the comment is greater than 20 characters, the first 8 characters and the last 8 characters are displayed, joined with ….

Remote Command	`:DISPlay:ANNotation:TRACe[:STATe] ON | OFF | 1 | 0` `:DISPlay:ANNotation:TRACe[:STATe]?`
Example	`:DISP:ANN:TRAC OFF`
Preset	`OFF`
State Saved	Saved in instrument state

Control Annotation

Turns on and off the display of values on the Active Function controls for all measurements in the current Mode. This is a security feature.

Remote Command	`:DISPlay:ACTivefunc[:STATe] ON | OFF | 1 | 0` `:DISPlay:ACTivefunc[:STATe]?`
Example	`:DISP:ACT OFF`
Dependencies	Grayed out and forced to `OFF` when **System Display Settings**, **Annotation** is `OFF`
Preset	`ON` This remains `OFF` through a Preset when **System Display Settings**, **Annotation** is set to `OFF`
State Saved	Saved in instrument state

Meas Bar

Turns the Measurement Bar at the top of the screen on and off for all measurements in the current Mode. When `OFF`, the graticule area expands to fill the area formerly occupied by the Measurement Bar.

Remote Command	`:DISPlay:ANNotation:MBAR[:STATe] OFF | ON | 0 | 1` `:DISPlay:ANNotation:MBAR[:STATe]?`

Example	`:DISP:ANN:MBAR OFF`
Dependencies	Grayed out and forced to `OFF` when **System Display Settings**, **Annotation** is `OFF`
Preset	`ON` This remains `OFF` through a Preset when **System Display Settings**, **Annotation** is set to `OFF`
State Saved	Saved in instrument state

Display Enable (Remote Command Only)

Turns the display on/off, including the display drive circuitry. The backlight stays lit to confirm that the instrument is on. The display enable setting is mode global. Theare three reasons for turning the display off:

1. To increase speed as much as possible by freeing the instrument from having to update the display
2. To reduce emissions from the display, drive circuitry
3. For security purposes

If you have turned off the display:

- and you are in local operation, the display can be turned back on by pressing any key or by sending `:SYSTem:DEFaults MISC` or `:DISPlay:ENABle ON` (neither `*RST` nor :SYSTem:PRESet enable the display)
- and you are in remote operation, the display can be turned back on by pressing the **Local** or **Esc** keys, or by sending `:SYSTem:DEFaults MISC` or `:DISPlay:ENABle ON` (neither `*RST` nor `:SYSTem:PRESet` enable the display)
- and you are using either the `:SYSTem:KLOCk` command or GPIB local lockout, then *no* front-panel key press will turn the display back on. You must turn it back on remotely.

If the display is `OFF`, many SCPI commands related to User Views and Multiscreen functionality do not work, and return the error messages “-221, Settings conflict; Screen SCPI cannot be used when Display is disabled” or “221, Settings conflict; View SCPI cannot be used while Display is disabled”. These commands include:

Name	Command
Select User View	`:DISPlay:VIEW:ADVanced:SELect`
Rename User View	`:DISPlay:VIEW:ADVanced:REName`
Delete User View	`:DISPlay:VIEW:ADVanced:DELete`
Create User View	`:DISPlay:VIEW:ADVanced:NAME`
Select Screen	`:INSTrument:SCReen:SELect`
Delete Screen	`:INSTrument:SCReen:DELete`

Name	Command
Delete All But This Screen	`:INSTrument:SCReen:DELete:ALL`
Add Screen	`:INSTrument:SCReen:CREate`
Rename Screen	`:INSTrument:SCReen:REName`
Sequencer On/Off	`:SYSTem:SEQuencer`

Remote Command	`:DISPlay:ENABle OFF | ON | 0 | 1` `:DISPlay:ENABle?`
Example	`:DISP:ENAB OFF`
Couplings	`:DISP:ENAB OFF` turns Backlight `OFF` and `:DISP:ENAB ON` turns Backlight `ON`, but changing Backlight settings does *not* change the state of `:DISP:ENAB`
Preset	`ON` Set by `:SYST:DEF MISC`, but not affected by `*RST` or `:SYSTem:PRESet`
State Saved	Not saved in instrument state
Backwards Compatibility Notes	`:SYST:PRES` no longer turns on `:DISPlay:ENABle` as it did in legacy analyzers

3.9.7 Frequency

Opens the **Frequency** menu, which contains controls that let you control the frequency and channel parameters of the instrument.

Some features in the **Frequency** menu are the same for all measurements in the current Mode – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by **Meas Preset**. For example, **Center Frequency** is the same for all measurements - it does not change as you change measurements.

3.9.7.1 Settings

Contains controls that pertain to the X axis parameters of the measurement. These parameters control how data on the vertical (X) axis is displayed and control instrument settings that affect the horizontal axis.

Carrier Reference Frequency

Sets the reference frequency for all carriers. The center frequencies of carriers are defined as offset frequency from this value.

Center Frequency is equivalent to **Carrier Reference Frequency** if the following conditions are satisfied at the same time:

- Number of Component Carrier is 1
- **Center Frequency** Offset is 0 Hz
- **Center Frequency** mode is Auto

When the center frequency changes in such conditions, the Center Frequency mode remains Auto, and **Carrier Reference Frequency** changes to the same value. The major purpose of this coupling is for backwards compatibility with legacy LTE/LTE TDD, in which `:SENSe:FREQuency:CENTer` is used to set up the Frequency of the measurement.

Remote Command	`[:SENSe]:CCARrier:REFerence <freq>` `[:SENSe]:CCARrier:REFerence?`
Example	`:CCAR:REF 2GHz` `:CCAR:REF?`
Preset	1GHz
State Saved	Saved in instrument state
Min/Max	Depends on instrument minimum/maximum center frequency. Same as Center Frequency

3.9.8 Marker

Not supported in this measurement.

3.9.9 Meas Setup

The Meas Setup menu panel contains functions for setting up the measurement parameters and also contains functions for setting up parameters global to all measurements in the mode.

3.9.9.1 Settings

This tab enables you to set measurement parameters.

Average/Hold Number

Sets the number of data acquisitions that are averaged for every Component Carrier. The average number is global for all Component Carriers.

Remote Command	`[:SENSe]:CEVM:AVERage:COUNt <integer>`

	`[:SENSe]:CEVM:AVERage:COUNt?`
Example	`:CEVM:AVER:COUN 3` `:CEVM:AVER:COUN?`
Preset	10
State Saved	Yes
Min/Max	1/10000

Averaging On/Off

Turns averaging on or off.

Remote Command	`[:SENSe]:CEVM:AVERage[:STATe] OFF | ON | 0 | 1` `[:SENSe]:CEVM:AVERage[:STATe]?`
Example	`:EVM:AVER OFF` `:EVM:AVER?`
Preset	`OFF`
State Saved	Yes
Range	`Off|On`

Meas Method

Selects the desired method for the CEVM measurement.

NOTE **This feature is available only when 85 MHz or wider analysis bandwidth option is installed.**

- `NORMal` – Measurement speed is not optimized
- `FAST` – Measurement speed is optimized and faster than NORMal. However, measurement settings are limited even in the valid combination of the parameter values. The limitations for Fast mode, See "Fast Mode Limitation" on page 1868

Remote Command	`[:SENSe]:CEVM:METHod NORMal | FAST` `[:SENSe]:CEVM:METHod?`
Example	`:CEVM:METH FAST` `:CEVM:METH?`
Dependencies	Available only when the Wideband DIF (85 MHz or wider) hardware is installed in the instrument Grayed-out in EXM, VXT, M9410E/11E/15E/16E, M9393A and M9391A. In these models, the Meas Method is restricted to NORMal only, FAST is not selectable

Preset	`NORMal`
State Saved	Yes
Range	`Normal|Fast`

Fast Mode Limitation

- For downlink signals, `FAST` mode can be used only for E-UTRA test models, the setup files can be recalled by using Recall, Data, EVM Setup
- For uplink signals, `FAST` mode only supports channel configuration for PUSCH, and other channels such as PUCCH are not supported. Multiple users are not supported in `FAST` mode. The auto function of the parameters must be `OFF`. See the table below for parameter values; all others must be preset value
- When Meas Method is `FAST`, EVM Minimization by IQ Imbalance is not valid and is always `OFF` to return the measurement results

Name	SCPI	Fast Mode
RB Auto Detection	`[:SENSe]:CEVM:CCARrier0|…|4:PROFile:AUTO[:DETect]`	`OFF`
Analysis Boundary	`[:SENSe]:CEVM:CCARrier0|…|4:TIME:ASBoundary`	`FRAMe`

Meas Interval/Offset	`[:SENSe]:CEVM:CCARrier0|…|4:TIME:INTerval:SLOT`
	`[:SENSe]:CEVM:CCARrier0|…|4:TIME:INTerval:SYMBol`
	`[:SENSe]:CEVM:CCARrier0|…|4:TIME:OFFSet:SLOT`
	`[:SENSe]:CEVM:CCARrier0|…|4:TIME:OFFSet:SYMBol`
		Same as `NORMal` Mode

Sync Type	`[:SENSe]:CEVM:CCARrier0|…|4:ULINk:SYNC:TYPE`	`RS`
Cyclic Prefix Length	`[:SENSe]:CEVM:CCARrier0|…|4:ULINk:SYNC:CPLength`	`NORMal`
Add User	`[:SENSe]:CEVM:CCARrier0|…|4:ULINk:PROFile:ADD:USER`	Only `USER[1]` is valid
Include PUSCH	`[:SENSe]:CEVM:CCARrier0|…|4:ULINk:PROFile:USER:PUSCh`	`INCLude`
PUSCH Active	`[:SENSe]:CEVM:CCARrier0|…|4:ULINk:PROFile:USER:PUSCh:ACTive`	`ON`
Include PUSCH DMRS	`[:SENSe]:CEVM:CCARrier0|…|4:ULINk:PROFile:USER:PUSCh:DMRS`	`INCLude`
PUSCH Auto Calc Params	`[:SENSe]:CEVM:CCARrier0	…	4:ULINk:PROFile:USER:PUSCh:DMRS:PARams`	Same as `NORMal` Mode
PUSCH n DMRS (1)	`[:SENSe]:CEVM:CCARrier0	…	4:ULINk:PROFile:USER:PUSCh:DMRS:ONE`	Same as `NORMal` Mode
PUSCH n DMRS (2)	`[:SENSe]:CEVM:CCARrier0	…	4:ULINk:PROFile:USER:PUSCh:DMRS:TWO`	Same as `NORMal` Mode

Name	SCPI	Fast Mode
Delta SS	`[:SENSe]:CEVM:CCARrier0|…|4:ULINk:PROFile:USER:PUSCh:DSS`	Same as `NORMal` Mode
Add PUSCH Slot	`[:SENSe]:CEVM:CCARrier0 | … | 4:ULINk:PROFile:USER:PUSCh:ADD:SLOT`	Same as `NORMal` Mode
User PUSCH RB Start	`[:SENSe]:CEVM:CCARrier0 | … | 4:ULINk:PROFile:USER:PUSCh:RB:STARt`	Same as `NORMal` Mode
PUSCH Start RB Couple	`[:SENSe]:CEVM:CCARrier0 | … | 4:ULINk:PROFile:USER:PUSCh:RB:STARt:COUPle`	Same as `NORMal` Mode
PUSCH Common RB End	`[:SENSe]:CEVM:CCARrier0|…|4:ULINk:PROFile:USER:PUSCh:RB:END`	Same as `NORMal` Mode
PUSCH End RB Couple	`[:SENSe]:CEVM:CCARrier0 | … | 4:ULINk:PROFile:USER:PUSCh:RB:END:COUPle`	Same as `NORMal` Mode
PUSCH Sync Slot	`[:SENSe]:CEVM:CCARrier0|…|4:ULINk:PROFile:USER:PUSCh:SSLot`	Same as `NORMal` Mode
PUSCH Sync Slot Auto	`[:SENSe]:CEVM:CCARrier0 | … | 4:ULINk:PROFile:USER:PUSCh:SSLot:AUTO`	`OFF`
PUSCH Common Mod Type	`[:SENSe]:CEVM:CCARrier0 | … | 4:ULINk:PROFile:USER1 | 50:PUSCh:MODulation:TYPE`	Same as `NORMal` Mode
Frequency Hopping	`[:SENSe]:CEVM:CCARrier0 | … | 4:ULINk:PROFile:USER:PUSCh:FHOPping`	`OFF`
Group Hopping	`[:SENSe]:CEVM:CCARrier0|…|4:ULINk:PROFile:USER:HOPPing:GROup`	Same as `NORMal` Mode
Seq Hopping	`[:SENSe]:CEVM:CCARrier0 | … | 4:ULINk:PROFile:USER1 | 50:HOPPing:SEQuence`	Same as `NORMal` Mode
Equalizer Training	`[:SENSe]:CEVM:CCARrier0|…|4:EQUalizer:TRAining`	`RSData`

Spur Avoidance

Because VXT models M9410A/11A/15A and M9410E/11E/15E/16E are direct-conversion (zero-IF) receivers, feedthrough leakage from the local oscillator appears as a spurious signal (spur) at the center frequency. **Spur Avoidance** eliminates this spur, at the expense of some measurement speed.

When **Spur Avoidance** is enabled (`ON`: the default), the analyzer uses a software algorithm to remove this spur from the displayed measurement data, but the algorithm only operates under certain conditions. Specifically, it only operates when the BW<= maxBW/2.5.

You can disable this function to speed up your measurement. When **Spur Avoidance** is `OFF`, a warning message appears in the status bar as “Settings Alert; Spur Avoidance Off”. This is to alert you that measurement accuracy might be impacted because you have defeated the spur avoidance algorithm.

Remote Command	`[:SENSe]:CEVM:SAVoid[:STATe] ON | OFF | 0 | 1` `[:SENSe]:CEVM:SAVoid[:STATe]?`
Example	`:CEVM:SAVoid ON` `:CEVM:SAVoid?`
Dependencies	Only appears in VXT models M9410A/11A/15A, M9410E/11E/15E/16E
Preset	`ON`
State Saved	Saved in instrument state
Range	`On|Off`

Copy from Mod Analysis

This immediate action control provides parameter copy function from Mod Analysis Measurement to CEVM.

This feature is available both in LTE-A FDD and LTE V2X Modes.

NOTE This immediate action copies LTE-Advanced demodulation parameters from the Mod Analysis Measurement to Conformance EVM Measurement. Note that the other parameters such as Attenuation (Range), Trigger, averaging parameters, IFBW, etc. are *not* copied from Mod Analysis Measurement.

Remote Command	`[:SENSe]:CEVM:EVM:COPY[:IMMediate]`
Example	`:CEVM:EVM:COPY`

Meas Preset

Immediately sets all measurement parameters to their preset values. For more information, see the **Preset** control in the **System** section.

EVM Minimization by IQ Imbalance (Remote Command only)

Selects whether or not IQ Imbalance will be used for EVM minimization algorithm for every component carrier.

Remote Command	`[:SENSe]:CEVM:CCARrier0|…|4:EVMMinimize:IQIMbalance OFF | ON | 0 | 1` `[:SENSe]:CEVM:CCARrier0|…|4:EVMMinimize:IQIMbalance?`
Example	`:CEVM:CCAR0:EVMM:IQIM OFF` `:CEVM:CCAR0:EVMM:IQIM?`
Dependencies	Enabled when EVM minimization is not OFF
Preset	`OFF`
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:CEVM:EVMMinimize:IQIMbalance`

IQ Imbalance Frequency Compensation (Remote Command only)

Toggles Frequency Compensation for IQ Imbalance measurement results (IQ Gain Imbalance, IQ Quadrature Error) for Receiver Device Under Test (DUT) on or off. The Compensation is not valid for Transmitter DUT.

- `ON`: IQ Imbalance measurement results are compensated by taking account of Frequency Offset, which is added before IQ Imbalance addition on DUT
- `OFF`: IQ Imbalance measurement results are not compensated for the Frequency Offset

Remote Command	`[:SENSe]:CEVM:CCARrier0|…|4:IQIMbalance:FCOMpen ON | OFF` `[:SENSe]:CEVM:CCARrier0|…|4:IQIMbalance:FCOMpen?`
Example	`:CEVM:CCAR0:IQIM:FCOM ON` `:CEVM:CCAR0:IQIM:FCOM?`
Preset	`OFF`
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:CEVM:IQIMbalance:FCOMpen`

Result Values

In CEVM, you can select results displayed in the Result Metrics View for every component carrier. These results are synchronized with the remote SCPI query results for index n = 1.

Downlink Result Output Selection (Remote Command only)

The following table shows the mapping of the Array index and Result parameters.

Index	Result Parameter
1	EVM (%rms)
2	EVM Sym Time Adjust 1: Window Start, 2: Window End, 3: Center, 4: Custom
3	EVM Pk (%)
4	EVM Pk Index
5	EVM Peak Sub Car Index
6	Data EVM (%rms)
7	3GPP-defined QPSK EVM (%rms)
8	3GPP-defined 16QAM EVM (%rms)
9	3GPP-defined 64QAM EVM (%rms)
10	RS EVM (%rms)
11	RS Tx. Power (dBm)
12	OFDM Sym. Tx. Power (dBm)
13	Freq Error (Hz)
14	Sync Corr (%)
15	Sync Type 1 : P-SS, 20: Ant Port 0 RS, 21: Ant Port 1 RS, 22:Ant Port 2 RS, 23: Ant Port 3 RS
16	Common Tracking Error (%rms)
17	Symbol Clock Error (ppm)
18	Time Offset (s)
19	IQ Offset (dB)
20	IQ Gain Imbalance (dB)
21	IQ Quad Error (deg)
22	IQ Timing Skew (s)
23	CP Length Mode 1: Normal, 2: Extended
24	Cell ID
25	Cell ID Group/Sector Integer part: Cell ID Group, After the decimal point: Cell ID Sector
26	RS-OS / PRS 1: 3GPP, 4: Custom
27	Reference Signal Rx Power (Avg)
28	Reference Signal Rx Quality (dB)
29	Received Signal Strength Indicator (dBm)
30	Channel Power (dBm)
31	3GPP-defined 256QAM EVM (%rms)
31	3GPP-defined 1024QAM EVM (%rms)

Remote Command	`[:SENSe]:CEVM:DLINk:RESult ON | OFF | 0 | 1,…` `[:SENSe]:CEVM:DLINk:RESult?`
Example	`:CEVM:DLIN:RES 0,1,0` `:CEVM:DLIN:RES?`
Notes	See the table above for the mapping of index and result parameters The array length might be expanded for future enhancement
Preset	1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1
State Saved	Yes

Uplink Result Output Selection (Remote Command only)

The following table shows the mapping of the Array index and Result parameters for LTE carrier.

Index	Result Parameter
1	EVM (%rms)
2	EVM Sym Time Adjust 1: Window Start, 2: Window End, 3: Center, 4: Custom
3	EVM Pk (%)
4	EVM Pk Index
5	EVM Peak Sub Car Index
6	Data EVM (%rms)
7	3GPP-defined QPSK EVM (%rms)
8	3GPP-defined 16QAM EVM (%rms)
9	3GPP-defined 64QAM EVM (%rms)
10	RS EVM (%rms)
11	RS Tx. Power (dBm) Always returns -999.0
12	OFDM Sym. Tx. Power (dBm) Always returns -999.0
13	Freq Error (Hz)
14	Sync Corr (%)
15	Sync Type 2: PUSCH-DMRS, 3: PUCCH-DMRS, 4: SRS, 5: PRACH
16	Common Tracking Error (%rms)
17	Symbol Clock Error (ppm)
18	Time Offset (s)
19	IQ Offset (dB)

Index	Result Parameter
20	IQ Gain Imbalance (dB)
21	IQ Quad Error (deg)
22	IQ Timing Skew (s)
23	CP Length Mode 1: Normal, 2: Extended
24	Channel Power (dBm)
25	In-band Emissions Result 0: PASS, 1: FAIL
26	In-band Emissions worst Margin (dB)
27	In-band Emissions worst Slot
28	In-band Emissions worst RB
29	Spectral Flatness Result 0: PASS, 1: FAIL
30	Spectral Flatness worst Margin (dB)
31	Spectral Flatness worst Slot
32	Spectral Flatness worst Subcarrier
33	3GPP-defined 256QAM EVM (%rms)

The following table shows the mapping of the Array index and Result parameters for V2X carrier.

Index	Result Parameter
1	EVM (%rms)
2	EVM Sym Time Adjust 1: Window Start, 2: Window End, 3: Center, 4: Custom
3	EVM Pk (%)
4	EVM Pk Index
5	EVM Peak Sub Car Index
6	Data EVM (%rms)
7	3GPP-defined QPSK EVM (%rms)
8	3GPP-defined 16QAM EVM (%rms)
9	3GPP-defined 64QAM EVM (%rms)
10	RS EVM (%rms)
11	Reserved
12	Reserved
13	Freq Error (Hz)
14	Sync Corr (%)
15	Sync Type

Index	Result Parameter
	11: DM-RS 12: PSSS
16	Common Tracking Error (%rms)
17	Symbol Clock Error (ppm)
18	Time Offset (s)
19	IQ Offset (dB)
20	IQ Gain Imbalance (dB)
21	IQ Quad Error (deg)
22	IQ Timing Skew (s)
23	Reserved
24	Channel Power (dBm)
25	In-band Emissions Result 0: PASS, 1: FAIL
26	In-band Emissions worst Margin (dB)
27	In-band Emissions worst Slot
28	In-band Emissions worst RB
29	Spectral Flatness Result 0: PASS, 1: FAIL
30	Spectral Flatness worst Margin (dB)
31	Spectral Flatness worst Slot
32	Spectral Flatness worst Subcarrier
33	Reserved
34	Sidelink ID

Remote Command	`[:SENSe]:CEVM:ULINk:RESult ON | OFF | 0 | 1,…` `[:SENSe]:CEVM:ULINk:RESult?`
Example	`:CEVM:ULIN:RES 1,0,0` `:CEVM:ULIN:RES?`
Notes	See the table above for the mapping of index and result parameters The array length might be expanded for future enhancement
Preset	`1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1`
State Saved	Yes

Downlink Set All Results (Remote Command only)

This action command sets all "Downlink Result Output Selection (Remote Command only)" on page 1871 to 0 or 1 at once. It works whenever the command is sent, regardless of the current result status.

Remote Command	`[:SENSe]:CEVM:DLINk:RESult:ALL ON | OFF | 0 | 1`
Example	`:CEVM:DLIN:RES:ALL 0`
State Saved	No

Uplink Set All Results (Remote Command only)

This action command sets all "Uplink Result Output Selection (Remote Command only)" on page 1873 to 0 or 1 at once. It works whenever the command is sent, regardless of the current result status.

Remote Command	`[:SENSe]:CEVM:ULINk:RESult:ALL ON | OFF | 0 | 1`
Example	`:CEVM:ULIN:RES:ALL 0`
State Saved	No

Get Measurement Item List (Remote Query only)

Returns a comma-delimited string list of the current active measurement item in "Result Metrics" on page 1812 View.

Remote Command	`:CALCulate:CEVM:RESult:NAMes?`
Example	`:CALC:CEVM:RES:NAM?`
Notes	The result depends on Radio Standard Direction, "Downlink Result Output Selection (Remote Command only)" on page 1871 or "Uplink Result Output Selection (Remote Command only)" on page 1873 This query provides information about the content of the `READ:CEVM?` result. The result strings may change in future releases
State Saved	No

3.9.9.2 Radio

Contains controls to select link direction.

Direction

Specifies whether the LTE-Advanced signal is an uplink signal or a downlink signal.

The choice of link direction determines the Sync/Format, Chan Profile and Time. Advanced menus all change based on the link direction selected. Also, since downlink and uplink signals use OFDMA and SC-FDMA respectively, the list of trace results available and the default traces presented change based on the link direction parameter.

Remote Command	`[:SENSe]:RADio:STANdard:DIRection DLINk | ULINk` `[:SENSe]:RADio:STANdard:DIRection?`
Example	`:RAD:STAN:DIR DLIN`
Couplings	TDD: Changing direction affects the sync source of periodic trigger source or gate source If Direction is uplink, the sync source is RF burst If Direction is downlink, the sync source is External1 If direction is downlink, the menu Measure PRACH/SRS is disabled and the value is off FDD/TDD: Changing Direction affects many other modulation analysis setup parameters
Preset	DLIN ULIN on E6640A DLIN on E6650A
State Saved	Yes
Range	Downlink|Uplink For E6640A, Direction is restricted to Uplink only, Downlink is not selectable For E6650A, Direction is restricted to Downlink only, Uplink is not selectable

eMTC Analysis

Enable/Disables the eMTC analysis function.

Remote Command	`[:SENSe]:RADio:STANdard:EMTC[:STATe] ON | OFF | 1 | 0` `[:SENSe]:RADio:STANdard:EMTC[:STATe]?`
Example	`:RAD:EMTC:STAT OFF`
Dependencies	This parameter requires N9080EM3E license
Preset	OFF
Backwards Compatibility SCPI	`[:SENSe]:RADio:EMTC[:STATe]`

Interfering Signal Present

Sets whether interfering signal for the intermodulation tests exists or not. If exists, limits are not evaluated over the interference signal frequency range specified by the span and the center frequency parameters in ACP, SEM and Spurious Emissions.

Remote Command	`[:SENSe]:RADio:IMODulation:INTerference[:STATe] OFF | ON | 0 | 1` `[:SENSe]:RADio:IMODulation:INTerference[:STATe]?`
Example	`:RAD:IMOD:INT 1` `:RAD:IMOD:INT?`
Preset	OFF

State Saved	Saved in instrument state
Range	Yes|No

Freq Offset from Edge

Sets the center frequency of the interference signal for intermodulation tests. The frequency is set as offset frequency from the BS RF bandwidth edge. Interference Offset Side determines on which side of the BS RF bandwidth the interference signal exists.

Remote Command	`[:SENSe]:RADio:IMODulation:INTerference:FREQuency:OFFSet <freq>` `[:SENSe]:RADio:IMODulation:INTerference:FREQuency:OFFSet?`
Example	`:RAD:IMOD:INT:FREQ:OFFS 5MHz` `:RAD:IMOD:INT:FREQ:OFFS?`
Preset	5MHz
State Saved	Saved in instrument state
Min/Max	0 Hz / 20.0 MHz

Span

Sets the span of the interference signal for intermodulation tests.

Remote Command	`[:SENSe]:RADio:IMODulation:INTerference:SPAN <freq>` `[:SENSe]:RADio:IMODulation:INTerference:SPAN?`
Example	`:RAD:IMOD:INT:SPAN 5MHz` `:RAD:IMOD:INT:SPAN?`
Preset	5 MHz
State Saved	Saved in instrument state
Min/Max	200 kHz / 20.0 MHz

Offset Side

Sets which side of the BS RF bandwidth the interference signal exists on.

Remote Command	`[:SENSe]:RADio:IMODulation:INTerference:SIDE NEGative | POSitive` `[:SENSe]:RADio:IMODulation:INTerference:SIDE?`
Example	`:RAD:IMOD:INT:SIDE POS` `:RAD:IMOD:INT:SIDE?`
Preset	POSitive
State Saved	Saved in instrument state

Non-Contiguous Interference Region

Sets the region the interfering signal exists at in the Non-Contiguous mode:

- INNer – The interfering signal exists at the inner region. This setting is only effective when Carrier Alloc is Non-Contiguous. When in Contiguous, the interference region is always outside regardless of the selection of this parameter
- OUTer – The interfering signal exists at either of the outer regions

Remote Command	`[:SENSe]:RADio:IMODulation:INTerference:REGion INNer | OUTer` `[:SENSe]:RADio:IMODulation:INTerference:REGion?`
Example	`:RAD:IMOD:INT:REG OUT` `:RAD:IMOD:INT:REG?`
Preset	OUTer
State Saved	Saved in instrument state

3.9.9.3 Component Carriers

Contains settings that let you configure the analyzer to match the component carriers in your LTE-A signal.

Number of Component Carriers

Specifies how many component carriers are included in LTE-Advanced TDD/FDD measurements. Each component carrier complies with the LTE specifications.

LTE-Advanced TDD/FDD supports a maximum of five component carriers, so the maximum transmission bandwidth is up to 100 MHz.

Remote Command	`[:SENSe]:CCARrier:COUNt <integer>` `[:SENSe]:CCARrier:COUNt?`
Example	`:CCAR:COUN 1` `:CCAR:COUN?`
Notes	The max number of Component carriers can be set greater than one with 9080B/9082B-2FP license
Preset	1
State Saved	Yes
Min	1
Max	5

Carrier Allocation

Specifies the carrier frequency allocation. There are two types of allocation, contiguous and non-contiguous. Non-Contiguous frequency allocation is defined as an allocation where two sub-blocks are separated with a sub-block gap:

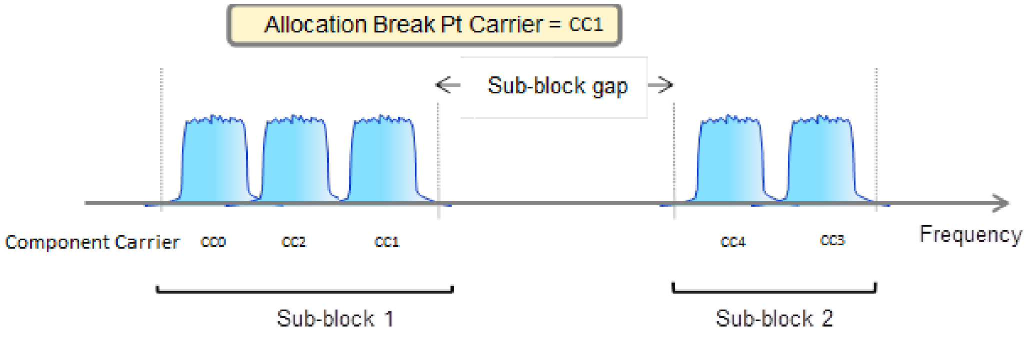
- CONTiguous – All the component carriers belong to one block and no sub-block gap exists
- NCONtiguous – Component carriers are separated into two sub-blocks. Allocation Break Pt Carrier determines how sub-blocks are configured

Remote Command	`[:SENSe]:CCARrier:CONFig:ALLocation CONTiguous | NCONtiguous` `[:SENSe]:CCARrier:CONFig:ALLocation?`
Example	`:CCAR:CONF:ALL CONT` `:CCAR:CONF:ALL?`
Preset	CONTiguous
State Saved	Saved in instrument state
Range	Contiguous|Non-Contiguous

Non-Contiguous Break at

Specifies an allocation break point in non-contiguous carrier allocation. First sub-block starts from the lowest frequency carrier and stops at the allocation break point carrier. Next sub-block starts from the next upper frequency carrier and ends at the highest frequency carrier.

one example is shown below. In the example carrier indices are not in the order of carrier frequency. In the example, Allocation Break Pt Carrier is CC1. It means that sub-block 1 ends at carrier CC1 and sub-block 2 starts at carrier CC4. Sub-block gap is located between carrier CC1 and CC4.



Remote Command	`[:SENSe]:CCARrier:CONFig:ALLocation:NCONtiguous:ABPoint CC0 | … | CC4`

	`[:SENSe]:CCARrier:CONFig:ALLocation:NCONtiguous:ABPoint?`
Example	`:CCAR:CONF:ALL:NCON:ABP CC0` `:CCAR:CONF:ALL:NCON:ABP?`
Notes	The options CC1~CC4 can be enabled with 9080B/9082B-2FP license
Dependencies	Allocation Break Point is coupled to Number of Component Carriers. For example, Allocation Break Point list will include CC0~CC1 if the number of Component Carriers is 2
Preset	CC0
State Saved	Saved in instrument state
Range	CC0|CC1|CC2|CC3|CC4

Configure Comp Carriers

Lets you perform a detailed configuration of your component carriers, including number of carriers, presets, bandwidth, offset, integration bandwidth, etc.

Configure CCs

Lets you configure System Bandwidth, frequency offsets, and integration bandwidth, and also lets you exclude certain carriers from the measurement.

Number of Component Carriers

See "Number of Component Carriers" on page 2245.

Carrier Allocation

See "Carrier Allocation" on page 2245.

Non-Contiguous Break at

See "Non-Contiguous Break at" on page 2246.

System BW

Enables you to set the system bandwidth of each component carrier for LTE-Advanced / NB-IoT signal (which also determines the total number of resource blocks for Modulation Analysis measurement).

Remote Command	`[:SENSe]:CCARrier0|…|4:RADio:STANdard:BANDwidth B1M4 | B3M | B5M | B10M | B15M | B20M | B200K`

	`[:SENSe]:CCARrier0|…|4:RADio:STANdard:BANDwidth?`
Example	`:CCAR4:RAD:STAN:BAND B5M`
Preset	B5M
State Saved	Yes
Range	1.4 MHz (6 RB) | 3 MHz (15 RB) | 5 MHz (25 RB) | 10 MHz (50 RB) | 15 MHz (75 RB) | 20 MHz (100 RB) | 200kHz (NB-IoT)
Backwards Compatibility SCPI	`[:SENSe]:RADio:STANdard:BANDwidth`

Measure Carrier

Sets whether to measure this component carrier or not.

Remote Command	`[:SENSe]:CCARrier0|…|4[:STATe] OFF | ON | 0 | 1` `[:SENSe]:CCARrier0|…|4[:STATe]?`
Example	`:CCAR0 ON` `:CCAR0?`
Notes	The command is used with a sub-op code <n> (default=0) to specify the component carrier for configuration. The range of the sub-op code is determined by the number of component carriers
Preset	ON
State Saved	Saved in instrument state
Range	On|Off

Frequency Offset

Sets the component carrier center frequency as offset from the Carrier Ref Frequency.

Remote Command	`[:SENSe]:CCARrier<n>:FREQuency:OFFSet <freq>` `[:SENSe]:CCARrier<n>:FREQuency:OFFSet?`
Example	`:CCAR4:FREQ:OFFS 10MHz` `:CCAR4:FREQ:OFFS?`
Notes	Used with a sub-op code <n> (default=0) to specify the component carrier for configuration. The range of the sub-op code is determined by the number of component carriers
Preset	0Hz
State Saved	Saved in instrument state
Min	-3.5GHz
Max	3.5GHz

Spectrum

Determines if the spectrum of the incoming data is mirrored or not. The actual mirroring is accomplished by conjugating the complex time data.

Note that only the Modulation Analysis measurement and Conformance EVM measurement support this feature.

Remote Command	`[:SENSe]:CCARrier0|…|4:SPECtrum NORMal | INVert` `[:SENSe]:CCARrier0|…|4:SPECtrum?`
Example	`:CCAR0:SPEC INV` `:CCAR0:SPEC?`
Preset	NORM
State Saved	Yes
Range	Normal | Invert
Backwards Compatibility SCPI	`[:SENSe]:SPECtrum`

UL/DL Configuration

Allows you to set the Uplink and Downlink allocation configuration of the signal being measured. The choice of link direction will determine which slot in the frame is used for uplink transmission, and which slot for downlink transmission.

Remote Command	`[:SENSe]:CCARrier0|…|4:RADio:STANdard:ULDL CONF0 | … | CONF6` `[:SENSe]:CCARrier0|…|4:RADio:STANdard:ULDL?`
Example	`:CCAR0:RAD:STAN:ULDL CONF0`
Notes	CONF0: Configuration 0 (DSUUUDSUUU) CONF1: Configuration 1 (DSUUDDSUUD) CONF2: Configuration 2 (DSUDDDSUDD) CONF3: Configuration 3 (DSUUUDDDDD) CONF4: Configuration 4 (DSUUDDDDDD) CONF5: Configuration 5 (DSUDDDDDDD) CONF6: Configuration 6 (DSUUUDSUUD)
Preset	CONF0
State Saved	Yes
Range	Configuration 0|Configuration 1|Configuration 2|Configuration 3|Configuration 4|Configuration 5|Configuration 6
Backwards Compatibility SCPI	`[:SENSe]:RADio:STANdard:ULDL`

Dw/GP/Up Len

This control allows you to set the DwPTS/GP/UpPTS length configuration of the signal being measured. The choice of link direction will determine the length of DwPTS, GP and UpPTS in the Special Subframe.

Remote Command	`[:SENSe]:CCARrier0|…|4:RADio:STANdard:DGPU CONF0 | … | CONF9` `[:SENSe]:CCARrier0|…|4:RADio:STANdard:DGPU?`
Example	`:CCAR0:RAD:STAN:DGPU CONF0`
Notes	CONF0: Configuration 0 CONF1: Configuration 1 CONF2: Configuration 2 CONF3: Configuration 3 CONF4: Configuration 4 CONF5: Configuration 5 CONF6: Configuration 6 CONF7: Configuration 7 CONF8: Configuration 8 CONF9: Configuration 9
Dependencies	The special sub-frame configuration 9 is only enabled when it is LTE-Advanced TDD
Preset	CONF0
State Saved	Yes
Range	Configuration 0|Configuration 1|Configuration 2|Configuration 3|Configuration 4|Configuration 5|Configuration 6|Configuration 7|Configuration 8|Configuration 9
Backwards Compatibility SCPI	`[:SENSe]:RADio:STANdard:DGPU`

Sidelink Mode

Set the sidelink mode per uplink component carrier. The setting is used to indicate whether the component carrier is cellular LTE or sidelink V2X. There are two modes listed as below:

- None: The component carrier is legacy LTE uplink carrier. The lte uplink parameters per carrier are in scope
- V2X: The component carrier is sidelink V2X carrier. The sidelink parameters per carrier are in scope

Remote Command	`[:SENSe]:CCARrier0|…|4:RADio:SLINk:MODE NONE | V2X` `[:SENSe]:CCARrier0|…|4:RADio:SLINk:MODE?`

Example	`:CCAR4:RAD:SLIN:MODE V2X`
Notes	The setting is available when Direction is Uplink with the required license
State Saved	Yes
Range	None | V2X

CHP Power Integ BW

Specifies the range of integration used in calculating the power in the component carrier s in the CHP measurement.

Remote Command	`[:SENSe]:CCARrier0|…|4:CHPower:BANDwidth:INTegration <freq>` `[:SENSe]:CCARrier0|…|4:CHPower:BANDwidth:INTegration?`
Example	`:CCAR0:CHP:BAND:INT 20MHz` `:CCAR0:CHP:BAND:INT?`
Notes	You must be in LTEATDD/LTEAFDD Mode to use this command. Use :INSTrument:SELect to set the mode
Couplings	When System Bandwidth of the parameter set is changed, the value of this parameter also changes as shown in the following table.

System Bandwidth	CHP Integ BW
1.4 MHz (B1M4)	1.4 MHz
3 MHz (B3M)	3 MHz
5 MHz (B5M)	5 MHz
10 MHz (B10M)	10 MHz
15 MHz (B15M)	15 MHz
20 MHz (B20M)	20 MHz
200 kHz(B200K)	200 kHz

Preset	5 MHz
State Saved	Saved in instrument state
Min	100 kHz
Max	20 MHz
Backwards Compatibility SCPI	`[:SENSe]:CHPower:BANDwidth:INTegration` `[:SENSe]:CHPower:BWIDth:INTegration`

ACP Power Integ BW

Specifies the Measurement Noise Bandwidth used to calculate the power in the component carriers in the ACP measurement.

Remote Command	`[:SENSe]:CCARrier0|…|4:ACPower:BANDwidth[1]|2:INTegration <freq>` `[:SENSe]:CCARrier0|…|4:ACPower:BANDwidth[1]|2:INTegration?`
Example	`:CCAR0:ACP:BAND:INT 20MHz` `:CCAR0:ACP:BAND:INT?`
Notes	Carrier sub op code, 1 is for BTS, 2 for MS. Default is BTS You must be in the LTEATDD/LTEAFDD mode. Use :INSTrument:SELect to set the mode
Couplings	When System Bandwidth of the parameter set is changed, the value of this parameter also changes as shown in the following table.

System Bandwidth	BTS ACP Meas Noise BW	MS ACP Meas Noise BW
1.4 MHz (B1M4)	1.095 MHz	1.08 MHz
3 MHz (B3M)	2.715 MHz	2.7 MHz
5 MHz (B5M)	4.515 MHz	4.5 MHz
10 MHz (B10M)	9.015 MHz	9.0 MHz
15 MHz (B15M)	13.515 MHz	13.5 MHz
20 MHz (B20M)	18.015 MHz	18.0 MHz
200 kHz(B200K)	180 kHz	180 kHz

Preset	4.515 MHz|4.5 MHz
State Saved	Yes
Min	100 kHz
Max	20 MHz
Backwards Compatibility SCPI	`[:SENSe]:ACPower:CARRier[1]|2:LIST:BANDwidth[:INTegration]` `[:SENSe]:ACPower:CARRier[1]|2:LIST:BWIDth[:INTegration]`

SEM Power Integ BW

Specifies the integration bandwidth used to calculate the power in the component carriers in SEM measurement.

Remote Command	`[:SENSe]:CCARrier0|…|4:SEMask:BANDwidth[1]|2:INTegration <freq>` `[:SENSe]:CCARrier0|…|4:SEMask:BANDwidth[1]|2:INTegration?`
Example	`:CCAR0:SEM:BAND:INT 20MHz` `:CCAR0:SEM:BAND:INT?`
Notes	Bandwidth sub op code, 1 is for BTS, 2 for MS. Default is BTS You must be in LTEATDD/LTEAFDD Mode to use this command. Use :INSTrument:SELect to set the mode
Couplings	When System Bandwidth of the parameter set is changed, the value of this parameter also changes as shown in the following table. Note that you cannot set the value exceeding the corresponding System

	Bandwidth System Bandwidth / BTS SEM Integ BW / MS SEM Integ BW (see table below)

System Bandwidth	BTS SEM Integ BW	MS SEM Integ BW
1.4 MHz (B1M4)	1.095 MHz	1.08 MHz
3 MHz (B3M)	2.715 MHz	2.7 MHz
5 MHz (B5M)	4.515 MHz	4.5 MHz
10 MHz (B10M)	9.015 MHz	9.0 MHz
15 MHz (B15M)	13.515 MHz	13.5 MHz
20 MHz (B20M)	18.015 MHz	18.0 MHz
200 kHz(B200K)	180 kHz	180 kHz

Preset	4.515 MHz|4.5 MHz
State Saved	Saved in instrument state
Min	100 kHz
Max	20 MHz
Backwards Compatibility SCPI	`[:SENSe]:SEMask:BANDwidth[1]|2:INTegration`

Carrier Config Presets

Lets you configure the Component Carrier presets.

Max BTS RF Bandwidth

Sets max BS RF bandwidth used when the carrier configuration preset runs. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:RFBW <freq>` `[:SENSe]:CCARrier:CONFig:RFBW?`
Example	`:CCAR:CONF:RFBW 40MHz` `:CCAR:CONF:RFBW?`
Preset	40MHz
State Saved	Saved in instrument state
Min	1.4MHz
Max	200 MHz

Carrier Spacing Delta

Sets delta channel spacing used when the carrier configuration preset runs. Channel spacing is determined from this value and the default channel spacing defined in the standard, i.e. Channel spacing = $(BW_{chan1} + BW_{chan2}) * 0.5$ + [the delta spacing]. Since this value is a difference from the default spacing, this value can be negative to allow narrower channel spacing. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:SPACing:DELTa <freq>` `[:SENSe]:CCARrier:CONFig:SPACing:DELTa?`
Example	`:CCAR:CONF:SPAC:DELT -200kHz` `:CCAR:CONF:SPAC:DELT?`
Preset	0Hz
State Saved	Saved in instrument state
Min	-1.0 MHz
Max	10.0 MHz

Preset ETC

The ETC configuration is applied. The component carrier parameters are dynamically changed using values of the parameters of each test configuration under Carrier Config Presets menu when some test configuration is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig NONE | ETC1 | ETC2 | ETC3` `[:SENSe]:CCARrier:CONFig?`
Example	`:CCAR:CONF ETC1` `:CCAR:CONF?`
Notes	The control for NONE is not available
State Saved	Saved in instrument state
Range	ETC1|ETC2|ETC3

ETC1 Attributes

Sets ETC1 carrier configuration.

Max Number of Component Carriers

Sets max component carriers placed when the ETC1 carrier configuration preset runs. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:ETC1:CMAX <integer>` `[:SENSe]:CCARrier:CONFig:ETC1:CMAX?`
Example	`:CCAR:CONF:ETC1:CMAX 5` `:CCAR:CONF:ETC1:CMAX?`
Preset	5
State Saved	Saved in instrument state
Max	5
Min/Max	1

Component Carrier System BW

Sets bandwidth of the component carriers placed when the ETC1carrier configuration preset runs. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:ETC1:BANDwidth B1M4 | B3M | B5M | B10M | B15M | B20M | B200K` `[:SENSe]:CCARrier:CONFig:ETC1:BANDwidth?`
Example	`:CCAR:CONF:ETC1:BAND B5M` `:CCAR:CONF:ETC1:BAND?`
Preset	B5M
State Saved	Saved in instrument state
Range	1.4MHz|3MHz|5MHz|10MHz|15MHz|20MHz|200kHz

Component Carrier Narrowest BW

Sets narrowest bandwidth of the component carriers placed when the ETC1 carrier configuration preset runs. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:ETC1:BANDwidth:NARRowest B1M4 | B3M | B5M | B10M | B15M | B20M | B200K` `[:SENSe]:CCARrier:CONFig:ETC1:BANDwidth:NARRowest?`
Example	`:CCAR:CONF:ETC1:BAND:NARR B1M4` `:CCAR:CONF:ETC1:BAND:NARR?`
Preset	B1M4
State Saved	Saved in instrument state
Range	1.4MHz|3MHz|5MHz|10MHz|15MHz|20MHz|200kHz

ETC2 Attributes

Sets ETC2 carrier configuration.

Max Number of Component Carriers

Sets max component carriers placed when the ETC2 carrier configuration preset runs. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:ETC2:CMAX <integer>` `[:SENSe]:CCARrier:CONFig:ETC2:CMAX?`
Example	`:CCAR:CONF:ETC2:CMAX 5` `:CCAR:CONF:ETC2:CMAX?`
Preset	5
State Saved	Saved in instrument state
Min	1
Max	5

Carrier Side (with BTS RF BW)

Select the side of RF bandwidth to place the ETC2 component carriers. When this value is changed, the carrier configuration preset is initiated.

- NEGative - Negative (lower) edge of RF bandwidth. If the option is selected, the available component carriers will be placed sequentially from the lower edge of the RF bandwidth starting from first
- POSitive - Positive (upper) edge of RF bandwidth, If the option is selected, the available component carriers will be placed sequentially from the upper edge of the RF bandwidth starting from first

Remote Command	`[:SENSe]:CCARrier:CONFig:ETC2:BANDwidth:SIDE NEGative | POSitive` `[:SENSe]:CCARrier:CONFig:ETC2:BANDwidth:SIDE?`
Example	`:CCAR:CONF:ETC2:BAND:SIDE NEG` `:CCAR:CONF:ETC2:BAND:SIDE?`
Preset	NEGative
State Saved	Saved in instrument state
Range	NEGative|POSitive

Component Carrier System BW

Sets carrier bandwidth of the component carriers placed when the ETC2 carrier configuration preset runs. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:ETC2:BANDwidth:CARRier[1]|2|…|5 B1M4 | B3M | B5M | B10M | B15M | B20M | B200K` `[:SENSe]:CCARrier:CONFig:ETC2:BANDwidth:CARRier?`
Example	`:CCAR:CONF:ETC2:BAND:CARR B5M` `:CCAR:CONF:ETC2:BAND:CARR?`
Dependencies	The Carrier Bandwidth is coupled to Max Component Carriers. The settings are enabled following the Max Component Carriers. For example, the 1st Carrier Bandwidth and 2nd Carrier Bandwidth will be available if the Max Component Carriers is 2
Preset	B5M
State Saved	Saved in instrument state
Range	1.4MHz|3MHz|5MHz|10MHz|15MHz|20MHz|200kHz

ETC3 CC Bandwidth

Sets the bandwidth of the component carriers placed when the ETC3 carrier configuration preset runs. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:ETC3:BANDwidth B1M4 | B3M | B5M | B10M | B15M | B20M | B200K` `[:SENSe]:CCARrier:CONFig:ETC3:BANDwidth?`
Example	`:CCAR:CONF:ETC3:BAND B5M` `:CCAR:CONF:ETC3:BAND?`
Preset	B5M
State Saved	Saved in instrument state
Range	1.4MHz|3MHz|5MHz|10MHz|15MHz|20MHz|200kHz

3.9.9.4 Meas Standard

Enables you to access Preset to Standard functions.

In LTE-Advanced TDD Mode, the parameters under Predefined Params impact the gate or trigger length and delay of the following measurements:

- Monitor Spectrum
- Channel Power
- ACP
- Power Stat CCDF
- Occupied BW
- Spectrum Emission Mask
- Spurious Emission

In LTE-Advanced FDD Mode, the Predefined Parameters in this section are used in the Transmit On/Off Power measurement. The Modulation Analysis measurement has its specific Predefined Parameters setting.

In LTE V2X Mode, Predefined parameters apply to all LTE V2X measurements.

System BW

Sets the demodulator to the specified bandwidth and configures the settings of every component carrier according to the default values listed in table for the current direction (Uplink or Downlink).

For example, when Number of Component is 3, after executing the command RAD:STAN:PRES B5M or selecting corresponding Bandwidth in the dropdown menu, all the 3 component carriers are configured as 5Mhz bandwidth, and all the settings of these 3 component carriers are set according to the table.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet B1M4 | B3M | B5M | B10M | B15M | B20M | B200K`
Example	`:RAD:STAN:PRES B5M`
Notes	B200K selection is available in LTE-A FDD mode B200K option is for NB-IoT which requires N9080EM3E license
Couplings	Preset To Standard presets parameter values listed in section “Values for each Preset To Standard”. And the system bandwidth of each component carrier under the Component Carrier Setup will be preset to the selected one
Preset	B5M
State Saved	Yes
Range	1.4 MHz (6 RB) | 3 MHz (15 RB) | 5 MHz (25 RB) | 10 MHz (50 RB) | 15 MHz (75 RB) | 20 MHz (100 RB) | 200 kHz (NB-IoT)

UL/DL Config

Sets the TDD UL/DL Allocation parameter of each carrier to the selected value.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:ULDL CONF0 | … | CONF6` `[:SENSe]:RADio:STANdard:PRESet:ULDL?`
Example	`:RAD:STAN:PRES:ULDL CONF0`
Notes	CONF0: Configuration 0 (DSUUUDSUUU) CONF1: Configuration 1 (DSUUDDSUUD) CONF2: Configuration 2 (DSUDDDSUDD) CONF3: Configuration 3 (DSUUUDDDDD) CONF4: Configuration 4 (DSUUDDDDDD) CONF5: Configuration 5 (DSUDDDDDDD) CONF6: Configuration 6 (DSUUUDSUUD)
Dependencies	When the setting is selected, the ULDL Alloc per component carrier under the Component carrier Setup will be preset to the selected value
Preset	CONF0
State Saved	Yes
Range	Configuration 0|Configuration 1|Configuration 2|Configuration 3|Configuration 4|Configuration 5|Configuration 6

Dw/GP/Up Len

Sets the TDD special sub-frame configuration of each component carrier to the selected value.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:DGPU CONF0 | … | CONF9` `[:SENSe]:RADio:STANdard:PRESet:DGPU?`
Example	`:RAD:STAN:PRES:DGPU CONF0`
Notes	CONF0: Configuration 0 CONF1: Configuration 1 CONF2: Configuration 2 CONF3: Configuration 3 CONF4: Configuration 4 CONF5: Configuration 5 CONF6: Configuration 6 CONF7: Configuration 7 CONF8: Configuration 8 CONF9: Configuration 9

Dependencies	When the setting is selected, the Dw/GP/Up Len per Component Carrier under the Component Carrier Setup will be preset to the selected value The special sub-frame configuration 9 is only enabled when it is LTE-Advanced TDD
Preset	CONF0
State Saved	Yes
Range	Configuration 0|Configuration 1|Configuration 2|Configuration 3|Configuration 4|Configuration 5|Configuration 6|Configuration 7|Configuration 8|Configuration 9

Analysis Slot

Specifies the starting analysis slot. The measurement will adjust the gate delay or trigger delay according to this parameter.

Remote Command	`[:SENSe]:RADio:SLOT TS0 | TS1 | DPTS1 | UPTS1 | TS4 | TS5 | TS6 | TS7 | TS8 | TS9 | TS10 | TS11 | TS12 | TS13 | TS14 | TS15 | TS16 | TS17 | TS18 | TS19` `[:SENSe]:RADio:SLOT?`
Example	`:RAD:SLOT TS0`
Couplings	Measurement's gate length or meas interval will couple to the parameter
Preset	TS0
State Saved	Yes
Range	TS0 | TS1 | DwPTS1 | UpPTS1 | TS4 | TS5 | TS6 | TS7 | TS8 | TS9 | TS10 | TS11 | TS12(DwPTS2) | TS13 (UpPTS2) | TS14 | TS15 | TS16 | TS17 | TS18 | TS19

Meas Interval

This parameter specifies the desired slots count that needs to be analyzed. The measurement will adjust the gate length or meas interval according to this parameter.

For NB-IoT uplink cases scenarios, when Measure NPRACH is Off, this parameter indicates not only the slots' count to be analyzed, but the time elapse of the off power measurements as well.

In LTE-A FDD Mode, this parameter only appears in the Transmit On|Off Power measurement.

Remote Command	`[:SENSe]:RADio:MINTerval <integer>` `[:SENSe]:RADio:MINTerval`
Example	`:RAD:MINT 1`
Notes	The backwards compatible command [:SENSe]:PVTime:MINTerval is available in LTE FDD & LTE-A FDD Modes
Dependencies	This parameter is disabled when all the below conditions are met at the same time:

	– System BW is “200 kHz (NB-IoT)” – Direction is “uplink” – NB-IoT Subcarrier Spacing is “3.75kHz” – Meas NPRACH is “OFF”
Couplings	Disabled when the “Measure PRACH” is in scope and its value is not off, then the actual meas interval is the length PRACH or SRS channel For NB-IoT case scenario, when the parameter is disabled, its value is automatically determined by both Meas NPRACH:

Meas NPRACH	Meas Interval
Preamble0	3 slots
Preamble1	4 slots

Preset	1
State Saved	Yes
Min	1
Max	20, when System BW is NOT “200 kHz (NB-IoT) 16, otherwise
Backwards Compatibility SCPI	LTE: `[:SENSe]:PVTime:MINTerval`

CP Length

Specifies whether the cyclic prefix is configured as NORMal or EXTended for power measurement. The parameter will affect the gate length or meas interval parameters.

In LTE-A FDD Mode, this parameter only appears in the Transmit On|Off Power measurement.

Remote Command	`[:SENSe]:RADio:CPLength NORMal | EXTended` `[:SENSe]:RADio:CPLength?`
Example	`:RAD:CPL NORM`
Notes	The backwards compatible SCPI command [:SENSe]:PVTime:CPLength is available in LTE FDD & LTE-A FDD Modes
Dependencies	Disabled when System BW is set to “200 kHz (NB-IoT)” and Direction is “uplink”
Couplings	Set to NORMal when System BW is set to “200 kHz (NB-IoT)”
Preset	NORMal
State Saved	Yes

Range	Normal|Extended
Backwards Compatibility SCPI	LTE: `[:SENSe]:PVTime:CPLength`

Measure PRACH/SRS

Specifies whether the analysis slot is used for PRACH channel or SRS and the PRACH preamble format of the analysis slot.

The measurement will adjust the gate length or meas interval according to this parameter.

Remote Command	`[:SENSe]:RADio:MEASure OFF | PPF0 | PPF1 | PPF2 | PPF3 | PPF4 | SRS | DSRS` `[:SENSe]:RADio:MEASure?`
Example	`:RAD:MEAS OFF`
Couplings	If direction is downlink, the control is disabled and the value is set to off If this control value is not off, Meas Interval is disabled
Preset	OFF
State Saved	Yes
Range	Off|Preamble 0|Preamble 1|Preamble 2|Preamble 3|Preamble 4|SRS|DSRS

Reference Config

Specifies which component carrier’s ULDL Allocation Configuration and Dw/Up Length Configuration settings are used to adjust time slot to be measured automatically. For Modulation Analysis measurement, this control specifies which CC is used as the reference CC for time alignment results.

In LTE-A FDD Mode, this parameter only appears in the Transmit On|Off Power and Modulation Analysis measurements.

Remote Command	`[:SENSe]:RADio:RCONfig CC0 | … | CC4` `[:SENSe]:RADio:RCONfig?`
Example	`:RAD:RCON CC0`
Notes	The options CC1~CC4 can be enabled with 9080B/9082B-2FP license
Dependencies	Reference Configuration is coupled to Number of Component Carriers. For example, reference configuration list will include CC0~CC1 if the number of Component Carriers is 2
Preset	CC0
State Saved	Yes
Range	CC0|CC1|CC2|CC3|CC4

3.9.10 Sweep

The Sweep key contains controls which allow you to control the sweep and measurement functions of the analyzer, such as the sweep or measurement time and whether in Single sweep/measure or Continuous sweep/measure mode.

3.9.10.1 Sweep/Control

This tab accesses controls that enable you to operate the Sweep and Control functions of the analyzer.

Sweep/Measure

Allows you to toggle between Continuous and Single sweep or measurement operation. The single/continuous state is Meas Global so the setting will affect all measurements.

The front-panel key **Single/Cont** performs this exact same function

See "More Information" on page 1897

Remote Command	`:INITiate:CONTinuous OFF | ON | 0 | 1` `:INITiate:CONTinuous?`
Example	INIT:CONT 0 !puts analyzer in Single measurement operation. INIT:CONT OFF !puts analyzer in Single measurement operation. INIT:CONT 1 !puts analyzer in Continuous measurement operation. INIT:CONT ON !puts analyzer in Continuous measurement operation
Preset	ON (Note that SYST:PRESet sets INIT:CONT to ON but *RST sets INIT:CONT to OFF)
State Saved	Saved in instrument state
Annunciation	The Single/Continuous icon in the Meas Bar changes depending on the setting. A line with an arrow is single, a loop with an arrow is Continuous.
Backwards Compatibility Notes	See the description of this control in the Swept SA measurement

More Information

With **Avg/Hold Num** (in the **Meas Setup** menu) set to **Off** or set to **On** with a value of 1, a sweep is taken after the trigger condition is met; and the analyzer continues to take new sweeps after the current sweep has completed and the trigger condition is again met. However, with **Avg/Hold Num** set to On with a value >1, multiple sweeps (data acquisitions) are taken for the measurement. The trigger condition must be met prior to each sweep. The sweep is not stopped when the average count k equals the number N set for Avg/Hold Num is reached, but the number k stops incrementing. A measurement average usually applies to all traces, marker results, and numeric results. But sometimes it only applies to the numeric results.

If the analyzer is in Single measurement, pressing the **Cont/Single** toggle control does not change k and does not cause the sweep to be reset; the only action is to put the analyzer into Continuous measurement operation.

If it is already in continuous sweep:

- the INIT:CONT 1 command has no effect
- the INIT:CONT 0 command will place the analyzer in Single Sweep but will have no effect on the current sequence until k = N, at which point the current sequence will stop and the instrument will go to the idle state.

See "Restart " on page 1898 control description for details on the INIT:IMMediate (Restart) function.

If you are already in single sweep, the `INIT:CONT OFF` command has no effect.

If you are already in Single Sweep, then pressing the **Cont/Single** toggle control in the middle of a sweep does not restart the sweep or sequence. Similarly, pressing the **Cont/Single** toggle control does not restart the sweep or sequence if the sweep is not in the idle state (for example, if you are taking a very slow sweep, or the analyzer is waiting for a trigger). Even though pressing the **Cont/Single** toggle control in the middle of a sweep does not restart the sweep, sending INIT:IMMediate does reset it.

Restart

The Restart function restarts the current sweep, or measurement, or set of averaged/held sweeps or measurements. If you are Paused, pressing Restart does a Resume.

The front-panel key **Restart** performs this exact same function

The Restart function is accessed in several ways:

- Pressing the Restart key
- Sending the remote command INIT:IMMediate
- Sending the remote command INIT:RESTart

See "More Information" on page 1899

Remote Command	`:INITiate[:IMMediate]` `:INITiate:RESTart`
Example	INIT:IMM INIT:REST
Notes	:INITiate:RESTart and :INITiate:IMMediate perform exactly the same function.
Couplings	Resets average/hold count k. For the first sweep overwrites all active (update=on) traces with new current data. For application modes, it resets other parameters as required by the measurement.
Status Bits/OPC dependencies	This is an Overlapped command. The STATus:OPERation register bits 0 through 8 are cleared. The STATus:QUEStionable register bit 9 (INTegrity sum) is cleared. The SWEEPING bit is set. The MEASURING bit is set.
Backwards Compatibility Notes	For Spectrum Analysis mode in ESA and PSA, the **Restart** hardkey and the INITiate:RESTart command restart trace averages (displayed average count reset to 1) for a trace in **Clear Write**, but did not restart **Max Hold** and **Min Hold**. In the X-Series, the **Restart** hardkey and the INITiate:RESTart command restart not only **Trace Average**, but **MaxHold** and **MinHold** traces as well. For wireless comms modes in ESA and PSA, the **Restart** hardkey and the INITiate:RESTart command restart every measurement, which includes all traces and numeric results. There is no change to this operation.

More Information

The **Restart** function first aborts the current sweep or measurement as quickly as possible. It then resets the sweep and trigger systems, sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the analyzer is in the process of aligning when a Restart is executed, the alignment finishes before the restart function is performed.

Even when set for Single operation, multiple sweeps may be taken when Restart is pressed (for example, when averaging/holding is on). Thus when we say that Restart "restarts a measurement," we may mean:

- It restarts the current sweep
- It restarts the current measurement
- It restarts the current set of sweeps if any trace is in Trace Average, Max Hold or Min Hold

- It restarts the current set of measurements if Averaging, or Max Hold, or Min Hold is on for the measurement
- depending on the current settings.

With Average/Hold Number (in Meas Setup menu) set to 1, or Averaging off, or no trace in Trace Average or Hold, a single sweep is equivalent to a single measurement. A single sweep is taken after the trigger condition is met; and the analyzer stops sweeping once that sweep has completed. However, with Average/Hold Number >1 and at least one trace set to Trace Average, Max Hold, or Min Hold (SA Measurement) or Averaging on (most other measurements), multiple sweeps/data acquisitions are taken for a single measurement. The trigger condition must be met prior to each sweep. The sweep is stopped when the average count k equals the number N set for Average/Hold Number. A measurement average usually applies to all traces, marker results, and numeric results; but sometimes it only applies to the numeric results.

Once the full set of sweeps has been taken, the analyzer will go to the idle state. To take one more sweep without resetting the average count, increment the average count by 1, by pressing the step up key while Average/Hold Number is the active function, or sending the remote command CALC:AVER:TCON UP.

Pause/Resume

Pauses a measurement after the current data acquisition is complete.

When Paused, the label on the control changes to Resume. Pressing Resume un-pauses the measurement. When you are Paused, pressing **Restart** does a Resume.

Remote Command	`:INITiate:PAUSe`
Example	`INIT:PAUS`
Dependencies	Not displayed in Modes that do not support Pausing.
Annotation	Only on control

Remote Command	`:INITiate:RESume`
Example	`INIT:RES`
Dependencies	Not displayed in Modes that do not support Pausing.
Annotation	Only on control

Abort (Remote Command Only)

This command is used to stop the current measurement. It aborts the current measurement as quickly as possible, resets the sweep and trigger systems, and puts the measurement into an "idle" state. If the analyzer is in the process of aligning when ABORt is sent, the alignment finishes before the abort function is performed. So ABORt does not abort an alignment.

If the analyzer is set for Continuous measurement, it sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the analyzer is set for Single measurement, it remains in the "idle" state until an :INIT:IMM command is received.

Remote Command	`:ABORt`
Example	ABOR
Notes	If :INITiate:CONTinuous is ON, then a new continuous measurement will start immediately, with sweep (data acquisition) occurring once the trigger condition has been met. If :INITiate:CONTinuous is OFF, then :INITiate:IMMediate is used to start a single measurement, with sweep (data acquisition) occurring once the trigger condition has been met.
Dependencies	For continuous measurement, ABORt is equivalent to the Restart key. Not all measurements support the abort command.
Status Bits/OPC dependencies	The STATus:OPERation register bits 0 through 8 are cleared. The STATus:QUEStionable register bit 9 (INTegrity sum) is cleared. Since all the bits that feed into OPC are cleared by the ABORt, the ABORt will cause the *OPC query to return true.

3.9.10.2 Recording

Contains parameters for recording.

See the **Save** and **Recall** sections under **Recording** for more information on how to load and save recording files.

See **Sweep** under **Playback** for more information about how to manage and play recordings.

Sample Rate (Display Only)

Display the sample rate of saved IQ data file.

Sample Points (Display Only)

Display the total sample number of saved IQ data file.

Sample Time (Display Only)

Display the total sample time of saved IQ data file.

3.9.10.3 Playback

Accesses controls that let you set the parameters for playback.

See the **Save** and **Recall** sections under **Recording** for more information on how to load and save recording files.

See **Sweep** under **Recording** for more information about how to manage and play recordings.

Playback Start

Specifies the start position of the IQ data playback range to be analyzed. When its value < 0, additional zero will be insert at the beginning of IQ data.

Remote Command	`:CALCulate:CEVM:PLAY:STARt <time>` `:CALCulate:CEVM:PLAY:STARt?`
Example	`:CALC:CEVM:PLAY:STAR 0.01 s` `:CALC:CEVM:PLAY:STAR?`
Preset	0
State Saved	Saved in instrument state
Min	-0.1
Max	Sample Points in IQ file / Sample Rate in IQ file

Sample Rate

Displays sample rate of recalled IQ data file if recalled file format contains sampling rate information(`.csv, .sdf, .txt`).

Sets sampling rate to playback recalled IQ data if recalled file format is `.bin` or `.binx`, which do not contain sampling rate information.

Remote Command	`:CALCulate:CEVM:PLAY:SRATe <freq>` `:CALCulate:CEVM:PLAY:SRATe?`
Example	`:CALC:CEVM:PLAY:SRAT 122.88MHz` `:CALC:CEVM:PLAY:SRAT?`
Couplings	Display only after .csv, .sdf, .txt file recalling Settable after .bin or .binx file recalling
Preset	0
State Saved	No

Sample Points (Display Only)

Displays the total sample number of recalled IQ data file.

Sample Time (Display Only)

Displays the total sample time of recalled IQ data file.

Input Channels (Display Only)

Display input channel number of recalled IQ data files.

This control aims at multi-channel I/Q data recording and playback, and is *only* available in 5GNR's EVM and WLAN's MIMO EVM.

3.9.11 Trace

Not supported in this measurement.

3.10 Power Stat CCDF Measurement

Many modern digitally-modulated signals look noise-like in the time and frequency domain, requiring statistical measurement of these signals for meaningful characterization and differentiation. The **Power Statistics Complementary Cumulative Distribution Function** (CCDF) measurement displays curves to characterize the higher-level power statistics of digitally modulated signals. The curves can be useful in determining design parameters for digital communications systems.

The Power Statistics CCDF measurement displays probability on the Y-Axis and amplitude on the X-axis, for a display of the statistical amplitude distribution of a signal. This distribution can be affected by many factors. For example, modulation filtering, modulation format, combining the multiple signals at different frequencies, number of active codes, and correlation between symbols on different codes with spread spectrum systems will all affect measurement results. These factors are all related to modulation and signal parameters. External factors such as signal compression and expansion by nonlinear components, group delay distortion from filtering, and power control within the observation interval also affect the measurement.

The power measured in power statistics CCDF curves is actually instantaneous envelope power defined by the equation:

$P = (I^2 + Q^2) / Zo$

where I & Q are the quadrature voltage components of the waveform, and Zo is the characteristic impedance.

A CCDF curve is defined by how much time the waveform spends at or above a given power level. The percent of time the signal spends at or above the level defines the probability for that particular power level. For capturing a lower probability down to 0.0001%, this measurement is made in the single mode by pressing Single. To make the power statistics CCDF measurement, the instrument uses digital signal processing (DSP) to sample the input signal in the channel bandwidth. The Gaussian distribution line as the band-limited Gaussian noise CCDF reference line, the user-definable reference trace, and the currently measured trace can be displayed on a semi-log graph. If the currently measured trace is above the user reference trace, it means that the higher peak power levels against the average power are included in the input signal.

Power Stat CCDF Measurement Commands

The general functionality of "CONFigure" on page 2997, "INITiate" on page 2998, "FETCh" on page 2998, "MEASure" on page 3000, and "READ" on page 2999 are described in the section **SCPI Operation and Results Query** in the topic

Programming the Instrument.

The following measurement commands and queries are used to configure the measurement:

`:INITiate:PSTatistic`	Initiates a trigger cycle for the `PST` measurement, but does not return any data. You must then use `:FETC:PST[n]?` to retrieve data Does not change any measurement settings
`:CONFigure?`	Returns the long form name of current measurement, in this case, `PSTatistic`
`:CONFigure:PSTatistic`	Selects `PST` measurement with Meas Setup settings in preset state – same as "Meas Preset" on page 1981
`:CONFigure:PSTatistic:NDEFault`	Selects `PST` measurement *without* affecting settings

The following queries are used to retrieve the results:

`:FETCh:PSTatistic?`	Retrieves the data specified by `n`
`:MEASure:PSTatistic[n]?`	Switches to `PST` measurement, restores default values, starts the measurement, then retrieves the data specified by `n`
`:READ:PSTatistic[n]?`	Starts the measurement, then retrieves the data specified by `n`

Measurement Results for Power Stat CCDF

The following table describes the results returned by the `:FETCh`, `:MEASure`, and `:READ` queries listed above, according to the index value `n`.

n	Results Returned
0	Returns unprocessed I/Q trace data, as a series of trace point values, in volts. The I values are listed first in each pair, using the 0 through even-indexed values. The Q values are the odd-indexed values
1, or not specified	Returns 11 scalar results:

#	Item	Unit, if any
1	Average input power	dBm
2	Probability at the average input power level	%
3	Power level that has 10 % of the power	
4	Power level that has 1 % of the power	
5	Power level that has 0.1 % of the power	
6	Power level that has 0.01 % of the power	
7	Power level that has 0.001 % of the power	

<table>
<tr><th>n</th><th>Results Returned</th></tr>
<tr><td></td><td><table>
<tr><th>#</th><th>Item</th><th>Unit, if any</th></tr>
<tr><td>8</td><td>Power level that has 0.0001 % of the power</td><td></td></tr>

5000. Probability at 49.9 dB power
5001. Probability at 50.0 dB power</td></tr>
</table>

3.10.1 Views

In the `LTEATDD` and `5GNR` Modes, this measurement has two views: "Normal" on page 1907 and **Slot**. In all other Modes, there is only a single view (**Normal**). For the SCPI command to select **Slot** View, see "Slot View" on page 1957.

These are multiple-window Views. When in a multiple-window View, you select a window by touching it. The menu controls may sometimes change depending on which window is selected.

3.10.1.1 Normal

Windows: "Metrics" on page 1910, "Graph" on page 1907

The Power Stat CCDF measurement provides CCDF curves and power statistics metrics. This is common for both Uplink (MS) and Downlink (BTS).

Example	`:PST:SLTV OFF`

3.10.1.2 Slot

Windows: "Metrics" on page 1910, "Graph" on page 1907, "Slot" on page 1909

Adds the signal wave window to Power Stat CCDF measurement curves and Power statistics metrics.

To select this view, set **Display** > **Settings** > "Slot View" on page 1957. to `ON`.

Example	`:PST:SLTV ON`
Dependencies	Only available in LTEATDD and 5GNR Modes

3.10.2 Windows

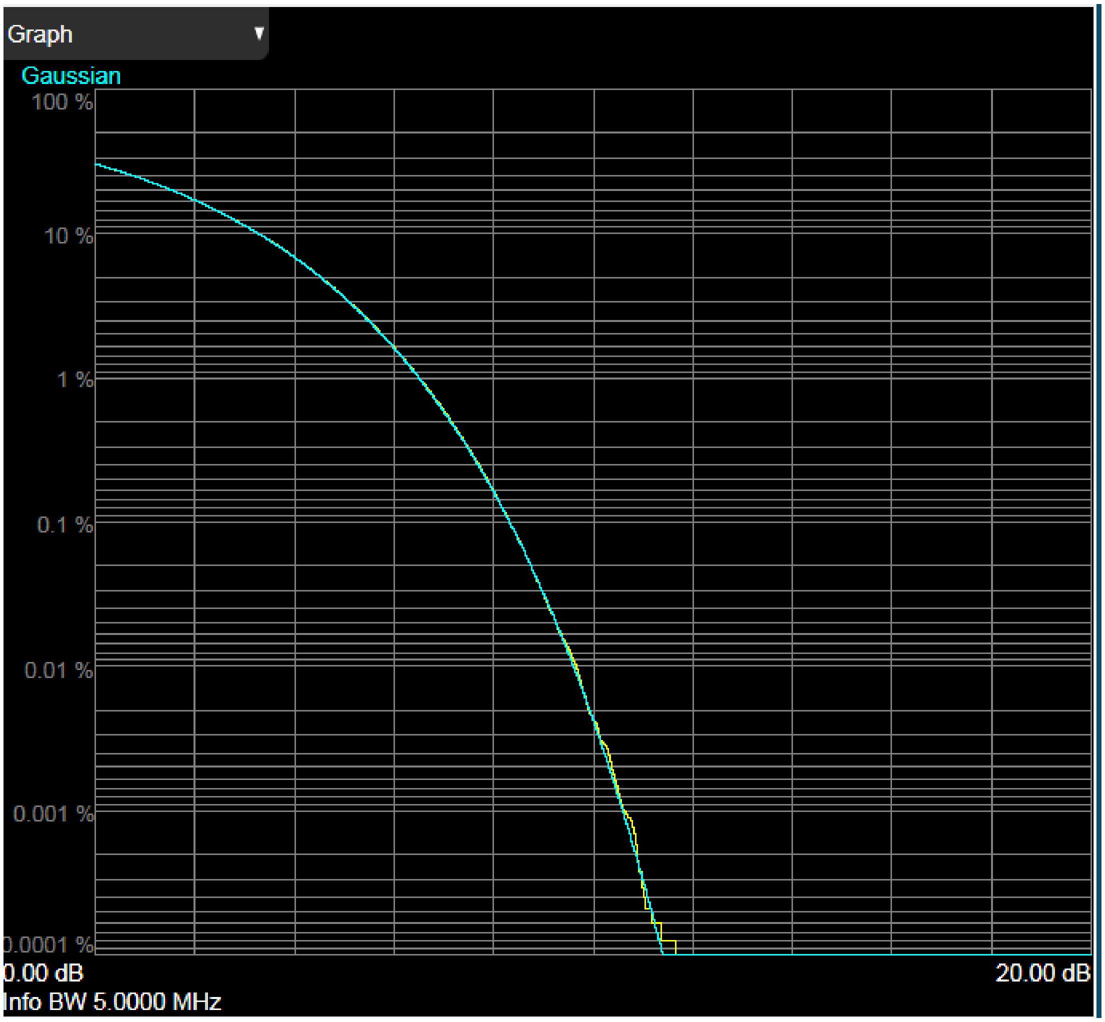
Three window types are defined:

1. "Graph" on page 1907
2. "Slot" on page 1909
3. "Metrics" on page 1910

Slot only appears in LTEATDD and 5GNR Modes.

3.10.2.1 Graph

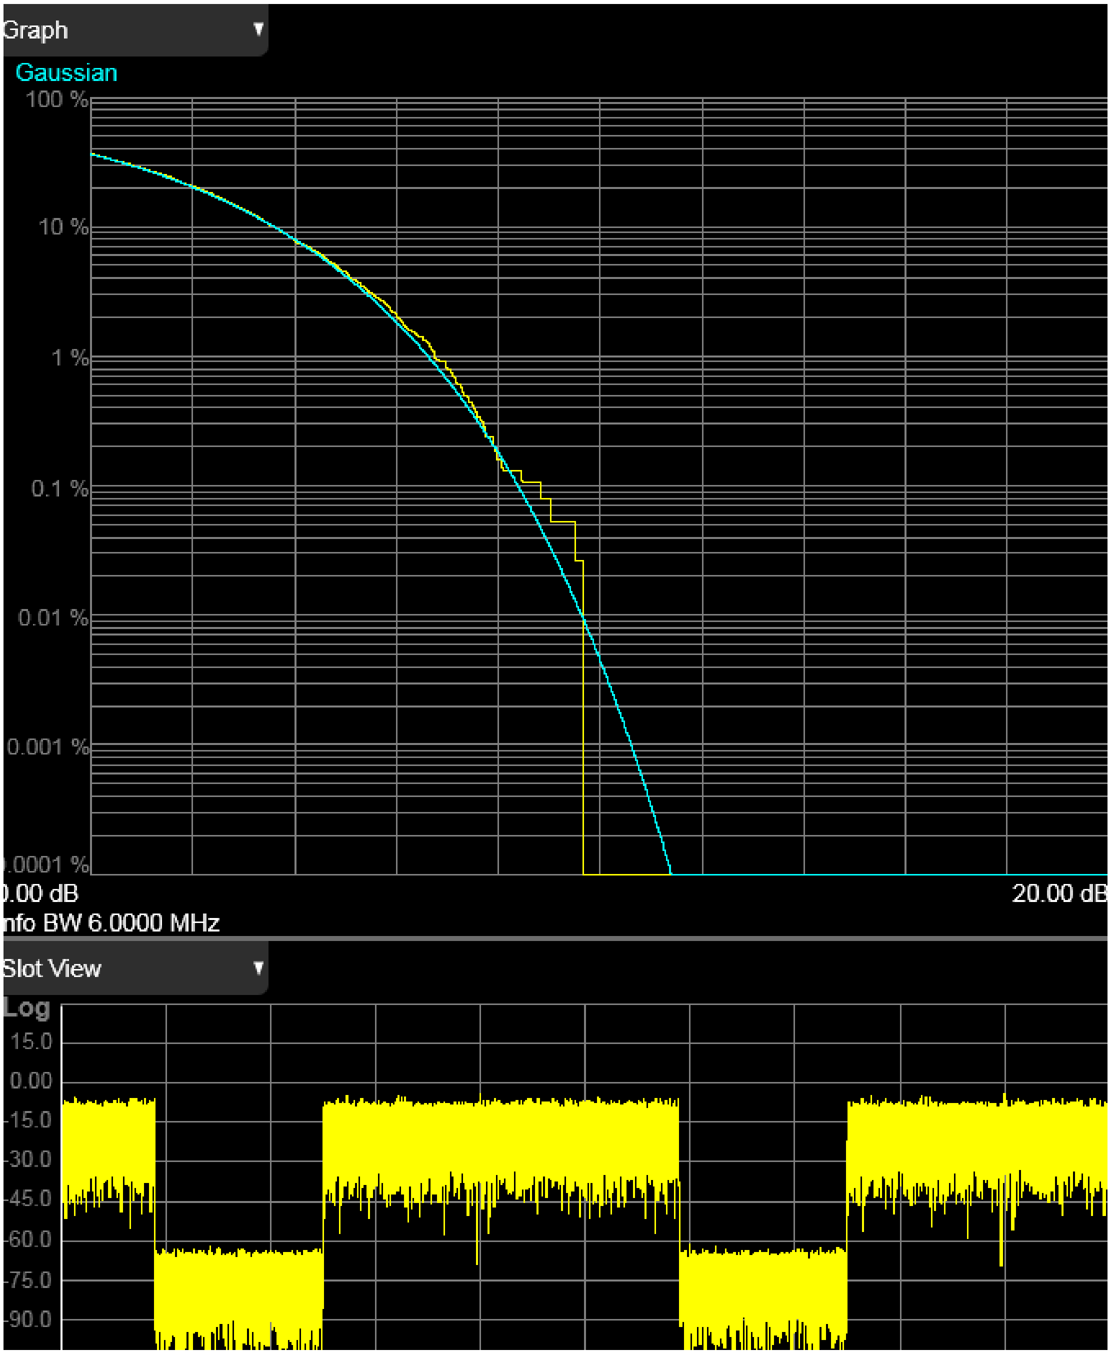
Displays Amplitude versus probability



Graph
Gaussian
100 %
10 %
1 %
0.1 %
0.01 %
0.001 %
0.0001 %
0.00 dB
20.00 dB
Info BW 5.0000 MHz

3.10.2.2 Slot

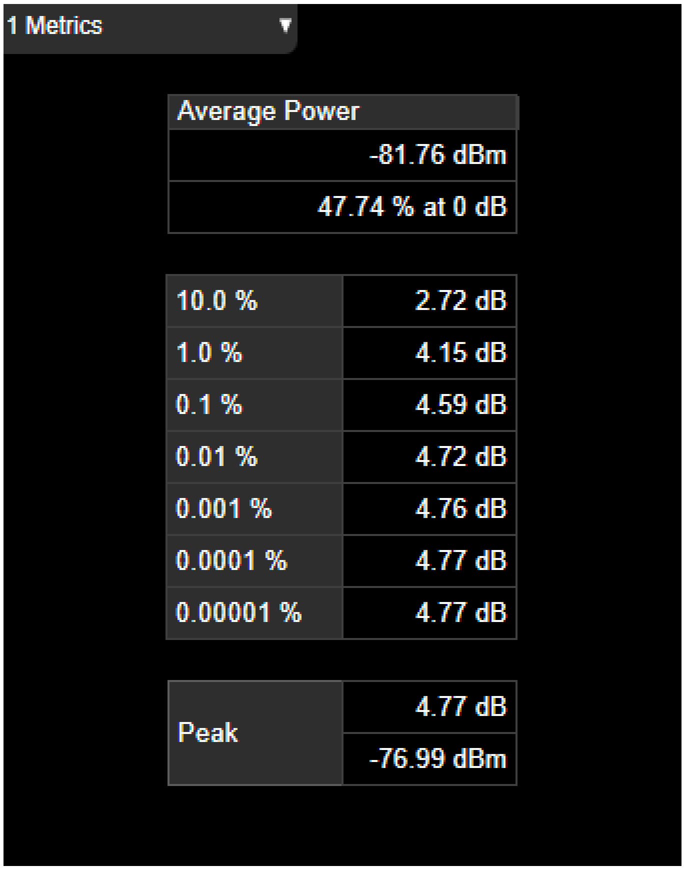
.



Only appears in LTEATDD and 5GNR Modes, and only in the View called "Slot" on page 1907

3.10.2.3 Metrics

Displays the textual results of the Power Stat CCDF measurement.



Average Power	
	-81.76 dBm
	47.74 % at 0 dB

10.0 %	2.72 dB
1.0 %	4.15 dB
0.1 %	4.59 dB
0.01 %	4.72 dB
0.001 %	4.76 dB
0.0001 %	4.77 dB
0.00001 %	4.77 dB

Peak	4.77 dB
	-76.99 dBm

For the list of n = 1 measurement results, see "Measurement Results for Power Stat CCDF" on page 1905 above.

Name	Unit	Corresponding Results	Results Item for n = 1	Explanation
Average Power	dBm	Average input power	1	99.99 dBm
Average Power	%	Probability at the average input power level	2	99.99 %
10.0%	dB	Power level that has 10 % of the power	3	99.99 dB
1.0%	dB	Power level that has 1 % of the power	4	99.99 dB
0.1%	dB	Power level that has 0.1 % of	5	99.99 dB

Name	**Unit**	**Corresponding Results**	**Results Item for n = 1**	**Explanation**
		the power		
0.01%	dB	Power level that has 0.01 % of the power	6	99.99 dB
0.001%	dB	Power level that has 0.001 % of the power	7	99.99 dB
0.0001%	dB	Power level that has 0.0001 % of the power	8	99.99 dB
0.00001%	dB	Power level that has 0.00001% of the power if "Minimum Probability" on page 1911 is PP7 (0.00001 %)	11	99.99 dB
Peak	dB	Peak power	9	99.99 dB
Peak	dBm	Not available via remote commands	n/a	99.99 dBm

3.10.3 Amplitude

Activates the **Amplitude** menu and selects **Reference Level** or **Reference Value** as the active function, depending on the measurement.

Some features in this menu apply to multiple measurements. Some other features apply only to specific measurements and their controls are blanked or grayed-out in measurements that do not support the feature.

3.10.3.1 Y Scale

Contains controls that pertain to the Y axis parameters of the measurement. These parameters control how data on the vertical (Y) axis is displayed and control instrument settings that affect the vertical axis.

Minimum Probability

Sets the minimum probability range.

Remote Command	`:CALCulate:PSTatistic:RANGe[:PROBability]:MINimum PP2 | … | PP7`
	For parameter values, see "Parameter Options" on page 1912 below
	`:CALCulate:PSTatistic:RANGe[:PROBability]:MINimum?`

Example	`:CALC:PST:RANG:MIN PP6` `:CALC:PST:RANG:MIN?`

Preset	PP6
State Saved	Yes
Range	1 % | 0.1 % | 0.01 % | 0.001 %| 0.0001 % | 0.00001 %

Parameter Options

Option	Value
PP2	1.0e-2 (1 %)
PP3	1.0e-3 (0.1 %)
PP4	1.0e-4 (0.01 %)
PP5	1.0e-5 (0.001 %)
PP6	1.0e-6 (0.0001 %)
PP7	1.0e-7 (0.00001 %)

3.10.3.2 Attenuation

Controls the attenuator functions and interactions between the attenuation system components.

There are two attenuator configurations in the X-Series. One is a Dual-Attenuator configuration consisting of a mechanical attenuator and an optional electronic attenuator. The other configuration uses a single attenuator with combined mechanical and electronic sections that controls all the attenuation functions. Different models in the X-Series come with different configurations.

- See "Dual-Attenuator Configurations" on page 1913
- See "Single-Attenuator Configuration" on page 1913

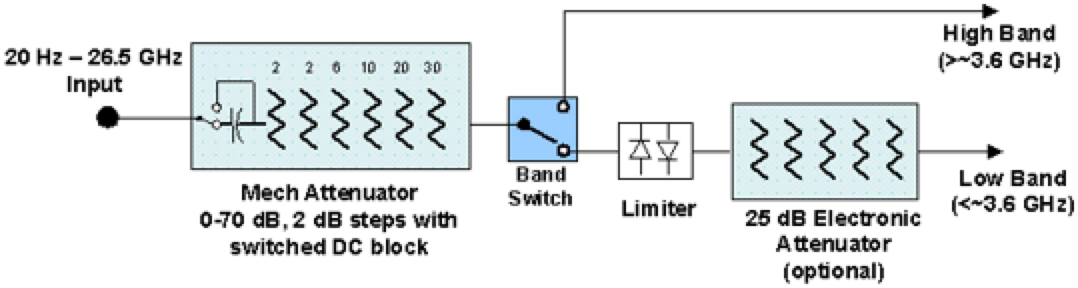
Most attenuation settings are the same for all measurements – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by **Meas Preset**.

Only available when the hardware set includes an input attenuator, which is typically only the case for Keysight’s benchtop instruments. For example, this tab does *not* appear in VXT models M9420A/10A/11A/15A/16A, M9410E/11E/15E/16E, nor in UXM. In UXM, all **Attenuation** and **Range** settings are disabled, as the expected input power level is handled by the Call Processing App that drives the DUT power control.

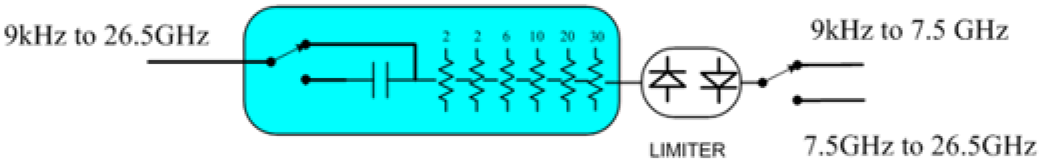
Dependencies	In measurements that support the I/Q inputs, unavailable when I/Q is the selected input. Replaced by the **Range** tab in that case

Dual-Attenuator Configurations

Configuration 1: Mechanical attenuator + optional electronic attenuator

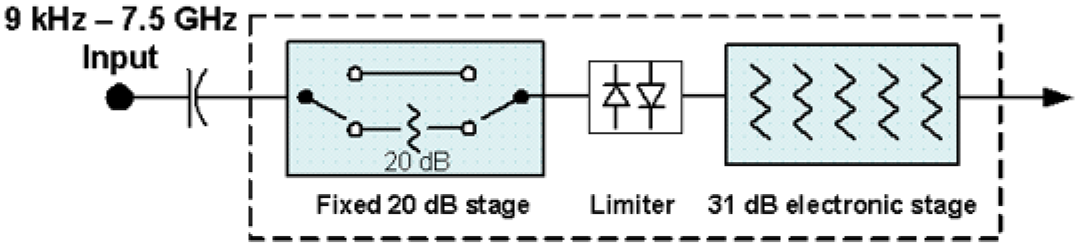


Configuration 2: Mechanical attenuator, no optional electronic attenuator

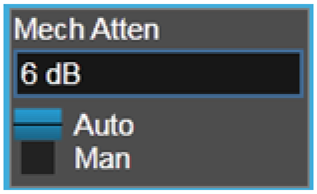


Note that Configuration 2 is not strictly speaking a dual-section attenuator, since there is no electronic section available. However, it behaves exactly like Configuration 1 without the Electronic Attenuator Option EA3, therefore for the sake of this document it is grouped into the “Dual-Attenuator” configuration.

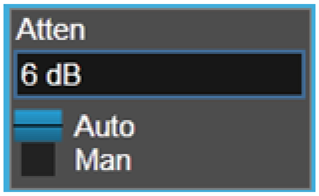
Single-Attenuator Configuration



You can tell which attenuator configuration you have by pressing the Attenuation tab, which (in most Modes) opens the Attenuation menu. If the first control in the Attenuation menu says **Mech Atten** you have the Dual-Attenuator configuration. If the first control says **Atten** you have the Single-Attenuator configuration.



Dual Attenuator



Single Attenuator

(Note that depending on the measurement, there may be no Auto/Man functionality on the Mech Atten control.)

In the Single-Attenuator configuration, you control the attenuation with a single control, as the fixed stage has only two states. In the Dual-Attenuator configuration, both stages have significant range, so you are given separate control of the mechanical and electronic attenuator stages.

When you have the Dual-Attenuator configuration, you may still have only a Single-Attenuator, because unless Option EA3 (the Electronic Attenuator option) is available, and you purchase it, you will have only the mechanical attenuator.

Full Range Atten

This control and **Attenuator Summary** only appear in N9041B, when the RF input is selected, the RF Input Port is set to RF Input 2, and the Full Range Attenuator is installed. The Full Range Attenuator adds a second input attenuator in front of RF Input 2, which enhances the protection and optimizes the performance of the extra internal mixers used by RF Input 2.

Remote Command	`[:SENSe]:POWer[:RF]:FRATten <rel_ampl>` `[:SENSe]:POWer[:RF]:FRATten?`
Example	`:POW:FRAT 14` `:POW:FRAT?`
Notes	When you enter an amplitude value that falls between valid values, the value will be incremented to the next smallest valid value
Dependencies	Only appears if input RF is selected, RF Input Port 2 is selected, and the Full Range Attenuator exists
Couplings	This value is never changed by any coupling, but other couplings use this value. See **Reference Level** and "Mech Atten" on page 2161 command descriptions
Preset	20 dB
State Saved	Saved in instrument state
Min	0 dB
Max	Only valid values are 0, 6, 14, 20 dB
Annotation	When the **Input** is **RF**, and the **Input Port** is **RF Input 2**, and the Full Range Attenuator is installed:

On the Meas Bar, the field “Atten” displays as follows:

- If the sweep is entirely < 50 GHz, the value shown after “Atten:” is equal to Mech Atten + Elec Atten + Full Range Atten
- If the sweep is entirely > 50 GHz, the value shown after “Atten:” is equal to Full Range Atten
- If the sweep straddles 50 GHz, the value shown after “Atten:” is preceded by the symbol “>=” and is equal to Full Range Atten

In the **Amplitude**, "Y Scale" on page 2153 menu, and the Atten **Meas Bar** dropdown menu panel, a summary is displayed as follows:

“Total Atten below 50 GHz” followed by the value of Full Range Atten + Mech Atten + Elec Atten

“Total Atten above 50 GHz” followed by the value of Full Range Atten

For example, if Mech Atten = 6 dB, Elec Atten = 4 dB, and Full Range Atten = 20 dB, the summary below is shown:

- Attenuator summary:
- Total Atten below 50 GHz: 30 dB
- Total Atten above 50 GHz: 20 dB

Mech Atten

Labeled **Mech Atten** in Dual-Attenuator models, and **Atten** in Single-Attenuator models. In the Dual-Attenuator configuration, this control only affects the mechanical attenuator.

Lets you modify the attenuation applied to the RF input signal path. This value is normally auto-coupled to **Ref Level**, "Internal Preamp" on page 2183 Gain, any External Gain that is entered, and **Max Mixer Level** (if available), as described in the table below.

See "Attenuator Configurations and Auto/Man" on page 1917

Remote Command	`[:SENSe]:POWer[:RF]:ATTenuation <rel_ampl>` `[:SENSe]:POWer[:RF]:ATTenuation?`
Example	`:POW:ATT 20` Dual-Attenuator configuration: sets the mechanical attenuator to 20 dB Single-Attenuator mode: sets the main attenuation to 20 dB (see below for definition of “main” attenuation) In either case, if the attenuator was in Auto, it is set to Manual
Dependencies	Some measurements do not support **Auto** setting of **Mech Atten**. In these measurements, the **Auto/Man** selection is not available, and the **Auto/Man** toggle function is not available In Dual-Attenuator configurations, when the electronic attenuator is enabled, the mechanical attenuator has no auto setting, and the **Auto/Man** toggle function is not available. The state of

	Auto/Man is remembered and restored when the electronic attenuator is once again disabled. This is described in more detail in "Elec Atten" on page 2164 See "Attenuator Configurations and Auto/Man" on page 1917 for more information on the **Auto/Man** functionality
Couplings	If the RF Input Port is the RF Input: – If the USB Preamp is connected to USB, use 0 dB for **Mech Atten** – Otherwise compute the auto-selected value of **Mech Atten** based on **Reference Level**, **Int Preamp**, **External Gain**, **Ref Level Offset**, **Max Mixer Level**, **µW Path Control** and **IF Gain** settings. Limit this value to be no less than 6 dB (total attenuation below 6 dB can never be chosen by Auto) – In N9041B, if the RF Input Port is RF Input 2, use the formula above and subtract the value of "Full Range Atten" on page 2160 from the result to determine the **Mech Atten**. Limit the value so that it is never lower than 0 dB and so that total attenuation, including **Full Range Atten**, is never less than 6 dB (total attenuation, including **Full Range Atten** below 6 dB, can never be chosen by Auto) In External Mixing and BBIQ, where the attenuator is not in the signal path, the attenuator setting changes as described above when **Mech Atten** is in **Auto**, but no changes are made to the actual attenuator hardware setting until the input is changed back to the RF Input For CXA-m with Option FSA (Fine-Step Attenuator or 2 dB steps), the FSA-like behavior is only available when the frequency setting is <= 7.5 GHz. So, when the frequency is changed from below 7.5 GHz to above 7.5 GHz, the attenuation setting changes to a multiple of 10 dB that is no smaller than the previous setting. For example, 4 dB attenuation changes to 10 dB
Preset	**Auto** The Auto value is 10 dB
State Saved	Saved in instrument state
Min	0 dB The attenuation set by this control cannot be decreased below 6 dB with the knob or step keys. Values below 6 dB must be directly entered from the keypad or via SCPI. This protects against setting a dangerously small attenuation value, which can put the instrument at risk of damage to input circuitry. If the current mechanical attenuation is below 6 dB, it can be increased with the knob and step keys, but not decreased
Max	CXA Option 503 or 507: 50 dB EXA: 60 dB All other models: 70 dB Note that in the Single-Attenuator configuration, the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB
Annotation	The current value for Total Atten is displayed in the Measurement Bar at the top of the display. A value appears for Electronic Attenuation only if the Electronic Attenuator is enabled. The annotation appears as: *Atten: <total> dB (e<elec>)* The e letter is in amber in Single-Attenuator configurations

For example:

Dual-Attenuator configuration:

Atten: 24 dB (e14)

Indicating the total attenuation is at 24 dB and the electronic attenuation is at 14 dB

Single-Attenuator configuration:

A: 24 dB (e14)

Indicating the total attenuation is at 24 dB and the "soft" attenuation is at 14 dB (see below for definition of "soft" attenuation)

When in Manual, a # sign appears in front of Atten in the annotation

Auto Function

Remote Command	`[:SENSe]:POWer[:RF]:ATTenuation:AUTO OFF | ON | 0 | 1` `[:SENSe]:POWer[:RF]:ATTenuation:AUTO?`
Example	Turn **Auto Mech Atten**ON: `:POW:ATT:AUTO ON`
Dependencies	`:POW:ATT:AUTO` is only available in measurements that support **Auto**, such as Swept SA
Preset	ON

Attenuator Configurations and Auto/Man

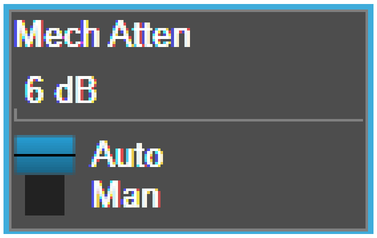
As described under "Attenuation" on page 2158, there are two distinct attenuator configurations available in the X-Series, the Single Attenuator and Dual-Attenuator configurations.

In Dual-Attenuator configurations, we have mechanical attenuation and electronic attenuation, and current total attenuation is the sum of electronic + mechanical attenuation.

In Single-Attenuator configurations, we refer to the attenuation set using "Mech Atten" on page 1915 (or `:POW:ATT`) as the "main" attenuation; and the attenuation that is set by `:POW:EATT` as the "soft" attenuation (`:POW:EATT` is honored even in the Single-Attenuator configuration, for compatibility purposes). Then current total attenuation is the sum of main + soft attenuation.

See "Elec Atten" on page 2164 for more about "soft" attenuation.

NOTE In some measurements, the **Mech Atten** control has an **Auto/Man** function. In these measurements, an **Auto/Man** switch is shown on the **Mech Atten** control:



Note that in configurations that include an Electronic Attenuator, this switch is only shown when the Electronic Attenuator is disabled.

In other measurements, **Mech Atten** has no **Auto/Man** function. In these measurements, no switch is shown on the **Mech Atten** control:

Mech Atten also appears with no switch, as above, in configurations that include an Electronic Attenuator but when the Electronic Attenuator is enabled.

Elec Atten

Controls the Electronic Attenuator in Dual-Attenuator configurations. Does not appear in Single-Attenuator configurations, because the control of both the mechanical and electronic stages of the Single-Attenuator is integrated into the single **Atten** control.

This control includes an **Enable/Disable** toggle switch; it is only possible to enter a value for the Electronic Attenuator when this switch is in the **Enable** position.

For more details of the Electronic Attenuator, see "More Information" on page 1920

Remote Command	`[:SENSe]:POWer[:RF]:EATTenuation <rel_ampl>` `[:SENSe]:POWer[:RF]:EATTenuation?`
Example	`:POW:EATT 10` `:POW:EATT?`
Notes	Electronic Attenuation’s specification is defined only when **Mech Atten** is 6 dB
Dependencies	Only appears in Dual-Attenuator models with an Electronic Attenuator installed and licensed. Does not appear in models with the Single-Attenuator configuration, because in the Single-Attenuator configuration there is no “electronic attenuator”; there is only a single integrated attenuator (which has both a mechanical and electronic stage). However, in the Single-Attenuator configuration, `EATT` SCPI commands are accepted for compatibility with other X-series instruments, and set a “soft” attenuation. The “soft” attenuation is treated as an addition to the “main” attenuation value set by the **Attenuation** control or `:POW:ATT`, and affects the total attenuation displayed on the **Attenuation**

	control and the Meas Bar The electronic attenuator, and the “soft” attenuation function provided in Single-Attenuator configurations, are unavailable above the low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model). If the low band range is from 0-3.6 GHz, and Stop Frequency of the instrument is > 3.6 GHz, then the **Enabled/Disabled** section of the **Elec Atten** control will be `OFF` and grayed-out If "Internal Preamp" on page 2183 is `ON` (that is, set to Low Band or Full), the electronic attenuator (and the “soft” attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the **Enabled/Disabled** section of the **Elec Atten** control will be `OFF` and grayed-out If either of the above is true, and the SCPI command is sent, an error indicating that the electronic attenuator is unavailable is returned If both the above are true, pressing the control generates error message -221, in other words, the frequency range lockout takes precedence If the electronic/soft Attenuator is enabled, then the **Stop Freq** of the instrument is limited to 3.6 GHz and **Internal Preamp** is unavailable If "LNA" on page 2185 is `ON`, the electronic attenuator (and the “soft” attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the **Enabled/Disabled** section of the **Elec Atten** control will be `OFF` and grayed-out. This coupling works in the following modes/measurements: – Channel Power, Occupied BW, ACP, SEM, Spurious Emissions, Power Stat CCDF measurements in all Modes – Transmit On|Off Power measurement in 5GNR Mode – Power vs. Time and Transmit Power measurement in GSM/EDGE Mode – Burst Power measurement in Spectrum Analyzer Mode The SCPI-only “soft” electronic attenuation for the single-attenuator configuration is not available in all measurements; in particular, it is not available in the Swept SA measurement
Couplings	Enabling and disabling the Electronic Attenuator affects the setting of the Mechanical Attenuator (in Dual-Attenuator configurations). This is described in more detail below and in "Mechanical Attenuator Transition Rules" on page 1920
Preset	0 dB
State Saved	Saved in instrument state
Min	0 dB
Max	Dual-Attenuator configuration: 24 dB Single-Attenuator configuration: the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB
Annotation	See Annotation under the **Mech Atten** control description

Auto Function

Remote Command	`[:SENSe]:POWer[:RF]:EATTenuation:STATe OFF | ON | 0 | 1` `[:SENSe]:POWer[:RF]:EATTenuation:STATe?`
Example	`:POW:EATT:STAT ON`

	`:POW:EATT:STAT?`
Preset	`OFF` (Disabled) for Swept SA measurement `ON` (Enabled) for all other measurements that support the electronic attenuator

NOTE

The maximum **Center Frequency** for Low Band can change based on the selected IFBW for measurements that support IFBW (for example, Waveform measurement across all Modes that support it). In certain models (such as N9042B & N9032B), IFBW values <= 40 MHz have a maximum Low Band frequency of 3.6 GHz, while 40 MHz < IFBW <= 1 GHz have a maximum of 3.3 GHz, and 1 GHz < IFBW <= 1.5 GHz have a maximum of 3.5 GHz. This frequency is reflected in the disabled message displayed for Electrical Attenuator. For N9032B and N9042B IFBW values > 1.5 GHz do not support a **Center Frequency** that can reach the Low Band maximum frequency. In these cases, the Electrical Attenuator will remain disabled no matter the Center Frequency.

More Information

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear. These advantages primarily aid in remote operation and are negligible for front panel use. See "Using the Electronic Attenuator: Pros and Cons" on page 1921 for a detailed discussion of the pros and cons of using the electronic attenuator.

For the Single-Attenuator configuration, for SCPI backwards compatibility, the “soft” attenuation feature replaces the Dual-Attenuator configuration’s electronic attenuator. All the same couplings and limitations apply. See "Attenuator Configurations and Auto/Man" on page 2163

Mechanical Attenuator Transition Rules

When the Electronic Attenuator is enabled, the Mechanical Attenuator transitions to a state that has no Auto function. Below are the rules for transitioning the Mechanical Attenuator. Note that the information below *only* applies to the Dual-Attenuator configurations, and *only* when the Electronic Attenuator is installed:

When the Electronic Attenuation is enabled from a disabled state:

- The Mechanical Attenuator is initialized to 10 dB (this is its optimal performance setting). You can then set it as desired with SCPI, numeric keypad, step keys, or knob, and it behaves as it normally would in manual mode
- The Auto/Man state of (Mech) Atten is saved
- The Auto/Man toggle on the (Mech) Atten control disappears, and the auto rules are disabled

- The Electronic Attenuator is set to 10 dB less than the previous value of the Mechanical Attenuator, within the limitation that it must stay within the range of 0 to 24 dB of attenuation

Examples in the Dual-Attenuator configuration:

- Mech Atten at 20 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 10 dB. New total attenuation equals the value before Elec Atten enabled
- Mech Atten at 0 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 0 dB. New total attenuation does not equal the value before Elec Atten enabled
- Mech Atten at 40 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 24 dB. New total attenuation does not equal the value before Elec Atten enabled

When the Electronic Attenuation is disabled from an enabled state:

- The Elec Atten control is grayed out
- The Auto/Man state of (Mech) Atten is restored
- If now in Auto, (Mech) Atten recouples
- If now in Man, (Mech) Atten is set to the value of total attenuation that existed before the Elec Atten was disabled. The resulting value is rounded up to the smallest value possible given the (Mech) Atten Step setting - (That is, 57 dB changes to 58 dB when (Mech) Atten Step is 2 dB)

Using the Electronic Attenuator: Pros and Cons

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear.

The “finer steps” advantage of the electronic attenuator is beneficial in optimizing the alignment of the instrument dynamic range to the signal power in the front panel as well as remote use. Thus, you can achieve improved relative signal measurement accuracy. Compared to a mechanical attenuator with 2 dB steps, the 1 dB resolution of the electronic attenuator only gives better resolution when the odd-decibel steps are used. Those odd-decibel steps are less accurately calibrated than the even-decibel steps, so one tradeoff for this superior relative accuracy is reduced absolute amplitude accuracy.

Another disadvantage of the electronic attenuator is that the spectrum analyzer loses its “Auto” setting, making operation less convenient.

Also, the relationship between the dynamic range specifications (TOI, SHI, compression, and noise) and instrument performance are less well-known with the

electrical attenuator. With the mechanical attenuator, TOI, SHI, and compression threshold levels increase dB-for-dB with increasing attenuation, and the noise floor does as well. With the electronic attenuator, there is an excess attenuation of about 1 to 3 dB between 0 and 3.6 GHz, making the effective TOI, SHI, and so forth, less well known. Excess attenuation is the actual attenuation relative to stated attenuation. Excess attenuation is accounted for in the instrument calibration.

Adjust Atten for Min Clipping

Sets the combination of mechanical and electronic attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an immediate action function, that is, it executes once, when the control is pressed.

The algorithms that are used for the adjustment are documented under "Pre-Adjust for Min Clipping" on page 2168.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMediate`
Example	`:POW:RANG:OPT IMM`
Notes	Executing **Adjust Atten for Min Clipping** initiates the measurement
Dependencies	Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes

Adjust Atten

Allows you to select;

- Electric attenuator only
- Combination of Electric attenuator and Mechanical attenuator

when `[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMediate` is executed.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:OPTimize:TYPE EONLy | COMBined` `[:SENSe]:POWer[:RF]:RANGe:OPTimize:TYPE?`
Example	`:POW:RANG:OPT:TYPE EONL` `:POW:RANG:OPT:TYPE?`
Dependencies	Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes
Preset	`COMBined`
State Saved	Saved in instrument state

Pre-Adjust for Min Clipping

If this function is `ON`, it applies the adjustment described under "Adjust Atten for Min Clipping" on page 2167 each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

In Dual-Attenuator models, you can set **Elec+Mech Atten**, in which case both attenuators participate in the autoranging, or **Elec Atten Only**, in which case the mechanical attenuator does not participate in the autoranging. This latter case results in less wear on the mechanical attenuator and is usually faster.

See "Adjustment Algorithm" on page 1924

Selection	SCPI	Note
Off	`OFF`	This is the default setting
On	`ON`	Available in Single-Attenuator instruments. For compatibility with models that do not have an input attenuator, the `ON` parameter is supported and mapped to `COMBined`
Elec Atten Only	`ELECtrical`	Selects only the electric attenuator to participate in auto ranging. This offers less wear on the mechanical attenuator and is usually faster
Elec+Mech Atten	`COMBined`	In Dual-Attenuator models, this selects both attenuators to participate in the autoranging

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation OFF | ON | ELECtrical | COMBined` `[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation?`
Example	`:POW:RANG:OPT:ATT OFF` `:POW:RANG:OPT:ATT?`
Notes	The parameter option `ELECtrical` sets this function to `ON` in Single-Attenuator models The parameter option `COMBined` is mapped to `ELECtrical` in Single-Attenuator models. If you send `COMBined`, it sets the function to `ON` and returns `ELEC` to a query For SCPI compatibility with models that do not have an input attenuator, the `ON` parameter is honored and mapped to `COMBined`
Dependencies	Only appears in Dual-Attenuator models with an Electronic Attenuator installed In instruments with Dual-Attenuator model, when "Elec Atten" on page 2164 is `OFF` or grayed-out, "Pre-Adjust for Min Clipping" on page 1923 is grayed-out Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes
Preset	`OFF` when Elec Atten is Disabled at preset, otherwise `ELEC`
State Saved	Saved in instrument state

Range	Dual-Attenuator models:	Off | Elec Atten Only | Mech + Elec Atten
	Single-Attenuator models:	Off | On

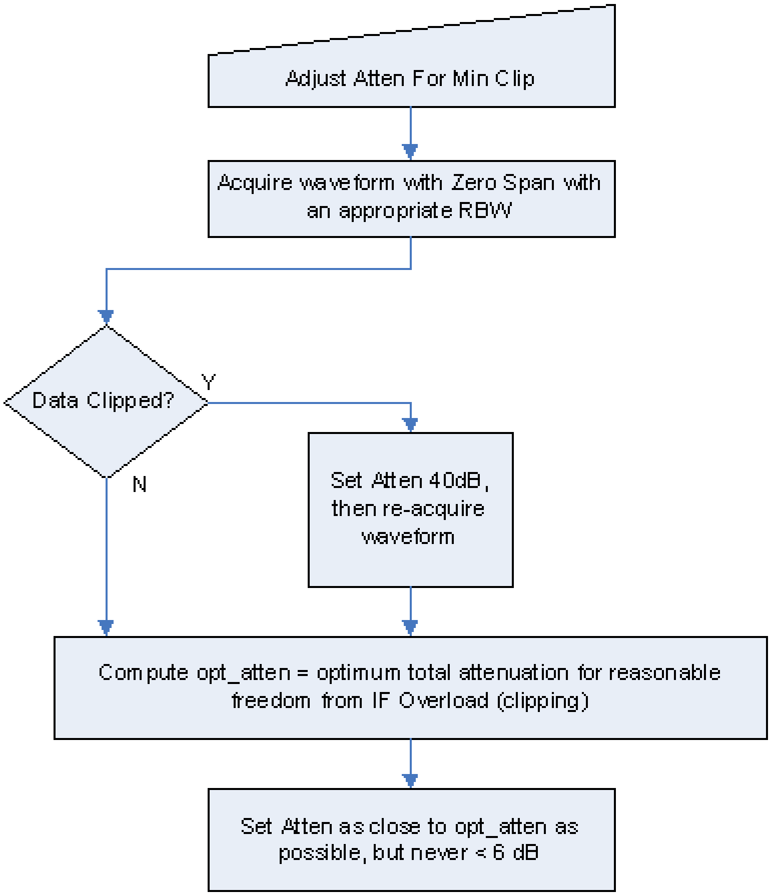
Backwards Compatibility Command

Notes	`ON` aliases to "Elec Atten Only" (`:POW:RANG:OPT:ATT ELEC`) `OFF` aliases to "Off" (`:POW:RANG:OPT:ATT OFF`) `:POW:RANG:AUTO?` returns true if `:POW:RANG:OPT:ATT` is not `OFF`
Backwards Compatibility SCPI	`[:SENSe]:POWer[:RF]:RANGe:AUTO ON | OFF | 1 | 0` `[:SENSe]:POWer[:RF]:RANGe:AUTO?`

Adjustment Algorithm

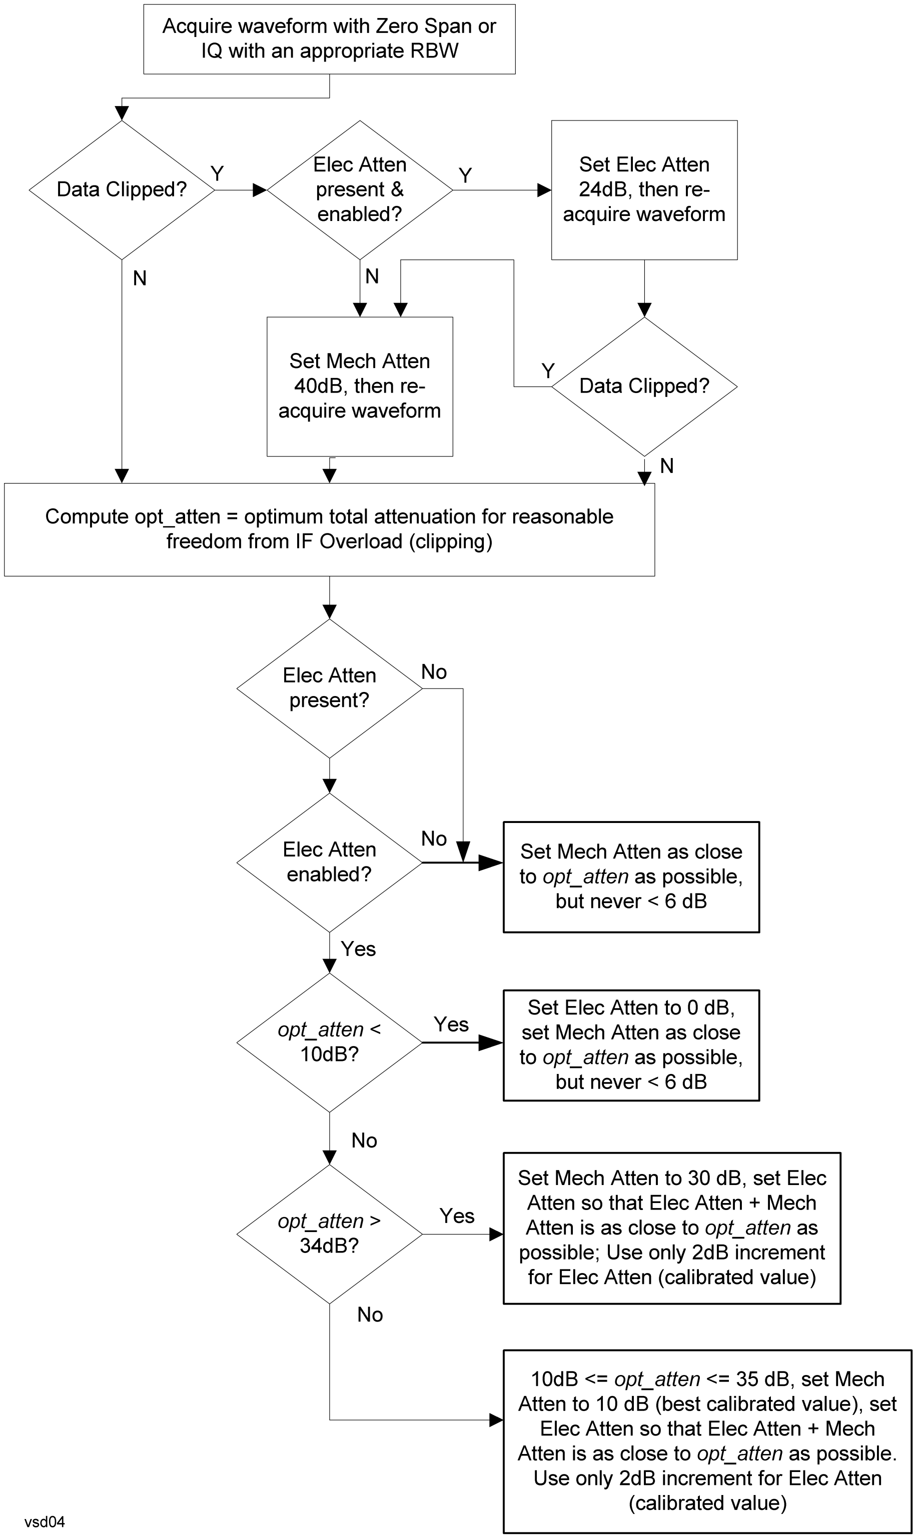
The algorithms for the adjustment are documented below:

Single-Attenuator Models



Dual-Attenuator models

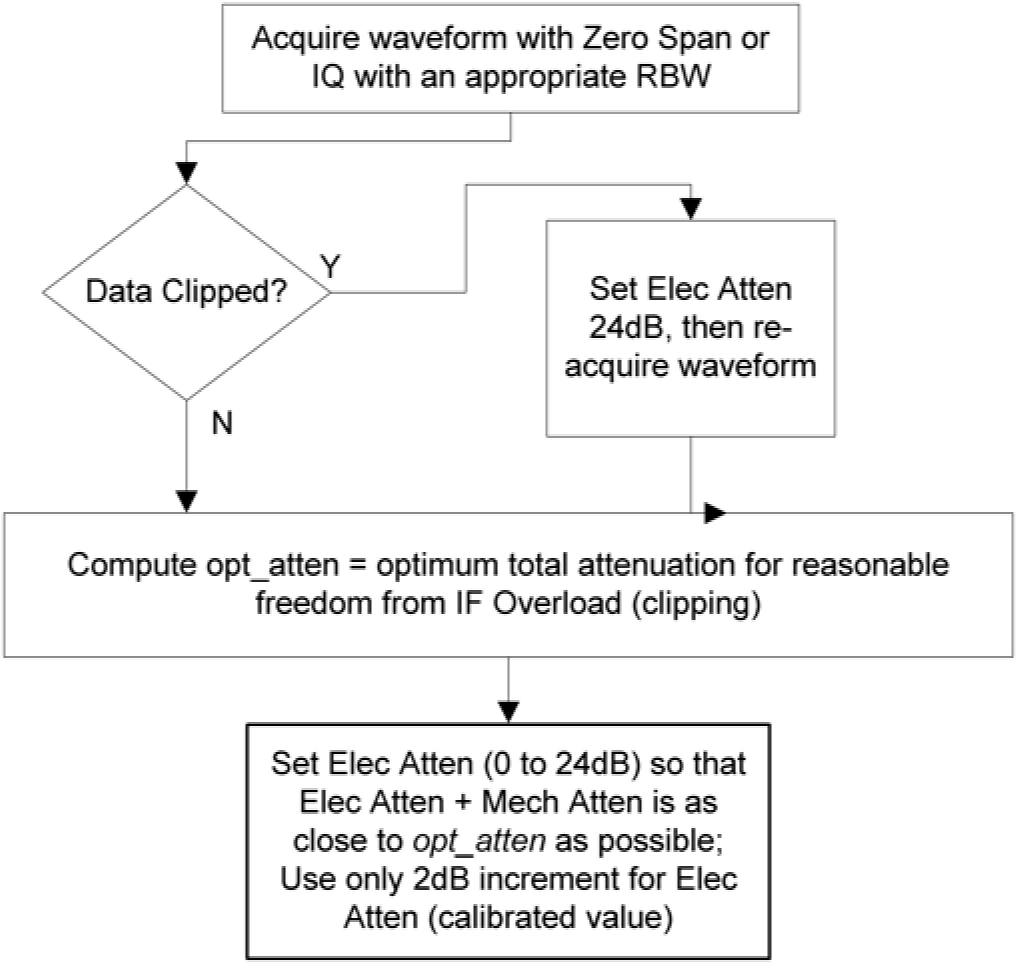
"Adjust Atten for Min Clipping" on page 2167 or "Pre-Adjust for Min Clipping" on page 1923 selection is Mech + Elec Atten:



Acquire waveform with Zero Span or IQ with an appropriate RBW
Data Clipped?
Y
Elec Atten present & enabled?
Y
Set Elec Atten 24dB, then re-acquire waveform
N
N
Set Mech Atten 40dB, then re-acquire waveform
Y
Data Clipped?
N
Compute opt_atten = optimum total attenuation for reasonable freedom from IF Overload (clipping)
Elec Atten present?
No
Elec Atten enabled?
No
Set Mech Atten as close to *opt_atten* as possible, but never < 6 dB
Yes
opt_atten < 10dB?
Yes
Set Elec Atten to 0 dB, set Mech Atten as close to *opt_atten* as possible, but never < 6 dB
No
opt_atten > 34dB?
Yes
Set Mech Atten to 30 dB, set Elec Atten so that Elec Atten + Mech Atten is as close to *opt_atten* as possible; Use only 2dB increment for Elec Atten (calibrated value)
No
10dB <= *opt_atten* <= 35 dB, set Mech Atten to 10 dB (best calibrated value), set Elec Atten so that Elec Atten + Mech Atten is as close to *opt_atten* as possible. Use only 2dB increment for Elec Atten (calibrated value)
vsd04

"Pre-Adjust for Min Clipping" on page 1923 selection is Elec Only.

Note that the **Mech Atten** value is not adjusted, and the value previously set is used. Therefore, there is a case that IF Overload is still observed depending on the input signal level and the Mech Atten setting.



Mech Atten Step

Controls the step size used when making adjustments to the input attenuation.

Labeled **Mech Atten Step** in Dual-Attenuator models and **Atten Step** in Single-Attenuator models. In the Dual-Attenuator configuration, only affects the step size of the mechanical attenuator.

Remote Command	`[:SENSe]:POWer[:RF]:ATTenuation:STEP[:INCRement] 10 dB | 2 dB`

	`[:SENSe]:POWer[:RF]:ATTenuation:STEP[:INCRement]?`
Example	`:POW:ATT:STEP 2` `:POW:ATT:STEP?`
Notes	Has a toggle control on the front panel, but takes a specific value (in dB) when used remotely. The only valid values are 2 and 10
Dependencies	Blanked in EXA, CXA and CXA-m if option FSA (2 dB steps) is not present. If blanked, attempts to set it via SCPI yield an error
Couplings	When the attenuation step size changes, the current mechanical attenuation value is adjusted (if necessary) to be quantized to the new step size. That is, if step is set to 10 dB, mech atten is increased if necessary so it is a multiple of 10 dB
Preset	EXA, CXA and CXA-m: 10 dB (2 dB with option FSA) All other models: 2 dB
State Saved	Saved in instrument state

3.10.3.3 Range (Baseband Input models)

Only available when Option BBA is present (I/Q Baseband Inputs), the current measurement supports option BBA, and I/Q is the selected input. In these cases, replaces the **Attenuation** tab.

Each input channel (I and Q) has four internal gain ranges. The maximum allowed voltage in each gain range is slightly more than the nominal value, so the break point between ranges is a few millivolts higher than the nominal (setting a peak voltage of 0.502 mV will still map to the 0.5 V Peak range).

Gain Setting	Volts RMS	Volts Peak	Volts Peak - Peak	dBm (50Ω)	Break Point
0 dB	0.7071	1.0	2.0	10	n/a
6 dB	0.3536	0.5	1.0	4	0.502 V Peak
12 dB	0.1768	0.25	0.5	-2	0.252 V Peak
18 dB	0.0884	0.125	0.25	-8	0.127 V Peak

Dependencies	Available only when the selected input is I/Q. If the current measurement does not support baseband inputs, an error will be displayed: “No result; Meas invalid with I/Q inputs”
State Saved	No

Range Auto/Man

The **Auto** setting for **Range** causes the range to be set based on the Y Scale settings. When **Range** is **Auto**, the I & Q Range are set based on the top of the Y Scale when the Y scale is in dB units (for example, power), or to the max(abs(top), abs(bottom)) when the Y scale reference is not at the top of the screen.

Not all measurements support **Range Auto/Man**. If **Auto** is not supported in the current measurement, this control is grayed-out, displaying **Man**, and `MAN` is returned to a SCPI query, but this does *not* change the Auto/Man setting for **Range**. When you switch to a measurement that supports **Auto**, it goes back to **Auto** if it was previously in **Auto** mode.

Remote Command	`[:SENSe]:VOLTage:IQ:RANGe:AUTO OFF | ON | 0 | 1` `[:SENSe]:VOLTage:IQ:RANGe:AUTO?`

Example	Put the I Range and Q Range in manual
	`:VOLT:IQ:RANG:AUTO OFF`
	`:VOLT:IQ:RANG:AUTO?`

Dependencies	If **Auto** is not supported, sending the SCPI command generates an error
Couplings	When in **Auto**, both I Range and Q Range are set to the same value, computed as follows: Maximum absolute value is computed for the Y Scale. The top and bottom of the graph are computed based on Ref Value, Scale/Div, and Ref Position. Formula: YMax = max(abs(top), abs(bottom)) The I Range and Q Range are then set to YMax
Preset	`ON`
State Saved	Saved in instrument state
Annotation	When in Man, the Range annotation is preceded by "#"

This is an alternate form of the command to match the `POWer` form of the I Range and Q Range SCPI.

Remote Command	`[:SENSe]:POWer:IQ:RANGe:AUTO OFF | ON | 0 | 1` `[:SENSe]:POWer:IQ:RANGe:AUTO?`

Example	Put the I Range and Q Range in manual
	`:POW:IQ:RANG:AUTO OFF`
	`:POW:IQ:RANG:AUTO?`

Notes	`:POW:IQ:RANG:AUTO` is an alternate form of `:VOLT:IQ:RANG:AUTO`, to maintain consistency with I Range and Q Range, which support both the `POWer` and `VOLTage` forms of the command
Preset	`ON`
Range	Auto | Man

I Range

The internal gain range for the I channel when the Input Path is I Only or I and I/Q. Used for both the I and Q channels when the Input Path is I+jQ.

Remote Command	`[:SENSe]:VOLTage:IQ[:I]:RANGe[:UPPer] <voltage>` `[:SENSe]:VOLTage:IQ[:I]:RANGe[:UPPer]?`
Example	Set the I Range to 0.5 V Peak `:VOLT:IQ:RANG 0.5 V`

	`:VOLT:IQ:RANG?`
Notes	The numeric entries are mapped to the smallest gain range whose break point is greater than or equal to the value, or 1 V Peak if the value is greater than 1 V
Couplings	When "Q Same as I" on page 2177 is On, the **I Range** value will be copied to "Q Range" on page 2176 Changing the value also sets Range = Man
Preset	Complex `SPECtrum` Measurement: 0.5 V Peak All others: 1 V Peak
State Saved	Saved in instrument state
Range	1 V Peak (10 dBm @ 50 Ω) | 0.5 V Peak (4 dBm @ 50Ω) | 0.25 V Peak (-2 dBm @ 50Ω) | 0.125 V Peak (-8 dBm @ 50Ω)
Min	0.125 V
Max	1 V
Annotation	The Range annotation replaces the RF Input context's "Atten" annotation "Rng: <I Range>". When Range = Man the annotation is preceded by "#" The I Range is not annotated in Input Path Q Only. When I Range and Q Range are the same, the annotation is "Rng: <Range>". When I Range and Q Range are different and the Input Path is Ind I/Q, the annotation is "Rng: <I Range>, <Q Range>" and "Peak" is removed from the text. Examples: "Rng: 1 V Peak" the I Range is 1 V Peak "Rng: 1 V, 0.5 V " the I Range is 1 V Peak and the Q Range is 0.5 V Peak

This is an alternate form of the command to allow entry as a power.

Remote Command	`[:SENSe]:POWer:IQ[:I]:RANGe[:UPPer] <ampl>` `[:SENSe]:POWer:IQ[:I]:RANGe[:UPPer]?`

Example	Set the I Range to 0.5 V Peak when Reference Z is 50 Ω, and to 1.0 V Peak when Reference Z is 75 **Ω**
	`:POW:IQ:RANG 4 dBm`
	`:POW:IQ:RANG?`

Notes	The `POWer` form of the command is provided for convenience. It maps to the same underlying gain range parameter as the `VOLTage` form The Reference Z (not the I channel Input Z) is used to convert the power to peak voltage, which is then used to set the I Range as with the `VOLTage` form of the command. The power values of the 4 range states (1V Peak, 0.5V Peak, 0.25V Peak, and 0.125V Peak) will vary with Reference Z. Here are some examples: 50 Ω: 10, 4, -2, -8 75 Ω: 8.2, 2.2, -3.8, -9.8 600 Ω: -0.8, -6.8, -12.8, -18.9
Preset	10.0 dBm
Range	-20 dBm to 10 dBm
Min	-20 dBm
Max	10 dBm

Q Range

The internal gain range for the Q channel. **Q Range** only applies to Input Path Q Only and Ind I/Q. For input I+jQ "I Range" on page 2174 determines both I and Q channel range settings.

Remote Command	`[:SENSe]:VOLTage:IQ:Q:RANGe[:UPPer] <voltage>` `[:SENSe]:VOLTage:IQ:Q:RANGe[:UPPer]?`

Example	Set the Q Range to 0.5 V Peak:
	`:VOLT:IQ:Q:RANG 0.5 V`
	`:VOLT:IQ:Q:RANG?`

Notes	The numeric entries are mapped to the smallest gain range whose break point is greater than or equal to the value, or 1 V Peak if the value is greater than 1 V **Q Range** is only used for Input Path Q Only and Ind I/Q. For input I+jQ, "I Range" on page 2174 determines both I and Q channel range settings
Couplings	When "Q Same as I" on page 2177 is On, the "I Range" on page 2174 value is copied to **Q Range** and the range value keys are disabled Changing the value also sets Range = Man
Preset	1 V Peak
State Saved	Saved in instrument state
Range	1 V Peak (10 dBm @ 50Ω) | 0.5 V Peak (4 dBm @ 50Ω) | 0.25 V Peak (-2 dBm @ 50Ω) | 0.125 V Peak (-8 dBm @ 50Ω)
Min	0.125 V
Max	1 V
Annotation	The Range annotation replaces the RF Input context's "Atten" annotation "Rng: <Q Range>". When Range = Man the annotation is preceded by "#" The Q Range is not annotated in Input Path I Only or I+jQ. When I Range and Q Range are the same, the annotation is "Rng: <Range>". When I Range and Q Range are different and the Input Path is Ind I/Q, the annotation is "Rng: <I Range>, <Q Range>" and "Peak" is removed from the text. Examples: "Rng: 1 V Peak" the Q Range is 1 V Peak "Rng: 1 V, 0.5 V " the I Range is 1 V Peak and the Q Range is 0.5 V Peak

This is an alternate form of the command to allow entry as a power.

Remote Command	`[:SENSe]:POWer:IQ:Q:RANGe[:UPPer] <ampl>` `[:SENSe]:POWer:IQ:Q:RANGe[:UPPer]?`

Example	Sets the Q Range to 0.5 V Peak when Reference Z is 50 Ω , and to 1.0 V Peak when Reference Z is 75 Ω :
	`:POW:IQ:Q:RANG 4 dBm`
	`:POW:IQ:Q:RANG?`

Notes	The `POWer` form of the command is provided for convenience. It maps to the same underlying gain

	range parameter as the `VOLTage` form of the command The Reference Z (not the Q channel Input Z) is used to convert the power to peak voltage, which is then used to set the Q Range as with the `VOLTage` form of the command. The power values of the 4 range states (1V Peak, 0.5V Peak, 0.25V Peak, and 0.125V Peak) will vary with Reference Z. Here are some examples: 50 Ω: 10, 4, -2, -8 75 Ω: 8.2, 2.2, -3.8, -9.8 600 Ω: -0.8, -6.8, -12.8, -18.9
Preset	10.0 dBm
Range	-20 dBm to 10 dBm
Min	-20 dBm
Max	10 dBm

Q Same as I

Many, but not all, usages require the I and Q channels to have an identical setup. To simplify channel setup, **Q Same as I** causes the Q channel range to be mirrored from the I channel. That way, you only need to set up one channel (the I channel). The I channel values are copied to the Q channel, so at the time **Q Same as I** is Off, the I and Q channel setups will be identical.

Remote Command	`[:SENSe]:VOLTage|POWer:IQ:MIRRored OFF | ON | 0 | 1` `[:SENSe]:VOLTage|POWer:IQ:MIRRored?`

Example	Turn off the mirroring of I Range to Q Range
	`:VOLT:IQ:MIRR OFF`
	`:POW:IQ:MIRR OFF`

Couplings	When `ON`, the "I Range" on page 2174 value is mirrored (copied) to the "Q Range" on page 2176
Preset	`ON`
State Saved	Saved in instrument state
Range	`OFF|ON`

3.10.3.4 Range (Non-attenuator models)

Only available for Keysight’s modular signal analyzers and certain other Keysight products, such as VXT and M941xE.

State Saved	No

Range

Represents the amplitude of the largest sinusoidal signal that could be present within the IF without being clipped by the ADC. For signals with high peak-to-average ratios, the range may need to exceed the rms signal power by a significant amount to avoid clipping.

This is a measurement global setting.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe <real>` `[:SENSe]:POWer[:RF]:RANGe?`
Example	`:POW:RANG 10 dBm` `:POW:RANG?`
Notes	The MIN and MAX values are affected by the External Gain parameters, and by the **Center Frequency** The hardware compensates for frequency response and alters the Range setting
Preset	0 dBm
State Saved	Yes
Min/Max	–/+100
Annotation	Meas Bar

Adjust Range for Min Clipping

Sets the combination of attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an "immediate action" function, that is, it executes once, when the key is pressed.

This key does not appear in measurements that do not support this functionality.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMediate`
Notes	Executing Adjust Range for Min Clipping initiates the measurement
Dependencies	Does not appear in the Swept SA and Monitor Spectrum measurements

Pre-Adjust for Min Clipping

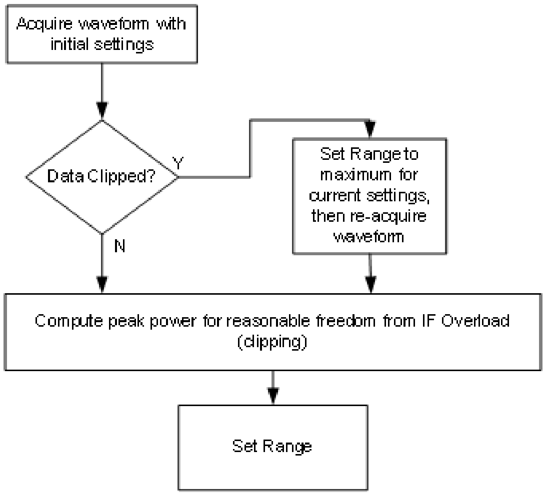
If this function is ON, it applies the adjustment described under Adjust Range For Min Clipping each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation OFF | ON | ELECtrical | COMBined`

	`[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation?`
Notes	Because there is no attenuator control available in these models, the control displays only `ON` and `OFF` choices. However, for SCPI compatibility with other platforms, all three parameters (`ELECtrical`, `COMBined`, and `ON`) are honored and all are mapped to `ELECtrical`, so if any of these three parameters is sent, a subsequent query will return `ELEC`
Dependencies	Does not appear in the Swept SA and Monitor Spectrum measurements
Preset	`OFF` for Swept SA measurement; `ON` for all other measurements that support **Pre-Adjust for Min Clipping**
State Saved	Saved in instrument state

Adjustment Algorithm

The algorithm for the adjustment is documented below:



Peak-to-Average Ratio

Used with "Range (Non-attenuator models)" on page 2177 to optimize the level control in the instrument. The value is the ratio, in dB, of the peak power to the average power of the signal to be measured. A ratio of 0 should be used for sinusoidal signals; for 802.11g OFDM signals use 9 dB.

All Modes show the current value of Peak-to-Average ratio on the control. However, some Modes do not permit changing the value. In these situations, the control is grayed-out.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:PARatio <real>` `[:SENSe]:POWer[:RF]:RANGe:PARatio?`
Example	`:POW:RANG:PAR 12 dB`
Notes	In some Modes, this parameter is read-only; meaning the value will appear on the control and query

	via SCPI, but is not changeable. In such applications the control is grayed-out. Attempts to change the value via SCPI are ignored, but no error message is generated	
Dependencies	Does not appear in Spectrum Analyzer Mode	
Preset	VXT Models M9410A/11A	0 dB
	All Others	10 dB
State Saved	Saved in instrument state	
Min	0 dB	
Max	VXT Models M9410A/11A	50 dB
	All Others	20 dB

Mixer Lvl Offset

This is an advanced setting to adjust target Range at the input mixer, which in turn affects the signal level in the instrument’s IF. This setting can be used when additional optimization is needed after setting "Peak-to-Average Ratio" on page 2179. Positive values of offset optimize noise performance over distortion, negative values optimize distortion performance over noise.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet <real>` `[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet?`	
Example	`:POW:RANG:MIX:OFFS -5 dB`	
Preset	0 dB	
State Saved	Saved in instrument state	
Min	VXT Models M9410A/11A	-34 dB
	All Others	-35 dB
Max	30 dB	

3.10.3.5 Signal Path

Contains controls that pertain to the routing of the signal through the frontend of the instrument.

In general, only appears in instruments whose hardware supports this signal routing. For example, this tab does not appear in many of the modular instrument products, including VXT Model M9420A, or UXM.

This tab *does* appear in VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E, because "Software Preselection" on page 2195 is under this tab, and VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E implement a version of Software Preselection.

Presel Center

Adjusts the centering of the preselector filter to optimize the amplitude accuracy at the frequency of the selected marker. If the selected marker is not on when **Presel Center** is pressed, the instrument turns on the selected marker, performs a peak search, and then performs centering on the marker's center frequency. If the selected marker is already on and between the start and stop frequencies of the instrument, the instrument performs the preselector calibration on that marker's frequency. If the selected marker is already on, but outside the frequency range between **Start Freq** and **Stop Freq**, the instrument first performs a peak search, and then performs centering on the marker's center frequency.

The value displayed on "Preselector Adjust" on page 2182 changes to reflect the new preselector tuning.

Certain considerations should be observed to ensure proper operation, as detailed in "Proper Preselector Operation" on page 1937.

Remote Command	`[:SENSe]:POWer[:RF]:PCENter`
Example	`:POW:PCEN`
Notes	The rules outlined above under the control description apply for the remote command as well as the key. The result of the command depends on marker position, etc. Any message generated by the control press is also generated in response to the remote command
Dependencies	Does not appear in CXA-m, nor in VXT Models M9410A/11A/15A/16A, M9410E/11E/15E/16E Grayed-out if the microwave preselector is off – If the selected marker's frequency is below Band 1, an advisory message is generated "Preselector not used in this frequency range" and no action is taken – Grayed-out if entirely in Band 0, that is, if **Stop Freq** is below about 3.6 GHz Grayed-out if entirely above 50 GHz, that is, if **Start Freq** is above 50 GHz – Blanked in models that do not include a preselector, such as Option 503. If the remote command is sent in these instruments, accepted without error, and the query always returns 0 – Grayed-out in the **Spectrogram** View
Couplings	The active marker position determines where the centering will be attempted If the instrument is in a measurement such as averaging when centering is initiated, the act of centering the preselector restarts averaging, but the first average trace will not be taken until the centering is completed The offset applied to do the centering appears in "Preselector Adjust" on page 2182
Status Bits/OPC	When centering the preselector, `*OPC` does not return true until the process is complete and a

dependencies	subsequent measurement has completed, nor are results returned in response to `:READ` or `:MEASure` queries The `Measuring` bit remains set (true) while this command is operating, and does not go false until the subsequent sweep/measurement has completed

Proper Preselector Operation

Certain considerations should be observed to ensure proper operation:

1. If the selected marker is **Off**, the instrument turns on a marker, performs a peak search, and adjusts the preselector using the selected marker’s frequency. It uses the "highest peak" peak search method unqualified by threshold or excursion, so that there is no chance of a ‘no peak found’ error. It continues with that peak, even if it is the peak of just noise. Therefore, for this operation to work properly, there should be a signal on-screen in a preselected range for the peak search to find
2. If the selected marker is already **On**, the instrument attempts the centering at that marker’s frequency. There is no preselector for signals below about 3.6 GHz, so if the marker is on a signal below 3.6 GHz, no centering is attempted, and an advisory message is generated
3. In some models, the preselector can be bypassed. If it is bypassed, no centering is attempted in that range and a message is generated

Preselector Adjust

Lets you manually adjust the preselector filter frequency to optimize its response to the signal of interest. Only available when "Presel Center" on page 2181 is available.

For general purpose signal analysis, using **Presel Center** is recommended. Centering the filter minimizes the impact of long-term preselector drift. **Preselector Adjust** can be used instead to manually optimize the preselector. One application of manual optimization would be to peak the preselector response, which both optimizes the signal-to-noise ratio and minimizes amplitude variations due to small (short-term) preselector drifting.

When **Presel Center** is performed, the offset applied to do the centering becomes the new value of **Preselector Adjust**.

Remote Command	`[:SENSe]:POWer[:RF]:PADJust <freq>` `[:SENSe]:POWer[:RF]:PADJust?`
Example	`:POW:PADJ 100KHz` `:POW:PADJ?`
Notes	The value on the control is displayed to 0.1 MHz resolution
Dependencies	– Does not appear in CXA-m

	– Does not appear in VXT Models M9410A/11A/15A/16A – Does not appear in M9410E/11E/15E/16E – Grayed-out if microwave preselector is off – Grayed-out if entirely in Band 0, that is, if Stop Freq is lower than about 3.6 GHz – Grayed-out if entirely above 50 GHz, that is, if Start Freq is higher than 50 GHz – Blank in models that do not include a preselector, such as Option 503. If the command is sent in these instruments, it is accepted without error, and the query always returns 0 – Grayed-out in the **Spectrogram** View
Preset	0 MHz
State Saved	The **Preselector Adjust** value set by "Presel Center" on page 2181, or by manually adjusting **Preselector Adjust** Not saved in instrument state, and does not survive a Preset or power cycle
Min/Max	–/+500 MHz
Backwards Compatibility SCPI	`[:SENSe]:POWer[:RF]:MW:PADJust` `[:SENSe]:POWer[:RF]:MMW:PADJust`

Backwards Compatibility Command

Notes	The command has no effect, and the query always returns `MWAVe`
Backwards Compatibility SCPI	`[:SENSe]:POWer[:RF]:PADJust:PRESelector MWAVe | MMWave | EXTernal` `[:SENSe]:POWer[:RF]:PADJust:PRESelector?`

Internal Preamp

Accesses a menu of controls for the internal preamps. Turning on the preamp gives a better noise figure, but a poorer inter-modulation distortion (TOI) to noise floor dynamic range. You can optimize this setting for your measurement.

The instrument takes the preamp gain into account as it sweeps. If you sweep outside of the range of the preamp, the instrument will also account for that. The displayed result always reflects the correct gain.

For some measurements, when the preamp is on and any part of the displayed frequency range is below the lowest frequency for which the preamp has specifications, a warning condition message appears in the status line. For example, for a preamp with a 9 kHz lowest specified frequency: "Preamp: Accy unspec’d below 9 kHz".

Selection	Example	Note
Off	:POW:GAIN OFF	
Low Band	:POW:GAIN ON :POW:GAIN:BAND LOW	Sets the internal preamp to use only the low band. The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Low Band selection in the dropdown
Full Range	:POW:GAIN ON :POW:GAIN:BAND FULL	Sets the internal preamp to use its full range. The low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model) is supplied by the low band preamp and the frequencies above low band are supplied by the high band preamp The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Full Range selection in the dropdown. If the high band option is not installed the Full Range selection does not appear

NOTE

The maximum **Center Frequency** for **Low Band**, displayed in square brackets, can change based on the selected IFBW for measurements that support IFBW (for example, Waveform measurement across all Modes that support it). In certain models (such as N9042B & N9032B), IFBW values <= 40 MHz have a maximum **Low Band** frequency of 3.6 GHz, while 40 MHz < IFBW <= 1 GHz have a maximum of 3.3 GHz, and 1 GHz < IFBW <= 1.5 GHz have a maximum of 3.5 GHz. IFBW values > 1.5 GHz do not support a **Center Frequency** that can reach the **Low Band** maximum frequency. In these cases, **N/A** is displayed in the square brackets for **Low Band**.

Remote Command	`[:SENSe]:POWer[:RF]:GAIN:BAND LOW | FULL` `[:SENSe]:POWer[:RF]:GAIN:BAND?`
Example	`:POW:GAIN:BAND LOW` `:POW:GAIN:BAND?`
Dependencies	Not available on all hardware platforms. If the preamp is not present or is unlicensed, this control is not shown Does not appear in VXT Models M9410A/11A/15A/16A nor in M9410E/11E/15E/16E If `:POW:GAIN:BAND FULL` is sent when a low band preamp is available, the preamp band parameter is set to `LOW` instead of `FULL`, and an "Option not installed" message is generated Not available when the electronic/soft attenuator is enabled
Preset	`LOW`
State Saved	Saved in instrument state
Annotation	When the USB Preamp is not connected to USB, the Preamp annotation in the Meas Bar says “Off” if the preamp is off and displays the frequency range of the low band or full range preamp depending on the setting. For example, if the Preamp is set to Low Band and the Low Band is 3.6 GHz the annotation says “3.6 GHz”. If it is a 13.6 GHz preamp and it is set to Full Range the annotation says “13.6 GHz”

	When the USB Preamp is connected to USB, the Preamp annotation says “Preamp: USB” if the internal preamp is off or “Preamp: USB, Int” if the internal preamp is on (only for measurements that support the USB preamp)

Auto Function

Remote Command	`[:SENSe]:POWer[:RF]:GAIN[:STATe] OFF | ON | 0 | 1` `[:SENSe]:POWer[:RF]:GAIN[:STATe]?`
Example	`:POW:GAIN OFF` `:POW:GAIN?`
Preset	`OFF`

LNA

Lets you turn the Low Noise Amplifier (**LNA**) on or off.

LNA is an additional preamplifier that provides superior DANL and frequency range compared to "Internal Preamp" on page 2183. LNA provides lower system noise figure, especially at frequencies above 100 MHz, and can be operated up to the full range of 50 GHz instruments.

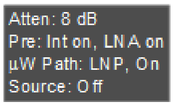
For best possible sensitivity, **LNA** can be turned on *together* with "Internal Preamp" on page 2183, although if you operate both preamps together, note that the TOI (distortion) specifications are impacted. The sensitivity improvement of this combination is substantial when operating in high band (frequencies above 3.6 GHz).

For more details about annotation, see "More Information" on page 1941

Remote Command	`[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe] OFF | ON | 0 | 1` `[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe]?`
Example	`:POW:GAIN:LNA ON`
Dependencies	Requires Option LNA, except for VXT models M9415A/16A Does not appear in VXT models M9420A/10A/11A M9410E/11E/15E/16E support LNA May not appear in some measurements **LNA** is not available when the electronic/soft attenuator is enabled
Preset	`OFF`
State Saved	Saved in State

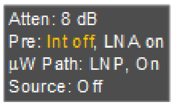
More Information

When **LNA** is installed, the preamp annotation changes to show the state of both **LNA** and **Internal Preamp**. Below is an example:



Atten: 8 dB
Pre: Int on, LNA on
µW Path: LNP, On
Source: Off

Note that when operating entirely in the low band (below about 3.6 GHz), if **LNA** is on, **Internal Preamp** is switched off (even if you have its switch set to ON). This is because the noise performance is actually degraded in low band if both preamps are on. In this case, the annotation reflects the actual state of the two preamps, but the **Internal Preamp** annotation displays in amber, to warn you that the actual state of **Internal Preamp** does not match its switch control display:



Atten: 8 dB
Pre: Int off, LNA on
µW Path: LNP, On
Source: Off

µW Path Control

Options for this control include **µW Preselector Bypass** (Option MPB), **Low Noise Path** (Option LNP) and **Full Bypass Enable** in the High Band path circuits.

When the µW Preselector is bypassed, flatness is improved, but will be subject to spurs from out of band interfering signals. When **Low Noise Path Enable** is selected, the instrument automatically bypasses certain circuitry in the high frequency bands that can contribute to noise, when it is appropriate based on other instrument settings.

For most applications, the preset state is **Standard Path**, which provides the best remote-control throughput, minimizes acoustic noise from switching and minimizes the risk of wear in the hardware switches, particularly in remote test scenarios where both low band and high band setups will follow in rapid succession. In this path, the bypass of the low band/high band switch and microwave preamp is never activated, which can cause some noise degradation but preserves the life of the bypass switch.

For applications that utilize the wideband IF paths, the preset state is **µW Preselector Bypas**s, if option MPB is present. This is because, when using a wideband IF such as the 140 MHz IF, the µW Preselector’s bandwidth can be narrower than the available IF bandwidth, causing degraded amplitude flatness and phase linearity, so it is desirable to bypass the preselector in the default case.

You may choose **Low Noise Path Enable** for a lower noise floor, especially in the 21-26.5 GHz region, though without improving many measures of dynamic range, and without giving the best possible noise floor. The preamp, if purchased and used, gives better noise floor than does **Low Noise Path Enable**, but the preamp's compression threshold and third-order intercept are much poorer than that of **Low Noise Path Enable**.

A fourth choice is **Full Bypass Enable**, which combines **µW Preselector Bypass** and **Low Noise Path Enable**. Because this can bypass most of the circuitry between the input and the first mixer, care should be taken when using this setting to avoid damaging the mixer. **Full Bypass Enable** is only available if both options LNP and MPB are present, as well as option FBP.

Path	Example	Note
Standard Path	:POW:MW:PATH STD	Normal setting for most measurements. µW Preselector in circuit, Low Noise Path disabled
Low Noise Path Enable	:POW:MW:PATH LNP	See "Low Noise Path Enable" on page 1946
µW Preselector Bypass	:POW:MW:PATH MPB	See "µW Preselector Bypass" on page 1948
Full Bypass Enable	:POW:MW:PATH FULL	See "Full Bypass Enable" on page 1948

Remote Command	`[:SENSe]:POWer[:RF]:MW:PATH STD | LNPath | MPBypass | FULL` `[:SENSe]:POWer[:RF]:MW:PATH?`

Example	`:POW:MW:PATH LNP`
	Enables the Low Noise path
	`:POW:MW:PATH?`

Notes	When "Presel Center" on page 2181 is performed, the instrument momentarily switches to the Standard Path, regardless of the setting of **µW Path Control** The DC Block will always be switched in when the low noise path is switched in, to protect succeeding circuitry from DC. Note that this does not mean "when the low noise path is enabled" but when, based on the Low Noise Path rules, the path is actually switched in. This can happen when the selection is **Low Noise Path Enable** or **Full Bypass Enable**. In the case where the DC Block is switched in, the instrument is now AC-coupled. However, if you selected DC coupling, the UI would still behave as though it were DC-coupled, including all annunciation, warnings, status bits, and responses to SCPI queries. This is because, based on other settings, the instrument could switch out the low noise path at any time and hence go back to being DC-coupled Alignment switching ignores the settings in this menu, and restores them when finished
Dependencies	Does not appear in CXA-m, VXT Models M9410A/11A/15A/16A, nor in M9410E/11E/15E/16E, BBIQ and External Mixing – The **Low Noise Path Enable** selection does not appear unless Option LNP is present and licensed – The **µW Preselector Bypass** selection does not appear unless Option MPB is present and licensed – The **Full Bypass Enable** selection does not appear unless options LNP and MPB are both present as well as option FBP

	In any of these cases, if the required options are not present and the SCPI command is sent, error -241, "Hardware missing; Option not installed" is generated **Low Noise Path Enable** and **Full Bypass Enable** are grayed-out if the current measurement does not support them **Low Noise Path Enable** and **Full Bypass Enable** are not supported in Avionics and MMR Modes (non-modulation measurements). In any of these cases (that is, the feature is not supported in either measurement or Mode), if the SCPI command is sent, the following error is generated: -221, “Setting Conflict; Feature not supported for this measurement”
Preset	
State Saved	Save in instrument state
Range	Standard Path | Low Noise Path Enable | µW Presel Bypass | Full Bypass Enable
Annotation	In the Meas Bar, if the Standard path is chosen: µW Path: Standard If Low Noise Path is enabled but the LNP switch is not thrown: µW Path: LNP,Off If the Low Noise Path is enabled and the LNP switch *is* thrown: µW Path: LNP,On If the preselector is bypassed: µW Path: Bypass If Full Bypass Enable is selected but the LNP switch is not thrown: µW Path: FByp,Off If Full Bypass Enable is selected and the LNP switch *is* thrown: µW Path: FByp,On

–

µW Path Control Auto

In VMA, WLAN, 5G NR, CQM Modes, an **Auto/Man** switch is added to **µW Path Control**:

This allows the function to automatically switch based on certain Auto Rules as shown below:

VMA Mode

Measurement	µW Path Control Auto behavior
Digital Demod	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
Monitor Spectrum	Always Presel Bypass
IQ Waveform	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
Custom OFDM	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
Channel Power	Always Presel Bypass
Occupied BW	Always Presel Bypass
CCDF	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
ACP	Always Presel Bypass
SEM	Always Presel Bypass
Spurious Emissions	Always Standard Path

WLAN Mode

Measurement	µW Path Control Auto behavior
Modulation Analysis	Always Presel Bypass
Spectral Flatness	Always Presel Bypasss
Power vs Time	Always Presel Bypass
Monitor Spectrum	Always Presel Bypass
IQ Waveform	Always Presel Bypass
Channel Power	Always Presel Bypass
Occupied BW	Always Presel Bypass
CCDF	Always Presel Bypass
SEM	For 11be 320M, when ‘Enabled Wideband IF for FFT’ is OFF or ‘Sweep Type Rule’ is Best Dynamic Range, auto µW path is standard For other cases, auto µW path is presel bypass if presel bypass is enabled, auto µW path is standard if presel bypass is not enabled
Spurious Emissions	Always Standard Path

5G NR Mode

Measurement	µW Path Control Auto behavior
Modulation Analysis	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Full Bypass if conditions warrant(FBP Option is available and “Allow Full Bypass in Auto” is On), otherwise choose Preselector Bypass
Monitor Spectrum	Always Standard Path
IQ Waveform	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Full Bypass if conditions warrant(FBP Option is available and “Allow Full Bypass in Auto” is On), otherwise choose Preselector Bypass
Channel Power	Always Standard Path
Occupied BW	Always Standard Path
CCDF	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
ACP	Always Standard Path
SEM	Always Standard Path
Spurious Emissions	Always Standard Path
Transmit On|Off Power	Use Standard Path unless tuned frequency > 3.6 GHz and Info BW > 15 MHz, in which case choose Preselector Bypass

Channel Quality Mode

Measurement	µW Path Control Auto behavior
Group Delay	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Full Bypass if conditions warrant(FBP Option is available and “Allow Full Bypass in Auto” is On), otherwise choose Preselector Bypass
Monitor Spectrum	Always Standard Path
IQ Waveform	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
CCDF	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass

Remote Command	`[:SENSe]:POWer[:RF]:MW:PATH:AUTO ON | OFF | 1 | 0` `[:SENSe]:POWer[:RF]:MW:PATH:AUTO?`
Example	`:POW:MW:PATH:AUTO ON` `:POW:MW:PATH:AUTO?`
Dependencies	Only appears in VMA, WLAN, 5G NR and CQM Modes
Couplings	See "µW Path Control Auto" on page 1943 above
Preset	ON
Range	ON|OFF

Low Noise Path Enable

Low Noise Path Enable provides a lower noise floor under some circumstances, particularly when operating in the 21–26.5 GHz region. With the Low Noise Path enabled, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and
- the stop frequency is above 3.6 GHz
- The internal preamp is not installed, or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Low Noise Path Enable** is selected in the user interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Low Noise Path Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Low Noise Path Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

For measurements that use IQ acquisition, the low noise path is used when **Center Frequency** is in High Band (> 3.6 GHz) and no preamp is in use. In other words, the rules above are modified to use only the center frequency to qualify which path to switch in. This is not the case for FFTs in the Swept SA measurement; they use the same rules as swept measurements.

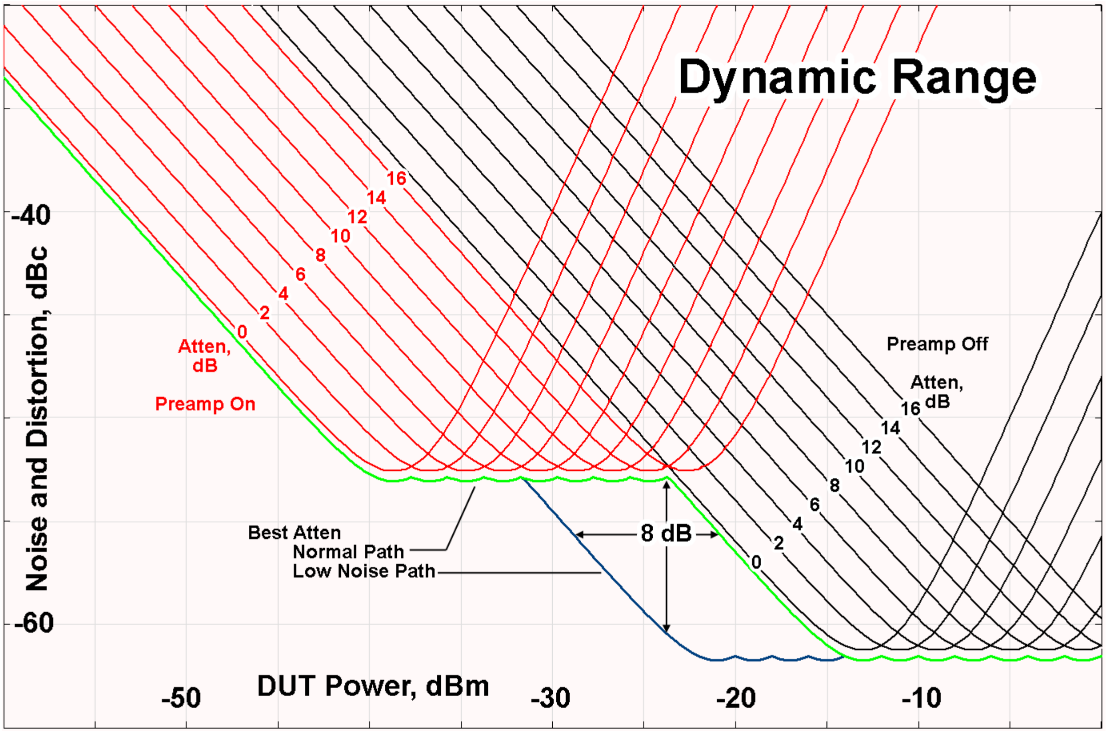
Note that the Low Noise Path, while giving improved DANL, has the disadvantage of decreased TOI performance and decreased gain compression performance relative to the standard path.

Note also that the bypass switch is a mechanical switch and has finite life, so if the **Low Noise Path Enable** is selected, it is possible to cause frequent cycling of this switch by frequently changing instrument settings such that the above conditions hold true only some of the time. A user making tests of this nature should consider opting for the **Standard Path**, which will never throw the bypass switch, at the expense of some degraded noise performance.

The low noise path is useful for situations where the signal level is so low that the instrument performance is dominated by noise even with 0 dB attenuation, but still high enough that the preamp option would have excessive third-order intermodulation or compression. The preamp, if purchased and used, gives better noise floor than does the “Low Noise Path.” However, its compression threshold and third-order intercept are much poorer than that of the non-preamp path.

There are some applications, typically for signals around –30 dBm, for which the third-order dynamic range of the standard path is good enough, but the noise floor is not low enough even with 0 dB input attenuation. When the third-order dynamic range of the preamp path is too little and the noise floor of the standard path is too high, the Low Noise Path can provide the best dynamic range

The graph below illustrates the concept. It shows, in red, the performance of an instrument at different attenuation settings, both with the preamp on and off, in a measurement that is affected by both instrument noise and instrument TOI. The green shows the best available dynamic range, offset by 0.5 dB for clarity. The blue shows how the best available dynamic range improves for moderate signal levels with the low noise path switched in. In this illustration, the preamp improves the noise floor by 15 dB while degrading the third-order intercept by 30 dB, and the low noise path reduces loss by 8 dB. The attenuator step size is 2 dB.



There are other times where selecting the low noise path improves performance, too. Compression-limited measurements such as finding the nulls in a pulsed-RF spectrum can profit from the low noise path in a way similar to the TOI-limited measurement illustrated. Accuracy can be improved when the low noise path allows the optimum attenuation to increase from a small amount like 0, 2 or 4 dB to a larger amount, giving better return loss at the instrument input. Harmonic measurements, such as second and third harmonic levels, are much improved using the low noise path because of the superiority of that path for harmonic (though not intermodulation) distortion performance.

µW Preselector Bypass

Toggles the preselector bypass switch for band 1 and higher. When the microwave presel is on, the signal path is preselected. When the microwave preselector is off, the signal path is not preselected. The preselected path is the normal path for the instrument.

The preselector is a tunable bandpass filter which prevents signals away from the frequency of interest from combining in the mixer to generate in-band spurious signals (images). The consequences of using a preselector filter are its limited bandwidth, the amplitude and phase ripple in its passband, and any amplitude and phase instability due to center frequency drift.

Option MPB or pre-selector bypass provides an unpreselected input mixer path for certain X-Series signal analyzers with frequency ranges above 3.6 GHz. This signal path allows a wider bandwidth and less amplitude variability, which is an advantage when doing modulation analysis and broadband signal analysis. The disadvantage is that, without the preselector, image signals will be displayed. Another disadvantage of bypassing the preselector is increased LO emission levels at the front panel input port.

Image responses are separated from the real signal by twice the 1st IF. For IF Paths of 10 MHz and 25 MHz, the 1st IF is 322.5 MHz, so the image response and the real signal will be separated by 645 MHz. The 1st IF will be different for other IF Path settings. When viewing a real signal and its corresponding image response in internal mixing, the image response will be to the left of the real signal.

Also, the image response and the real signal typically have the same amplitude and exhibit the same shape factor.

However, if Option FS1 (Fast Sweep Capability) is enabled, the image response in the Swept SA measurement appears lower in amplitude and has a much wider shape factor compared to the real signal.

Full Bypass Enable

With **Full Bypass Enable** selected, the microwave preselector is bypassed. In addition, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and
- the stop frequency is above 3.6 GHz.
- the internal preamp is not installed or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Full Bypass Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

CAUTION

When **Full Bypass Enable** is selected, and "Y Scale" on page 2153 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq >3.6 GHz and the Preamp is either not licensed, set to Low Band, or Off). This puts the first converter at considerable risk to be damaged by high AC power. Consequently, whenever **Full Bypass Enable** is selected, a warning message appears in the status bar:

"Full Bypass Enabled, maximum safe input power reduced"

Microwave Preselector Bypass Backwards Compatibility

Example	Bypass the microwave preselector: `:POW:MW:PRES OFF`
Notes	Included for Microwave Preselector Bypass backwards compatibility The `ON` parameter sets the `STD` path (`:POW:MW:PATH STD`) The `OFF` parameter sets path `MPB` (`:POW:MW:PATH MPB`)
Preset	`ON`
Backwards Compatibility SCPI	`[:SENSe]:POWer[:RF]:MW:PRESelector[:STATe] ON | OFF | 0 | 1` `[:SENSe]:POWer[:RF]:MW:PRESelector[:STATe]?`

Frequency Extender Preselection Bypass

Only applies to the high frequency path of the Frequency Extender, and only if the Frequency Extender allows it. For example, the V3050A high frequency path is 50 – 110 GHz and *does* allow control of the preselector bypass.

When the Frequency Extender's preselection is bypassed, flatness is improved, but will be subject to spurs from out-of-band interfering signals. For bandwidths greater than 2.5 [GHz], it is recommended that the signal bypass the Frequency Extender Preselector since the max bandwidth of the Preselector can be as narrow as 2.5 [GHz].

For most applications, the preset state is `OFF`, which gives the best remote-control throughput, minimizes acoustic noise from switching, minimizes out of band spurs, and minimizes the risk of wear in the hardware switches.

Preselector and Bandwidth Conflict

When the Frequency Extender Preselector is applied and the signal bandwidth is greater than 2.5 [GHz], then a settings alert message will show to warn the user that the signal may be distorted due to the limitation of the Frequency Extender Preselector bandwidth.

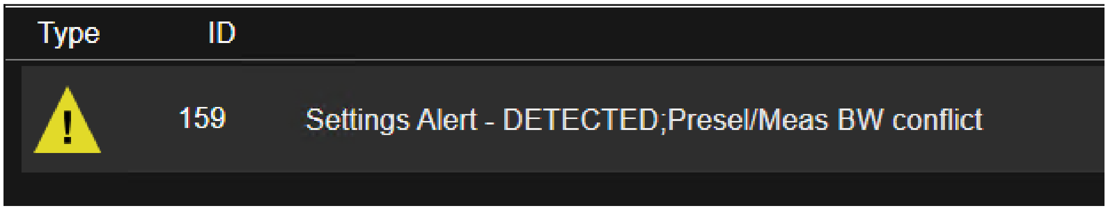
An example of the settings alert message is shown below.

Settings Alert message in the Status Bar at the bottom of the display.

Settings Alert;Presel/Meas BW conflict

Settings Alert message in the error queue

.



Type	ID	
!	159	Settings Alert - DETECTED;Presel/Meas BW conflict

Software Preselection

Provided in some instruments, either to compensate for issues with provided hardware preselection or to provide the preselection function when there is no hardware preselector.

N9041B

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

In N9041B, **Software Preselection** only applies for frequencies above 50 GHz, therefore it is only used for RF Input 2. Even if turned on, it is not used for other inputs, and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note “(>~50 GHz)”.

Note that in N9041B, in Swept SA measurement, **Software Preselection** works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT sweep type.

N9042B+V3050A

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

For N9042B+V3050A, Software Preselection only applies for frequencies above 50 GHz, therefore it is only used for External RF. Even if it is turned on, it will not be used for other inputs and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note "(>~50 GHz)".

Note that for N9042B+V3050A, in the Swept SA measurement, Software Preselection works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT Sweep Type.

VXT models M9410A/11A/15A/16A

Software Preselection is used to provide the preselection function, as there is no hardware preselector in these models. Two background traces are taken and compared point by point, and the point with the lowest amplitude from the two traces is used. This provides a method to reduce spurs that are internally generated within the VXT, but you should note the following when using Software Preselection:

- There is some speed cost due to the need to take multiple captures
- Taking the point with the lowest amplitude in each trace will make the average noise level lower at all points that do not have a spur. This can reduce the accuracy of the measurement of noise and noise-like signals

Because of the difficulty in identifying spurs manually, you are recommended to leave Software Preselection `ON` at all times in VXT models M9410A/11A. If you turn it off in order to speed up your measurement or improve noise accuracy, be aware of unwanted onscreen spurs.

Remote Command	`[:SENSe]:POWer[:RF]:SWPResel:STATe 0 | 1 | ON | OFF` `[:SENSe]:POWer[:RF]:SWPresel:STAT?`
Example	`:POW:SWPR:STAT 1` `:POW:SWPR:STAT?`
Dependencies	Only appears in N9041B, N9042B+V2050A, VXT models M9410A/11A and M9410E/11E. Does not appear in all measurements
Couplings	Affects **Sweep Time** **Auto Tune** supports **Software Preselection**, so **Auto Tune** should be performed after setting the **Software Preselection** state

Preset	N9041B	`OFF`
	N9042B+V3050A	`ON`
	M9410A/11A	`ON`
State Saved	Saved in instrument state	

SW Preselection Type

Specifies the algorithm used for software preselection.

Two hidden sweeps occur in succession. The second sweep is offset in LO frequency by 2 * IF / N. For each point in each trace, the smaller amplitude from the two traces is taken and placed in that point in the selected trace. The Peak detector is auto-selected to improve the image suppression effectiveness. Responses of each trace that lie on top of one another will remain and are valid signals. Other signals are images, which are suppressed. The action of taking the smaller of the two traces will make the average noise level lower in all points that do not have an image, thus reducing the accuracy of the measurement of noise and noise-like signals.

- `NORMal` - mathematically removes all image and multiple responses of signals present at the input
- `ADVanced` - any trace processing (such as “max hold” or trace averaging) is performed on the points of both candidate traces before the “select minimum” operation occurs. This form of processing works better for non-stationary signals, such as pulsed-RF signals

Remote Command	`[:SENSe]:POWer[:RF]:SWPResel NORMal | ADVanced` `[:SENSe]:POWer[:RF]:SWPResel?`	
Example	`:POW:SWPR NORM` `:POW:SWPR?`	
Dependencies	Only appears in N9041B and N9042B+V3050A. Only appears in measurements that use the Swept method Grayed-out when "Software Preselection" on page 2195 is `OFF`. The grayout message is “Unavailable unless SW Presel enabled”	
Preset	N9041B	`ADVanced`
	N9042B+V3050A	`NORMal`
State Saved	Saved in instrument state	

SW Preselection BW

Specifies the effective bandwidth to be used for Software Preselection.

The options are:

- `NORMal` – when making Swept measurements, a software preselection algorithm is used which takes up to 4 background acquisitions, then post-processes the result. This algorithm can remove images from signals with an occupied bandwidth up to around 3 GHz. (Default/Preset setting). When making FFT measurements, this algorithm is not used, instead the same algorithm is used as for `NARRow` (below)
- `NARRow`– a software preselection algorithm is used which takes two background acquisitions, then post-processes the result to detect and remove images from wideband signals with occupied bandwidths up to 2 GHz. This increases the risk of images failing to be rejected, but improves the measurement speed

Remote Command	`[:SENSe]:POWer[:RF]:SWPResel:BW NORMal | NARRow` `[:SENSe]:POWer[:RF]:SWPResel:BW?`
Example	`:POW:SWPR:BW NARR`
Dependencies	Only appears in N9041B and N9042B+V3050A. Only appears in measurements that use the Swept method Grayed-out when "Software Preselection" on page 2195 is `OFF`. The grayout message is “Unavailable unless SW Presel enabled” For N9042B+V3050A, the parameter is SCPI-only, and always set to `NARRow` when **Software Preselection** is enabled
Preset	N9041B: `NORMal` N9042B+V3050A: `NARRow`
State Saved	Saved in instrument state

High Freq Prefilter

Lets you set the state of Prefilter for center frequencies above 1310 MHz.

In VXT Models M9410A/11A and M9410E/11E in bypass frequency range (1310MHz~5GHz), the Receiver RF path has a bank of filters that come after the RF Attenuator in the signal path. Since this bank of filters precedes the mixer they are known as the “Prefilter” bank. Their purpose is to eliminate unwanted in-band mixing products by filtering out all but the desired frequencies before the signals get to the mixer. There are 13 prefilter bands to cover the frequencies between 9 kHz and 6000 MHz. The Prefilter provides the necessary rejection of the unwanted signal.

Remote Command	`[:SENSe]:<measurement>:PFILter[:STATe] ON | OFF | 1 | 0` `[:SENSe]:<measurement>:PFILter[:STATe]?`

Example	Enable High Freq Prefilter for the Complex Spectrum Measurement in `BASIC` Mode:
	`:SPEC:PFIL ON`
	Enable High Freq Prefilter for the IQ Waveform Measurement, in multiple Modes:
	`:WAV:PFIL ON`
	Enable High Freq Prefilter for the Swept SA Measurement in `SA` Mode:
	`:SAN:PFIL ON`

Dependencies	Only appears in VXT models M9410A/11A with center frequency above 1310 MHz, and M9410E/11E in frequency range 1310MHz~5GHz
Preset	See "Prefilter Presets" on page 1954 below
State Saved	Saved in instrument state

Prefilter Presets

Meas	Mode	Preset
SPEC	BASIC	OFF
WAV	BASIC, WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA	OFF
MON	WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA	OFF
RHO	WCDMA	OFF
CDP	WCDMA	OFF
PCON	WCDMA	OFF
EVMQ	WCDMA	OFF
CHP	WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA, SA	OFF
OBW	WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA, SA	OFF
ACP	WCDMA, LTEAFDD, LTEATDD, 5GNR, VMA, SA	OFF
SEM	WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA, SA	OFF

EVMM	WLAN	OFF
CEVM	LTEAFDD, LTEATDD	OFF
PAVT	5GNR, VMA	OFF
DDEM	VMA	OFF
OFDM	VMA	OFF
SAN	SA	ON
HARM	SA	ON

3.10.4 BW

Opens the Bandwidth (**BW**) menu, which contains the Info BW control.

3.10.4.1 Settings

Contains basic bandwidth functions. It is the only tab under **BW**.

Info BW

Allows you to enter a frequency value to set the channel bandwidth that will be used for data acquisition. When in **Auto**, it is set to the value that covers carriers set by carrier configuration.

Remote Command	`[:SENSe]:PSTatistic:BANDwidth <freq>` `[:SENSe]:PSTatistic:BANDwidth?`
Example	`:PST:BAND 8 MHz` `:PST:BAND?`
Notes	Auto/Man is available only for 5G NR, LTE, LTETDD, LTEAFDD, LTEA TDD
Preset	Depends on Mode and installed Options. See "Preset Values" on page 1956 below
State Saved	Saved in instrument state
Min	10 kHz
Max	Hardware-dependent:
	RF Input: – No Option = 10 MHz – WB (25 MHz or wider) = Hardware Option Limit
	I/Q Input (for I+jQ): – No Option = 20 MHz – Option B25 = 50 MHz
Backwards Compatibility SCPI	`[:SENSe]:PSTatistic:BWIDth`

Auto Function

Remote Command	`[:SENSe]:PSTatistic:BANDwidth:AUTO ON | OFF | 1 | 0` `[:SENSe]:PSTatistic:BANDwidth:AUTO`
Example	`:PST:BAND:AUTO 0` `:PST:BAND:AUTO?`
Preset	`ON`

3.10.5 Display

Lets you configure display items for the current Mode, Measurement View or Window.

3.10.5.1 Settings

Contains a control to turn on or turn off "Slot" on page 1907. When **Slot** View is switched `OFF`, **Normal** View is selected.

Slot View

Toggles "Slot" on page 1907 On or Off. When `ON`, **Slot View** is selected. When `OFF`, **Normal** View is selected.

Remote Command	`[:SENSe]:PSTatistic:SLTView[:STATe] OFF | ON | 0 | 1` `[:SENSe]:PSTatistic:SLTView[:STATe]?`
Example	`:PST:SLTV ON` `:PST:SLTV?`
Dependencies	Only available in LTEATDD and 5GNR Modes
Preset	`OFF`
State Saved	Yes
Range	`OFF|ON`

3.10.5.2 View

Contains controls for selecting the current **View**, and for editing User Views.

View

See "Views" on page 1906.

User View

Lets you choose a View from the saved User Views for the current measurement. This panel only appears if a User View exists for the current measurement.

Remote Command	`:DISPlay:VIEW:ADVanced:SELect <alphanumeric>` `:DISPlay:VIEW:ADVanced:SELect?`
Example	Select Baseband as the current View `:DISP:VIEW:ADV:SEL “Baseband”`
Notes	You must be in the measurement whose View you are trying to set to send the command. You can only set Views for the current measurement using this command For predefined views, the parameter is derived from the view name that is shown in the View list in the user interface. For example, if you are trying to select the Trace Zoom view in the Swept SA measurement, you send: `:DISP:VIEW:ADV:SEL "Trace Zoom"` because “Trace Zoom” is the name of the View as seen in the Mode/Meas dialog or in the Display, View menu You *cannot* use the legacy View parameter (which in this case would be `TZOom`) with

	`:DISP:VIEW:ADV:SEL`
	`<alphanumeric>` is case insensitive; you can specify mixed case, however the name will be evaluated on a single case. Thus, both of the following forms work:
	`:DISP:VIEW:ADV:SEL "Trace Zoom"`
	`:DISP:VIEW:ADV:SEL "TRACE ZOOM"`
	If the specified view is not a valid View, the query returns the error message "-224, Illegal parameter value; View with the name <alphanumeric> does not exist"
	If the display is disabled (via `:DISP:ENAB OFF`) then the error message "-221, Settings conflict; View SCPI cannot be used while Display is disabled" is generated

Backwards Compatibility SCPI	The legacy node `:DISPlay:VIEW[:SELect]` is retained for backwards compatibility, but it only supports predefined views

Restore Layout to Default

Restores the Layout to the default for Basic.

Modified Views are very temporary; if you exit the current measurement they are discarded, and they are not saved in State. To retain this View for later use, and to be able to return easily to your original Basic View, you can save your edited View as a "User View".

Save Layout as New View

Saves your new View as a User View. An alpha keyboard appears, which lets you name your new View; the default is the old View name plus a number.

Remote Command	`:DISPlay:VIEW:ADVanced:NAME <alphanumeric>`
Example	`:DISP:VIEW:ADV:NAME "Baseband"` Creates a new View named `Baseband` from the current View, and selects it as the current View
Notes	`<alphanumeric>` is case insensitive; you can specify mixed case, however the name will be evaluated on a single case If `<alphanumeric>` name already exists as a View, the error message "-224, Illegal parameter value; View <alphanumeric> already exists" is generated If the display is disabled (via `:DISP:ENAB OFF`) then the error message "-221, Settings conflict; User View SCPI cannot be used while Display is disabled" is generated

Re-Save User View

You can re-edit a User View; if you make changes, then an asterisk will appear next to the User View's name. You can then tap **Re-Save User View** to save it back to its existing name, or **Save Layout as New View** to add another, new User View.

This is a front panel function only, there is no remote command available to perform this function. To do this remotely, you must first perform **Save Layout as New View**, then delete the old User View and rename the new one with the name of the View you just deleted.

Rename User View

You can rename the current View by giving it a new unique name. Only User Views can be renamed, if the current View is a Predefined View, an error occurs.

Remote Command	`:DISPlay:VIEW:ADVanced:REName <alphanumeric>`
Example	`:DISP:VIEW:ADV:REN “Baseband”`
Notes	`<alphanumeric>` is case insensitive; you can specify mixed case, however the name will be evaluated on a single case If the `<alphanumeric>` specifying the new name is already present in the list of View names, the error message “-224, Illegal parameter value; View <alphanumeric> already exists” is generated If the current View is a Predefined View, the error message “-224, Illegal parameter value; Cannot rename a Predefined View” is generated If the display is disabled (via `:DISP:ENAB OFF`) then the error message “-221, Settings conflict; View SCPI cannot be used while Display is disabled” is generated

Delete User View

You can delete the current View if it is a User View. The default view becomes the current view for the Measurement.

Remote Command	`:DISPlay:VIEW:ADVanced:DELete`
Example	`:DISP:VIEW:ADV:DEL`
Notes	`<alphanumeric>` is case insensitive; you can specify mixed case, however the name will be evaluated on a single case If the `<alphanumeric>` is not present in the list of View names, the error message “-224, Illegal parameter value; View <alphanumeric> does not exist” is generated If the current View is a Predefined View, the error message “-224, Illegal parameter value; Cannot delete a Predefined View” is generated If the display is disabled (via `:DISP:ENAB OFF`) then the error message “-221, Settings conflict; View SCPI cannot be used while Display is disabled” is generated

Delete All User Views

Deletes all previously saved User Views. The default view becomes the current view for the Measurement if a User View was the current view when this command was executed.

Remote Command	`:DISPlay:VIEW:ADVanced:DELete:ALL`
Example	`:DISP:VIEW:ADV:DEL:ALL`
Notes	Disabled if there are no User Views

View Editor Remote Commands

The following remote commands help you manage Views and User Views. Note that the SCPI node for User Views handles both Predefined and User Views. The legacy nodes, `:DISPlay:VIEW[:SELect]` and `:DISPlay:VIEW:NSEL`, are retained for backwards compatibility, but they only support predefined views.

View Listing Query

Returns a string containing a comma-separated list of names for *all* the Views, including User Views, available for the current Measurement.

Remote Command	`:DISPlay:VIEW:ADVanced:CATalog?`
Example	`:DISP:VIEW:ADV:CAT?`
Notes	Returns a quoted string of the available Views for the current measurement, separated by commas. The list includes names for *all* the Views, including User Views, available for the current Measurement Example: `"Normal,Trace Zoom,Spectrogram,Baseband,myView1,yourView1"` No distinction is made between Predefined and User Views If you switch measurements with the display disabled (via `:DISP:ENAB OFF`), then query the list of available Views, the result is undefined

User View Listing Query

Returns a string containing a comma-separated list of names for *only* the User Views available for the current Measurement.

Remote Command	`:DISPlay:VIEW:ADVanced:USER:CATalog?`

Example	`:DISP:VIEW:ADV:USER:CAT?`
Notes	Returns a quoted string of the available User Views for the current measurement, separated by commas. Example: `"Baseband,myView1,yourView1"` If you switch measurements with the display disabled (see "Display Enable (Remote Command Only)" on page 2211), then query the list of available Views, the result is undefined

3.10.5.3 Annotation

Contains controls for setting up the annotation for the current Mode or Measurement.

Graticule

Turns the display graticule On or Off for all windows with graticules in all measurements in the current Mode. Also turns the graticule Y-Axis annotation on and off.

Remote Command	`:DISPlay:GRATicule[:STATe] OFF | ON | 0 | 1` `:DISPlay:GRATicule[:STATe]?`
Example	`:DISP:GRAT OFF`
Notes	The graticule is the set of horizontal and vertical lines that make up the grid/divisions for the X-Axis and Y-Axis
Preset	`ON`
State Saved	Saved in instrument state

Backwards Compatibility SCPI	`:DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe] OFF | ON | 0 | 1`
	`:DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe]?`
	This command is accepted for backwards compatibility with older instruments, but the `WINDow`, `TRACe` and `GRID` parameters are ignored

Screen Annotation

Controls the display of the annunciation and annotation around the graticule, including any annotation on lines (such as the display line, the threshold line, etc.) and the Y-Axis annotation, for all windows with screen annotation in all measurements in the current Mode.

This does *not* include marker annotation (or the N dB result). When `OFF`, the graticule expands to fill the entire graticule area, leaving only the 1.5% gap above the graticule, as described in the **Trace** section.

Remote Command	`:DISPlay:ANNotation:SCReen[:STATe] OFF | ON | 0 | 1` `:DISPlay:ANNotation:SCReen[:STATe]?`
Example	`:DISP:ANN:SCR OFF`
Dependencies	Grayed-out and forced to `OFF` when **System Display Settings**, **Annotation** is `OFF`
Preset	`ON` This remains `OFF` through a Preset when **System Display Settings**, **Annotation** is set to `OFF`
State Saved	Saved in instrument state

Trace Annotation

Turns on and off the labels on the traces, showing their detector (or their Math Mode) as described in the **Trace** section, for all windows in all measurements in the current Mode for which Trace Annotation on/off is supported.

If Trace Math is being performed on a trace, then the Trace Math annotation replaces the detector annotation.

For measurements that support limit lines, this key also turns on and off the labels on the Limit Lines. The label is the Limit number annotation and Limit Comment displayed on the graph. If the length of the comment is greater than 20 characters, the first 8 characters and the last 8 characters are displayed, joined with ….

Remote Command	`:DISPlay:ANNotation:TRACe[:STATe] ON | OFF | 1 | 0` `:DISPlay:ANNotation:TRACe[:STATe]?`
Example	`:DISP:ANN:TRAC OFF`
Preset	`OFF`
State Saved	Saved in instrument state

Control Annotation

Turns on and off the display of values on the Active Function controls for all measurements in the current Mode. This is a security feature.

Remote Command	`:DISPlay:ACTivefunc[:STATe] ON | OFF | 1 | 0` `:DISPlay:ACTivefunc[:STATe]?`
Example	`:DISP:ACT OFF`
Dependencies	Grayed out and forced to `OFF` when **System Display Settings**, **Annotation** is `OFF`
Preset	`ON` This remains `OFF` through a Preset when **System Display Settings**, **Annotation** is set to `OFF`
State Saved	Saved in instrument state

Meas Bar

Turns the Measurement Bar at the top of the screen on and off for all measurements in the current Mode. When `OFF`, the graticule area expands to fill the area formerly occupied by the Measurement Bar.

Remote Command	`:DISPlay:ANNotation:MBAR[:STATe] OFF | ON | 0 | 1` `:DISPlay:ANNotation:MBAR[:STATe]?`
Example	`:DISP:ANN:MBAR OFF`
Dependencies	Grayed out and forced to `OFF` when **System Display Settings**, **Annotation** is `OFF`
Preset	`ON` This remains `OFF` through a Preset when **System Display Settings**, **Annotation** is set to `OFF`
State Saved	Saved in instrument state

Display Enable (Remote Command Only)

Turns the display on/off, including the display drive circuitry. The backlight stays lit to confirm that the instrument is on. The display enable setting is mode global. Theare three reasons for turning the display off:

1. To increase speed as much as possible by freeing the instrument from having to update the display
2. To reduce emissions from the display, drive circuitry
3. For security purposes

If you have turned off the display:

- and you are in local operation, the display can be turned back on by pressing any key or by sending `:SYSTem:DEFaults MISC` or `:DISPlay:ENABle ON` (neither `*RST` nor :SYSTem:PRESet enable the display)
- and you are in remote operation, the display can be turned back on by pressing the **Local** or **Esc** keys, or by sending `:SYSTem:DEFaults MISC` or `:DISPlay:ENABle ON` (neither `*RST` nor `:SYSTem:PRESet` enable the display)
- and you are using either the `:SYSTem:KLOCk` command or GPIB local lockout, then *no* front-panel key press will turn the display back on. You must turn it back on remotely.

If the display is `OFF`, many SCPI commands related to User Views and Multiscreen functionality do not work, and return the error messages “-221, Settings conflict; Screen SCPI cannot be used when Display is disabled” or “221, Settings conflict; View SCPI cannot be used while Display is disabled”. These commands include:

Name	Command
Select User View	`:DISPlay:VIEW:ADVanced:SELect`
Rename User View	`:DISPlay:VIEW:ADVanced:REName`
Delete User View	`:DISPlay:VIEW:ADVanced:DELete`
Create User View	`:DISPlay:VIEW:ADVanced:NAME`
Select Screen	`:INSTrument:SCReen:SELect`
Delete Screen	`:INSTrument:SCReen:DELete`
Delete All But This Screen	`:INSTrument:SCReen:DELete:ALL`
Add Screen	`:INSTrument:SCReen:CREate`
Rename Screen	`:INSTrument:SCReen:REName`
Sequencer On/Off	`:SYSTem:SEQuencer`

Remote Command	`:DISPlay:ENABle OFF | ON | 0 | 1` `:DISPlay:ENABle?`
Example	`:DISP:ENAB OFF`
Couplings	`:DISP:ENAB OFF` turns Backlight `OFF` and `:DISP:ENAB ON` turns Backlight `ON`, but changing Backlight settings does *not* change the state of `:DISP:ENAB`
Preset	`ON` Set by `:SYST:DEF MISC`, but not affected by `*RST` or `:SYSTem:PRESet`
State Saved	Not saved in instrument state
Backwards Compatibility Notes	`:SYST:PRES` no longer turns on `:DISPlay:ENABle` as it did in legacy analyzers

3.10.6 Frequency

Opens the **Frequency** menu, which contains controls that allow you to control the frequency and channel parameters of the instrument.

Some features in this menu are the same for all measurements in the current Mode – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by Meas Preset. For example, **Center Frequency** is the same for all measurements – it does not change as you change measurements.

3.10.6.1 Settings

Contains controls that pertain to the X-Axis parameters of the measurement. These parameters control how data on the vertical (X) axis is displayed and control instrument settings that affect the horizontal axis.

Carrier Reference Frequency

Sets carrier reference frequency. The center frequencies of carriers are defined as offset frequency from this value. This reference frequency is also the reference of carrier configuration preset.

Because LTE-A, MSR and 5G NR Mode measurements often deal with multiple carriers with distinct bandwidths, the simple "Center Frequency" on page 1966 parameter used in most measurements does not apply here. Instead, **Carrier Reference Frequency** is the key parameter. This must be distinct from the **Center Frequency** parameter used in other measurements, as **Center Frequency** can be a global parameter, and it would not make sense for **Carrier Reference Frequency** to use this global value.

In LTE-A and 5G NR Modes, if the following conditions are satisfied at the same time:

- the **Number of Component Carriers** is 1
- the **Center Freq Offset** is 0 Hz
- the **Center Frequency** Mode is Auto

then **Center Frequency** is equivalent to **Carrier Reference Frequency**. When **Center Frequency** changes in such conditions, the mode of **Center Frequency** remains as Auto and the Carrier Ref Freq changes to the same value. The main purpose of this coupling is to maintain backwards compatibility with legacy LTE/LTE TDD Modes, in which `:SENSe:FREQuency:CENTer` is used to set up the frequency of the measurement.

See "More Information" on page 1966

Remote Command	For LTE-A, 5G NR
	`[:SENSe]:CCARrier:REFerence <freq>`
	`[:SENSe]:CCARrier:REFerence?`
	For MSR
	`[:SENSe]:CARRier:REFerence <freq>`
	`[:SENSe]:CARRier:REFerence?`

Example	For LTE-A, 5G NR
	`:CCAR:REF 2GHz`
	`:CCAR:REF?`
	For MSR
	`:CARR:REF 2GHz`
	`:CARR:REF?`

Dependencies	Only available in LTEAFDD, LTEATDD, 5GNR and MSR Modes
Preset	1 GHz
State Saved	Saved in instrument state
Min/Max	Depends on instrument minimum center frequency. Same as "Center Frequency" on page 1966

More Information

In most applications, **Center Frequency** is generally where the carrier center is located at and thus plays a very important role. However, in LTE-Advanced TDD/FDD Modes, the measurements are done based on carrier center frequencies and its bandwidths, both of which are calculated or obtained according to the carriers' configuration.

Center Frequency

Sets the frequency that corresponds to the horizontal center of the graticule. While adjusting **Center Frequency**, **Span** is held constant.

The **Center Frequency** setting is the same for all measurements within a mode, that is, it is Meas Global. Some Modes are also able to share a Mode Global center frequency value. If this is the case, the Mode will have a **Global** tab in its **Meas Setup** menu.

Center Frequency sets (and queries) the center frequency for the currently selected input. If your instrument has multiple inputs, and you select another input, **Center Frequency** changes to the value for that input. SCPI commands are available to directly set the center frequency for a specific input.

Center Frequency is remembered as you go from input to input. Thus, you can set a **Center Frequency** of 10 GHz with the RF Input selected, change to BBIQ and set a **Center Frequency** of 20 MHz, then switch to External Mixing and set a Center Freq of 60 GHz, and when you go back to the RF Input, **Center Frequency** will go back to 10 GHz; back to BBIQ and it is 20 MHz; back to External Mixing and it is 60 GHz.

See:

- "Center Frequency Presets" on page 1968
- "VXT Models with Radio Heads/CIU Frequency Range" on page 1970
- "RF Center Freq" on page 1970
- "Ext Mix Center Freq" on page 1970
- "I/Q Center Freq" on page 1971

Remote	`[:SENSe]:FREQuency:CENTer <freq>`

Command	`[:SENSe]:FREQuency:CENTer?`

Example	Set Center Frequency to 50 MHz:
	`:FREQ:CENT 50 MHz`
	Increment Center Frequency by the value of **CF Step**:
	`:FREQ:CENT UP`
	Return the current value of Center Frequency:
	`:FREQ:CENT?`

Notes	Sets the RF, External Mixing or I/Q Center Frequency depending on the selected input: – For RF input it is equivalent to `:FREQ:RF:CENT` – For I/Q input it is equivalent to `:FREQ:IQ:CENT` – For External Mixer it is equivalent to `:FREQ:EMIX:CENT` Preset and Max values are dependent on Hardware Options If no terminator (for example, MHz) is sent, the terminator Hz is used. If a terminator with unit other than Frequency is used, an invalid suffix error message is generated
Preset	Depends on instrument maximum frequency, mode, measurement, and selected input See "Center Frequency Presets" on page 1968, "RF Center Freq" on page 1970, "Ext Mix Center Freq" on page 1970, "I/Q Center Freq" on page 1971, and "VXT Models with Radio Heads/CIU Frequency Range" on page 1970
State Saved	Saved in instrument state
Min/Max	Depends on instrument maximum frequency, mode, measurement, and selected input See "Center Frequency Presets" on page 1968, "RF Center Freq" on page 1970, "I/Q Center Freq" on page 1971, and "VXT Models with Radio Heads/CIU Frequency Range" on page 1970
Status Bits/OPC dependencies	Non-overlapped

The following command and parameters apply only to MSR, LTE-Advanced FDD/TDD and 5G NR Modes.

Remote Command	`[:SENSe]:FREQuency:CENTer:AUTO ON | OFF | 1 | 0` `[:SENSe]:FREQuency:CENTer:AUTO?`
Example	`:FREQ:CENT:AUTO OFF` `:FREQ:CENT:AUTO?`
Dependencies	Only available for the Monitor Spectrum, Power Stat CCDF and IQ waveform measurements in MSR, LTE-Advanced FDD/TDD and 5G NR Modes
Couplings	When Center Frequency changes, state automatically changes to **Manual** (`OFF`) Center Frequency, Center Frequency Offset and Carrier Reference Frequency are coupled. When Carrier Reference Frequency changes:

Center Frequency	Relationship
Auto	Center Frequency = Carrier Reference Frequency + Center Frequency Offset (fixed)
Man	Center Frequency (fixed) = Carrier Reference Frequency + Center Frequency Offset

Preset	`ON`
State Saved	Saved in instrument state
Range	`Auto`|`Man`

Center Frequency Presets

The following table provides the Center Frequency Presets for the Spectrum Analyzer mode, and the Max Freq, for the various frequency options:

Freq Option	CF after Mode Preset	Stop Freq after Mode Preset	Max Freq (can't tune above)
503 (all but CXA)	1.805 GHz	3.6 GHz	3.7 GHz
503 (CXA)	1.505 GHz	3.0 GHz	3.08 GHz
507 (all but CXA)	3.505 GHz	7.0 GHz	7.1 GHz
507 (CXA)	3.755 GHz	7.5 GHz	7.58 GHz
508 (all but MXE)	1.805 GHz	3.6 GHz	8.5 GHz
508 (MXE)	4.205 GHz	8.4 GHz	8.5 GHz
513	6.805 GHz	13.6 GHz	13.8 GHz
526 (except CXA and MXE)	13.255 GHz	26.5 GHz	27.0 GHz*
526 (CXA)	13.255 GHz	26.5 GHz	26.55 GHz
526 (MXE)	1.805 GHz	3.6 GHz	27.0 GHz
532	16.005 GHz	32.0 GHz	32.5 GHz
540	20.005 GHz	40.0 GHz	40.5 GHz
543	21.505 GHz	43.0 GHz	43.0 GHz
544	22.005 GHz	44.0 GHz	45.0 GHz
550	25.005 GHz	50.0 GHz	52 GHz
F03 (CXA-m)	1.505 GHz	3.0 GHz	3.08 GHz
F07 (CXA-m)	3.755 GHz	7.5 GHz	7.575 GHz
F13 (CXA-m)	6.805 GHz	13.6 GHz	13.8 GHz
F26 (CXA-m)	13.255 GHz	26.5 GHz	26.55 GHz
504 (M9421A, M8920A)	2.145 GHz	3.88GHz	3.88 GHz

Freq Option	CF after Mode Preset	Stop Freq after Mode Preset	Max Freq (can't tune above)
506 (M9421A, M8920A)	3.245 GHz	6.08GHz	6.08 GHz
F06 (M9410A/11A)	1.0 GHz	6.08 GHz	6.08 GHz
F06 (M9415A)	1 GHz	1.08 GHz	6.6 GHz
F08 (M9415A)	1 GHz	1.08 GHz	8.6 GHz
F12 (M9415A)	1 GHz	1.08 GHz	12.9 GHz

*For option 526, the Max CF in RTSA is 26.999999995 GHz.

N9041B Center Freq Presets

Input	CF after Mode Preset	Stop Freq after Mode Preset	Max Freq (can't tune above)
Input 1, all models	25.005 GHz	50.0 GHz	52 GHz
Input 2, opt 585	42.505 GHz	85.0 GHz	86 GHz
Input 2, opt 590	45.005 GHz	90.0 GHz	92 GHz
Input 2, opt 5CX	55.005 GHz	110.0 GHz	110 GHz

Input 2, CXA and MXE

Model	CF after Mode Preset	Stop Freq after Mode Preset	Max Freq (can't tune above)
CXA opt C75	0.7505 GHz	1.5 GHz	1.58 GHz
MXE	505 MHz	1 GHz	1.000025 GHz

Tracking Generator Frequency Limits (CXA only)

Tracking Generator Option	Min Freq (clips to this freq when turn TG on and can't tune below while TG on)	If above this Freq, Stop Freq clipped to this Freq when TG turned on	Max Freq (can't tune above) while TG on
T03	9 kHz	3.0 GHz	3.08 GHz
T06	9 kHz	6.0 GHz	6.05 GHz

Tracking Generator Frequency Limits(CXA-m only)

Tracking Generator Option	Min Freq (clips to this freq when turn TG on and can't tune below while TG on)	If above this Freq, Stop Freq clipped to this Freq when TG turned on	Max Freq (can't tune above) while TG on
T03	2 MHz	3.08 GHz	3.08 GHz
T07	2 MHz	7.575 GHz	7.575 GHz

Tracking Generator Option	Min Freq (clips to this freq when turn TG on and can't tune below while TG on)	If above this Freq, Stop Freq clipped to this Freq when TG turned on	Max Freq (can't tune above) while TG on
T13	2 MHz	13.8 GHz	13.8 GHz
T26	2 MHz	26.55 GHz	26.55 GHz

VXT Models with Radio Heads/CIU Frequency Range

The following table shows the Center Frequency Presets and Range for VXT modes with Radio Heads/CIU.

Products with Radio Heads/CIU	Preset	Start frequency	Stop frequency
M9421A + CIU	6 GHz	5.9 GHz	12 GHz
M9410A + CIU	6 GHz	5.9 GHz	12 GHz
M9410A + CIU + RRH	25 GHz	24.25 GHz	43.5 GHz

RF Center Freq

Lets you specify the RF Center Frequency. Sets the Center Frequency to use when the RF input is selected, even if the RF input is not selected at the time the command is sent. Note that **Center Frequency** in the **Frequency** menu on the front panel always applies to the currently selected input.

Remote Command	`[:SENSe]:FREQuency:RF:CENTer <freq>` `[:SENSe]:FREQuency:RF:CENTer?`
Example	`:FREQ:RF:CENT 30 MHz` `:FREQ:RF:CENT?`
Notes	This command is the same in all Modes, but the parameter is Measurement Global, so the value is independent in each mode and common across all the measurements in the mode
Dependencies	If the electronic/soft attenuator is enabled, any attempt to set **Center Frequency** such that the Stop Frequency would be > 3.6 GHz fails and results in an advisory message If the equivalent SCPI command is sent, this same message is generated as part of a "-221, Settings conflict" warning
Preset	See "Center Frequency Presets" on page 1968
State Saved	Saved in instrument state
Min	-79.999995 MHz
Max	See "Center Frequency Presets" on page 1968. Basically, instrument maximum frequency - 5 Hz

Ext Mix Center Freq

Specifies the External Mixer Center Frequency. Sets the Center Frequency to use when the External Mixer is selected, even if the External Mixer input is not the input that is selected at the time the command is sent. Note that **Center Frequency** in the **Frequency** menu on the front panel always applies to the currently selected input.

Remote Command	`[:SENSe]:FREQuency:EMIXer:CENTer <freq>` `[:SENSe]:FREQuency:EMIXer:CENTer?`
Example	`:FREQ:EMIX:CENT 60 GHz` `:FREQ:EMIX:CENT?`
Notes	This command is the same in all Modes, but the parameter is Measurement Global, so the value is independent in each Mode and common across all the measurements in the Mode
Couplings	When returning to External Mixing after having switched to one of the other inputs (for example, RF), you will come back into the settings that you had when you left External Mixing. So, you will come back to the band you were in with the Center Frequency that you had. However, Span is not an input-dependent parameter, therefore you will bring the span over from the other input. Therefore, the instrument comes back with the span from the previous input, limited as necessary by the current mixer setup
Preset	When a Mode Preset is performed while in External Mixing, the Start frequency of the current Mode is set to the nominal Min Freq of the lowest harmonic range in the Harmonic Table for the current mixer setup. Similarly, the Stop frequency of the current Mode is set to the nominal Max Freq of the highest harmonic range in the Harmonic Table. The Center Freq thus presets to the point arithmetically equidistant from these two frequencies Note that, if the current measurement has a limited Span available to it, and cannot achieve the Span shown in the table (Span=Stop Freq – Start Freq), the instrument uses the maximum Span the measurement allows, and still sets the Center Freq to the midpoint of the Start and Stop Freq values in the Harmonic Table When **Restore Input/Output Defaults** is performed, the mixer presets to the 11970A, whose Start and Stop frequencies are 26.5 and 40 GHz respectively. The center of these two frequencies is 33.25 GHz Therefore, after **Restore Input/Output Defaults**, if you go to External Mixing and do a **Mode Preset** while in Spectrum Analyzer Mode, the resulting Center Freq is 33.25 GHz
State Saved	Yes
Min	The minimum frequency in the currently selected mixer band + 5 Hz
Max	The maximum frequency in the currently selected mixer band - 5 Hz

I/Q Center Freq

Specifies the I/Q Center Frequency. Sets the Center Frequency to be used when the I/Q input is selected, even if the I/Q input is not the input that is selected at the time the command is sent. Note that **Center Frequency** in the **Frequency** menu on the front panel always applies to the currently selected input.

Remote Command	`[:SENSe]:FREQuency:IQ:CENTer <freq>` `[:SENSe]:FREQuency:IQ:CENTer?`
Example	`:FREQ:IQ:CENT 30 MHz`
Notes	This command is the same in all Modes, but the parameter is Measurement Global, so the value is

	independent in each Mode and common across all the measurements in the Mode
Preset	0 Hz
State Saved	Saved in instrument state
Min/Max	–/+40.049995 MHz

Center Frequency Offset

Sets **Center Frequency Offset**, which is coupled with "Center Frequency" on page 1966, and only used in the Monitor Spectrum, IQ Waveform, Power Stat CCDF, and PAvT measurements. **Center Frequency**, **Center Frequency Offset** and **Carrier Reference Frequency** are coupled by this equation:

Center Frequency = **Carrier Reference Frequency** + **Center Frequency Offset**

When you change **Center Frequency Offset**, **Center Frequency** is updated, but **Carrier Reference Frequency** is not.

Remote Command	`[:SENSe]:FREQuency:CENTer:OFFSet <freq>` `[:SENSe]:FREQuency:CENTer:OFFSet?`
Example	`:FREQ:CENT:OFFS 100kHz` `:FREQ:CENT:OFFS?`
Dependencies	Only available in MSR, LTEAFDD/LTEATDD and 5GNR Modes
Preset	0 GHz
State Saved	Saved in instrument state
Min/Max	–/+500 GHz

Adjust Center Frequency to Carrier Config

This immediate action control adjusts "Center Frequency" on page 1966 to cover all the configured carriers when "Info BW" on page 1955 is Auto.

Remote Command	`[:SENSe]:PSTatistic:FREQuency:CENTer:ADJust`
Example	`:PST:FREQ:CENT:ADJ`
Couplings	When "Info BW" on page 1955 is **Man**, pressing this control automatically changes it to **Auto**

3.10.7 Marker

Accesses a menu that enables you to select, set up and control the markers for the current measurement. If there are no active markers, **Marker** selects marker 1, sets it to **Normal** and places it at the center of the display. If the selected marker is **Off**, it is set to **Normal** and placed at the center of the screen on the trace determined by the Marker Trace rules.

3.10.7.1 Select Marker

Specifies the selected marker. The term “selected marker” is used throughout this document to specify which marker will be affected when you change marker settings, perform a Peak Search, etc.

The **Select Marker** control appears above the menu panel, indicating that it applies to all controls in the **Marker** menu panels. **Select Marker** is blanked if you select a tab whose controls do *not* depend on the selected marker (for example, Counter).

For any menu that includes **Select Marker**, the first control is always **Marker Frequency | Time**.

Notes	The selected marker is remembered even when not in the **Marker** menu, and is used if a search is done, or a Band Function is turned on, or for Signal Track or Continuous Peak
Preset	Marker 1
State Saved	The number of the selected marker is saved in instrument state
Annunciation	Appears in the marker results block label for **Normal** and **Delta** markers

3.10.7.2 Settings

The controls on this tab include the Marker active function and a radio button selection of the marker control mode (`Position`/**Normal**, **Delta** or **Off**) for the selected marker, as well as additional functions that help you use markers.

Marker X-Axis Value

Sets the marker X-Axis value in the current marker X-Axis Scale unit. This function has no effect if the control mode is **Off**, but is the remote command equivalent of entering an X value if the control mode is **Normal** or **Delta**.

Remote Command	`:CALCulate:PSTatistic:MARKer[1]|2|…|12:X <rel_ampl>` `:CALCulate:PSTatistic:MARKer[1]|2|…|12:X?`
Example	`:CALC:PST:MARK3:X 0` `:CALC:PST:MARK3:X?`
Notes	If no suffix is sent, uses the fundamental units for the current marker X-Axis Scale. If a suffix is sent that does not match the current marker X-Axis Scale unit, an error “Invalid suffix” is generated The query returns the marker’s absolute X Axis value if the control mode is **Normal**, or the offset from the marker’s reference marker if the control mode is **Delta**. The query is returned in the fundamental units for the current marker X-Axis scale: Hz for **Frequency** and **Inverse Time**, seconds for **Period** and

	Time. If the marker is **Off** the response is Not A Number
Preset	After a preset, all Markers are turned `OFF`, so Marker X-Axis Value query returns Not a Number (`NAN`)
State Saved	No
Min/Max	–/+9.9E+37
Annotation	Mkr # <X value> and <Marker value> upper right on graph

Marker Y Axis Value (Remote Command Only)

Queries the marker Y-Axis value in the current marker Y-Axis unit.

Remote Command	`:CALCulate:PSTatistic:MARKer[1]|2|…|12:Y?`
Example	`:CALC:PST:MARK11:Y?`
Notes	Returns the marker Y-Axis result, if the control mode is **Normal,** or **Delta.** If the marker is **Off**, the response is *Not a Number*
Preset	0
State Saved	No
Backwards Compatibility SCPI	`:CALCulate:PSTatistic:MARKer[1]|2|…|12:FUNCtion:RESult?`

Marker Mode

Sets the marker control mode to **Normal** (`POSition`), **Delta**, or **Off**. All interactions and dependencies detailed under the control description are enforced when the remote command is sent. If the selected marker is **Off**, pressing **Marker** sets it to **Normal** and places it at the center of the screen on the trace determined by the **Marker Trace** rules. At the same time, **Marker X Axis Value** appears on the Active Function area.

The default active function is the active function for the currently selected marker control mode. If the current control mode is `OFF`, there is no active function, and the active function is turned off.

Remote Command	`:CALCulate:PSTatistic:MARKer[1]|2|…|12:MODE POSition | DELTa | OFF` `:CALCulate:PSTatistic:MARKer[1]|2|…|12:MODE?`
Example	`:CALC:PST:MARK:MODE POS` `:CALC:PST:MARK:MODE?`
Preset	`OFF`
State Saved	Saved in instrument state
Range	`POSition|DELTa|OFF`
Annotation	Mkr # <X value> and <Marker value> upper right on graph

	When Marker Trace is Polar in WCDMA mode: Mkr # <Chip Value (RHO & QPSKEVM)/Symbol Value (CDP)>, <X value> and <Y value> upper right on graph

Backwards Compatibility SCPI Commands

Sets or queries the state of a marker. Setting a marker that is `OFF` to `ON` (1) puts it into **Normal** mode and places it at the center of the screen.

Example	`:CALC:PST:MARK3:STAT 1` `:CALC:PST:MARK3:STAT?`
Preset	`OFF`
State Saved	Saved in instrument state
Range	`OFF|ON`
Backwards Compatibility SCPI	`:CALCulate:PSTatistic:MARKer[1]|2|…|12:STATe OFF | ON | 0 | 1` `:CALCulate:PSTatistic:MARKer[1]|2|…|12:STATe?`

Delta Marker (Reset Delta)

Pressing this button has exactly the same effect as pressing **Delta** in "Marker Mode" on page 1974. The selected marker becomes a **Delta** marker. If the selected marker is already a **Delta** marker, the reference marker is moved to the current position of the selected marker, thus resetting the Delta to zero.

Marker Settings Diagram

Lets you configure the Marker system using a visual utility.

All Markers Off

Turns off all markers.

Remote Command	`:CALCulate:PSTatistic:MARKer:AOFF`
Example	`:CALC:PST:MARK:AOFF`

Couple Markers

When this function is ON, moving any marker causes an equal X-Axis movement of every other marker that is not **Off**. By "equal X-Axis movement" we mean that we preserve the difference between each marker's X-Axis value (in the fundamental x-axis units of the trace that marker is on), and the X-Axis value of the marker being moved (in the same fundamental x-axis units).

This may result in markers going off screen.

Remote Command	`:CALCulate:PSTatistic:MARKer:COUPle[:STATe] ON | OFF | 1 | 0` `:CALCulate:PSTatistic:MARKer:COUPle[:STATe]?`
Example	`:CALC:PST:MARK:COUP ON` `:CALC:PST:MARK:COUP?`
Preset	`OFF` Presets on **Mode Preset** and **All Markers Off**
State Saved	Saved in instrument state

3.10.7.3 Properties

The controls on this tab are used to set certain properties of the selected marker.

Marker X-Axis Value

This is the fundamental control that you use to move a marker around on the trace. This is the same as "Marker X-Axis Value" on page 1973 in **Settings**.

Relative To

Selects the marker to which the selected marker is relative (its reference marker).

Every marker has another marker to which it is relative. This marker is referred to as the "reference marker" for that marker. This attribute is set by the **Marker, Properties, Relative To** key. The marker must be a **Delta** marker to make this attribute relevant. If it is a **Delta** marker, the reference marker determines how the marker is controlled and how its value is displayed. A marker cannot be relative to itself.

Remote Command	`:CALCulate:PSTatistic:MARKer[1]|2|…|12:REFerence <integer>` `:CALCulate:PSTatistic:MARKer[1]|2|…|12:REFerence?`
Example	`:CALC:PST:MARK:REF 3` `:CALC:PST:MARK:REF?`

Notes	Causes the marker specified with the subopcode to become selected Range (for SCPI command): 1 to 12. If the range is exceeded the value is clipped A marker cannot be relative to itself so that choice is not available, and if sent from SCPI generates error -221: "Settings conflict; marker cannot be relative to itself" When queried, a single value is returned (the specified marker numbers relative marker)
Couplings	The act of specifying the selected marker's reference marker makes the selected marker a Delta marker If the reference marker is off it is turned on in **Fixed or Normal** mode at the delta marker location
Preset	The preset default "Relative To" marker (reference marker) is the next higher numbered marker (current marker +1). For example, if marker 2 is selected, then it's default reference marker is marker 3. The exception is marker 12, which has a default reference of marker 1 Set to the defaults by using **Restore Mode Defaults.** This is not reset by **Marker Off**, **All Markers Off**, or **Preset**
State Saved	Saved in instrument state. Not affected by Marker Off and hence not affected by Preset or power cycle
Min	1
Max	12
Annunciation	Appears in the marker label of a **Delta** marker

Marker Trace

Assigns the specified marker to the designated trace. The trace choices are:

- `MEASured`
- `GAUSsian`
- `REFerence`

Remote Command	`:CALCulate:PSTatistic:MARKer[1]|2|…|12:TRACe MEASured | GAUSsian | REFerence` `:CALCulate:PSTatistic:MARKer[1]|2|…|12:TRACe?`
Example	`:CALC:PST:MARK3:TRAC MEAS` `:CALC:PST:MARK:TRACE?`
Preset	`MEASured`
State Saved	Yes
Range	`MEASured|GAUSsian|REFerence`

Marker Settings Diagram

Lets you configure the Marker system using a visual utility. This is the same as "Marker Settings Diagram" on page 1975 in **Settings**.

3.10.8 Meas Setup

Contains functions for setting up the measurement parameters and also contains functions for setting up parameters global to all measurements in the mode.

3.10.8.1 Settings

Contains frequently used functions to which you will want the fastest access.

Counts

Sets the accumulated number of sampling points for data acquisition. The range is 1.000 kpt (k point) to 2.00000 Gpt (G point) with 1 kpt resolution.

Remote Command	`[:SENSe]:PSTatistic:COUNts <integer>` `[:SENSe]:PSTatistic:COUNts?`
Example	`:PST:COUN 5001` `:PST:COUN?`
Couplings	Coupled to "Meas Cycles" on page 1978, by: **Counts** = **Meas Cycles** * **SamplingFrequency** * "Meas Interval" on page 1979
Preset	10000000
State Saved	Saved in instrument state
Min/Max	1000/2000000000

Meas Cycles

Set the number of measurement cycles to calculate power statistic data. This number is coupled to "Counts" on page 1978, by:

Meas Cycles = **Counts** / (**Sampling Frequency** * **Meas Interval**)

When the **Counts** value cannot be divided by (**Sampling Frequency** * "Meas Interval" on page 1979), this value is displayed as a decimal fraction.

Remote Command	`[:SENSe]:PSTatistic:SWEep:CYCLes <real>` `[:SENSe]:PSTatistic:SWEep:CYCLes?`
Example	`:PST:SWE:CYCL 1001` `:PST:SWE:CYCL?`
Preset	Depends on the sampling frequency
Min	0.001
Max	Depends on the sampling frequency

Meas Interval

Sets the number of data points to be used as the measurement interval. This value couples to "Counts" on page 1978, as:

Meas Interval = **Counts** / ("Meas Cycles" on page 1978 * **Sampling Frequency**)

Remote Command	`[:SENSe]:PSTatistic:SWEep:TIME <time>` `[:SENSe]:PSTatistic:SWEep:TIME?`
Example	`:PST:SWE:TIME 2 ms` `:PST:SWE:TIME?`
Preset	1.0 ms !unless noted below LTEATDD, 5G NR: 500 us
Min/Max	50.0 us/10.0 ms !unless noted below LTEATDD, 5G NR: 1 us/10.0 ms

Meas Offset

Sets the value of time to be used as the measurement interval start.

Remote Command	`[:SENSe]:PSTatistic:MEAS:OFFSet <time>` `[:SENSe]:PSTatistic:MEAS:OFFSet?`
Example	`:PST:MEAS:OFFS 2 ms` `:PST:MEAS:OFFS?`
Dependencies	Only available in LTEAFDD/LTEATDD and 5GNR Modes
Preset	0.0s for LTEATDD, 5G NR
State Saved	Saved in instrument state
Min/Max	0.0 s/10.0 ms for LTEATDD, 5G NR

Meas Setup Summary Table

Lets you view and access many of the parameters in the **Meas Setup** menus on one screen.

Auto Couple

Immediately puts all **Auto/Man** functions into **Auto**. **Auto Couple** is confined to the current measurement only. It does not affect other measurements in the Mode.

In the **Auto** state, **Auto/Man** functions are said to be “coupled”, meaning their values change as you make changes to other values in the measurement. This helps ensure accurate measurements and optimum dynamic range. **Auto Couple** is an immediate action function, and when it is executed, all the **Auto/Man** controls for the current measurement are set to **Auto**, and all measurement settings coupled to the **Auto/Man** parameters are automatically set to their optimal values.

For further details of measurement-specific settings (if any), see "Measurement-Specific Details" on page 1981 below.

Remote Command	`:COUPle ALL`
Example	`:COUP ALL`
Backwards Compatibility SCPI	`:COUPLE ALL | NONE`
Backwards Compatibility Notes	`:COUP:NONE` puts all Auto/Man parameters in manual mode, decoupling all the coupled instrument parameters. It is retained for backwards compatibility and is *not* recommended for making measurements or new designs

All **Auto/Man** parameter couplings in the measurement are set to **Auto**. This includes couplings that may be unavailable or grayed-out due to the current state. For example, in the Swept SA measurement, there is no **Auto/Man** coupling for **RBW** while in Zero Span. Nonetheless, if **Auto Couple** were executed while in Zero Span, it would set **RBW** to Auto "behind the scenes" so that, on exit from Zero Span, it would be in **Auto**.

Any **Auto/Man** selection specific (local) to the other measurements in the current Mode are not affected by **Auto Couple**. Any functions that are *not* coupled with other instrument parameters, such as ranging or leveling variables, such as **AutoRange** or **AutoScale**, are not affected.

Executing **Auto Couple** generates the informational message, "All Auto/Man functions have been set to Auto".

Each parameter, upon being set to **Auto**, selects and sets the appropriate auto-coupled value based on that parameter’s coupling rules. The Dependency Resolver orchestrates the couplings for parameters that depend on one or more other parameters. The coupling and dependency rules for each parameter are defined in the section describing that parameter.

Executing **Auto Couple***does not* affect markers, marker functions, trace or display attributes, or any other instrument setting other than those specifically mentioned above.

Measurement-Specific Details

TOI (SA Mode only)

Parameters affected by **Auto Couple** are:

- Center Frequency Step
- Resolution Bandwidth
- Span/RBW Ratio
- Sweep Time
- Video BANDwidth VBW/RBW ratio
- Upper and Lower Tone (set to Sense)
- Zero span measurement Resolution Bandwidth
- Zero span measurement Dwell Time

Harmonics (SA Mode only)

Parameters affected by **Auto Couple** are:

- Resolution Bandwidth
- Fundamental Frequency
- Dwell Time
- Range Table Resolution Bandwidths
- Range Table Dwell Times

Meas Preset

Restores all the measurement parameters to their default values.

Remote Command	`:CONFigure:PSTatistic`
Example	`:CONF:PST`
Couplings	Selecting **Meas Preset** restores all measurement parameters to their default values

3.10.8.2 Radio

Contains controls to select link direction.

Direction

Specifies whether the LTE-Advanced signal is an uplink signal or a downlink signal.

The choice of link direction determines the Sync/Format, Chan Profile and Time. Advanced menus all change based on the link direction selected. Also, since downlink and uplink signals use OFDMA and SC-FDMA respectively, the list of trace results available and the default traces presented change based on the link direction parameter.

Remote Command	`[:SENSe]:RADio:STANdard:DIRection DLINk | ULINk` `[:SENSe]:RADio:STANdard:DIRection?`
Example	`:RAD:STAN:DIR DLIN`
Couplings	TDD: Changing direction affects the sync source of periodic trigger source or gate source If Direction is uplink, the sync source is RF burst If Direction is downlink, the sync source is External1 If direction is downlink, the menu Measure PRACH/SRS is disabled and the value is off FDD/TDD: Changing Direction affects many other modulation analysis setup parameters
Preset	DLIN ULIN on E6640A DLIN on E6650A
State Saved	Yes
Range	Downlink|Uplink For E6640A, Direction is restricted to Uplink only, Downlink is not selectable For E6650A, Direction is restricted to Downlink only, Uplink is not selectable

3.10.8.3 Component Carriers

Contains settings that let you configure the analyzer to match the component carriers in your LTE-A signal.

Number of Component Carriers

Specifies how many component carriers are included in LTE-Advanced TDD/FDD measurements. Each component carrier complies with the LTE specifications.

LTE-Advanced TDD/FDD supports a maximum of five component carriers, so the maximum transmission bandwidth is up to 100 MHz.

Remote Command	`[:SENSe]:CCARrier:COUNt <integer>` `[:SENSe]:CCARrier:COUNt?`
Example	`:CCAR:COUN 1` `:CCAR:COUN?`
Notes	The max number of Component carriers can be set greater than one with 9080B/9082B-2FP license
Preset	1
State Saved	Yes
Min	1
Max	5

Carrier Allocation

Specifies the carrier frequency allocation. There are two types of allocation, contiguous and non-contiguous. Non-Contiguous frequency allocation is defined as an allocation where two sub-blocks are separated with a sub-block gap:

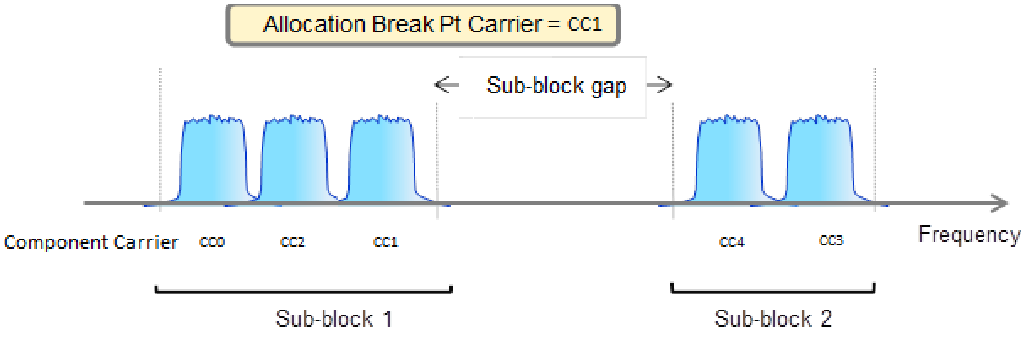
- CONTiguous – All the component carriers belong to one block and no sub-block gap exists
- NCONtiguous – Component carriers are separated into two sub-blocks. Allocation Break Pt Carrier determines how sub-blocks are configured

Remote Command	`[:SENSe]:CCARrier:CONFig:ALLocation CONTiguous | NCONtiguous` `[:SENSe]:CCARrier:CONFig:ALLocation?`
Example	`:CCAR:CONF:ALL CONT` `:CCAR:CONF:ALL?`
Preset	CONTiguous
State Saved	Saved in instrument state
Range	Contiguous|Non-Contiguous

Non-Contiguous Break at

Specifies an allocation break point in non-contiguous carrier allocation. First sub-block starts from the lowest frequency carrier and stops at the allocation break point carrier. Next sub-block starts from the next upper frequency carrier and ends at the highest frequency carrier.

one example is shown below. In the example carrier indices are not in the order of carrier frequency. In the example, Allocation Break Pt Carrier is CC1. It means that sub-block 1 ends at carrier CC1 and sub-block 2 starts at carrier CC4. Sub-block gap is located between carrier CC1 and CC4.



Remote Command	`[:SENSe]:CCARrier:CONFig:ALLocation:NCONtiguous:ABPoint CC0 | … | CC4` `[:SENSe]:CCARrier:CONFig:ALLocation:NCONtiguous:ABPoint?`
Example	`:CCAR:CONF:ALL:NCON:ABP CC0` `:CCAR:CONF:ALL:NCON:ABP?`
Notes	The options CC1~CC4 can be enabled with 9080B/9082B-2FP license
Dependencies	Allocation Break Point is coupled to Number of Component Carriers. For example, Allocation Break Point list will include CC0~CC1 if the number of Component Carriers is 2
Preset	CC0
State Saved	Saved in instrument state
Range	CC0|CC1|CC2|CC3|CC4

Configure Comp Carriers

Lets you perform a detailed configuration of your component carriers, including number of carriers, presets, bandwidth, offset, integration bandwidth, etc.

Configure CCs

Lets you configure System Bandwidth, frequency offsets, and integration bandwidth, and also lets you exclude certain carriers from the measurement.

Number of Component Carriers

See "Number of Component Carriers" on page 2245.

Carrier Allocation

See "Carrier Allocation" on page 2245.

Non-Contiguous Break at

See "Non-Contiguous Break at" on page 2246.

System BW

Enables you to set the system bandwidth of each component carrier for LTE-Advanced / NB-IoT signal (which also determines the total number of resource blocks for Modulation Analysis measurement).

Remote Command	`[:SENSe]:CCARrier0|…|4:RADio:STANdard:BANDwidth B1M4 | B3M | B5M | B10M | B15M | B20M | B200K` `[:SENSe]:CCARrier0|…|4:RADio:STANdard:BANDwidth?`
Example	`:CCAR4:RAD:STAN:BAND B5M`
Preset	B5M
State Saved	Yes
Range	1.4 MHz (6 RB) | 3 MHz (15 RB) | 5 MHz (25 RB) | 10 MHz (50 RB) | 15 MHz (75 RB) | 20 MHz (100 RB) | 200kHz (NB-IoT)
Backwards Compatibility SCPI	`[:SENSe]:RADio:STANdard:BANDwidth`

Measure Carrier

Sets whether to measure this component carrier or not.

Remote Command	`[:SENSe]:CCARrier0|…|4[:STATe] OFF | ON | 0 | 1` `[:SENSe]:CCARrier0|…|4[:STATe]?`
Example	`:CCAR0 ON` `:CCAR0?`
Notes	The command is used with a sub-op code <n> (default=0) to specify the component carrier for configuration. The range of the sub-op code is determined by the number of component carriers
Preset	ON
State Saved	Saved in instrument state
Range	On|Off

Frequency Offset

Sets the component carrier center frequency as offset from the Carrier Ref Frequency.

Remote Command	`[:SENSe]:CCARrier<n>:FREQuency:OFFSet <freq>` `[:SENSe]:CCARrier<n>:FREQuency:OFFSet?`
Example	`:CCAR4:FREQ:OFFS 10MHz` `:CCAR4:FREQ:OFFS?`
Notes	Used with a sub-op code <n> (default=0) to specify the component carrier for configuration. The range of the sub-op code is determined by the number of component carriers
Preset	0Hz
State Saved	Saved in instrument state
Min	-3.5GHz
Max	3.5GHz

Spectrum

Determines if the spectrum of the incoming data is mirrored or not. The actual mirroring is accomplished by conjugating the complex time data.

Note that only the Modulation Analysis measurement and Conformance EVM measurement support this feature.

Remote Command	`[:SENSe]:CCARrier0|…|4:SPECtrum NORMal	INVert` `[:SENSe]:CCARrier0|…|4:SPECtrum?`
Example	`:CCAR0:SPEC INV` `:CCAR0:SPEC?`
Preset	NORM
State Saved	Yes
Range	Normal | Invert
Backwards Compatibility SCPI	`[:SENSe]:SPECtrum`

UL/DL Configuration

Allows you to set the Uplink and Downlink allocation configuration of the signal being measured. The choice of link direction will determine which slot in the frame is used for uplink transmission, and which slot for downlink transmission.

Remote Command	`[:SENSe]:CCARrier0|…|4:RADio:STANdard:ULDL CONF0	…	CONF6` `[:SENSe]:CCARrier0|…|4:RADio:STANdard:ULDL?`
Example	`:CCAR0:RAD:STAN:ULDL CONF0`
Notes	CONF0: Configuration 0 (DSUUUDSUUU) CONF1: Configuration 1 (DSUUDDSUUD)

	CONF2: Configuration 2 (DSUDDDSUDD) CONF3: Configuration 3 (DSUUUDDDDD) CONF4: Configuration 4 (DSUUDDDDDD) CONF5: Configuration 5 (DSUDDDDDDD) CONF6: Configuration 6 (DSUUUDSUUD)
Preset	CONF0
State Saved	Yes
Range	Configuration 0|Configuration 1|Configuration 2|Configuration 3|Configuration 4|Configuration 5|Configuration 6
Backwards Compatibility SCPI	`[:SENSe]:RADio:STANdard:ULDL`

Dw/GP/Up Len

This control allows you to set the DwPTS/GP/UpPTS length configuration of the signal being measured. The choice of link direction will determine the length of DwPTS, GP and UpPTS in the Special Subframe.

Remote Command	`[:SENSe]:CCARrier0|…|4:RADio:STANdard:DGPU CONF0 | … | CONF9` `[:SENSe]:CCARrier0|…|4:RADio:STANdard:DGPU?`
Example	`:CCAR0:RAD:STAN:DGPU CONF0`
Notes	CONF0: Configuration 0 CONF1: Configuration 1 CONF2: Configuration 2 CONF3: Configuration 3 CONF4: Configuration 4 CONF5: Configuration 5 CONF6: Configuration 6 CONF7: Configuration 7 CONF8: Configuration 8 CONF9: Configuration 9
Dependencies	The special sub-frame configuration 9 is only enabled when it is LTE-Advanced TDD
Preset	CONF0
State Saved	Yes
Range	Configuration 0|Configuration 1|Configuration 2|Configuration 3|Configuration 4|Configuration 5|Configuration 6|Configuration 7|Configuration 8|Configuration 9
Backwards Compatibility SCPI	`[:SENSe]:RADio:STANdard:DGPU`

CHP Power Integ BW

Specifies the range of integration used in calculating the power in the component carrier s in the CHP measurement.

Remote Command	`[:SENSe]:CCARrier0|…|4:CHPower:BANDwidth:INTegration <freq>` `[:SENSe]:CCARrier0|…|4:CHPower:BANDwidth:INTegration?`
Example	`:CCAR0:CHP:BAND:INT 20MHz` `:CCAR0:CHP:BAND:INT?`
Notes	You must be in LTEATDD/LTEAFDD Mode to use this command. Use :INSTrument:SELect to set the mode
Couplings	When System Bandwidth of the parameter set is changed, the value of this parameter also changes as shown in the following table.

System Bandwidth	CHP Integ BW
1.4 MHz (B1M4)	1.4 MHz
3 MHz (B3M)	3 MHz
5 MHz (B5M)	5 MHz
10 MHz (B10M)	10 MHz
15 MHz (B15M)	15 MHz
20 MHz (B20M)	20 MHz
200 kHz(B200K)	200 kHz

Preset	5 MHz
State Saved	Saved in instrument state
Min	100 kHz
Max	20 MHz
Backwards Compatibility SCPI	`[:SENSe]:CHPower:BANDwidth:INTegration` `[:SENSe]:CHPower:BWIDth:INTegration`

ACP Power Integ BW

Specifies the Measurement Noise Bandwidth used to calculate the power in the component carriers in the ACP measurement.

Remote Command	`[:SENSe]:CCARrier0|…|4:ACPower:BANDwidth[1]|2:INTegration <freq>` `[:SENSe]:CCARrier0|…|4:ACPower:BANDwidth[1]|2:INTegration?`
Example	`:CCAR0:ACP:BAND:INT 20MHz` `:CCAR0:ACP:BAND:INT?`

Notes	Carrier sub op code, 1 is for BTS, 2 for MS. Default is BTS You must be in the LTEATDD/LTEAFDD mode. Use :INSTrument:SELect to set the mode
Couplings	When System Bandwidth of the parameter set is changed, the value of this parameter also changes as shown in the following table.

System Bandwidth	BTS ACP Meas Noise BW	MS ACP Meas Noise BW
1.4 MHz (B1M4)	1.095 MHz	1.08 MHz
3 MHz (B3M)	2.715 MHz	2.7 MHz
5 MHz (B5M)	4.515 MHz	4.5 MHz
10 MHz (B10M)	9.015 MHz	9.0 MHz
15 MHz (B15M)	13.515 MHz	13.5 MHz
20 MHz (B20M)	18.015 MHz	18.0 MHz
200 kHz(B200K)	180 kHz	180 kHz

Preset	4.515 MHz|4.5 MHz
State Saved	Yes
Min	100 kHz
Max	20 MHz
Backwards Compatibility SCPI	`[:SENSe]:ACPower:CARRier[1]|2:LIST:BANDwidth[:INTegration]` `[:SENSe]:ACPower:CARRier[1]|2:LIST:BWIDth[:INTegration]`

SEM Power Integ BW

Specifies the integration bandwidth used to calculate the power in the component carriers in SEM measurement.

Remote Command	`[:SENSe]:CCARrier0|…|4:SEMask:BANDwidth[1]|2:INTegration <freq>` `[:SENSe]:CCARrier0|…|4:SEMask:BANDwidth[1]|2:INTegration?`
Example	`:CCAR0:SEM:BAND:INT 20MHz` `:CCAR0:SEM:BAND:INT?`
Notes	Bandwidth sub op code, 1 is for BTS, 2 for MS. Default is BTS You must be in LTEATDD/LTEAFDD Mode to use this command. Use :INSTrument:SELect to set the mode
Couplings	When System Bandwidth of the parameter set is changed, the value of this parameter also changes as shown in the following table. Note that you cannot set the value exceeding the corresponding System Bandwidth

System Bandwidth	BTS SEM Integ BW	MS SEM Integ BW
1.4 MHz (B1M4)	1.095 MHz	1.08 MHz
3 MHz (B3M)	2.715 MHz	2.7 MHz
5 MHz (B5M)	4.515 MHz	4.5 MHz
10 MHz (B10M)	9.015 MHz	9.0 MHz
15 MHz (B15M)	13.515 MHz	13.5 MHz
20 MHz (B20M)	18.015 MHz	18.0 MHz
200 kHz(B200K)	180 kHz	180 kHz

Preset	4.515 MHz|4.5 MHz
State Saved	Saved in instrument state
Min	100 kHz
Max	20 MHz
Backwards Compatibility SCPI	`[:SENSe]:SEMask:BANDwidth[1]|2:INTegration`

Carrier Config Presets

Lets you configure the Component Carrier presets.

Preset ETC

The ETC configuration is applied. The component carrier parameters are dynamically changed using values of the parameters of each test configuration under Carrier Config Presets menu when some test configuration is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig NONE	ETC1	ETC2	ETC3` `[:SENSe]:CCARrier:CONFig?`
Example	`:CCAR:CONF ETC1` `:CCAR:CONF?`
Notes	The control for NONE is not available
State Saved	Saved in instrument state
Range	ETC1|ETC2|ETC3

Max BTS RF Bandwidth

Sets max BS RF bandwidth used when the carrier configuration preset runs. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:RFBW <freq>` `[:SENSe]:CCARrier:CONFig:RFBW?`
Example	`:CCAR:CONF:RFBW 40MHz` `:CCAR:CONF:RFBW?`
Preset	40MHz
State Saved	Saved in instrument state
Min	1.4MHz
Max	200 MHz

Carrier Spacing Delta

Sets delta channel spacing used when the carrier configuration preset runs. Channel spacing is determined from this value and the default channel spacing defined in the standard, i.e. Channel spacing = (BW_{chan1} + BW_{chan2}) * 0.5 + [the delta spacing]. Since this value is a difference from the default spacing, this value can be negative to allow narrower channel spacing. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:SPACing:DELTa <freq>` `[:SENSe]:CCARrier:CONFig:SPACing:DELTa?`
Example	`:CCAR:CONF:SPAC:DELT -200kHz` `:CCAR:CONF:SPAC:DELT?`
Preset	0Hz
State Saved	Saved in instrument state
Min	-1.0 MHz
Max	10.0 MHz

ETC1 Attributes

Sets ETC1 carrier configuration.

Max Number of Component Carriers

Sets max component carriers placed when the ETC1 carrier configuration preset runs. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:ETC1:CMAX <integer>` `[:SENSe]:CCARrier:CONFig:ETC1:CMAX?`
Example	`:CCAR:CONF:ETC1:CMAX 5`

	`:CCAR:CONF:ETC1:CMAX?`
Preset	5
State Saved	Saved in instrument state
Max	5
Min/Max	1

Component Carrier System BW

Sets bandwidth of the component carriers placed when the ETC1carrier configuration preset runs. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:ETC1:BANDwidth B1M4 | B3M | B5M | B10M | B15M | B20M | B200K` `[:SENSe]:CCARrier:CONFig:ETC1:BANDwidth?`
Example	`:CCAR:CONF:ETC1:BAND B5M` `:CCAR:CONF:ETC1:BAND?`
Preset	B5M
State Saved	Saved in instrument state
Range	1.4MHz|3MHz|5MHz|10MHz|15MHz|20MHz|200kHz

Component Carrier Narrowest BW

Sets narrowest bandwidth of the component carriers placed when the ETC1 carrier configuration preset runs. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:ETC1:BANDwidth:NARRowest B1M4 | B3M | B5M | B10M | B15M | B20M | B200K` `[:SENSe]:CCARrier:CONFig:ETC1:BANDwidth:NARRowest?`
Example	`:CCAR:CONF:ETC1:BAND:NARR B1M4` `:CCAR:CONF:ETC1:BAND:NARR?`
Preset	B1M4
State Saved	Saved in instrument state
Range	1.4MHz|3MHz|5MHz|10MHz|15MHz|20MHz|200kHz

ETC2 Attributes

Sets ETC2 carrier configuration.

Max Number of Component Carriers

Sets max component carriers placed when the ETC2 carrier configuration preset runs. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:ETC2:CMAX <integer>` `[:SENSe]:CCARrier:CONFig:ETC2:CMAX?`
Example	`:CCAR:CONF:ETC2:CMAX 5` `:CCAR:CONF:ETC2:CMAX?`
Preset	5
State Saved	Saved in instrument state
Min	1
Max	5

Carrier Side (with BTS RF BW)

Select the side of RF bandwidth to place the ETC2 component carriers. When this value is changed, the carrier configuration preset is initiated.

- NEGative - Negative (lower) edge of RF bandwidth. If the option is selected, the available component carriers will be placed sequentially from the lower edge of the RF bandwidth starting from first
- POSitive - Positive (upper) edge of RF bandwidth, If the option is selected, the available component carriers will be placed sequentially from the upper edge of the RF bandwidth starting from first

Remote Command	`[:SENSe]:CCARrier:CONFig:ETC2:BANDwidth:SIDE NEGative | POSitive` `[:SENSe]:CCARrier:CONFig:ETC2:BANDwidth:SIDE?`
Example	`:CCAR:CONF:ETC2:BAND:SIDE NEG` `:CCAR:CONF:ETC2:BAND:SIDE?`
Preset	NEGative
State Saved	Saved in instrument state
Range	NEGative|POSitive

Component Carrier System BW

Sets carrier bandwidth of the component carriers placed when the ETC2 carrier configuration preset runs. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:ETC2:BANDwidth:CARRier[1]|2|…|5 B1M4 | B3M | B5M | B10M | B15M | B20M | B200K` `[:SENSe]:CCARrier:CONFig:ETC2:BANDwidth:CARRier?`
Example	`:CCAR:CONF:ETC2:BAND:CARR B5M` `:CCAR:CONF:ETC2:BAND:CARR?`
Dependencies	The Carrier Bandwidth is coupled to Max Component Carriers. The settings are enabled following the Max Component Carriers. For example, the 1st Carrier Bandwidth and 2nd Carrier Bandwidth will be available if the Max Component Carriers is 2
Preset	B5M
State Saved	Saved in instrument state
Range	1.4MHz|3MHz|5MHz|10MHz|15MHz|20MHz|200kHz

ETC3 CC Bandwidth

Sets the bandwidth of the component carriers placed when the ETC3 carrier configuration preset runs. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:ETC3:BANDwidth B1M4 | B3M | B5M | B10M | B15M | B20M | B200K` `[:SENSe]:CCARrier:CONFig:ETC3:BANDwidth?`
Example	`:CCAR:CONF:ETC3:BAND B5M` `:CCAR:CONF:ETC3:BAND?`
Preset	B5M
State Saved	Saved in instrument state
Range	1.4MHz|3MHz|5MHz|10MHz|15MHz|20MHz|200kHz

3.10.8.4 Meas Standard

Enables you to access Preset to Standard functions.

In LTE-Advanced TDD Mode, the parameters under Predefined Params impact the gate or trigger length and delay of the following measurements:

- Monitor Spectrum
- Channel Power
- ACP
- Power Stat CCDF

- Occupied BW
- Spectrum Emission Mask
- Spurious Emission

In LTE-Advanced FDD Mode, the Predefined Parameters in this section are used in the Transmit On/Off Power measurement. The Modulation Analysis measurement has its specific Predefined Parameters setting.

In LTE V2X Mode, Predefined parameters apply to all LTE V2X measurements.

System BW

Sets the demodulator to the specified bandwidth and configures the settings of every component carrier according to the default values listed in table for the current direction (Uplink or Downlink).

For example, when Number of Component is 3, after executing the command RAD:STAN:PRES B5M or selecting corresponding Bandwidth in the dropdown menu, all the 3 component carriers are configured as 5Mhz bandwidth, and all the settings of these 3 component carriers are set according to the table.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet B1M4 | B3M | B5M | B10M | B15M | B20M | B200K`
Example	`:RAD:STAN:PRES B5M`
Notes	B200K selection is available in LTE-A FDD mode B200K option is for NB-IoT which requires N9080EM3E license
Couplings	Preset To Standard presets parameter values listed in section “Values for each Preset To Standard”. And the system bandwidth of each component carrier under the Component Carrier Setup will be preset to the selected one
Preset	B5M
State Saved	Yes
Range	1.4 MHz (6 RB) | 3 MHz (15 RB) | 5 MHz (25 RB) | 10 MHz (50 RB) | 15 MHz (75 RB) | 20 MHz (100 RB) | 200 kHz (NB-IoT)

UL/DL Config

Sets the TDD UL/DL Allocation parameter of each carrier to the selected value.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:ULDL CONF0 | … | CONF6` `[:SENSe]:RADio:STANdard:PRESet:ULDL?`
Example	`:RAD:STAN:PRES:ULDL CONF0`
Notes	CONF0: Configuration 0 (DSUUUDSUUU)

	CONF1: Configuration 1 (DSUUDDSUUD) CONF2: Configuration 2 (DSUDDDSUDD) CONF3: Configuration 3 (DSUUUDDDDD) CONF4: Configuration 4 (DSUUDDDDDD) CONF5: Configuration 5 (DSUDDDDDDD) CONF6: Configuration 6 (DSUUUDSUUD)
Dependencies	When the setting is selected, the ULDL Alloc per component carrier under the Component carrier Setup will be preset to the selected value
Preset	CONF0
State Saved	Yes
Range	Configuration 0|Configuration 1|Configuration 2|Configuration 3|Configuration 4|Configuration 5|Configuration 6

Dw/GP/Up Len

Sets the TDD special sub-frame configuration of each component carrier to the selected value.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:DGPU CONF0 | … | CONF9` `[:SENSe]:RADio:STANdard:PRESet:DGPU?`
Example	`:RAD:STAN:PRES:DGPU CONF0`
Notes	CONF0: Configuration 0 CONF1: Configuration 1 CONF2: Configuration 2 CONF3: Configuration 3 CONF4: Configuration 4 CONF5: Configuration 5 CONF6: Configuration 6 CONF7: Configuration 7 CONF8: Configuration 8 CONF9: Configuration 9
Dependencies	When the setting is selected, the Dw/GP/Up Len per Component Carrier under the Component Carrier Setup will be preset to the selected value The special sub-frame configuration 9 is only enabled when it is LTE-Advanced TDD
Preset	CONF0
State Saved	Yes
Range	Configuration 0|Configuration 1|Configuration 2|Configuration 3|Configuration 4|Configuration 5|Configuration 6|Configuration 7|Configuration 8|Configuration 9

Analysis Slot

Specifies the starting analysis slot. The measurement will adjust the gate delay or trigger delay according to this parameter.

Remote Command	`[:SENSe]:RADio:SLOT TS0 | TS1 | DPTS1 | UPTS1 | TS4 | TS5 | TS6 | TS7 | TS8 | TS9 | TS10 | TS11 | TS12 | TS13 | TS14 | TS15 | TS16 | TS17 | TS18 | TS19` `[:SENSe]:RADio:SLOT?`
Example	`:RAD:SLOT TS0`
Couplings	Measurement's gate length or meas interval will couple to the parameter
Preset	TS0
State Saved	Yes
Range	TS0 | TS1 | DwPTS1 | UpPTS1 | TS4 | TS5 | TS6 | TS7 | TS8 | TS9 | TS10 | TS11 | TS12(DwPTS2) | TS13 (UpPTS2) | TS14 | TS15 | TS16 | TS17 | TS18 | TS19

Meas Interval

This parameter specifies the desired slots count that needs to be analyzed. The measurement will adjust the gate length or meas interval according to this parameter.

For NB-IoT uplink cases scenarios, when Measure NPRACH is Off, this parameter indicates not only the slots' count to be analyzed, but the time elapse of the off power measurements as well.

In LTE-A FDD Mode, this parameter only appears in the Transmit On|Off Power measurement.

Remote Command	`[:SENSe]:RADio:MINTerval <integer>` `[:SENSe]:RADio:MINTerval`
Example	`:RAD:MINT 1`
Notes	The backwards compatible command [:SENSe]:PVTime:MINTerval is available in LTE FDD & LTE-A FDD Modes
Dependencies	This parameter is disabled when all the below conditions are met at the same time: – System BW is "200 kHz (NB-IoT)" – Direction is "uplink" – NB-IoT Subcarrier Spacing is "3.75kHz" – Meas NPRACH is "OFF"
Couplings	Disabled when the "Measure PRACH" is in scope and its value is not off, then the actual meas interval is the length PRACH or SRS channel

For NB-IoT case scenario, when the parameter is disabled, its value is automatically determined by both Meas NPRACH:

Meas NPRACH	Meas Interval
Preamble0	3 slots
Preamble1	4 slots

Preset	1
State Saved	Yes
Min	1
Max	20, when System BW is NOT “200 kHz (NB-IoT) 16, otherwise
Backwards Compatibility SCPI	LTE: `[:SENSe]:PVTime:MINTerval`

CP Length

Specifies whether the cyclic prefix is configured as NORMal or EXTended for power measurement. The parameter will affect the gate length or meas interval parameters.

In LTE-A FDD Mode, this parameter only appears in the Transmit On|Off Power measurement.

Remote Command	`[:SENSe]:RADio:CPLength NORMal | EXTended` `[:SENSe]:RADio:CPLength?`
Example	`:RAD:CPL NORM`
Notes	The backwards compatible SCPI command [:SENSe]:PVTime:CPLength is available in LTE FDD & LTE-A FDD Modes
Dependencies	Disabled when System BW is set to “200 kHz (NB-IoT)” and Direction is “uplink”
Couplings	Set to NORMal when System BW is set to “200 kHz (NB-IoT)”
Preset	NORMal
State Saved	Yes
Range	Normal|Extended
Backwards Compatibility SCPI	LTE: `[:SENSe]:PVTime:CPLength`

Measure PRACH/SRS

Specifies whether the analysis slot is used for PRACH channel or SRS and the PRACH preamble format of the analysis slot.

The measurement will adjust the gate length or meas interval according to this parameter.

Remote Command	`[:SENSe]:RADio:MEASure OFF | PPF0 | PPF1 | PPF2 | PPF3 | PPF4 | SRS | DSRS` `[:SENSe]:RADio:MEASure?`
Example	`:RAD:MEAS OFF`
Couplings	If direction is downlink, the control is disabled and the value is set to off If this control value is not off, Meas Interval is disabled
Preset	OFF
State Saved	Yes
Range	Off|Preamble 0|Preamble 1|Preamble 2|Preamble 3|Preamble 4|SRS|DSRS

Reference Config

Specifies which component carrier’s ULDL Allocation Configuration and Dw/Up Length Configuration settings are used to adjust time slot to be measured automatically. For Modulation Analysis measurement, this control specifies which CC is used as the reference CC for time alignment results.

In LTE-A FDD Mode, this parameter only appears in the Transmit On|Off Power and Modulation Analysis measurements.

Remote Command	`[:SENSe]:RADio:RCONfig CC0 | … | CC4` `[:SENSe]:RADio:RCONfig?`
Example	`:RAD:RCON CC0`
Notes	The options CC1~CC4 can be enabled with 9080B/9082B-2FP license
Dependencies	Reference Configuration is coupled to Number of Component Carriers. For example, reference configuration list will include CC0~CC1 if the number of Component Carriers is 2
Preset	CC0
State Saved	Yes
Range	CC0|CC1|CC2|CC3|CC4

3.10.8.5 Advanced

Contains controls for setting advanced functions of the instrument.

IF Gain

Used to set the IF Gain function to: Auto, Low Gain or High Gain. These settings affect sensitivity and IF overloads.

Only applies to the RF input. Does not apply to baseband I/Q input.

Remote Command	`[:SENSe]:PSTatistic:IF:GAIN[:STATe] ON | OFF | 1 | 0` `[:SENSe]:PSTatistic:IF:GAIN[:STATe]?`
Example	`:PST:IF:GAIN ON` `:PST:IF:GAIN?`
Notes	`ON` = high gain `OFF` = low gain
Dependencies	Not available when IQ Input is selected Has no effect when the U7227A USB Preamplifier is connected. This is not annotated or reflected on any control; there are no controls grayed out nor any SCPI locked out. The instrument simply behaves as though both IF Gain is set to Low regardless of the setting on the control Not available in VXT, EXM, or UXM
Couplings	Sending this command forces IF Gain Auto to `OFF` (**Man**)
Preset	`OFF`
State Saved	Saved in instrument state
Range	Low Gain | High Gain

Auto Function

Remote Command	`[:SENSe]:PSTatistic:IF:GAIN:AUTO[:STATe] ON | OFF | 1 | 0` `[:SENSe]:PSTatistic:IF:GAIN:AUTO[:STATe]?`
Example	`:PST:IF:GAIN:AUTO ON` `:PST:IF:GAIN:AUTO?`
Couplings	**Auto** sets IF Gain to High Gain if the input attenuator is set to 0 dB, or the preamp is turned on, or the Max Mixer Level is –20 dBm or lower For other conditions, **Auto** sets IF Gain to Low Gain
Preset	`OFF`

IF Upsampling Ratio

Allows you to select the upsampling ratio after data is captured for a measurement. Using this method, mitigation of peak detection error can be expected when upsampling ratio is set to > x1.

Remote Command	`[:SENSe]:PSTatistic:URATio X1 | X2 | X4 | X8 | X16 | X32` `[:SENSe]:PSTatistic:URATio?`
Example	`:PST:URAT X8` `:PST:URAT?`
Notes	X1 is for backwards compatibility
Preset	`X1`

State Saved	Yes, Saved in instrument state
Range	`X1|X2|X4|X8|X16|X32`

3.10.8.6 Global

The controls in this menu apply to all Modes in the instrument.

Some controls (for example, "Global Center Freq" on page 2276) allow you to switch certain Meas Global parameters to a Mode Global state. These switches apply to all Modes that support global settings. For example, no matter what Mode you are in when you set **Global Center Freq** to `ON`, it applies to all Modes that support Global settings.

Other controls (for example, **Extend Low Band**) are actually set in this menu, but apply to all Modes.

Global Center Freq

The software maintains a Mode Global value called **Global Center Freq**.

When **Global Center Freq** is switched `ON`, the current Mode's center frequency is copied into the **Global Center Frequency**, and from then on all Modes that support global settings use the **Global Center Frequency**, so you can switch between any of these Modes and the **Center Frequency** remains unchanged.

Adjusting the **Center Frequency** of any Mode that supports Global Settings, while **Global Center Freq** is `ON`, modifies the **Global Center Freq**.

When **Global Center Freq** is switched `OFF`, the **Center Frequency** of the current Mode is unchanged, but now the **Center Frequency** of each Mode is once again independent.

When **Mode Preset** is pressed while **Global Center Freq** is `ON`, the **Global Center Freq** is preset to the preset **Center Frequency** of the current Mode.

This function resets to `OFF` when "Restore Defaults" on page 2278 is pressed, or when **System**, **Restore Defaults**, **All Modes** is pressed.

Remote Command	`:INSTrument:COUPle:FREQuency:CENTer ALL | NONE` `:INSTrument:COUPle:FREQuency:CENTer?`
Example	`:INST:COUP:FREQ:CENT ALL` `:INST:COUP:FREQ:CENT?`
Preset	Set to `OFF` on **Global** Settings, **Restore Defaults** and **System, Restore Defaults, All Modes**
Range	`ALL|NONE`

Preset	`OFF`
Backwards Compatibility SCPI	`:GLOBal:FREQuency:CENTer[:STATe] 1 | 0 | ON | OFF` `:GLOBal:FREQuency:CENTer[:STATe]?`

Global EMC Std

When this control is switched `ON`, the current Mode's EMC Std is copied into the **Global EMC Std**, and from then on all Modes that support global settings use the **Global EMC Std**, so you can switch between any of these Modes and the EMC Std remains unchanged.

Adjusting the EMC Std of any Mode that supports Global settings, while **Global EMC Std** is `ON` modifies the **Global EMC Std**.

When **Global EMC Std** is switched `OFF`, the EMC Std of the current Mode remains unchanged, but now the EMC Std of each Mode is once again independent. When **Mode Preset** is pressed while **Global EMC Std** is `ON`, **Global EMC Std** is preset to the preset EMC Std of the current Mode.

This function resets to `OFF` when "Restore Defaults" on page 2278 is pressed, or when **System, Restore Defaults, All Modes** is pressed.

Remote Command	`:INSTrument:COUPle:EMC:STANdard ALL | NONE` `:INSTrument:COUPle:EMC:STANdard?`
Example	`:INST:COUP:EMC:STAN ALL` `:INST:COUP:EMC:STAN?`
Dependencies	Only available if Option EMC is installed
Preset	Set to `OFF` on **Global** Settings, **Restore Defaults** and **System, Restore Defaults, All Modes**
Range	`ALL | NONE`

Extend Low Band

The software maintains a Mode Global value called **Extend Low Band**.

Under the current sweep configuration crossing over two bands, when **Extend Low Band** is turned `ON`, the instrument checks whether one band can cover the whole sweep frequency range or not. If it can, then the instrument locks the band; otherwise, it does nothing (the band crossover occurs).

This function does *not* work when **Band Lock** under **System** > **Service** > **Lock Functions** is not -1 (no Band Lock). In that case, **Band Lock** takes priority over **Extend Low Band**.

This function resets to `OFF` when "Restore Defaults" on page 2278 is pressed, or when **System**, **Restore Defaults**, **All Modes** is pressed.

Remote Command	`:INSTrument:COUPle:FREQuency:BAND:EXTend 0 | 1 | ON | OFF` `:INSTrument:COUPle:FREQuency:BAND:EXTend?`
Example	`:INST:COUP:FREQ:BAND:EXT 1` `:INST:COUP:FREQ:BAND:EXT?`
Preset	Set to `OFF` by **Global** Settings > **Restore Defaults** and **System** > **Restore Defaults** > **All Modes**
Range	`ON|OFF`

Restore Defaults

Resets all functions in the **Global** settings menu to `OFF`. Pressing **System**, **Restore Defaults**, **All Modes** has the same effect.

Remote Command	`:INSTrument:COUPle:DEFault`
Example	`:INST:COUP:DEF`
Backwards Compatibility SCPI	`:GLOBal:DEFault`

3.10.9 Sweep

Accesses controls to configure and control the acquisition of data, and the X-axis parameters of the instrument.

Depending on the selected mode and measurement, these controls might include: **Sweep Time**, **Continuous/Single**, **Pause/Resume**, **X Scale** and **Number of Points**.

3.10.9.1 Sweep/Control

Accesses controls that let you operate the sweep and control functions of the instrument, such as **Sweep Time** and **Continuous/Single**.

Sweep/Measure

Lets you toggle between **Continuous** and **Single** sweep or measurement operation. The single/continuous state is Meas Global, so the setting affects all measurements.

The front-panel key **Single/Cont** performs exactly the same function

See "More Information" on page 2004

Remote Command	`:INITiate:CONTinuous OFF | ON | 0 | 1` `:INITiate:CONTinuous?`
Example	Put instrument into **Single** measurement operation:

	`:INIT:CONT 0`
	`:INIT:CONT OFF`
	Put instrument into **Continuous** measurement operation:
	`:INIT:CONT 1`
	`:INIT:CONT ON`

Preset	`ON` Note that `:SYST:PRES` sets `:INIT:CONT` to `ON`, but `*RST` sets `:INIT:CONT` to `OFF`
State Saved	Saved in instrument state
Annunciation	The **Single/Continuous** icon in the Meas Bar changes depending on the setting: – A line with an arrow is **Single** – A loop with an arrow is **Continuous**
Backwards Compatibility Notes	X-Series A-models had **Single** and **Cont** hardkeys in place of the **SweepSingleCont** softkey. In the X-Series A-models, if in single measurement, the **Cont** hardkey (and `INIT:CONT ON`) switched to continuous measurement, but never restarted a measurement and never reset a sweep X-Series B-models have a **Cont/Single** toggle control instead of **Single** and **Cont** hardkeys, but it is still true that, if in single measurement, the **Cont/Single** toggle control never restarts a measurement and never resets a sweep

More Information

Continuous Mode	The instrument takes repetitive sweeps, averages, measurements, etc., when in continuous mode. If in average or Max/Min Hold, and the average/hold count reaches the **Average/Hold Num**, the count stops incrementing, but the instrument keeps sweeping See the **Trace** key description under **Trace Average** for the averaging formula used both before and after the **Average/Hold Num** is reached. The trigger condition must be met prior to each sweep The type of trace processing for multiple sweeps is set under the **Trace** key, with choices of **Trace Average**, **Max Hold**, or **Min Hold**
Single Mode	The instrument takes a single sweep when in **Single** mode, or if in average or Max/Min Hold, or if there is a **Waterfall** window displayed, it takes multiple sweeps until the average/hold count reaches the **Average/Hold Num**, then the count stops incrementing, and the instrument stops sweeping See the **Trace** key description under **Trace Average** for the averaging formula used. The trigger condition must be met prior to the sweep The type of trace processing for multiple sweeps is set under the **Trace** key, with choices of **Trace Average**, **Max Hold**, or **Min Hold**

If the instrument is in **Single** measurement mode, pressing the **Cont/Single** toggle control does not zero the count and does not cause the sweep to be reset; the only action is to put the instrument into Continuous measurement operation.

If the instrument is already in **Continuous** sweep:

- `:INIT:CONT 1` has no effect
- `:INIT:CONT 0` places the instrument in Single Sweep but has no effect on the current sequence until k = N, at which point the current sequence will stop and the instrument will go to the idle state

See "Restart" on page 2279 for details of `:INIT:IMMediate`.

If the instrument is already in **Single** sweep, `:INIT:CONT OFF` has no effect.

If the instrument is already in **Single** sweep, then pressing **Cont/Single** in the middle of a sweep does not restart the sweep or sequence. Similarly, pressing **Cont/Single** does not restart the sweep or sequence if the sweep is not in the idle state (for example, if you are taking a very slow sweep, or the instrument is waiting for a trigger). Even though pressing **Cont/Single** in the middle of a sweep does not restart the sweep, sending `:INIT:IMM` *does* reset it.

If the instrument is in **Single** sweep, and *not* Averaging/Holding, and you want to take one more sweep, press **Restart**.

If the instrument is in **Single** sweep, *and* Averaging/Holding, and you want to take one more sweep without resetting the Average trace or count, go to **Meas Setup** and increment the average count by 1 by pressing the **Step-Up** key while **Average/Hold Num** is the active function. You can also do this by sending `:CALC:AVER:TCON UP`.

Restart

Restarts the current sweep, or measurement, or set of averaged/held sweeps or measurements. If you are Paused, pressing **Restart** performs a Resume.

The front-panel key **Restart** performs exactly the same function.

The **Restart** function is accessed in several ways:

- Pressing the **Restart** key
- Sending `:INIT:IMM`
- Sending `:INIT:REST`

See "More Information" on page 2006

Remote Command	`:INITiate[:IMMediate]` `:INITiate:RESTart`
Example	`:INIT:IMM` `:INIT:REST`
Notes	`:INIT:REST` and `:INIT:IMM` perform exactly the same function

Couplings	Resets average/hold count k. For the first sweep overwrites all active (update = on) traces with new current data. For application modes, it resets other parameters as required by the measurement
Status Bits/OPC dependencies	This is an Overlapped command The `STATus:OPERation` register bits 0 through 8 are cleared , *except* bit 6 (Waiting for Periodic Sync). Initiating a measurement and Waiting for Periodic Sync could be asynchronous The `STATus:QUEStionable` register bit 9 (`INTegrity` sum) is cleared The `SWEEPING` bit is set The `MEASURING` bit is set
Backwards Compatibility Notes	For Spectrum Analysis Mode in ESA and PSA, the **Restart** hardkey and the `:INIT:REST` command restarted trace averages (displayed average count reset to 1) for a trace in **Clear Write**, but did not restart **Max Hold** and **Min Hold** In X-Series, the **Restart** hardkey and the `:INIT:REST` command restart not only **Trace Average**, but **MaxHold** and **MinHold** traces as well

More Information

The **Restart** function first aborts the current sweep or measurement as quickly as possible. It then resets the sweep and trigger systems, sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the instrument is in the process of aligning when a **Restart** is executed, the alignment finishes before the restart function is performed.

Even when set for **Single** operation, multiple sweeps may be taken when **Restart** is pressed (for example, when averaging/holding is on). Thus, when we say that **Restart** "restarts a measurement", depending on the current settings, we may mean that it:

- Restarts the current sweep
- Restarts the current measurement
- Restarts the current set of sweeps if any trace is in Trace Average, Max Hold or Min Hold
- Restarts the current set of measurements if Averaging, or Max Hold, or Min Hold is on for the measurement

If there is no Average or Max/Min Hold function (no trace in Trace Average or Hold, or **Average/Hold Num** set to 1), and no **Waterfall** window is being displayed, a single sweep is equivalent to a single measurement. A single sweep is taken after the trigger condition is met; and the instrument stops sweeping once that sweep has completed. However, with **Average/Hold Num** >1, and at least one trace set to Trace Average, Max Hold, or Min Hold, or a **Waterfall** window being displayed, multiple sweeps/data acquisitions are taken for a single measurement. The trigger condition must be met prior to each sweep. The sweep is stopped when the average count k equals the number N set for **Average/Hold Num**.

Once the full set of sweeps has been taken, the instrument goes to the idle state. To take one more sweep without resetting the average count, increment the average count by 1, by pressing the **Step-Up** key while **Average/Hold Number** is the active function, or by sending the remote command `:CALC:AVER:TCON UP`.

Trace Update

The numeric results are not blanked at any time during the restart cycle.

For slow sweeps (see **Trace Update** section in **Trace/Detector**), the traces are updated real-time during the sweep. There may be a special circumstance in application mode measurements where an exception is made and the traces and/or results need to be blanked before displaying the new results.

To summarize, the following list shows what happens to the trace data on various events:

Event	Trace Effect
Clear/Write pressed (even if already in Clear/Write)	Set to mintracevalue
Max Hold pressed (even if already in Max Hold)	Set to mintracevalue
Min Hold pressed (even if already in Min Hold)	Set to maxtracevalue
Trace Average pressed (even if already in Trace Average)	Trace data unaffected but start new sweep/avg/hold
Restart pressed	Trace data unaffected but start new sweep/avg/hold
Parameter requiring restart changed (e.g., RBW)	Trace data unaffected but start new sweep/avg/hold

Sweep and Trigger Reset

Resetting the sweep system resets the average/hold count k to 0. It also resets the set point counter to 0. Resetting the trigger system resets the internal auto trig timer to the value set by the **Auto Trig** control.

Averaging

The weighting factor used for averaging is k. This k is also the average/hold count for how many valid sweeps (data acquisitions) have been done. This k is used for comparisons with N, as those comparisons always needs to be based on valid completed sweeps.

The displayed average/hold, `K`, shows the count for the sweep (data acquisition) in progress. `K` = `k` + 1, with a limit of N. The displayed value `K` changes from its previous value to 1 as soon as the trigger condition for the first data acquisition (sweep) is met.

Pause/Resume

Pauses a measurement after the current data acquisition is complete.

When paused, the label on the control changes to **Resume**. Pressing **Resume** un-pauses the measurement. When paused, pressing **Restart** performs a Resume.

Remote Command	`:INITiate:PAUSe` `:INITiate:RESume`
Example	`:INIT:PAUS` `:INIT:RES`
Dependencies	Not displayed in Modes that do not support pausing
Annotation	Only on control

Abort (Remote Command Only)

Stops the current measurement. Aborts the current measurement as quickly as possible, resets the sweep and trigger systems, and puts the measurement into an "idle" state. If the instrument is in the process of aligning when `:ABORt` is sent, the alignment finishes *before* the abort function is performed, so `:ABORt` does not abort an alignment.

If the instrument is set for **Continuous** measurement, it sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the instrument is set for **Single** measurement, it remains in the "idle" state until an `:INIT:IMM` command is received.

Remote Command	`:ABORt`
Example	`:ABOR`
Notes	If `:INIT:CONT` is `ON`, then a new continuous measurement will start immediately, with sweep (data acquisition) occurring once the trigger condition has been met If `:INIT:CONT` is `OFF`, then `:INIT:IMM` is used to start a single measurement, with sweep (data acquisition) occurring once the trigger condition has been met
Dependencies	For continuous measurement, `:ABORt` is equivalent to the **Restart** key Not all measurements support this command
Status Bits/OPC dependencies	The `STATus:OPERation` register bits 0 through 8 are cleared , *except* bit 6 (Waiting for Periodic Sync). Initiating a measurement and Waiting for Periodic Sync could be asynchronous

	The `STATus:QUEStionable` register bit 9 (`INTegrity` sum) is cleared Since all the bits that feed into OPC are cleared by `:ABORt`, the Abort command will cause the `*OPC` query to return true

3.10.9.2 X Scale

Accesses controls that enable you to set the horizontal scale parameters.

Scale/Div

Enables you to enter a time value to change the horizontal scale.

Remote Command	`:DISPlay:PSTatistic:VIEW[1]:WINDow2:TRACe:X[:SCALe]:PDIVision <rel_ampl>` `:DISPlay:PSTatistic:VIEW[1]:WINDow2:TRACe:X[:SCALe]:PDIVision?`
Example	`:DISP:PST:VIEW:WIND2:TRAC:X:PDIV 10` `:DISP:PST:VIEW:WIND2:TRAC:X:PDIV?`
Notes	The CCDF measurement has the trace display only in Window 2, because values other than “2” are *not* available as the sub-op code
Preset	2.00
State Saved	Saved in instrument state
Min	0.1
Max	20
Backwards Compatibility SCPI	`:DISPlay:PSTatistic:XSCale`

3.10.10 Trace

Lets you control the display and storage of trace data for the available traces.

3.10.10.1 Trace Control

The controls on this tab allow you to select display of the Reference Trace and the Gaussian Line, and store the Reference Trace.

Store Ref Trace

Copies the currently measured curve as the user-definable reference trace. The captured data remains until the other mode is chosen. Pressing this key also refreshes the reference trace.

No query is available.

Remote Command	`:CALCulate:PSTatistic:STORe:REFerence`
Example	`:CALC:PST:STOR:REF`
Backwards Compatibility SCPI	`[:SENSe]:PSTatistic:SRTRace`

Ref Trace

Toggles the reference trace display On or Off.

Remote Command	`:DISPlay:PSTatistic:RTRace[:STATe] OFF | ON | 0 | 1` `:DISPlay:PSTatistic:RTRace[:STATe]?`
Example	`:DISP:PST:RTR OFF` `:DISP:PST:RTR?`
Preset	`OFF`
State Saved	Saved in instrument state
Range	`OFF|ON`
Backwards Compatibility SCPI	`[:SENSe]:PSTatistic:RTRace[:STATe]`

Gaussian Line

Toggles the Gaussian trace display On or Off.

Remote Command	`:DISPlay:PSTatistic:GAUSsian[:STATe] OFF | ON | 0 | 1` `:DISPlay:PSTatistic:GAUSsian[:STATe]?`
Example	`:DISP:PST:GAUS OFF` `:DISP:PST:GAUS?`
Preset	`ON`
State Saved	Saved in instrument state
Range	`OFF|ON`
Backwards Compatibility SCPI	`[:SENSe]:PSTatistic:GAUSsian[:STATe]`

3.11 Monitor Spectrum Measurement

The Monitor Spectrum measurement provides a quick, convenient means of looking at the entire spectrum. While the look and feel are similar to Spectrum Analyzer Mode, the functionality is greatly reduced for easy operation. The main purpose of this measurement is to show the spectrum. The default span should cover an appropriate frequency range of the application.

Measurement Commands

The following commands can be used to configure the measurement and retrieve results:

`:CONFigure:MONitor`

`:CONFigure:MONitor:NDEFault`

`:INITiate:MONitor`

`:FETCh:MONitor[n]?`

`:READ:MONitor[n]?`

`:MEASure:MONitor[n]?`

Remote Command Results

The following table describes the results returned by the queries listed above, according to the index value `n`.

n	Results Returned
1 (or not specified)	Returns trace1 data with comma separated floating numbers
2	Returns trace2 data with comma separated floating numbers
3	Returns trace3 data with comma separated floating numbers

3.11.1 Views

For modes other than MSR, LTEAFDD/LTEATDD and 5GNR, there is a single view, **Normal**.

For the MSR, LTEAFDD/LTEATDD and 5GNR modes, there are two views, **Normal** and **Carrier Info**, as described in the table below. The **Normal** view is the same as the common Monitor Spectrum view in other Modes. Carrier Info is available on the spectrum trace.

"Normal" on page 2012	This is a single window view of the spectrum In MSR, LTEAFDD/LTEATDD and 5GNR Modes, you can turn on attributes that show the defined carriers and the sub-blocks also
"Carrier Info" on page 2013	This view shows the spectrum in the top window and a carrier configuration summary in the bottom window Carrier center frequency can be displayed in either offset or absolute frequency depending on Carrier Freq

View Selection by Name

Remote Command	`:DISPlay:MONitor:VIEW[:SELect] RTRace | CINFormation` `:DISPlay:MONitor:VIEW[:SELect]?`
Example	`:DISP:MON:VIEW RTR` `:DISP:MON:VIEW?`
Preset	`RTRace`
State Saved	Saved in instrument state
Range	Power Results|Carrier Info

View Selection by Number

Remote Command	`:DISPlay:MONitor:VIEW:NSELect <integer>` `:DISPlay:MONitor:VIEW:NSELect?`
Example	`:DISP:MON:VIEW:NSEL 1` `:DISP:MON:VIEW:NSEL?`
Preset	1
State Saved	Saved in instrument state
Min/Max	1/2

3.11.1.1 Normal

Windows: "Spectrum" on page 2013

Single window view of the graph.

Example	`:DISP:MON:VIEW RTR`
Dependencies	This command is only available in the MSR, LTE-A FDD/TDD and 5G NR modes. In other Modes this is the only View

3.11.1.2 Carrier Info

This view shows the spectrum in the top window and a carrier configuration summary in the bottom window.

Carrier center frequency can be displayed in either offset or absolute frequency, depending on Carrier Freq.

Windows: "Spectrum" on page 2013,"Carrier Info" on page 2015

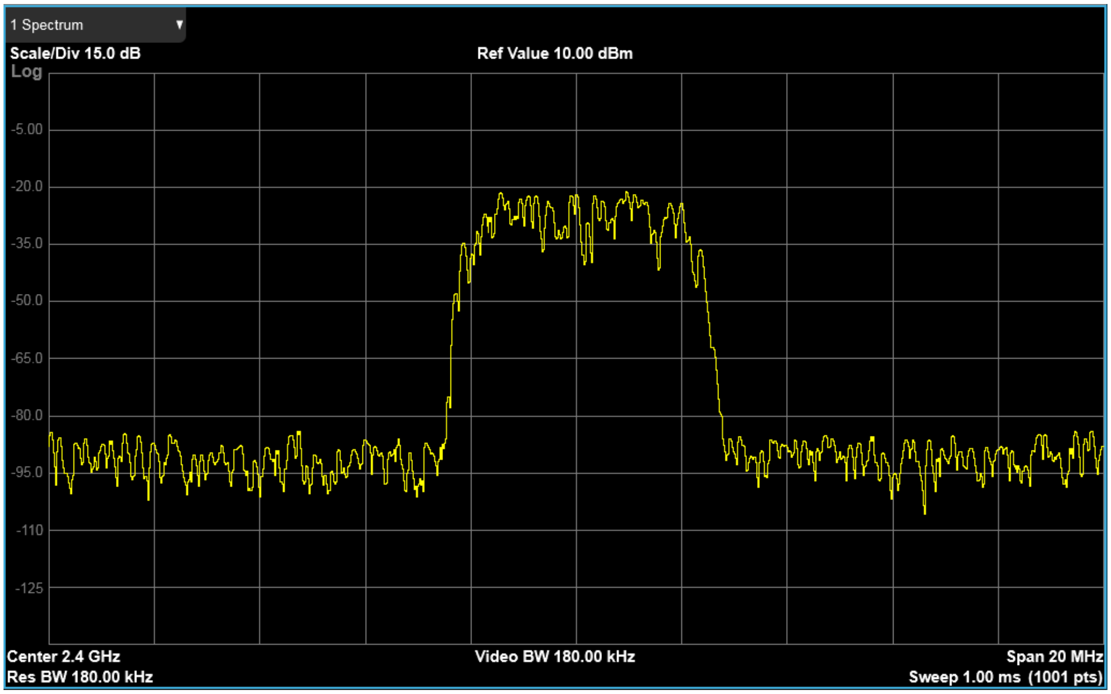
Example	`:DISP:MON:VIEW CINF`
Dependencies	Only available in the MSR, LTEAFDD/LTEATDD and 5GNR modes

3.11.2 Windows

This section describes the windows used in the Monitor Spectrum measurement.

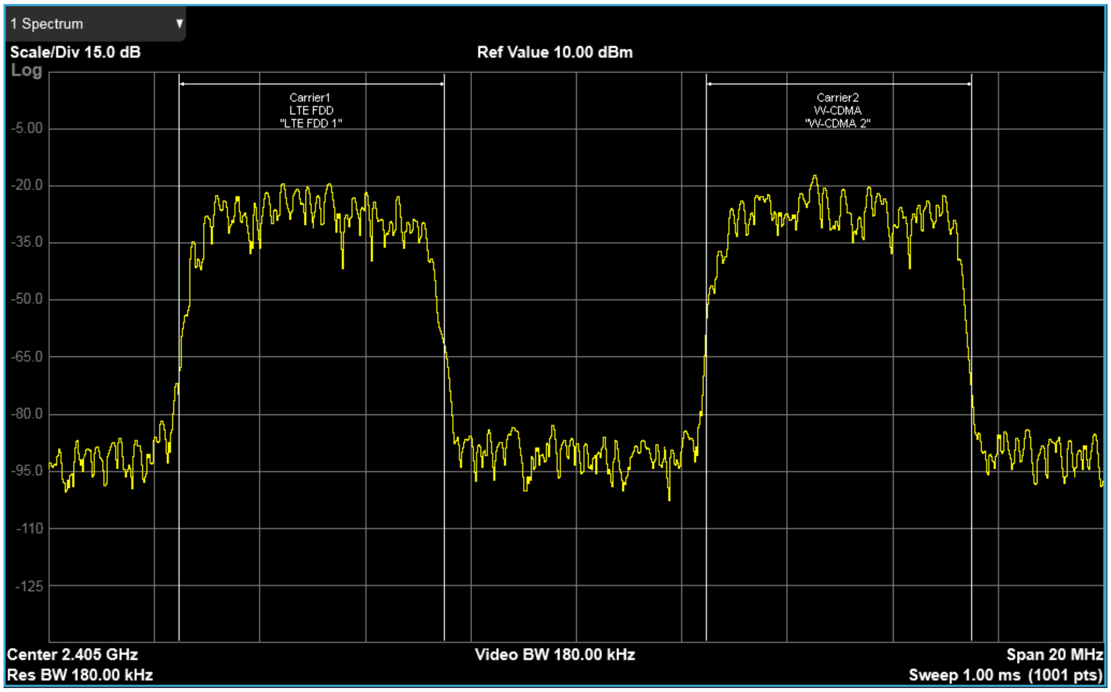
3.11.2.1 Spectrum

In all modes except **MSR, LTEAFDD/LTEATDD, and 5GNR,** this is a single trace window showing the spectrum.



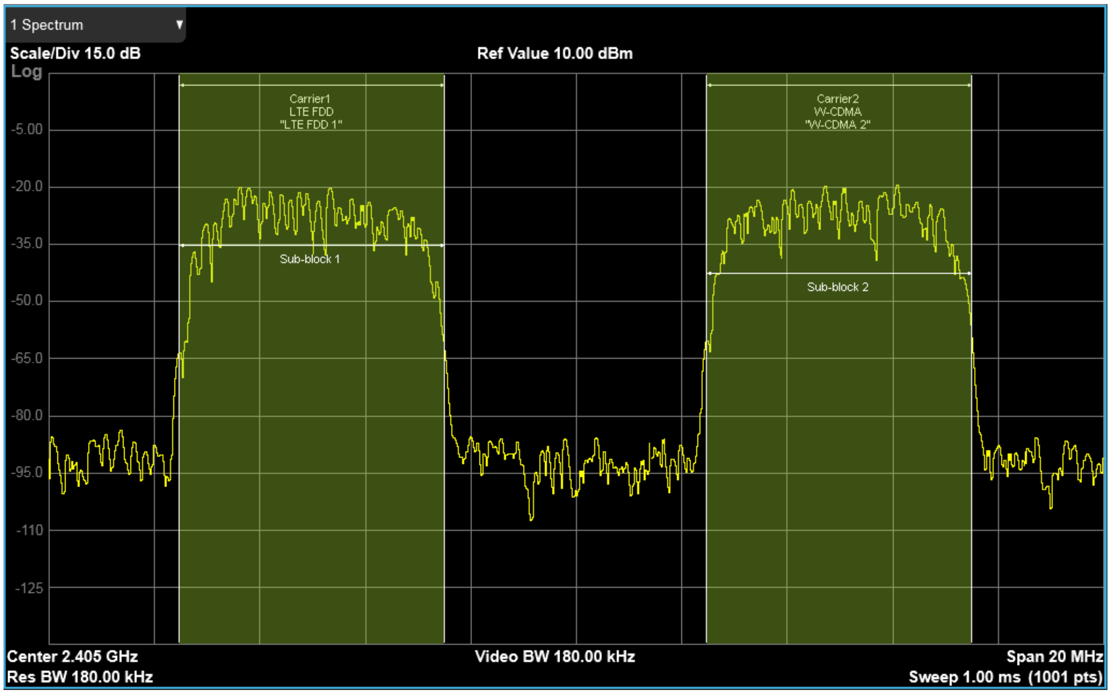
In **LTEAFDD/LTEATDD, MSR and 5GNR Modes**, multi-carriers are supported. The Carrier Attribute on/off and Sub-block Attribute on/off settings (under Display, Meas Display) are defined to allow the carrier and sub-block legends to display.

When the Carrier Attribute is on, the carrier identification and name are shown on the spectrum trace:



Scale/Div 15.0 dB
Ref Value 10.00 dBm
Center 2.405 GHz
Res BW 180.00 kHz
Video BW 180.00 kHz
Span 20 MHz
Sweep 1.00 ms (1001 pts)

When Carrier and Sub-block attributes are both on, the sub-block scope and name are also shown on the spectrum trace:

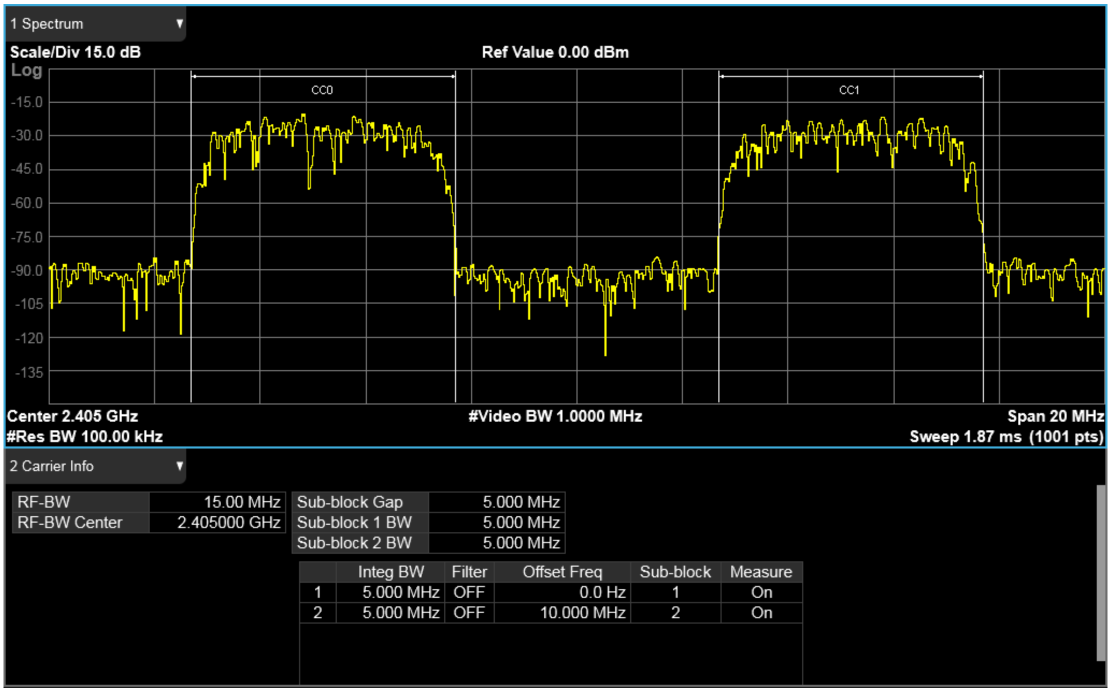


3.11.2.2 Carrier Info

In the Carrier Info window, the Carrier configuration is summarized in the lower window.

LTEAFDD/LTEATDD, 5GNR Modes

The Carrier configuration is summarized in the lower window as below:



Scale/Div 15.0 dB

Ref Value 0.00 dBm

Center 2.405 GHz

#Res BW 100.00 kHz

#Video BW 1.0000 MHz

Span 20 MHz

Sweep 1.87 ms (1001 pts)

RF-BW	15.00 MHz
RF-BW Center	2.405000 GHz

Sub-block Gap	5.000 MHz
Sub-block 1 BW	5.000 MHz
Sub-block 2 BW	5.000 MHz

	Integ BW	Filter	Offset Freq	Sub-block	Measure
1	5.000 MHz	OFF	0.0 Hz	1	On
2	5.000 MHz	OFF	10.000 MHz	2	On

The text window displays the following results:

RF-BW and RF-BW Center

It shows the RF bandwidth calculated from the outermost component carriers and their freq offset, and the center frequency of the RF Bandwidth.

Sub-block configuration

As for intra-band non-contiguous spectrum operation, the sub-block concept is introduced, which refers to one contiguous allocated block of spectrum for transmission and reception in the intra-band non-contiguous aggregation mode. So far we support the two sub-blocks. It summarizes each sub-block bandwidth and the frequency gap between the two consecutive sub-blocks. The Sub-block gap and Sub-block 2 BW are displayed when Component Carrier Allocation is Non-Contiguous and two sub-blocks are separated.

Integration Bandwidth

It displays the transmission bandwidth each component carrier.

Filter

It displays whether RRC filter is used for MON measurement or not.

Offset Frequency

It shows the offset frequency from the carrier reference frequency in multi-carrier measurements. The carrier frequency display type determines whether the relative frequency or absolute frequency will be displayed.

Sub-block

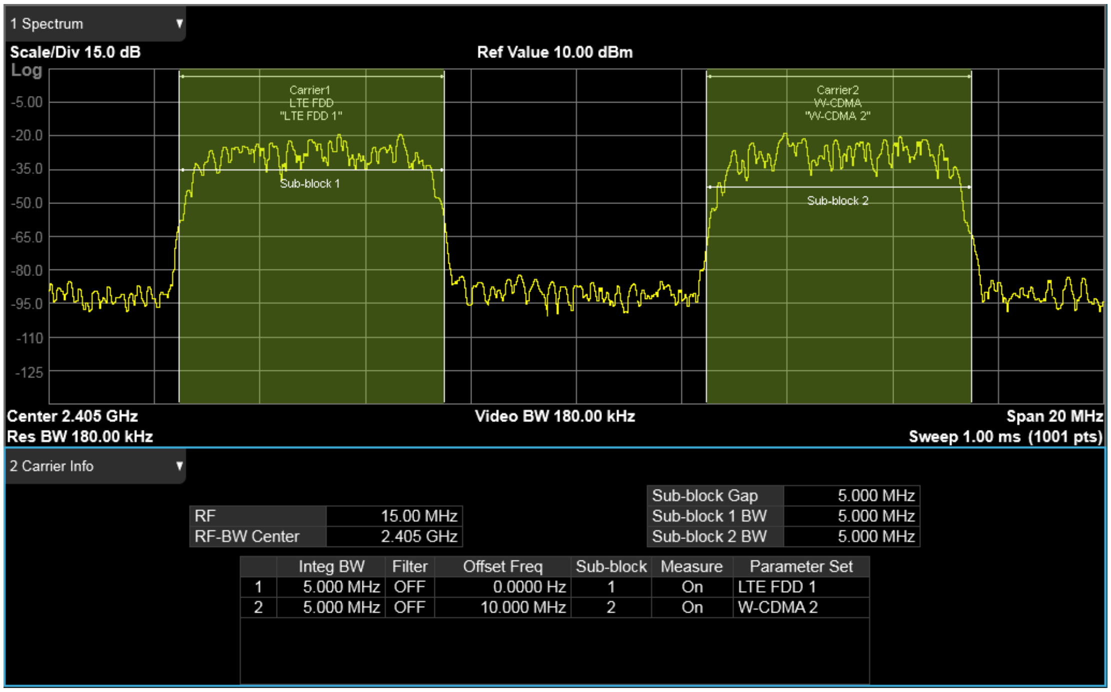
It displays which sub-block the carrier belongs to in the intra-band non-contiguous aggregation mode. The column will be displayed when the carrier allocation mode is non-contiguous.

Measure

Shows whether the carrier is measured or not.

MSR

The Carrier configuration is summarized in the lower window as below:



RF	15.00 MHz
RF-BW Center	2.405 GHz

Sub-block Gap	5.000 MHz
Sub-block 1 BW	5.000 MHz
Sub-block 2 BW	5.000 MHz

	Integ BW	Filter	Offset Freq	Sub-block	Measure	Parameter Set
1	5.000 MHz	OFF	0.0000 Hz	1	On	LTE FDD 1
2	5.000 MHz	OFF	10.000 MHz	2	On	W-CDMA 2

The text window displays the following results:

RF-BW and RF-BW Center

It shows the RF bandwidth calculated from the outermost component carriers and their freq offset, and the center frequency of the RF Bandwidth.

Sub-block configuration

As for intra-band non-contiguous spectrum operation, the sub-block concept is introduced, which refers to one contiguous allocated block of spectrum for transmission and reception in the intra-band non-contiguous aggregation mode. So far we support the two sub-blocks. It summarizes each sub-block bandwidth and the frequency gap between the two consecutive sub-blocks. The Sub-block gap and Sub-block 2 BW are displayed when Component Carrier Allocation is Non-Contiguous and two sub-blocks are separated.

Integration Bandwidth

It displays the transmission bandwidth each component carrier.

Filter

It displays whether RRC filter is used for MON measurement or not.

Offset Frequency

It shows the offset frequency from the carrier reference frequency in multi-carrier measurements. The carrier frequency display type determines whether the relative frequency or absolute frequency will be displayed.

Sub-block

It displays which sub-block the carrier belongs to in the intra-band non-contiguous aggregation mode. The column will be displayed when the carrier allocation mode is non-contiguous.

Measure

It shows whether the carrier is measured or not.

Parameter Set

It displays which format parameter set is selected.

3.11.3 Amplitude

Activates the **Amplitude** menu and selects **Reference Level** or **Reference Value** as the active function, depending on the measurement.

Some features in this menu apply to multiple measurements. Some other features apply only to specific measurements and their controls are blanked or grayed-out in measurements that do not support the feature.

3.11.3.1 Y Scale

Contains controls that pertain to the Y axis parameters of the measurement. These parameters control how data on the vertical (Y) axis is displayed and control instrument settings that affect the vertical axis.

Ref Value

Sets the value for the absolute power reference. The reference line is at the top, center, or bottom of the graticule, depending on the value of "Ref Position" on page 2020.

Remote Command	`:DISPlay:MONitor:WINDow[1]:TRACe:Y[:SCALe]:RLEVel <real>` `:DISPlay:MONitor:WINDow[1]:TRACe:Y[:SCALe]:RLEVel?`
Example	`:DISP:MON:WIND:TRAC:Y:RLEV 2.0` `:DISP:MON:WIND:TRAC:Y:RLEV?`
Couplings	When "Auto Scaling" on page 2021 is ON (default), this value is automatically determined by the measurement result. When you set a value manually, **Auto Scaling** changes to `OFF` Attenuation is not coupled to "Ref Value" on page 2019
Preset	10.00 dBm
State Saved	Saved in instrument state
Min/Max	-250.00 dBm / 250.00 dBm
Annotation	Ref <value> top left of graph
Backwards Compatibility SCPI	`:DISPlay:MONitor:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:RLEVel`

Scale/Div

For measurements that support a logarithmic Y-Axis, **Scale/Div** sets the height of one division of the graticule in the current Y-Axis unit.

Scale/Div also determines the displayed amplitude range in the log plot graph. Since there are usually 10 vertical graticule division on the display, the total amplitude range of the graph is typically 10x this amount. For example, if **Scale/Div** is 10 dB, then the total range of the graph is 100 dB.

Remote Command	`:DISPlay:MONitor:WINDow[1]:TRACe:Y[:SCALe]:PDIVision <rel_ampl>` `:DISPlay:MONitor:WINDow[1]:TRACe:Y[:SCALe]:PDIVision?`
Example	`:DISP:MON:WIND:TRAC:Y:PDIV 5.0 dB` `:DISP:MON:WIND:TRAC:Y:PDIV?`
Couplings	Coupled to Scale Range as follows Scale/Div = Scale Range/10 (number of divisions) When "Auto Scaling" on page 2021 is ON, this value is automatically determined by the measurement result When you change a value, **Auto Scaling** automatically changes to `OFF`

Preset	10.00 dB / Div
State Saved	Saved in instrument state
Min	0.10 dB
Max	20 dB
Annotation	<value> dB/ left upper of graph
Backwards Compatibility SCPI	`:DISPlay:MONitor:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:PDIVision`

Scale Range

Sets the Y Axis scale range.

Remote Command	`:DISPlay:MONitor:WINDow[1]:TRACe:Y[:SCALe]:RANGe <rel_ampl>` `:DISPlay:MONitor:WINDow[1]:TRACe:Y[:SCALe]:RANGe?`
Example	`:DISP:MON:WIND:TRAC:Y:RANG 100` `:DISP:MON:WIND:TRAC:Y:RANG?`
Couplings	Coupled to Scale/Div as follows Scale Range = Scale/Div * 10 (number of divisions) When you change a value, Auto Scaling automatically changes to OFF
Preset	100 dB
State Saved	Saved in instrument state
Min	1
Max	200

Ref Position

Positions the reference level at the top, center, or bottom of the Y Scale display. Changing the reference position does not change the reference level value.

Remote Command	`:DISPlay:MONitor:WINDow[1]:TRACe:Y[:SCALe]:RPOSition TOP | CENTer | BOTTom` `:DISPlay:MONitor:WINDow[1]:TRACe:Y[:SCALe]:RPOSition?`
Example	`:DISP:MON:WIND:TRAC:Y:RPOS CENT` `:DISP:MON:WIND:TRAC:Y:RPOS?`
Preset	`TOP`
State Saved	Saved in instrument state
Range	`TOP|CENTer|BOTTom`
Annotation	The greater than (>) and less than (<) symbols are displayed on both sides of the graph to indicate the Reference Position

Backwards Compatibility SCPI	`:DISPlay:MONitor:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:RPOSition`

Auto Scaling

Toggles the **Auto Scaling** function On or Off.

Remote Command	`:DISPlay:MONitor:WINDow[1]:TRACe:Y[:SCALe]:COUPle 0 | 1 | OFF | ON` `:DISPlay:MONitor:WINDow[1]:TRACe:Y[:SCALe]:COUPle?`
Example	`:DISP:MON:WIND:TRAC:Y:COUP OFF` `:DISP:MON:WIND:TRAC:Y:COUP?`
Couplings	When **Auto Scaling** is ON, and the **Restart** front-panel key is pressed, this function automatically sets the scale per division to 10 dB and determines the reference values based on the measurement results When you change a value of **Scale/Div**, **Ref Value**, or **Scale Range**, Auto Scaling automatically changes to OFF
Preset	1
State Saved	Saved in instrument state
Range	OFF|ON
Backwards Compatibility SCPI	`:DISPlay:MONitor:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:COUPle`

3.11.3.2 Attenuation

Controls the attenuator functions and interactions between the attenuation system components.

There are two attenuator configurations in the X-Series. One is a Dual-Attenuator configuration consisting of a mechanical attenuator and an optional electronic attenuator. The other configuration uses a single attenuator with combined mechanical and electronic sections that controls all the attenuation functions. Different models in the X-Series come with different configurations.

- See "Dual-Attenuator Configurations" on page 2022
- See "Single-Attenuator Configuration" on page 2022

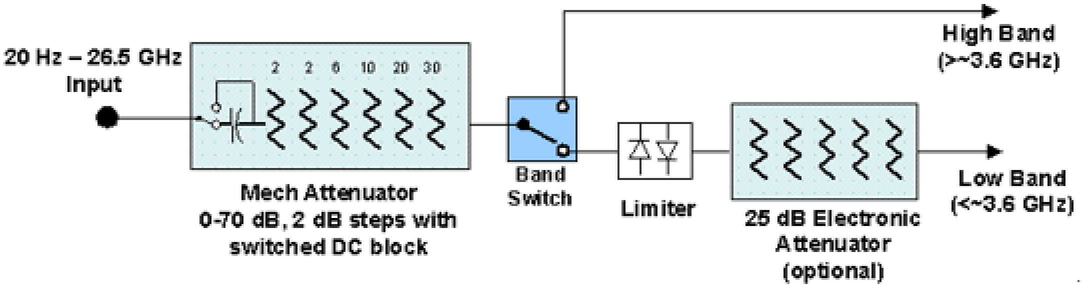
Most attenuation settings are the same for all measurements – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by **Meas Preset**.

Only available when the hardware set includes an input attenuator, which is typically only the case for Keysight’s benchtop instruments. For example, this tab does *not*

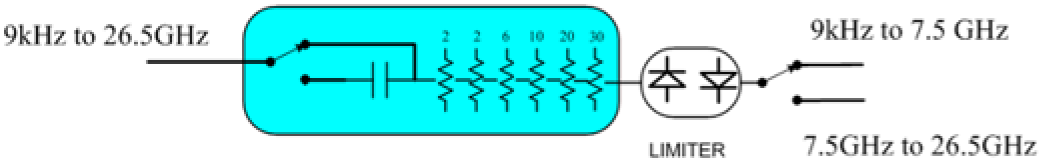
	appear in VXT models M9420A/10A/11A/15A/16A, M9410E/11E/15E/16E, nor in UXM. In UXM, all **Attenuation** and **Range** settings are disabled, as the expected input power level is handled by the Call Processing App that drives the DUT power control.
Dependencies	In measurements that support the I/Q inputs, unavailable when I/Q is the selected input. Replaced by the **Range** tab in that case

Dual-Attenuator Configurations

Configuration 1: Mechanical attenuator + optional electronic attenuator

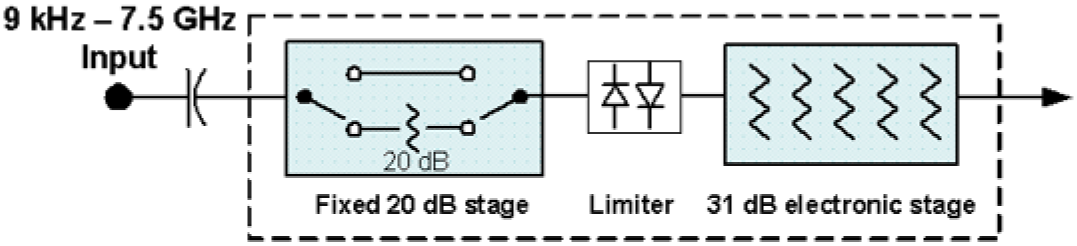


Configuration 2: Mechanical attenuator, no optional electronic attenuator



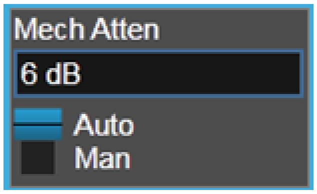
Note that Configuration 2 is not strictly speaking a dual-section attenuator, since there is no electronic section available. However, it behaves exactly like Configuration 1 without the Electronic Attenuator Option EA3, therefore for the sake of this document it is grouped into the “Dual-Attenuator” configuration.

Single-Attenuator Configuration

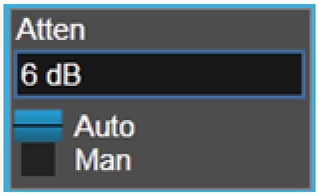


You can tell which attenuator configuration you have by pressing the Attenuation tab, which (in most Modes) opens the Attenuation menu. If the first control in the

Attenuation menu says **Mech Atten** you have the Dual-Attenuator configuration. If the first control says **Atten** you have the Single-Attenuator configuration.



Dual Attenuator



Single Attenuator

(Note that depending on the measurement, there may be no Auto/Man functionality on the Mech Atten control.)

In the Single-Attenuator configuration, you control the attenuation with a single control, as the fixed stage has only two states. In the Dual-Attenuator configuration, both stages have significant range, so you are given separate control of the mechanical and electronic attenuator stages.

When you have the Dual-Attenuator configuration, you may still have only a Single-Attenuator, because unless Option EA3 (the Electronic Attenuator option) is available, and you purchase it, you will have only the mechanical attenuator.

Full Range Atten

This control and **Attenuator Summary** only appear in N9041B, when the RF input is selected, the RF Input Port is set to RF Input 2, and the Full Range Attenuator is installed. The Full Range Attenuator adds a second input attenuator in front of RF Input 2, which enhances the protection and optimizes the performance of the extra internal mixers used by RF Input 2.

Remote Command	`[:SENSe]:POWer[:RF]:FRATten <rel_ampl>` `[:SENSe]:POWer[:RF]:FRATten?`
Example	`:POW:FRAT 14` `:POW:FRAT?`
Notes	When you enter an amplitude value that falls between valid values, the value will be incremented to the next smallest valid value
Dependencies	Only appears if input RF is selected, RF Input Port 2 is selected, and the Full Range Attenuator exists
Couplings	This value is never changed by any coupling, but other couplings use this value. See **Reference Level** and "Mech Atten" on page 2161 command descriptions
Preset	20 dB
State Saved	Saved in instrument state
Min	0 dB

Max	Only valid values are 0, 6, 14, 20 dB
Annotation	When the **Input** is **RF**, and the **Input Port** is **RF Input 2**, and the Full Range Attenuator is installed: On the Meas Bar, the field “Atten” displays as follows: – If the sweep is entirely < 50 GHz, the value shown after “Atten:” is equal to Mech Atten + Elec Atten + Full Range Atten – If the sweep is entirely > 50 GHz, the value shown after “Atten:” is equal to Full Range Atten – If the sweep straddles 50 GHz, the value shown after “Atten:” is preceded by the symbol “>=” and is equal to Full Range Atten In the **Amplitude**, "Y Scale" on page 2153 menu, and the Atten **Meas Bar** dropdown menu panel, a summary is displayed as follows: “Total Atten below 50 GHz” followed by the value of Full Range Atten + Mech Atten + Elec Atten “Total Atten above 50 GHz” followed by the value of Full Range Atten For example, if Mech Atten = 6 dB, Elec Atten = 4 dB, and Full Range Atten = 20 dB, the summary below is shown: – Attenuator summary: – Total Atten below 50 GHz: 30 dB – Total Atten above 50 GHz: 20 dB

Mech Atten

Labeled **Mech Atten** in Dual-Attenuator models, and **Atten** in Single-Attenuator models. In the Dual-Attenuator configuration, this control only affects the mechanical attenuator.

Lets you modify the attenuation applied to the RF input signal path. This value is normally auto-coupled to **Ref Level**, "Internal Preamp" on page 2183 Gain, any External Gain that is entered, and **Max Mixer Level** (if available), as described in the table below.

See "Attenuator Configurations and Auto/Man" on page 2026

Remote Command	`[:SENSe]:POWer[:RF]:ATTenuation <rel_ampl>` `[:SENSe]:POWer[:RF]:ATTenuation?`
Example	`:POW:ATT 20` Dual-Attenuator configuration: sets the mechanical attenuator to 20 dB Single-Attenuator mode: sets the main attenuation to 20 dB (see below for definition of “main” attenuation) In either case, if the attenuator was in Auto, it is set to Manual
Dependencies	Some measurements do not support **Auto** setting of **Mech Atten.** In these measurements, the **Auto/Man** selection is not available, and the **Auto/Man** toggle function is not available

	In Dual-Attenuator configurations, when the electronic attenuator is enabled, the mechanical attenuator has no auto setting, and the **Auto/Man** toggle function is not available. The state of **Auto/Man** is remembered and restored when the electronic attenuator is once again disabled. This is described in more detail in "Elec Atten" on page 2164 See "Attenuator Configurations and Auto/Man" on page 2026 for more information on the **Auto/Man** functionality
Couplings	If the RF Input Port is the RF Input: – If the USB Preamp is connected to USB, use 0 dB for **Mech Atten** – Otherwise compute the auto-selected value of **Mech Atten** based on **Reference Level**, **Int Preamp**, **External Gain**, **Ref Level Offset**, **Max Mixer Level**, **µW Path Control** and **IF Gain** settings. Limit this value to be no less than 6 dB (total attenuation below 6 dB can never be chosen by Auto) – In N9041B, if the RF Input Port is RF Input 2, use the formula above and subtract the value of "Full Range Atten" on page 2160 from the result to determine the **Mech Atten**. Limit the value so that it is never lower than 0 dB and so that total attenuation, including **Full Range Atten**, is never less than 6 dB (total attenuation, including **Full Range Atten** below 6 dB, can never be chosen by Auto) In External Mixing and BBIQ, where the attenuator is not in the signal path, the attenuator setting changes as described above when **Mech Atten** is in **Auto**, but no changes are made to the actual attenuator hardware setting until the input is changed back to the RF Input For CXA-m with Option FSA (Fine-Step Attenuator or 2 dB steps), the FSA-like behavior is only available when the frequency setting is <= 7.5 GHz. So, when the frequency is changed from below 7.5 GHz to above 7.5 GHz, the attenuation setting changes to a multiple of 10 dB that is no smaller than the previous setting. For example, 4 dB attenuation changes to 10 dB
Preset	**Auto** The Auto value is 10 dB
State Saved	Saved in instrument state
Min	0 dB The attenuation set by this control cannot be decreased below 6 dB with the knob or step keys. Values below 6 dB must be directly entered from the keypad or via SCPI. This protects against setting a dangerously small attenuation value, which can put the instrument at risk of damage to input circuitry. If the current mechanical attenuation is below 6 dB, it can be increased with the knob and step keys, but not decreased
Max	CXA Option 503 or 507: 50 dB EXA: 60 dB All other models: 70 dB Note that in the Single-Attenuator configuration, the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB
Annotation	The current value for Total Atten is displayed in the Measurement Bar at the top of the display. A value appears for Electronic Attenuation only if the Electronic Attenuator is enabled. The annotation appears as: *Atten: <total> dB (e<elec>)*

The e letter is in amber in Single-Attenuator configurations

For example:

Dual-Attenuator configuration:

Atten: 24 dB (e14)

Indicating the total attenuation is at 24 dB and the electronic attenuation is at 14 dB

Single-Attenuator configuration:

A: 24 dB (e14)

Indicating the total attenuation is at 24 dB and the “soft” attenuation is at 14 dB (see below for definition of “soft” attenuation)

When in Manual, a # sign appears in front of Atten in the annotation

Auto Function

Remote Command	`[:SENSe]:POWer[:RF]:ATTenuation:AUTO OFF | ON | 0 | 1` `[:SENSe]:POWer[:RF]:ATTenuation:AUTO?`
Example	Turn **Auto Mech Atten** `ON`: `:POW:ATT:AUTO ON`
Dependencies	`:POW:ATT:AUTO` is only available in measurements that support **Auto**, such as Swept SA
Preset	`ON`

Attenuator Configurations and Auto/Man

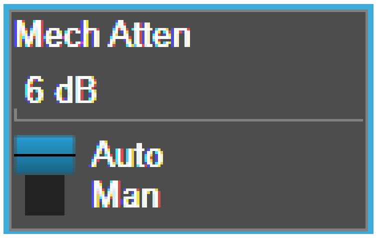
As described under "Attenuation" on page 2158, there are two distinct attenuator configurations available in the X-Series, the Single Attenuator and Dual-Attenuator configurations.

In Dual-Attenuator configurations, we have mechanical attenuation and electronic attenuation, and current total attenuation is the sum of electronic + mechanical attenuation.

In Single-Attenuator configurations, we refer to the attenuation set using "Mech Atten" on page 2024 (or `:POW:ATT`) as the “main” attenuation; and the attenuation that is set by `:POW:EATT` as the “soft” attenuation (`:POW:EATT` is honored even in the Single-Attenuator configuration, for compatibility purposes). Then current total attenuation is the sum of main + soft attenuation.

See "Elec Atten" on page 2164 for more about “soft” attenuation.

NOTE	In some measurements, the **Mech Atten** control has an **Auto/Man** function. In these measurements, an **Auto/Man** switch is shown on the **Mech Atten** control:



Mech Atten
6 dB
Auto
Man

Note that in configurations that include an Electronic Attenuator, this switch is only shown when the Electronic Attenuator is disabled.

In other measurements, **Mech Atten** has no **Auto/Man** function. In these measurements, no switch is shown on the **Mech Atten** control:

Mech Atten
10 dB

Mech Atten also appears with no switch, as above, in configurations that include an Electronic Attenuator but when the Electronic Attenuator is enabled.

Elec Atten

Controls the Electronic Attenuator in Dual-Attenuator configurations. Does not appear in Single-Attenuator configurations, because the control of both the mechanical and electronic stages of the Single-Attenuator is integrated into the single **Atten** control.

This control includes an **Enable/Disable** toggle switch; it is only possible to enter a value for the Electronic Attenuator when this switch is in the **Enable** position.

For more details of the Electronic Attenuator, see "More Information" on page 2029

Remote Command	`[:SENSe]:POWer[:RF]:EATTenuation <rel_ampl>` `[:SENSe]:POWer[:RF]:EATTenuation?`
Example	`:POW:EATT 10` `:POW:EATT?`
Notes	Electronic Attenuation's specification is defined only when **Mech Atten** is 6 dB
Dependencies	Only appears in Dual-Attenuator models with an Electronic Attenuator installed and licensed. Does not appear in models with the Single-Attenuator configuration, because in the Single-Attenuator configuration there is no "electronic attenuator"; there is only a single integrated attenuator (which has both a mechanical and electronic stage). However, in the Single-Attenuator configuration, `EATT` SCPI commands are accepted for compatibility with other X-series instruments, and set a "soft" attenuation. The "soft" attenuation is treated as an addition to the "main" attenuation value set by the **Attenuation** control or `:POW:ATT`, and affects the total attenuation displayed on the **Attenuation**

	control and the Meas Bar The electronic attenuator, and the "soft" attenuation function provided in Single-Attenuator configurations, are unavailable above the low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model). If the low band range is from 0-3.6 GHz, and Stop Frequency of the instrument is > 3.6 GHz, then the **Enabled/Disabled** section of the **Elec Atten** control will be `OFF` and grayed-out If "Internal Preamp" on page 2183 is `ON` (that is, set to Low Band or Full), the electronic attenuator (and the "soft" attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the **Enabled/Disabled** section of the **Elec Atten** control will be `OFF` and grayed-out If either of the above is true, and the SCPI command is sent, an error indicating that the electronic attenuator is unavailable is returned If both the above are true, pressing the control generates error message -221, in other words, the frequency range lockout takes precedence If the electronic/soft Attenuator is enabled, then the **Stop Freq** of the instrument is limited to 3.6 GHz and **Internal Preamp** is unavailable If "LNA" on page 2185 is `ON`, the electronic attenuator (and the "soft" attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the **Enabled/Disabled** section of the **Elec Atten** control will be `OFF` and grayed-out. This coupling works in the following modes/measurements: – Channel Power, Occupied BW, ACP, SEM, Spurious Emissions, Power Stat CCDF measurements in all Modes – Transmit On|Off Power measurement in 5GNR Mode – Power vs. Time and Transmit Power measurement in GSM/EDGE Mode – Burst Power measurement in Spectrum Analyzer Mode The SCPI-only "soft" electronic attenuation for the single-attenuator configuration is not available in all measurements; in particular, it is not available in the Swept SA measurement
Couplings	Enabling and disabling the Electronic Attenuator affects the setting of the Mechanical Attenuator (in Dual-Attenuator configurations). This is described in more detail below and in "Mechanical Attenuator Transition Rules" on page 2029
Preset	0 dB
State Saved	Saved in instrument state
Min	0 dB
Max	Dual-Attenuator configuration: 24 dB Single-Attenuator configuration: the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB
Annotation	See Annotation under the **Mech Atten** control description

Auto Function

Remote Command	`[:SENSe]:POWer[:RF]:EATTenuation:STATe OFF | ON | 0 | 1` `[:SENSe]:POWer[:RF]:EATTenuation:STATe?`
Example	`:POW:EATT:STAT ON`

	`:POW:EATT:STAT?`
Preset	`OFF` (Disabled) for Swept SA measurement `ON` (Enabled) for all other measurements that support the electronic attenuator

NOTE The maximum **Center Frequency** for Low Band can change based on the selected IFBW for measurements that support IFBW (for example, Waveform measurement across all Modes that support it). In certain models (such as N9042B & N9032B), IFBW values <= 40 MHz have a maximum Low Band frequency of 3.6 GHz, while 40 MHz < IFBW <= 1 GHz have a maximum of 3.3 GHz, and 1 GHz < IFBW <= 1.5 GHz have a maximum of 3.5 GHz. This frequency is reflected in the disabled message displayed for Electrical Attenuator. For N9032B and N9042B IFBW values > 1.5 GHz do not support a **Center Frequency** that can reach the Low Band maximum frequency. In these cases, the Electrical Attenuator will remain disabled no matter the Center Frequency.

More Information

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear. These advantages primarily aid in remote operation and are negligible for front panel use. See "Using the Electronic Attenuator: Pros and Cons" on page 2030 for a detailed discussion of the pros and cons of using the electronic attenuator.

For the Single-Attenuator configuration, for SCPI backwards compatibility, the “soft” attenuation feature replaces the Dual-Attenuator configuration’s electronic attenuator. All the same couplings and limitations apply. See "Attenuator Configurations and Auto/Man" on page 2163

Mechanical Attenuator Transition Rules

When the Electronic Attenuator is enabled, the Mechanical Attenuator transitions to a state that has no Auto function. Below are the rules for transitioning the Mechanical Attenuator. Note that the information below *only* applies to the Dual-Attenuator configurations, and *only* when the Electronic Attenuator is installed:

When the Electronic Attenuation is enabled from a disabled state:

- The Mechanical Attenuator is initialized to 10 dB (this is its optimal performance setting). You can then set it as desired with SCPI, numeric keypad, step keys, or knob, and it behaves as it normally would in manual mode
- The Auto/Man state of (Mech) Atten is saved
- The Auto/Man toggle on the (Mech) Atten control disappears, and the auto rules are disabled

- The Electronic Attenuator is set to 10 dB less than the previous value of the Mechanical Attenuator, within the limitation that it must stay within the range of 0 to 24 dB of attenuation

Examples in the Dual-Attenuator configuration:

- Mech Atten at 20 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 10 dB. New total attenuation equals the value before Elec Atten enabled
- Mech Atten at 0 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 0 dB. New total attenuation does not equal the value before Elec Atten enabled
- Mech Atten at 40 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 24 dB. New total attenuation does not equal the value before Elec Atten enabled

When the Electronic Attenuation is disabled from an enabled state:

- The Elec Atten control is grayed out
- The Auto/Man state of (Mech) Atten is restored
- If now in Auto, (Mech) Atten recouples
- If now in Man, (Mech) Atten is set to the value of total attenuation that existed before the Elec Atten was disabled. The resulting value is rounded up to the smallest value possible given the (Mech) Atten Step setting - (That is, 57 dB changes to 58 dB when (Mech) Atten Step is 2 dB)

Using the Electronic Attenuator: Pros and Cons

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear.

The “finer steps” advantage of the electronic attenuator is beneficial in optimizing the alignment of the instrument dynamic range to the signal power in the front panel as well as remote use. Thus, you can achieve improved relative signal measurement accuracy. Compared to a mechanical attenuator with 2 dB steps, the 1 dB resolution of the electronic attenuator only gives better resolution when the odd-decibel steps are used. Those odd-decibel steps are less accurately calibrated than the even-decibel steps, so one tradeoff for this superior relative accuracy is reduced absolute amplitude accuracy.

Another disadvantage of the electronic attenuator is that the spectrum analyzer loses its “Auto” setting, making operation less convenient.

Also, the relationship between the dynamic range specifications (TOI, SHI, compression, and noise) and instrument performance are less well-known with the

electrical attenuator. With the mechanical attenuator, TOI, SHI, and compression threshold levels increase dB-for-dB with increasing attenuation, and the noise floor does as well. With the electronic attenuator, there is an excess attenuation of about 1 to 3 dB between 0 and 3.6 GHz, making the effective TOI, SHI, and so forth, less well known. Excess attenuation is the actual attenuation relative to stated attenuation. Excess attenuation is accounted for in the instrument calibration.

Adjust Atten for Min Clipping

Sets the combination of mechanical and electronic attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an immediate action function, that is, it executes once, when the control is pressed.

The algorithms that are used for the adjustment are documented under "Pre-Adjust for Min Clipping" on page 2168.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMediate`
Example	`:POW:RANG:OPT IMM`
Notes	Executing **Adjust Atten for Min Clipping** initiates the measurement
Dependencies	Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes

Adjust Atten

Allows you to select;

- Electric attenuator only
- Combination of Electric attenuator and Mechanical attenuator

when `[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMediate` is executed.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:OPTimize:TYPE EONLy | COMBined` `[:SENSe]:POWer[:RF]:RANGe:OPTimize:TYPE?`
Example	`:POW:RANG:OPT:TYPE EONL` `:POW:RANG:OPT:TYPE?`
Dependencies	Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes
Preset	`COMBined`
State Saved	Saved in instrument state

Pre-Adjust for Min Clipping

If this function is `ON`, it applies the adjustment described under "Adjust Atten for Min Clipping" on page 2167 each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

In Dual-Attenuator models, you can set **Elec+Mech Atten**, in which case both attenuators participate in the autoranging, or **Elec Atten Only**, in which case the mechanical attenuator does not participate in the autoranging. This latter case results in less wear on the mechanical attenuator and is usually faster.

See "Adjustment Algorithm" on page 2033

Selection	SCPI	Note
Off	`OFF`	This is the default setting
On	`ON`	Available in Single-Attenuator instruments. For compatibility with models that do not have an input attenuator, the `ON` parameter is supported and mapped to `COMBined`
Elec Atten Only	`ELECtrical`	Selects only the electric attenuator to participate in auto ranging. This offers less wear on the mechanical attenuator and is usually faster
Elec+Mech Atten	`COMBined`	In Dual-Attenuator models, this selects both attenuators to participate in the autoranging

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation OFF | ON | ELECtrical | COMBined` `[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation?`
Example	`:POW:RANG:OPT:ATT OFF` `:POW:RANG:OPT:ATT?`
Notes	The parameter option `ELECtrical` sets this function to `ON` in Single-Attenuator models The parameter option `COMBined` is mapped to `ELECtrical` in Single-Attenuator models. If you send `COMBined`, it sets the function to `ON` and returns `ELEC` to a query For SCPI compatibility with models that do not have an input attenuator, the `ON` parameter is honored and mapped to `COMBined`
Dependencies	Only appears in Dual-Attenuator models with an Electronic Attenuator installed In instruments with Dual-Attenuator model, when "Elec Atten" on page 2164 is `OFF` or grayed-out, "Pre-Adjust for Min Clipping" on page 2032 is grayed-out Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes
Preset	`OFF` when Elec Atten is Disabled at preset, otherwise `ELEC`
State Saved	Saved in instrument state

Range	Dual-Attenuator models:	Off | Elec Atten Only | Mech + Elec Atten
	Single-Attenuator models:	Off | On

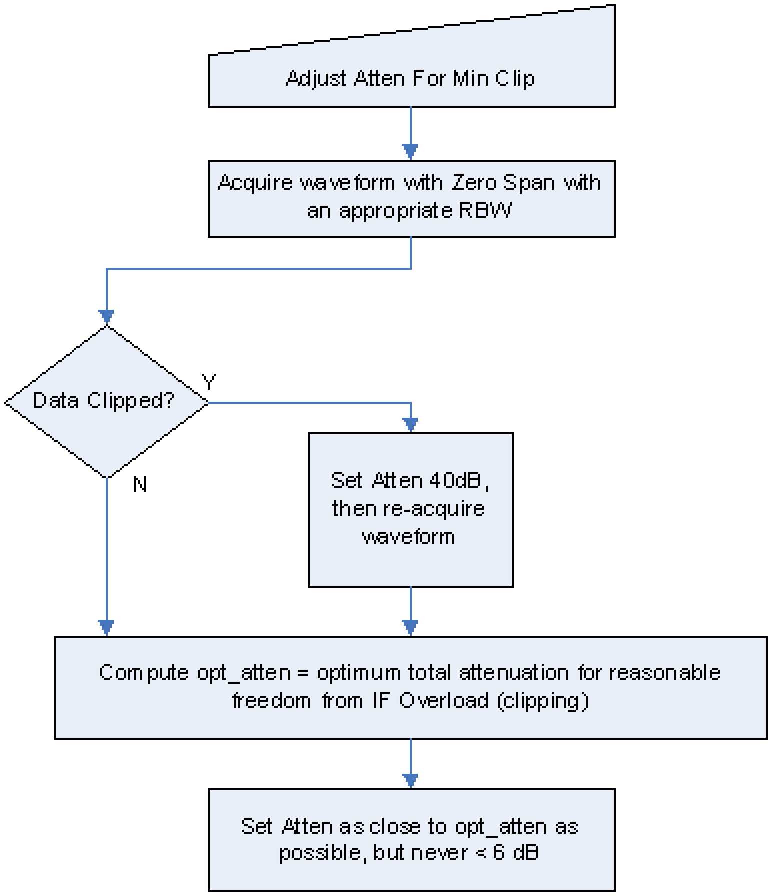
Backwards Compatibility Command

Notes	`ON` aliases to "Elec Atten Only" (`:POW:RANG:OPT:ATT ELEC`) `OFF` aliases to "Off" (`:POW:RANG:OPT:ATT OFF`) `:POW:RANG:AUTO?` returns true if `:POW:RANG:OPT:ATT` is not `OFF`
Backwards Compatibility SCPI	`[:SENSe]:POWer[:RF]:RANGe:AUTO ON | OFF | 1 | 0` `[:SENSe]:POWer[:RF]:RANGe:AUTO?`

Adjustment Algorithm

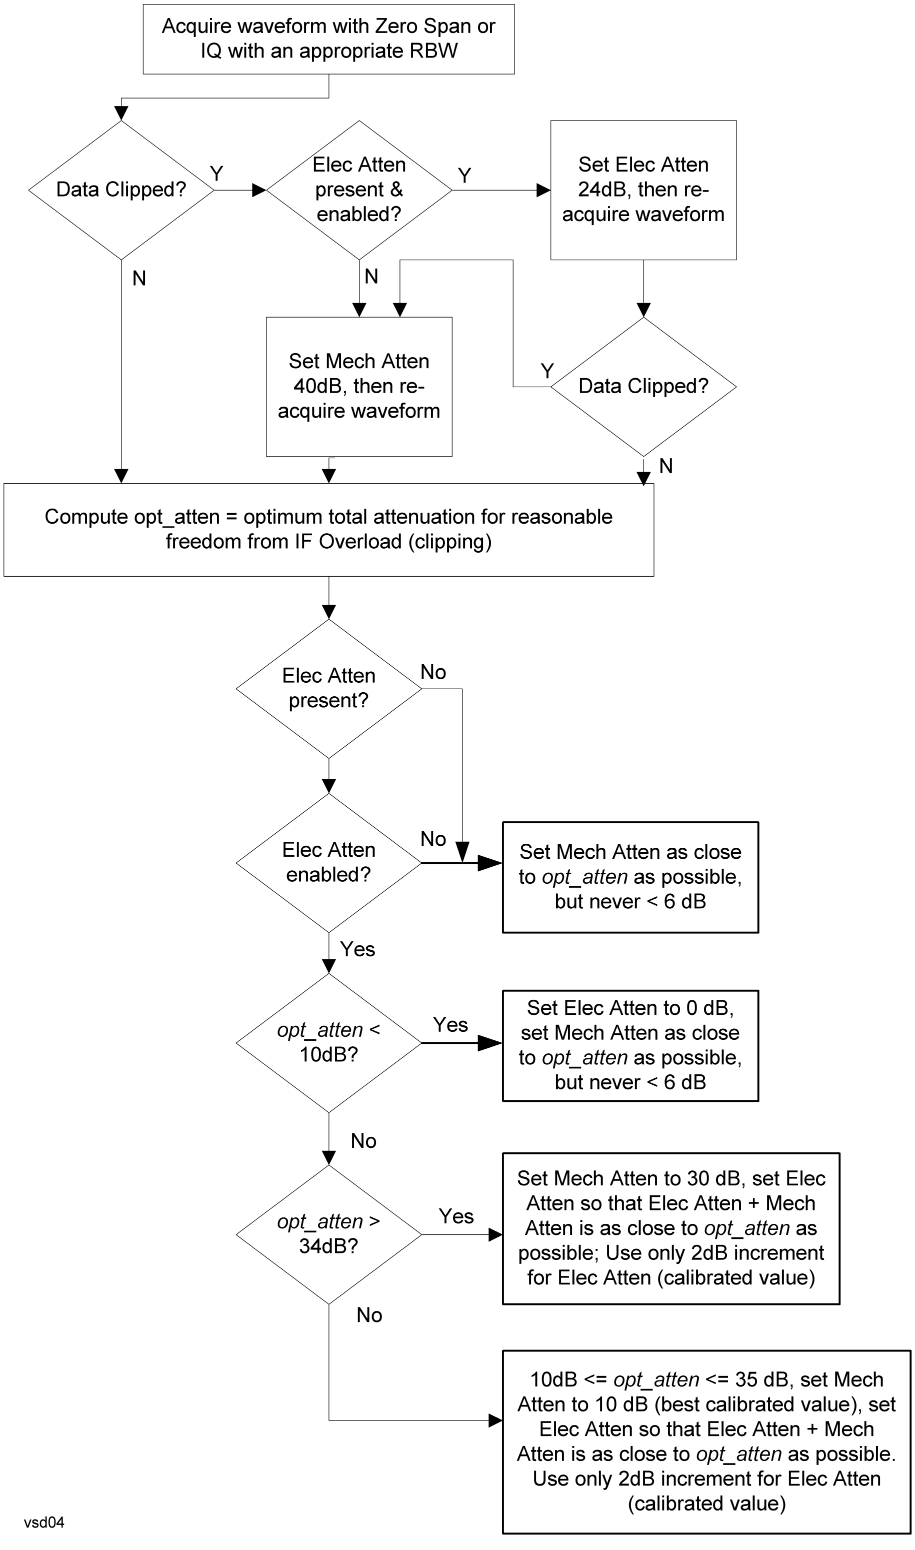
The algorithms for the adjustment are documented below:

Single-Attenuator Models



Dual-Attenuator models

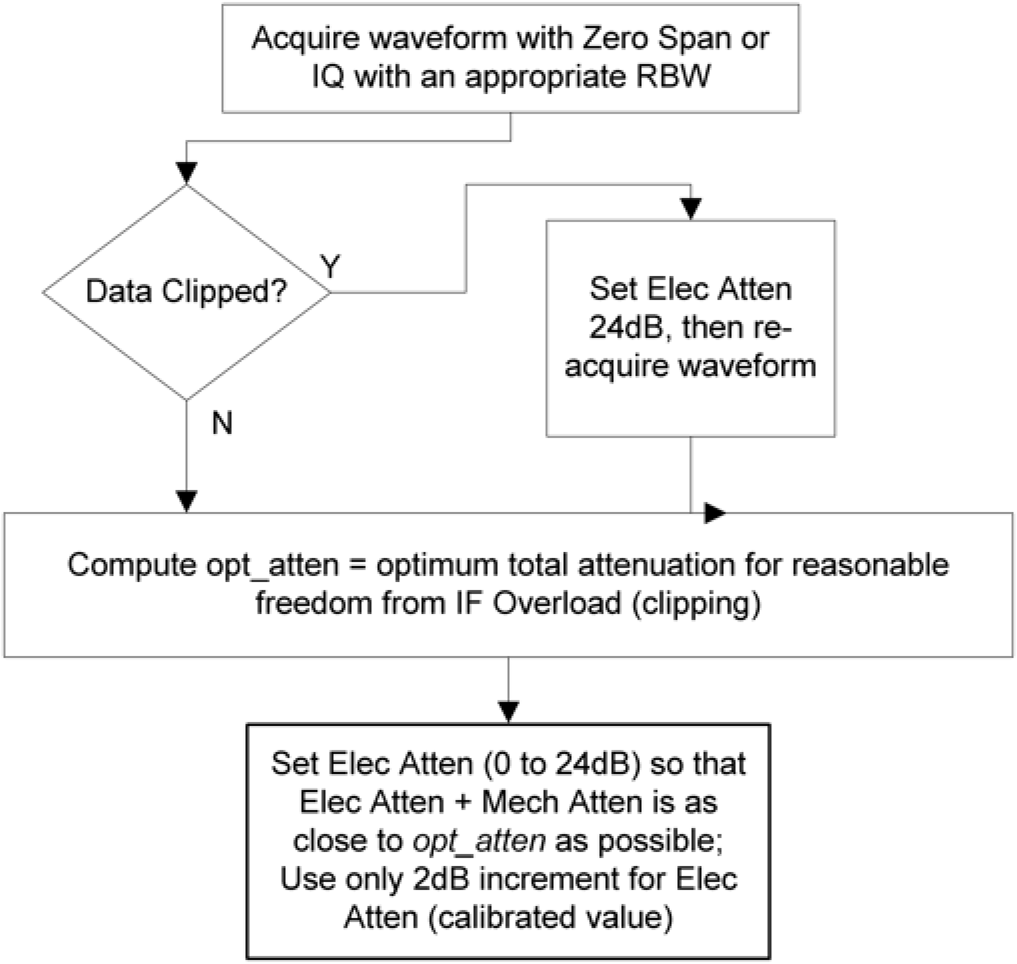
"Adjust Atten for Min Clipping" on page 2167 or "Pre-Adjust for Min Clipping" on page 2032 selection is Mech + Elec Atten:



Acquire waveform with Zero Span or IQ with an appropriate RBW
Data Clipped?
Y
N
Elec Atten present & enabled?
Y
N
Set Elec Atten 24dB, then re-acquire waveform
Set Mech Atten 40dB, then re-acquire waveform
Y
Data Clipped?
N
Compute opt_atten = optimum total attenuation for reasonable freedom from IF Overload (clipping)
Elec Atten present?
No
Elec Atten enabled?
No
Set Mech Atten as close to *opt_atten* as possible, but never < 6 dB
Yes
opt_atten < 10dB?
Yes
Set Elec Atten to 0 dB, set Mech Atten as close to *opt_atten* as possible, but never < 6 dB
No
opt_atten > 34dB?
Yes
Set Mech Atten to 30 dB, set Elec Atten so that Elec Atten + Mech Atten is as close to *opt_atten* as possible; Use only 2dB increment for Elec Atten (calibrated value)
No
10dB <= *opt_atten* <= 35 dB, set Mech Atten to 10 dB (best calibrated value), set Elec Atten so that Elec Atten + Mech Atten is as close to *opt_atten* as possible. Use only 2dB increment for Elec Atten (calibrated value)
vsd04

"Pre-Adjust for Min Clipping" on page 2032 selection is Elec Only.

Note that the **Mech Atten** value is not adjusted, and the value previously set is used. Therefore, there is a case that IF Overload is still observed depending on the input signal level and the Mech Atten setting.



Mech Atten Step

Controls the step size used when making adjustments to the input attenuation.

Labeled **Mech Atten Step** in Dual-Attenuator models and **Atten Step** in Single-Attenuator models. In the Dual-Attenuator configuration, only affects the step size of the mechanical attenuator.

Remote Command	`[:SENSe]:POWer[:RF]:ATTenuation:STEP[:INCRement] 10 dB | 2 dB`

	`[:SENSe]:POWer[:RF]:ATTenuation:STEP[:INCRement]?`
Example	`:POW:ATT:STEP 2` `:POW:ATT:STEP?`
Notes	Has a toggle control on the front panel, but takes a specific value (in dB) when used remotely. The only valid values are 2 and 10
Dependencies	Blanked in EXA, CXA and CXA-m if option FSA (2 dB steps) is not present. If blanked, attempts to set it via SCPI yield an error
Couplings	When the attenuation step size changes, the current mechanical attenuation value is adjusted (if necessary) to be quantized to the new step size. That is, if step is set to 10 dB, mech atten is increased if necessary so it is a multiple of 10 dB
Preset	EXA, CXA and CXA-m: 10 dB (2 dB with option FSA) All other models: 2 dB
State Saved	Saved in instrument state

3.11.3.3 Range (Non-attenuator models)

Only available for Keysight’s modular signal analyzers and certain other Keysight products, such as VXT and M941xE.

State Saved	No

Range

Represents the amplitude of the largest sinusoidal signal that could be present within the IF without being clipped by the ADC. For signals with high peak-to-average ratios, the range may need to exceed the rms signal power by a significant amount to avoid clipping.

This is a measurement global setting.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe <real>` `[:SENSe]:POWer[:RF]:RANGe?`
Example	`:POW:RANG 10 dBm` `:POW:RANG?`
Notes	The MIN and MAX values are affected by the External Gain parameters, and by the **Center Frequency** The hardware compensates for frequency response and alters the Range setting
Preset	0 dBm
State Saved	Yes
Min/Max	–/+100
Annotation	Meas Bar

Adjust Range for Min Clipping

Sets the combination of attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an "immediate action" function, that is, it executes once, when the key is pressed.

This key does not appear in measurements that do not support this functionality.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMediate`
Notes	Executing Adjust Range for Min Clipping initiates the measurement
Dependencies	Does not appear in the Swept SA and Monitor Spectrum measurements

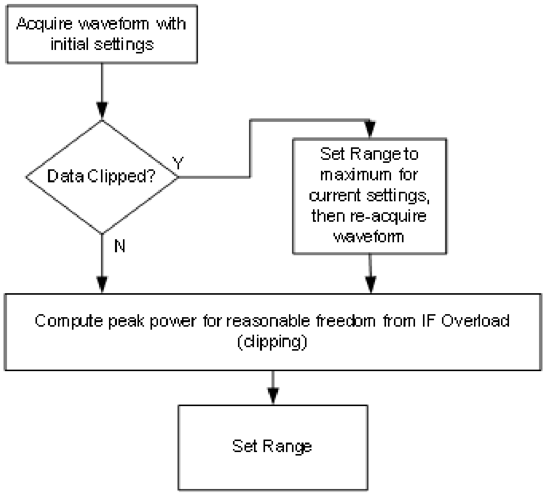
Pre-Adjust for Min Clipping

If this function is `ON`, it applies the adjustment described under Adjust Range For Min Clipping each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation OFF | ON | ELECtrical | COMBined` `[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation?`
Notes	Because there is no attenuator control available in these models, the control displays only `ON` and `OFF` choices. However, for SCPI compatibility with other platforms, all three parameters (`ELECtrical`, `COMBined`, and `ON`) are honored and all are mapped to `ELECtrical`, so if any of these three parameters is sent, a subsequent query will return `ELEC`
Dependencies	Does not appear in the Swept SA and Monitor Spectrum measurements
Preset	`OFF` for Swept SA measurement; `ON` for all other measurements that support **Pre-Adjust for Min Clipping**
State Saved	Saved in instrument state

Adjustment Algorithm

The algorithm for the adjustment is documented below:



Peak-to-Average Ratio

Used with "Range (Non-attenuator models)" on page 2177 to optimize the level control in the instrument. The value is the ratio, in dB, of the peak power to the average power of the signal to be measured. A ratio of 0 should be used for sinusoidal signals; for 802.11g OFDM signals use 9 dB.

All Modes show the current value of Peak-to-Average ratio on the control. However, some Modes do not permit changing the value. In these situations, the control is grayed-out.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:PARatio <real>` `[:SENSe]:POWer[:RF]:RANGe:PARatio?`	
Example	`:POW:RANG:PAR 12 dB`	
Notes	In some Modes, this parameter is read-only; meaning the value will appear on the control and query via SCPI, but is not changeable. In such applications the control is grayed-out. Attempts to change the value via SCPI are ignored, but no error message is generated	
Dependencies	Does not appear in Spectrum Analyzer Mode	
Preset	VXT Models M9410A/11A	0 dB
	All Others	10 dB
State Saved	Saved in instrument state	
Min	0 dB	
Max	VXT Models M9410A/11A	50 dB
	All Others	20 dB

Mixer Lvl Offset

This is an advanced setting to adjust target Range at the input mixer, which in turn affects the signal level in the instrument's IF. This setting can be used when additional optimization is needed after setting "Peak-to-Average Ratio" on page 2179. Positive values of offset optimize noise performance over distortion, negative values optimize distortion performance over noise.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet <real>` `[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet?`	
Example	`:POW:RANG:MIX:OFFS -5 dB`	
Preset	0 dB	
State Saved	Saved in instrument state	
Min	VXT Models M9410A/11A	-34 dB
	All Others	-35 dB
Max	30 dB	

3.11.3.4 Signal Path

Contains controls that pertain to the routing of the signal through the frontend of the instrument.

In general, only appears in instruments whose hardware supports this signal routing. For example, this tab does not appear in many of the modular instrument products, including VXT Model M9420A, or UXM.

This tab *does* appear in VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E, because "Software Preselection" on page 2195 is under this tab, and VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E implement a version of Software Preselection.

Presel Center

Adjusts the centering of the preselector filter to optimize the amplitude accuracy at the frequency of the selected marker. If the selected marker is not on when **Presel Center** is pressed, the instrument turns on the selected marker, performs a peak search, and then performs centering on the marker's center frequency. If the selected marker is already on and between the start and stop frequencies of the instrument, the instrument performs the preselector calibration on that marker's frequency. If the selected marker is already on, but outside the frequency range

between **Start Freq** and **Stop Freq**, the instrument first performs a peak search, and then performs centering on the marker's center frequency.

The value displayed on "Preselector Adjust" on page 2182 changes to reflect the new preselector tuning.

Certain considerations should be observed to ensure proper operation, as detailed in "Proper Preselector Operation" on page 2041.

Remote Command	`[:SENSe]:POWer[:RF]:PCENter`
Example	`:POW:PCEN`
Notes	The rules outlined above under the control description apply for the remote command as well as the key. The result of the command depends on marker position, etc. Any message generated by the control press is also generated in response to the remote command
Dependencies	Does not appear in CXA-m, nor in VXT Models M9410A/11A/15A/16A, M9410E/11E/15E/16E Grayed-out if the microwave preselector is off – If the selected marker's frequency is below Band 1, an advisory message is generated "Preselector not used in this frequency range" and no action is taken – Grayed-out if entirely in Band 0, that is, if **Stop Freq** is below about 3.6 GHz Grayed-out if entirely above 50 GHz, that is, if **Start Freq** is above 50 GHz – Blanked in models that do not include a preselector, such as Option 503. If the remote command is sent in these instruments, accepted without error, and the query always returns 0 – Grayed-out in the **Spectrogram** View
Couplings	The active marker position determines where the centering will be attempted If the instrument is in a measurement such as averaging when centering is initiated, the act of centering the preselector restarts averaging, but the first average trace will not be taken until the centering is completed The offset applied to do the centering appears in "Preselector Adjust" on page 2182
Status Bits/OPC dependencies	When centering the preselector, `*OPC` does not return true until the process is complete and a subsequent measurement has completed, nor are results returned in response to `:READ` or `:MEASure` queries The `Measuring` bit remains set (true) while this command is operating, and does not go false until the subsequent sweep/measurement has completed

Proper Preselector Operation

Certain considerations should be observed to ensure proper operation:

1. If the selected marker is **Off**, the instrument turns on a marker, performs a peak search, and adjusts the preselector using the selected marker's frequency. It uses the "highest peak" peak search method unqualified by threshold or excursion, so that there is no chance of a 'no peak found' error. It continues with that peak, even if it is the peak of just noise. Therefore, for this operation to work properly, there should be a signal on-screen in a preselected range for the peak

search to find

2. If the selected marker is already **On**, the instrument attempts the centering at that marker's frequency. There is no preselector for signals below about 3.6 GHz, so if the marker is on a signal below 3.6 GHz, no centering is attempted, and an advisory message is generated
3. In some models, the preselector can be bypassed. If it is bypassed, no centering is attempted in that range and a message is generated

Preselector Adjust

Lets you manually adjust the preselector filter frequency to optimize its response to the signal of interest. Only available when "Presel Center" on page 2181 is available.

For general purpose signal analysis, using **Presel Center** is recommended. Centering the filter minimizes the impact of long-term preselector drift. **Preselector Adjust** can be used instead to manually optimize the preselector. One application of manual optimization would be to peak the preselector response, which both optimizes the signal-to-noise ratio and minimizes amplitude variations due to small (short-term) preselector drifting.

When **Presel Center** is performed, the offset applied to do the centering becomes the new value of **Preselector Adjust**.

Remote Command	`[:SENSe]:POWer[:RF]:PADJust <freq>` `[:SENSe]:POWer[:RF]:PADJust?`
Example	`:POW:PADJ 100KHz` `:POW:PADJ?`
Notes	The value on the control is displayed to 0.1 MHz resolution
Dependencies	– Does not appear in CXA-m – Does not appear in VXT Models M9410A/11A/15A/16A – Does not appear in M9410E/11E/15E/16E – Grayed-out if microwave preselector is off – Grayed-out if entirely in Band 0, that is, if Stop Freq is lower than about 3.6 GHz – Grayed-out if entirely above 50 GHz, that is, if Start Freq is higher than 50 GHz – Blank in models that do not include a preselector, such as Option 503. If the command is sent in these instruments, it is accepted without error, and the query always returns 0 – Grayed-out in the **Spectrogram** View
Preset	0 MHz

State Saved	The **Preselector Adjust** value set by "Presel Center" on page 2181, or by manually adjusting **Preselector Adjust** Not saved in instrument state, and does not survive a Preset or power cycle
Min/Max	–/+500 MHz
Backwards Compatibility SCPI	`[:SENSe]:POWer[:RF]:MW:PADJust` `[:SENSe]:POWer[:RF]:MMW:PADJust`

Backwards Compatibility Command

Notes	The command has no effect, and the query always returns `MWAVe`
Backwards Compatibility SCPI	`[:SENSe]:POWer[:RF]:PADJust:PRESelector MWAVe | MMWave | EXTernal` `[:SENSe]:POWer[:RF]:PADJust:PRESelector?`

Internal Preamp

Accesses a menu of controls for the internal preamps. Turning on the preamp gives a better noise figure, but a poorer inter-modulation distortion (TOI) to noise floor dynamic range. You can optimize this setting for your measurement.

The instrument takes the preamp gain into account as it sweeps. If you sweep outside of the range of the preamp, the instrument will also account for that. The displayed result always reflects the correct gain.

For some measurements, when the preamp is on and any part of the displayed frequency range is below the lowest frequency for which the preamp has specifications, a warning condition message appears in the status line. For example, for a preamp with a 9 kHz lowest specified frequency: "Preamp: Accy unspec'd below 9 kHz".

Selection	Example	Note
Off	:POW:GAIN OFF	
Low Band	:POW:GAIN ON :POW:GAIN:BAND LOW	Sets the internal preamp to use only the low band. The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Low Band selection in the dropdown
Full Range	:POW:GAIN ON :POW:GAIN:BAND FULL	Sets the internal preamp to use its full range. The low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model) is supplied by the low band preamp and the frequencies above low band are supplied by the high band preamp The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Full Range selection in the dropdown. If the high band option is not installed the Full Range selection does not appear

NOTE The maximum **Center Frequency** for **Low Band**, displayed in square brackets, can change based on the selected IFBW for measurements that support IFBW (for example, Waveform measurement across all Modes that support it). In certain models (such as N9042B & N9032B), IFBW values <= 40 MHz have a maximum **Low Band** frequency of 3.6 GHz, while 40 MHz < IFBW <= 1 GHz have a maximum of 3.3 GHz, and 1 GHz < IFBW <= 1.5 GHz have a maximum of 3.5 GHz. IFBW values > 1.5 GHz do not support a **Center Frequency** that can reach the **Low Band** maximum frequency. In these cases, **N/A** is displayed in the square brackets for **Low Band**.

Remote Command	`[:SENSe]:POWer[:RF]:GAIN:BAND LOW | FULL` `[:SENSe]:POWer[:RF]:GAIN:BAND?`
Example	`:POW:GAIN:BAND LOW` `:POW:GAIN:BAND?`
Dependencies	Not available on all hardware platforms. If the preamp is not present or is unlicensed, this control is not shown Does not appear in VXT Models M9410A/11A/15A/16A nor in M9410E/11E/15E/16E If `:POW:GAIN:BAND FULL` is sent when a low band preamp is available, the preamp band parameter is set to `LOW` instead of `FULL`, and an "Option not installed" message is generated Not available when the electronic/soft attenuator is enabled
Preset	`LOW`
State Saved	Saved in instrument state
Annotation	When the USB Preamp is not connected to USB, the Preamp annotation in the Meas Bar says “Off” if the preamp is off and displays the frequency range of the low band or full range preamp depending on the setting. For example, if the Preamp is set to Low Band and the Low Band is 3.6 GHz the annotation says “3.6 GHz”. If it is a 13.6 GHz preamp and it is set to Full Range the annotation says “13.6 GHz” When the USB Preamp is connected to USB, the Preamp annotation says “Preamp: USB” if the internal preamp is off or “Preamp: USB, Int” if the internal preamp is on (only for measurements that support the USB preamp)

Auto Function

Remote Command	`[:SENSe]:POWer[:RF]:GAIN[:STATe] OFF | ON | 0 | 1` `[:SENSe]:POWer[:RF]:GAIN[:STATe]?`
Example	`:POW:GAIN OFF` `:POW:GAIN?`
Preset	`OFF`

LNA

Lets you turn the Low Noise Amplifier (**LNA**) on or off.

LNA is an additional preamplifier that provides superior DANL and frequency range compared to "Internal Preamp" on page 2183. LNA provides lower system noise figure, especially at frequencies above 100 MHz, and can be operated up to the full range of 50 GHz instruments.

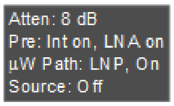
For best possible sensitivity, **LNA** can be turned on *together* with "Internal Preamp" on page 2183, although if you operate both preamps together, note that the TOI (distortion) specifications are impacted. The sensitivity improvement of this combination is substantial when operating in high band (frequencies above 3.6 GHz).

For more details about annotation, see "More Information" on page 2045

Remote Command	`[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe] OFF | ON | 0 | 1` `[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe]?`
Example	`:POW:GAIN:LNA ON`
Dependencies	Requires Option LNA, except for VXT models M9415A/16A Does not appear in VXT models M9420A/10A/11A M9410E/11E/15E/16E support LNA May not appear in some measurements **LNA** is not available when the electronic/soft attenuator is enabled
Preset	`OFF`
State Saved	Saved in State

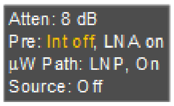
More Information

When **LNA** is installed, the preamp annotation changes to show the state of both **LNA** and **Internal Preamp**. Below is an example:



Atten: 8 dB
Pre: Int on, LNA on
µW Path: LNP, On
Source: Off

Note that when operating entirely in the low band (below about 3.6 GHz), if **LNA** is on, **Internal Preamp** is switched off (even if you have its switch set to ON). This is because the noise performance is actually degraded in low band if both preamps are on. In this case, the annotation reflects the actual state of the two preamps, but the **Internal Preamp** annotation displays in amber, to warn you that the actual state of **Internal Preamp** does not match its switch control display:



Atten: 8 dB
Pre: Int off, LNA on
µW Path: LNP, On
Source: Off

µW Path Control

Options for this control include **µW Preselector Bypass** (Option MPB), **Low Noise Path** (Option LNP) and **Full Bypass Enable** in the High Band path circuits.

When the µW Preselector is bypassed, flatness is improved, but will be subject to spurs from out of band interfering signals. When **Low Noise Path Enable** is selected, the instrument automatically bypasses certain circuitry in the high frequency bands that can contribute to noise, when it is appropriate based on other instrument settings.

For most applications, the preset state is **Standard Path**, which provides the best remote-control throughput, minimizes acoustic noise from switching and minimizes the risk of wear in the hardware switches, particularly in remote test scenarios where both low band and high band setups will follow in rapid succession. In this path, the bypass of the low band/high band switch and microwave preamp is never activated, which can cause some noise degradation but preserves the life of the bypass switch.

For applications that utilize the wideband IF paths, the preset state is **µW Preselector Bypas**s, if option MPB is present. This is because, when using a wideband IF such as the 140 MHz IF, the µW Preselector’s bandwidth can be narrower than the available IF bandwidth, causing degraded amplitude flatness and phase linearity, so it is desirable to bypass the preselector in the default case.

You may choose **Low Noise Path Enable** for a lower noise floor, especially in the 21-26.5 GHz region, though without improving many measures of dynamic range, and without giving the best possible noise floor. The preamp, if purchased and used, gives better noise floor than does **Low Noise Path Enable**, but the preamp’s compression threshold and third-order intercept are much poorer than that of **Low Noise Path Enable**.

A fourth choice is **Full Bypass Enable**, which combines **µW Preselector Bypass** and **Low Noise Path Enable**. Because this can bypass most of the circuitry between the input and the first mixer, care should be taken when using this setting to avoid damaging the mixer. **Full Bypass Enable** is only available if both options LNP and MPB are present, as well as option FBP.

Path	Example	Note
Standard Path	:POW:MW:PATH STD	Normal setting for most measurements. µW Preselector in circuit, Low Noise Path disabled
Low Noise Path Enable	:POW:MW:PATH LNP	See "Low Noise Path Enable" on page 2050
µW Preselector Bypass	:POW:MW:PATH MPB	See "µW Preselector Bypass" on page 2052

<table>
<tr><td>Remote Command</td><td><code>[:SENSe]:POWer[:RF]:MW:PATH STD | LNPath | MPBypass | FULL</code>
<code>[:SENSe]:POWer[:RF]:MW:PATH?</code></td></tr>
<tr><td>Example</td><td><code>:POW:MW:PATH LNP</code>
Enables the Low Noise path
<code>:POW:MW:PATH?</code></td></tr>
<tr><td>Notes</td><td>When "Presel Center" on page 2181 is performed, the instrument momentarily switches to the Standard Path, regardless of the setting of µW Path Control
The DC Block will always be switched in when the low noise path is switched in, to protect succeeding circuitry from DC. Note that this does not mean “when the low noise path is enabled” but when, based on the Low Noise Path rules, the path is actually switched in. This can happen when the selection is Low Noise Path Enable or Full Bypass Enable. In the case where the DC Block is switched in, the instrument is now AC-coupled. However, if you selected DC coupling, the UI would still behave as though it were DC-coupled, including all annunciation, warnings, status bits, and responses to SCPI queries. This is because, based on other settings, the instrument could switch out the low noise path at any time and hence go back to being DC-coupled
Alignment switching ignores the settings in this menu, and restores them when finished</td></tr>
<tr><td>Dependencies</td><td>Does not appear in CXA-m, VXT Models M9410A/11A/15A/16A, nor in M9410E/11E/15E/16E, BBIQ and External Mixing
– The Low Noise Path Enable selection does not appear unless Option LNP is present and licensed
– The µW Preselector Bypass selection does not appear unless Option MPB is present and licensed
– The Full Bypass Enable selection does not appear unless options LNP and MPB are both present as well as option FBP
In any of these cases, if the required options are not present and the SCPI command is sent, error -241, "Hardware missing; Option not installed" is generated
Low Noise Path Enable and Full Bypass Enable are grayed-out if the current measurement does not support them
Low Noise Path Enable and Full Bypass Enable are not supported in Avionics and MMR Modes (non-modulation measurements). In any of these cases (that is, the feature is not supported in either measurement or Mode), if the SCPI command is sent, the following error is generated: -221, “Setting Conflict; Feature not supported for this measurement”</td></tr>

µW Path Control Auto

In VMA, WLAN, 5G NR, CQM Modes, an **Auto/Man** switch is added to **µW Path Control**:

This allows the function to automatically switch based on certain Auto Rules as shown below:

VMA Mode

Measurement	µW Path Control Auto behavior
Digital Demod	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
Monitor Spectrum	Always Presel Bypass
IQ Waveform	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
Custom OFDM	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
Channel Power	Always Presel Bypass
Occupied BW	Always Presel Bypass
CCDF	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass

Measurement	**µW Path Control Auto behavior**
ACP	Always Presel Bypass
SEM	Always Presel Bypass
Spurious Emissions	Always Standard Path

WLAN Mode

Measurement	**µW Path Control Auto behavior**
Modulation Analysis	Always Presel Bypass
Spectral Flatness	Always Presel Bypasss
Power vs Time	Always Presel Bypass
Monitor Spectrum	Always Presel Bypass
IQ Waveform	Always Presel Bypass
Channel Power	Always Presel Bypass
Occupied BW	Always Presel Bypass
CCDF	Always Presel Bypass
SEM	For 11be 320M, when 'Enabled Wideband IF for FFT' is OFF or 'Sweep Type Rule' is Best Dynamic Range, auto µW path is standard For other cases, auto µW path is presel bypass if presel bypass is enabled, auto µW path is standard if presel bypass is not enabled
Spurious Emissions	Always Standard Path

5G NR Mode

Measurement	**µW Path Control Auto behavior**
Modulation Analysis	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Full Bypass if conditions warrant(FBP Option is available and "Allow Full Bypass in Auto" is On), otherwise choose Preselector Bypass
Monitor Spectrum	Always Standard Path
IQ Waveform	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Full Bypass if conditions warrant(FBP Option is available and "Allow Full Bypass in Auto" is On), otherwise choose Preselector Bypass
Channel Power	Always Standard Path
Occupied BW	Always Standard Path
CCDF	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
ACP	Always Standard Path
SEM	Always Standard Path
Spurious	Always Standard Path

Measurement	µW Path Control Auto behavior
Emissions	
Transmit On|Off Power	Use Standard Path unless tuned frequency > 3.6 GHz and Info BW > 15 MHz, in which case choose Preselector Bypass

Channel Quality Mode

Measurement	µW Path Control Auto behavior
Group Delay	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Full Bypass if conditions warrant(FBP Option is available and “Allow Full Bypass in Auto” is On), otherwise choose Preselector Bypass
Monitor Spectrum	Always Standard Path
IQ Waveform	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
CCDF	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass

Remote Command	`[:SENSe]:POWer[:RF]:MW:PATH:AUTO ON | OFF | 1 | 0` `[:SENSe]:POWer[:RF]:MW:PATH:AUTO?`
Example	`:POW:MW:PATH:AUTO ON` `:POW:MW:PATH:AUTO?`
Dependencies	Only appears in VMA, WLAN, 5G NR and CQM Modes
Couplings	See "µW Path Control Auto" on page 2048 above
Preset	`ON`
Range	`ON|OFF`

Low Noise Path Enable

Low Noise Path Enable provides a lower noise floor under some circumstances, particularly when operating in the 21–26.5 GHz region. With the Low Noise Path enabled, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and
- the stop frequency is above 3.6 GHz
- The internal preamp is not installed, or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Low Noise Path Enable** is selected in the user interface. Also, if the preamp is turned on, the Low Noise Path is not used,

whether or not the **Low Noise Path Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Low Noise Path Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

For measurements that use IQ acquisition, the low noise path is used when **Center Frequency** is in High Band (> 3.6 GHz) and no preamp is in use. In other words, the rules above are modified to use only the center frequency to qualify which path to switch in. This is not the case for FFTs in the Swept SA measurement; they use the same rules as swept measurements.

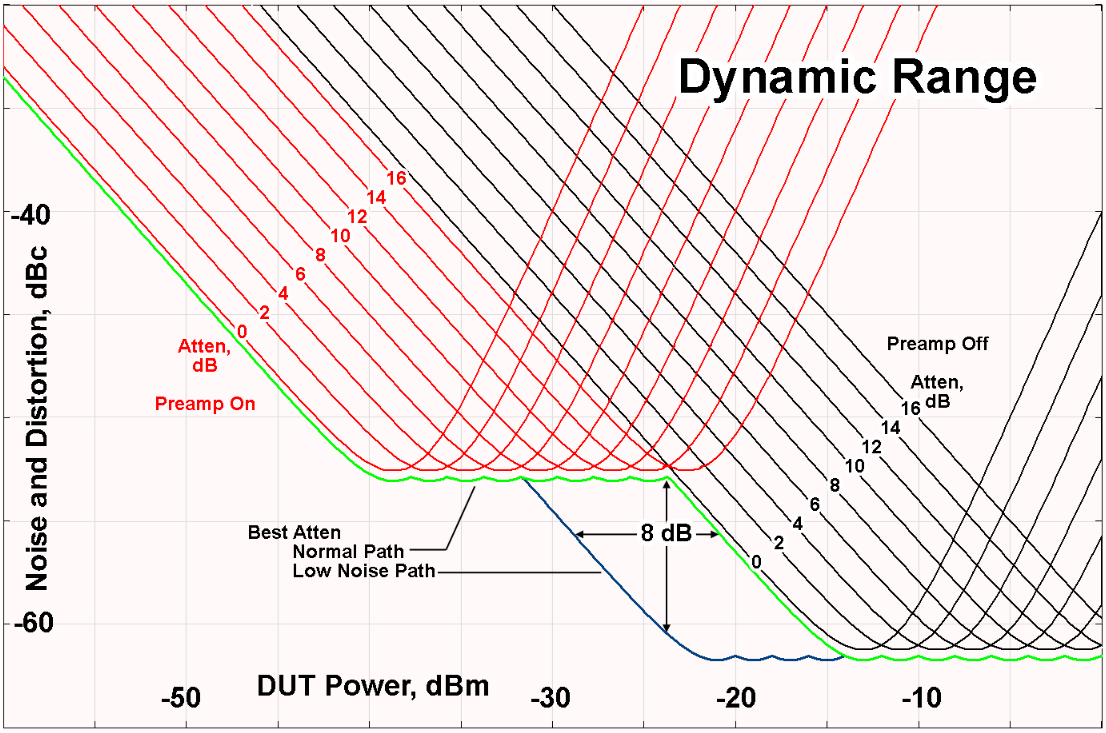
Note that the Low Noise Path, while giving improved DANL, has the disadvantage of decreased TOI performance and decreased gain compression performance relative to the standard path.

Note also that the bypass switch is a mechanical switch and has finite life, so if the **Low Noise Path Enable** is selected, it is possible to cause frequent cycling of this switch by frequently changing instrument settings such that the above conditions hold true only some of the time. A user making tests of this nature should consider opting for the **Standard Path**, which will never throw the bypass switch, at the expense of some degraded noise performance.

The low noise path is useful for situations where the signal level is so low that the instrument performance is dominated by noise even with 0 dB attenuation, but still high enough that the preamp option would have excessive third-order intermodulation or compression. The preamp, if purchased and used, gives better noise floor than does the “Low Noise Path.” However, its compression threshold and third-order intercept are much poorer than that of the non-preamp path.

There are some applications, typically for signals around –30 dBm, for which the third-order dynamic range of the standard path is good enough, but the noise floor is not low enough even with 0 dB input attenuation. When the third-order dynamic range of the preamp path is too little and the noise floor of the standard path is too high, the Low Noise Path can provide the best dynamic range

The graph below illustrates the concept. It shows, in red, the performance of an instrument at different attenuation settings, both with the preamp on and off, in a measurement that is affected by both instrument noise and instrument TOI. The green shows the best available dynamic range, offset by 0.5 dB for clarity. The blue shows how the best available dynamic range improves for moderate signal levels with the low noise path switched in. In this illustration, the preamp improves the noise floor by 15 dB while degrading the third-order intercept by 30 dB, and the low noise path reduces loss by 8 dB. The attenuator step size is 2 dB.



There are other times where selecting the low noise path improves performance, too. Compression-limited measurements such as finding the nulls in a pulsed-RF spectrum can profit from the low noise path in a way similar to the TOI-limited measurement illustrated. Accuracy can be improved when the low noise path allows the optimum attenuation to increase from a small amount like 0, 2 or 4 dB to a larger amount, giving better return loss at the instrument input. Harmonic measurements, such as second and third harmonic levels, are much improved using the low noise path because of the superiority of that path for harmonic (though not intermodulation) distortion performance.

µW Preselector Bypass

Toggles the preselector bypass switch for band 1 and higher. When the microwave presel is on, the signal path is preselected. When the microwave preselector is off, the signal path is not preselected. The preselected path is the normal path for the instrument.

The preselector is a tunable bandpass filter which prevents signals away from the frequency of interest from combining in the mixer to generate in-band spurious signals (images). The consequences of using a preselector filter are its limited bandwidth, the amplitude and phase ripple in its passband, and any amplitude and phase instability due to center frequency drift.

Option MPB or pre-selector bypass provides an unpreselected input mixer path for certain X-Series signal analyzers with frequency ranges above 3.6 GHz. This signal path allows a wider bandwidth and less amplitude variability, which is an advantage when doing modulation analysis and broadband signal analysis. The disadvantage is that, without the preselector, image signals will be displayed. Another disadvantage of bypassing the preselector is increased LO emission levels at the front panel input port.

Image responses are separated from the real signal by twice the 1st IF. For IF Paths of 10 MHz and 25 MHz, the 1st IF is 322.5 MHz, so the image response and the real signal will be separated by 645 MHz. The 1st IF will be different for other IF Path settings. When viewing a real signal and its corresponding image response in internal mixing, the image response will be to the left of the real signal.

Also, the image response and the real signal typically have the same amplitude and exhibit the same shape factor.

However, if Option FS1 (Fast Sweep Capability) is enabled, the image response in the Swept SA measurement appears lower in amplitude and has a much wider shape factor compared to the real signal.

Full Bypass Enable

With **Full Bypass Enable** selected, the microwave preselector is bypassed. In addition, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and
- the stop frequency is above 3.6 GHz.
- the internal preamp is not installed or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Full Bypass Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

CAUTION

When Full Bypass Enable is selected, and "Y Scale" on page 2153 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq >3.6 GHz and the Preamp is either not licensed, set to Low Band, or Off). This puts the first converter at considerable risk to be damaged by high AC power. Consequently,

whenever **Full Bypass Enable** is selected, a warning message appears in the status bar:
"Full Bypass Enabled, maximum safe input power reduced"

Microwave Preselector Bypass Backwards Compatibility

Example	Bypass the microwave preselector: `:POW:MW:PRES OFF`
Notes	Included for Microwave Preselector Bypass backwards compatibility The `ON` parameter sets the `STD` path (`:POW:MW:PATH STD`) The `OFF` parameter sets path `MPB` (`:POW:MW:PATH MPB`)
Preset	`ON`
Backwards Compatibility SCPI	`[:SENSe]:POWer[:RF]:MW:PRESelector[:STATe] ON | OFF | 0 | 1` `[:SENSe]:POWer[:RF]:MW:PRESelector[:STATe]?`

Frequency Extender Preselection Bypass

Only applies to the high frequency path of the Frequency Extender, and only if the Frequency Extender allows it. For example, the V3050A high frequency path is 50 – 110 GHz and *does* allow control of the preselector bypass.

When the Frequency Extender's preselection is bypassed, flatness is improved, but will be subject to spurs from out-of-band interfering signals. For bandwidths greater than 2.5 [GHz], it is recommended that the signal bypass the Frequency Extender Preselector since the max bandwidth of the Preselector can be as narrow as 2.5 [GHz].

For most applications, the preset state is `OFF`, which gives the best remote-control throughput, minimizes acoustic noise from switching, minimizes out of band spurs, and minimizes the risk of wear in the hardware switches.

Preselector and Bandwidth Conflict

When the Frequency Extender Preselector is applied and the signal bandwidth is greater than 2.5 [GHz], then a settings alert message will show to warn the user that the signal may be distorted due to the limitation of the Frequency Extender Preselector bandwidth.

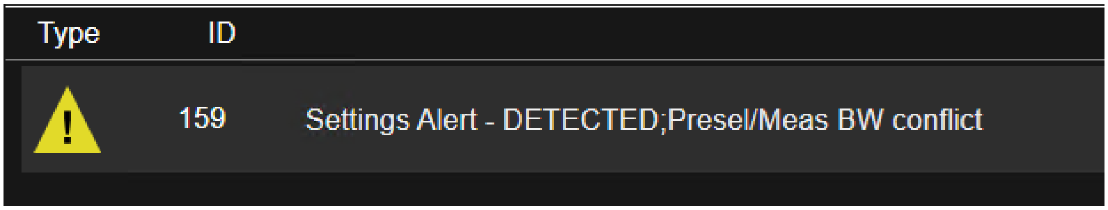
An example of the settings alert message is shown below.

Settings Alert message in the Status Bar at the bottom of the display.

Settings Alert;Presel/Meas BW conflict

Settings Alert message in the error queue

.



159 Settings Alert - DETECTED;Presel/Meas BW conflict

Software Preselection

Provided in some instruments, either to compensate for issues with provided hardware preselection or to provide the preselection function when there is no hardware preselector.

N9041B

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

In N9041B, **Software Preselection** only applies for frequencies above 50 GHz, therefore it is only used for RF Input 2. Even if turned on, it is not used for other inputs, and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note “(>~50 GHz)”.

Note that in N9041B, in Swept SA measurement, **Software Preselection** works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT sweep type.

N9042B+V3050A

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

For N9042B+V3050A, Software Preselection only applies for frequencies above 50 GHz, therefore it is only used for External RF. Even if it is turned on, it will not be used for other inputs and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note “(>~50 GHz)”.

Note that for N9042B+V3050A, in the Swept SA measurement, Software Preselection works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT Sweep Type.

VXT models M9410A/11A/15A/16A

Software Preselection is used to provide the preselection function, as there is no hardware preselector in these models. Two background traces are taken and compared point by point, and the point with the lowest amplitude from the two traces is used. This provides a method to reduce spurs that are internally generated within the VXT, but you should note the following when using Software Preselection:

- There is some speed cost due to the need to take multiple captures
- Taking the point with the lowest amplitude in each trace will make the average noise level lower at all points that do not have a spur. This can reduce the accuracy of the measurement of noise and noise-like signals

Because of the difficulty in identifying spurs manually, you are recommended to leave Software Preselection `ON` at all times in VXT models M9410A/11A. If you turn it off in order to speed up your measurement or improve noise accuracy, be aware of unwanted onscreen spurs.

Remote Command	`[:SENSe]:POWer[:RF]:SWPResel:STATe 0 | 1 | ON | OFF` `[:SENSe]:POWer[:RF]:SWPresel:STAT?`
Example	`:POW:SWPR:STAT 1` `:POW:SWPR:STAT?`
Dependencies	Only appears in N9041B, N9042B+V2050A, VXT models M9410A/11A and M9410E/11E. Does not appear in all measurements
Couplings	Affects **Sweep Time** **Auto Tune** supports **Software Preselection**, so **Auto Tune** should be performed after setting the **Software Preselection** state
Preset	N9041B: `OFF` N9042B+V3050A: `ON` M9410A/11A: `ON`
State Saved	Saved in instrument state

SW Preselection Type

Specifies the algorithm used for software preselection.

Two hidden sweeps occur in succession. The second sweep is offset in LO frequency by 2 * IF / N. For each point in each trace, the smaller amplitude from the two traces is taken and placed in that point in the selected trace. The Peak detector is auto-selected to improve the image suppression effectiveness. Responses of each trace that lie on top of one another will remain and are valid signals. Other signals are images, which are suppressed. The action of taking the smaller of the two traces will make the average noise level lower in all points that do not have an image, thus reducing the accuracy of the measurement of noise and noise-like signals.

- `NORMal` - mathematically removes all image and multiple responses of signals present at the input
- `ADVanced` - any trace processing (such as “max hold” or trace averaging) is performed on the points of both candidate traces before the “select minimum” operation occurs. This form of processing works better for non-stationary signals, such as pulsed-RF signals

Remote Command	`[:SENSe]:POWer[:RF]:SWPResel NORMal | ADVanced` `[:SENSe]:POWer[:RF]:SWPResel?`
Example	`:POW:SWPR NORM` `:POW:SWPR?`
Dependencies	Only appears in N9041B and N9042B+V3050A. Only appears in measurements that use the Swept method Grayed-out when "Software Preselection" on page 2195 is `OFF`. The grayout message is “Unavailable unless SW Presel enabled”
Preset	N9041B: `ADVanced` N9042B+V3050A: `NORMal`
State Saved	Saved in instrument state

SW Preselection BW

Specifies the effective bandwidth to be used for Software Preselection.

The options are:

- `NORMal` – when making Swept measurements, a software preselection algorithm is used which takes up to 4 background acquisitions, then post-processes the result. This algorithm can remove images from signals with an occupied bandwidth up to around 3 GHz. (Default/Preset setting). When making FFT measurements, this algorithm is not used, instead the same algorithm is used as for `NARRow` (below)
- `NARRow`– a software preselection algorithm is used which takes two background acquisitions, then post-processes the result to detect and remove images from

wideband signals with occupied bandwidths up to 2 GHz. This increases the risk of images failing to be rejected, but improves the measurement speed

<table>
<tr><td>Remote Command</td><td>[:SENSe]:POWer[:RF]:SWPResel:BW NORMal | NARRow
[:SENSe]:POWer[:RF]:SWPResel:BW?</td></tr>

High Freq Prefilter

Lets you set the state of Prefilter for center frequencies above 1310 MHz.

In VXT Models M9410A/11A and M9410E/11E in bypass frequency range (1310MHz~5GHz), the Receiver RF path has a bank of filters that come after the RF Attenuator in the signal path. Since this bank of filters precedes the mixer they are known as the “Prefilter” bank. Their purpose is to eliminate unwanted in-band mixing products by filtering out all but the desired frequencies before the signals get to the mixer. There are 13 prefilter bands to cover the frequencies between 9 kHz and 6000 MHz. The Prefilter provides the necessary rejection of the unwanted signal.

<table>
<tr><td>Remote Command</td><td>[:SENSe]:<measurement>:PFILter[:STATe] ON | OFF | 1 | 0
[:SENSe]:<measurement>:PFILter[:STATe]?</td></tr>

3.11.4 BW

Opens the Bandwidth (**BW**) menu, which contains controls for the Resolution Bandwidth and Video Bandwidth functions of the instrument.

3.11.4.1 Settings

Contains the basic bandwidth functions. It is the only tab under **BW**.

Res BW

Activates the resolution bandwidth active function, which allows you to manually set the Resolution Bandwidth (RBW) of the instrument.

Normally, **Res BW** (Auto) selects automatic coupling of the Res BW to Span using the ratio set by the Span:3 dB RBW control (some measurements do not have a

Span:3 dB RBW control, in which case the measurement chooses the optimal ratio). To decouple the resolution bandwidth, press the **Auto/Man** toggle on the **Res BW** control, or simply enter a different value for **Res BW**.

When the **Res BW** is manually selected, it may be returned to the coupled state by pressing the **Auto/Man** toggle on the **Res BW** control. This may also be done by pressing Auto Couple or by performing a **Preset**.

Only certain discrete resolution bandwidths are available. The available bandwidths are dependent on the **EMC Standard**. If an unavailable bandwidth is entered with the numeric keypad, the closest available bandwidth is selected.

See "RBW Presets" on page 2061

Remote Command	`[:SENSe]:MONitor:BANDwidth[:RESolution] <bandwidth>`
	`[:SENSe]:MONitor:BANDwidth[:RESolution]?`
	`[:SENSe]:MONitor:BANDwidth[:RESolution]:AUTO ON | OFF | 1 | 0`
	`[:SENSe]:MONitor:BANDwidth[:RESolution]:AUTO?`

Example	`:MON:BAND 5 MHz`
	`:MON:BAND?`
	`:MON:BAND:AUTO ON`
	`:MON:BAND:AUTO?`

Notes	For numeric entries, all RBW Types choose the nearest (arithmetically, on a linear scale, rounding up) available RBW to the value entered The setting and querying of values depends on the current bandwidth type
Couplings	Sweep time is coupled to the RBW. As the RBW changes, the sweep time (if set to Auto) is changed to maintain amplitude calibration Video bandwidth (VBW) is coupled to the RBW. As the resolution bandwidth changes, the video bandwidth (if set to Auto) changes to maintain the ratio of VBW/RBW (10:1) When the Res BW is set to Auto, the resolution bandwidth is auto-coupled to the span. The ratio of Span/RBW is approximately 106:1 when auto coupled. When Res BW is set to Man, and the bandwidths are entered manually, these bandwidths are used regardless of other instrument settings
Preset	Auto (unless noted in the table below) See "RBW Presets" on page 2061 below
State Saved	Saved in instrument state
Min	1 Hz
Max	8 MHz is the max equivalent –3 dB RBW, which means that the named RBW (the one shown on the control etc.) can actually exceed 8 MHz if using a filter other than –3 dB Gaussian
Annotation	A “#” mark appears before “RBW” in the annotation when it is switched from Auto to Manual coupling
Backwards Compatibility Notes	For backwards compatibility this command obeys both the `BANDwidth` and `BWIDth` forms For ESA, the maximum Res BW was 5 MHz; on X-Series it is 8 MHz

RBW Presets

Unless noted in the table below, the Preset value of RBW is **Auto**.

Mode	Preset RBW
`WLAN`	100 kHz
`LTE, LTETDD, LTEAFDD, LTEATDD`	100 kHz
`5GNR`	100 kHz

Video BW

Lets you change the instrument post-detection filter (VBW or “video bandwidth”) from 1 Hz to 8 MHz in approximately 10% steps. In addition, a wide-open video filter bandwidth may be chosen by selecting 50 MHz. The VBW is annotated at the bottom of the display, in the center.

Normally, **Video BW (Auto)** selects automatic coupling of the Video BW to RBW using the ratio set by the VBW:3 dB RBW control. To decouple the resolution bandwidth, press the **Auto/Man** toggle on the **Video BW** control, or simply enter a different value for **Video BW**.

When the **Video BW** is manually selected, it may be returned to the coupled state by pressing the **Auto/Man** toggle on the **Video BW** control. This may also be done by pressing Auto Couple or by performing a **Preset**.

Remote Command	`[:SENSe]:MONitor:BANDwidth:VIDeo <bandwidth>`
	`[:SENSe]:MONitor:BANDwidth:VIDeo?`
	`[:SENSe]:MONitor:BANDwidth:VIDeo:AUTO ON | OFF | 1 | 0`
	`[:SENSe]:MONitor:BANDwidth:VIDeo:AUTO?`

Example	`:MON:BAND:VID 2.4 MHz`
	`:MON:BAND:VID?`
	`:MON:BAND:VID:AUTO ON`
	`:MON:BAND:VID:AUTO?`

Notes	For numeric entries, the instrument chooses the nearest (arithmetically, on a linear scale, rounding up) available VBW to the value entered. The 50 MHz VBW is defined to mean “wide open” The values shown in this table reflect the conditions after a Mode Preset
Dependencies	Sometimes the displayed Video BW is not actually used to process the trace data: – When the Average Detector is selected and **Sweep Type** is set to **Swept**, the video bandwidth filter cannot be used, because it uses the same hardware as the Average Detector – When the Quasi-Peak, EMI Average or RMS Average detector is selected the VBW is implemented by the digital IF as part of the detector

	When this is the case, the VBW still acts to change the Sweep Time, if Sweep Time is in Auto, and still affects the data on other traces for which this is not the case
Couplings	Video bandwidth (VBW) is normally coupled to RBW. If **VBW** is set to Auto, then the VBW is changed as the RBW changes, to maintain the ratio set by the VBW:3 dB RBW control (usually 10:1 for measurements that do not have a VBW:3 dB RBW control)
Preset	Auto (unless noted in table below) `ON`
State Saved	Saved in instrument state
Min	1 Hz
Max	50 MHz
Annunciation	A “#” mark appears before “VBW” in the annotation when it is not coupled
Annotation	In the bottom center of the screen, “VBW <value> <units>” indicates the current video bandwidth value. Note that for some detectors this is not the value actually used for VBW (see above)
Backwards Compatibility Notes	For backwards compatibility this command obeys both the `BANDwidth` and `BWIDth` forms

VBW Presets

Unless noted in the table below, the Preset value of VBW is **Auto**.

Mode	Preset VBW
`WLAN`	1 MHz
`LTE, LTETDD, LTEAFDD, LTEATDD`	1 MHz
`5GNR`	1 MHz

VBW:3dB RBW

Selects the ratio between the video bandwidth and the equivalent 3 dB resolution bandwidth to be used for setting VBW when VBW is in Auto.

VBW:3dB RBW (Auto) selects automatic coupling of the VBW:3 dB RBW ratio to Detector using the rules described below in "Coupling Auto Rules" on page 2063. To decouple the ratio, press the **Auto/Man** toggle on the VBW:3 dB RBW control, or simply enter a different value for VBW:3 dB RBW.

When the VBW:3dB RBW is manually selected, it may be returned to the coupled state by setting the toggle on the VBW:3 dB RBW control back to **Auto**. This may also be done by pressing Auto Couple or by performing a **Preset**.

Remote Command	`[:SENSe]:MONitor:BANDwidth:VIDeo:RATio <real>` `[:SENSe]:MONitor:BANDwidth:VIDeo:RATio?`

	`[:SENSe]:MONitor:BANDwidth:VIDeo:RATio:AUTO OFF | ON | 0 | 1` `[:SENSe]:MONitor:BANDwidth:VIDeo:RATio:AUTO?`

Example	`:MON:BAND:VID:RAT 2`
	`:MON:BAND:VID:RAT?`
	`:MON:BAND:VID:RAT:AUTO 0`
	`:MON:BAND:VID:RAT:AUTO?`

Notes	The values shown in this table reflect the conditions after a Mode Preset
Couplings	See "Coupling Auto Rules" on page 2063
Preset	1 `ON`
State Saved	Saved in instrument state
Min	0.00001
Max	3000000
Backwards Compatibility Notes	For backwards compatibility this command accepts both the `BANDwidth` and `BWIDth` forms

Coupling Auto Rules

The Auto Rules for the **VBW:3dB RBW** function are as follows.

First, if Source Mode is set to “Tracking”: Use 1.0

Otherwise, we go through the following list of detector numbers and find the lowest numbered detector being used on any active traces (traces for which Update is On):

1. Peak
2. Normal
3. Average
4. Sample
5. Negative Peak
6. EMI Average
7. Quasi Peak
8. RMS Average

Use that detector to pick the ratio based on the following criteria:

1. If the measurement supports EMC Standard, and the detector is Peak and the EMC Standard is set to either CISPR or MIL, use 10.0 (we use wide VBWs to capture peak levels accurately).
2. Otherwise, if the detector is **Negative Peak**, use 1.0 (in the Negative Peak case, there are no known significant use models so we use a medium ratio).
3. Otherwise, if the detector is **Normal**, use 1.0.
4. Otherwise, if the detector is **Average**, and the span is nonzero, use 0.1. The use of a small ratio in Average detection is desirable because of its effect on the sweep time equations. The VBW filter is not actually in-circuit when the average detector is on. If the detector is Average, and the span is zero, use 10.0, which gives optimal behavior for Interval Markers in zero span. Note that only the Swept SA measurement supports Zero Span.
5. Otherwise, if the detector is EMI Average, Quasi Peak or RMS Average, use 10.0. In fact, this is a “don’t care” since no VBW is used for these detectors, as noted under “Dependencies” for the VBW control
6. Otherwise, the detector is simply **Peak** or **Sample**. These two detectors can use the same rules. In these cases, if any active trace is in max hold or min hold, use 10.0, because Max and Min Hold operations will usually be intended to capture peaks and pits without smoothing from the VBW filter; otherwise, use 1.0 as a compromise, because you have not set the instrument in a way that implies that you are measuring noise, pulsed-RF or CW signals, and for backward compatibility with earlier instruments.

Note that because the above couplings depend on which traces are active, they are re-examined whenever any trace goes active or inactive, except when this leaves no traces active. Transitioning to the state where no traces are active should not affect the couplings; in that way, the annotation will always reflect the state of the last trace which was active.

Note also that some detectors are not available in some measurements, but because of the way the above rules that does not change the logic of the rules.

Span:3dB RBW

Selects the ratio between span and resolution bandwidth.

Normally, Span:3dB RBW (Auto) selects a Span:3 dB RBW ratio of 106:1. If you manually enter the ratio, the toggle on the Span:3dB RBW control will change to **Man.** This enables you to manually select ratios more suitable for certain measurements.

When the Span:3dB RBW is manually selected, it may be returned to the coupled state by setting the toggle on the RBW:3 dB RBW control back to **Auto**. This may also be done by pressing Auto Couple or by performing a **Preset**.

Remote Command	`[:SENSe]:MONitor:FREQuency:SPAN:BANDwidth[:RESolution]:RATio <integer>`
	`[:SENSe]:MONitor:FREQuency:SPAN:BANDwidth[:RESolution]:RATio?`
	`[:SENSe]:MONitor:FREQuency:SPAN:BANDwidth[:RESolution]:RATio:AUTO OFF | ON | 0 | 1`
	`[:SENSe]:MONitor:FREQuency:SPAN:BANDwidth[:RESolution]:RATio:AUTO?`

Example	`:MON:FREQ:SPAN:BAND:RAT 200`
	`:MON:FREQ:SPAN:BAND:RAT?`
	`:MON:FREQ:SPAN:BAND:RAT:AUTO ON`
	`:MON:FREQ:SPAN:BAND:RAT:AUTO?`

Notes	The values shown in this table reflect the conditions after a Mode Preset
Preset	106 `ON`
State Saved	Saved in instrument state
Min	2
Max	10000
Backwards Compatibility SCPI	`[:SENSe]:MONitor:FREQuency:SPAN:BWIDth[:RESolution]:RATio`

3.11.5 Display

Opens the **Display** menu, which lets you configure display items for the current Mode, Measurement View or Window.

3.11.5.1 Meas Display

Contains controls for setting up the display for the current Measurement, View or Window.

Carrier Attribute

Toggles whether or not carrier information is shown on the spectrum trace.

Carrier information is displayed when carrier attribute is on . When the Span is greater, there is insufficient space to display the texts. In this case, only vertical lines and arrows are displayed, without text.

Remote Command	`:DISPlay:MONitor:VIEW:WINDow:CATTribute OFF | ON | 0 | 1` `:DISPlay:MONitor:VIEW:WINDow:CATTribute?`
Example	`:DISP:MON:VIEW:WIND:CATT 0` `:DISP:MON:VIEW:WIND:CATT?`
Dependencies	Only available in MSR, LTEAFDD/LTEATDD and 5GNR Modes
Preset	`ON`
State Saved	Saved in instrument state
Range	`OFF|ON`

Sub-block Attribute

Toggles the sub-block information on the spectrum trace. Sub-block attributes are displayed when the setting is selected as on.

Remote Command	`:DISPlay:MONitor:VIEW:WINDow:SATTribute[:STATe] OFF | ON | 0 | 1` `:DISPlay:MONitor:VIEW:WINDow:SATTribute[:STATe]?`
Example	`:DISP:MON:VIEW:WIND:SATT 0` `:DISP:MON:VIEW:WIND:SATT?`
Dependencies	Only available in MSR, LTEAFDD/LTEATDD and 5GNR Modes
Preset	`OFF`
State Saved	Saved in instrument state
Range	`OFF|ON`

Carrier Freq

Selects frequency display type between:

- `OFFSet`: carrier frequencies in the carrier table are shown as offsets from Carrier Ref Freq
- `ABSolute`: absolute frequencies are displayed

Remote Command	`:DISPlay:MONitor:VIEW:WINDow:CINFormation:FREQuency OFFSet | ABSolute` `:DISPlay:MONitor:VIEW:WINDow:CINFormation:FREQuency?`
Example	`:DISP:MON:VIEW:WIND:CINF:FREQ ABS` `:DISP:MON:VIEW:WIND:CINF:FREQ?`
Dependencies	Only available in MSR, LTEAFDD/LTEATDD and 5GNR Modes
Preset	`OFFSet`
State Saved	Saved in instrument state
Range	`OFFSet|ABSolute`

3.11.5.2 View

Contains controls for selecting the current **View**, and for editing User Views.

View

See "Views" on page 2011

User View

Lets you choose a View from the saved User Views for the current measurement. This panel only appears if a User View exists for the current measurement.

Remote Command	`:DISPlay:VIEW:ADVanced:SELect <alphanumeric>` `:DISPlay:VIEW:ADVanced:SELect?`
Example	Select Baseband as the current View `:DISP:VIEW:ADV:SEL “Baseband”`

Notes	You must be in the measurement whose View you are trying to set to send the command. You can only set Views for the current measurement using this command
	For predefined views, the parameter is derived from the view name that is shown in the View list in the user interface. For example, if you are trying to select the Trace Zoom view in the Swept SA measurement, you send:
	`:DISP:VIEW:ADV:SEL "Trace Zoom"`
	because “Trace Zoom” is the name of the View as seen in the Mode/Meas dialog or in the Display, View menu
	You *cannot* use the legacy View parameter (which in this case would be `TZOom`) with `:DISP:VIEW:ADV:SEL`
	`<alphanumeric>` is case insensitive; you can specify mixed case, however the name will be evaluated on a single case. Thus, both of the following forms work:
	`:DISP:VIEW:ADV:SEL "Trace Zoom"`
	`:DISP:VIEW:ADV:SEL "TRACE ZOOM"`
	If the specified view is not a valid View, the query returns the error message “-224, Illegal parameter value; View with the name <alphanumeric> does not exist”
	If the display is disabled (via `:DISP:ENAB OFF`) then the error message “-221, Settings conflict; View SCPI cannot be used while Display is disabled” is generated

Backwards Compatibility SCPI	The legacy node `:DISPlay:VIEW[:SELect]` is retained for backwards compatibility, but it only supports predefined views

Restore Layout to Default

Restores the Layout to the default for Basic.

Modified Views are very temporary; if you exit the current measurement they are discarded, and they are not saved in State. To retain this View for later use, and to be able to return easily to your original Basic View, you can save your edited View as a “User View”.

Save Layout as New View

Saves your new View as a User View. An alpha keyboard appears, which lets you name your new View; the default is the old View name plus a number.

Remote Command	`:DISPlay:VIEW:ADVanced:NAME <alphanumeric>`
Example	`:DISP:VIEW:ADV:NAME “Baseband”` Creates a new View named `Baseband` from the current View, and selects it as the current View
Notes	`<alphanumeric>` is case insensitive; you can specify mixed case, however the name will be evaluated on a single case If `<alphanumeric>` name already exists as a View, the error message “-224, Illegal parameter value; View <alphanumeric> already exists” is generated If the display is disabled (via `:DISP:ENAB OFF`) then the error message “-221, Settings conflict; User View SCPI cannot be used while Display is disabled” is generated

Re-Save User View

You can re-edit a User View; if you make changes, then an asterisk will appear next to the User View’s name. You can then tap **Re-Save User View** to save it back to its existing name, or **Save Layout as New View** to add another, new User View.

This is a front panel function only, there is no remote command available to perform this function. To do this remotely, you must first perform **Save Layout as New View**, then delete the old User View and rename the new one with the name of the View you just deleted.

Rename User View

You can rename the current View by giving it a new unique name. Only User Views can be renamed, if the current View is a Predefined View, an error occurs.

Remote Command	`:DISPlay:VIEW:ADVanced:REName <alphanumeric>`

Example	`:DISP:VIEW:ADV:REN “Baseband”`
Notes	`<alphanumeric>` is case insensitive; you can specify mixed case, however the name will be evaluated on a single case If the `<alphanumeric>` specifying the new name is already present in the list of View names, the error message “-224, Illegal parameter value; View <alphanumeric> already exists” is generated If the current View is a Predefined View, the error message “-224, Illegal parameter value; Cannot rename a Predefined View” is generated If the display is disabled (via `:DISP:ENAB OFF`) then the error message “-221, Settings conflict; View SCPI cannot be used while Display is disabled” is generated

Delete User View

You can delete the current View if it is a User View. The default view becomes the current view for the Measurement.

Remote Command	`:DISPlay:VIEW:ADVanced:DELete`
Example	`:DISP:VIEW:ADV:DEL`
Notes	`<alphanumeric>` is case insensitive; you can specify mixed case, however the name will be evaluated on a single case If the `<alphanumeric>` is not present in the list of View names, the error message “-224, Illegal parameter value; View <alphanumeric> does not exist” is generated If the current View is a Predefined View, the error message “-224, Illegal parameter value; Cannot delete a Predefined View” is generated If the display is disabled (via `:DISP:ENAB OFF`) then the error message “-221, Settings conflict; View SCPI cannot be used while Display is disabled” is generated

Delete All User Views

Deletes all previously saved User Views. The default view becomes the current view for the Measurement if a User View was the current view when this command was executed.

Remote Command	`:DISPlay:VIEW:ADVanced:DELete:ALL`
Example	`:DISP:VIEW:ADV:DEL:ALL`
Notes	Disabled if there are no User Views

View Editor Remote Commands

The following remote commands help you manage Views and User Views. Note that the SCPI node for User Views handles both Predefined and User Views. The legacy

nodes, `:DISPlay:VIEW[:SELect]` and `:DISPlay:VIEW:NSEL`, are retained for backwards compatibility, but they only support predefined views.

View Listing Query

Returns a string containing a comma-separated list of names for *all* the Views, including User Views, available for the current Measurement.

Remote Command	`:DISPlay:VIEW:ADVanced:CATalog?`
Example	`:DISP:VIEW:ADV:CAT?`
Notes	Returns a quoted string of the available Views for the current measurement, separated by commas. The list includes names for *all* the Views, including User Views, available for the current Measurement Example: `"Normal,Trace Zoom,Spectrogram,Baseband,myView1,yourView1"` No distinction is made between Predefined and User Views If you switch measurements with the display disabled (via `:DISP:ENAB OFF`), then query the list of available Views, the result is undefined

User View Listing Query

Returns a string containing a comma-separated list of names for *only* the User Views available for the current Measurement.

Remote Command	`:DISPlay:VIEW:ADVanced:USER:CATalog?`
Example	`:DISP:VIEW:ADV:USER:CAT?`
Notes	Returns a quoted string of the available User Views for the current measurement, separated by commas. Example: `"Baseband,myView1,yourView1"` If you switch measurements with the display disabled (see "Display Enable (Remote Command Only)" on page 2211), then query the list of available Views, the result is undefined

3.11.5.3 Annotation

Contains controls for setting up the annotation for the current Mode or Measurement.

Graticule

Turns the display graticule On or Off for all windows with graticules in all measurements in the current Mode. Also turns the graticule Y-Axis annotation on and off.

Remote Command	`:DISPlay:GRATicule[:STATe] OFF | ON | 0 | 1` `:DISPlay:GRATicule[:STATe]?`
Example	`:DISP:GRAT OFF`
Notes	The graticule is the set of horizontal and vertical lines that make up the grid/divisions for the X-Axis and Y-Axis
Preset	`ON`
State Saved	Saved in instrument state

Backwards Compatibility SCPI	`:DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe] OFF | ON | 0 | 1`
	`:DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe]?`
	This command is accepted for backwards compatibility with older instruments, but the `WINDow`, `TRACe` and `GRID` parameters are ignored

Screen Annotation

Controls the display of the annunciation and annotation around the graticule, including any annotation on lines (such as the display line, the threshold line, etc.) and the Y-Axis annotation, for all windows with screen annotation in all measurements in the current Mode.

This does *not* include marker annotation (or the N dB result). When `OFF`, the graticule expands to fill the entire graticule area, leaving only the 1.5% gap above the graticule, as described in the **Trace** section.

Remote Command	`:DISPlay:ANNotation:SCReen[:STATe] OFF | ON | 0 | 1` `:DISPlay:ANNotation:SCReen[:STATe]?`
Example	`:DISP:ANN:SCR OFF`
Dependencies	Grayed-out and forced to `OFF` when **System Display Settings**, **Annotation** is `OFF`
Preset	`ON` This remains `OFF` through a Preset when **System Display Settings**, **Annotation** is set to `OFF`
State Saved	Saved in instrument state

Trace Annotation

Turns on and off the labels on the traces, showing their detector (or their Math Mode) as described in the **Trace** section, for all windows in all measurements in the current Mode for which Trace Annotation on/off is supported.

If Trace Math is being performed on a trace, then the Trace Math annotation replaces the detector annotation.

For measurements that support limit lines, this key also turns on and off the labels on the Limit Lines. The label is the Limit number annotation and Limit Comment displayed on the graph. If the length of the comment is greater than 20 characters, the first 8 characters and the last 8 characters are displayed, joined with ....

Remote Command	`:DISPlay:ANNotation:TRACe[:STATe] ON | OFF | 1 | 0` `:DISPlay:ANNotation:TRACe[:STATe]?`
Example	`:DISP:ANN:TRAC OFF`
Preset	`OFF`
State Saved	Saved in instrument state

Control Annotation

Turns on and off the display of values on the Active Function controls for all measurements in the current Mode. This is a security feature.

Remote Command	`:DISPlay:ACTivefunc[:STATe] ON | OFF | 1 | 0` `:DISPlay:ACTivefunc[:STATe]?`
Example	`:DISP:ACT OFF`
Dependencies	Grayed out and forced to `OFF` when **System Display Settings**, **Annotation** is `OFF`
Preset	`ON` This remains `OFF` through a Preset when **System Display Settings**, **Annotation** is set to `OFF`
State Saved	Saved in instrument state

Meas Bar

Turns the Measurement Bar at the top of the screen on and off for all measurements in the current Mode. When `OFF`, the graticule area expands to fill the area formerly occupied by the Measurement Bar.

Remote Command	`:DISPlay:ANNotation:MBAR[:STATe] OFF | ON | 0 | 1` `:DISPlay:ANNotation:MBAR[:STATe]?`

Example	`:DISP:ANN:MBAR OFF`
Dependencies	Grayed out and forced to `OFF` when **System Display Settings**, **Annotation** is `OFF`
Preset	`ON` This remains `OFF` through a Preset when **System Display Settings**, **Annotation** is set to `OFF`
State Saved	Saved in instrument state

Display Enable (Remote Command Only)

Turns the display on/off, including the display drive circuitry. The backlight stays lit to confirm that the instrument is on. The display enable setting is mode global. Theare three reasons for turning the display off:

1. To increase speed as much as possible by freeing the instrument from having to update the display
2. To reduce emissions from the display, drive circuitry
3. For security purposes

If you have turned off the display:

- and you are in local operation, the display can be turned back on by pressing any key or by sending `:SYSTem:DEFaults MISC` or `:DISPlay:ENABle ON` (neither `*RST` nor :SYSTem:PRESet enable the display)
- and you are in remote operation, the display can be turned back on by pressing the **Local** or **Esc** keys, or by sending `:SYSTem:DEFaults MISC` or `:DISPlay:ENABle ON` (neither `*RST` nor `:SYSTem:PRESet` enable the display)
- and you are using either the `:SYSTem:KLOCk` command or GPIB local lockout, then *no* front-panel key press will turn the display back on. You must turn it back on remotely.

If the display is `OFF`, many SCPI commands related to User Views and Multiscreen functionality do not work, and return the error messages "-221, Settings conflict; Screen SCPI cannot be used when Display is disabled" or "221, Settings conflict; View SCPI cannot be used while Display is disabled". These commands include:

Name	Command
Select User View	`:DISPlay:VIEW:ADVanced:SELect`
Rename User View	`:DISPlay:VIEW:ADVanced:REName`
Delete User View	`:DISPlay:VIEW:ADVanced:DELete`
Create User View	`:DISPlay:VIEW:ADVanced:NAME`
Select Screen	`:INSTrument:SCReen:SELect`
Delete Screen	`:INSTrument:SCReen:DELete`

Name	Command
Delete All But This Screen	`:INSTrument:SCReen:DELete:ALL`
Add Screen	`:INSTrument:SCReen:CREate`
Rename Screen	`:INSTrument:SCReen:REName`
Sequencer On/Off	`:SYSTem:SEQuencer`

Remote Command	`:DISPlay:ENABle OFF | ON | 0 | 1` `:DISPlay:ENABle?`
Example	`:DISP:ENAB OFF`
Couplings	`:DISP:ENAB OFF` turns Backlight `OFF` and `:DISP:ENAB ON` turns Backlight `ON`, but changing Backlight settings does *not* change the state of `:DISP:ENAB`
Preset	`ON` Set by `:SYST:DEF MISC`, but not affected by `*RST` or `:SYSTem:PRESet`
State Saved	Not saved in instrument state
Backwards Compatibility Notes	`:SYST:PRES` no longer turns on `:DISPlay:ENABle` as it did in legacy analyzers

3.11.6 Frequency

Opens the **Frequency** menu, which contains controls that allow you to control the Frequency and Channel parameters of the instrument.

Some features in this menu are the same for all measurements in the current Mode – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by Meas Preset. For example, the Center Freq setting is the same for all measurements - it does not change as you change measurements.

3.11.6.1 Settings

The Settings tab contains the basic Bandwidth functions. In most measurements it is the only tab under Bandwidth.

Carrier Reference Frequency

Sets carrier reference frequency. The center frequencies of carriers are defined as offset frequency from this value. This reference frequency is also the reference of carrier configuration preset.

Because LTE-A, MSR and 5G NR measurements often deal with multiple carriers with distinct bandwidths, the simple Center Frequency parameter used in most measurements does not apply here. Instead, the Carrier Reference Frequency is the key parameter. This must be distinct from the Center Frequency parameter used in other measurements, as Center Frequency can be a global parameter, and it would not make sense for Carrier Reference Frequency to take on this global value.

In LTE-A and 5G NR, if the following conditions are satisfied at the same time:

- the Number of Component Carrier equals 1
- the Center Freq Offset equals to 0 Hz
- the mode of the Center Freq is Auto

then the Center Freq is equivalent to Carrier Ref Freq. When the Center Freq changes in such conditions, the mode of the Center Freq remains as Auto and the Carrier Ref Freq will be changed to same value. The major purpose of this coupling is to keep BWCC with legacy LTE/LTE TDD, in which `:SENSe:FREQuency:CENTer` is used to set up the Frequency of the measurement.

See "More Information" on page 2075.

Remote Command	For LTEAFDD/LTEATDD, 5GNR:
	`[:SENSe]:CCARrier:REFerence <freq>`
	`[:SENSe]:CCARrier:REFerence?`
	For MSR:
	`[:SENSe]:CARRier:REFerence <freq>`
	`[:SENSe]:CARRier:REFerence?`

Example	For LTEAFDD/LTEATDD, 5GNR:
	`:CCAR:REF 2GHz`
	`:CCAR:REF?`
	For MSR:
	`:CARR:REF 2GHz`
	`:CARR:REF?`

Dependencies	Only available in LTEAFDD/LTEATDD, 5GNR and MSR Modes
Preset	1 GHz
State Saved	Saved in instrument state
Min/Max	Depends on instrument minimum center frequency. Same as Center Freq

More Information

In most applications, Center Frequency is generally where the carrier center is located at and thus plays a very important role. However, in LTE-Advanced

TDD/FDD mode, the measurements are done based on carrier center frequencies and its bandwidths, both of which are calculated or obtained according to the carriers' configuration.

The Center Frequency defined here only for the Monitor Spectrum, IQ Waveform and CCDF measurements, because these three are general type measurements and focus on a certain frequency range, which may be the entire BS RF bandwidth, a frequency range of one of the component carriers or a range far away from the component carriers to see spurious. The Center Frequency in these three measurements has a different meaning, therefore it should be a separate setting from Carrier Reference Frequency.

Carrier center frequencies are defined using offsets from Carrier Reference Frequency which determines absolute frequency locations, which can be set as both absolute and relative frequency from the carrier reference frequency.

Since Center Frequency is only used in those three measurements, Monitor Spectrum, IQ Waveform and CCDF, this control only appears on the Frequency menu of these measurements.

Considering the legacy LTE usability in the converged LTE & LTE-A application, when the mode of the Center Frequency is Auto and the Number of Component Carrier equals to 1 and the Center Frequency Offset equals to 0 Hz, the Center Frequency is equivalent to Carrier Reference Frequency, which is used to set up the Frequency of all the measurements.

Center Frequency

Sets the frequency that corresponds to the horizontal center of the graticule. While adjusting the Center Frequency the Span is held constant.

The center frequency setting is the same for all measurements within a mode, that is, it is Meas Global. Some modes are also able to share a Mode Global center frequency value. If this is the case, the Mode will have a **Global** tab in its **Meas Setup** menu.

The **Center Freq** function sets (and queries) the Center Frequency for the currently selected input. If your instrument has multiple inputs, and you select another input, the Center Freq changes to the value for that input. SCPI commands are available to directly set the Center Freq for a specific input.

Center Freq is remembered as you go from input to input. Thus, you can set a Center Freq of 10 GHz with the RF Input selected, change to BBIQ, and set a Center Freq of 20 MHz, then switch to External Mixing and set a Center Freq of 60 GHz, and when you go back to the RF Input the Center Freq will go back to 10 GHz; back to BBIQ and it is 20 MHz; back to External Mixing and it is 60 GHz.

See:

- "Center Frequency Presets" on page 2079
- "VXT Models with Radio Heads/CIU Frequency Range" on page 2081
- "RF Center Freq" on page 2081
- "Ext Mix Center Freq" on page 2082
- "I/Q Center Freq" on page 2082

Remote Command	`[:SENSe]:FREQuency:CENTer <freq>` `[:SENSe]:FREQuency:CENTer?`

Example	`:FREQ:CENT 50 MHz`
	Sets Center Frequency to 50 MHz
	`:FREQ:CENT UP`
	Increments the Center Frequency by the value of CF Step
	`:FREQ:CENT?`
	Returns the current value of Center Frequency

Notes	Sets the RF, External Mixing or I/Q Center Frequency depending on the selected input: – For RF input it is equivalent to `:FREQ:RF:CENT` – For I/Q input it is equivalent to `:FREQ:IQ:CENT` – For External Mixer it is equivalent to `:FREQ:EMIX:CENT` Preset and Max values are dependent on Hardware Options (5xx) If no terminator (for example, MHz) is sent, the terminator Hz is used. If a terminator with unit other than Frequency is used, an invalid suffix error message is generated
Couplings	**In LTEAFDD/LTEATDD and 5GNR Modes:** Center Frequency, Center Frequency Offset and Carrier Reference Frequency are coupled with the following equation: Center Frequency = Carrier Reference Frequency + Center Frequency Offset If the following conditions are satisfied at the same time: – the Num Component Carrier equals to 1 – the Center Frequency Offset equals to 0 Hz – the mode of the Center Frequency is Auto The Center Frequency is equivalent to Carrier Reference Frequency The major purpose of this coupling is to keep BWCC with legacy LTE, in which `:SENSe:FREQuency:CENTer` is used to set up the Frequency of the measurement Otherwise, the Center Frequency Offset is changed following the Center Frequency and the Carrier Reference Frequency keeps intact

	In MSR, Center Freq, Center Freq Offset and Carrier Ref Freq are coupled with the equation, Center Freq = Carrier Ref Freq + Center Freq Offset. When Center Freq is changed, Center Freq Offset is updated and Carrier Ref Freq is not changed When auto, Center Freq Offset remains the same value. Thus, Center Freq changes the same amount of Carrier Ref Freq change when Carrier Ref Freq is changed. The auto state changes to manual when either Center Freq is changed **In Bluetooth Mode:** Center Frequency is coupled to Channel and Geography – If Geography is France: Center Frequency 2454 MHz + (channel number* channel space) MHz – If Geography is Others: Center Frequency 2402 MHz + (channel number* channel space) MHz – If Radio Stand is Basic or EDR, channel space is 1 MHz – If Radio Stand is Low Energy, channel space is 2 MHz **In other modes:** Any value of the Center Frequency or Span that keeps start frequency and stop frequency within the frequency range of the instrument is allowed when the value is being set through the front panel numeric keypad or the SCPI command. Other frequency parameters are forced to different values if needed, to keep the start and stop frequencies within the instrument’s frequency range
Preset	Depends on instrument maximum frequency, mode, measurement, and selected input See "Center Frequency Presets" on page 2079, "RF Center Freq" on page 2081, "Ext Mix Center Freq" on page 2082, "I/Q Center Freq" on page 2082 and "VXT Models with Radio Heads/CIU Frequency Range" on page 2081
State Saved	Saved in instrument state
Min/Max	Depends on instrument maximum frequency, mode, measurement, and selected input See "Center Frequency Presets" on page 2079, "RF Center Freq" on page 2081, "Ext Mix Center Freq" on page 2082, "I/Q Center Freq" on page 2082 and "VXT Models with Radio Heads/CIU Frequency Range" on page 2081
Annotation	Center <value> appears in the lower left corner of the display
Status Bits/OPC dependencies	Non-overlapped

Center Frequency Auto State

Remote Command	`[:SENSe]:FREQuency:CENTer:AUTO ON | OFF | 1 | 0` `[:SENSe]:FREQuency:CENTer:AUTO?`
Example	`:FREQ:CENT:AUTO OFF` `:FREQ:CENT:AUTO?`
Dependencies	This is only available in MSR, LTEAFDD/LTEATDD and 5GNR Modes
Couplings	When the Center Frequency is changed, the state is automatically changed to Manual

	Center Frequency, **Center Frequency Offset** and **Carrier Reference Frequency** are coupled. When Carrier Reference Frequency changes: – Center Frequency : Auto Center Frequency = Carrier Reference Frequency + Center Frequency Offset (fixed) – Center Frequency : Man Center Frequency (fixed) = Carrier Reference Frequency + Center Frequency Offset
Preset	`ON`
State Saved	Saved in instrument state
Range	`Auto|Man`

Center Frequency Presets

The following table provides the Center Frequency Presets for the Spectrum Analyzer mode, and the Max Freq, for the various frequency options:

Freq Option	CF after Mode Preset	Stop Freq after Mode Preset	Max Freq (can't tune above)
503 (all but CXA)	1.805 GHz	3.6 GHz	3.7 GHz
503 (CXA)	1.505 GHz	3.0 GHz	3.08 GHz
507 (all but CXA)	3.505 GHz	7.0 GHz	7.1 GHz
507 (CXA)	3.755 GHz	7.5 GHz	7.58 GHz
508 (all but MXE)	1.805 GHz	3.6 GHz	8.5 GHz
508 (MXE)	4.205 GHz	8.4 GHz	8.5 GHz
513	6.805 GHz	13.6 GHz	13.8 GHz
526 (except CXA and MXE)	13.255 GHz	26.5 GHz	27.0 GHz*
526 (CXA)	13.255 GHz	26.5 GHz	26.55 GHz
526 (MXE)	1.805 GHz	3.6 GHz	27.0 GHz
532	16.005 GHz	32.0 GHz	32.5 GHz
540	20.005 GHz	40.0 GHz	40.5 GHz
543	21.505 GHz	43.0 GHz	43.0 GHz
544	22.005 GHz	44.0 GHz	45.0 GHz
550	25.005 GHz	50.0 GHz	52 GHz
F03 (CXA-m)	1.505 GHz	3.0 GHz	3.08 GHz
F07 (CXA-m)	3.755 GHz	7.5 GHz	7.575 GHz
F13 (CXA-m)	6.805 GHz	13.6 GHz	13.8 GHz
F26 (CXA-m)	13.255 GHz	26.5 GHz	26.55 GHz
504 (M9421A, M8920A)	2.145 GHz	3.88GHz	3.88 GHz

Freq Option	CF after Mode Preset	Stop Freq after Mode Preset	Max Freq (can't tune above)
506 (M9421A, M8920A)	3.245 GHz	6.08GHz	6.08 GHz
F06 (M9410A/11A)	1.0 GHz	6.08 GHz	6.08 GHz
F06 (M9415A)	1 GHz	1.08 GHz	6.6 GHz
F08 (M9415A)	1 GHz	1.08 GHz	8.6 GHz
F12 (M9415A)	1 GHz	1.08 GHz	12.9 GHz

*For option 526, the Max CF in RTSA is 26.999999995 GHz.

N9041B Center Freq Presets

Input	CF after Mode Preset	Stop Freq after Mode Preset	Max Freq (can't tune above)
Input 1, all models	25.005 GHz	50.0 GHz	52 GHz
Input 2, opt 585	42.505 GHz	85.0 GHz	86 GHz
Input 2, opt 590	45.005 GHz	90.0 GHz	92 GHz
Input 2, opt 5CX	55.005 GHz	110.0 GHz	110 GHz

Input 2, CXA and MXE

Model	CF after Mode Preset	Stop Freq after Mode Preset	Max Freq (can't tune above)
CXA opt C75	0.7505 GHz	1.5 GHz	1.58 GHz
MXE	505 MHz	1 GHz	1.000025 GHz

Tracking Generator Frequency Limits (CXA only)

Tracking Generator Option	Min Freq (clips to this freq when turn TG on and can't tune below while TG on)	If above this Freq, Stop Freq clipped to this Freq when TG turned on	Max Freq (can't tune above) while TG on
T03	9 kHz	3.0 GHz	3.08 GHz
T06	9 kHz	6.0 GHz	6.05 GHz

Tracking Generator Frequency Limits(CXA-m only)

Tracking Generator Option	Min Freq (clips to this freq when turn TG on and can't tune below while TG on)	If above this Freq, Stop Freq clipped to this Freq when TG turned on	Max Freq (can't tune above) while TG on
T03	2 MHz	3.08 GHz	3.08 GHz
T07	2 MHz	7.575 GHz	7.575 GHz

Tracking Generator Option	Min Freq (clips to this freq when turn TG on and can't tune below while TG on)	If above this Freq, Stop Freq clipped to this Freq when TG turned on	Max Freq (can't tune above) while TG on
T13	2 MHz	13.8 GHz	13.8 GHz
T26	2 MHz	26.55 GHz	26.55 GHz

VXT Models with Radio Heads/CIU Frequency Range

The following table shows the Center Frequency Presets and Range for VXT modes with Radio Heads/CIU.

Products with Radio Heads/CIU	Preset	Start frequency	Stop frequency
M9421A + CIU	6 GHz	5.9 GHz	12 GHz
M9410A + CIU	6 GHz	5.9 GHz	12 GHz
M9410A + CIU + RRH	25 GHz	24.25 GHz	43.5 GHz

RF Center Freq

Specifies the RF Center Frequency. This command sets the Center Frequency to be used when the RF input is selected, even if the RF input is not the input that is selected at the time the command is sent. Note that "Center Frequency" on page 2076 in the **Frequency** menu on the front panel always applies to the currently selected input.

Remote Command	`[:SENSe]:FREQuency:RF:CENTer <freq>` `[:SENSe]:FREQuency:RF:CENTer?`
Example	`:FREQ:RF:CENT 30 MHz` `:FREQ:RF:CENT?`
Notes	This command is the same in all Modes, but the parameter is Measurement Global, so the value is independent in each Mode and common across all the measurements in the Mode
Dependencies	If the electronic/soft attenuator is enabled, any attempt to set Center Frequency such that the Stop Frequency would be >3.6 GHz fails and results in an advisory message. If the equivalent SCPI command is sent, this same message is generated as part of a “-221, Settings conflict” warning
Preset	See "Center Frequency Presets" on page 2079 above
State Saved	Saved in instrument state
Min	-79.999995 MHz
Max	See table above. Basically, instrument maximum frequency - 5 Hz If the knob or step keys are being used, also depends on the value of Span

Ext Mix Center Freq

Specifies the External Mixer Center Frequency. This command sets the Center Frequency to be used when the External Mixer is selected, even if the External Mixer input is not the input that is selected at the time the command is sent. Note that "Center Frequency" on page 2076 in the **Frequency** menu on the front panel always applies to the currently selected input.

Remote Command	`[:SENSe]:FREQuency:EMIXer:CENTer <freq>` `[:SENSe]:FREQuency:EMIXer:CENTer?`
Example	`:FREQ:EMIX:CENT 60 GHz` `:FREQ:EMIX:CENT?`
Notes	This command is the same in all Modes, but the parameter is Measurement Global, so the value is independent in each Mode and common across all the measurements in the Mode
Couplings	When returning to External Mixing after having been switched to one of the other inputs (e.g., RF), you will come back into the settings that you had when you left External Mixing. So, you will come back to the band you were in with the Center Frequency that you had. However, Span is not an input-dependent parameter, therefore you will bring the span over from the other input. Therefore, the instrument comes back with the span from the previous input, limited as necessary by the current mixer setup
Preset	When a Mode Preset is performed while in External Mixing, the Start frequency of the current Mode is set to the nominal Min Freq of the lowest harmonic range in the Harmonic Table for the current mixer setup. Similarly, the Stop frequency of the current Mode is set to the nominal Max Freq of the highest harmonic range in the Harmonic Table. The Center Freq thus presets to the point arithmetically equidistant from these two frequencies Note that, if the current measurement has a limited Span available to it, and cannot achieve the Span shown in the table (Span=Stop Freq – Start Freq), the instrument uses the maximum Span the measurement allows, and still sets the Center Freq to the midpoint of the Start and Stop Freq values in the Harmonic Table When Restore Input/Output Defaults is performed, the mixer presets to the 11970A, whose Start and Stop frequencies are 26.5 and 40 GHz respectively. The center of these two frequencies is 33.25 GHz Therefore, after a Restore Input/Output Defaults, if you go into External Mixing and do a Mode Preset while in the Spectrum Analyzer Mode, the resulting Center Freq is 33.25 GHz
State Saved	Yes
Min	The minimum frequency in the currently selected mixer band + 5 Hz If the knob or step keys are being used, also depends on Span
Max	The maximum frequency in the currently selected mixer band - 5 Hz If the knob or step keys are being used, also depends on Span

I/Q Center Freq

Specifies the I/Q Center Frequency. This command sets the Center Frequency to be used when the I/Q input is selected, even if the I/Q input is not the input that is selected at the time the command is sent. Note that "Center Frequency" on page

2076 in the **Frequency** menu on the front panel always applies to the currently selected input.

Remote Command	`[:SENSe]:FREQuency:IQ:CENTer <freq>` `[:SENSe]:FREQuency:IQ:CENTer?`
Example	`:FREQ:IQ:CENT 30 MHz`
Notes	This command is the same in all Modes, but the parameter is Measurement Global, so the value is independent in each Mode and common across all the measurements in the Mode
Preset	0 Hz
State Saved	Saved in instrument state
Min	-40.049995 MHz
Max	40.049995 MHz

Center Frequency Offset

This setting is coupled with Center Frequency, and is only used in Monitor Spectrum, IQ Waveform, Power Stat CCDF and PAvT measurements. **Center Frequency**, **Center Frequency Offset** and **Carrier Reference Frequency** are coupled with this equation:

Center Frequency = Carrier Reference Frequency + Center Frequency Offset

If you change **Center Frequency Offset**, **Center Frequency** is updated and **Carrier Reference Frequency** is not.

Remote Command	`[:SENSe]:FREQuency:CENTer:OFFSet <freq>` `[:SENSe]:FREQuency:CENTer:OFFSet?`
Example	`:FREQ:CENT:OFFS 100kHz` `:FREQ:CENT:OFFS?`
Preset	0 GHz
State Saved	Saved in instrument state
Min	-500 GHz
Max	500 GHz

Span

Changes the displayed frequency range symmetrically about the center frequency. While adjusting the Span, the Center Frequency is held constant, this means that both Start Frequency and Stop Frequency will change.

If the Span is set to a value greater than the maximum allowable span of the instrument, an error message is generated indicating the data is out of range and was clipped to upper limit.

See "Span Presets" on page 2084

Remote Command	`[:SENSe]:MONitor:FREQuency:SPAN <freq>` `[:SENSe]:MONitor:FREQuency:SPAN?`
Example	`:MON:FREQ:SPAN 10 MHz` `:MON:FREQ:SPAN?`
Dependencies	If the electrical attenuator is enabled, any attempt to set Span such that the Stop Frequency would be >3.6 GHz results in an error In instruments with an RF Preselector, such as MXE, you cannot sweep across the band break at 3.6 GHz while the RF Preselector is on in Continuous sweep, as there is a mechanical switch which bypasses the RF Preselector above 3.6 GHz
Couplings	Span affects RBW, sweeptime, FFT & Sweep choice (including FFT Width, Phase Noise Optimization and ADC Dither auto couplings) – Any value of the Center Frequency or Span that is within the frequency range of the instrument is allowed when the value is being set through the front panel numeric keypad or the SCPI command. The other parameter is forced to a different value if needed, to keep the Start and the Stop Frequencies within the instrument's frequency range – When using the knob or the step up/down keys or the UP |DOWN keywords in SCPI, the value that is being changed i.e., the Center Frequency or Span, is limited so that the other parameter is not forced to a new value
Preset	Depends on instrument maximum frequency, mode, measurement, and selected input See "Span Presets" on page 2084
State Saved	Saved in instrument state
Min	10 Hz
Max	Depends on instrument maximum frequency, mode, measurement, and selected input; see "Span Presets" on page 2084 If the knob or step keys are being used, depends on the value of the other three interdependent parameters Center Frequency, Start Frequency, Stop Frequency
Annunciation	Data out of range, value clipped to upper limit
Annotation	Span <value> appears on the first line of the annotation in the lower right corner of display

Span Presets

The following table provides the Max Span, for the various frequency options:

Freq Option	Max Span (can't set higher than this)
503 (all but CXA)	3.7 GHz
503, F03 (CXA, CXA-m)	3.08 GHz

Freq Option	Max Span (can't set higher than this)
507 (all but CXA)	7.1 GHz
507 (CXA, CXA-m)	7.575 GHz
508 (all but MXE)	8.5 GHz
508 (MXE)	8.5 GHz
513, F13	13.8 GHz
526 (all but CXA and MXE)	27.0 GHz
526 (MXE)	27.0 GHz
526, F26 (CXA, CXA-m)	26.55 GHz
544	44.5 GHz
550	52 GHz
M9415A-F06	6.27 GHz
M9415A-F08	8.27 GHz
M9415A-F12	12.57 GHz

Input 2:

Model	Max Span (can't set higher than this)
CXA opt C75	1.58 GHz
MXE	1.000025 GHz

Note that if you are in External Mixing, the maximum Span will be equal to the Maximum Stop Frequency – Minimum Start Frequency for the currently selected mixer.

Span Presets by Mode

Mode	Radio Std	Preset Value
WCDMA		10.0 MHz
PN		1.0 MHz
GSM/EDGE		1.0 MHz
WLAN	802.11a/b/g/n/ac/ax/be (20 MHz)	25 MHz
	802.11n/ac/ax/be (40MHz)	50 MHz
	802.11ac/ax/be (80MHz)	100 MHz
	802.11ac /ax/be (160MHz)	200 MHz
	802.11be (320MHz)	400 MHz
MSR		20 MHz
LTEAFDD, LTEATDD		20 MHz

Mode	Radio Std	Preset Value
5GNR		150 MHz
RTS		40 kHz
CQM		10 MHz

CF Step

Changes the step size for the center frequency and start and stop frequency functions. Once a step size has been selected and the center frequency function is active, the step keys (and the UP|DOWN parameters for Center Frequency from remote commands) change the center frequency by the step-size value. The step size function is useful for finding harmonics and sidebands beyond the current frequency span of the instrument.

Note that the start and stop frequencies also step by the CF Step value.

Remote Command	`[:SENSe]:FREQuency:CENTer:STEP[:INCRement] <freq>`
	`[:SENSe]:FREQuency:CENTer:STEP[:INCRement]?`
	`[:SENSe]:FREQuency:CENTer:STEP:AUTO OFF | ON | 0 | 1`
	`[:SENSe]:FREQuency:CENTer:STEP:AUTO?`

Example	`:FREQ:CENT:STEP 500 MHz`
	`:FREQ:CENT UP`
	Increases the current center frequency value by 500 MHz
	`:FREQ:CENT:STEP?`
	`:FREQ:CENT:STEP:AUTO ON`
	`:FREQ:CENT:STEP:AUTO?`

Notes	Preset and Max values are dependent on Hardware Options
Dependencies	Not available in MSR, LTEAFDD/LTEATDD, 5GNR and Channel Quality Modes If the electronic/soft attenuator is enabled, any attempt to change the value of the center frequency >3.6 GHz by pressing the Up-arrow key, fails and results in an advisory message. If the equivalent SCPI command is sent, this same message is generated as part of a "-221, Settings conflict" warning
Couplings	When auto-coupled, the center frequency step size is set to 10% of the span
Preset	Auto `ON`
State Saved	Saved in instrument state
Min	– (the maximum frequency of the instrument). That is, 27 GHz max freq instrument has a CF step range of +/- 27 GHz. Note that this is the maximum frequency given the current settings of the instrument, so in External Mixing, for example, it is the maximum frequency of the current mixer band
Max	The maximum frequency of the instrument. That is, 27 GHz max freq instrument has a CF step range of +/- 27 GHz. Note that this is the maximum frequency given the current settings of the instrument, so

	in External Mixing, for example, it is the maximum frequency of the current mixer band
Status Bits/OPC dependencies	non-overlapped

Adjust Span to Carrier Config

This immediate-action control sets Span and Center Frequency to monitor all the configured carriers.

When executed, Span will be set based on the bandwidth and frequency offset of each carrier regardless of Measure Carrier state. Center Frequency will be set to the center of the Span

Remote Command	`[:SENSe]:MONitor:FREQuency:SPAN:ADJust`
Example	`:MON:FREQ:SPAN:ADJ`

3.11.7 Marker

Accesses a menu that enables you to select, set up and control the markers for the current measurement. If there are no active markers, **Marker** selects marker 1, sets it to Normal and places it at the center of the display. If the selected marker is Off, it is set to Normal and placed it at the center of the screen on the trace determined by the **Marker Trace** rules.

For more detailed information on the types of Markers and the interaction between Markers, see the Marker section of the Swept SA measurement.

3.11.7.1 Select Marker

Specifies the *selected marker*. The term “selected marker” is used throughout this document to specify which marker will be affected when you change marker settings, perform a Peak Search, etc.

This control appears above the menu panel, indicating that it applies to all controls in the Marker menu panels. Select Marker is blanked if you select a tab whose controls do *not* depend on the selected marker (for example, Counter).

On any menu tab for which Select Marker displays, the first control is always **Marker Frequency|Time**.

Notes	The selected marker is remembered even when not in the Marker menu and is used if a Search is done or a Band Function is turned on or for Signal Track or Continuous Peak
Preset	Marker 1

State Saved	The number of the selected marker is saved in instrument state
Annunciation	Appears in the marker results block label for **Normal** and **Delta** markers

3.11.7.2 Settings

The controls on this tab include the Marker active function and a radio button selection of the marker control mode (Normal, Delta, or Off) for the selected marker, as well as additional functions that help you use markers.

Marker Frequency

Sets the marker X Axis value in the current marker X Axis Scale unit. It has no effect if the control mode is **Off,** but is the SCPI equivalent of entering an X value if the control mode is **Normal** or **Delta**.

Remote Command	`:CALCulate:MONitor:MARKer[1]|2|...|12:X <freq>` `:CALCulate:MONitor:MARKer[1]|2|...|12:X?`
Example	`:CALC:MON:MARK3:X 0` `:CALC:MON:MARK3:X?`
Notes	If no suffix is sent, uses the fundamental units for the current marker X Axis Scale. If a suffix is sent that does not match the current marker X Axis Scale unit, an error “Invalid suffix” is generated The query returns the marker’s absolute X Axis value if the control mode is **Normal**, or the offset from the marker’s reference marker if the control mode is **Delta**. The query is returned in the fundamental units for the current marker X Axis scale: Hz for **Frequency** and Inverse Time, seconds for Period and Time
Preset	After a preset, all markers are turned OFF, so Marker X Axis Value query returns a not a number (NAN)
State Saved	Saved in instrument state
Min	-9.9E+37
Max	9.9E+37
Annotation	Mkr # <X value> and <Marker value> upper right on graph

Marker X Axis Position (Remote Command Only)

Sets the marker X Axis Scale position in trace points. This setting has no effect if the control mode is Off, but is the SCPI equivalent of entering a value if the control mode is Normal or Delta - except in trace points rather than X Axis Scale units. The entered value is immediately translated into the current X Axis Scale units for setting the value of the marker.

Remote Command	`:CALCulate:MONitor:MARKer[1]|2|...|12:X:POSition <real>` `:CALCulate:MONitor:MARKer[1]|2|...|12:X:POSition?`
Example	`:CALC:MON:MARK:X:POS 0`

	`:CALC:MON:MARK:X:POS?`
Notes	The query returns the marker's absolute X Axis value in trace points if the control mode is **Normal**, or the offset from the marker's reference marker in trace points if the control mode is **Delta**. The value is returned as a real number, not an integer, corresponding to the translation from X Axis Scale units to trace points . When a Marker is turned on, it is placed center of the screen on the trace. Therefore, the default value depends on instrument condition. If the marker is Off the response is not a number
Preset	After a preset, all markers are turned `OFF`, so Marker X Axis Value query returns a not a number (`NAN`)
State Saved	Saved in instrument state
Min	-9.9E+37
Max	9.9E+37

Marker Y Axis Value (Remote Command only)

Returns the marker Y Axis value in the current marker Y Axis unit.

Remote Command	`:CALCulate:MONitor:MARKer[1]|2|...|12:Y?`
Example	`:CALC:MON:MARK11:Y?`
Notes	Returns the marker Y-axis result if the control mode is **Normal** or **Delta**. If the marker is **Off**, the response is Not A Number
Preset	Result dependent on Markers setup and signal source
State Saved	No
Backwards Compatibility SCPI	`:CALCulate:MONitor:MARKer[1]|2|...|12:FUNCtion:RESult?`

Marker Mode

Sets the marker control mode to **Normal** (`POSition`), **Delta**, or **Off**. All interactions and dependencies detailed under the control description are enforced when the remote command is sent. If the selected marker is Off, pressing Marker sets it to Normal and places it at the center of the screen on the trace determined by the **Marker Trace** rules. At the same time, **Marker X Axis Value** appears on the Active Function area.

The default active function is the active function for the currently selected marker control mode. If the current control mode is **Off**, there is no active function and the active function is turned off.

Remote Command	`:CALCulate:MONitor:MARKer[1]|2|...|12:MODE POSition | DELTa | OFF` `:CALCulate:MONitor:MARKer[1]|2|...|12:MODE?`
Example	`:CALC:MON:MARK:MODE POS`

	`:CALC:MON:MARK:MODE?`
Preset	`OFF`
State Saved	Saved in instrument state
Range	`POSition|DELTa|OFF`
Annotation	Mkr # <X value> and <Marker value> upper right on graph

Backward Compatibility SCPI Commands

Sets or queries the state of a marker. Setting a marker that is `OFF` to `ON` (1) puts it in **Normal** mode and places it at the center of the screen.

Remote Command	`:CALCulate:MONitor:MARKer[1]|2|...|12:STATe OFF	ON	0	1` `:CALCulate:MONitor:MARKer[1]|2|...|12:STATe?`
Example	`:CALC:MON:MARK3:STAT ON` `:CALC:MON:MARK3:STAT?`
Preset	`OFF`
State Saved	Saved in instrument state
Range	`OFF|ON`

Delta Marker (Reset Delta)

Pressing this button has exactly the same effect as selecting the **Delta** selection in "Marker Mode" on page 2089. The selected marker becomes a Delta Marker. If the selected marker is already a Delta marker, the reference marker is moved to the current position of the selected marker, thus resetting the Delta to zero.

Marker Settings Diagram

Lets you configure the Marker system using a visual utility.

All Markers Off

Turns off all markers.

Remote Command	`:CALCulate:MONitor:MARKer:AOFF`
Example	`:CALC:MON:MARK:AOFF`

Couple Markers

When this function is ON, moving any marker causes an equal X Axis movement of every other marker that is not Off. By “equal X Axis movement” we mean that we preserve the difference between each marker’s X Axis value (in the fundamental x-axis units of the trace that marker is on) and the X Axis value of the marker being moved (in the same fundamental x-axis units).

This may result in markers going off screen.

Remote Command	`:CALCulate:MONitor:MARKer:COUPle[:STATe] ON | OFF | 1 | 0` `:CALCulate:MONitor:MARKer:COUPle[:STATe]?`
Example	`:CALC:MON:MARK:COUP ON` `:CALC:MON:MARK:COUP?`
Preset	`OFF` Presets on Mode Preset and All Markers Off
State Saved	Saved in instrument state

3.11.7.3 Peak Search

The controls on this tab allow you to move the marker to selected peaks of the signal, giving you enormous analysis capabilities, particularly when combined with the Delta Marker function.

NOTE

Pressing the **Peak Search** hardkey automatically moves you to the **Peak Search** page of the **Marker** menu and performs a Peak Search.

Pressing the **Peak Search** tab once you are already *in* the **Marker** menu does *not* perform a Peak Search.

Marker Frequency

This is the fundamental control that you use to move a marker around on the trace. This is the same as "Marker Frequency" on page 2088 on the **Settings** tab.

Peak Search

Moves the selected marker to the trace point which has the maximum y-axis value for that marker’s trace.

NOTE Pressing the **Peak Search** hardkey automatically moves you to the **Peak Search** page of the **Marker** menu and performs a Peak Search.

If the selected marker was off, then it is turned on as a normal marker, and a Peak Search is performed.

Remote Command	`:CALCulate:MONitor:MARKer[1]|2|...|12:MAXimum`

Example	`:CALC:MON:MARK2:MAX`
	`:SYST:ERR?`
	can be used to query the errors to determine if a peak is found. If a search is unsuccessful, then the message "Execution error; No peak found" (-200) will be returned

Notes	Sending this command selects the subopcoded marker

Next Peak

Moves the selected marker to the peak that is next lower in amplitude than the current marker value. If there is no valid peak lower than the current marker value, an "Execution error; No peak found" message is generated and the marker is not moved.

If the selected marker was off, then it is turned on as a normal marker and a peak search is performed.

Remote Command	`:CALCulate:MONitor:MARKer[1]|2|...|12:MAXimum:NEXT`
Example	`:CALC:MON:MARK2:MAX:NEXT` selects marker 2 and moves it to the peak that is next lower in amplitude than the current marker value
Notes	Sending this command selects the subopcoded marker
State Saved	Not part of saved state

Marker Delta

Pressing this control has exactly the same effect as selecting the **Delta** selection in "Marker Mode" on page 2089 on the **Settings** tab. The selected marker becomes a Delta Marker. If the selected marker is already a Delta marker, the reference marker is moved to the current position of the selected marker, thus resetting the Delta to zero.

The control is duplicated here to allow you to conveniently perform a peak search and change the marker's control mode to Delta without having to access two separate menus.

3.11.7.4 Properties

The controls on this tab are used to set certain properties of the selected marker.

Marker Frequency

This is the fundamental control that you use to move a marker around on the trace. This is the same as "Marker Frequency" on page 2088 on the **Settings** tab.

Relative To

Selects the marker to which the selected marker is relative (its reference marker).

Every marker has another marker to which it is relative. This marker is referred to as the "reference marker" for that marker. This attribute is set by the **Marker, Properties, Relative To** key. The marker must be a **Delta** marker to make this attribute relevant. If it is a **Delta** marker, the reference marker determines how the marker is controlled and how its value is displayed. A marker cannot be relative to itself.

Remote Command	`:CALCulate:MONitor:MARKer[1]|2|...|12:REFerence <integer>` `:CALCulate:MONitor:MARKer[1]|2|...|12:REFerence?`
Example	`:CALC:MON:MARK2:REF 1` `:CALC:MON:MARK2:REF?`
Notes	This command causes the marker specified with the subopcode to become selected Range (for SCPI command): 1 to 12. If the range is exceeded the value is clipped A marker cannot be relative to itself so that choice is not available, and if sent from SCPI generates error -221: "Settings conflict; marker cannot be relative to itself" When queried a single value is returned (the specified marker numbers relative marker)
Couplings	The act of specifying the selected marker's reference marker makes the selected marker a Delta marker If the reference marker is off it is turned on in **Normal** mode at the delta marker location
Preset	The preset default "Relative To" marker (reference marker) is the next higher numbered marker (current marker +1). For example, if marker 2 is selected, then it's default reference marker is marker 3. The exception is marker 12, which has a default reference of marker 1 Set to the defaults by using **Restore Mode Defaults**. This is not reset by **Marker Off**, **All Markers Off**, or **Preset**
State Saved	Saved in instrument state. Not affected by Marker Off and hence not affected by Preset or power cycle
Min	1
Max	12
Annunciation	Appears in the marker label of a **Delta** marker

Marker Trace

Selects the trace on which you want your marker placed. A marker is associated with one and only one trace. This trace is used to determine the placement, result, and X-Axis Scale of the marker. All markers have an associated trace; it is from that trace that they determine their attributes and behaviors, and it is to that trace that they go when they become Normal markers.

Specifying a Marker Trace manually or with this command associates the marker with the specified trace. If the marker is not `OFF`, it moves the marker from the trace it was on to the new trace. If the marker is `OFF`, it stays off but is now associated with the specified trace.

The query returns the number of the trace on which the marker is currently placed.

Remote Command	`:CALCulate:MONitor:MARKer[1]|2|...|12:TRACe 1 | 2 | 3` `:CALCulate:MONitor:MARKer[1]|2|...|12:TRACe?`
Example	`:CALC:MON:MARK:TRAC 1` `:CALC:MON:MARK:TRAC?`
Notes	A marker may be placed on a blanked and/or inactive trace, even though the trace is not visible and/or updating An application may register a trace name to be displayed on the control instead of a trace number
Couplings	The state of Marker Trace is not affected by the "Auto Couple" on page 2242 key Sending the remote command causes the addressed marker to become selected
Preset	1
State Saved	Saved in instrument state
Min	1
Max	3

Marker Settings Diagram

Lets you configure the Marker system using a visual utility. This is the same as the "Marker Settings Diagram" on page 2090 control on the **Settings** tab.

3.11.7.5 Marker Function

The controls on this tab allow you to control the Marker Functions of the instrument. Marker Functions perform post-processing operations on marker data.

The **Marker Function** menu controls which marker functions are turned on and allows you to adjust the setup parameters for each function. These parameters include the following, but only one parameter can be assigned to a given marker:

- Marker Noise
- Band Power
- Band Density
- Off

Marker Frequency

This is the fundamental control that you use to move a marker around on the trace. This is the same as "Marker Frequency" on page 2088 on the **Settings** tab.

Marker Function

Sets the marker control function type to one of the following:

`NOISe`	Marker Noise
`BPOWer`	Band Power
`BDENsity`	Band Density
`OFF`	Marker Function Off

Remote Command	`:CALCulate:MONitor:MARKer[1]|2|...|12:FUNCtion NOISe | BPOWer | BDENsity | OFF` `:CALCulate:MONitor:MARKer[1]|2|...|12:FUNCtion?`
Example	`:CALC:MON:MARK:FUNC NOIS` `:CALC:MON:MARK:FUNC?`
Preset	`OFF`
State Saved	Yes
Range	`NOISe|BPOWer|BDENsity|OFF`
Annotation	Mkr # <X value> and <Marker value> upper right on graph

Band Span

Sets the width of the frequency span for the selected marker.

Remote Command	`:CALCulate:MONitor:MARKer[1]|2|...|12:FUNCtion:BAND:SPAN <freq>` `:CALCulate:MONitor:MARKer[1]|2|...|12:FUNCtion:BAND:SPAN?`
Example	`:CALC:MON:MARK12:FUNC:BAND:SPAN 20 MHz` `:CALC:MON:MARK12:FUNC:BAND:SPAN?`
Couplings	Changing the Band Span necessarily changes the Band Left and Band Right values

Preset	Depends on X axis range of selected Trace 10% of Span
State Saved	Yes
Min	-9.9E+37 0
Max	9.9E+37 26.5GHz

Band Left

Sets the left edge frequency or time value for the band of the selected marker.

Remote Command	`:CALCulate:MONitor:MARKer[1]|2|...|12:FUNCtion:BAND:LEFT <freq>` `:CALCulate:MONitor:MARKer[1]|2|...|12:FUNCtion:BAND:LEFT?`
Example	`:CALC:MON:MARK12:FUNC:BAND:LEFT 20 GHz` `:CALC:MON:MARK12:FUNC:BAND:LEFT?`
Couplings	Changing the Band Left necessarily changes the Band Span value
Preset	Depends on X axis range of selected Trace
State Saved	Yes
Min	-9.9E+37
Max	9.9E+37

Band Right

Sets the right edge frequency or time value for the band of the selected marker.

Remote Command	`:CALCulate:MONitor:MARKer[1]|2|...|12:FUNCtion:BAND:RIGHt <freq>` `:CALCulate:MONitor:MARKer[1]|2|...|12:FUNCtion:BAND:RIGHt?`
Example	`:CALC:MON:MARK12:FUNC:BAND:RIGH 20 GHz` `:CALC:MON:MARK12:FUNC:BAND:RIGH?`
Couplings	Changing the Band Right necessarily changes the Band Span value
Preset	Depends on X axis range of selected Trace
State Saved	Yes
Min	-9.9E+37
Max	9.9E+37

3.11.8 Meas Setup

This menu panel contains functions for setting up the measurement parameters and also contains functions for setting up parameters global to all measurements in the Mode.

3.11.8.1 Settings

Contains frequently used Meas Setup functions to which you will want the fastest access.

Avg|Hold Num

Specifies the number of measurement averages used when calculating the measurement result. The average is displayed at the end of each sweep.

After the specified number of average counts, the averaging mode (terminal control) setting determines the averaging action.

Remote Command	`[:SENSe]:MONitor:AVERage:COUNt <integer>` `[:SENSe]:MONitor:AVERage:COUNt?`
Example	`:MON:AVER:COUN 25` `:MON:AVER:COUN?`
Preset	10
State Saved	Yes
Min/Max	1/1000
Annotation	The average count is displayed in the measurement bar on the front panel display. The annotation appears in the format n/N where n is the current average and N is the average count

Averaging On/Off

Turns averaging on or off.

Remote Command	`[:SENSe]:MONitor:AVERage[:STATe] OFF | ON | 0 | 1` `[:SENSe]:MONitor:AVERage[:STATe]?`
Example	`:MON:AVER ON` `:MON:AVER?`
Preset	`OFF`
State Saved	Yes
Range	`OFF|ON`

Average Mode

Toggles the Average Mode:

- `EXPonential`- continues measurement averaging, using the specified number of averages to compute each averaged value. The average is displayed at the end of each sweep
- `REPeat`- causes the measurement to reset the average counter each time the specified number of averages is reached

Remote Command	`[:SENSe]:MONitor:AVERage:TCONtrol EXPonential | REPeat` `[:SENSe]:MONitor:AVERage:TCONtrol?`
Example	`:MON:AVER:TCON EXP` `:MON:AVER:TCON?`
Preset	`EXPonential`
State Saved	Yes
Range	`EXPonential|REPeat`

Spur Avoidance

Because the VXT models M9410A/11A/15A are direct-conversion (zero-IF) receivers, feedthrough leakage from the local oscillator appears as a spurious signal (spur) at the center frequency. The **Spur Avoidance** function is provided to eliminate this spur, at the expense of some measurement speed. For Spur Avoidance, the instrument uses a software algorithm to remove this spur from the displayed measurement data.

Some measurements allow you to turn off **Spur Avoidance**, but in this measurement it is always enabled. Therefore, in this measurement the Spur Avoidance switch is unavailable (grayed out) and set to Enabled.

Furthermore, if you press the grayed-out switch, this popup message appears:

```
Always enabled in this measurement. See manual for details
```

Remote Command	`[:SENSe]:MONitor:SAVoid[:STATe]?`
Example	`:MON:SAV?` Always returns `ON`
Dependencies	This control only appears in VXT models M9410A/11A/15A
Preset	`ON`
State Saved	Saved in instrument state
Range	`ON`

Meas Setup Summary Table

Lets you view and access many of the parameters in the Meas Setup menus on one screen.

Auto Couple

Immediately puts all **Auto/Man** functions into **Auto**. **Auto Couple** is confined to the current measurement only. It does not affect other measurements in the Mode.

In the **Auto** state, **Auto/Man** functions are said to be “coupled”, meaning their values change as you make changes to other values in the measurement. This helps ensure accurate measurements and optimum dynamic range. **Auto Couple** is an immediate action function, and when it is executed, all the **Auto/Man** controls for the current measurement are set to **Auto**, and all measurement settings coupled to the **Auto/Man** parameters are automatically set to their optimal values.

For further details of measurement-specific settings (if any), see "Measurement-Specific Details" on page 2100 below.

Remote Command	`:COUPle ALL`
Example	`:COUP ALL`
Backwards Compatibility SCPI	`:COUPLE ALL | NONE`
Backwards Compatibility Notes	`:COUP:NONE` puts all Auto/Man parameters in manual mode, decoupling all the coupled instrument parameters. It is retained for backwards compatibility and is *not* recommended for making measurements or new designs

All **Auto/Man** parameter couplings in the measurement are set to **Auto**. This includes couplings that may be unavailable or grayed-out due to the current state. For example, in the Swept SA measurement, there is no **Auto/Man** coupling for **RBW** while in Zero Span. Nonetheless, if **Auto Couple** were executed while in Zero Span, it would set **RBW** to Auto "behind the scenes" so that, on exit from Zero Span, it would be in **Auto**.

Any **Auto/Man** selection specific (local) to the other measurements in the current Mode are not affected by **Auto Couple**. Any functions that are *not* coupled with other instrument parameters, such as ranging or leveling variables, such as **AutoRange** or **AutoScale**, are not affected.

Executing **Auto Couple** generates the informational message, "All Auto/Man functions have been set to Auto".

Each parameter, upon being set to **Auto**, selects and sets the appropriate auto-coupled value based on that parameter’s coupling rules. The Dependency Resolver orchestrates the couplings for parameters that depend on one or more other parameters. The coupling and dependency rules for each parameter are defined in the section describing that parameter.

Executing **Auto Couple***does not* affect markers, marker functions, trace or display attributes, or any other instrument setting other than those specifically mentioned above.

Measurement-Specific Details

TOI (SA Mode only)

Parameters affected by **Auto Couple** are:

- Center Frequency Step
- Resolution Bandwidth
- Span/RBW Ratio
- Sweep Time
- Video BANDwidth VBW/RBW ratio
- Upper and Lower Tone (set to Sense)
- Zero span measurement Resolution Bandwidth
- Zero span measurement Dwell Time

Harmonics (SA Mode only)

Parameters affected by **Auto Couple** are:

- Resolution Bandwidth
- Fundamental Frequency
- Dwell Time
- Range Table Resolution Bandwidths
- Range Table Dwell Times

Meas Preset

Restores all the measurement parameters to their default values.

Remote Command	`:CONFigure:MONitor`
Example	`:CONF:MON`

3.11.8.2 Radio

Contains controls to select link direction.

Direction

Specifies whether the LTE-Advanced signal is an uplink signal or a downlink signal.

The choice of link direction determines the Sync/Format, Chan Profile and Time. Advanced menus all change based on the link direction selected. Also, since downlink and uplink signals use OFDMA and SC-FDMA respectively, the list of trace results available and the default traces presented change based on the link direction parameter.

Remote Command	`[:SENSe]:RADio:STANdard:DIRection DLINk | ULINk` `[:SENSe]:RADio:STANdard:DIRection?`
Example	`:RAD:STAN:DIR DLIN`
Couplings	TDD: Changing direction affects the sync source of periodic trigger source or gate source If Direction is uplink, the sync source is RF burst If Direction is downlink, the sync source is External1 If direction is downlink, the menu Measure PRACH/SRS is disabled and the value is off FDD/TDD: Changing Direction affects many other modulation analysis setup parameters
Preset	DLIN ULIN on E6640A DLIN on E6650A
State Saved	Yes
Range	Downlink|Uplink For E6640A, Direction is restricted to Uplink only, Downlink is not selectable For E6650A, Direction is restricted to Downlink only, Uplink is not selectable

3.11.8.3 Component Carriers

Contains settings that let you configure the analyzer to match the component carriers in your LTE-A signal.

Number of Component Carriers

Specifies how many component carriers are included in LTE-Advanced TDD/FDD measurements. Each component carrier complies with the LTE specifications.

LTE-Advanced TDD/FDD supports a maximum of five component carriers, so the maximum transmission bandwidth is up to 100 MHz.

Remote Command	`[:SENSe]:CCARrier:COUNt <integer>` `[:SENSe]:CCARrier:COUNt?`
Example	`:CCAR:COUN 1` `:CCAR:COUN?`
Notes	The max number of Component carriers can be set greater than one with 9080B/9082B-2FP license
Preset	1
State Saved	Yes
Min	1
Max	5

Carrier Allocation

Specifies the carrier frequency allocation. There are two types of allocation, contiguous and non-contiguous. Non-Contiguous frequency allocation is defined as an allocation where two sub-blocks are separated with a sub-block gap:

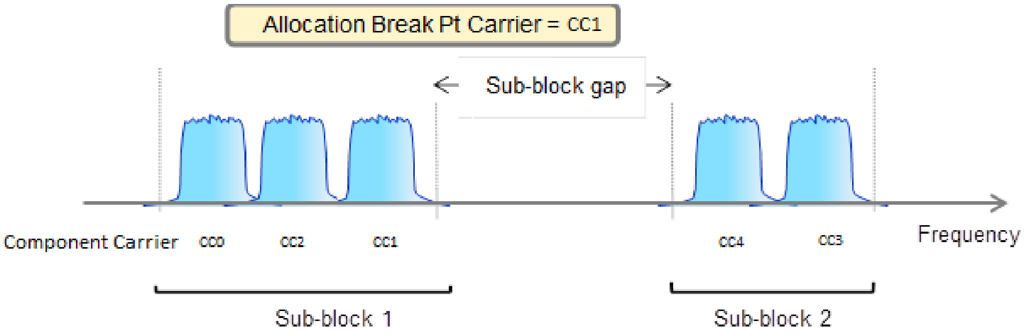
- CONTiguous – All the component carriers belong to one block and no sub-block gap exists
- NCONtiguous – Component carriers are separated into two sub-blocks. Allocation Break Pt Carrier determines how sub-blocks are configured

Remote Command	`[:SENSe]:CCARrier:CONFig:ALLocation CONTiguous | NCONtiguous` `[:SENSe]:CCARrier:CONFig:ALLocation?`
Example	`:CCAR:CONF:ALL CONT` `:CCAR:CONF:ALL?`
Preset	CONTiguous
State Saved	Saved in instrument state
Range	Contiguous|Non-Contiguous

Non-Contiguous Break at

Specifies an allocation break point in non-contiguous carrier allocation. First sub-block starts from the lowest frequency carrier and stops at the allocation break point carrier. Next sub-block starts from the next upper frequency carrier and ends at the highest frequency carrier.

one example is shown below. In the example carrier indices are not in the order of carrier frequency. In the example, Allocation Break Pt Carrier is CC1. It means that sub-block 1 ends at carrier CC1 and sub-block 2 starts at carrier CC4. Sub-block gap is located between carrier CC1 and CC4.



Remote Command	`[:SENSe]:CCARrier:CONFig:ALLocation:NCONtiguous:ABPoint CC0 | … | CC4` `[:SENSe]:CCARrier:CONFig:ALLocation:NCONtiguous:ABPoint?`
Example	`:CCAR:CONF:ALL:NCON:ABP CC0` `:CCAR:CONF:ALL:NCON:ABP?`
Notes	The options CC1~CC4 can be enabled with 9080B/9082B-2FP license
Dependencies	Allocation Break Point is coupled to Number of Component Carriers. For example, Allocation Break Point list will include CC0~CC1 if the number of Component Carriers is 2
Preset	CC0
State Saved	Saved in instrument state
Range	CC0|CC1|CC2|CC3|CC4

Configure Comp Carriers

Lets you perform a detailed configuration of your component carriers, including number of carriers, presets, bandwidth, offset, integration bandwidth, etc.

Configure CCs

Lets you configure System Bandwidth, frequency offsets, and integration bandwidth, and also lets you exclude certain carriers from the measurement.

Number of Component Carriers

See "Number of Component Carriers" on page 2245.

Carrier Allocation

See "Carrier Allocation" on page 2245.

Non-Contiguous Break at

See "Non-Contiguous Break at" on page 2246.

System BW

Enables you to set the system bandwidth of each component carrier for LTE-Advanced / NB-IoT signal (which also determines the total number of resource blocks for Modulation Analysis measurement).

Remote Command	`[:SENSe]:CCARrier0|…|4:RADio:STANdard:BANDwidth B1M4 | B3M | B5M | B10M | B15M | B20M | B200K` `[:SENSe]:CCARrier0|…|4:RADio:STANdard:BANDwidth?`
Example	`:CCAR4:RAD:STAN:BAND B5M`
Preset	B5M
State Saved	Yes
Range	1.4 MHz (6 RB) | 3 MHz (15 RB) | 5 MHz (25 RB) | 10 MHz (50 RB) | 15 MHz (75 RB) | 20 MHz (100 RB) | 200kHz (NB-IoT)
Backwards Compatibility SCPI	`[:SENSe]:RADio:STANdard:BANDwidth`

Measure Carrier

Sets whether to measure this component carrier or not.

Remote	`[:SENSe]:CCARrier0|…|4[:STATe] OFF | ON | 0 | 1`

Command	`[:SENSe]:CCARrier0|…|4[:STATe]?`
Example	`:CCAR0 ON` `:CCAR0?`
Notes	The command is used with a sub-op code <n> (default=0) to specify the component carrier for configuration. The range of the sub-op code is determined by the number of component carriers
Preset	ON
State Saved	Saved in instrument state
Range	On|Off

Frequency Offset

Sets the component carrier center frequency as offset from the Carrier Ref Frequency.

Remote Command	`[:SENSe]:CCARrier<n>:FREQuency:OFFSet <freq>` `[:SENSe]:CCARrier<n>:FREQuency:OFFSet?`
Example	`:CCAR4:FREQ:OFFS 10MHz` `:CCAR4:FREQ:OFFS?`
Notes	Used with a sub-op code <n> (default=0) to specify the component carrier for configuration. The range of the sub-op code is determined by the number of component carriers
Preset	0Hz
State Saved	Saved in instrument state
Min	-3.5GHz
Max	3.5GHz

Spectrum

Determines if the spectrum of the incoming data is mirrored or not. The actual mirroring is accomplished by conjugating the complex time data.

Note that only the Modulation Analysis measurement and Conformance EVM measurement support this feature.

Remote Command	`[:SENSe]:CCARrier0|…|4:SPECtrum NORMal | INVert` `[:SENSe]:CCARrier0|…|4:SPECtrum?`
Example	`:CCAR0:SPEC INV` `:CCAR0:SPEC?`
Preset	NORM
State Saved	Yes

Range	Normal | Invert
Backwards Compatibility SCPI	`[:SENSe]:SPECtrum`

UL/DL Configuration

Allows you to set the Uplink and Downlink allocation configuration of the signal being measured. The choice of link direction will determine which slot in the frame is used for uplink transmission, and which slot for downlink transmission.

Remote Command	`[:SENSe]:CCARrier0|…|4:RADio:STANdard:ULDL CONF0 | … | CONF6` `[:SENSe]:CCARrier0|…|4:RADio:STANdard:ULDL?`
Example	`:CCAR0:RAD:STAN:ULDL CONF0`
Notes	CONF0: Configuration 0 (DSUUUDSUUU) CONF1: Configuration 1 (DSUUDDSUUD) CONF2: Configuration 2 (DSUDDDSUDD) CONF3: Configuration 3 (DSUUUDDDDD) CONF4: Configuration 4 (DSUUDDDDDD) CONF5: Configuration 5 (DSUDDDDDDD) CONF6: Configuration 6 (DSUUUDSUUD)
Preset	CONF0
State Saved	Yes
Range	Configuration 0|Configuration 1|Configuration 2|Configuration 3|Configuration 4|Configuration 5|Configuration 6
Backwards Compatibility SCPI	`[:SENSe]:RADio:STANdard:ULDL`

Dw/GP/Up Len

This control allows you to set the DwPTS/GP/UpPTS length configuration of the signal being measured. The choice of link direction will determine the length of DwPTS, GP and UpPTS in the Special Subframe.

Remote Command	`[:SENSe]:CCARrier0|…|4:RADio:STANdard:DGPU CONF0 | … | CONF9` `[:SENSe]:CCARrier0|…|4:RADio:STANdard:DGPU?`
Example	`:CCAR0:RAD:STAN:DGPU CONF0`
Notes	CONF0: Configuration 0 CONF1: Configuration 1 CONF2: Configuration 2

	CONF3: Configuration 3 CONF4: Configuration 4 CONF5: Configuration 5 CONF6: Configuration 6 CONF7: Configuration 7 CONF8: Configuration 8 CONF9: Configuration 9
Dependencies	The special sub-frame configuration 9 is only enabled when it is LTE-Advanced TDD
Preset	CONF0
State Saved	Yes
Range	Configuration 0|Configuration 1|Configuration 2|Configuration 3|Configuration 4|Configuration 5|Configuration 6|Configuration 7|Configuration 8|Configuration 9
Backwards Compatibility SCPI	`[:SENSe]:RADio:STANdard:DGPU`

CHP Power Integ BW

Specifies the range of integration used in calculating the power in the component carrier s in the CHP measurement.

Remote Command	`[:SENSe]:CCARrier0|…|4:CHPower:BANDwidth:INTegration <freq>` `[:SENSe]:CCARrier0|…|4:CHPower:BANDwidth:INTegration?`
Example	`:CCAR0:CHP:BAND:INT 20MHz` `:CCAR0:CHP:BAND:INT?`
Notes	You must be in LTEATDD/LTEAFDD Mode to use this command. Use :INSTrument:SELect to set the mode
Couplings	When System Bandwidth of the parameter set is changed, the value of this parameter also changes as shown in the following table.

System Bandwidth	CHP Integ BW
1.4 MHz (B1M4)	1.4 MHz
3 MHz (B3M)	3 MHz
5 MHz (B5M)	5 MHz
10 MHz (B10M)	10 MHz
15 MHz (B15M)	15 MHz
20 MHz (B20M)	20 MHz
200 kHz(B200K)	200 kHz

Preset	5 MHz
State Saved	Saved in instrument state

Min	100 kHz
Max	20 MHz
Backwards Compatibility SCPI	`[:SENSe]:CHPower:BANDwidth:INTegration` `[:SENSe]:CHPower:BWIDth:INTegration`

ACP Power Integ BW

Specifies the Measurement Noise Bandwidth used to calculate the power in the component carriers in the ACP measurement.

Remote Command	`[:SENSe]:CCARrier0|…|4:ACPower:BANDwidth[1]|2:INTegration <freq>` `[:SENSe]:CCARrier0|…|4:ACPower:BANDwidth[1]|2:INTegration?`
Example	`:CCAR0:ACP:BAND:INT 20MHz` `:CCAR0:ACP:BAND:INT?`
Notes	Carrier sub op code, 1 is for BTS, 2 for MS. Default is BTS You must be in the LTEATDD/LTEAFDD mode. Use :INSTrument:SELect to set the mode
Couplings	When System Bandwidth of the parameter set is changed, the value of this parameter also changes as shown in the following table.

System Bandwidth	BTS ACP Meas Noise BW	MS ACP Meas Noise BW
1.4 MHz (B1M4)	1.095 MHz	1.08 MHz
3 MHz (B3M)	2.715 MHz	2.7 MHz
5 MHz (B5M)	4.515 MHz	4.5 MHz
10 MHz (B10M)	9.015 MHz	9.0 MHz
15 MHz (B15M)	13.515 MHz	13.5 MHz
20 MHz (B20M)	18.015 MHz	18.0 MHz
200 kHz(B200K)	180 kHz	180 kHz

Preset	4.515 MHz|4.5 MHz
State Saved	Yes
Min	100 kHz
Max	20 MHz
Backwards Compatibility SCPI	`[:SENSe]:ACPower:CARRier[1]|2:LIST:BANDwidth[:INTegration]` `[:SENSe]:ACPower:CARRier[1]|2:LIST:BWIDth[:INTegration]`

SEM Power Integ BW

Specifies the integration bandwidth used to calculate the power in the component carriers in SEM measurement.

Remote Command	`[:SENSe]:CCARrier0|…|4:SEMask:BANDwidth[1]|2:INTegration <freq>` `[:SENSe]:CCARrier0|…|4:SEMask:BANDwidth[1]|2:INTegration?`
Example	`:CCAR0:SEM:BAND:INT 20MHz` `:CCAR0:SEM:BAND:INT?`
Notes	Bandwidth sub op code, 1 is for BTS, 2 for MS. Default is BTS You must be in LTEATDD/LTEAFDD Mode to use this command. Use :INSTrument:SELect to set the mode
Couplings	When System Bandwidth of the parameter set is changed, the value of this parameter also changes as shown in the following table. Note that you cannot set the value exceeding the corresponding System Bandwidth

System Bandwidth	BTS SEM Integ BW	MS SEM Integ BW
1.4 MHz (B1M4)	1.095 MHz	1.08 MHz
3 MHz (B3M)	2.715 MHz	2.7 MHz
5 MHz (B5M)	4.515 MHz	4.5 MHz
10 MHz (B10M)	9.015 MHz	9.0 MHz
15 MHz (B15M)	13.515 MHz	13.5 MHz
20 MHz (B20M)	18.015 MHz	18.0 MHz
200 kHz(B200K)	180 kHz	180 kHz

Preset	4.515 MHz|4.5 MHz
State Saved	Saved in instrument state
Min	100 kHz
Max	20 MHz
Backwards Compatibility SCPI	`[:SENSe]:SEMask:BANDwidth[1]|2:INTegration`

Carrier Config Presets

Lets you configure the Component Carrier presets.

Preset ETC

The ETC configuration is applied. The component carrier parameters are dynamically changed using values of the parameters of each test configuration under Carrier Config Presets menu when some test configuration is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig NONE | ETC1 | ETC2 | ETC3` `[:SENSe]:CCARrier:CONFig?`
Example	`:CCAR:CONF ETC1` `:CCAR:CONF?`
Notes	The control for NONE is not available
State Saved	Saved in instrument state
Range	ETC1|ETC2|ETC3

Max BTS RF Bandwidth

Sets max BS RF bandwidth used when the carrier configuration preset runs. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:RFBW <freq>` `[:SENSe]:CCARrier:CONFig:RFBW?`
Example	`:CCAR:CONF:RFBW 40MHz` `:CCAR:CONF:RFBW?`
Preset	40MHz
State Saved	Saved in instrument state
Min	1.4MHz
Max	200 MHz

Carrier Spacing Delta

Sets delta channel spacing used when the carrier configuration preset runs. Channel spacing is determined from this value and the default channel spacing defined in the standard, i.e. Channel spacing = $(BW_{chan1} + BW_{chan2}) * 0.5$ + [the delta spacing]. Since this value is a difference from the default spacing, this value can be negative to allow narrower channel spacing. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:SPACing:DELTa <freq>` `[:SENSe]:CCARrier:CONFig:SPACing:DELTa?`
Example	`:CCAR:CONF:SPAC:DELT -200kHz`

	`:CCAR:CONF:SPAC:DELT?`
Preset	0Hz
State Saved	Saved in instrument state
Min	-1.0 MHz
Max	10.0 MHz

ETC1 Attributes

Sets ETC1 carrier configuration.

Max Number of Component Carriers

Sets max component carriers placed when the ETC1 carrier configuration preset runs. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:ETC1:CMAX <integer>` `[:SENSe]:CCARrier:CONFig:ETC1:CMAX?`
Example	`:CCAR:CONF:ETC1:CMAX 5` `:CCAR:CONF:ETC1:CMAX?`
Preset	5
State Saved	Saved in instrument state
Max	5
Min/Max	1

Component Carrier System BW

Sets bandwidth of the component carriers placed when the ETC1carrier configuration preset runs. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:ETC1:BANDwidth B1M4 | B3M | B5M | B10M | B15M | B20M | B200K` `[:SENSe]:CCARrier:CONFig:ETC1:BANDwidth?`
Example	`:CCAR:CONF:ETC1:BAND B5M` `:CCAR:CONF:ETC1:BAND?`
Preset	B5M
State Saved	Saved in instrument state
Range	1.4MHz|3MHz|5MHz|10MHz|15MHz|20MHz|200kHz

Component Carrier Narrowest BW

Sets narrowest bandwidth of the component carriers placed when the ETC1 carrier configuration preset runs. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:ETC1:BANDwidth:NARRowest B1M4 | B3M | B5M | B10M | B15M | B20M | B200K` `[:SENSe]:CCARrier:CONFig:ETC1:BANDwidth:NARRowest?`
Example	`:CCAR:CONF:ETC1:BAND:NARR B1M4` `:CCAR:CONF:ETC1:BAND:NARR?`
Preset	B1M4
State Saved	Saved in instrument state
Range	1.4MHz|3MHz|5MHz|10MHz|15MHz|20MHz|200kHz

ETC2 Attributes

Sets ETC2 carrier configuration.

Max Number of Component Carriers

Sets max component carriers placed when the ETC2 carrier configuration preset runs. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:ETC2:CMAX <integer>` `[:SENSe]:CCARrier:CONFig:ETC2:CMAX?`
Example	`:CCAR:CONF:ETC2:CMAX 5` `:CCAR:CONF:ETC2:CMAX?`
Preset	5
State Saved	Saved in instrument state
Min	1
Max	5

Carrier Side (with BTS RF BW)

Select the side of RF bandwidth to place the ETC2 component carriers. When this value is changed, the carrier configuration preset is initiated.

- NEGative - Negative (lower) edge of RF bandwidth. If the option is selected, the available component carriers will be placed sequentially from the lower edge of the RF bandwidth starting from first
- POSitive - Positive (upper) edge of RF bandwidth, If the option is selected, the available component carriers will be placed sequentially from the upper edge of the RF bandwidth starting from first

Remote Command	`[:SENSe]:CCARrier:CONFig:ETC2:BANDwidth:SIDE NEGative | POSitive` `[:SENSe]:CCARrier:CONFig:ETC2:BANDwidth:SIDE?`
Example	`:CCAR:CONF:ETC2:BAND:SIDE NEG` `:CCAR:CONF:ETC2:BAND:SIDE?`
Preset	NEGative
State Saved	Saved in instrument state
Range	NEGative|POSitive

Component Carrier System BW

Sets carrier bandwidth of the component carriers placed when the ETC2 carrier configuration preset runs. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:ETC2:BANDwidth:CARRier[1]|2|…|5 B1M4 | B3M | B5M | B10M | B15M | B20M | B200K` `[:SENSe]:CCARrier:CONFig:ETC2:BANDwidth:CARRier?`
Example	`:CCAR:CONF:ETC2:BAND:CARR B5M` `:CCAR:CONF:ETC2:BAND:CARR?`
Dependencies	The Carrier Bandwidth is coupled to Max Component Carriers. The settings are enabled following the Max Component Carriers. For example, the 1st Carrier Bandwidth and 2nd Carrier Bandwidth will be available if the Max Component Carriers is 2
Preset	B5M
State Saved	Saved in instrument state
Range	1.4MHz|3MHz|5MHz|10MHz|15MHz|20MHz|200kHz

ETC3 CC Bandwidth

Sets the bandwidth of the component carriers placed when the ETC3 carrier configuration preset runs. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:ETC3:BANDwidth B1M4 | B3M | B5M | B10M | B15M | B20M | B200K`

	`[:SENSe]:CCARrier:CONFig:ETC3:BANDwidth?`
Example	`:CCAR:CONF:ETC3:BAND B5M` `:CCAR:CONF:ETC3:BAND?`
Preset	B5M
State Saved	Saved in instrument state
Range	1.4MHz|3MHz|5MHz|10MHz|15MHz|20MHz|200kHz

3.11.8.4 Meas Standard

Enables you to access Preset to Standard functions.

In LTE-Advanced TDD Mode, the parameters under Predefined Params impact the gate or trigger length and delay of the following measurements:

- Monitor Spectrum
- Channel Power
- ACP
- Power Stat CCDF
- Occupied BW
- Spectrum Emission Mask
- Spurious Emission

In LTE-Advanced FDD Mode, the Predefined Parameters in this section are used in the Transmit On/Off Power measurement. The Modulation Analysis measurement has its specific Predefined Parameters setting.

In LTE V2X Mode, Predefined parameters apply to all LTE V2X measurements.

System BW

Sets the demodulator to the specified bandwidth and configures the settings of every component carrier according to the default values listed in table for the current direction (Uplink or Downlink).

For example, when Number of Component is 3, after executing the command RAD:STAN:PRES B5M or selecting corresponding Bandwidth in the dropdown menu, all the 3 component carriers are configured as 5Mhz bandwidth, and all the settings of these 3 component carriers are set according to the table.

Remote	`[:SENSe]:RADio:STANdard:PRESet B1M4 | B3M | B5M | B10M | B15M | B20M | B200K`

Command	
Example	`:RAD:STAN:PRES B5M`
Notes	B200K selection is available in LTE-A FDD mode B200K option is for NB-IoT which requires N9080EM3E license
Couplings	Preset To Standard presets parameter values listed in section “Values for each Preset To Standard”. And the system bandwidth of each component carrier under the Component Carrier Setup will be preset to the selected one
Preset	B5M
State Saved	Yes
Range	1.4 MHz (6 RB) | 3 MHz (15 RB) | 5 MHz (25 RB) | 10 MHz (50 RB) | 15 MHz (75 RB) | 20 MHz (100 RB) | 200 kHz (NB-IoT)

UL/DL Config

Sets the TDD UL/DL Allocation parameter of each carrier to the selected value.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:ULDL CONF0 | … | CONF6` `[:SENSe]:RADio:STANdard:PRESet:ULDL?`
Example	`:RAD:STAN:PRES:ULDL CONF0`
Notes	CONF0: Configuration 0 (DSUUUDSUUU) CONF1: Configuration 1 (DSUUDDSUUD) CONF2: Configuration 2 (DSUDDDSUDD) CONF3: Configuration 3 (DSUUUDDDDD) CONF4: Configuration 4 (DSUUDDDDDD) CONF5: Configuration 5 (DSUDDDDDDD) CONF6: Configuration 6 (DSUUUDSUUD)
Dependencies	When the setting is selected, the ULDL Alloc per component carrier under the Component carrier Setup will be preset to the selected value
Preset	CONF0
State Saved	Yes
Range	Configuration 0|Configuration 1|Configuration 2|Configuration 3|Configuration 4|Configuration 5|Configuration 6

Dw/GP/Up Len

Sets the TDD special sub-frame configuration of each component carrier to the selected value.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:DGPU CONF0 | … | CONF9` `[:SENSe]:RADio:STANdard:PRESet:DGPU?`

Example	`:RAD:STAN:PRES:DGPU CONF0`
Notes	CONF0: Configuration 0 CONF1: Configuration 1 CONF2: Configuration 2 CONF3: Configuration 3 CONF4: Configuration 4 CONF5: Configuration 5 CONF6: Configuration 6 CONF7: Configuration 7 CONF8: Configuration 8 CONF9: Configuration 9
Dependencies	When the setting is selected, the Dw/GP/Up Len per Component Carrier under the Component Carrier Setup will be preset to the selected value The special sub-frame configuration 9 is only enabled when it is LTE-Advanced TDD
Preset	CONF0
State Saved	Yes
Range	Configuration 0|Configuration 1|Configuration 2|Configuration 3|Configuration 4|Configuration 5|Configuration 6|Configuration 7|Configuration 8|Configuration 9

Analysis Slot

Specifies the starting analysis slot. The measurement will adjust the gate delay or trigger delay according to this parameter.

Remote Command	`[:SENSe]:RADio:SLOT TS0 | TS1 | DPTS1 | UPTS1 | TS4 | TS5 | TS6 | TS7 | TS8 | TS9 | TS10 | TS11 | TS12 | TS13 | TS14 | TS15 | TS16 | TS17 | TS18 | TS19` `[:SENSe]:RADio:SLOT?`
Example	`:RAD:SLOT TS0`
Couplings	Measurement’s gate length or meas interval will couple to the parameter
Preset	TS0
State Saved	Yes
Range	TS0 | TS1 | DwPTS1 | UpPTS1 | TS4 | TS5 | TS6 | TS7 | TS8 | TS9 | TS10 | TS11 | TS12(DwPTS2) | TS13 (UpPTS2) | TS14 | TS15 | TS16 | TS17 | TS18 | TS19

Meas Interval

This parameter specifies the desired slots count that needs to be analyzed. The measurement will adjust the gate length or meas interval according to this parameter.

For NB-IoT uplink cases scenarios, when Measure NPRACH is Off, this parameter indicates not only the slots' count to be analyzed, but the time elapse of the off power measurements as well.

In LTE-A FDD Mode, this parameter only appears in the Transmit On|Off Power measurement.

<table>
<tr><td>Remote Command</td><td><code>[:SENSe]:RADio:MINTerval <integer></code>
<code>[:SENSe]:RADio:MINTerval</code></td></tr>
<tr><td>Example</td><td><code>:RAD:MINT 1</code></td></tr>
<tr><td>Notes</td><td>The backwards compatible command [:SENSe]:PVTime:MINTerval is available in LTE FDD & LTE-A FDD Modes</td></tr>
<tr><td>Dependencies</td><td>This parameter is disabled when all the below conditions are met at the same time:
– System BW is “200 kHz (NB-IoT)”
– Direction is “uplink”
– NB-IoT Subcarrier Spacing is “3.75kHz”
– Meas NPRACH is “OFF”</td></tr>
<tr><td>Couplings</td><td>Disabled when the “Measure PRACH” is in scope and its value is not off, then the actual meas interval is the length PRACH or SRS channel
For NB-IoT case scenario, when the parameter is disabled, its value is automatically determined by both Meas NPRACH:
<table>
<tr><th>Meas NPRACH</th><th>Meas Interval</th></tr>
<tr><td>Preamble0</td><td>3 slots</td></tr>
<tr><td>Preamble1</td><td>4 slots</td></tr>
</table></td></tr>
<tr><td>Preset</td><td>1</td></tr>
<tr><td>State Saved</td><td>Yes</td></tr>
<tr><td>Min</td><td>1</td></tr>
<tr><td>Max</td><td>20, when System BW is NOT “200 kHz (NB-IoT)
16, otherwise</td></tr>
<tr><td>Backwards Compatibility SCPI</td><td>LTE:
<code>[:SENSe]:PVTime:MINTerval</code></td></tr>
</table>

CP Length

Specifies whether the cyclic prefix is configured as NORMal or EXTended for power measurement. The parameter will affect the gate length or meas interval parameters.

In LTE-A FDD Mode, this parameter only appears in the Transmit On|Off Power measurement.

Remote Command	`[:SENSe]:RADio:CPLength NORMal | EXTended` `[:SENSe]:RADio:CPLength?`
Example	`:RAD:CPL NORM`
Notes	The backwards compatible SCPI command [:SENSe]:PVTime:CPLength is available in LTE FDD & LTE-A FDD Modes
Dependencies	Disabled when System BW is set to “200 kHz (NB-IoT)” and Direction is “uplink”
Couplings	Set to NORMal when System BW is set to “200 kHz (NB-IoT)”
Preset	NORMal
State Saved	Yes
Range	Normal|Extended
Backwards Compatibility SCPI	LTE: `[:SENSe]:PVTime:CPLength`

Measure PRACH/SRS

Specifies whether the analysis slot is used for PRACH channel or SRS and the PRACH preamble format of the analysis slot.

The measurement will adjust the gate length or meas interval according to this parameter.

Remote Command	`[:SENSe]:RADio:MEASure OFF | PPF0 | PPF1 | PPF2 | PPF3 | PPF4 | SRS | DSRS` `[:SENSe]:RADio:MEASure?`
Example	`:RAD:MEAS OFF`
Couplings	If direction is downlink, the control is disabled and the value is set to off If this control value is not off, Meas Interval is disabled
Preset	OFF
State Saved	Yes
Range	Off|Preamble 0|Preamble 1|Preamble 2|Preamble 3|Preamble 4|SRS|DSRS

Reference Config

Specifies which component carrier’s ULDL Allocation Configuration and Dw/Up Length Configuration settings are used to adjust time slot to be measured automatically. For Modulation Analysis measurement, this control specifies which CC is used as the reference CC for time alignment results.

In LTE-A FDD Mode, this parameter only appears in the Transmit On|Off Power and Modulation Analysis measurements.

Remote Command	`[:SENSe]:RADio:RCONfig CC0 | … | CC4`

	`[:SENSe]:RADio:RCONfig?`
Example	`:RAD:RCON CC0`
Notes	The options CC1~CC4 can be enabled with 9080B/9082B-2FP license
Dependencies	Reference Configuration is coupled to Number of Component Carriers. For example, reference configuration list will include CC0~CC1 if the number of Component Carriers is 2
Preset	CC0
State Saved	Yes
Range	CC0|CC1|CC2|CC3|CC4

3.11.8.5 Advanced

Contains controls for setting advanced function s of the instrument.

This tab does not appear in EXM or VXT.

Noise Floor Extension

When this function is ON, the expected noise power of the instrument (derived from a factory calibration) is subtracted from the trace data. This will usually reduce the apparent noise level by about 10 dB in low band, and 8 dB in high band (>~3.6 GHz).

Noise Floor Extension works with any RBW, VBW, detector, any setting of Average Type, any amount of trace averaging, and any signal type. It is ineffective when the trace is not smoothed (smoothing processes include narrow VBWs, trace averaging, and long sweep times with the detector set to Average or Peak). It works best with extreme amounts of smoothing, and with the average detector, with the Average Type set to Power.

NOTE Noise Floor Extensions has no effect unless the RF Input is selected, therefore it does nothing when External Mixing is selected.

In those cases where the cancellation is ineffective, it nonetheless has no undesirable side-effects. There is no significant speed impact to having **Noise Floor Extension** on.

The best accuracy is achieved when substantial smoothing occurs in each point before trace averaging. Thus, when using the average detector, results are better with long sweep times and fewer trace averages. When using the sample detector, the VBW filter should be set narrow with less trace averaging, instead of a wide VBW filter with more trace averaging.

See "More Information" on page 2120.

Remote Command	`[:SENSe]:CORRection:NOISe:FLOor ON | OFF | 1 | 0`

	`[:SENSe]:CORRection:NOISe:FLOor?`
Example	`:CORR:NOIS:FLO ON`
Dependencies	This control only appears in instruments with the NFE or NF2 license installed. In all others, the control does not appear, however the SCPI command will be accepted without error (but will have no effect)
Couplings	When NFE is enabled in any mode manually, a prompt will be displayed reminding you to perform the Characterize Noise Floor operation if it is needed. If NFE is enabled through SCPI and a Characterize Noise Floor operation is needed, an error will be entered in the system error queue
Preset	Unaffected by Mode Preset. Turned off by Restore Mode Defaults
State Saved	No

More Information

The instrument is characterized in the factory (or during a field calibration) with a model of the noise, referred to the input mixer, versus frequency in each band and path combination. Bands are 0 (low band) and 1 through 4 (high band) in a 26.5 GHz instrument, for example. Paths include normal paths, preamp paths, the electronic attenuator, etc.

In most band/path combinations, the noise can be well characterized based on just two parameters and the instrument frequency response before compensation for frequency-dependent losses.

After the noise density at the input mixer is estimated, the effects of the input attenuator, RBW, detector, etc. are computed to get the estimated input-port-referred noise level.

In the simplest case, the measured power (signal plus analyzer noise) in each display point (bucket) is compensated by subtracting the estimated noise power, leaving just the signal power. This is the operation when the detector is Average and the Average Type is set to Power.

In other cases, operation is often not quite as good but still highly effective. With peak detection, the noise floor is estimated based on the RBW and the duration of the bucket using the same equations used in the noise marker function. The voltage of the noise is subtracted from the voltage of the observed signal-plus-noise measurement to compute the estimated signal voltage. The peak detector is one example of processing that varies with detector to give good estimates of the signal level without the analyzer noise.

For best operation, the average detector and the power scale are recommended, as already stated. Peak detection for pulsed-RF can still give excellent effectiveness. FFT analysis does not work well, and does not do NFE well, with pulsed-RF signals, so this combination is not recommended. Negative peak detection is not very useful, either. Sample detection works well, but is never better than the average detector because it doesn’t smooth as well. The Normal detector is a combination of peak and negative peak behaviors, and works about as well as these.

For best operation, extreme smoothing is desirable, as already stated. Using narrow VBWs works well, but using very long bucket durations and the average detector works best. Reducing the number of trace points will make the buckets longer.

For best operation, the power scale (Average Type = Power) is optimum. When making CW measurements in the presence of noise without NFE, averaging on the decibel scale has the advantage of reducing the effect of noise. When using NFE, the NFE does an even better job than using the log scale ever could. Using NFE with the log scale is not synergistic, though; NFE with the power scale works a little better than NFE with log averaging type.

The results from NFE with internal preamp can often be lower than the theoretical noise in a signal source at room temperature, a noise density of -174 dBm/Hz. This is expected and useful behavior, because NFE is designed to report the amount of input signal that is in excess of the thermal noise, not the amount that includes the thermal noise. This can be a useful behavior because thermal noise often interferes with what you want to measure, instead of being part of what you want to measure. Note that NFE is not adequately accurate to always be able to read below kTB.

On instruments with the NF2 license installed, the calibrated Noise Floor used by Noise Floor Extensions should be refreshed periodically. Keysight recommends that the **Characterize Noise Floor** operation be performed after the first 500 hours of operation, and once every calendar year. The key to perform this is located in the **System, Alignments, Advanced** menu. If you have not done this yourself at the recommended interval, then when you turn on Noise Floor Extensions, the instrument will prompt you to do so with a dialog that says:

This action will take several minutes to perform. Please disconnect all cables from the RF input and press Enter to proceed. Press ESC to cancel, or Postpone to postpone for a week

If you Cancel, you will be prompted again the next time you turn NFE on. If you postpone, you will be prompted again after a week passes and you then turn NFE on.

Conversion

Access a menu of functions that enable you to control the frequency conversion type for the current measurement. The following choices are available:

Auto	`AUTO`	Auto optimizes demodulation quality by selecting single conversion when available. Default value
Single High Side	`SHSide`	Single downconversion with the LO frequency above the receiver frequency. Not image protected, and available only above 400 MHz or at all frequencies under specific condition

Single Low Side	`SLSide`	Single downconversion with the LO frequency below the receiver frequency. Not image protected, and available only above 1.1 GHz
Image Protect	`IPRotect`	Double downconversion with pre-selection filtering. Available at all frequencies

Remote Command	`[:SENSe]:MONitor:CONversion:TYPE AUTO | SHSide | SLSide | IPRotect` `[:SENSe]:MONitor:CONversion:TYPE?`
Example	`:MON:CON:TYPE AUTO` `:MON:CON:TYPE?`
Dependencies	This control only appears in the M9391A
Couplings	The availabilities of SingleHighSide and SingleLowSide depend on the current Sweep Parameters such as Center Freq, Span, Res BW and Points
Preset	`AUTO`
State Saved	Yes
Range	`AUTO|SHSide|SLSide|IPRotect`

Phase Noise Optimization

Access a menu of functions that enable you to control the phase noise optimization for the current measurement. The following choices are available:

Normal	`NORmal`	Sets the Synthesizer's Phase Lock Loop to the Normal setting (Best Close-In)
Best Wide Offset	`BWOffset`	Sets the Synthesizer's Phase Lock Loop for narrow bandwidth to improve ORFS and EVM measurements for wide modulation

Remote Command	`[:SENSe]:MONitor:PNOise:OPTion NORmal | BWOffset` `[:SENSe]:MONitor:PNOise:OPTion?`
Example	`:MON:PNO:OPT NOR` `:MON:PNO:OPT?`
Dependencies	This control only appears in the M9391A
Preset	`NORmal`
State Saved	Yes
Range	`NORmal|BWOffset`

3.11.8.6 Global

The controls in this menu apply to all Modes in the instrument.

Some controls (for example, "Global Center Freq" on page 2276) allow you to switch certain Meas Global parameters to a Mode Global state. These switches apply to all

Modes that support global settings. For example, no matter what Mode you are in when you set **Global Center Freq** to `ON`, it applies to all Modes that support Global settings.

Other controls (for example, **Extend Low Band**) are actually set in this menu, but apply to all Modes.

Global Center Freq

The software maintains a Mode Global value called **Global Center Freq**.

When **Global Center Freq** is switched `ON`, the current Mode's center frequency is copied into the **Global Center Frequency**, and from then on all Modes that support global settings use the **Global Center Frequency**, so you can switch between any of these Modes and the **Center Frequency** remains unchanged.

Adjusting the **Center Frequency** of any Mode that supports Global Settings, while **Global Center Freq** is `ON`, modifies the **Global Center Freq**.

When **Global Center Freq** is switched `OFF`, the **Center Frequency** of the current Mode is unchanged, but now the **Center Frequency** of each Mode is once again independent.

When **Mode Preset** is pressed while **Global Center Freq** is `ON`, the **Global Center Freq** is preset to the preset **Center Frequency** of the current Mode.

This function resets to `OFF` when "Restore Defaults" on page 2278 is pressed, or when **System**, **Restore Defaults**, **All Modes** is pressed.

Remote Command	`:INSTrument:COUPle:FREQuency:CENTer ALL | NONE` `:INSTrument:COUPle:FREQuency:CENTer?`
Example	`:INST:COUP:FREQ:CENT ALL` `:INST:COUP:FREQ:CENT?`
Preset	Set to `OFF` on **Global** Settings, **Restore Defaults** and **System, Restore Defaults, All Modes**
Range	`ALL|NONE`

Preset	`OFF`
Backwards Compatibility SCPI	`:GLOBal:FREQuency:CENTer[:STATe] 1 | 0 | ON | OFF` `:GLOBal:FREQuency:CENTer[:STATe]?`

Global EMC Std

When this control is switched `ON`, the current Mode's EMC Std is copied into the **Global EMC Std**, and from then on all Modes that support global settings use the **Global EMC Std**, so you can switch between any of these Modes and the EMC Std remains unchanged.

Adjusting the EMC Std of any Mode that supports Global settings, while **Global EMC Std** is `ON` modifies the **Global EMC Std**.

When **Global EMC Std** is switched `OFF`, the EMC Std of the current Mode remains unchanged, but now the EMC Std of each Mode is once again independent. When **Mode Preset** is pressed while **Global EMC Std** is `ON`, **Global EMC Std** is preset to the preset EMC Std of the current Mode.

This function resets to `OFF` when "Restore Defaults" on page 2278 is pressed, or when **System, Restore Defaults, All Modes** is pressed.

Remote Command	`:INSTrument:COUPle:EMC:STANdard ALL | NONE` `:INSTrument:COUPle:EMC:STANdard?`
Example	`:INST:COUP:EMC:STAN ALL` `:INST:COUP:EMC:STAN?`
Dependencies	Only available if Option EMC is installed
Preset	Set to `OFF` on **Global** Settings, **Restore Defaults** and **System, Restore Defaults, All Modes**
Range	`ALL | NONE`

Extend Low Band

The software maintains a Mode Global value called **Extend Low Band**.

Under the current sweep configuration crossing over two bands, when **Extend Low Band** is turned `ON`, the instrument checks whether one band can cover the whole sweep frequency range or not. If it can, then the instrument locks the band; otherwise, it does nothing (the band crossover occurs).

This function does *not* work when **Band Lock** under **System** > **Service** > **Lock Functions** is not -1 (no Band Lock). In that case, **Band Lock** takes priority over **Extend Low Band**.

This function resets to `OFF` when "Restore Defaults" on page 2278 is pressed, or when **System**, **Restore Defaults**, **All Modes** is pressed.

Remote Command	`:INSTrument:COUPle:FREQuency:BAND:EXTend 0 | 1 | ON | OFF` `:INSTrument:COUPle:FREQuency:BAND:EXTend?`
Example	`:INST:COUP:FREQ:BAND:EXT 1` `:INST:COUP:FREQ:BAND:EXT?`
Preset	Set to `OFF` by **Global** Settings > **Restore Defaults** and **System** > **Restore Defaults** > **All Modes**
Range	`ON|OFF`

Restore Defaults

Resets all functions in the **Global** settings menu to `OFF`. Pressing **System**, **Restore Defaults**, **All Modes** has the same effect.

Remote Command	`:INSTrument:COUPle:DEFault`
Example	`:INST:COUP:DEF`
Backwards Compatibility SCPI	`:GLOBal:DEFault`

3.11.9 Sweep

Accesses controls that enable you configure and control the acquisition of data and the X-axis parameters of the instrument. These controls might include Sweep Time, Continuous/Single, Pause/Resume, X Scale, and number of Points.

3.11.9.1 Sweep/Control

Accesses controls that let you operate the sweep and control functions of the instrument, such as **Sweep Time** and **Continuous/Single**.

Sweep Time

Controls the time the instrument takes to sweep the current frequency span in swept measurements, displays the sweep time in swept measurements, and displays the equivalent Sweep Time in FFT measurements.

When **Sweep Time** is in Auto, the instrument computes a time that will give accurate measurements based on other settings, such as RBW and VBW.

You can select a shorter sweep time to improve the measurement throughput (with some potential unspecified accuracy reduction), but the **Meas Uncal** indicator will appear if the sweep time you set is less than the calculated Auto Sweep time.

You can also select a longer sweep time, which can be useful (for example) for obtaining accurate insertion loss measurements on very narrowband filters.

NOTE Significantly faster sweep times are available with Option FS1.

NOTE The **Meas Uncal** (measurement uncalibrated) warning is displayed in the Status Bar at the bottom of the screen when the manual Sweep time entered is faster than the time computed by the instrument's Sweep time equations, that is, the Auto Sweep Time. The instrument's computed Sweep time will provide accurate measurements; if you sweep faster than this your measurements may be inaccurate. A **Meas Uncal** condition may be corrected by returning the Sweep Time to Auto; by entering a longer Sweep Time; or by choosing a wider RBW and/or VBW.

NOTE

On non-sweeping hardware, this control is grayed-out. The value shown on this control is an estimate. It is the measurement's turnaround time, which is the sum of signal acquisition time, FFT time, and other overhead time, to complete the entire span of the measurement. If you need to specify the same "Sweep Time" as you would for sweeping hardware, send `[:SENSe]:<meas>:SWEep:TIME <time>`. The measurement emulates the "Sweep Time" effect, but this emulation is not straightforward, and therefore the behavior is not specified. Instead, we recommend using Minimum Acquisition Time, which provides better control.

Remote Command	`[:SENSe]:<meas>:SWEep:TIME <time>` `[:SENSe]:<meas>:SWEep:TIME?`

Example	Channel Power measurement:
	`:CHP:SWE:TIME 25ms`
	`:CHP:SWE:TIME?`

Notes	In the ACP measurement in WCDMA Mode, this parameter is preset by **Meas Method** selection. Preset values are as follows: – IBW: 29 ms – IBWR: 108 ms – FAST 7.5 ms
Dependencies	On non-sweeping hardware, this control is grayed out, and the Auto/Man toggle disappears. The read-only control shows estimated sweep time In those instruments, "Minimum Acquisition Time" on page 2127 is available
Couplings	Coupled to **Span**, **RBW**, **VBW**, and **Sweep Time Rules** when **Sweep Time** is set to Auto; **Sweep Time** changes when these parameters are changed When you manually set a value when in the **Auto** state, the state automatically changes to **Man**
Preset	Automatically Calculated unless noted below WCDMA Mode – Channel Power: 1.0 msOBW: 32.6 ms – ACP: 29 ms
State Saved	Saved in instrument state
Min	Other than non-sweeping hardware: Typically, 1 ms

	Non-sweeping hardware: N/A In the ACP measurement, when **Meas Method** is **Fast Power**, the minimum sweep time is span-dependent and automatically calculated
Max	Other than non-sweeping hardware: 4000 s Non-sweeping hardware: N/A
Annotation	The sweep time is displayed in the lower-right corner of the screen. The number of points is displayed parenthetically, as: Sweep 13.3 ms (1001 points) A "#" mark appears before "Sweep" in the annotation when it is switched from Auto to Manual coupling
Status Bits/OPC dependencies	Meas Uncal is Bit 0 in the register: `STATus:QUEStionable:INTegrity:UNCalibrated`

Auto Function

Remote Command	`[:SENSe]:<meas>:SWEep:TIME:AUTO OFF | ON | 0 | 1` `[:SENSe]:<meas>:SWEep:TIME:AUTO?`

Example	Channel Power measurement:
	`:CHP:SWE:TIME:AUTO OFF`
	`:CHP:SWE:TIME:AUTO?`

Preset	WCDMA Mode: `OFF` All others: `ON`

Minimum Acquisition Time

Available on non-sweeping hardware.

Specifies the minimum acquisition time for each "chunk" of the measurement result. The instrument automatically divides Span into multiple chunks if needed. Therefore, the total signal acquisition time for the entire Span is:

~(>~Minimum Acquisition Time) * (The number of chunks)

When in Auto, this parameter's value is determined by other parameters, such as **Span**, **RBW** and **VBW**.

You can manually increase this parameter value from this Auto value.

If increased, the instrument acquires signal for the specified time duration for each chunk. It performs additional FFTs, and averages or peak-holds the FFT results for a chunk, depending on **Detector** settings.

Note that the actual acquisition time for each chunk may exceed the **Minimum Acquisition Time** value, in order to satisfy FFT time required by other parameters, and to perform an integer number of FFTs.

Remote Command	`[:SENSe]:<meas>:SWEep:ACQuisition:TIME <time>`
	`[:SENSe]:<meas>:SWEep:ACQuisition:TIME?`
	`<meas>` is the identifier for the current measurement; any one of `CHPower-|ACPower|OBWidth|MONitor`

Example	Channel Power measurement
	`:CHP:SWE:ACQ:TIME 500 ms`
	`:CHP:SWE:ACQ:TIME?`

Dependencies	Available only on non-sweeping hardware
Couplings	Coupled to **Span**, **RBW**, and **VBW** when in the Auto state When you manually set a value when in the **Auto** state, the state automatically changes to **Man**
Preset	Automatically calculated
State Saved	Saved in instrument state
Min	100 ns
Max	4.00 ks

Auto Function

Remote Command	`[:SENSe]:<meas>:SWEep:ACQuisition:TIME:AUTO OFF | ON | 0 | 1`
	`[:SENSe]:<meas>:SWEep:ACQuisition:TIME:AUTO?`
	`<meas>` is the identifier for the current measurement; any one of `CHPower-|ACPower|OBWidth|MONitor`

Example	Channel Power measurement: `:CHP:SWE:ACQ:TIME:AUTO OFF`
Preset	`ON`

Sweep/Measure

Lets you toggle between **Continuous** and **Single** sweep or measurement operation. The single/continuous state is Meas Global, so the setting affects all measurements.

The front-panel key **Single/Cont** performs exactly the same function

See "More Information" on page 2129

Remote Command	`:INITiate:CONTinuous OFF | ON | 0 | 1` `:INITiate:CONTinuous?`
Example	Put instrument into **Single** measurement operation: `:INIT:CONT 0`

	`:INIT:CONT OFF`
	Put instrument into **Continuous** measurement operation:
	`:INIT:CONT 1`
	`:INIT:CONT ON`

Preset	`ON` Note that `:SYST:PRES` sets `:INIT:CONT` to `ON`, but `*RST` sets `:INIT:CONT` to `OFF`
State Saved	Saved in instrument state
Annunciation	The **Single/Continuous** icon in the Meas Bar changes depending on the setting: – A line with an arrow is **Single** – A loop with an arrow is **Continuous**
Backwards Compatibility Notes	X-Series A-models had **Single** and **Cont** hardkeys in place of the **SweepSingleCont** softkey. In the X-Series A-models, if in single measurement, the **Cont** hardkey (and `INIT:CONT ON`) switched to continuous measurement, but never restarted a measurement and never reset a sweep X-Series B-models have a **Cont/Single** toggle control instead of **Single** and **Cont** hardkeys, but it is still true that, if in single measurement, the **Cont/Single** toggle control never restarts a measurement and never resets a sweep

More Information

Continuous Mode	The instrument takes repetitive sweeps, averages, measurements, etc., when in continuous mode. If in average or Max/Min Hold, and the average/hold count reaches the **Average/Hold Num**, the count stops incrementing, but the instrument keeps sweeping See the **Trace** key description under **Trace Average** for the averaging formula used both before and after the **Average/Hold Num** is reached. The trigger condition must be met prior to each sweep The type of trace processing for multiple sweeps is set under the **Trace** key, with choices of **Trace Average**, **Max Hold**, or **Min Hold**
Single Mode	The instrument takes a single sweep when in **Single** mode, or if in average or Max/Min Hold, or if there is a **Waterfall** window displayed, it takes multiple sweeps until the average/hold count reaches the **Average/Hold Num**, then the count stops incrementing, and the instrument stops sweeping See the **Trace** key description under **Trace Average** for the averaging formula used. The trigger condition must be met prior to the sweep The type of trace processing for multiple sweeps is set under the **Trace** key, with choices of **Trace Average**, **Max Hold**, or **Min Hold**

If the instrument is in **Single** measurement mode, pressing the **Cont/Single** toggle control does not zero the count and does not cause the sweep to be reset; the only action is to put the instrument into Continuous measurement operation.

If the instrument is already in **Continuous** sweep:

- `:INIT:CONT 1` has no effect
- `:INIT:CONT 0` places the instrument in Single Sweep but has no effect on the current sequence until k = N, at which point the current sequence will stop and the instrument will go to the idle state

See "Restart" on page 2279 for details of `:INIT:IMMediate`.

If the instrument is already in **Single** sweep, `:INIT:CONT OFF` has no effect.

If the instrument is already in **Single** sweep, then pressing **Cont/Single** in the middle of a sweep does not restart the sweep or sequence. Similarly, pressing **Cont/Single** does not restart the sweep or sequence if the sweep is not in the idle state (for example, if you are taking a very slow sweep, or the instrument is waiting for a trigger). Even though pressing **Cont/Single** in the middle of a sweep does not restart the sweep, sending `:INIT:IMM` *does* reset it.

If the instrument is in **Single** sweep, and *not* Averaging/Holding, and you want to take one more sweep, press **Restart**.

If the instrument is in **Single** sweep, *and* Averaging/Holding, and you want to take one more sweep without resetting the Average trace or count, go to **Meas Setup** and increment the average count by 1 by pressing the **Step-Up** key while **Average/Hold Num** is the active function. You can also do this by sending `:CALC:AVER:TCON UP`.

Restart

Restarts the current sweep, or measurement, or set of averaged/held sweeps or measurements. If you are Paused, pressing **Restart** performs a Resume.

The front-panel key **Restart** performs exactly the same function.

The **Restart** function is accessed in several ways:

- Pressing the **Restart** key
- Sending `:INIT:IMM`
- Sending `:INIT:REST`

See "More Information" on page 2131

Remote Command	`:INITiate[:IMMediate]` `:INITiate:RESTart`
Example	`:INIT:IMM` `:INIT:REST`
Notes	`:INIT:REST` and `:INIT:IMM` perform exactly the same function

Couplings	Resets average/hold count k. For the first sweep overwrites all active (update = on) traces with new current data. For application modes, it resets other parameters as required by the measurement
Status Bits/OPC dependencies	This is an Overlapped command The `STATus:OPERation` register bits 0 through 8 are cleared , *except* bit 6 (Waiting for Periodic Sync). Initiating a measurement and Waiting for Periodic Sync could be asynchronous The `STATus:QUEStionable` register bit 9 (`INTegrity` sum) is cleared The `SWEEPING` bit is set The `MEASURING` bit is set
Backwards Compatibility Notes	For Spectrum Analysis Mode in ESA and PSA, the **Restart** hardkey and the `:INIT:REST` command restarted trace averages (displayed average count reset to 1) for a trace in **Clear Write**, but did not restart **Max Hold** and **Min Hold** In X-Series, the **Restart** hardkey and the `:INIT:REST` command restart not only **Trace Average**, but **MaxHold** and **MinHold** traces as well

More Information

The **Restart** function first aborts the current sweep or measurement as quickly as possible. It then resets the sweep and trigger systems, sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the instrument is in the process of aligning when a **Restart** is executed, the alignment finishes before the restart function is performed.

Even when set for **Single** operation, multiple sweeps may be taken when **Restart** is pressed (for example, when averaging/holding is on). Thus, when we say that **Restart** "restarts a measurement", depending on the current settings, we may mean that it:

- Restarts the current sweep
- Restarts the current measurement
- Restarts the current set of sweeps if any trace is in Trace Average, Max Hold or Min Hold
- Restarts the current set of measurements if Averaging, or Max Hold, or Min Hold is on for the measurement

If there is no Average or Max/Min Hold function (no trace in Trace Average or Hold, or **Average/Hold Num** set to 1), and no **Waterfall** window is being displayed, a single sweep is equivalent to a single measurement. A single sweep is taken after the trigger condition is met; and the instrument stops sweeping once that sweep has completed. However, with **Average/Hold Num** >1, and at least one trace set to Trace Average, Max Hold, or Min Hold, or a **Waterfall** window being displayed, multiple sweeps/data acquisitions are taken for a single measurement. The trigger condition must be met prior to each sweep. The sweep is stopped when the average count k equals the number N set for **Average/Hold Num**.

Once the full set of sweeps has been taken, the instrument goes to the idle state. To take one more sweep without resetting the average count, increment the average count by 1, by pressing the **Step-Up** key while **Average/Hold Number** is the active function, or by sending the remote command `:CALC:AVER:TCON UP`.

Trace Update

The numeric results are not blanked at any time during the restart cycle.

For slow sweeps (see **Trace Update** section in **Trace/Detector**), the traces are updated real-time during the sweep. There may be a special circumstance in application mode measurements where an exception is made and the traces and/or results need to be blanked before displaying the new results.

To summarize, the following list shows what happens to the trace data on various events:

Event	Trace Effect
Clear/Write pressed (even if already in Clear/Write)	Set to mintracevalue
Max Hold pressed (even if already in Max Hold)	Set to mintracevalue
Min Hold pressed (even if already in Min Hold)	Set to maxtracevalue
Trace Average pressed (even if already in Trace Average)	Trace data unaffected but start new sweep/avg/hold
Restart pressed	Trace data unaffected but start new sweep/avg/hold
Parameter requiring restart changed (e.g., RBW)	Trace data unaffected but start new sweep/avg/hold

Sweep and Trigger Reset

Resetting the sweep system resets the average/hold count k to 0. It also resets the set point counter to 0. Resetting the trigger system resets the internal auto trig timer to the value set by the **Auto Trig** control.

Averaging

The weighting factor used for averaging is k. This k is also the average/hold count for how many valid sweeps (data acquisitions) have been done. This k is used for comparisons with N, as those comparisons always needs to be based on valid completed sweeps.

The displayed average/hold, `K`, shows the count for the sweep (data acquisition) in progress. `K` = `k` + 1, with a limit of N. The displayed value `K` changes from its previous value to 1 as soon as the trigger condition for the first data acquisition (sweep) is met.

Pause/Resume

Pauses a measurement after the current data acquisition is complete.

When paused, the label on the control changes to **Resume**. Pressing **Resume** un-pauses the measurement. When paused, pressing **Restart** performs a Resume.

Remote Command	`:INITiate:PAUSe` `:INITiate:RESume`
Example	`:INIT:PAUS` `:INIT:RES`
Dependencies	Not displayed in Modes that do not support pausing
Annotation	Only on control

Abort (Remote Command Only)

Stops the current measurement. Aborts the current measurement as quickly as possible, resets the sweep and trigger systems, and puts the measurement into an "idle" state. If the instrument is in the process of aligning when `:ABORt` is sent, the alignment finishes *before* the abort function is performed, so `:ABORt` does not abort an alignment.

If the instrument is set for **Continuous** measurement, it sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the instrument is set for **Single** measurement, it remains in the "idle" state until an `:INIT:IMM` command is received.

Remote Command	`:ABORt`
Example	`:ABOR`
Notes	If :`INIT:CONT` is `ON`, then a new continuous measurement will start immediately, with sweep (data acquisition) occurring once the trigger condition has been met If `INIT:CONT` is `OFF`, then `:INIT:IMM` is used to start a single measurement, with sweep (data acquisition) occurring once the trigger condition has been met
Dependencies	For continuous measurement, `:ABORt` is equivalent to the **Restart** key Not all measurements support this command
Status Bits/OPC dependencies	The `STATus:OPERation` register bits 0 through 8 are cleared , *except* bit 6 (Waiting for Periodic Sync). Initiating a measurement and Waiting for Periodic Sync could be asynchronous

	The `STATus:QUEStionable` register bit 9 (`INTegrity` sum) is cleared Since all the bits that feed into OPC are cleared by `:ABORt`, the Abort command will cause the `*OPC` query to return true

Sweep Time Annotation (Remote Query Only)

Returns the **Sweep Time Annotation** value. Available only on non-sweeping hardware.

This value is also displayed in the result trace window.

The value returned is the estimated turnaround time of each measurement cycle, in seconds. The turnaround time is the sum of the signal acquisition time, FFT time, and other overhead time, to complete the entire span of each measurement cycle.

Remote Command	`[:SENSe]:<meas>:SWEep:ETIMe?` `<meas>` is the identifier for the current measurement; any one of `CHPower|ACPower|OBWidth|MONitor`
Example	Channel Power measurement `:CHP:SWE:ETIMe?`
Dependencies	Available only on non-sweeping hardware
Preset	Automatically calculated

3.11.9.2 Sweep Config

Accesses controls that enable you to configure the Sweep and Control functions of the instrument, such as Sweep Rules.

Points

Sets the number of points taken per sweep, and displayed in the traces. The current value of points is displayed parenthetically, next to the sweep time in the lower-right corner of the display. Using more points provides greater resolution. Using fewer points compacts the data and decreases the time required to access a trace over the remote interface.

Increasing the number of points does not increase the sweep time. However, it can slightly impact the trace processing time and therefore the overall measurement speed. Decreasing the number of points does not decrease the sweep time, but it may speed up the measurement, depending on the other sweep settings (for example, in FFT sweeps). Fewer points will always speed up the I/O.

Due to minimum sweep rate limitations of the hardware, the minimum sweep time available to the user will increase above its normal value of 1 ms as the number of sweep points increases above 15001.

Changing the number of sweep points has several effects on the instrument. Since markers are read at the point location, the marker reading may change. The sweep time resolution will change. Trace data for all the traces will be cleared and, if Sweep is in Cont, a new trace taken. If any trace is in average or hold, the averaging starts over.

Because of sweep time quantization issues, the knob and up/down keys cannot be used to adjust the number of points.

When in a split screen display each window may have its own value for points.

When sweep points is changed, an informational message "Sweep points changed, all traces cleared" is displayed and in the 5G NR mode, Auto Sweep Points is set to OFF(0).

Remote Command	`[:SENSe]:MONitor:SWEep:POINts <integer>` `[:SENSe]:MONitor:SWEep:POINts?`
Example	`:MON:SWE:POIN 1000` `:MON:SWE:POIN?`
Dependencies	This function is not available when Signal ID is set to On in External Mixing Neither the knob nor the step keys can be used to change this value. If it is tried, a warning is given Not displayed in modes that do not support Swept
Couplings	Whenever the number of sweep points change: – All trace data is erased – Any traces with Update Off will also go to Display Off (like going from View to Blank in the older instruments) – Sweep time is re-quantized – Any limit lines that are on will be updated – If averaging/hold is on, averaging/hold starts over – Auto Sweep Points is OFF (Only 5GNR) The resolution of setting the sweep time depends on the number of points selected
Preset	1001 unless noted below 2001: 5GNR
State Saved	Saved in instrument state
Min	1
Max	20001
Annotation	On second line of annotations, in lower right corner in parenthesis behind the sweep annotation

3.11.10 Trace

Lets you control the acquisition, display, storage, detection, and manipulation of trace data for the available traces.

The "Trace Control" on page 2136 tab in this menu contains radio-button selections for the trace type (**Clear/Write, Trace Average, Max Hold, Min Hold**) and **View/Blank** setting for the selected trace.

3.11.10.1 Select Trace

Specifies the *selected trace*, which is the trace that will be affected when you change trace settings.

Select Trace appears above the menu panel, indicating that it applies to *all* controls in the menu panel. **Select Trace** is blanked if you select a tab whose controls do *not* depend on the selected trace (for example, **Trace Function**).

Notes	The selected trace is remembered even when not in the **Trace** menu
Dependencies	For the Swept SA measurement: – In Image Suppress mode, when you select a trace it becomes the active trace, and the formerly active trace goes into View – When you turn on Image Suppress, Update turns off for all traces except the selected trace For the ACP measurement, when **Meas Method** is `RBW`, `FAST` or `FPOWer`, **Select Trace** is disabled
Preset	Trace 1
State Saved	Yes

3.11.10.2 Trace Control

The controls on this tab allow you to set the "Trace Type" on page 2137 and its update mode.

There are four Trace Types:

- Clear/Write
- Trace Average
- Max Hold
- Min Hold

Each type handles data in a different way.

Each trace also has two values that determine whether it is being written or not, and whether it is being displayed or not. These values, **Update** and **Display,** are described fully in the "View/Blank" on page 2142 control description. Essentially, when **Update** is `ON`, a trace is updating, and when **Update** is `OFF` it is not. When **Display** is `ON`, it is visible and when **Display** is `OFF` it is not. These terms are used throughout the descriptions in this section.

Trace Type

There are four trace Types:

Option	Parameter	SCPI Example	Details
Clear/Write	`WRITe`	`:TRAC2:TYPE WRIT`	See: "Clear/Write" on page 2140
Trace Average	`AVERage`	`:TRAC2:TYPE AVER`	See: "Trace Average" on page 2140
Maximum Hold	`MAXHold`	`:TRAC3:TYPE MAXH`	See: "Max Hold" on page 2141
Minimum Hold	`MINHold`	`:TRAC5:TYPE MINH`	See: "Min Hold" on page 2141

Full descriptions of each type are provided below. You may select one of these types for each trace. Re-selecting the current **Trace Type** initiates the same action that selecting it the first time did, even though it is already selected. For example, selecting **Clear/Write** while **Clear/Write** is already selected will nonetheless clear the trace and begin rewriting it.

Besides the **Trace Type**, the "View/Blank" on page 2142 state must be set to **Active** (**Update**: `ON`, **Display**: `ON`) for a trace to be updating and visible. Selecting any **Trace Type** automatically makes the trace **Active**.

See also: "Trace Mode Backwards Compatibility Commands" on page 2138

Remote Command	For Swept SA Measurement (in SA Mode):
	`:TRACe[1]|2|…|6:TYPE WRITe | AVERage | MAXHold | MINHold`
	`:TRACe[1]|2|…|6:TYPE?`
	For all other measurements:
	`:TRACe[1]|2|3:<meas>:TYPE WRITe | AVERage | MAXHold | MINHold`
	`:TRACe[1]|2|3:<meas>:TYPE?`
	where `<meas>` is the identifier for the current measurement

Example	`:TRAC:TYPE WRIT` `:TRAC:TYPE?`
Couplings	Selecting a **Trace Type** (by pressing any of the Trace Type selections or sending `:TRAC:TYPE`) sets the Trace to **Active** (**Update**: `ON`, **Display**: `OFF`), even if the same trace type was already selected When Detector setting is "Auto" (`[:SENSe]:<meas>:DETector:AUTO?`), Detector (`[:SENSe]:<meas>:DETector[:FUNCtion]?`) switches aligning with the switch of this parameter: "`NORMal`" with `WRITe` (Clear Write), "`AVERage`" with `AVERage`, "`POSitive` (peak)" with `MAXHold`, and "`NEGative` (peak)" with `MINHold`

Preset	Swept SA and Monitor Spectrum: `WRITe` All other measurements: `AVERage` Following **Preset**, all traces are cleared (all trace points set to mintracevalue)
State Saved	The type of each trace is saved in instrument state
Annunciation	The type for each trace is indicated in the Trace annunciator panel on the Measurement Bar

Trace Mode Backwards Compatibility Commands

In earlier instruments, the "Trace Modes" were: Clear/Write, Max Hold, Min Hold, View and Blank. Averaging was global to all traces and was controlled under the **BW/Avg** menu.

In X-Series, trace averaging can be done on a per-trace basis. The Trace Modes (now called Trace Types) are Clear/Write, Trace Average, Max Hold and Min Hold. View and Blank are set separately under "View/Blank" on page 2142.

While this provides more flexibility, it also gives rise to potential backwards compatibility problems. To mitigate these, the old Trace Mode command has been retained and a new Trace Type command has been added. The :`TRACe:MODE` command is retained for backwards compatibility, and the :`TRACe:TYPE`, :`TRACe:UPDate` and :`TRACe:DISPlay` commands introduced for ongoing use. The old Trace Modes are selected using `:TRAC:MODE`, whose parameters are mapped into calls to `:TRACe:TYPE`, `:TRACe:UPDate` and `:TRACe:DISPlay`, and the old global Averaging command `[:SENSe]:AVERage[:STATe]` is provided for backwards compatibility. See the individual command descriptions for details.

When **Average/Hold** in the **Meas Setup**, **Legacy Compatibility** menu is `ON`, the following is true for traces in Max Hold and Min Hold:

- They ignore the **Average/Hold** number; **Single** for Max Hold causes one sweep only, so switching to **Single** stops after the current sweep, and switching to **Cont** starts again without clearing the accumulated result
- Max Hold is not cleared on a **Restart**, **Single** or `:INIT:IMM`, but changing a measurement parameter, like frequency or bandwidth etc., still restarts the Max Hold

Preset	`WRITe`
State Saved	The trace mode is an alias only
Backwards Compatibility SCPI	`:TRACe[1]|2|…|6:MODE WRITe | MAXHold | MINHold | VIEW | BLANk` `:TRACe[1]|2|…|6:MODE?`
Backwards Compatibility Notes	The legacy `:TRACe:MODE` command is retained for backwards compatibility. In conjunction with the legacy `:AVErage` command, it works as follows: – `:AVErage ON|OFF` sets/clears a variable that we will call average for the sake of this discussion. This variable is maintained by the instrument solely for backwards compatibility. See

	the `[:SENSe]:AVERage[:STATe]` command description below – `:TRACe:MODE WRITe` sets `:TRACe:TYPE WRITe` (Clear/Write) unless average is true, in which case it sets it to `:TRACe:TYPE AVErag`e. It also sets `:TRACe:UPDate ON`, `:TRACe:DISPlay ON`, for the selected trace – `:TRACe:MODE MAXHold` sets `:TRACe:TYPE MAXHold` (Max Hold). It also sets `:TRACe:UPDate ON`, `:TRACe:DISPlay ON`, for the selected trace – `:TRACe:MODE MINHold` sets `:TRACe:TYPE MINHol`d (Min Hold). It also sets `:TRACe:UPDate ON`, `:TRACe:DISPlay ON`, for the selected trace – `:TRACe:MODE VIEW` sets `:TRACe:UPDate OFF`, `:TRACe:DISPlay ON`, for the selected trace – `:TRACe:MODE BLANk` sets `:TRACe:UPDate OFF`, `:TRACe:DISPlay OFF`, for the selected trace The query returns the same value as `:TRACe:TYPE?`, meaning that if you set `:TRACe:MODE:VIEW` or `:TRACe:MODE:BLANk`, the query response will not be what you sent `:TRACe[n]:MODE` was formerly used to set the type or "writing mode" of the trace. At that time, View and Blank were writing modes. The new `:TRACe:TYPE` command should be used in the future, but `:TRACe:MODE` is retained to provide backwards compatibility In X-Series, unlike earlier instruments, Max Hold and Min Hold now obey the Average Number and counts up to a terminal value as Average always has As the **Average/Hold Number** now affects **Min Hold** and **Max Hold**, the operations that restart Averaging (for example, the **Restart** key) now also restart **Min Hold** and **Max Hold** As a result of these changes, legacy code that restarts averaging while retaining a running Max Hold will need to be rewritten, because the Max Hold will now restart when the Average does Also, previous to X-Series: – Pressing **Max Hold** while already in **Max Hold** (or doing so remotely) had no effect. Now it will clear the trace and restart the sweep and the Max Hold sequence – Changing the vertical scale (Log/Lin or dB/div) of the display restarted **Max Hold** and **Min Hold**. This is no longer the case
Preset	`OFF`
State Saved	The state of Average is saved in Instrument State for ghosting purposes
Backwards Compatibility SCPI	`[:SENSe]:AVERage[:STATe] ON | OFF | 1 | 0` `[:SENSe]:AVERage[:STATe]?`
Backwards Compatibility Notes	Previous to X-Series, Averaging (also sometimes known as trace averaging) was global to all traces, that is, it was either on or off for all active traces. The legacy command `[:SENSe]:AVERage [:STATe] ON|OFF|1|0` was used to turn Averaging on or off In X-Series, Averaging is turned on or off on a per-trace basis, so it can be on for one trace and off for another For backwards compatibility, the old global Average State variable is retained solely as a legacy

variable, turned on and off and queried by the legacy command `[:SENSe]:AVERage[:STATe] OFF|ON|0|1.` When Average is turned on, any trace in Clear/Write will get put into Average. While Average is on, any trace put into Clear/Write by the old `:TRAC:MODE` command will instead get put into Average. When Average is turned off, any trace in Average will get put into Clear/Write

Trace Type Details

Clear/Write

Each trace update replaces the old data in the trace with new data.

Pressing **Clear/Write** for the selected trace, or sending `:TRAC:TYPE WRIT` for the specified trace, sets the trace type to **Clear/Write** and clears the trace, even if you are already in **Clear/Write**. Then a new sweep is initiated. Trigger conditions must be met before the sweep actually starts, and if in **Single** the sweep won’t start until **Restart** is pressed.

Pressing **Clear/Write** stops the current sweep and initiates a new one, so **Trace Average, Max Hold** and **Min Hold** data may be interrupted in mid-sweep when **Clear/Write** is pressed, and therefore may not accurately reflect the displayed count. Therefore, when **Clear/Write** is pressed for one trace, **Trace Average, Max Hold** and **Min Hold** must restart for all traces.

When in **Clear/Write**, if a measurement-related instrument setting is changed (that is, one which requires new data to be taken, like **Center Frequency** or **Attenuation**), a new sweep is initiated but the trace is not cleared.

Trace Average

The instrument maintains and displays an average trace, which represents the cumulative average on a point-by-point basis of the new trace data and previous averaged trace data.

Pressing **Trace Average** (for the selected trace), or sending `:TRAC:TYPE AVER` (for the specified trace), sets the trace type to **Trace Average**, clears the trace, initiates a new sweep, and restarts the Average sequence.

Details of the count limiting behavior and the averaging calculations may be found under **Avg|Hold Number** and **Average Type** under **Meas Setup.**

When in **Trace Average**, if a measurement-related instrument setting is changed (that is, one which requires new data to be taken, like Center Frequency or Attenuation), the average restarts and a new sweep is initiated but the trace is not cleared.

Restarting the average means:

- The average/hold count k is set to 1, so that the next time the average trace is displayed it simply represents one trace of new data
- A new sweep is initiated
- Once the new sweep starts, the trace is overwritten with current trace data as the first trace of the new average

Remember that restarting averaging also restarts **Max Hold** and **Min Hold**, as there is only one count for Trace Average and Hold.

Max Hold

The instrument maintains and displays a max hold trace, which represents the maximum data value on a point-by-point basis of the new trace data and previous trace data. Details of the count limiting behavior may be found under **Avg|Hold Number** under **Meas Setup.**

Pressing **Max Hold** for the selected trace, or sending `:TRAC:TYPE MAXH` for the specified trace, sets the Trace Type to **Max Hold,** clears the trace , initiates a new sweep, and restarts the hold sequence, even if you are already in **Max Hold**.

When in **Max Hold**, if a measurement-related instrument setting is changed(that is, one which requires new data to be taken, like **Center Frequency** or **Attenuation**), the **Max Hold** sequence restarts and a new sweep is initiated but the trace is not cleared.

Restarting the **Max Hold** sequence means:

- The average/hold count k is set to 1, so that the next time the max hold trace is displayed it simply represents one trace of new data
- A new sweep is initiated.

Remember that restarting **Max Hold** also restarts averaging and **Min Hold**, as there is only one count for Trace Average and Hold.

Min Hold

The instrument maintains and displays a min hold trace, which represents the minimum data value on a point-point basis of the new trace data and previous trace data. Details of the count limiting behavior may be found under **Avg|Hold Number** under the **Meas Setup** functions.

Pressing **Min Hold** for the selected trace, or sending `:TRAC:TYPE MINH` for the specified trace, sets the Trace Type to **Min Hold,** clears the trace, initiates a new sweep, and restarts the hold sequence, even if you are already in **Min Hold**.

When in **Min Hold**, if a measurement-related instrument setting is changed(that is, one which requires new data to be taken, like **Center Frequency** or **Attenuation**), the **Min Hold** sequence restarts and a new sweep is initiated but the trace is not cleared.

Restarting the **Min Hold** sequence means:

- The average/hold count k is set to 1, so that the next time the min hold trace is displayed it simply represents one trace of new data
- A new sweep is initiated

Remember that restarting **Min Hold** also restarts **Max Hold** and averaging, because there is only one count for Trace Average and Hold.

Clear and Write | Restart Averaging | Restart Max/Min Hold

Starts the trace writing, as though the "Trace Type" on page 2137 had just been selected. The effect is exactly the same as reselecting the current **Trace Type** again – the control is provided because it may not be obvious that reselecting the same selection from a radio button menu will take any action.

This control displays different labels, depending on the selected Trace Type:

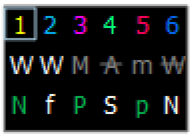
- **Clear/Write**: Clear and Write
- **Trace Average**: Restart Averaging
- **Max Hold**: Restart Max Hold
- **Min Hold**: Restart Min Hold

View/Blank

Lets you set the state of the two trace variables: **Update** and **Display**. The choices available in this dropdown menu are:

Active	Update and Display both `ON`
View	Update `OFF`; Display `ON`
Blank	Update `OFF`; Display `OFF`
Background	Update `ON`, Display `OFF` Allows a trace to be blanked *and* continue to update "in the background", which was not possible in the past

In the Swept SA measurement, a trace with **Display**`OFF` is indicated by a strikethrough of the type letter in the trace annotation panel in the Measurement Bar. A trace with **Update**`OFF` is indicated by dimming the type letter in the trace annotation panel in the Measurement Bar. In the example below, Traces 3, 4, 5 and 6 have **Update**`OFF`, and Traces 4 and 6 have **Display**`OFF`.



See: "More Information" on page 2144

Notes	For the commands to control the two variables, Update and Display, see "Trace Update State On/Off" on page 2143 and "Trace Display State On/Off" on page 2144 below
Dependencies	When Signal ID is on, this key is grayed-out
Couplings	Selecting a Trace Type for a trace (pressing the key or sending the equivalent command) puts the trace in **Active** (Update ON and Display ON), even if that trace type was already selected Selecting a detector for a trace (pressing the key or sending `[:SENS]:DET:TRAC`) puts the trace in **Active** (**Update**ON and **Display**ON), even if that detector was already selected Selecting a "Math Function" on page 1145 other than `OFF` for a trace (pressing the key or sending the equivalent command) puts the trace in **Active** (**Update**ON and **Display**ON), even if that Math Mode was already selected Loading a trace from a file puts that trace in **View** regardless of the state it was in when it was saved; as does being the target of a **Copy** or a participant in an **Exchange**

Trace Update State On/Off

Remote Command	For Swept SA Measurement (in SA Mode):
	`:TRACe[1]|2|…|6:UPDate[:STATe] ON | OFF | 1 | 0`
	`:TRACe[1]|2|…|6:UPDate[:STATe]?`
	For all other measurements:
	`:TRACe[1]|2|3:<meas>:UPDate[:STATe] ON | OFF | 1 | 0`
	`:TRACe[1]|2|3:<meas>:UPDate[:STATe]?`
	where <meas> is the identifier for the current measurement

Example	Make trace 2 inactive (stop updating): `:TRAC2:UPD 0`
Couplings	Whenever you set **Update** to ON for any trace, the **Display** is set to ON for that trace

Preset	For Swept SA Measurement (in SA Mode):
	`1|0|0|0|0|0`
	ON for Trace 1; `OFF` for 2–6
	For all other measurements:
	`1|0|0`
	ON for Trace 1; `OFF` for 2 &3

State Saved	Saved in instrument state

Trace Display State On/Off

Remote Command	For Swept SA Measurement (in SA Mode):
	`:TRACe[1]|2|…|6:DISPlay[:STATe] ON | OFF | 1 | 0`
	`:TRACe[1]|2|…|6:DISPlay[:STATe]?`
	For all other measurements:
	`:TRACe[1]|2|3:<meas>:DISPlay[:STATe] ON | OFF | 1 | 0`
	`:TRACe[1]|2|3:<meas>:DISPlay[:STATe]?`
	where <meas> is the identifier for the current measurement

Example	Make trace 1 visible:
	`:TRAC2:DISP 1`
	Blank trace 3:
	`:TRAC3:DISP 3`

Couplings	Whenever you set **Update** to `ON` for any trace, the **Display** is set to `ON` for that trace

Preset	For Swept SA Measurement (in SA Mode):
	`1|0|0|0|0|0`
	`ON` for Trace 1; `OFF` for 2–6
	For all other measurements:
	`1|0|0`
	`ON` for Trace 1; `OFF` for 2 &3

State Saved	Saved in instrument state

More Information

When a trace becomes inactive, any update from the `:SENSe` system (detectors) immediately stops, without waiting for the end of the sweep. The trace data remains unchanged, but stops updating. If the trace is blanked, this still does not affect the data in the trace. Traces that are blanked (**Display**=`OFF`) do not display nor appear on printouts, but their data stays intact, they may be queried, and markers may be placed on them

In most cases, inactive traces are static and unchanging; however, there are cases when an inactive trace will update, specifically:

- if data is written to that trace from remote
- if trace data is loaded from mass storage
- if the trace is the target of a **Copy** or participant in an **Exchange**
- if the trace is cleared using **Clear Trace**

Inactive traces that are also being displayed (traces in **View**) are displayed at half intensity. Traces in **View** display across the entire X-Axis of the instrument. Their horizontal placement does not change, even if X-Axis settings subsequently are changed, although Y-Axis settings do affect the vertical placement of data.

When a trace becomes active (**Update**=`ON`), the trace is cleared, the average count is reset, and a new sweep is initiated.

Note that putting a trace into **Display**=`OFF` and/or **Update**=`OFF` does *not* restart the sweep and does *not* restart Averaging or Hold functions for any traces.

Trace Settings Table

Lets you configure the Trace system using a visual utility.

Clear All Traces

Clears all traces from the display.

Remote Command	`:TRACe:MONitor:CLEar:ALL`
Example	`:TRAC:MON:CLE:ALL`
Backwards Compatibility SCPI	`:DISPlay:MONitor:VIEW:WINDow:TRACe:CLEar:ALL`

3.11.10.3 Detector

Lets you choose and configure detectors for the selected trace.

Detector

Allows you to select a specific detector for the current measurement. When the detector choice is Auto, the instrument selects the detector. The selected detector depends on marker functions, trace functions, and trace averaging functions for the current measurement.

The following options are available:

`AUTO`	The detector selected depends on marker functions, trace functions, average type, and the trace averaging function In the ACP measurement, when in AUTO, the detector selected is set to AVERage, unless the Radio Standard defaults state otherwise e.g., it is set to Peak for Radio Standard = PDC when Device = both MS and BTS, and when Radio Standard = NADC and Device = MS
`NORMal`	The detector determines the peak of the CW-like signals, and it yields alternating maximums and minimums of noise-like signals. This is also referred to as Rosenfell detection

`AVERage`	The detector determines the average of the signal within the sweep points, using RMS averaging
`POSitive` Peak	The detector determines the maximum of the signal within the sweep points
`SAMPle`	The detector indicates the instantaneous level of the signal at the center of the sweep points represented by each display point
`NEGative` Peak	The detector determines the minimum of the signal within the sweep points

Because they may not find a spectral component's true peak, neither `AVERage` nor `SAMPle` detectors measure amplitudes of CW signals as accurately as Peak or `NORMal`, but they do measure noise without the biases of Peak detection.

<table>
<tr><td>Remote Command</td><td><code>[:SENSe]:MONitor:DETector:TRACe[1]|2|3 AVERage | NEGative | NORMal | POSitive | SAMPle | RMS</code>
<code>[:SENSe]:MONitor:DETector:TRACe?</code></td></tr>
<tr><td>Example</td><td><code>:MON:DET:TRAC NORM</code>
<code>:MON:DET:TRAC?</code>
<code>:MON:DET RMS</code>
Sets the detector to <code>AVERage</code>. <code>AVERage</code> uses RMS averaging, so this is equivalent to selecting <code>RMS</code></td></tr>
<tr><td>Notes</td><td>The query returns a string corresponding to the detector type as shown below
<table>
<tr><th>String Returned</th><th>Definition</th></tr>
<tr><td><code>NORM</code></td><td>Normal</td></tr>
<tr><td><code>AVER</code></td><td>Average (RMS)</td></tr>
<tr><td><code>POS</code></td><td>Peak</td></tr>
<tr><td><code>SAMP</code></td><td>Sample</td></tr>
<tr><td><code>NEG</code></td><td>Negative Peak</td></tr>
</table>
The RMS selection sets the detector type to <code>AVERage</code> with RMS averaging. Therefore, if RMS has been selected, the query returns “<code>AVER</code>”</td></tr>
<tr><td>Couplings</td><td>When "Detector Select Auto/Man" on page 2147 is <code>ON</code>, the detector selected depends on the Trace (Average) type</td></tr>
<tr><td>Preset</td><td><code>NORMal</code></td></tr>
<tr><td>State Saved</td><td>Yes</td></tr>
<tr><td>Range</td><td><code>AVERage|NEGative|NORMal|POSitive|SAMPle|RMS</code></td></tr>
<tr><td>Annotation</td><td>The four letter mnemonic for the detector appears in the trace window next to the trace it applies to</td></tr>
<tr><td>Backwards Compatibility SCPI</td><td><code>[:SENSe]:MONitor:DETector[:FUNCtion]</code>
Applied to Trace 1 only</td></tr>
</table>

Detector Select Auto/Man

Sets the Detector mode to Auto or Manual. In Auto, the proper detector is chosen based on rules that take into account the measurement settings and other instrument settings.

When any detector is selected by the user, this toggles automatically set to Man (manual).

Remote Command	`[:SENSe]:MONitor:DETector:TRACe[1]|2|3:AUTO ON | OFF | 1 | 0` `[:SENSe]:MONitor:DETector:TRACe[1]|2|3:AUTO?`
Example	`:MON:DET:TRAC2:AUTO ON` `:MON:DET:TRAC2:AUTO?`
Couplings	When this function is `ON`, the "Detector" on page 2145 and "Trace Type" on page 2137 settings automatically align as follows: – "`NORMal`" with Clear Write – "`AVERage`" with `AVERage` – "`POSitive` (Peak)" with `MAXHold` – "`NEGative` (Peak)" with `MINHold`
Preset	`ON`
State Saved	Yes
Backwards Compatibility SCPI	`[:SENSe]:MONitor:DETector:AUTO` Applied to Trace 1 only

3.12 IQ Waveform Measurement

The IQ Waveform measurement is a time-domain measurement that lets you view the envelope, real and imaginary components of an RF or baseband signal. It is similar in many respects to the zero-span measurement in traditional spectrum analysis but gives you direct access to the I/Q pairs of the signal, such as those that make up modern communications signals. The IQ Waveform measurement can also be used to perform general purpose power measurements to a high degree of accuracy.

You can examine the RF envelope (magnitude) of the signal, or open an I/Q Waveform window, which shows the I and Q signal waveform voltage versus time, to disclose the voltages that comprise the complex modulated waveform of a digital signal.

Measurement Commands

The general functionality of "CONFigure" on page 2997, "INITiate" on page 2998, "FETCh" on page 2998, "MEASure" on page 3000, and "READ" on page 2999 are described in the section **SCPI Operation and Results Query** in the topic **Programming the Instrument**.

The following measurement commands and queries are used to configure the measurement:

`:INITiate:WAVeform`	Initiates a trigger cycle for the `WAV` measurement, but does not return any data. You must then use `:FETC:WAV[n]?` to retrieve data Does not change any measurement settings
`:CONFigure?`	Returns the long form name of current measurement, in this case, `WAVeform`
`:CONFigure:WAVeform`	Selects `WAV` measurement with Meas Setup settings in preset state – same as "Meas Preset" on page 2244
`:CONFigure:WAVeform:NDEFault`	Selects `WAV` measurement *without* affecting settings

The following queries are used to retrieve the results:

`:FETCh:WAVeform?`	Retrieves the data defined by n
`:MEASure:WAVeform[n]?`	Switches to `WAV` measurement, restores default values, starts the measurement, then retrieves the data defined by `n`
`:READ:WAVeform[n]?`	Starts the measurement, then retrieves the data defined by `n`

Remote Command Results

For the `:FETCh`, `:MEASure` and `:READ` queries above, the results returned depend on the `n` parameter value as follows:

<table>
<tr><th>n</th><th>Results Returned</th></tr>
<tr><td>0</td><td>Returns unprocessed I/Q trace data, as a series of trace point pairs, in Volts
Each pair consists of an I value (even-indexed, starting at 0), followed by a Q value (odd-indexed)</td></tr>
<tr><td>1</td><td>Returns the following scalar results:
<table>
<tr><th>#</th><th>Item</th><th>Unit, if any</th></tr>
<tr><td>1</td><td>Sample Time
A floating-point number representing the time between samples. This value is important when analyzing signal results (that is, when you send a query using n = 0, 2, etc.)</td><td></td></tr>
<tr><td>2</td><td>Mean Power
The power across the entire trace. If Averaging State is ON, as set by "Avg/Hold Number (Averaging On/Off)" on page 2234, the power is for the latest acquisition</td><td>dBm</td></tr>
<tr><td>3</td><td>Mean Power Averaged
The power across the entire trace
If Averaging State is ON, the power for N averages (the latest acquisition), as set by "Avg/Hold Number (Averaging On/Off)" on page 2234
If Averaging State is OFF, the value of the mean power averaged is the same as the value of the mean power</td><td>dBm</td></tr>
<tr><td>4</td><td>Number of samples
The number of data points in the captured signal. This value is important when analyzing signal results (that is, when you send a query using n = 0, 2, etc.)</td><td></td></tr>
<tr><td>5</td><td>Peak-to-mean ratio
The ratio of the maximum signal level to the mean power. Valid values are only obtained with Averaging State OFF. If Averaging State is ON, the peak-to-mean ratio is calculated using the highest peak value, rather than the displayed average peak value</td><td>dB</td></tr>
<tr><td>6</td><td>Maximum value
The maximum of the most recently acquired data</td><td>dBm</td></tr>
<tr><td>7</td><td>Minimum value
The minimum of the most recently acquired data</td><td>dBm</td></tr>
</table></td></tr>
<tr><td>2</td><td>Returns trace point values of the entire captured signal envelope trace data
Floating-point numbers, representing the power of the signal (in dBm). There are N data points, where N is the number of samples. The period between the samples is defined by the **Sample Time** (see n = 1 above)</td></tr>
<tr><td>3</td><td>Returns unprocessed I/Q trace data, as a series of trace point values, in volts
The I values are listed first in each pair, as the even-indexed values (starting at 0). The Q values are odd-indexed. The number of points returned is defined by "Meas Time" on page 2237 * "Sample Rate" on page 2237, and is one point less than index 0</td></tr>
</table>

n	Results Returned
4	Returns conjugated I/Q trace data, in Volts, if "Invert Spectrum" on page 2274 is set to `INVert`. Otherwise, returns the same unprocessed I/Q trace data as n = 0 above

3.12.1 Views

You can select the measurement view you want to use from the **Mode/Measurement/View** selector screen. You can also specify the view programmatically, using one of these commands:

View Selection by name

Specify the desired View by its name:

Remote Command	`:DISPlay:WAVeform:VIEW[:SELect] RFENvelope | IQ` `:DISPlay:WAVeform:VIEW[:SELect]?`
Example	`:DISP:WAV:VIEW RFEN` `:DISP:WAV:VIEW?`
Preset	`RFENvelope`
State Saved	Saved in instrument state
Range	RF Envelope | I/Q Waveform

View Selection by number

Specify the desired View by its number:

Remote Command	`:DISPlay:WAVeform:VIEW:NSELect <integer>` `:DISPlay:WAVeform:VIEW:NSELect?`
Example	`:DISP:WAV:VIEW:NSEL 1` `:DISP:WAV:VIEW:NSEL?`
Notes	View 1 is the RF Envelope View View 2 is the I/Q Waveform View
Preset	1
State Saved	Saved in instrument state
Min/Max	1/2

3.12.1.1 RF Envelope

Windows: "RF Envelope" on page 2151, "Metrics" on page 2152

Shows an RF envelope (magnitude) window and a metrics table showing the measured values for the mean power and peak-to-mean power.

3.12.1.2 I/Q Waveform

Windows: "I/Q Waveform" on page 2152

Shows a window with I and Q voltages vs time. SCPI commands can also be used to query the I/Q pairs while in this View.

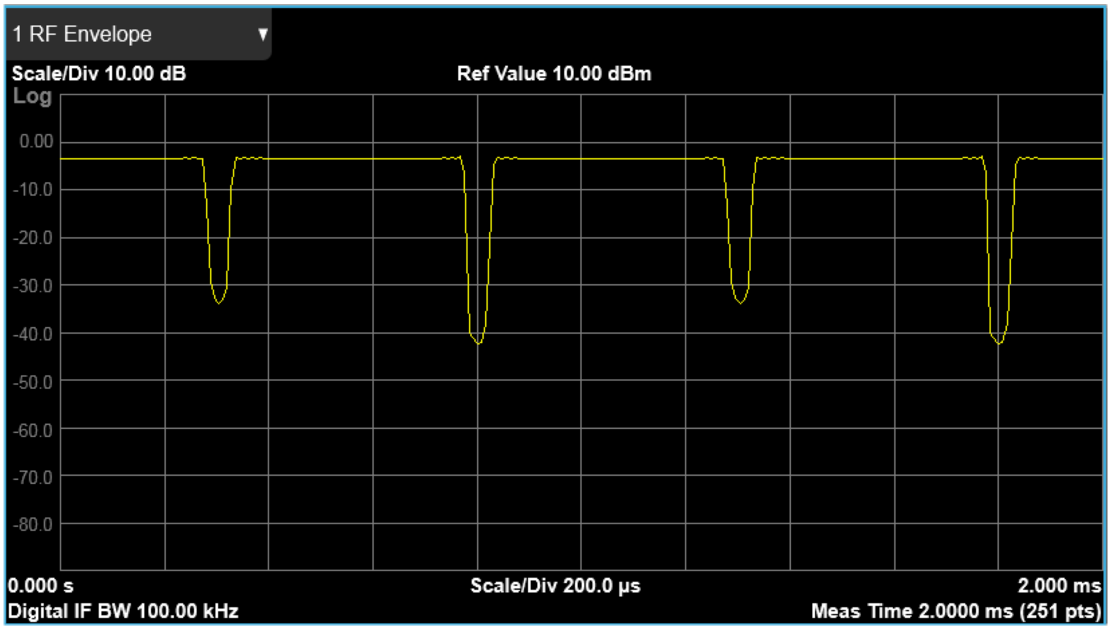
3.12.2 Windows

The following windows are available in this measurement.

- "RF Envelope" on page 2151
- "Metrics" on page 2152
- "I/Q Waveform" on page 2152

3.12.2.1 RF Envelope

Displays an amplitude-vs time (time domain) graph of the envelope (magnitude) of the RF waveform:



3.12.2.2 Metrics

Shows the measured values for the mean power and peak-to-mean power of the RF Envelope result of the waveform (time domain) measurements.

Mean Pwr (Entire Trace)	-55.97 dBm
Pk-to-Mean	8.287 dB

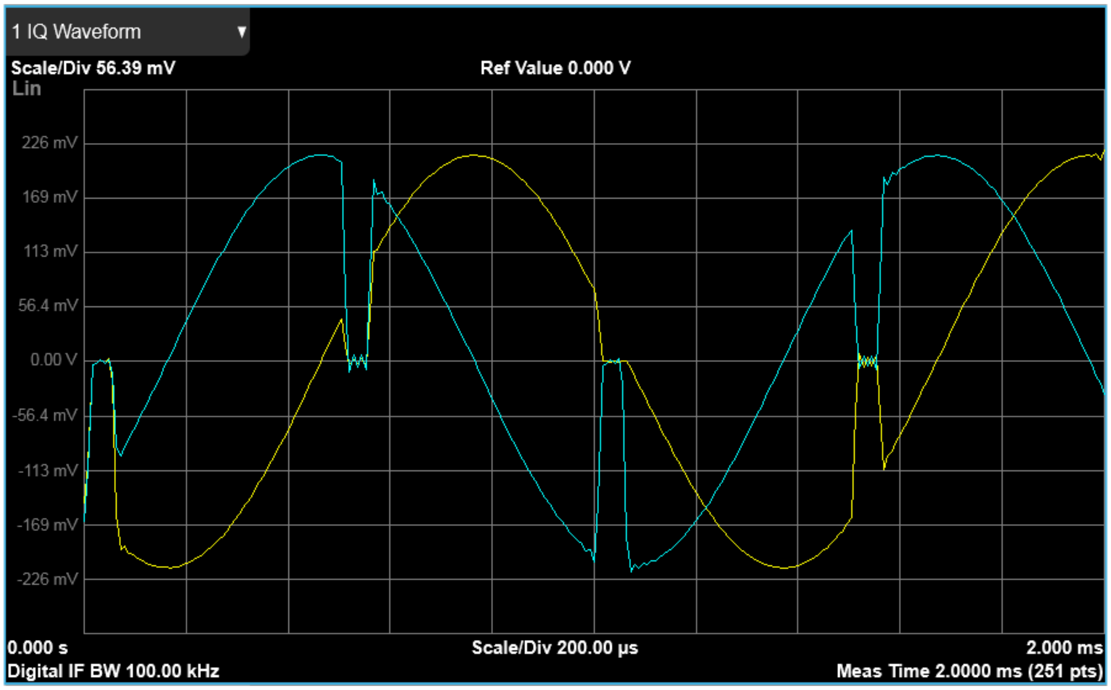
Current Data	
Max Pt	-47.69 dBm
Min Pt	-108.0 dBm

Numeric Results

Name	Type	Description	Unit	Format
Mean Pwr	Float64	The mean power (dBm). This is either the power across the entire trace, or the power between markers if the markers are enabled	dBm	XX.XX dBm
Pk-to-Mean	Float64	This is the ratio of the maximum signal level to the mean power	dB	XX.XX dB
Max Pt	Float64	The maximum of the most recently acquired data	dBm	XX.XX dBm
Min Pt	Float64	The minimum of the most recently acquired data	dBm	XX.XX dBm

3.12.2.3 I/Q Waveform

Shows an amplitude-vs time (time domain) graph of the quadrature (I and Q) components of the RF waveform. This allows you to measure the phase of the waveform as well as its magnitude. The yellow trace is the I (real) component and the blue trace is the Q (imaginary) component.



3.12.3 Amplitude

Activates the **Amplitude** menu and selects **Reference Level** or **Reference Value** as the active function, depending on the measurement.

Some features in this menu apply to multiple measurements. Some other features apply only to specific measurements and their controls are blanked or grayed-out in measurements that do not support the feature.

3.12.3.1 Y Scale

Contains controls that pertain to the Y axis parameters of the measurement. These parameters control how data on the vertical (Y) axis is displayed and control instrument settings that affect the vertical axis.

Ref Value

Sets the value for the absolute power reference. The functionality depends on the selected window. The reference line is at the top, center, or bottom of the graticule, depending on the value of "Ref Position" on page 2156.

RF Envelope

Remote Command	`:DISPlay:WAVeform:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:RLEVel <amptd>` `:DISPlay:WAVeform:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:RLEVel?`
Example	`:DISP:WAV:VIEW:WIND:TRAC:Y:RLEV -50 dBm`
Couplings	When "Auto Scaling" on page 2157 is `ON` (default), this value is automatically determined by the measurement result. When you set a value manually, **Auto Scaling** changes to `OFF`
Preset	10.00 dBm
State Saved	Saved in instrument state
Min/Max	–/+250.00 dBm
Annotation	Ref <value> top of graph

IQ Waveform

Remote Command	`:DISPlay:WAVeform:VIEW2:WINDow[1]:TRACe:Y[:SCALe]:RLEVel <voltage>` `:DISPlay:WAVeform:VIEW2:WINDow[1]:TRACe:Y[:SCALe]:RLEVel?`
Example	`:DISP:WAV:VIEW2:WIND:TRAC:Y:RLEV 25 V`
Couplings	When "Auto Scaling" on page 2157 is On (default), this value is automatically determined by the measurement result. When you set a value manually, **Auto Scaling** changes to Off
Preset	0 V
State Saved	Saved in instrument state
Min/Max	–/+250.00 V
Annotation	Ref <value> top of graph

Scale/Div

Enables you to set the units per division of vertical scale in the logarithmic display. However, since "Auto Scaling" on page 2157 defaults to `ON`, this value is automatically determined by the measurement result. When you set a value manually, **Auto Scaling** automatically changes to `OFF`.

The SCPI command and default parameters are dependent on whether the View is "RF Envelope" on page 2150 or "I/Q Waveform" on page 2151.

RF Envelope

Remote	`:DISPlay:WAVeform:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:PDIVision <rel_ampl>`

Command	`:DISPlay:WAVeform:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:PDIVision?`
Example	`:DISP:WAV:VIEW:WIND:TRAC:Y:PDIV 5` `:DISP:WAV:VIEW:WIND:TRAC:Y:PDIV?`
Couplings	Coupled to "Scale Range" on page 2155 as follows Scale/Div = Scale Range/10 (number of divisions) When "Auto Scaling" on page 2157 is On, this value is automatically determined by the measurement result When you change a value, **Auto Scaling** automatically changes to Off
Preset	10.00 dB
State Saved	Saved in instrument state
Min	0.10 dB
Max	20.00 dB
Annotation	<value> dB/ left upper of graph

IQ Waveform

Remote Command	`:DISPlay:WAVeform:VIEW2:WINDow[1]:TRACe:Y[:SCALe]:PDIVision <voltage>` `:DISPlay:WAVeform:VIEW2:WINDow[1]:TRACe:Y[:SCALe]:PDIVision?`
Example	`:DISP:WAV:VIEW2:WIND:TRAC:Y:PDIV 25mV` `:DISP:WAV:VIEW2:WIND:TRAC:Y:PDIV?`
Couplings	Coupled to "Scale Range" on page 2155 as follows Scale/Div = Scale Range/10 (number of divisions) When "Auto Scaling" on page 2157 is On, this value is automatically determined by the measurement result When you change a value, **Auto Scaling** automatically changes to Off
Preset	100.0 mV
State Saved	Saved in instrument state
Min	1.0 nV
Max	20 V
Annotation	<value> dB/ left upper of graph

Scale Range

Sets the Y-Axis scale range.

The SCPI command and default parameters depend on whether the View is "RF Envelope" on page 2150 or "I/Q Waveform" on page 2151.

RF Envelope

Remote Command	`:DISPlay:WAVeform:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:RANGe <rel_ampl>` `:DISPlay:WAVeform:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:RANGe?`
Example	`:DISP:WAV:VIEW:WIND:TRAC:Y:RANG 100` `:DISP:WAV:VIEW:WIND:TRAC:Y:RANG?`
Couplings	Coupled to "Scale/Div" on page 2154 as follows Scale Range = Scale/Div * 10 (number of divisions) When you change a value, "Auto Scaling" on page 2157 automatically changes to `OFF`
Preset	100 dB
State Saved	Saved in instrument state
Min	1
Max	200

IQ Waveform

Remote Command	`:DISPlay:WAVeform:VIEW2:WINDow[1]:TRACe:Y[:SCALe]:RANGe <voltage>` `:DISPlay:WAVeform:VIEW2:WINDow[1]:TRACe:Y[:SCALe]:RANGe?`
Example	`:DISP:WAV:VIEW:WIND:TRAC:Y:RANG 1000` `:DISP:WAV:VIEW:WIND:TRAC:Y:RANG?`
Couplings	Coupled to "Scale/Div" on page 2154 as follows Scale Range = Scale/Div * 10 (number of divisions) When you change a value, "Auto Scaling" on page 2157 automatically changes to `OFF`
Preset	1 V
State Saved	Saved in instrument state
Min	10 nV
Max	200 V

Ref Position

Enables you to position the reference level at the top, center, or bottom of the Y Scale display. Changing the reference position does not change the reference level value.

The SCPI command and default parameters depend on whether the View is "RF Envelope" on page 2150 or "I/Q Waveform" on page 2151.

RF Envelope

Remote Command	`:DISPlay:WAVeform:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:RPOSition TOP | CENTer | BOTTom` `:DISPlay:WAVeform:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:RPOSition?`
Example	`:DISP:WAV:VIEW:WIND:TRAC:Y:RPOS CENT` `:DISP:WAV:VIEW:WIND:TRAC:Y:RPOS?`
Preset	`TOP`
State Saved	Saved in instrument state
Range	`Top|Center|Bottom`
Annotation	> and < are displayed both side of graph to indicate Reference Position

IQ Waveform

Remote Command	`:DISPlay:WAVeform:VIEW2:WINDow[1]:TRACe:Y[:SCALe]:RPOSition TOP | CENTer | BOTTom` `:DISPlay:WAVeform:VIEW2:WINDow[1]:TRACe:Y[:SCALe]:RPOSition?`
Example	`:DISP:WAV:VIEW2:WIND:TRAC:Y:RPOS CENT` `:DISP:WAV:VIEW2:WIND:TRAC:Y:RPOS?`
Preset	`CENT`
State Saved	Saved in instrument state
Range	`Top|Center|Bottom`
Annotation	> and < are displayed both side of graph to indicate Reference Position

Auto Scaling

Enables you to toggle Auto Scaling On or Off. When the **Restart** front-panel key is pressed, this function automatically determines the scale per division and reference values based on the measurement results.

Remote Command	`:DISPlay:WAVeform:VIEW[1]|2:WINDow[1]:TRACe:Y[:SCALe]:COUPle 0 | 1 | OFF | ON` `:DISPlay:WAVeform:VIEW[1]|2:WINDow[1]:TRACe:Y[:SCALe]:COUPle?`
Example	`:DISP:WAV:VIEW:WIND:TRAC:Y:COUP OFF` `:DISP:WAV:VIEW:WIND:TRAC:Y:COUP?`
Couplings	When "Auto Scaling" on page 2157 is On, and the **Restart** front-panel key is pressed, this function automatically sets the scale per division to 10 dB and determines the reference values based on the measurement results When you change a value of **Scale/Div**, **Ref Value**, or **Scale Range**, **Auto Scaling** automatically changes

	to OFF
Preset	`OFF`
State Saved	Saved in instrument state
Range	`OFF`|`ON`

3.12.3.2 Attenuation

Controls the attenuator functions and interactions between the attenuation system components.

There are two attenuator configurations in the X-Series. One is a Dual-Attenuator configuration consisting of a mechanical attenuator and an optional electronic attenuator. The other configuration uses a single attenuator with combined mechanical and electronic sections that controls all the attenuation functions. Different models in the X-Series come with different configurations.

– See "Dual-Attenuator Configurations" on page 2158

– See "Single-Attenuator Configuration" on page 2159

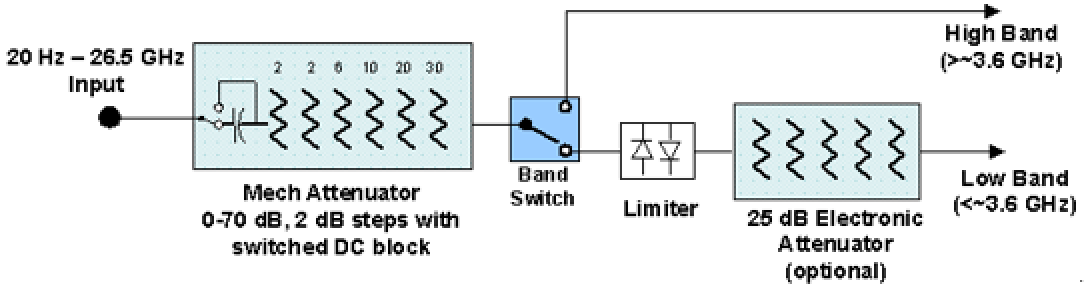
Most attenuation settings are the same for all measurements – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by **Meas Preset**.

Only available when the hardware set includes an input attenuator, which is typically only the case for Keysight’s benchtop instruments. For example, this tab does *not* appear in VXT models M9420A/10A/11A/15A/16A, M9410E/11E/15E/16E, nor in UXM. In UXM, all **Attenuation** and **Range** settings are disabled, as the expected input power level is handled by the Call Processing App that drives the DUT power control.

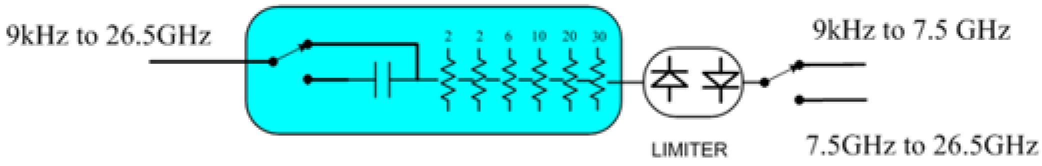
Dependencies	In measurements that support the I/Q inputs, unavailable when I/Q is the selected input. Replaced by the **Range** tab in that case

Dual-Attenuator Configurations

Configuration 1: Mechanical attenuator + optional electronic attenuator

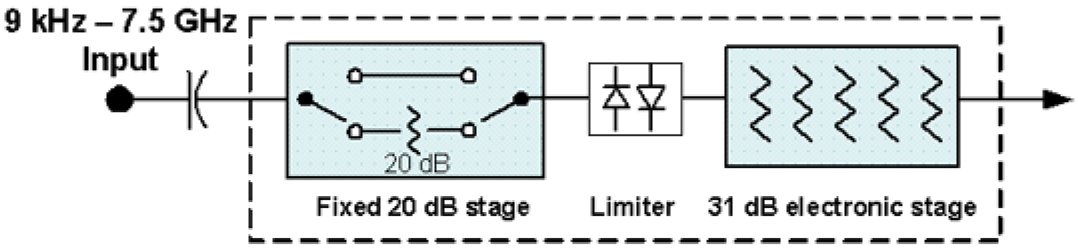


Configuration 2: Mechanical attenuator, no optional electronic attenuator

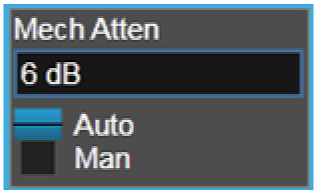


Note that Configuration 2 is not strictly speaking a dual-section attenuator, since there is no electronic section available. However, it behaves exactly like Configuration 1 without the Electronic Attenuator Option EA3, therefore for the sake of this document it is grouped into the “Dual-Attenuator” configuration.

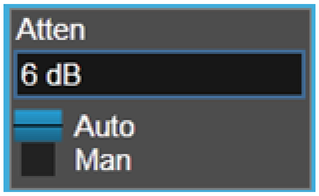
Single-Attenuator Configuration



You can tell which attenuator configuration you have by pressing the Attenuation tab, which (in most Modes) opens the Attenuation menu. If the first control in the Attenuation menu says **Mech Atten** you have the Dual-Attenuator configuration. If the first control says **Atten** you have the Single-Attenuator configuration.



Dual Attenuator



Single Attenuator

(Note that depending on the measurement, there may be no Auto/Man functionality on the Mech Atten control.)

In the Single-Attenuator configuration, you control the attenuation with a single control, as the fixed stage has only two states. In the Dual-Attenuator configuration, both stages have significant range, so you are given separate control of the mechanical and electronic attenuator stages.

When you have the Dual-Attenuator configuration, you may still have only a Single-Attenuator, because unless Option EA3 (the Electronic Attenuator option) is available, and you purchase it, you will have only the mechanical attenuator.

Full Range Atten

This control and **Attenuator Summary** only appear in N9041B, when the RF input is selected, the RF Input Port is set to RF Input 2, and the Full Range Attenuator is installed. The Full Range Attenuator adds a second input attenuator in front of RF Input 2, which enhances the protection and optimizes the performance of the extra internal mixers used by RF Input 2.

Remote Command	`[:SENSe]:POWer[:RF]:FRATten <rel_ampl>` `[:SENSe]:POWer[:RF]:FRATten?`
Example	`:POW:FRAT 14` `:POW:FRAT?`
Notes	When you enter an amplitude value that falls between valid values, the value will be incremented to the next smallest valid value
Dependencies	Only appears if input RF is selected, RF Input Port 2 is selected, and the Full Range Attenuator exists
Couplings	This value is never changed by any coupling, but other couplings use this value. See **Reference Level** and "Mech Atten" on page 2161 command descriptions
Preset	20 dB
State Saved	Saved in instrument state
Min	0 dB
Max	Only valid values are 0, 6, 14, 20 dB
Annotation	When the **Input** is **RF**, and the **Input Port** is **RF Input 2**, and the Full Range Attenuator is installed: On the Meas Bar, the field “Atten” displays as follows: – If the sweep is entirely < 50 GHz, the value shown after “Atten:” is equal to Mech Atten + Elec Atten + Full Range Atten – If the sweep is entirely > 50 GHz, the value shown after “Atten:” is equal to Full Range Atten – If the sweep straddles 50 GHz, the value shown after “Atten:” is preceded by the symbol “>=” and is equal to Full Range Atten In the **Amplitude**, "Y Scale" on page 2153 menu, and the Atten **Meas Bar** dropdown menu panel, a summary is displayed as follows: “Total Atten below 50 GHz” followed by the value of Full Range Atten + Mech Atten + Elec Atten “Total Atten above 50 GHz” followed by the value of Full Range Atten For example, if Mech Atten = 6 dB, Elec Atten = 4 dB, and Full Range Atten = 20 dB, the summary below is shown: – Attenuator summary:

- Total Atten below 50 GHz: 30 dB
- Total Atten above 50 GHz: 20 dB

Mech Atten

Labeled **Mech Atten** in Dual-Attenuator models, and **Atten** in Single-Attenuator models. In the Dual-Attenuator configuration, this control only affects the mechanical attenuator.

Lets you modify the attenuation applied to the RF input signal path. This value is normally auto-coupled to **Ref Level**, "Internal Preamp" on page 2183 Gain, any External Gain that is entered, and **Max Mixer Level** (if available), as described in the table below.

See "Attenuator Configurations and Auto/Man" on page 2163

Remote Command	`[:SENSe]:POWer[:RF]:ATTenuation <rel_ampl>` `[:SENSe]:POWer[:RF]:ATTenuation?`
Example	`:POW:ATT 20` Dual-Attenuator configuration: sets the mechanical attenuator to 20 dB Single-Attenuator mode: sets the main attenuation to 20 dB (see below for definition of “main” attenuation) In either case, if the attenuator was in Auto, it is set to Manual
Dependencies	Some measurements do not support **Auto** setting of **Mech Atten**. In these measurements, the **Auto/Man** selection is not available, and the **Auto/Man** toggle function is not available In Dual-Attenuator configurations, when the electronic attenuator is enabled, the mechanical attenuator has no auto setting, and the **Auto/Man** toggle function is not available. The state of **Auto/Man** is remembered and restored when the electronic attenuator is once again disabled. This is described in more detail in "Elec Atten" on page 2164 See "Attenuator Configurations and Auto/Man" on page 2163 for more information on the **Auto/Man** functionality
Couplings	If the RF Input Port is the RF Input: – If the USB Preamp is connected to USB, use 0 dB for **Mech Atten** – Otherwise compute the auto-selected value of **Mech Atten** based on **Reference Level**, **Int Preamp**, **External Gain**, **Ref Level Offset**, **Max Mixer Level**, **µW Path Control** and **IF Gain** settings. Limit this value to be no less than 6 dB (total attenuation below 6 dB can never be chosen by Auto) – In N9041B, if the RF Input Port is RF Input 2, use the formula above and subtract the value of "Full Range Atten" on page 2160 from the result to determine the **Mech Atten**. Limit the value so that it is never lower than 0 dB and so that total attenuation, including **Full Range Atten**, is never less than 6 dB (total attenuation, including **Full Range Atten** below 6 dB, can never be chosen by Auto) In External Mixing and BBIQ, where the attenuator is not in the signal path, the attenuator setting changes as described above when **Mech Atten** is in **Auto**, but no changes are made to the actual

<table>
<tr><td></td><td>attenuator hardware setting until the input is changed back to the RF Input
For CXA-m with Option FSA (Fine-Step Attenuator or 2 dB steps), the FSA-like behavior is only available when the frequency setting is <= 7.5 GHz. So, when the frequency is changed from below 7.5 GHz to above 7.5 GHz, the attenuation setting changes to a multiple of 10 dB that is no smaller than the previous setting. For example, 4 dB attenuation changes to 10 dB</td></tr>
<tr><td>Preset</td><td>Auto
The Auto value is 10 dB</td></tr>
<tr><td>State Saved</td><td>Saved in instrument state</td></tr>
<tr><td>Min</td><td>0 dB
The attenuation set by this control cannot be decreased below 6 dB with the knob or step keys. Values below 6 dB must be directly entered from the keypad or via SCPI. This protects against setting a dangerously small attenuation value, which can put the instrument at risk of damage to input circuitry. If the current mechanical attenuation is below 6 dB, it can be increased with the knob and step keys, but not decreased</td></tr>
<tr><td>Max</td><td><table>
<tr><td>CXA Option 503 or 507</td><td>50 dB</td></tr>
<tr><td>EXA</td><td>60 dB</td></tr>
<tr><td>All other models</td><td>70 dB</td></tr>
</table>
Note that in the Single-Attenuator configuration, the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB</td></tr>
<tr><td>Annotation</td><td>The current value for Total Atten is displayed in the Measurement Bar at the top of the display. A value appears for Electronic Attenuation only if the Electronic Attenuator is enabled. The annotation appears as:
<i>Atten: <total> dB (e<elec>)</i>
The e letter is in amber in Single-Attenuator configurations
For example:
Dual-Attenuator configuration:
<i>Atten: 24 dB (e14)</i>
Indicating the total attenuation is at 24 dB and the electronic attenuation is at 14 dB
Single-Attenuator configuration:
<i>A: 24 dB (e14)</i>
Indicating the total attenuation is at 24 dB and the “soft” attenuation is at 14 dB (see below for definition of “soft” attenuation)
When in Manual, a # sign appears in front of Atten in the annotation</td></tr>
</table>

Auto Function

Remote Command	`[:SENSe]:POWer[:RF]:ATTenuation:AUTO OFF | ON | 0 | 1` `[:SENSe]:POWer[:RF]:ATTenuation:AUTO?`
Example	Turn **Auto Mech Atten**ON: `:POW:ATT:AUTO ON`

Dependencies	`:POW:ATT:AUTO` is only available in measurements that support **Auto**, such as Swept SA
Preset	`ON`

Attenuator Configurations and Auto/Man

As described under "Attenuation" on page 2158, there are two distinct attenuator configurations available in the X-Series, the Single Attenuator and Dual-Attenuator configurations.

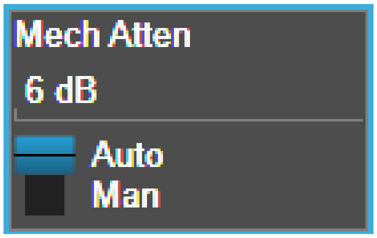
In Dual-Attenuator configurations, we have mechanical attenuation and electronic attenuation, and current total attenuation is the sum of electronic + mechanical attenuation.

In Single-Attenuator configurations, we refer to the attenuation set using "Mech Atten" on page 2161 (or `:POW:ATT`) as the “main” attenuation; and the attenuation that is set by `:POW:EATT` as the “soft” attenuation (`:POW:EATT` is honored even in the Single-Attenuator configuration, for compatibility purposes). Then current total attenuation is the sum of main + soft attenuation.

See "Elec Atten" on page 2164 for more about “soft” attenuation.

NOTE

In some measurements, the **Mech Atten** control has an **Auto/Man** function. In these measurements, an **Auto/Man** switch is shown on the **Mech Atten** control:



Mech Atten
6 dB
Auto
Man

Note that in configurations that include an Electronic Attenuator, this switch is only shown when the Electronic Attenuator is disabled.

In other measurements, **Mech Atten** has no **Auto/Man** function. In these measurements, no switch is shown on the **Mech Atten** control:

Mech Atten
10 dB

Mech Atten also appears with no switch, as above, in configurations that include an Electronic Attenuator but when the Electronic Attenuator is enabled.

Elec Atten

Controls the Electronic Attenuator in Dual-Attenuator configurations. Does not appear in Single-Attenuator configurations, because the control of both the mechanical and electronic stages of the Single-Attenuator is integrated into the single **Atten** control.

This control includes an **Enable/Disable** toggle switch; it is only possible to enter a value for the Electronic Attenuator when this switch is in the **Enable** position.

For more details of the Electronic Attenuator, see "More Information" on page 2165

Remote Command	`[:SENSe]:POWer[:RF]:EATTenuation <rel_ampl>` `[:SENSe]:POWer[:RF]:EATTenuation?`
Example	`:POW:EATT 10` `:POW:EATT?`
Notes	Electronic Attenuation's specification is defined only when **Mech Atten** is 6 dB
Dependencies	Only appears in Dual-Attenuator models with an Electronic Attenuator installed and licensed. Does not appear in models with the Single-Attenuator configuration, because in the Single-Attenuator configuration there is no "electronic attenuator"; there is only a single integrated attenuator (which has both a mechanical and electronic stage). However, in the Single-Attenuator configuration, `EATT` SCPI commands are accepted for compatibility with other X-series instruments, and set a "soft" attenuation. The "soft" attenuation is treated as an addition to the "main" attenuation value set by the **Attenuation** control or `:POW:ATT`, and affects the total attenuation displayed on the **Attenuation** control and the Meas Bar The electronic attenuator, and the "soft" attenuation function provided in Single-Attenuator configurations, are unavailable above the low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model). If the low band range is from 0-3.6 GHz, and Stop Frequency of the instrument is > 3.6 GHz, then the **Enabled/Disabled** section of the **Elec Atten** control will be `OFF` and grayed-out If "Internal Preamp" on page 2183 is `ON` (that is, set to Low Band or Full), the electronic attenuator (and the "soft" attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the **Enabled/Disabled** section of the **Elec Atten** control will be `OFF` and grayed-out If either of the above is true, and the SCPI command is sent, an error indicating that the electronic attenuator is unavailable is returned If both the above are true, pressing the control generates error message -221, in other words, the frequency range lockout takes precedence If the electronic/soft Attenuator is enabled, then the **Stop Freq** of the instrument is limited to 3.6 GHz and **Internal Preamp** is unavailable If "LNA" on page 2185 is `ON`, the electronic attenuator (and the "soft" attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the **Enabled/Disabled** section of the **Elec Atten** control will be `OFF` and grayed-out. This coupling works in the following modes/measurements: – Channel Power, Occupied BW, ACP, SEM, Spurious Emissions, Power Stat CCDF measurements in all Modes – Transmit On|Off Power measurement in 5GNR Mode

	– Power vs. Time and Transmit Power measurement in GSM/EDGE Mode – Burst Power measurement in Spectrum Analyzer Mode The SCPI-only “soft” electronic attenuation for the single-attenuator configuration is not available in all measurements; in particular, it is not available in the Swept SA measurement
Couplings	Enabling and disabling the Electronic Attenuator affects the setting of the Mechanical Attenuator (in Dual-Attenuator configurations). This is described in more detail below and in "Mechanical Attenuator Transition Rules" on page 2166
Preset	0 dB
State Saved	Saved in instrument state
Min	0 dB
Max	Dual-Attenuator configuration: 24 dB Single-Attenuator configuration: the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB
Annotation	See Annotation under the **Mech Atten** control description

Auto Function

Remote Command	`[:SENSe]:POWer[:RF]:EATTenuation:STATe OFF | ON | 0 | 1` `[:SENSe]:POWer[:RF]:EATTenuation:STATe?`
Example	`:POW:EATT:STAT ON` `:POW:EATT:STAT?`
Preset	`OFF` (Disabled) for Swept SA measurement `ON` (Enabled) for all other measurements that support the electronic attenuator

NOTE

The maximum **Center Frequency** for Low Band can change based on the selected IFBW for measurements that support IFBW (for example, Waveform measurement across all Modes that support it). In certain models (such as N9042B & N9032B), IFBW values <= 40 MHz have a maximum Low Band frequency of 3.6 GHz, while 40 MHz < IFBW <= 1 GHz have a maximum of 3.3 GHz, and 1 GHz < IFBW <= 1.5 GHz have a maximum of 3.5 GHz. This frequency is reflected in the disabled message displayed for Electrical Attenuator. For N9032B and N9042B IFBW values > 1.5 GHz do not support a **Center Frequency** that can reach the Low Band maximum frequency. In these cases, the Electrical Attenuator will remain disabled no matter the Center Frequency.

More Information

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear. These advantages primarily aid in remote operation and are negligible for front panel use. See "Using the Electronic Attenuator: Pros and Cons" on page 2167 for a detailed discussion of the pros and cons of using the electronic attenuator.

For the Single-Attenuator configuration, for SCPI backwards compatibility, the “soft” attenuation feature replaces the Dual-Attenuator configuration’s electronic attenuator. All the same couplings and limitations apply. See "Attenuator Configurations and Auto/Man" on page 2163

Mechanical Attenuator Transition Rules

When the Electronic Attenuator is enabled, the Mechanical Attenuator transitions to a state that has no Auto function. Below are the rules for transitioning the Mechanical Attenuator. Note that the information below *only* applies to the Dual-Attenuator configurations, and *only* when the Electronic Attenuator is installed:

When the Electronic Attenuation is enabled from a disabled state:

- The Mechanical Attenuator is initialized to 10 dB (this is its optimal performance setting). You can then set it as desired with SCPI, numeric keypad, step keys, or knob, and it behaves as it normally would in manual mode
- The Auto/Man state of (Mech) Atten is saved
- The Auto/Man toggle on the (Mech) Atten control disappears, and the auto rules are disabled
- The Electronic Attenuator is set to 10 dB less than the previous value of the Mechanical Attenuator, within the limitation that it must stay within the range of 0 to 24 dB of attenuation

Examples in the Dual-Attenuator configuration:

- Mech Atten at 20 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 10 dB. New total attenuation equals the value before Elec Atten enabled
- Mech Atten at 0 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 0 dB. New total attenuation does not equal the value before Elec Atten enabled
- Mech Atten at 40 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 24 dB. New total attenuation does not equal the value before Elec Atten enabled

When the Electronic Attenuation is disabled from an enabled state:

- The Elec Atten control is grayed out
- The Auto/Man state of (Mech) Atten is restored
- If now in Auto, (Mech) Atten recouples
- If now in Man, (Mech) Atten is set to the value of total attenuation that existed before the Elec Atten was disabled. The resulting value is rounded up to the smallest value possible given the (Mech) Atten Step setting - (That is, 57 dB changes to 58 dB when (Mech) Atten Step is 2 dB)

Using the Electronic Attenuator: Pros and Cons

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear.

The “finer steps” advantage of the electronic attenuator is beneficial in optimizing the alignment of the instrument dynamic range to the signal power in the front panel as well as remote use. Thus, you can achieve improved relative signal measurement accuracy. Compared to a mechanical attenuator with 2 dB steps, the 1 dB resolution of the electronic attenuator only gives better resolution when the odd-decibel steps are used. Those odd-decibel steps are less accurately calibrated than the even-decibel steps, so one tradeoff for this superior relative accuracy is reduced absolute amplitude accuracy.

Another disadvantage of the electronic attenuator is that the spectrum analyzer loses its “Auto” setting, making operation less convenient.

Also, the relationship between the dynamic range specifications (TOI, SHI, compression, and noise) and instrument performance are less well-known with the electrical attenuator. With the mechanical attenuator, TOI, SHI, and compression threshold levels increase dB-for-dB with increasing attenuation, and the noise floor does as well. With the electronic attenuator, there is an excess attenuation of about 1 to 3 dB between 0 and 3.6 GHz, making the effective TOI, SHI, and so forth, less well known. Excess attenuation is the actual attenuation relative to stated attenuation. Excess attenuation is accounted for in the instrument calibration.

Adjust Atten for Min Clipping

Sets the combination of mechanical and electronic attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an immediate action function, that is, it executes once, when the control is pressed.

The algorithms that are used for the adjustment are documented under "Pre-Adjust for Min Clipping" on page 2168.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMediate`
Example	`:POW:RANG:OPT IMM`
Notes	Executing **Adjust Atten for Min Clipping** initiates the measurement
Dependencies	Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes

Adjust Atten

Allows you to select;

- Electric attenuator only
- Combination of Electric attenuator and Mechanical attenuator

when `[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMediate` is executed.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:OPTimize:TYPE EONLy | COMBined` `[:SENSe]:POWer[:RF]:RANGe:OPTimize:TYPE?`
Example	`:POW:RANG:OPT:TYPE EONL` `:POW:RANG:OPT:TYPE?`
Dependencies	Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes
Preset	`COMBined`
State Saved	Saved in instrument state

Pre-Adjust for Min Clipping

If this function is `ON`, it applies the adjustment described under "Adjust Atten for Min Clipping" on page 2167 each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

In Dual-Attenuator models, you can set **Elec+Mech Atten**, in which case both attenuators participate in the autoranging, or **Elec Atten Only**, in which case the mechanical attenuator does not participate in the autoranging. This latter case results in less wear on the mechanical attenuator and is usually faster.

See "Adjustment Algorithm" on page 2169

Selection	SCPI	Note
Off	`OFF`	This is the default setting
On	`ON`	Available in Single-Attenuator instruments. For compatibility with models that do not have an input attenuator, the `ON` parameter is supported and mapped to

Selection	SCPI	Note
		`COMBined`
Elec Atten Only	`ELECtrical`	Selects only the electric attenuator to participate in auto ranging. This offers less wear on the mechanical attenuator and is usually faster
Elec+Mech Atten	`COMBined`	In Dual-Attenuator models, this selects both attenuators to participate in the autoranging

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation OFF | ON | ELECtrical | COMBined` `[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation?`
Example	`:POW:RANG:OPT:ATT OFF` `:POW:RANG:OPT:ATT?`
Notes	The parameter option `ELECtrical` sets this function to `ON` in Single-Attenuator models The parameter option `COMBined` is mapped to `ELECtrical` in Single-Attenuator models. If you send `COMBined`, it sets the function to `ON` and returns `ELEC` to a query For SCPI compatibility with models that do not have an input attenuator, the `ON` parameter is honored and mapped to `COMBined`
Dependencies	Only appears in Dual-Attenuator models with an Electronic Attenuator installed In instruments with Dual-Attenuator model, when "Elec Atten" on page 2164 is `OFF` or grayed-out, "Pre-Adjust for Min Clipping" on page 2168 is grayed-out Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes
Preset	`OFF` when Elec Atten is Disabled at preset, otherwise `ELEC`
State Saved	Saved in instrument state
Range	Dual-Attenuator models: Off | Elec Atten Only | Mech + Elec Atten Single-Attenuator models: Off | On

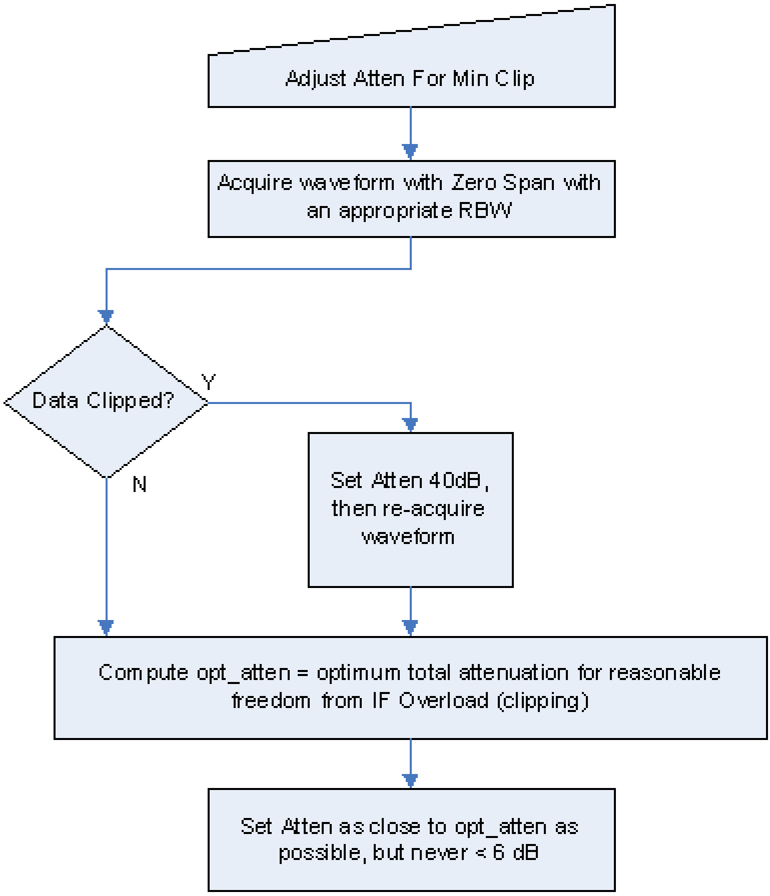
Backwards Compatibility Command

Notes	`ON` aliases to "Elec Atten Only" (`:POW:RANG:OPT:ATT ELEC`) `OFF` aliases to "Off" (`:POW:RANG:OPT:ATT OFF`) `:POW:RANG:AUTO?` returns true if `:POW:RANG:OPT:ATT` is not `OFF`
Backwards Compatibility SCPI	`[:SENSe]:POWer[:RF]:RANGe:AUTO ON | OFF | 1 | 0` `[:SENSe]:POWer[:RF]:RANGe:AUTO?`

Adjustment Algorithm

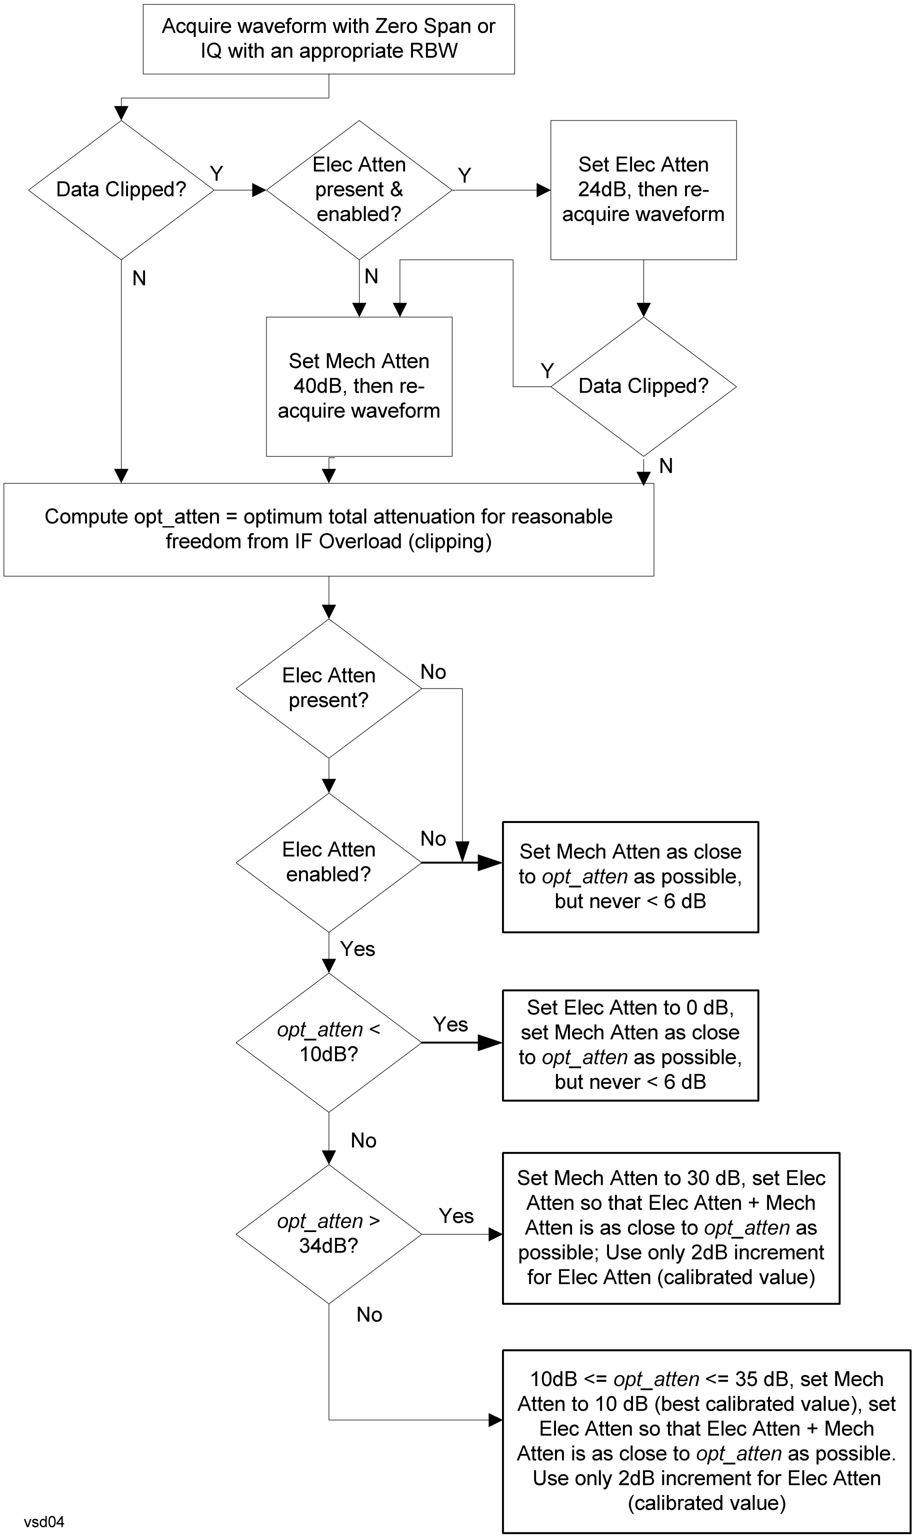
The algorithms for the adjustment are documented below:

Single-Attenuator Models



Dual-Attenuator models

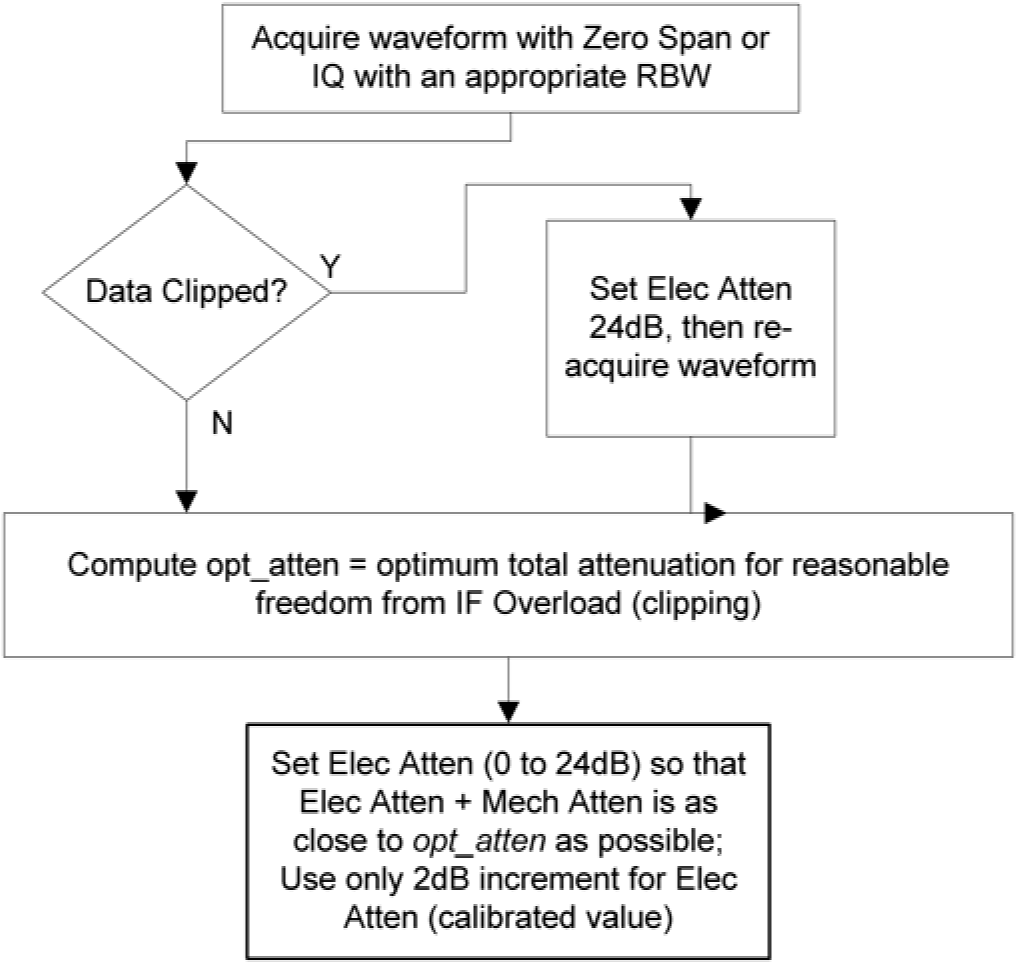
"Adjust Atten for Min Clipping" on page 2167 or "Pre-Adjust for Min Clipping" on page 2168 selection is Mech + Elec Atten:



Acquire waveform with Zero Span or IQ with an appropriate RBW
Data Clipped?
Y
N
Elec Atten present & enabled?
Y
N
Set Elec Atten 24dB, then re-acquire waveform
Set Mech Atten 40dB, then re-acquire waveform
Data Clipped?
Y
N
Compute opt_atten = optimum total attenuation for reasonable freedom from IF Overload (clipping)
Elec Atten present?
No
Elec Atten enabled?
No
Yes
Set Mech Atten as close to opt_atten as possible, but never < 6 dB
opt_atten < 10dB?
Yes
No
Set Elec Atten to 0 dB, set Mech Atten as close to opt_atten as possible, but never < 6 dB
opt_atten > 34dB?
Yes
No
Set Mech Atten to 30 dB, set Elec Atten so that Elec Atten + Mech Atten is as close to opt_atten as possible; Use only 2dB increment for Elec Atten (calibrated value)
10dB <= opt_atten <= 35 dB, set Mech Atten to 10 dB (best calibrated value), set Elec Atten so that Elec Atten + Mech Atten is as close to opt_atten as possible. Use only 2dB increment for Elec Atten (calibrated value)
vsd04

"Pre-Adjust for Min Clipping" on page 2168 selection is Elec Only.

Note that the **Mech Atten** value is not adjusted, and the value previously set is used. Therefore, there is a case that IF Overload is still observed depending on the input signal level and the Mech Atten setting.



Mech Atten Step

Controls the step size used when making adjustments to the input attenuation.

Labeled **Mech Atten Step** in Dual-Attenuator models and **Atten Step** in Single-Attenuator models. In the Dual-Attenuator configuration, only affects the step size of the mechanical attenuator.

Remote Command	`[:SENSe]:POWer[:RF]:ATTenuation:STEP[:INCRement] 10 dB | 2 dB`

	`[:SENSe]:POWer[:RF]:ATTenuation:STEP[:INCRement]?`
Example	`:POW:ATT:STEP 2` `:POW:ATT:STEP?`
Notes	Has a toggle control on the front panel, but takes a specific value (in dB) when used remotely. The only valid values are 2 and 10
Dependencies	Blanked in EXA, CXA and CXA-m if option FSA (2 dB steps) is not present. If blanked, attempts to set it via SCPI yield an error
Couplings	When the attenuation step size changes, the current mechanical attenuation value is adjusted (if necessary) to be quantized to the new step size. That is, if step is set to 10 dB, mech atten is increased if necessary so it is a multiple of 10 dB
Preset	EXA, CXA and CXA-m: 10 dB (2 dB with option FSA) All other models: 2 dB
State Saved	Saved in instrument state

3.12.3.3 Range (Baseband Input models)

Only available when Option BBA is present (I/Q Baseband Inputs), the current measurement supports option BBA, and I/Q is the selected input. In these cases, replaces the **Attenuation** tab.

Each input channel (I and Q) has four internal gain ranges. The maximum allowed voltage in each gain range is slightly more than the nominal value, so the break point between ranges is a few millivolts higher than the nominal (setting a peak voltage of 0.502 mV will still map to the 0.5 V Peak range).

Gain Setting	Volts RMS	Volts Peak	Volts Peak - Peak	dBm (50Ω)	Break Point
0 dB	0.7071	1.0	2.0	10	n/a
6 dB	0.3536	0.5	1.0	4	0.502 V Peak
12 dB	0.1768	0.25	0.5	-2	0.252 V Peak
18 dB	0.0884	0.125	0.25	-8	0.127 V Peak

Dependencies	Available only when the selected input is I/Q. If the current measurement does not support baseband inputs, an error will be displayed: “No result; Meas invalid with I/Q inputs”
State Saved	No

Range Auto/Man

The **Auto** setting for **Range** causes the range to be set based on the Y Scale settings. When **Range** is **Auto**, the I & Q Range are set based on the top of the Y Scale when the Y scale is in dB units (for example, power), or to the max(abs(top), abs(bottom)) when the Y scale reference is not at the top of the screen.

Not all measurements support **Range Auto/Man**. If **Auto** is not supported in the current measurement, this control is grayed-out, displaying **Man**, and `MAN` is returned to a SCPI query, but this does *not* change the Auto/Man setting for **Range**. When you switch to a measurement that supports **Auto**, it goes back to **Auto** if it was previously in **Auto** mode.

Remote Command	`[:SENSe]:VOLTage:IQ:RANGe:AUTO OFF | ON | 0 | 1` `[:SENSe]:VOLTage:IQ:RANGe:AUTO?`

Example	Put the I Range and Q Range in manual
	`:VOLT:IQ:RANG:AUTO OFF`
	`:VOLT:IQ:RANG:AUTO?`

Dependencies	If **Auto** is not supported, sending the SCPI command generates an error
Couplings	When in **Auto**, both I Range and Q Range are set to the same value, computed as follows: Maximum absolute value is computed for the Y Scale. The top and bottom of the graph are computed based on Ref Value, Scale/Div, and Ref Position. Formula: YMax = max(abs(top), abs(bottom)) The I Range and Q Range are then set to YMax
Preset	`ON`
State Saved	Saved in instrument state
Annotation	When in Man, the Range annotation is preceded by "#"

This is an alternate form of the command to match the `POWer` form of the I Range and Q Range SCPI.

Remote Command	`[:SENSe]:POWer:IQ:RANGe:AUTO OFF | ON | 0 | 1` `[:SENSe]:POWer:IQ:RANGe:AUTO?`

Example	Put the I Range and Q Range in manual
	`:POW:IQ:RANG:AUTO OFF`
	`:POW:IQ:RANG:AUTO?`

Notes	`:POW:IQ:RANG:AUTO` is an alternate form of `:VOLT:IQ:RANG:AUTO`, to maintain consistency with I Range and Q Range, which support both the `POWer` and `VOLTage` forms of the command
Preset	`ON`
Range	Auto | Man

I Range

The internal gain range for the I channel when the Input Path is I Only or I and I/Q. Used for both the I and Q channels when the Input Path is I+jQ.

Remote Command	`[:SENSe]:VOLTage:IQ[:I]:RANGe[:UPPer] <voltage>` `[:SENSe]:VOLTage:IQ[:I]:RANGe[:UPPer]?`
Example	Set the I Range to 0.5 V Peak `:VOLT:IQ:RANG 0.5 V`

	`:VOLT:IQ:RANG?`
Notes	The numeric entries are mapped to the smallest gain range whose break point is greater than or equal to the value, or 1 V Peak if the value is greater than 1 V
Couplings	When "Q Same as I" on page 2177 is On, the **I Range** value will be copied to "Q Range" on page 2176 Changing the value also sets Range = Man
Preset	Complex `SPECtrum` Measurement: 0.5 V Peak All others: 1 V Peak
State Saved	Saved in instrument state
Range	1 V Peak (10 dBm @ 50 Ω) | 0.5 V Peak (4 dBm @ 50Ω) | 0.25 V Peak (-2 dBm @ 50Ω) | 0.125 V Peak (-8 dBm @ 50Ω)
Min	0.125 V
Max	1 V
Annotation	The Range annotation replaces the RF Input context's "Atten" annotation "Rng: <I Range>". When Range = Man the annotation is preceded by "#" The I Range is not annotated in Input Path Q Only. When I Range and Q Range are the same, the annotation is "Rng: <Range>". When I Range and Q Range are different and the Input Path is Ind I/Q, the annotation is "Rng: <I Range>, <Q Range>" and "Peak" is removed from the text. Examples: "Rng: 1 V Peak" the I Range is 1 V Peak "Rng: 1 V, 0.5 V " the I Range is 1 V Peak and the Q Range is 0.5 V Peak

This is an alternate form of the command to allow entry as a power.

Remote Command	`[:SENSe]:POWer:IQ[:I]:RANGe[:UPPer] <ampl>` `[:SENSe]:POWer:IQ[:I]:RANGe[:UPPer]?`

Example	Set the I Range to 0.5 V Peak when Reference Z is 50 Ω, and to 1.0 V Peak when Reference Z is 75 Ω
	`:POW:IQ:RANG 4 dBm`
	`:POW:IQ:RANG?`

Notes	The `POWer` form of the command is provided for convenience. It maps to the same underlying gain range parameter as the `VOLTage` form The Reference Z (not the I channel Input Z) is used to convert the power to peak voltage, which is then used to set the I Range as with the `VOLTage` form of the command. The power values of the 4 range states (1V Peak, 0.5V Peak, 0.25V Peak, and 0.125V Peak) will vary with Reference Z. Here are some examples: 50 Ω: 10, 4, -2, -8 75 Ω: 8.2, 2.2, -3.8, -9.8 600 Ω: -0.8, -6.8, -12.8, -18.9
Preset	10.0 dBm
Range	-20 dBm to 10 dBm
Min	-20 dBm
Max	10 dBm

Q Range

The internal gain range for the Q channel. **Q Range** only applies to Input Path Q Only and Ind I/Q. For input I+jQ "I Range" on page 2174 determines both I and Q channel range settings.

Remote Command	`[:SENSe]:VOLTage:IQ:Q:RANGe[:UPPer] <voltage>` `[:SENSe]:VOLTage:IQ:Q:RANGe[:UPPer]?`

Example	Set the Q Range to 0.5 V Peak:
	`:VOLT:IQ:Q:RANG 0.5 V`
	`:VOLT:IQ:Q:RANG?`

Notes	The numeric entries are mapped to the smallest gain range whose break point is greater than or equal to the value, or 1 V Peak if the value is greater than 1 V **Q Range** is only used for Input Path Q Only and Ind I/Q. For input I+jQ, "I Range" on page 2174 determines both I and Q channel range settings
Couplings	When "Q Same as I" on page 2177 is On, the "I Range" on page 2174 value is copied to **Q Range** and the range value keys are disabled Changing the value also sets Range = Man
Preset	1 V Peak
State Saved	Saved in instrument state
Range	1 V Peak (10 dBm @ 50Ω) | 0.5 V Peak (4 dBm @ 50Ω) | 0.25 V Peak (-2 dBm @ 50Ω) | 0.125 V Peak (-8 dBm @ 50Ω)
Min	0.125 V
Max	1 V
Annotation	The Range annotation replaces the RF Input context's "Atten" annotation "Rng: <Q Range>". When Range = Man the annotation is preceded by "#" The Q Range is not annotated in Input Path I Only or I+jQ. When I Range and Q Range are the same, the annotation is "Rng: <Range>". When I Range and Q Range are different and the Input Path is Ind I/Q, the annotation is "Rng: <I Range>, <Q Range>" and "Peak" is removed from the text. Examples: "Rng: 1 V Peak" the Q Range is 1 V Peak "Rng: 1 V, 0.5 V " the I Range is 1 V Peak and the Q Range is 0.5 V Peak

This is an alternate form of the command to allow entry as a power.

Remote Command	`[:SENSe]:POWer:IQ:Q:RANGe[:UPPer] <ampl>` `[:SENSe]:POWer:IQ:Q:RANGe[:UPPer]?`

Example	Sets the Q Range to 0.5 V Peak when Reference Z is 50 Ω , and to 1.0 V Peak when Reference Z is 75 Ω :
	`:POW:IQ:Q:RANG 4 dBm`
	`:POW:IQ:Q:RANG?`

Notes	The `POWer` form of the command is provided for convenience. It maps to the same underlying gain

	range parameter as the `VOLTage` form of the command The Reference Z (not the Q channel Input Z) is used to convert the power to peak voltage, which is then used to set the Q Range as with the `VOLTage` form of the command. The power values of the 4 range states (1V Peak, 0.5V Peak, 0.25V Peak, and 0.125V Peak) will vary with Reference Z. Here are some examples: 50 Ω: 10, 4, -2, -8 75 Ω: 8.2, 2.2, -3.8, -9.8 600 Ω: -0.8, -6.8, -12.8, -18.9
Preset	10.0 dBm
Range	-20 dBm to 10 dBm
Min	-20 dBm
Max	10 dBm

Q Same as I

Many, but not all, usages require the I and Q channels to have an identical setup. To simplify channel setup, **Q Same as I** causes the Q channel range to be mirrored from the I channel. That way, you only need to set up one channel (the I channel). The I channel values are copied to the Q channel, so at the time **Q Same as I** is Off, the I and Q channel setups will be identical.

Remote Command	`[:SENSe]:VOLTage|POWer:IQ:MIRRored OFF | ON | 0 | 1` `[:SENSe]:VOLTage|POWer:IQ:MIRRored?`

Example	Turn off the mirroring of I Range to Q Range
	`:VOLT:IQ:MIRR OFF`
	`:POW:IQ:MIRR OFF`

Couplings	When `ON`, the "I Range" on page 2174 value is mirrored (copied) to the "Q Range" on page 2176
Preset	`ON`
State Saved	Saved in instrument state
Range	`OFF|ON`

3.12.3.4 Range (Non-attenuator models)

Only available for Keysight's modular signal analyzers and certain other Keysight products, such as VXT and M941xE.

State Saved	No

Range

Represents the amplitude of the largest sinusoidal signal that could be present within the IF without being clipped by the ADC. For signals with high peak-to-average ratios, the range may need to exceed the rms signal power by a significant amount to avoid clipping.

This is a measurement global setting.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe <real>` `[:SENSe]:POWer[:RF]:RANGe?`
Example	`:POW:RANG 10 dBm` `:POW:RANG?`
Notes	The MIN and MAX values are affected by the External Gain parameters, and by the **Center Frequency** The hardware compensates for frequency response and alters the Range setting
Preset	0 dBm
State Saved	Yes
Min/Max	–/+100
Annotation	Meas Bar

Adjust Range for Min Clipping

Sets the combination of attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an "immediate action" function, that is, it executes once, when the key is pressed.

This key does not appear in measurements that do not support this functionality.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMediate`
Notes	Executing Adjust Range for Min Clipping initiates the measurement
Dependencies	Does not appear in the Swept SA and Monitor Spectrum measurements

Pre-Adjust for Min Clipping

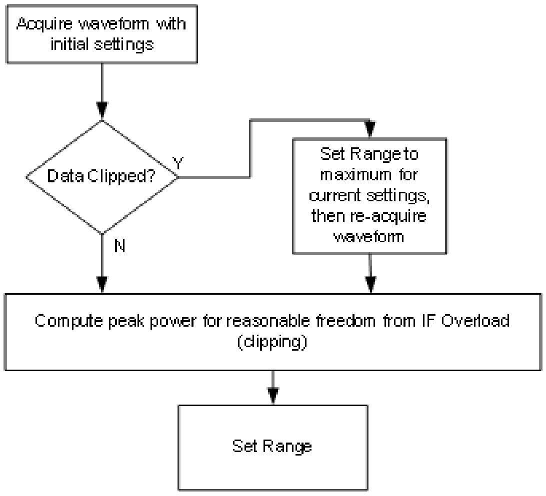
If this function is ON, it applies the adjustment described under Adjust Range For Min Clipping each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation OFF | ON | ELECtrical | COMBined`

	`[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation?`
Notes	Because there is no attenuator control available in these models, the control displays only `ON` and `OFF` choices. However, for SCPI compatibility with other platforms, all three parameters (`ELECtrical`, `COMBined`, and `ON`) are honored and all are mapped to `ELECtrical`, so if any of these three parameters is sent, a subsequent query will return `ELEC`
Dependencies	Does not appear in the Swept SA and Monitor Spectrum measurements
Preset	`OFF` for Swept SA measurement; `ON` for all other measurements that support **Pre-Adjust for Min Clipping**
State Saved	Saved in instrument state

Adjustment Algorithm

The algorithm for the adjustment is documented below:



Peak-to-Average Ratio

Used with "Range (Non-attenuator models)" on page 2177 to optimize the level control in the instrument. The value is the ratio, in dB, of the peak power to the average power of the signal to be measured. A ratio of 0 should be used for sinusoidal signals; for 802.11g OFDM signals use 9 dB.

All Modes show the current value of Peak-to-Average ratio on the control. However, some Modes do not permit changing the value. In these situations, the control is grayed-out.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:PARatio <real>` `[:SENSe]:POWer[:RF]:RANGe:PARatio?`
Example	`:POW:RANG:PAR 12 dB`
Notes	In some Modes, this parameter is read-only; meaning the value will appear on the control and query

	via SCPI, but is not changeable. In such applications the control is grayed-out. Attempts to change the value via SCPI are ignored, but no error message is generated
Dependencies	Does not appear in Spectrum Analyzer Mode
Preset	VXT Models M9410A/11A: 0 dB All Others: 10 dB
State Saved	Saved in instrument state
Min	0 dB
Max	VXT Models M9410A/11A: 50 dB All Others: 20 dB

Mixer Lvl Offset

This is an advanced setting to adjust target Range at the input mixer, which in turn affects the signal level in the instrument's IF. This setting can be used when additional optimization is needed after setting "Peak-to-Average Ratio" on page 2179. Positive values of offset optimize noise performance over distortion, negative values optimize distortion performance over noise.

Remote Command	`[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet <real>` `[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet?`
Example	`:POW:RANG:MIX:OFFS -5 dB`
Preset	0 dB
State Saved	Saved in instrument state
Min	VXT Models M9410A/11A: -34 dB All Others: -35 dB
Max	30 dB

3.12.3.5 Signal Path

Contains controls that pertain to the routing of the signal through the frontend of the instrument.

In general, only appears in instruments whose hardware supports this signal routing. For example, this tab does not appear in many of the modular instrument products, including VXT Model M9420A, or UXM.

This tab *does* appear in VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E, because "Software Preselection" on page 2195 is under this tab, and VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E implement a version of Software Preselection.

Presel Center

Adjusts the centering of the preselector filter to optimize the amplitude accuracy at the frequency of the selected marker. If the selected marker is not on when **Presel Center** is pressed, the instrument turns on the selected marker, performs a peak search, and then performs centering on the marker's center frequency. If the selected marker is already on and between the start and stop frequencies of the instrument, the instrument performs the preselector calibration on that marker's frequency. If the selected marker is already on, but outside the frequency range between **Start Freq** and **Stop Freq**, the instrument first performs a peak search, and then performs centering on the marker's center frequency.

The value displayed on "Preselector Adjust" on page 2182 changes to reflect the new preselector tuning.

Certain considerations should be observed to ensure proper operation, as detailed in "Proper Preselector Operation" on page 2182.

Remote Command	`[:SENSe]:POWer[:RF]:PCENter`
Example	`:POW:PCEN`
Notes	The rules outlined above under the control description apply for the remote command as well as the key. The result of the command depends on marker position, etc. Any message generated by the control press is also generated in response to the remote command
Dependencies	Does not appear in CXA-m, nor in VXT Models M9410A/11A/15A/16A, M9410E/11E/15E/16E Grayed-out if the microwave preselector is off – If the selected marker's frequency is below Band 1, an advisory message is generated "Preselector not used in this frequency range" and no action is taken – Grayed-out if entirely in Band 0, that is, if **Stop Freq** is below about 3.6 GHz Grayed-out if entirely above 50 GHz, that is, if **Start Freq** is above 50 GHz – Blanked in models that do not include a preselector, such as Option 503. If the remote command is sent in these instruments, accepted without error, and the query always returns 0 – Grayed-out in the **Spectrogram** View
Couplings	The active marker position determines where the centering will be attempted If the instrument is in a measurement such as averaging when centering is initiated, the act of centering the preselector restarts averaging, but the first average trace will not be taken until the centering is completed The offset applied to do the centering appears in "Preselector Adjust" on page 2182
Status Bits/OPC	When centering the preselector, `*OPC` does not return true until the process is complete and a

dependencies	subsequent measurement has completed, nor are results returned in response to `:READ` or `:MEASure` queries The `Measuring` bit remains set (true) while this command is operating, and does not go false until the subsequent sweep/measurement has completed

Proper Preselector Operation

Certain considerations should be observed to ensure proper operation:

1. If the selected marker is **Off**, the instrument turns on a marker, performs a peak search, and adjusts the preselector using the selected marker's frequency. It uses the "highest peak" peak search method unqualified by threshold or excursion, so that there is no chance of a 'no peak found' error. It continues with that peak, even if it is the peak of just noise. Therefore, for this operation to work properly, there should be a signal on-screen in a preselected range for the peak search to find
2. If the selected marker is already **On**, the instrument attempts the centering at that marker's frequency. There is no preselector for signals below about 3.6 GHz, so if the marker is on a signal below 3.6 GHz, no centering is attempted, and an advisory message is generated
3. In some models, the preselector can be bypassed. If it is bypassed, no centering is attempted in that range and a message is generated

Preselector Adjust

Lets you manually adjust the preselector filter frequency to optimize its response to the signal of interest. Only available when "Presel Center" on page 2181 is available.

For general purpose signal analysis, using **Presel Center** is recommended. Centering the filter minimizes the impact of long-term preselector drift. **Preselector Adjust** can be used instead to manually optimize the preselector. One application of manual optimization would be to peak the preselector response, which both optimizes the signal-to-noise ratio and minimizes amplitude variations due to small (short-term) preselector drifting.

When **Presel Center** is performed, the offset applied to do the centering becomes the new value of **Preselector Adjust**.

Remote Command	`[:SENSe]:POWer[:RF]:PADJust <freq>` `[:SENSe]:POWer[:RF]:PADJust?`
Example	`:POW:PADJ 100KHz` `:POW:PADJ?`
Notes	The value on the control is displayed to 0.1 MHz resolution
Dependencies	– Does not appear in CXA-m

	– Does not appear in VXT Models M9410A/11A/15A/16A – Does not appear in M9410E/11E/15E/16E – Grayed-out if microwave preselector is off – Grayed-out if entirely in Band 0, that is, if Stop Freq is lower than about 3.6 GHz – Grayed-out if entirely above 50 GHz, that is, if Start Freq is higher than 50 GHz – Blank in models that do not include a preselector, such as Option 503. If the command is sent in these instruments, it is accepted without error, and the query always returns 0 – Grayed-out in the **Spectrogram** View
Preset	0 MHz
State Saved	The **Preselector Adjust** value set by "Presel Center" on page 2181, or by manually adjusting **Preselector Adjust** Not saved in instrument state, and does not survive a Preset or power cycle
Min/Max	–/+500 MHz
Backwards Compatibility SCPI	`[:SENSe]:POWer[:RF]:MW:PADJust` `[:SENSe]:POWer[:RF]:MMW:PADJust`

Backwards Compatibility Command

Notes	The command has no effect, and the query always returns `MWAVe`
Backwards Compatibility SCPI	`[:SENSe]:POWer[:RF]:PADJust:PRESelector MWAVe | MMWave | EXTernal` `[:SENSe]:POWer[:RF]:PADJust:PRESelector?`

Internal Preamp

Accesses a menu of controls for the internal preamps. Turning on the preamp gives a better noise figure, but a poorer inter-modulation distortion (TOI) to noise floor dynamic range. You can optimize this setting for your measurement.

The instrument takes the preamp gain into account as it sweeps. If you sweep outside of the range of the preamp, the instrument will also account for that. The displayed result always reflects the correct gain.

For some measurements, when the preamp is on and any part of the displayed frequency range is below the lowest frequency for which the preamp has specifications, a warning condition message appears in the status line. For example, for a preamp with a 9 kHz lowest specified frequency: "Preamp: Accy unspec’d below 9 kHz".

Selection	Example	Note
Off	:POW:GAIN OFF	
Low Band	:POW:GAIN ON :POW:GAIN:BAND LOW	Sets the internal preamp to use only the low band. The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Low Band selection in the dropdown
Full Range	:POW:GAIN ON :POW:GAIN:BAND FULL	Sets the internal preamp to use its full range. The low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model) is supplied by the low band preamp and the frequencies above low band are supplied by the high band preamp The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Full Range selection in the dropdown. If the high band option is not installed the Full Range selection does not appear

NOTE

The maximum **Center Frequency** for **Low Band**, displayed in square brackets, can change based on the selected IFBW for measurements that support IFBW (for example, Waveform measurement across all Modes that support it). In certain models (such as N9042B & N9032B), IFBW values <= 40 MHz have a maximum **Low Band** frequency of 3.6 GHz, while 40 MHz < IFBW <= 1 GHz have a maximum of 3.3 GHz, and 1 GHz < IFBW <= 1.5 GHz have a maximum of 3.5 GHz. IFBW values > 1.5 GHz do not support a **Center Frequency** that can reach the **Low Band** maximum frequency. In these cases, **N/A** is displayed in the square brackets for **Low Band**.

Remote Command	`[:SENSe]:POWer[:RF]:GAIN:BAND LOW | FULL` `[:SENSe]:POWer[:RF]:GAIN:BAND?`
Example	`:POW:GAIN:BAND LOW` `:POW:GAIN:BAND?`
Dependencies	Not available on all hardware platforms. If the preamp is not present or is unlicensed, this control is not shown Does not appear in VXT Models M9410A/11A/15A/16A nor in M9410E/11E/15E/16E If `:POW:GAIN:BAND FULL` is sent when a low band preamp is available, the preamp band parameter is set to `LOW` instead of `FULL`, and an "Option not installed" message is generated Not available when the electronic/soft attenuator is enabled
Preset	`LOW`
State Saved	Saved in instrument state
Annotation	When the USB Preamp is not connected to USB, the Preamp annotation in the Meas Bar says “Off” if the preamp is off and displays the frequency range of the low band or full range preamp depending on the setting. For example, if the Preamp is set to Low Band and the Low Band is 3.6 GHz the annotation says “3.6 GHz”. If it is a 13.6 GHz preamp and it is set to Full Range the annotation says “13.6 GHz”

When the USB Preamp is connected to USB, the Preamp annotation says “Preamp: USB” if the internal preamp is off or “Preamp: USB, Int” if the internal preamp is on (only for measurements that support the USB preamp)

Auto Function

Remote Command	`[:SENSe]:POWer[:RF]:GAIN[:STATe] OFF | ON | 0 | 1` `[:SENSe]:POWer[:RF]:GAIN[:STATe]?`
Example	`:POW:GAIN OFF` `:POW:GAIN?`
Preset	`OFF`

LNA

Lets you turn the Low Noise Amplifier (**LNA**) on or off.

LNA is an additional preamplifier that provides superior DANL and frequency range compared to "Internal Preamp" on page 2183. LNA provides lower system noise figure, especially at frequencies above 100 MHz, and can be operated up to the full range of 50 GHz instruments.

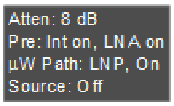
For best possible sensitivity, **LNA** can be turned on *together* with "Internal Preamp" on page 2183, although if you operate both preamps together, note that the TOI (distortion) specifications are impacted. The sensitivity improvement of this combination is substantial when operating in high band (frequencies above 3.6 GHz).

For more details about annotation, see "More Information" on page 2186

Remote Command	`[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe] OFF | ON | 0 | 1` `[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe]?`
Example	`:POW:GAIN:LNA ON`
Dependencies	Requires Option LNA, except for VXT models M9415A/16A Does not appear in VXT models M9420A/10A/11A M9410E/11E/15E/16E support LNA May not appear in some measurements **LNA** is not available when the electronic/soft attenuator is enabled
Preset	`OFF`
State Saved	Saved in State

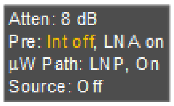
More Information

When **LNA** is installed, the preamp annotation changes to show the state of both **LNA** and **Internal Preamp**. Below is an example:



Atten: 8 dB
Pre: Int on, LNA on
µW Path: LNP, On
Source: Off

Note that when operating entirely in the low band (below about 3.6 GHz), if **LNA** is on, **Internal Preamp** is switched off (even if you have its switch set to ON). This is because the noise performance is actually degraded in low band if both preamps are on. In this case, the annotation reflects the actual state of the two preamps, but the **Internal Preamp** annotation displays in amber, to warn you that the actual state of **Internal Preamp** does not match its switch control display:



Atten: 8 dB
Pre: Int off, LNA on
µW Path: LNP, On
Source: Off

µW Path Control

Options for this control include **µW Preselector Bypass** (Option MPB), **Low Noise Path** (Option LNP) and **Full Bypass Enable** in the High Band path circuits.

When the µW Preselector is bypassed, flatness is improved, but will be subject to spurs from out of band interfering signals. When **Low Noise Path Enable** is selected, the instrument automatically bypasses certain circuitry in the high frequency bands that can contribute to noise, when it is appropriate based on other instrument settings.

For most applications, the preset state is **Standard Path**, which provides the best remote-control throughput, minimizes acoustic noise from switching and minimizes the risk of wear in the hardware switches, particularly in remote test scenarios where both low band and high band setups will follow in rapid succession. In this path, the bypass of the low band/high band switch and microwave preamp is never activated, which can cause some noise degradation but preserves the life of the bypass switch.

For applications that utilize the wideband IF paths, the preset state is **µW Preselector Bypas**s, if option MPB is present. This is because, when using a wideband IF such as the 140 MHz IF, the µW Preselector's bandwidth can be narrower than the available IF bandwidth, causing degraded amplitude flatness and phase linearity, so it is desirable to bypass the preselector in the default case.

You may choose **Low Noise Path Enable** for a lower noise floor, especially in the 21-26.5 GHz region, though without improving many measures of dynamic range, and without giving the best possible noise floor. The preamp, if purchased and used, gives better noise floor than does **Low Noise Path Enable**, but the preamp's compression threshold and third-order intercept are much poorer than that of **Low Noise Path Enable**.

A fourth choice is **Full Bypass Enable**, which combines **µW Preselector Bypass** and **Low Noise Path Enable**. Because this can bypass most of the circuitry between the input and the first mixer, care should be taken when using this setting to avoid damaging the mixer. **Full Bypass Enable** is only available if both options LNP and MPB are present, as well as option FBP.

Path	Example	Note
Standard Path	:POW:MW:PATH STD	Normal setting for most measurements. µW Preselector in circuit, Low Noise Path disabled
Low Noise Path Enable	:POW:MW:PATH LNP	See "Low Noise Path Enable" on page 2191
µW Preselector Bypass	:POW:MW:PATH MPB	See "µW Preselector Bypass" on page 2193
Full Bypass Enable	:POW:MW:PATH FULL	See "Full Bypass Enable" on page 2193

Remote Command	`[:SENSe]:POWer[:RF]:MW:PATH STD | LNPath | MPBypass | FULL` `[:SENSe]:POWer[:RF]:MW:PATH?`

Example	`:POW:MW:PATH LNP`
	Enables the Low Noise path
	`:POW:MW:PATH?`

Notes	When "Presel Center" on page 2181 is performed, the instrument momentarily switches to the Standard Path, regardless of the setting of **µW Path Control** The DC Block will always be switched in when the low noise path is switched in, to protect succeeding circuitry from DC. Note that this does not mean "when the low noise path is enabled" but when, based on the Low Noise Path rules, the path is actually switched in. This can happen when the selection is **Low Noise Path Enable** or **Full Bypass Enable**. In the case where the DC Block is switched in, the instrument is now AC-coupled. However, if you selected DC coupling, the UI would still behave as though it were DC-coupled, including all annunciation, warnings, status bits, and responses to SCPI queries. This is because, based on other settings, the instrument could switch out the low noise path at any time and hence go back to being DC-coupled Alignment switching ignores the settings in this menu, and restores them when finished
Dependencies	Does not appear in CXA-m, VXT Models M9410A/11A/15A/16A, nor in M9410E/11E/15E/16E, BBIQ and External Mixing – The **Low Noise Path Enable** selection does not appear unless Option LNP is present and licensed – The **µW Preselector Bypass** selection does not appear unless Option MPB is present and licensed – The **Full Bypass Enable** selection does not appear unless options LNP and MPB are both present as well as option FBP

In any of these cases, if the required options are not present and the SCPI command is sent, error -241, "Hardware missing; Option not installed" is generated

Low Noise Path Enable and **Full Bypass Enable** are grayed-out if the current measurement does not support them

Low Noise Path Enable and **Full Bypass Enable** are not supported in Avionics and MMR Modes (non-modulation measurements). In any of these cases (that is, the feature is not supported in either measurement or Mode), if the SCPI command is sent, the following error is generated: -221, “Setting Conflict; Feature not supported for this measurement”

Preset

Mode	Value
IQ Analyzer Pulse RTSA Avionics	MPB option present and licensed: `MPB` MPB option not present and licensed: `STD`
All other Modes	`STD`

–

State Saved	Save in instrument state
Range	Standard Path | Low Noise Path Enable | µW Presel Bypass | Full Bypass Enable
Annotation	In the Meas Bar, if the Standard path is chosen: µW Path: Standard If Low Noise Path is enabled but the LNP switch is not thrown: µW Path: LNP,Off If the Low Noise Path is enabled and the LNP switch *is* thrown: µW Path: LNP,On If the preselector is bypassed: µW Path: Bypass If Full Bypass Enable is selected but the LNP switch is not thrown: µW Path: FByp,Off If Full Bypass Enable is selected and the LNP switch *is* thrown: µW Path: FByp,On

µW Path Control Auto

In VMA, WLAN, 5G NR, CQM Modes, an **Auto/Man** switch is added to **µW Path Control**:

This allows the function to automatically switch based on certain Auto Rules as shown below:

VMA Mode

Measurement	µW Path Control Auto behavior
Digital Demod	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
Monitor Spectrum	Always Presel Bypass
IQ Waveform	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
Custom OFDM	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
Channel Power	Always Presel Bypass
Occupied BW	Always Presel Bypass
CCDF	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
ACP	Always Presel Bypass
SEM	Always Presel Bypass
Spurious Emissions	Always Standard Path

WLAN Mode

Measurement	µW Path Control Auto behavior
Modulation Analysis	Always Presel Bypass
Spectral Flatness	Always Presel Bypasss
Power vs Time	Always Presel Bypass
Monitor Spectrum	Always Presel Bypass
IQ Waveform	Always Presel Bypass
Channel Power	Always Presel Bypass
Occupied BW	Always Presel Bypass
CCDF	Always Presel Bypass
SEM	For 11be 320M, when ‘Enabled Wideband IF for FFT’ is OFF or ‘Sweep Type Rule’ is Best Dynamic Range, auto µW path is standard For other cases, auto µW path is presel bypass if presel bypass is enabled, auto µW path is standard if presel bypass is not enabled
Spurious Emissions	Always Standard Path

5G NR Mode

Measurement	**µW Path Control Auto behavior**
Modulation Analysis	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Full Bypass if conditions warrant(FBP Option is available and “Allow Full Bypass in Auto” is On), otherwise choose Preselector Bypass
Monitor Spectrum	Always Standard Path
IQ Waveform	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Full Bypass if conditions warrant(FBP Option is available and “Allow Full Bypass in Auto” is On), otherwise choose Preselector Bypass
Channel Power	Always Standard Path
Occupied BW	Always Standard Path
CCDF	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
ACP	Always Standard Path
SEM	Always Standard Path
Spurious Emissions	Always Standard Path
Transmit On|Off Power	Use Standard Path unless tuned frequency > 3.6 GHz and Info BW > 15 MHz, in which case choose Preselector Bypass

Channel Quality Mode

Measurement	**µW Path Control Auto behavior**
Group Delay	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Full Bypass if conditions warrant(FBP Option is available and “Allow Full Bypass in Auto” is On), otherwise choose Preselector Bypass
Monitor Spectrum	Always Standard Path
IQ Waveform	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass
CCDF	Use Standard Path unless tuned frequency > 3.6 GHz and IFBW > 15 MHz, in which case choose Preselector Bypass

Remote Command	`[:SENSe]:POWer[:RF]:MW:PATH:AUTO ON | OFF | 1 | 0` `[:SENSe]:POWer[:RF]:MW:PATH:AUTO?`
Example	`:POW:MW:PATH:AUTO ON` `:POW:MW:PATH:AUTO?`
Dependencies	Only appears in VMA, WLAN, 5G NR and CQM Modes
Couplings	See "µW Path Control Auto" on page 2188 above
Preset	`ON`
Range	`ON|OFF`

Low Noise Path Enable

Low Noise Path Enable provides a lower noise floor under some circumstances, particularly when operating in the 21–26.5 GHz region. With the Low Noise Path enabled, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and
- the stop frequency is above 3.6 GHz
- The internal preamp is not installed, or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Low Noise Path Enable** is selected in the user interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Low Noise Path Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Low Noise Path Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

For measurements that use IQ acquisition, the low noise path is used when **Center Frequency** is in High Band (> 3.6 GHz) and no preamp is in use. In other words, the rules above are modified to use only the center frequency to qualify which path to switch in. This is not the case for FFTs in the Swept SA measurement; they use the same rules as swept measurements.

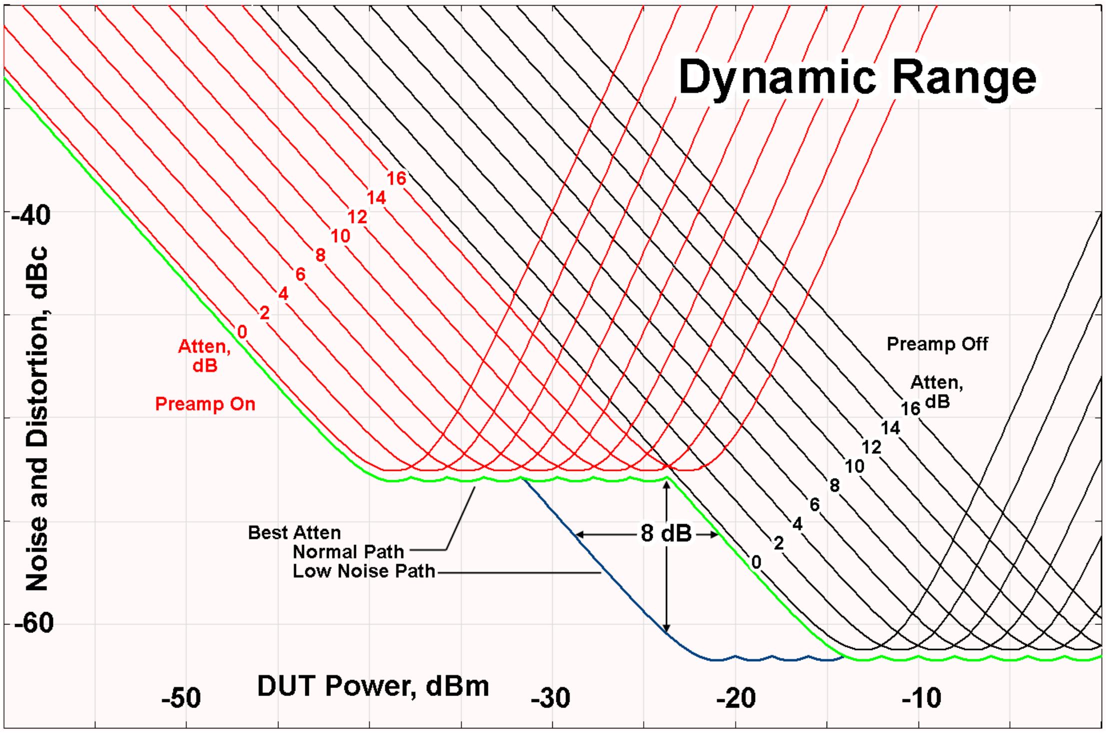
Note that the Low Noise Path, while giving improved DANL, has the disadvantage of decreased TOI performance and decreased gain compression performance relative to the standard path.

Note also that the bypass switch is a mechanical switch and has finite life, so if the **Low Noise Path Enable** is selected, it is possible to cause frequent cycling of this switch by frequently changing instrument settings such that the above conditions hold true only some of the time. A user making tests of this nature should consider opting for the **Standard Path**, which will never throw the bypass switch, at the expense of some degraded noise performance.

The low noise path is useful for situations where the signal level is so low that the instrument performance is dominated by noise even with 0 dB attenuation, but still high enough that the preamp option would have excessive third-order intermodulation or compression. The preamp, if purchased and used, gives better noise floor than does the “Low Noise Path.” However, its compression threshold and third-order intercept are much poorer than that of the non-preamp path.

There are some applications, typically for signals around –30 dBm, for which the third-order dynamic range of the standard path is good enough, but the noise floor is not low enough even with 0 dB input attenuation. When the third-order dynamic range of the preamp path is too little and the noise floor of the standard path is too high, the Low Noise Path can provide the best dynamic range

The graph below illustrates the concept. It shows, in red, the performance of an instrument at different attenuation settings, both with the preamp on and off, in a measurement that is affected by both instrument noise and instrument TOI. The green shows the best available dynamic range, offset by 0.5 dB for clarity. The blue shows how the best available dynamic range improves for moderate signal levels with the low noise path switched in. In this illustration, the preamp improves the noise floor by 15 dB while degrading the third-order intercept by 30 dB, and the low noise path reduces loss by 8 dB. The attenuator step size is 2 dB.



There are other times where selecting the low noise path improves performance, too. Compression-limited measurements such as finding the nulls in a pulsed-RF spectrum can profit from the low noise path in a way similar to the TOI-limited measurement illustrated. Accuracy can be improved when the low noise path allows the optimum attenuation to increase from a small amount like 0, 2 or 4 dB to a larger amount, giving better return loss at the instrument input. Harmonic measurements, such as second and third harmonic levels, are much improved using the low noise path because of the superiority of that path for harmonic (though not intermodulation) distortion performance.

µW Preselector Bypass

Toggles the preselector bypass switch for band 1 and higher. When the microwave presel is on, the signal path is preselected. When the microwave preselector is off, the signal path is not preselected. The preselected path is the normal path for the instrument.

The preselector is a tunable bandpass filter which prevents signals away from the frequency of interest from combining in the mixer to generate in-band spurious signals (images). The consequences of using a preselector filter are its limited bandwidth, the amplitude and phase ripple in its passband, and any amplitude and phase instability due to center frequency drift.

Option MPB or pre-selector bypass provides an unpreselected input mixer path for certain X-Series signal analyzers with frequency ranges above 3.6 GHz. This signal path allows a wider bandwidth and less amplitude variability, which is an advantage when doing modulation analysis and broadband signal analysis. The disadvantage is that, without the preselector, image signals will be displayed. Another disadvantage of bypassing the preselector is increased LO emission levels at the front panel input port.

Image responses are separated from the real signal by twice the 1st IF. For IF Paths of 10 MHz and 25 MHz, the 1st IF is 322.5 MHz, so the image response and the real signal will be separated by 645 MHz. The 1st IF will be different for other IF Path settings. When viewing a real signal and its corresponding image response in internal mixing, the image response will be to the left of the real signal.

Also, the image response and the real signal typically have the same amplitude and exhibit the same shape factor.

However, if Option FS1 (Fast Sweep Capability) is enabled, the image response in the Swept SA measurement appears lower in amplitude and has a much wider shape factor compared to the real signal.

Full Bypass Enable

With **Full Bypass Enable** selected, the microwave preselector is bypassed. In addition, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and
- the stop frequency is above 3.6 GHz.
- the internal preamp is not installed or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Full Bypass Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

CAUTION

When **Full Bypass Enable** is selected, and "Y Scale" on page 2153 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq >3.6 GHz and the Preamp is either not licensed, set to Low Band, or Off). This puts the first converter at considerable risk to be damaged by high AC power. Consequently, whenever **Full Bypass Enable** is selected, a warning message appears in the status bar:

"Full Bypass Enabled, maximum safe input power reduced"

Microwave Preselector Bypass Backwards Compatibility

Example	Bypass the microwave preselector: `:POW:MW:PRES OFF`
Notes	Included for Microwave Preselector Bypass backwards compatibility The `ON` parameter sets the `STD` path (`:POW:MW:PATH STD`) The `OFF` parameter sets path `MPB` (`:POW:MW:PATH MPB`)
Preset	`ON`
Backwards Compatibility SCPI	`[:SENSe]:POWer[:RF]:MW:PRESelector[:STATe] ON | OFF | 0 | 1` `[:SENSe]:POWer[:RF]:MW:PRESelector[:STATe]?`

Frequency Extender Preselection Bypass

Only applies to the high frequency path of the Frequency Extender, and only if the Frequency Extender allows it. For example, the V3050A high frequency path is 50 – 110 GHz and *does* allow control of the preselector bypass.

When the Frequency Extender's preselection is bypassed, flatness is improved, but will be subject to spurs from out-of-band interfering signals. For bandwidths greater than 2.5 [GHz], it is recommended that the signal bypass the Frequency Extender Preselector since the max bandwidth of the Preselector can be as narrow as 2.5 [GHz].

For most applications, the preset state is `OFF`, which gives the best remote-control throughput, minimizes acoustic noise from switching, minimizes out of band spurs, and minimizes the risk of wear in the hardware switches.

Preselector and Bandwidth Conflict

When the Frequency Extender Preselector is applied and the signal bandwidth is greater than 2.5 [GHz], then a settings alert message will show to warn the user that the signal may be distorted due to the limitation of the Frequency Extender Preselector bandwidth.

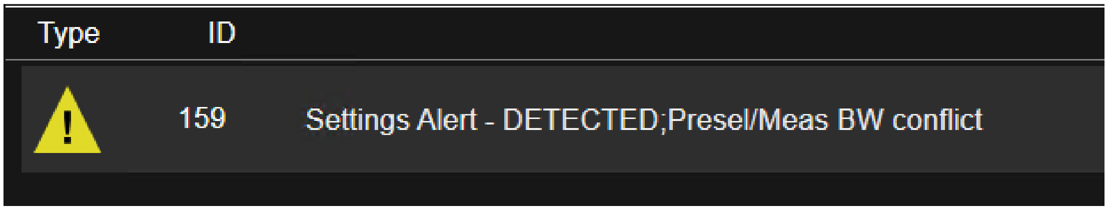
An example of the settings alert message is shown below.

Settings Alert message in the Status Bar at the bottom of the display.

Settings Alert;Presel/Meas BW conflict

Settings Alert message in the error queue

.



Type	ID	
!	159	Settings Alert - DETECTED;Presel/Meas BW conflict

Software Preselection

Provided in some instruments, either to compensate for issues with provided hardware preselection or to provide the preselection function when there is no hardware preselector.

N9041B

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

In N9041B, **Software Preselection** only applies for frequencies above 50 GHz, therefore it is only used for RF Input 2. Even if turned on, it is not used for other inputs, and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note “(>~50 GHz)”.

Note that in N9041B, in Swept SA measurement, **Software Preselection** works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT sweep type.

N9042B+V3050A

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

For N9042B+V3050A, Software Preselection only applies for frequencies above 50 GHz, therefore it is only used for External RF. Even if it is turned on, it will not be used for other inputs and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note “(>~50 GHz)”.

Note that for N9042B+V3050A, in the Swept SA measurement, Software Preselection works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT Sweep Type.

VXT models M9410A/11A/15A/16A

Software Preselection is used to provide the preselection function, as there is no hardware preselector in these models. Two background traces are taken and compared point by point, and the point with the lowest amplitude from the two traces is used. This provides a method to reduce spurs that are internally generated within the VXT, but you should note the following when using Software Preselection:

- There is some speed cost due to the need to take multiple captures
- Taking the point with the lowest amplitude in each trace will make the average noise level lower at all points that do not have a spur. This can reduce the accuracy of the measurement of noise and noise-like signals

Because of the difficulty in identifying spurs manually, you are recommended to leave Software Preselection ON at all times in VXT models M9410A/11A. If you turn it off in order to speed up your measurement or improve noise accuracy, be aware of unwanted onscreen spurs.

Remote Command	`[:SENSe]:POWer[:RF]:SWPResel:STATe 0 | 1 | ON | OFF` `[:SENSe]:POWer[:RF]:SWPresel:STAT?`
Example	`:POW:SWPR:STAT 1` `:POW:SWPR:STAT?`
Dependencies	Only appears in N9041B, N9042B+V2050A, VXT models M9410A/11A and M9410E/11E. Does not appear in all measurements
Couplings	Affects **Sweep Time** **Auto Tune** supports **Software Preselection**, so **Auto Tune** should be performed after setting the **Software Preselection** state

Preset	N9041B	`OFF`
	N9042B+V3050A	`ON`
	M9410A/11A	`ON`
State Saved	Saved in instrument state	

SW Preselection Type

Specifies the algorithm used for software preselection.

Two hidden sweeps occur in succession. The second sweep is offset in LO frequency by 2 * IF / N. For each point in each trace, the smaller amplitude from the two traces is taken and placed in that point in the selected trace. The Peak detector is auto-selected to improve the image suppression effectiveness. Responses of each trace that lie on top of one another will remain and are valid signals. Other signals are images, which are suppressed. The action of taking the smaller of the two traces will make the average noise level lower in all points that do not have an image, thus reducing the accuracy of the measurement of noise and noise-like signals.

- `NORMal` - mathematically removes all image and multiple responses of signals present at the input
- `ADVanced` - any trace processing (such as “max hold” or trace averaging) is performed on the points of both candidate traces before the “select minimum” operation occurs. This form of processing works better for non-stationary signals, such as pulsed-RF signals

Remote Command	`[:SENSe]:POWer[:RF]:SWPResel NORMal | ADVanced` `[:SENSe]:POWer[:RF]:SWPResel?`	
Example	`:POW:SWPR NORM` `:POW:SWPR?`	
Dependencies	Only appears in N9041B and N9042B+V3050A. Only appears in measurements that use the Swept method Grayed-out when "Software Preselection" on page 2195 is `OFF`. The grayout message is “Unavailable unless SW Presel enabled”	
Preset	N9041B	`ADVanced`
	N9042B+V3050A	`NORMal`
State Saved	Saved in instrument state	

SW Preselection BW

Specifies the effective bandwidth to be used for Software Preselection.

The options are:

- `NORMal` – when making Swept measurements, a software preselection algorithm is used which takes up to 4 background acquisitions, then post-processes the result. This algorithm can remove images from signals with an occupied bandwidth up to around 3 GHz. (Default/Preset setting). When making FFT measurements, this algorithm is not used, instead the same algorithm is used as for `NARRow` (below)
- `NARRow`– a software preselection algorithm is used which takes two background acquisitions, then post-processes the result to detect and remove images from wideband signals with occupied bandwidths up to 2 GHz. This increases the risk of images failing to be rejected, but improves the measurement speed

Remote Command	`[:SENSe]:POWer[:RF]:SWPResel:BW NORMal | NARRow` `[:SENSe]:POWer[:RF]:SWPResel:BW?`
Example	`:POW:SWPR:BW NARR`
Dependencies	Only appears in N9041B and N9042B+V3050A. Only appears in measurements that use the Swept method Grayed-out when "Software Preselection" on page 2195 is `OFF`. The grayout message is “Unavailable unless SW Presel enabled” For N9042B+V3050A, the parameter is SCPI-only, and always set to `NARRow` when **Software Preselection** is enabled
Preset	N9041B: `NORMal` N9042B+V3050A: `NARRow`
State Saved	Saved in instrument state

High Freq Prefilter

Lets you set the state of Prefilter for center frequencies above 1310 MHz.

In VXT Models M9410A/11A and M9410E/11E in bypass frequency range (1310MHz~5GHz), the Receiver RF path has a bank of filters that come after the RF Attenuator in the signal path. Since this bank of filters precedes the mixer they are known as the “Prefilter” bank. Their purpose is to eliminate unwanted in-band mixing products by filtering out all but the desired frequencies before the signals get to the mixer. There are 13 prefilter bands to cover the frequencies between 9 kHz and 6000 MHz. The Prefilter provides the necessary rejection of the unwanted signal.

Remote Command	`[:SENSe]:<measurement>:PFILter[:STATe] ON | OFF | 1 | 0` `[:SENSe]:<measurement>:PFILter[:STATe]?`

Example	Enable High Freq Prefilter for the Complex Spectrum Measurement in `BASIC` Mode:
	`:SPEC:PFIL ON`
	Enable High Freq Prefilter for the IQ Waveform Measurement, in multiple Modes:
	`:WAV:PFIL ON`
	Enable High Freq Prefilter for the Swept SA Measurement in `SA` Mode:
	`:SAN:PFIL ON`

Dependencies	Only appears in VXT models M9410A/11A with center frequency above 1310 MHz, and M9410E/11E in frequency range 1310MHz~5GHz
Preset	See "Prefilter Presets" on page 2199 below
State Saved	Saved in instrument state

Prefilter Presets

Meas	Mode	Preset
`SPEC`	`BASIC`	`OFF`
`WAV`	`BASIC, WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA`	`OFF`
`MON`	`WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA`	`OFF`
`RHO`	`WCDMA`	`OFF`
`CDP`	`WCDMA`	`OFF`
`PCON`	`WCDMA`	`OFF`
`EVMQ`	`WCDMA`	`OFF`
`CHP`	`WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA, SA`	`OFF`
`OBW`	`WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA, SA`	`OFF`
`ACP`	`WCDMA, LTEAFDD, LTEATDD, 5GNR, VMA, SA`	`OFF`

`PST`	`WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA, SA`	`OFF`
`PVT`	`WLAN, LTEAFDD, LTEATDD, 5GNR`	`OFF`
`EVM`	`WLAN, LTEAFDD, LTEATDD, 5GNR`	`OFF`
`FLAT`	`WLAN`	`OFF`
`EVMM`	`WLAN`	`OFF`
`CEVM`	`LTEAFDD, LTEATDD`	`OFF`
`PAVT`	`5GNR, VMA`	`OFF`
`DDEM`	`VMA`	`OFF`
`OFDM`	`VMA`	`OFF`
`SAN`	`SA`	`ON`
`HARM`	`SA`	`ON`

3.12.4 BW

Opens the **BW** (Bandwidth) menu. The Digital IF BW functions control filter bandwidth and filter type. There are two filter types: Gaussian and Flattop. The Gaussian filters have a response curve that is parabolic on a log scale. The Flattop filter shape is a close approximation of a rectangular filter.

3.12.4.1 Settings

Contains the basic bandwidth functions. It is the only tab under **Bandwidth**.

Digital IF BW

Sets the Digital IF (formerly Info BW) bandwidth of the instrument. When in Auto, it is set to the value that covers carriers set by carrier configuration.

Remote Command	`[:SENSe]:WAVeform:DIF:BANDwidth <freq>` `[:SENSe]:WAVeform:DIF:BANDwidth?`
Example	`:WAV:DIF:BAND 1kHz` `:WAV:DIF:BAND?`
Notes	Auto/Man is available only for 5G NR, LTE, LTETDD, LTEAFDD, LTEA TDD Modes
Dependencies	To set a 2 GHz Span with option R20, the Center Frequency must be equal to or greater than 3.5 GHz To set a 4 GHz Span with option R40, the Center Frequency must be equal to or greater than 10 GHz For applications that have the **IF Path** Selection menu, such as the `BASIC` mode:

IF Path Auto State	Maximum Value Criteria
`OFF`	The maximum value depends on which IF Path is currently selected If 10 MHz, 25 MHz, 40 MHz, 85 MHz, 125 MHz, 140 MHz or 160 MHz, 255 MHz, or 510 MHz paths are selected, the maximum value of this parameter is 10, 25, 40, 85, 125, 140 or 160 MHz, 255 MHz, or 510 MHz respectively
`ON`	The maximum value is the maximum Digital IF BW available in the instrument, regardless of the current IF Path Selection For example, if the instrument has the options B25, B40, and B1X installed, the maximum available Digital IF BW of the instrument is 160 MHz. Thus, if IF Path Auto is `ON` and IF Path Selection is 25 MHz, the maximum Digital IF BW is *not* limited to 25 MHz, but is 160 MHz

Couplings	Changing "Sample Rate" on page 2237 automatically changes the state to Man
Preset	See "Preset Values" on page 2202 below

Filter Type

Lets you select the type of bandwidth filter that is used.

The following types are available:

Type	SCPI	Notes
Gaussian	`GAUSsian`	See "Gaussian" on page 2204
Flat Top	`FLATtop`	See "Flattop" on page 2204

Type	SCPI	Notes
Short Nyquist	`SNYQuist`	Available only when Option B40, B85, B1A, or B1X WBDIF installed
Raised Short Nyquist	`RSNYquist`	
Raised Cosine	`RCOSine`	
Root Raised Cosine	`RRCosine`	

Remote Command	`[:SENSe]:WAVeform:DIF:FILTer:TYPE GAUSsian | FLATtop`
	`[:SENSe]:WAVeform:DIF:FILTer:TYPE?`
	With DIF40 and/or WBDIF:
	`[:SENSe]:WAVeform:DIF:FILTer:TYPE GAUSsian | FLATtop | SNYQuist | RSNYquist | RCOSine | RRCosine`
	`[:SENSe]:WAVeform:DIF:FILTer:TYPE?`

Example	`:WAV:DIF:FILT:TYPE GAUS` `:WAV:DIF:FILT:TYPE?`
Dependencies	**Gaussian** and **Flattop** are available in all DIF configurations. For the other filter types, the filters are only available when Option DP2, B40, or a wider IF Bandwidth option is installed When you select a filter type other than **Gaussian** or **Flattop** when using Option B40, B85, B1A, or B1X WBDIF, but then you either explicitly select an IF Path Selection of 10 MHz or 25 MHz (`B10M/B25M`), or set a Digital IF BW equal to or narrower than 25 MHz with IF Path Selection Auto `ON`, the default filter type (`FLATtop`) is automatically selected. If you then again set the IF Path Selection to 85 MHz (`B85`), 125 MHz (`B125M`), or 140 MHz (`B140M`), the filter type remains as `FLATtop`
Couplings	See the description above
Preset	See table below
State Saved	Saved in instrument state

Range	`GAUSsian|FLATtop`
	When Option DP2, B40, or wider IF Bandwidth option is installed, the range is as follows
	`GAUSsian|FLATtop|SNYQuist|RSNYquist|RCOSine|RRCosine`

Backwards Compatibility SCPI	`[:SENSe]:WAVeform:BANDwidth:SHAPe`
	`[:SENSe]:WAVeform:BWIDth:SHAPe`
	`[:SENSe]:WAVeform:BANDwidth|BWIDth[:RESolution]:TYPE`

Preset:

Modes	Value
BASIC with DP2, B40, or wider, IF Bandwidth option	`FLATtop`
5G NR, WLAN, Channel Quality	`FLATtop`
All others	`GAUSsian`

Gaussian

When Option DP2, B40, or wider IF Bandwidth option is installed, the capability for arbitrary Digital IF bandwidths is available. However, for instruments without DP2, B40, or wider IF Bandwidth option , the selectable Gaussian filter bandwidths are predetermined. There are 160 Info BWs (RBWs) arranged in a 24-per-decade sequence from 1 Hz through 3 MHz, plus 4, 5, 6 and 8 MHz settings.

Flattop

When Option DP2, B40, or wider IF Bandwidth option is installed, the capability for arbitrary Digital IF bandwidths is available. However, for instruments without Option DP2, B40 or wider IF Bandwidth option, , the selectable Flattop filter bandwidths are predefined. There are 134 Digital IF BWs (RBWs) arranged in a 6-per-decade sequence from 3 Hz through 3 MHz, plus 4, 5, 6 and 8 MHz settings.

Filter BW

This feature is only available when Option DP2, B40, or wider IF Bandwidth option is installed.

Remote Command	`[:SENSe]:WAVeform:DIF:FILTer:BANDwidth <freq>` `[:SENSe]:WAVeform:DIF:FILTer:BANDwidth?`
Example	`:WAV:DIF:FILT:BAND 1MHz` `:WAV:DIF:FILT:BAND?`
Dependencies	Only available when Option DP2, B40, or wider IF Bandwidth option is installed. Disabled when the Filter Type is `FLATtop`
Couplings	Sets the same value as the current Digital IF BW value on Preset, or when Channel Filter Bandwidth Auto is ON
Preset	Same value as Digital IF BW
State Saved	Saved in instrument state
Min	10 Hz
Max	Clipped to the current Digital IF BW value

Auto Function

Remote Command	`[:SENSe]:WAVeform:DIF:FILTer:BANDwidth:AUTO ON | OFF | 1 | 0` `[:SENSe]:WAVeform:DIF:FILTer:BANDwidth:AUTO?`
Example	`:WAV:DIF:FILT:BAND:AUTO 0` `:WAV:DIF:FILT:BAND:AUTO?`
Preset	ON
Range	Auto | Man

Filter Alpha

Sets the filter alpha for the DIF filter. This feature is only available when Option DP2, B40, or wider IF Bandwidth option is installed.

Remote Command	`[:SENSe]:WAVeform:DIF:FILTer:ALPHa <real>` `[:SENSe]:WAVeform:DIF:FILTer:ALPHa?`
Example	`:WAV:DIF:FILT:ALPH 0.5` `:WAV:DIF:FILT:ALPH?`
Preset	0.2
State Saved	Saved in instrument state
Min	0.01
Max	1.00
Backwards Compatibility SCPI	`[:SENSe]:WAVeform:WBIF:FILTer:ALPHa`

Channel Filter Bandwidth (Backwards Compatibility Remote Command Only)

Dependencies	Only available when Option DP2, B40, or wider IF Bandwidth option is installed
Couplings	The value is determined by the following equation ChannelFilterBwBwcc = (ChannelFilterBw/(DigitalIFBw*OverSampleRatio))
Preset	0.8
State Saved	Saved in instrument state
Min	0.01
Max	1.0
Backwards Compatibility SCPI	`[:SENSe]:WAVeform:WBIF:FILTer:BANDwidth <real>` `[:SENSe]:WAVeform:WBIF:FILTer:BANDwidth?`

3.12.5 Display

Lets you configure display items for the current Mode, Measurement, View, or Window.

3.12.5.1 View

Contains controls for selecting the current **View**, and for editing User Views.

View

See "Views" on page 2150.

User View

Lets you choose a View from the saved User Views for the current measurement. This panel only appears if a User View exists for the current measurement.

Remote Command	`:DISPlay:VIEW:ADVanced:SELect <alphanumeric>` `:DISPlay:VIEW:ADVanced:SELect?`
Example	Select Baseband as the current View `:DISP:VIEW:ADV:SEL “Baseband”`

Notes	You must be in the measurement whose View you are trying to set to send the command. You can only set Views for the current measurement using this command
	For predefined views, the parameter is derived from the view name that is shown in the View list in the user interface. For example, if you are trying to select the Trace Zoom view in the Swept SA measurement, you send:
	`:DISP:VIEW:ADV:SEL "Trace Zoom"`
	because “Trace Zoom” is the name of the View as seen in the Mode/Meas dialog or in the Display, View menu
	You *cannot* use the legacy View parameter (which in this case would be `TZOom`) with `:DISP:VIEW:ADV:SEL`
	`<alphanumeric>` is case insensitive; you can specify mixed case, however the name will be evaluated on a single case. Thus, both of the following forms work:
	`:DISP:VIEW:ADV:SEL "Trace Zoom"`
	`:DISP:VIEW:ADV:SEL "TRACE ZOOM"`
	If the specified view is not a valid View, the query returns the error message “-224, Illegal parameter value; View with the name <alphanumeric> does not exist”
	If the display is disabled (via `:DISP:ENAB OFF`) then the error message “-221, Settings conflict; View SCPI cannot be used while Display is disabled” is generated

Backwards Compatibility SCPI	The legacy node `:DISPlay:VIEW[:SELect]` is retained for backwards compatibility, but it only supports predefined views

Restore Layout to Default

Restores the Layout to the default for Basic.

Modified Views are very temporary; if you exit the current measurement they are discarded, and they are not saved in State. To retain this View for later use, and to be able to return easily to your original Basic View, you can save your edited View as a “User View”.

Save Layout as New View

Saves your new View as a User View. An alpha keyboard appears, which lets you name your new View; the default is the old View name plus a number.

Remote Command	`:DISPlay:VIEW:ADVanced:NAME <alphanumeric>`
Example	`:DISP:VIEW:ADV:NAME “Baseband”` Creates a new View named `Baseband` from the current View, and selects it as the current View
Notes	`<alphanumeric>` is case insensitive; you can specify mixed case, however the name will be evaluated on a single case If `<alphanumeric>` name already exists as a View, the error message “-224, Illegal parameter value; View <alphanumeric> already exists” is generated If the display is disabled (via `:DISP:ENAB OFF`) then the error message “-221, Settings conflict; User View SCPI cannot be used while Display is disabled” is generated

Re-Save User View

You can re-edit a User View; if you make changes, then an asterisk will appear next to the User View’s name. You can then tap **Re-Save User View** to save it back to its existing name, or **Save Layout as New View** to add another, new User View.

This is a front panel function only, there is no remote command available to perform this function. To do this remotely, you must first perform **Save Layout as New View**, then delete the old User View and rename the new one with the name of the View you just deleted.

Rename User View

You can rename the current View by giving it a new unique name. Only User Views can be renamed, if the current View is a Predefined View, an error occurs.

Remote Command	`:DISPlay:VIEW:ADVanced:REName <alphanumeric>`
Example	`:DISP:VIEW:ADV:REN “Baseband”`
Notes	`<alphanumeric>` is case insensitive; you can specify mixed case, however the name will be evaluated on a single case If the `<alphanumeric>` specifying the new name is already present in the list of View names, the error message “-224, Illegal parameter value; View <alphanumeric> already exists” is generated If the current View is a Predefined View, the error message “-224, Illegal parameter value; Cannot

	rename a Predefined View" is generated If the display is disabled (via `:DISP:ENAB OFF`) then the error message "-221, Settings conflict; View SCPI cannot be used while Display is disabled" is generated

Delete User View

You can delete the current View if it is a User View. The default view becomes the current view for the Measurement.

Remote Command	`:DISPlay:VIEW:ADVanced:DELete`
Example	`:DISP:VIEW:ADV:DEL`
Notes	`<alphanumeric>` is case insensitive; you can specify mixed case, however the name will be evaluated on a single case If the `<alphanumeric>` is not present in the list of View names, the error message "-224, Illegal parameter value; View <alphanumeric> does not exist" is generated If the current View is a Predefined View, the error message "-224, Illegal parameter value; Cannot delete a Predefined View" is generated If the display is disabled (via `:DISP:ENAB OFF`) then the error message "-221, Settings conflict; View SCPI cannot be used while Display is disabled" is generated

Delete All User Views

Deletes all previously saved User Views. The default view becomes the current view for the Measurement if a User View was the current view when this command was executed.

Remote Command	`:DISPlay:VIEW:ADVanced:DELete:ALL`
Example	`:DISP:VIEW:ADV:DEL:ALL`
Notes	Disabled if there are no User Views

View Editor Remote Commands

The following remote commands help you manage Views and User Views. Note that the SCPI node for User Views handles both Predefined and User Views. The legacy nodes, `:DISPlay:VIEW[:SELect]` and `:DISPlay:VIEW:NSEL`, are retained for backwards compatibility, but they only support predefined views.

View Listing Query

Returns a string containing a comma-separated list of names for *all* the Views, including User Views, available for the current Measurement.

Remote Command	`:DISPlay:VIEW:ADVanced:CATalog?`
Example	`:DISP:VIEW:ADV:CAT?`
Notes	Returns a quoted string of the available Views for the current measurement, separated by commas. The list includes names for *all* the Views, including User Views, available for the current Measurement Example: `"Normal,Trace Zoom,Spectrogram,Baseband,myView1,yourView1"` No distinction is made between Predefined and User Views If you switch measurements with the display disabled (via `:DISP:ENAB OFF`), then query the list of available Views, the result is undefined

User View Listing Query

Returns a string containing a comma-separated list of names for *only* the User Views available for the current Measurement.

Remote Command	`:DISPlay:VIEW:ADVanced:USER:CATalog?`
Example	`:DISP:VIEW:ADV:USER:CAT?`
Notes	Returns a quoted string of the available User Views for the current measurement, separated by commas. Example: `"Baseband,myView1,yourView1"` If you switch measurements with the display disabled (see "Display Enable (Remote Command Only)" on page 2211), then query the list of available Views, the result is undefined

3.12.5.2 Annotation

Contains controls for setting up the annotation for the current Mode or Measurement.

Graticule

Turns the display graticule On or Off for all windows with graticules in all measurements in the current Mode. Also turns the graticule Y-Axis annotation on and off.

Remote Command	`:DISPlay:GRATicule[:STATe] OFF | ON | 0 | 1` `:DISPlay:GRATicule[:STATe]?`
Example	`:DISP:GRAT OFF`
Notes	The graticule is the set of horizontal and vertical lines that make up the grid/divisions for the X-Axis and Y-Axis
Preset	`ON`
State Saved	Saved in instrument state

Backwards Compatibility SCPI	`:DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe] OFF | ON | 0 | 1`
	`:DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe]?`
	This command is accepted for backwards compatibility with older instruments, but the `WINDow`, `TRACe` and `GRID` parameters are ignored

Screen Annotation

Controls the display of the annunciation and annotation around the graticule, including any annotation on lines (such as the display line, the threshold line, etc.) and the Y-Axis annotation, for all windows with screen annotation in all measurements in the current Mode.

This does *not* include marker annotation (or the N dB result). When `OFF`, the graticule expands to fill the entire graticule area, leaving only the 1.5% gap above the graticule, as described in the **Trace** section.

Remote Command	`:DISPlay:ANNotation:SCReen[:STATe] OFF | ON | 0 | 1` `:DISPlay:ANNotation:SCReen[:STATe]?`
Example	`:DISP:ANN:SCR OFF`
Dependencies	Grayed-out and forced to `OFF` when **System Display Settings**, **Annotation** is `OFF`
Preset	`ON` This remains `OFF` through a Preset when **System Display Settings**, **Annotation** is set to `OFF`
State Saved	Saved in instrument state

Trace Annotation

Turns on and off the labels on the traces, showing their detector (or their Math Mode) as described in the **Trace** section, for all windows in all measurements in the current Mode for which Trace Annotation on/off is supported.

If Trace Math is being performed on a trace, then the Trace Math annotation replaces the detector annotation.

For measurements that support limit lines, this key also turns on and off the labels on the Limit Lines. The label is the Limit number annotation and Limit Comment displayed on the graph. If the length of the comment is greater than 20 characters, the first 8 characters and the last 8 characters are displayed, joined with ….

Remote Command	`:DISPlay:ANNotation:TRACe[:STATe] ON | OFF | 1 | 0` `:DISPlay:ANNotation:TRACe[:STATe]?`
Example	`:DISP:ANN:TRAC OFF`
Preset	`OFF`
State Saved	Saved in instrument state

Control Annotation

Turns on and off the display of values on the Active Function controls for all measurements in the current Mode. This is a security feature.

Remote Command	`:DISPlay:ACTivefunc[:STATe] ON | OFF | 1 | 0` `:DISPlay:ACTivefunc[:STATe]?`
Example	`:DISP:ACT OFF`
Dependencies	Grayed out and forced to `OFF` when **System Display Settings**, **Annotation** is `OFF`
Preset	`ON` This remains `OFF` through a Preset when **System Display Settings**, **Annotation** is set to `OFF`
State Saved	Saved in instrument state

Meas Bar

Turns the Measurement Bar at the top of the screen on and off for all measurements in the current Mode. When `OFF`, the graticule area expands to fill the area formerly occupied by the Measurement Bar.

Remote Command	`:DISPlay:ANNotation:MBAR[:STATe] OFF | ON | 0 | 1` `:DISPlay:ANNotation:MBAR[:STATe]?`
Example	`:DISP:ANN:MBAR OFF`
Dependencies	Grayed out and forced to `OFF` when **System Display Settings**, **Annotation** is `OFF`
Preset	`ON` This remains `OFF` through a Preset when **System Display Settings**, **Annotation** is set to `OFF`
State Saved	Saved in instrument state

Display Enable (Remote Command Only)

Turns the display on/off, including the display drive circuitry. The backlight stays lit to confirm that the instrument is on. The display enable setting is mode global.

Theare three reasons for turning the display off:

1. To increase speed as much as possible by freeing the instrument from having to update the display
2. To reduce emissions from the display, drive circuitry
3. For security purposes

If you have turned off the display:

- and you are in local operation, the display can be turned back on by pressing any key or by sending `:SYSTem:DEFaults MISC` or `:DISPlay:ENABle ON` (neither `*RST` nor :SYSTem:PRESet enable the display)
- and you are in remote operation, the display can be turned back on by pressing the **Local** or **Esc** keys, or by sending `:SYSTem:DEFaults MISC` or `:DISPlay:ENABle ON` (neither `*RST` nor `:SYSTem:PRESet` enable the display)
- and you are using either the `:SYSTem:KLOCk` command or GPIB local lockout, then *no* front-panel key press will turn the display back on. You must turn it back on remotely.

If the display is `OFF`, many SCPI commands related to User Views and Multiscreen functionality do not work, and return the error messages “-221, Settings conflict; Screen SCPI cannot be used when Display is disabled” or “221, Settings conflict; View SCPI cannot be used while Display is disabled”. These commands include:

Name	Command
Select User View	`:DISPlay:VIEW:ADVanced:SELect`
Rename User View	`:DISPlay:VIEW:ADVanced:REName`
Delete User View	`:DISPlay:VIEW:ADVanced:DELete`
Create User View	`:DISPlay:VIEW:ADVanced:NAME`
Select Screen	`:INSTrument:SCReen:SELect`
Delete Screen	`:INSTrument:SCReen:DELete`
Delete All But This Screen	`:INSTrument:SCReen:DELete:ALL`
Add Screen	`:INSTrument:SCReen:CREate`
Rename Screen	`:INSTrument:SCReen:REName`
Sequencer On/Off	`:SYSTem:SEQuencer`

Remote Command	`:DISPlay:ENABle OFF | ON | 0 | 1` `:DISPlay:ENABle?`
Example	`:DISP:ENAB OFF`
Couplings	`:DISP:ENAB OFF` turns Backlight `OFF` and `:DISP:ENAB ON` turns Backlight `ON`, but changing Backlight settings does *not* change the state of `:DISP:ENAB`

Preset	`ON` Set by `:SYST:DEF MISC`, but not affected by `*RST` or `:SYSTem:PRESet`
State Saved	Not saved in instrument state
Backwards Compatibility Notes	`:SYST:PRES` no longer turns on `:DISPlay:ENABle` as it did in legacy analyzers

3.12.6 Frequency

Opens the **Frequency** menu, which contains controls that allow you to control the Frequency and Channel parameters of the instrument.

Some features in the **Frequency** menu are the same for all measurements in the current Mode – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by Meas Preset. For example, the Center Freq setting is the same for all measurements - it does not change as you change measurements.

3.12.6.1 Settings

Contains controls that pertain to the X axis parameters of the measurement. These parameters control how data on the vertical (X) axis is displayed and control instrument settings that affect the horizontal axis.

Carrier Reference Frequency

Sets the carrier reference frequency. The center frequencies of carriers are defined as offset frequency from this value. This reference frequency is also the reference of carrier configuration preset.

Since LTE-A, MSR and 5G NR Mode measurements often deal with multiple carriers with distinct bandwidths, the simple Center Frequency parameter used in most measurements does not apply here. Instead, the Carrier Reference Frequency is the key parameter. This must be distinct from the Center Frequency parameter used in other measurements, as Center Frequency can be a global parameter, and it would not make sense for Carrier Reference Frequency to take on this global value.

In LTE-A and 5G NR Modes, if the following conditions are satisfied at the same time:

- the Number of Component Carrier equals 1
- the Center Freq Offset equals to 0 Hz
- the mode of the Center Freq is Auto

then **Center Frequency** is equivalent to **Carrier Ref Frequency**. When Center Freq changes in such conditions, the mode of Center Freq remains as Auto, and Carrier Ref Freq changes to the same value. The major purpose of this coupling is for backwards compatibility with legacy LTE/LTE TDD Modes, in which `:SENSe:FREQuency:CENTer` is used to set up the frequency of the measurement.

Available only in 5GNR, LTEAFDD/TDD, and MSR Modes.

See "More Information" on page 2214.

Mode: 5GNR, LTEAFDD, LTEATDD

Remote Command	`[:SENSe]:CCARrier:REFerence <freq>` `[:SENSe]:CCARrier:REFerence?`
Example	`:CCAR:REF 2GHz` `:CCAR:REF?`
Preset	1GHz
State Saved	Saved in instrument state
Min/Max	Depends on instrument minimum/maximum center frequency, as for "Center Frequency" on page 2215

Mode: MSR

Remote Command	`[:SENSe]:CARRier:REFerence <freq>` `[:SENSe]:CARRier:REFerence?`
Example	`:CARR:REF 2GHz` `:CARR:REF?`
Preset	1GHz
State Saved	Saved in instrument state
Min/Max	Depends on instrument minimum/maximum center frequency, as for "Center Frequency" on page 2215

More Information

In most applications, **Center Frequency** is generally where the carrier center is located at and thus plays a very important role. However, in LTE-Advanced TDD/FDD Modes, the measurements are done based on carrier center frequencies and its bandwidths, both of which are calculated or obtained according to the carriers' configuration.

The **Center Frequency** defined here only for the Monitor Spectrum, IQ Waveform and CCDF measurements, because those are general type measurements and focus on a certain frequency range, which may be the entire BS RF bandwidth, a frequency range of one of the component carriers or a range far away from the component carriers to see spurious. The **Center Frequency** in those measurements has a different meaning, therefore it should be a separate setting from Carrier Reference Frequency.

Carrier center frequencies are defined using offsets from Carrier Reference Frequency, which determines absolute frequency locations, and which can be set as both absolute and relative frequency from the carrier reference frequency.

Since **Center Frequency** is only used in those measurements, Monitor Spectrum, IQ Waveform and CCDF, this control only appears on the **Frequency** menu of those measurements.

Center Frequency

Sets the frequency that corresponds to the horizontal center of the graticule. While adjusting **Center Frequency**, **Span** is held constant.

The center frequency setting is the same for all measurements within a mode, that is, it is Meas Global. Some modes are also able to share a Mode Global center frequency value. If this is the case, the Mode will have a Global tab in its Meas Setup menu.

The Center Freq function sets (and queries) the Center Frequency for the currently selected input. If your instrument has multiple inputs, and you select another input, the Center Freq changes to the value for that input. SCPI commands are available to directly set the Center Freq for a specific input.

Center Freq is remembered as you go from input to input. Thus, you can set a Center Freq of 10 GHz with the RF Input selected, change to BBIQ, and set a Center Freq of 20 MHz, then switch to External Mixing and set a Center Freq of 60 GHz, and when you go back to the RF Input the Center Freq will go back to 10 GHz; back to BBIQ and it is 20 MHz; back to External Mixing and it is 60 GHz.

For more details, see the following:

- "RF Center Freq (Remote Command Only)" on page 2219
- "Ext Mix Center Freq (Remote Command Only)" on page 2219
- "I/Q Center Freq (Remote Command Only)" on page 2220
- "Center Frequency Presets" on page 2217
- "VXT Models with Radio Heads/CIU Frequency Range" on page 2218

Remote Command	`[:SENSe]:FREQuency:CENTer <freq>` `[:SENSe]:FREQuency:CENTer?`
Example	Set **Center Frequency** to 50 MHz:

	`:FREQ:CENT 50 MHz`
	Increment **Center Frequency** by the value of **CF Step**:
	`:FREQ:CENT UP`
	Return the current value of **Center Frequency**:
	`:FREQ:CENT?`

Notes	Sets the RF, External Mixing or I/Q Center Frequency depending on the selected input – For RF input it is equivalent to `FREQ:RF:CENT` – For I/Q input it is equivalent to `FREQ:IQ:CENT` – For External Mixer it is equivalent to `FREQ:EMIX:CENT` Preset and Max values depend on Hardware Options If no terminator (for example, MHz) is sent the terminator Hz is used. If a terminator with unit other than Frequency is used, an invalid suffix error message is generated
Preset	Depends on instrument maximum frequency, mode, measurement, and selected input See "Center Frequency Presets" on page 2217, "RF Center Freq (Remote Command Only)" on page 2219, "Ext Mix Center Freq (Remote Command Only)" on page 2219, "I/Q Center Freq (Remote Command Only)" on page 2220 and "VXT Models with Radio Heads/CIU Frequency Range" on page 2218
State Saved	Saved in instrument state
Min/Max	Depends on instrument minimum/maximum frequency, mode, measurement, and selected input See "Center Frequency Presets" on page 2217, "RF Center Freq (Remote Command Only)" on page 2219, "Ext Mix Center Freq (Remote Command Only)" on page 2219, "I/Q Center Freq (Remote Command Only)" on page 2220 and "VXT Models with Radio Heads/CIU Frequency Range" on page 2218
Status Bits/OPC dependencies	Non-overlapped

Auto Function (MSR, LTE-Advanced FDD/TDD and 5G NR Modes Only)

Remote Command	`[:SENSe]:FREQuency:CENTer:AUTO ON | OFF | 1 | 0` `[:SENSe]:FREQuency:CENTer:AUTO?`
Example	`:FREQ:CENT:AUTO OFF` `:FREQ:CENT:AUTO?`
Dependencies	Only available for Monitor Spectrum, Power Stat CCDF and IQ waveform measurements in the MSR, LTE-Advanced FDD/TDD and 5G NR Modes
Couplings	When **Center Frequency** is changed, state is automatically changed to **Manual** **Center Frequency**, **Center Frequency Offset** and **Carrier Reference Frequency** are coupled. When **Carrier Reference Frequency** changes: Center Frequency : Auto **Center Frequency** = **Carrier Reference Frequency** + **Center Frequency Offset** (fixed) Center Frequency : Man **Center Frequency** (fixed) = **Carrier Reference Frequency** + **Center Frequency**

	Offset
Preset	`ON`
State Saved	Saved in instrument state
Range	`Auto`|`Man`

Center Frequency Presets

The following table provides the Center Frequency Presets for the Spectrum Analyzer mode, and the Max Freq, for the various frequency options:

Freq Option	CF after Mode Preset	Stop Freq after Mode Preset	Max Freq (can't tune above)
503 (all but CXA)	1.805 GHz	3.6 GHz	3.7 GHz
503 (CXA)	1.505 GHz	3.0 GHz	3.08 GHz
507 (all but CXA)	3.505 GHz	7.0 GHz	7.1 GHz
507 (CXA)	3.755 GHz	7.5 GHz	7.58 GHz
508 (all but MXE)	1.805 GHz	3.6 GHz	8.5 GHz
508 (MXE)	4.205 GHz	8.4 GHz	8.5 GHz
513	6.805 GHz	13.6 GHz	13.8 GHz
526 (except CXA and MXE)	13.255 GHz	26.5 GHz	27.0 GHz*
526 (CXA)	13.255 GHz	26.5 GHz	26.55 GHz
526 (MXE)	1.805 GHz	3.6 GHz	27.0 GHz
532	16.005 GHz	32.0 GHz	32.5 GHz
540	20.005 GHz	40.0 GHz	40.5 GHz
543	21.505 GHz	43.0 GHz	43.0 GHz
544	22.005 GHz	44.0 GHz	45.0 GHz
550	25.005 GHz	50.0 GHz	52 GHz
F03 (CXA-m)	1.505 GHz	3.0 GHz	3.08 GHz
F07 (CXA-m)	3.755 GHz	7.5 GHz	7.575 GHz
F13 (CXA-m)	6.805 GHz	13.6 GHz	13.8 GHz
F26 (CXA-m)	13.255 GHz	26.5 GHz	26.55 GHz
504 (M9421A, M8920A)	2.145 GHz	3.88GHz	3.88 GHz
506 (M9421A, M8920A)	3.245 GHz	6.08GHz	6.08 GHz
F06 (M9410A/11A)	1.0 GHz	6.08 GHz	6.08 GHz
F06 (M9415A)	1 GHz	1.08 GHz	6.6 GHz
F08 (M9415A)	1 GHz	1.08 GHz	8.6 GHz
F12 (M9415A)	1 GHz	1.08 GHz	12.9 GHz

*For option 526, the Max CF in RTSA is 26.999999995 GHz.

N9041B Center Freq Presets

Input	CF after Mode Preset	Stop Freq after Mode Preset	Max Freq (can't tune above)
Input 1, all models	25.005 GHz	50.0 GHz	52 GHz
Input 2, opt 585	42.505 GHz	85.0 GHz	86 GHz
Input 2, opt 590	45.005 GHz	90.0 GHz	92 GHz
Input 2, opt 5CX	55.005 GHz	110.0 GHz	110 GHz

Input 2, CXA and MXE

Model	CF after Mode Preset	Stop Freq after Mode Preset	Max Freq (can't tune above)
CXA opt C75	0.7505 GHz	1.5 GHz	1.58 GHz
MXE	505 MHz	1 GHz	1.000025 GHz

Tracking Generator Frequency Limits (CXA only)

Tracking Generator Option	Min Freq (clips to this freq when turn TG on and can't tune below while TG on)	If above this Freq, Stop Freq clipped to this Freq when TG turned on	Max Freq (can't tune above) while TG on
T03	9 kHz	3.0 GHz	3.08 GHz
T06	9 kHz	6.0 GHz	6.05 GHz

Tracking Generator Frequency Limits(CXA-m only)

Tracking Generator Option	Min Freq (clips to this freq when turn TG on and can't tune below while TG on)	If above this Freq, Stop Freq clipped to this Freq when TG turned on	Max Freq (can't tune above) while TG on
T03	2 MHz	3.08 GHz	3.08 GHz
T07	2 MHz	7.575 GHz	7.575 GHz
T13	2 MHz	13.8 GHz	13.8 GHz
T26	2 MHz	26.55 GHz	26.55 GHz

VXT Models with Radio Heads/CIU Frequency Range

The following table shows the Center Frequency Presets and Range for VXT modes with Radio Heads/CIU.

Products with Radio Heads/CIU	Preset	Start frequency	Stop frequency
M9421A + CIU	6 GHz	5.9 GHz	12 GHz

Products with Radio Heads/CIU	Preset	Start frequency	Stop frequency
M9410A + CIU	6 GHz	5.9 GHz	12 GHz
M9410A + CIU + RRH	25 GHz	24.25 GHz	43.5 GHz

RF Center Freq (Remote Command Only)

Specifies the RF Center Frequency. Sets the **Center Frequency** to use when the RF input is selected, even if the RF input is not the input that is selected at the time the command is sent. Note that the **Center Frequency** function in the **Frequency** menu on the front panel always applies to the currently selected input.

Remote Command	`[:SENSe]:FREQuency:RF:CENTer <freq>` `[:SENSe]:FREQuency:RF:CENTer?`
Example	`:FREQ:RF:CENT 30 MHz` `:FREQ:RF:CENT?`
Notes	This command is the same in all Modes, but the parameter is Measurement Global. So, the value is independent in each Mode and common across all the measurements in the Mode
Dependencies	If the electronic/soft attenuator is enabled, any attempt to set **Center Frequency** such that the Stop Frequency would be >3.6 GHz fails and results in an advisory message. If the equivalent SCPI command is sent, this same message is generated as part of a “-221, Settings conflict” warning
Preset	See table above
State Saved	Saved in instrument state
Min	-79.999995 MHz
Max	See table above. Basically, instrument maximum frequency - 5 Hz

Ext Mix Center Freq (Remote Command Only)

Specifies the External Mixer Center Frequency. Sets the **Center Frequency** to use when the External Mixer is selected, even if the External Mixer input is not the input that is selected at the time the command is sent. Note that the **Center Frequency** function in the **Frequency** menu on the front panel always applies to the currently selected input.

Remote Command	`[:SENSe]:FREQuency:EMIXer:CENTer <freq>` `[:SENSe]:FREQuency:EMIXer:CENTer?`
Example	`:FREQ:EMIX:CENT 60 GHz` `:FREQ:EMIX:CENT?`
Notes	This command is the same in all Modes, but the parameter is Measurement Global. So, the value is independent in each Mode and common across all the measurements in the Mode
Couplings	When returning to External Mixing after having been switched to one of the other inputs (for example, RF), you return to the settings that existed when you left External Mixing. So, you return to the band you were in, with the **Center Frequency** that you had. However, **Span** is not an input-dependent parameter,

	therefore the **Span** setting from the other input is retained. Thus, the instrument returns to the **Span** setting from the previous input, limited as necessary by the current mixer setup
Preset	When a **Mode Preset** is performed while in External Mixing, the Start frequency of the current Mode is set to the nominal Min Freq of the lowest harmonic range in the Harmonic Table for the current mixer setup. Similarly, the Stop frequency of the current Mode is set to the nominal Max Freq of the highest harmonic range in the Harmonic Table. **Center Frequency** thus presets to the point arithmetically equidistant from these two frequencies Note that, if the current measurement has a limited **Span** available to it, and cannot achieve the span shown in the table (**Span** = Stop Freq – Start Freq), the instrument uses the maximum **Span** the measurement allows, and still sets **Center Frequency** to the midpoint of the Start and Stop Freq values in the Harmonic Table When **Restore Input/Output Defaults** is performed, the mixer presets to the 11970A, whose Start and Stop frequencies are 26.5 and 40 GHz respectively. The center of these two frequencies is 33.25 GHz Therefore, after **Restore Input/Output Defaults**, if you go into External Mixing and do a *Mode Preset* while in the Spectrum Analyzer Mode, the resulting **Center Frequency** is 33.25 GHz
State Saved	Yes
Min	The minimum frequency in the currently selected mixer band +5 Hz
Max	The maximum frequency in the currently selected mixer band –5 Hz

I/Q Center Freq (Remote Command Only)

Specifies the I/Q Center Frequency. Sets the **Center Frequency** to be used when the I/Q input is selected, even if the I/Q input is not the input that is selected at the time the command is sent. Note that the **Center Frequency** function in the **Frequency** menu on the front panel always applies to the currently selected input.

Remote Command	`[:SENSe]:FREQuency:IQ:CENTer <freq>` `[:SENSe]:FREQuency:IQ:CENTer?`
Example	`:FREQ:IQ:CENT: 30 MHz`
Notes	This command is the same in all Modes, but the parameter is Measurement Global. So, the value is independent in each Mode and common across all the measurements in the Mode
Preset	0 Hz
State Saved	Saved in instrument state
Min/Max	–/+40.049995 MHz

Center Frequency Offset

Sets the **Center Frequency Offset**, which is coupled with "Center Frequency" on page 2215, and is only used in the Monitor Spectrum, IQ Waveform, Power Stat CCDF and PAvT measurements. The **Center Frequency**, **Center Frequency Offset** and **Carrier Reference Frequency** are coupled by this equation:

Center Frequency = Carrier Reference Frequency + Center Frequency Offset

When you change **Center Frequency Offset**, the **Center Frequency** is updated, but **Carrier Reference Frequency** is not.

Remote Command	`[:SENSe]:FREQuency:CENTer:OFFSet <freq>` `[:SENSe]:FREQuency:CENTer:OFFSet?`
Example	`:FREQ:CENT:OFFS 100kHz` `:FREQ:CENT:OFFS?`
Dependencies	Only available in the MSR, LTE-A FDD/TDD and 5G NR Modes
Preset	0 GHz
State Saved	Saved in instrument state
Min/Max	–/+500 GHz

Adjust Center Frequency to Carrier Config

This immediate action control adjusts **Center Frequency** to cover all the configured carriers when "Digital IF BW" on page 2200 is **Auto**.

Remote Command	`[:SENSe]:WAVeform:FREQuency:CENTer:ADJust`
Example	`:WAV:FREQ:CENT:ADJ`
Couplings	When "Digital IF BW" on page 2200 is **Man**, pressing this control automatically changes it to **Auto**

3.12.7 Marker

Displays a menu that enables you to select, set up and control the markers for the current measurement.

If there are no active markers, **Marker** selects `Marker 1`, sets it to `POSition` (Normal) mode, and places it at the center of the display. If the selected marker is `OFF`, it is set to `POSition` mode and placed at the center of the screen, on the trace determined by the Marker Trace rules.

For details of the `POSition`, `DELTa`, and `OFF` mode options, see "Marker Mode" on page 2224.

3.12.7.1 Select Marker

Sets the selected marker. The term “selected marker” is used throughout this document to specify which marker will be affected when you change marker settings, perform a **Peak Search**, etc.

The **Select Marker** control appears above the menu panel, indicating that it applies to all controls in the **Marker** menu panels. **Select Marker** is blanked if you select a tab whose controls do *not* depend on the selected marker (for example, **Counter**).

For any menu that includes **Select Marker**, the first control is always "Marker Time" on page 2222.

Notes	The selected marker is remembered even when not in the **Marker** menu and is used if a Search is done or a Band Function is turned on or for Signal Track or Continuous Peak
Preset	Marker 1
State Saved	The number of the selected marker is saved in instrument state
Annunciation	Appears in the marker results block label for `POSition` and Delta markers

3.12.7.2 Settings

The controls on this tab include the Marker active function and a radio button selection for "Marker Mode" on page 2224 (`POSition`, `DELTa`, or `OFF`) for the selected marker, as well as additional functions that help you use markers.

Marker Time

This is the fundamental control that you use to move a marker around on the trace. Because it is the default active function in the **Marker** menu, all you need to do is press **Marker** and turn the knob to move the marker left and right on the display. This is always the first control on any **Marker** menu page that follows the Selected Marker.

The SCPI command sets the marker X-Axis value in the current marker X-Axis Scale unit. The marker that is addressed becomes the selected marker. It has no effect (other than to cause the marker to become selected) if the control mode is `OFF`, but it is the SCPI equivalent of entering an X value if the control mode is `POSition` or `DELTa`.

Remote Command	`:CALCulate:WAVeform:MARKer[1]|2|…|12:X <time>` `:CALCulate:WAVeform:MARKer[1]|2|…|12:X?`
Example	`:CALC:WAV:MARK1:X 1` `:CALC:WAV:MARK1:X?`
Notes	If no suffix is sent it will use the fundamental units for the current marker X Axis Scale. If a suffix is sent that does not match the current marker X Axis Scale unit, an invalid suffix message will be generated The query returns the marker's absolute X-Axis value if the control mode is `POSition`. It returns the offset from the marker's reference marker if the control mode is `DELTa`. The query is returned in the fundamental units for the current marker X-Axis scale: seconds for **Time**. If the marker is `OFF` the response is Not A Number
Dependencies	Grayed-out, and displays three dashes, for the value when the selected Marker is `OFF`

Preset	LTE, LTE-A, 5G NR Modes: 5ms All other Modes: 1.0 ms
Min/Max	–/+infinity Unlike legacy instruments, where the markers were forced to be on screen, X-Series marker values are not limited and do not clip
Backwards Compatibility SCPI	`:CALCulate:MARKer[1]|2|…|4:X:CENTer` This alias is provided for compatibility with the Band Power function in PSA and ESA

Marker X Axis Position (Remote Command Only)

Sets the marker X position in trace points. It has no effect if the control mode is `OFF`, but is the SCPI equivalent of entering a value if the control mode is Normal or Delta. The entered value is immediately translated into the current X Axis Scale units for setting the value of the marker.

Remote Command	`:CALCulate:WAVeform:MARKer[1]|2|…|12:X:POSition <real>` `:CALCulate:WAVeform:MARKer[1]|2|…|12:X:POSition?`
Example	`:CALC:WAV:MARK:X:POS 500` `:CALC:WAV:MARK:X:POS?`
Notes	The query returns the marker's absolute X-Axis value in trace points if the control mode is `POSition`, or the offset from the marker's reference marker in trace points if the control mode is `DELTa`. The value is returned as a real number, not an integer, corresponding to the translation from X-Axis Scale units to trace points
Preset	After a preset, all markers are turned `OFF`, so the query returns a *Not A Number* (`NAN`)
State Saved	No
Min/Max	-/+9.9E+37

Marker Y Axis Value (Remote Query Only)

Queries the marker Y-Axis result value in the current marker Y-Axis unit. The "result" of a marker is the value that is displayed on the second line of the Marker Result block. To properly interpret the returned value, you must also know how the instrument's Y-Axis Unit is set, as described below.

A marker can have up to two results, only one of which is displayed or returned in a query, as follows:

- **Absolute** Result: every marker has an Absolute Result. For `POSition` and `DELTa` markers, the Y-axis value of the trace point the marker is currently on. The Absolute Result is displayed in the result block or returned as a query, unless the marker control mode is `DELTa`
- **Relative** Result: if a marker's control mode is `DELTa`, the *relative* result is displayed in the result block or returned in a query. This is the ratio of the

Absolute Result of a delta marker to the Absolute Result of its reference marker. The ratio is expressed in dB

Remote Command	`:CALCulate:WAVeform:MARKer[1]|2|…|12:Y?`
Example	`:CALC:WAV:MARK11:Y?`

Notes	When the marker is on, IQ waveform returns I and Q values
	Case #1 - Trace RF, I or Q: returns a single double value
	`>:CALC:WAV:MARK1:Y?`
	`-2.402406506109E+001`
	Case #2 - Trace IQ: returns a double array of two values, the first is I, and the second is Q
	`>:CALC:WAV:MARK1:Y?`
	`-3.006944493834E-003,+9.9870666467354E-004`
	The IQ selection is for backwards compatibility purposes. For new designs, use the I and/or Q selection instead
	You must be in a Mode that includes the Waveform measurement to use this command. Use `:INSTrument:SELect` to set the Mode

Preset	Result depends on the marker setup and signal source
State Saved	No
Backwards Compatibility SCPI	`:CALCulate:WAVeform:MARKer[1]|2|…|12:FUNCtion:RESult?`

Marker Mode

Sets the marker control mode to `POSition`, `DELTa`, or `OFF`. All interactions and dependencies detailed under the control description are enforced when the remote command is sent. If the selected marker is `OFF`, pressing **Marker** sets it to `POSition` (**Normal**) and places it at the center of the screen on the trace determined by the Marker Trace rules. At the same time, Marker X-Axis Value appears on the Active Function area.

The default active function is the active function for the currently selected marker control mode. If the current control mode is `OFF`, there is no active function, and the active function is turned off.

Remote Command	`:CALCulate:WAVeform:MARKer[1]|2|…|12:MODE POSition | DELTa | OFF` `:CALCulate:WAVeform:MARKer[1]|2|…|12:MODE?`
Example	`:CALC:WAV:MARK:MODE OFF` `:CALC:WAV:MARK:MODE?`
Preset	`OFF`

State Saved	Saved in instrument state
Range	`POSition|DELTa|OFF`
Annotation	Mkr # <X value> and <Marker value> upper right on graph When Marker Trace is Polar in WCDMA mode: Mkr # <Chip Value (RHO & QPSKEVM)/Symbol Value (CDP)>, <X value> and <Y value> upper right on graph

Backwards Compatibility SCPI Command

Sets or queries the state of a marker. Setting a marker that is `OFF` to state `ON` or 1 puts it in `POSition` mode and places it at the center of the screen.

Preset	`OFF`
State Saved	Saved in instrument state
Range	`OFF|ON`
Backwards Compatibility SCPI	`:CALCulate:WAVeform:MARKer[1]|2|…|12:STATe OFF | ON | 0 | 1` `:CALCulate:WAVeform:MARKer[1]|2|…|12:STATe?`

Delta Marker (Reset Delta)

Pressing this control has the same effect as pressing the `DELTa` selection in "Marker Mode" on page 2224. The selected marker becomes a **Delta** marker. If the selected marker is already a **Delta** marker, the reference marker is moved to the current position of the selected marker, thus resetting the delta to zero.

Marker Settings Diagram

Lets you configure the **Marker** system using a visual utility.

All Markers Off

Turns off all markers.

Remote Command	`:CALCulate:WAVeform:MARKer:AOFF`
Example	`:CALC:WAV:MARK:AOFF`

Couple Markers

When this function is `ON`, moving any marker causes an equal X-Axis movement of every other marker that is not `OFF`. By “equal X-Axis movement” we mean that we preserve the difference between each marker’s X-Axis value (in the fundamental x-axis units of the trace that marker is on), and the X-Axis value of the marker being moved (in the same fundamental x-axis units).

This may result in markers going off-screen.

Remote Command	`:CALCulate:WAVeform:MARKer:COUPle[:STATe] ON | OFF | 1 | 0` `:CALCulate:WAVeform:MARKer:COUPle[:STATe]?`
Example	`:CALC:WAV:MARK:COUP ON` `:CALC:WAV:MARK:COUP?`
Preset	`OFF` Presets on Mode Preset and "All Markers Off" on page 2225
State Saved	Saved in instrument state

3.12.7.3 Peak Search

The controls on this tab allow you to move the marker to selected peaks of the signal, giving you enormous analysis capabilities, particularly when combined with the **Delta** marker function.

NOTE

Pressing the **Peak Search** hardkey automatically moves you to the **Peak Search** page of the **Marker** menu *and* performs a peak search.

Pressing the **Peak Search** tab once you are already *in* the **Marker** menu does *not* perform a peak search.

Marker Time

This is the fundamental control that you use to move a marker around on the trace. It is the same as "Marker Time" on page 2222 in **Settings**.

Peak Search

Moves the selected marker to the trace point that has the maximum Y-Axis value for that marker’s trace.

NOTE Pressing the **Peak Search** hardkey automatically moves you to the **Peak Search** page of the **Marker** menu *and* performs a peak search.

Remote Command	`:CALCulate:WAVeform:MARKer[1]|2|…|12:MAXimum`

Example	`:CALC:WAV:MARK2:MAX`
	`:SYST:ERR?`
	can be used to query the errors to determine if a peak is found. The message "No peak found" (-200) will be returned after an unsuccessful search

Notes	Sending this command selects the subopcoded marker In W-CDMA Mode, this command does *not* work when the selected marker is located on the Polar trace. In this case, the command is ignored

Next Peak

Moves the selected marker to the peak that is next lower in amplitude than the current marker value.

If the selected marker was `OFF`, then it is turned `ON` as a `POSition` marker, and a peak search is performed.

Remote Command	`:CALCulate:WAVeform:MARKer[1]|2|…|12:MAXimum:NEXT`
Example	`:CALC:WAV:MARK:MAX:NEXT`
Notes	Sending this command selects the subopcoded marker
State Saved	Not part of saved state

Minimum Peak

Moves the selected marker to the minimum Y-Axis value on the current trace.

If the selected marker is `OFF`, it is turned `ON` before the minimum search is performed.

Remote Command	`:CALCulate:WAVeform:MARKer[1]|2|…|12:MINimum`
Example	`:CALC:WAV:MARK:MIN`
Notes	Sending this command selects the subopcoded marker
State Saved	Not part of saved state

Marker Delta

Pressing this control has the same effect as pressing **Delta** in "Marker Mode" on page 2224 on the **Settings** tab. The selected marker becomes a **Delta** marker. If the selected marker is already a **Delta** marker, the reference marker is moved to the current position of the selected marker, thus resetting the delta to zero.

The control is duplicated here to allow you to conveniently perform a **Peak Search** and change the marker's control mode to **Delta**, without having to access two separate menus.

3.12.7.4 Pk Search Config

Contains controls that let you set up the **Peak Search** functions.

Since the **Pk Search Config** functions are independent of the selected **Marker**, the **Select Marker** control does not appear while in **Pk Search Config**.

Peak Search Range

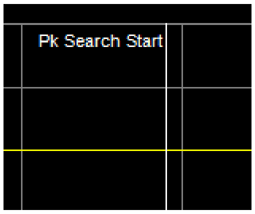
Lets you specify the range of trace to perform peak search actions specified in the **Peak Search** menu.

Option	SCPI	Behavior
Full	`FULL`	**Peak Search** actions will be performed on the entire trace
Manual	`MANual`	Specifies the range of the trace to which **Peak Search** actions will apply

Remote Command	`:CALCulate:WAVeform:MARKer:PEAK:SEARch:RANGe FULL | MANual` `:CALCulate:WAVeform:MARKer:PEAK:SEARch:RANGe FULL | MANual`
Example	`:CALC:WAV:MARK:PEAK:SEAR:RANG FULL`
Preset	`FULL`
State Saved	Saved in instrument state
Range	`FULL | MANual`

Peak Search Range Start

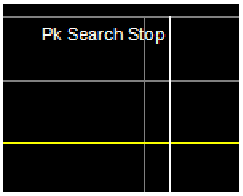
Specifies the start of the range, in seconds, to which **Peak Search** actions are applied. Displays as a green vertical line, with the label **Pk Search Start** on the left, as shown below.



Remote Command	`:CALCulate:WAVeform:MARKer:PEAK:SEARch:RANGe:STARt <time>` `:CALCulate:WAVeform:MARKer:PEAK:SEARch:RANGe:STARt?`
Example	`:CALC:WAV:MARK:PEAK:SEAR:RANG:STAR 0.001`
Dependencies	Disabled when **Peak Search Range** is set to Full.
Preset	0.0 ms
Min/Max	0.0/+Meas Time

Peak Search Range Stop

Specifies the end of the range, in seconds, to which **Peak Search** actions are applied. Displays as a green vertical line, with the label **Pk Search Stop** on the left, as shown below.



Remote Command	`:CALCulate:WAVeform:MARKer:PEAK:SEARch:RANGe:STOP <time>` `:CALCulate:WAVeform:MARKer:PEAK:SEARch:RANGe:STOP?`
Example	`:CALC:WAV:MARK:PEAK:SEAR:RANG:STOP 0.001`
Dependencies	Disabled when **Peak Search Range** is set to Full.
Preset	0.0 ms
Min/Max	0.0/+Meas Time

3.12.7.5 Marker Function

The controls in this tab perform post-processing operations on marker data.

The **Marker Function** menu controls which marker functions are turned on, and allows you to adjust the setup parameters for each function. These parameters include the following, but only one parameter can be assigned to a given marker:

- Marker Noise
- Interval Power
- Interval Density
- Off

More Information

In the Waveform measurement, post-processing operations on markers are based on the measurement specifications. **Marker Functions** are distinct from measurement functions, which automatically perform complex sequences of setup, data acquisition, and display operations, to measure specified signal characteristics. **Marker Functions** are specified for each individual marker, and may be turned on individually for each marker.

Marker Time

This is the fundamental control that you use to move a marker around on the trace. It is the same as "Marker Time" on page 2222 in **Settings**.

Interval Function

Sets the marker control function type to one of:

Option	Parameter
Marker Noise	`NOISe`
Interval Power	`BPOWer`
Interval Density	`BDENsity`
Marker Function Off	`OFF`

All interactions and dependencies detailed under the control description are enforced when the remote command is sent.

Remote Command	`:CALCulate:WAVeform:MARKer[1]|2|…|12:FUNCtion NOISe | BPOWer | BDENsity | OFF` `:CALCulate:WAVeform:MARKer[1]|2|…|12:FUNCtion?`
Example	`:CALC:WAV:MARK:FUNC BPOW` `:CALC:WAV:MARK:FUNC?`
Preset	`OFF`
State Saved	Saved in instrument state
Range	Marker Noise | Interval Power | Interval Density | Off
Annotation	Mkr # <X value> and <Marker value> upper right on graph

Interval Span

Sets the width of the Span for the selected marker.

Remote Command	`:CALCulate:WAVeform:MARKer[1]|2|…|12:FUNCtion:BAND:SPAN <time>` `:CALCulate:WAVeform:MARKer[1]|2|…|12:FUNCtion:BAND:SPAN?`
Example	`:CALC:WAV:MARK:FUNC:BAND:SPAN 20 ms` `:CALC:WAV:MARK:FUNC:BAND:SPAN?`
Couplings	Changing **Interval Span** necessarily changes "Interval Left" on page 2231 and "Interval Right" on page 2231
Preset	10% of Meas Time
State Saved	Saved in instrument state
Min	0
Max	100 s

Interval Left

Sets the left edge time for the band of the selected marker.

Remote Command	`:CALCulate:WAVeform:MARKer[1]|2|…|12:FUNCtion:BAND:LEFT <time>` `:CALCulate:WAVeform:MARKer[1]|2|…|12:FUNCtion:BAND:LEFT?`
Example	`:CALC:WAV:MARK12:FUNC:BAND:LEFT 1 s` `:CALC:WAV:MARK12:FUNC:BAND:LEFT?`
Couplings	Changing **Interval Left** necessarily changes "Interval Span" on page 2231 and "Interval Right" on page 2231
Preset	5% of Meas Time
State Saved	Yes
Min	0
Max	100 s

Interval Right

Sets the right edge time for the band of the selected marker.

Remote Command	`:CALCulate:WAVeform:MARKer[1]|2|…|12:FUNCtion:BAND:RIGHt <time>` `:CALCulate:WAVeform:MARKer[1]|2|…|12:FUNCtion:BAND:RIGHt?`
Example	`:CALC:WAV:MARK12:FUNC:BAND:RIGH 1 s` `:CALC:WAV:MARK12:FUNC:BAND:RIGH?`

Notes	You must be in the IQ Waveform measurement to use this command
Couplings	Changing **Interval Right** necessarily changes "Interval Left" on page 2231 and "Interval Span" on page 2231
Preset	5% of Meas Time
State Saved	Yes
Min	0
Max	100 s

3.12.7.6 Properties

The controls on this tab are used to set certain properties of the selected marker.

Marker Time

This is the fundamental control that you use to move a marker around on the trace. It is the same as "Marker Time" on page 2222 in **Settings**.

Relative To

Selects the marker to which the selected marker is relative (its reference marker).

Every marker has another marker to which it is relative. This marker is referred to as the "*reference marker*" for that marker. This attribute is set by the **Marker**, **Properties**, **Relative To** key. The marker must be a **Delta** marker to make this attribute relevant. If it is a **Delta** marker, the reference marker determines how the marker is controlled and how its value is displayed. A marker cannot be relative to itself.

Remote Command	`:CALCulate:WAVeform:MARKer[1]|2|…|12:REFerence <integer>` `:CALCulate:WAVeform:MARKer[1]|2|…|12:REFerence?`
Example	`:CALC:WAV:MARK:REF 8` `:CALC:WAV:MARK:REF?`
Notes	This command causes the marker specified with the subopcode to become selected A marker cannot be relative to itself so that choice is not available, and if sent from SCPI generates error -221: "Settings conflict; marker cannot be relative to itself" When queried, a single value is returned (the specified marker number's relative marker)
Couplings	The act of specifying the selected marker's reference marker makes the selected marker a **Delta** marker If the reference marker is `OFF`, it is turned on in `POSition` mode at the **Delta** marker location
Preset	The preset default "Relative To" marker (reference marker) is the next higher numbered marker (current marker +1). For example, if Marker 2 is selected, then its default reference marker is Marker 3. The

	exception is Marker 12, which has a default reference of Marker 1 Set to default by **Restore Mode Defaults**. Not reset by **Marker Off**, **All Markers Off**, or **Preset**
State Saved	Saved in instrument state. Not affected by **Marker Off** and hence not affected by **Preset** or power cycle
Range	1 to 12 Remote Command only: if the range is exceeded, then the value is clipped
Min	1
Max	12
Annunciation	Appears in the marker label of a **Delta** marker

Marker Trace

Assigns the specified marker to the designated trace.

Remote Command	`:CALCulate:WAVeform:MARKer[1]|2|…|12:TRACe RFENvelope | I | Q | IQ` `:CALCulate:WAVeform:MARKer[1]|2|…|12:TRACe?`
Example	`:CALC:WAV:MARK:TRAC RFEN` `:CALC:WAV:MARK:TRAC?`
Notes	The `IQ` selection is for backwards compatibility. For new designs, use the `I` and/or `Q` selection instead
Preset	`RFEN`
State Saved	Yes
Range	`RFENvelope|I|Q|IQ`

Marker Settings Diagram

Lets you configure the Marker system using a visual utility. It is the same as "Marker Settings Diagram" on page 2225 in **Settings**.

3.12.8 Meas Setup

Contains functions for setting up the measurement parameters, and for setting up parameters global to all measurements in the Mode.

3.12.8.1 Settings

Contains frequently used **Meas Setup** functions to which you will want the fastest access.

Avg/Hold Number (Averaging On/Off)

Sets the number of sweeps (average counts) that are averaged. After the specified number of sweeps, the "Average Mode" on page 2234 (terminal control) setting determines the averaging action.

Also lets you turn Averaging on or off.

Remote Command	`[:SENSe]:WAVeform:AVERage:COUNt <integer>` `[:SENSe]:WAVeform:AVERage:COUNt?`
Example	`:WAV:AVER:COUN 1001` `:WAV:AVER:COUN?`
Preset	10
State Saved	Saved in instrument state
Min/Max	1/20001
Annotation	The average count is displayed in the measurement bar on the front panel display. The annotation appears in the format n/N, where n is the current average and N is the average count

Auto Function

Remote Command	`[:SENSe]:WAVeform:AVERage[:STATe] OFF | ON | 0 | 1` `[:SENSe]:WAVeform:AVERage[:STATe]?`
Example	`:WAV:AVER ON` `:WAV:AVER?`
Preset	`OFF`
State Saved	Saved in instrument state
Range	`OFF|ON`

Average Mode

Sets the Average Mode:

- `EXPonential`, The measurement averaging continues using the specified number of averages to compute each averaged value. The average is displayed at the end of each sweep
- `REPeat`: The measurement resets the average counter each time the specified number of averages is reached

Remote Command	`[:SENSe]:WAVeform:AVERage:TCONtrol EXPonential | REPeat` `[:SENSe]:WAVeform:AVERage:TCONtrol?`
Example	`:WAV:AVER:TCON REP`

	`:WAV:AVER:TCON?`
Preset	`EXPonential`
State Saved	Saved in instrument state
Range	`EXPonential|REPeat`

Average Type

Sets the type of averaging. When AUTO is selected, the instrument chooses the type of averaging. Available Average Types are:

Option	Parameter
Log-Pwr Avg	`LOG`
Power (RMS)	`RMS`
Voltage	`SCALar`

When one of the average types is selected manually, the instrument uses that type regardless of other instrument settings, and shows Man on the **Average Type** control.

Remote Command	`[:SENSe]:WAVeform:AVERage:TYPE LOG | MAXimum | MINimum | RMS | SCALar`
	`[:SENSe]:WAVeform:AVERage:TYPE?`
	For EXT-C, E6630A, E6640A, M90XA, use the following command
	`[:SENSe]:WAVeform:AVERage:TYPE LOG | RMS | SCALar`

Example	`:WAV:AVER:TYPE RMS` `:WAV:AVER:TYPE?`
Notes	The selections MAX and MIN are retained for backwards compatibility, but they are removed from the front panel access because they are not an Average function
Couplings	AUTO selects Power (RMS) averaging if a Marker Function (Marker Noise, Band/Intvl Power) is on
Preset	`RMS`
State Saved	Saved in instrument state
Range	Log-Pwr Avg | Power (RMS) | Voltage

Auto Function

Remote Command	`[:SENSe]:WAVeform:AVERage:TYPE:AUTO ON | OFF | 1 | 0` `[:SENSe]:WAVeform:AVERage:TYPE:AUTO?`
Example	`:WAV:AVER:TYPE:AUTO 0` `:WAV:AVER:TYPE:AUTO?`
Preset	`ON`

Time Avg Num

Sets the number of HW averages to be executed per each data acquisition.

HW Averaging

Changes the number of time averages to be made using hardware. This averaging is much faster than the standard averaging done in software. The hardware averaging is done on the complex voltage time trace data before any measurement application averaging is done. Both types of averaging (HW and SW) can be done on the same measurement data.

When time averaging is being done in HW, each trace update represents N fresh data acquisitions averaged together, where N is the number of time averages. You cannot access the individual time data. Note that this averaging is done prior to the SW averaging done within the application. Thus, if time averaging is turned on, the trace in this measurement shows the result of HW averaging even if the normal (SW) averaging is turned off. Subsequent normal (SW) averaging is orthogonal to this hardware-based time averaging.

Thus, it is possible to turn off normal (SW) averaging within the application but still have the HW averaging set to a certain number greater than 1. In other words, turning averaging off within the measurement will not affect HW averaging. If HW averaging needs to be turned off, simply set the HW Averaging parameter to 1.

The **Auto/Man** feature of **Time Avg Num** works differently than other parameters. Since it is time averaging, a trigger source something other than **Free Run** should be used to synchronize successive data acquisitions to avoid cancelling out the signal to be measured. It is most useful for a periodic signal with known periods used in conjunction with the Periodic trigger. Thus, when in **Auto**, the Trigger Source automatically changes to **Periodic** trigger when **Time Avg Num** is turned `ON`. The trigger period is set to the current Meas Time value. Any changes to Meas Time change the **Periodic** trigger period to the same value and vice versa. If a trigger source other than **Periodic** trigger is manually selected, the **Time Avg Num Auto/Man** toggle is set to **Man**.

Remote Command	`[:SENSe]:WAVeform:AVERage:TACount <integer>` `[:SENSe]:WAVeform:AVERage:TACount?`
Example	`:WAV:AVER:TAC 10` `:WAV:AVER:TAC?`
Notes	Only available when Option DP2, B40, or wider IF Bandwidth option is installed
Preset	1
State Saved	Saved in instrument state
Min/Max	1/65535

Auto Function

Remote Command	`[:SENSe]:WAVeform:AVERage:TACount:AUTO OFF | ON | 0 | 1` `[:SENSe]:WAVeform:AVERage:TACount:AUTO?`
Example	`:WAV:AVER:TAC:AUTO ON` `:WAV:AVER:TAC:AUTO?`
Preset	`ON`
Range	`Auto|Man`

Meas Time

Lets you set how long the measurement is performed. X Scale *only* changes the scale of the display.

Remote Command	`[:SENSe]:WAVeform:SWEep:TIME <time>` `[:SENSe]:WAVeform:SWEep:TIME?`
Example	`:WAV:SWE:TIME 50 ms` `:WAV:SWE:TIME?`
Notes	Specifies and returns how long the measurement is performed. It is the time record length of the measurement waveform. The Max time may be reduced when the sample frequency is high due to the memory limitation
Preset	LTE, LTETDD, LTEAFDD, LTEATDD, 5G NR Modes: 10 ms All other Modes: 2.000000 ms
State Saved	Saved in instrument state
Range	1.000 us to 100.00 s
Min/Max	1.000 us/100.0 s 1.000 us/3200 s

Sample Rate

Sets an arbitrary sample rate for the acquired data to be processed.

Remote Command	`[:SENSe]:WAVeform:SRATe <freq>` `[:SENSe]:WAVeform:SRATe?`
Example	`:WAV:SRAT 1.3636 MHz`
Notes	The command and query are available when Option DP2, B40, or wider IF Bandwidth option is installed. For other configurations, only the query is available
Dependencies	To set a 2.4 GHz Sample Rate with Options R15 or R20, **Center Frequency** must be greater than or equal to 3.5 GHz To set a 5.1 GHz Sample Rate with Option R40, **Center Frequency** must be greater than or equal to 10 GHz

Preset

Mode	Value
5G NR, LTEA FDD/TDD	Automatically calculated
BASIC	125.0 kHz
BASIC	100 MHz
EDGEGSM	637.5 kHz
MSR	125.0 kHz
PNOISE	125.0 kHz
WCDMA	125.0 kHz
WLAN	31.25 MHz

Min/Max

12.5 Hz/Option dependent

For Option DP2, B40 or wider IF Bandwidth option:

Digital IF 10 MHz path	12.5 MHz
Digital IF 25 MHz path	31.25 MHz
Digital IF 40 MHz path	50 MHz
Option B85 85 MHz path	106.25 MHz
Option B1A 125 MHz path	156.25 MHz
Option B1X 140 MHz path	175 MHz
Option B1Y 160 MHz path	200 MHz
Option B2X 255 MHz path	300 MHz
Option B5X 510 MHz path	600 MHz
Option R10 1 GHz path	1.2 GHz
Option R15 1.5 GHz path	2.4 GHz
Option R20 2 GHz path	2.4 GHz
Option R40 4 GHz path	5.1 GHz

For all other configurations:

10 MHz path	15 MHz
Option B25 25 MHz path	45 MHz

Meas Setup Summary Table

Lets you view and access many of the parameters in the **Meas Setup** menus on one screen.

Spur Avoidance

Because VXT models M9410A/11A/15A/16A are direct-conversion (zero-IF) receivers, feedthrough leakage from the local oscillator appears as a spurious signal (spur) at the center frequency. The **Spur Avoidance** function is provided to eliminate this spur, at the expense of some measurement speed.

When **Spur Avoidance** is enabled (the default), the instrument uses a software algorithm to remove this spur from the displayed measurement data, but the algorithm only operates under certain conditions. Specifically, it only operates when the Digital IF BW<= maxBW/2.5. See "More Information" on page 2239.

You can disable this function to speed up your measurement, by setting **Spur Avoidance** to **Disabled**.

Note that when **Spur Avoidance** is not in effect, either because you have disabled it or because the Digital IF BW > maxBW/2.5, the following warning message appears in the status bar: “Settings Alert; Spur Avoidance Off”. This is to alert you that measurement accuracy might be impacted by the fact that **Spur Avoidance** is not in effect.

The spur avoidance function is not available for:

– M9410A/11A with EP6 option at frequency above 6 GHz

– M9415A/16A at frequency below 380 MHz and above 12.3 GHz

– M9410E/11E/15E/16E at frequency below 380 MHz and above 25.9 GHz

Remote Command	`[:SENSe]:WAVeform:SAVoid[:STATe] ON | OFF | 0 | 1` `[:SENSe]:WAVeform:SAVoid[:STATe]?`
Example	`:WAV:SAVoid ON` `:WAV:SAVoid?`
Dependencies	Only appears in VXT models M9410A/11A/15A/16A and M9410E/11E/15E/16E
Preset	`OFF`
State Saved	Saved in instrument state
Range	`ON|OFF`

More Information

The Maximum Digital IF BW depends on the installed options, and selected **Center Frequency**.

VXT models M9410A/11A

Option limitation:

Option	Max Digital IF BW
B40	40 MHz
B3X	300 MHz
B6X	600 MHz
B12	1200 MHz

Center frequency limitation:

Center Frequency	Max Digital IF BW
330 MHz ~ 380 MHz	(CF – 330 MHz) * 2
380 MHz ~ 550 MHz	100 MHz
550 MHz ~ 1310 MHz	200 MHz
1310 MHz ~ 2000 MHz (without Option EP6)	600 MHz
2000 MHz ~ 5480 MHz (without Option EP6)	1200 MHz
5480 MHz ~ 6080 MHz (without Option EP6)	(6080 MHz – CF) * 2
1310 MHz ~ 1900 MHz (Option EP6)	600 MHz
1900 MHz ~ 6000 MHz (Option EP6)	1200 MHz
6000 MHz ~ 6600 MHz (Option EP6)	(6600 MHz – CF) * 2

VXT models M9415A/16A

Option limitation:

Option	Max Digital IF BW
B4X	400 MHz
B8X	800 MHz
B12	1200 MHz

Center frequency limitation:

Center Frequency	Max Digital IF BW
330 MHz ~ 380 MHz	(CF – 330 MHz) * 2
380 MHz ~ 550 MHz	100 MHz
550 MHz ~ 1310 MHz	200 MHz
1310 MHz ~ 2000 MHz	600 MHz
2000 MHz ~ 12300 MHz	1200 MHz
12300 MHz ~ 12900 MHz	(12900 MHz – CF) * 2

M9410E/11E

Option Limitation:

Option	Maximum IF BW
B40	40 MHz
B3X	300 MHz
B6X	600 MHz
B12	1200 MHz

Center Frequency Limitation:

Center Frequency	Maximum IF BW
1 MHz ~ 10 MHz (Option LFE)	500 kHz
10 MHz ~ 20 MHz (Option LFE)	5 MHz
20 MHz ~ 60 MHz (Option LFE)	10 MHz
60 MHz ~ 80 MHz (Option LFE)	20 MHz
80 MHz ~ 380 MHz (Option LFE)	40 MHz
330 MHz ~ 380 MHz (without Option LFE)	(CF – 330 MHz) * 2
380 MHz ~ 550 MHz	100 MHz
550 MHz ~ 1310 MHz	200 MHz
1310 MHz ~ 2000 MHz (without Option EP6)	600 MHz
2000 MHz ~ 25.9 GHz (without Option EP6)	1200 MHz
1310 MHz ~ 1900 MHz (Option EP6)	600 MHz
1900 MHz ~ 25.9 GHz (Option EP6)	1200 MHz
25.9 GHz ~ 26.5 GHz	Min(Max BW by option, 2*(26.5 GHz-Center Freq))

M9415E/16E

Option Limitation:

Option	Maximum IF BW
B4X	400 MHz
B8X	800 MHz
B12	1200 MHz

Center Frequency Limitation:

Center Frequency	Maximum IF BW
1 MHz ~ 10 MHz (Option LFE)	500 kHz

Center Frequency	Maximum IF BW
10 MHz ~ 20 MHz (Option LFE)	5 MHz
20 MHz ~ 60 MHz (Option LFE)	10 MHz
60 MHz ~ 80 MHz (Option LFE)	20 MHz
80 MHz ~ 380 MHz (Option LFE)	40 MHz
330 MHz ~ 380 MHz (without Option LFE)	(CF – 330 MHz) * 2
380 MHz ~ 550 MHz	100 MHz
550 MHz ~ 1310 MHz	200 MHz
1310 MHz ~ 2000 MHz	600 MHz
2000 MHz ~ 25.9 GHz	1200 MHz
25.9 GHz ~ 26.5 GHz	Min(Max BW by option, 2*(26.5 GHz-Center Freq))

Auto Couple

Immediately puts all **Auto/Man** functions into **Auto**. **Auto Couple** is confined to the current measurement only. It does not affect other measurements in the Mode.

In the **Auto** state, **Auto/Man** functions are said to be “coupled”, meaning their values change as you make changes to other values in the measurement. This helps ensure accurate measurements and optimum dynamic range. **Auto Couple** is an immediate action function, and when it is executed, all the **Auto/Man** controls for the current measurement are set to **Auto**, and all measurement settings coupled to the **Auto/Man** parameters are automatically set to their optimal values.

For further details of measurement-specific settings (if any), see "Measurement-Specific Details" on page 2243 below.

Remote Command	`:COUPle ALL`
Example	`:COUP ALL`
Backwards Compatibility SCPI	`:COUPLE ALL | NONE`
Backwards Compatibility Notes	`:COUP:NONE` puts all Auto/Man parameters in manual mode, decoupling all the coupled instrument parameters. It is retained for backwards compatibility and is *not* recommended for making measurements or new designs

All **Auto/Man** parameter couplings in the measurement are set to **Auto**. This includes couplings that may be unavailable or grayed-out due to the current state. For example, in the Swept SA measurement, there is no **Auto/Man** coupling for **RBW** while in Zero Span. Nonetheless, if **Auto Couple** were executed while in Zero Span, it would set **RBW** to Auto "behind the scenes" so that, on exit from Zero Span, it would be in **Auto**.

Any **Auto/Man** selection specific (local) to the other measurements in the current Mode are not affected by **Auto Couple**. Any functions that are *not* coupled with other instrument parameters, such as ranging or leveling variables, such as **AutoRange** or **AutoScale**, are not affected.

Executing **Auto Couple** generates the informational message, "All Auto/Man functions have been set to Auto".

Each parameter, upon being set to **Auto**, selects and sets the appropriate auto-coupled value based on that parameter's coupling rules. The Dependency Resolver orchestrates the couplings for parameters that depend on one or more other parameters. The coupling and dependency rules for each parameter are defined in the section describing that parameter.

Executing **Auto Couple***does not* affect markers, marker functions, trace or display attributes, or any other instrument setting other than those specifically mentioned above.

Measurement-Specific Details

TOI (SA Mode only)

Parameters affected by **Auto Couple** are:

- Center Frequency Step
- Resolution Bandwidth
- Span/RBW Ratio
- Sweep Time
- Video BANDwidth VBW/RBW ratio
- Upper and Lower Tone (set to Sense)
- Zero span measurement Resolution Bandwidth
- Zero span measurement Dwell Time

Harmonics (SA Mode only)

Parameters affected by **Auto Couple** are:

- Resolution Bandwidth
- Fundamental Frequency

- Dwell Time
- Range Table Resolution Bandwidths
- Range Table Dwell Times

Meas Preset

Restores all measurement parameters to their default values.

Remote Command	`:CONFigure:WAVeform`
Example	`:CONF:WAV`
Notes	Restore default values of all parameters

3.12.8.2 Radio

Contains controls to select link direction.

Direction

Specifies whether the LTE-Advanced signal is an uplink signal or a downlink signal.

The choice of link direction determines the Sync/Format, Chan Profile and Time. Advanced menus all change based on the link direction selected. Also, since downlink and uplink signals use OFDMA and SC-FDMA respectively, the list of trace results available and the default traces presented change based on the link direction parameter.

Remote Command	`[:SENSe]:RADio:STANdard:DIRection DLINk | ULINk` `[:SENSe]:RADio:STANdard:DIRection?`
Example	`:RAD:STAN:DIR DLIN`
Couplings	TDD: Changing direction affects the sync source of periodic trigger source or gate source If Direction is uplink, the sync source is RF burst If Direction is downlink, the sync source is External1 If direction is downlink, the menu Measure PRACH/SRS is disabled and the value is off FDD/TDD: Changing Direction affects many other modulation analysis setup parameters
Preset	DLIN ULIN on E6640A DLIN on E6650A
State Saved	Yes
Range	Downlink|Uplink

	For E6640A, Direction is restricted to Uplink only, Downlink is not selectable For E6650A, Direction is restricted to Downlink only, Uplink is not selectable

3.12.8.3 Component Carriers

Contains settings that let you configure the analyzer to match the component carriers in your LTE-A signal.

Number of Component Carriers

Specifies how many component carriers are included in LTE-Advanced TDD/FDD measurements. Each component carrier complies with the LTE specifications.

LTE-Advanced TDD/FDD supports a maximum of five component carriers, so the maximum transmission bandwidth is up to 100 MHz.

Remote Command	`[:SENSe]:CCARrier:COUNt <integer>` `[:SENSe]:CCARrier:COUNt?`
Example	`:CCAR:COUN 1` `:CCAR:COUN?`
Notes	The max number of Component carriers can be set greater than one with 9080B/9082B-2FP license
Preset	1
State Saved	Yes
Min	1
Max	5

Carrier Allocation

Specifies the carrier frequency allocation. There are two types of allocation, contiguous and non-contiguous. Non-Contiguous frequency allocation is defined as an allocation where two sub-blocks are separated with a sub-block gap:

- CONTiguous – All the component carriers belong to one block and no sub-block gap exists
- NCONtiguous – Component carriers are separated into two sub-blocks. Allocation Break Pt Carrier determines how sub-blocks are configured

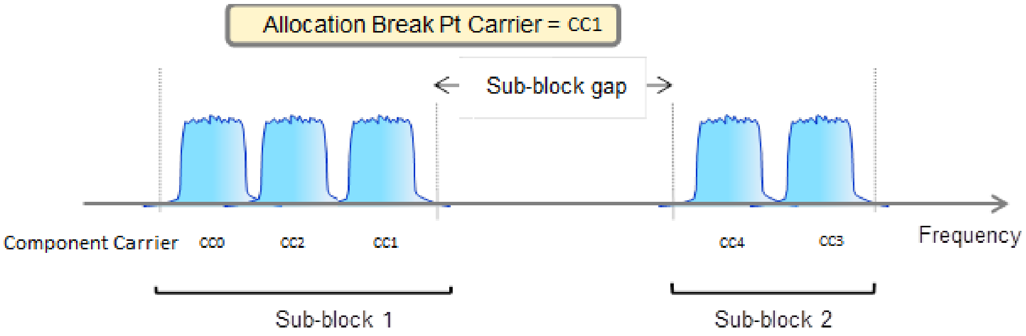
Remote Command	`[:SENSe]:CCARrier:CONFig:ALLocation CONTiguous | NCONtiguous` `[:SENSe]:CCARrier:CONFig:ALLocation?`
Example	`:CCAR:CONF:ALL CONT` `:CCAR:CONF:ALL?`

Preset	CONTiguous
State Saved	Saved in instrument state
Range	Contiguous|Non-Contiguous

Non-Contiguous Break at

Specifies an allocation break point in non-contiguous carrier allocation. First sub-block starts from the lowest frequency carrier and stops at the allocation break point carrier. Next sub-block starts from the next upper frequency carrier and ends at the highest frequency carrier.

one example is shown below. In the example carrier indices are not in the order of carrier frequency. In the example, Allocation Break Pt Carrier is CC1. It means that sub-block 1 ends at carrier CC1 and sub-block 2 starts at carrier CC4. Sub-block gap is located between carrier CC1 and CC4.



Remote Command	`[:SENSe]:CCARrier:CONFig:ALLocation:NCONtiguous:ABPoint CC0 | … | CC4` `[:SENSe]:CCARrier:CONFig:ALLocation:NCONtiguous:ABPoint?`
Example	`:CCAR:CONF:ALL:NCON:ABP CC0` `:CCAR:CONF:ALL:NCON:ABP?`
Notes	The options CC1~CC4 can be enabled with 9080B/9082B-2FP license
Dependencies	Allocation Break Point is coupled to Number of Component Carriers. For example, Allocation Break Point list will include CC0~CC1 if the number of Component Carriers is 2
Preset	CC0
State Saved	Saved in instrument state
Range	CC0|CC1|CC2|CC3|CC4

Configure Comp Carriers

Lets you perform a detailed configuration of your component carriers, including number of carriers, presets, bandwidth, offset, integration bandwidth, etc.

Configure CCs

Lets you configure System Bandwidth, frequency offsets, and integration bandwidth, and also lets you exclude certain carriers from the measurement.

Number of Component Carriers

See "Number of Component Carriers" on page 2245.

Carrier Allocation

See "Carrier Allocation" on page 2245.

Non-Contiguous Break at

See "Non-Contiguous Break at" on page 2246.

System BW

Enables you to set the system bandwidth of each component carrier for LTE-Advanced / NB-IoT signal (which also determines the total number of resource blocks for Modulation Analysis measurement).

Remote Command	`[:SENSe]:CCARrier0|…|4:RADio:STANdard:BANDwidth B1M4 | B3M | B5M | B10M | B15M | B20M | B200K` `[:SENSe]:CCARrier0|…|4:RADio:STANdard:BANDwidth?`
Example	`:CCAR4:RAD:STAN:BAND B5M`
Preset	B5M
State Saved	Yes
Range	1.4 MHz (6 RB) | 3 MHz (15 RB) | 5 MHz (25 RB) | 10 MHz (50 RB) | 15 MHz (75 RB) | 20 MHz (100 RB) | 200kHz (NB-IoT)
Backwards Compatibility SCPI	`[:SENSe]:RADio:STANdard:BANDwidth`

Measure Carrier

Sets whether to measure this component carrier or not.

Remote	`[:SENSe]:CCARrier0|…|4[:STATe] OFF | ON | 0 | 1`

Command	`[:SENSe]:CCARrier0|…|4[:STATe]?`
Example	`:CCAR0 ON` `:CCAR0?`
Notes	The command is used with a sub-op code <n> (default=0) to specify the component carrier for configuration. The range of the sub-op code is determined by the number of component carriers
Preset	ON
State Saved	Saved in instrument state
Range	On|Off

Frequency Offset

Sets the component carrier center frequency as offset from the Carrier Ref Frequency.

Remote Command	`[:SENSe]:CCARrier<n>:FREQuency:OFFSet <freq>` `[:SENSe]:CCARrier<n>:FREQuency:OFFSet?`
Example	`:CCAR4:FREQ:OFFS 10MHz` `:CCAR4:FREQ:OFFS?`
Notes	Used with a sub-op code <n> (default=0) to specify the component carrier for configuration. The range of the sub-op code is determined by the number of component carriers
Preset	0Hz
State Saved	Saved in instrument state
Min	-3.5GHz
Max	3.5GHz

Spectrum

Determines if the spectrum of the incoming data is mirrored or not. The actual mirroring is accomplished by conjugating the complex time data.

Note that only the Modulation Analysis measurement and Conformance EVM measurement support this feature.

Remote Command	`[:SENSe]:CCARrier0|…|4:SPECtrum NORMal | INVert` `[:SENSe]:CCARrier0|…|4:SPECtrum?`
Example	`:CCAR0:SPEC INV` `:CCAR0:SPEC?`
Preset	NORM
State Saved	Yes

Range	Normal | Invert
Backwards Compatibility SCPI	`[:SENSe]:SPECtrum`

UL/DL Configuration

Allows you to set the Uplink and Downlink allocation configuration of the signal being measured. The choice of link direction will determine which slot in the frame is used for uplink transmission, and which slot for downlink transmission.

Remote Command	`[:SENSe]:CCARrier0|…|4:RADio:STANdard:ULDL CONF0 | … | CONF6` `[:SENSe]:CCARrier0|…|4:RADio:STANdard:ULDL?`
Example	`:CCAR0:RAD:STAN:ULDL CONF0`
Notes	CONF0: Configuration 0 (DSUUUDSUUU) CONF1: Configuration 1 (DSUUDDSUUD) CONF2: Configuration 2 (DSUDDDSUDD) CONF3: Configuration 3 (DSUUUDDDDD) CONF4: Configuration 4 (DSUUDDDDDD) CONF5: Configuration 5 (DSUDDDDDDD) CONF6: Configuration 6 (DSUUUDSUUD)
Preset	CONF0
State Saved	Yes
Range	Configuration 0|Configuration 1|Configuration 2|Configuration 3|Configuration 4|Configuration 5|Configuration 6
Backwards Compatibility SCPI	`[:SENSe]:RADio:STANdard:ULDL`

Dw/GP/Up Len

This control allows you to set the DwPTS/GP/UpPTS length configuration of the signal being measured. The choice of link direction will determine the length of DwPTS, GP and UpPTS in the Special Subframe.

Remote Command	`[:SENSe]:CCARrier0|…|4:RADio:STANdard:DGPU CONF0 | … | CONF9` `[:SENSe]:CCARrier0|…|4:RADio:STANdard:DGPU?`
Example	`:CCAR0:RAD:STAN:DGPU CONF0`
Notes	CONF0: Configuration 0 CONF1: Configuration 1 CONF2: Configuration 2

	CONF3: Configuration 3 CONF4: Configuration 4 CONF5: Configuration 5 CONF6: Configuration 6 CONF7: Configuration 7 CONF8: Configuration 8 CONF9: Configuration 9
Dependencies	The special sub-frame configuration 9 is only enabled when it is LTE-Advanced TDD
Preset	CONF0
State Saved	Yes
Range	Configuration 0|Configuration 1|Configuration 2|Configuration 3|Configuration 4|Configuration 5|Configuration 6|Configuration 7|Configuration 8|Configuration 9
Backwards Compatibility SCPI	`[:SENSe]:RADio:STANdard:DGPU`

CHP Power Integ BW

Specifies the range of integration used in calculating the power in the component carrier s in the CHP measurement.

Remote Command	`[:SENSe]:CCARrier0|…|4:CHPower:BANDwidth:INTegration <freq>` `[:SENSe]:CCARrier0|…|4:CHPower:BANDwidth:INTegration?`
Example	`:CCAR0:CHP:BAND:INT 20MHz` `:CCAR0:CHP:BAND:INT?`
Notes	You must be in LTEATDD/LTEAFDD Mode to use this command. Use :INSTrument:SELect to set the mode
Couplings	When System Bandwidth of the parameter set is changed, the value of this parameter also changes as shown in the following table.

System Bandwidth	CHP Integ BW
1.4 MHz (B1M4)	1.4 MHz
3 MHz (B3M)	3 MHz
5 MHz (B5M)	5 MHz
10 MHz (B10M)	10 MHz
15 MHz (B15M)	15 MHz
20 MHz (B20M)	20 MHz
200 kHz(B200K)	200 kHz

Preset	5 MHz
State Saved	Saved in instrument state

Min	100 kHz
Max	20 MHz
Backwards Compatibility SCPI	`[:SENSe]:CHPower:BANDwidth:INTegration` `[:SENSe]:CHPower:BWIDth:INTegration`

ACP Power Integ BW

Specifies the Measurement Noise Bandwidth used to calculate the power in the component carriers in the ACP measurement.

Remote Command	`[:SENSe]:CCARrier0|…|4:ACPower:BANDwidth[1]|2:INTegration <freq>` `[:SENSe]:CCARrier0|…|4:ACPower:BANDwidth[1]|2:INTegration?`
Example	`:CCAR0:ACP:BAND:INT 20MHz` `:CCAR0:ACP:BAND:INT?`
Notes	Carrier sub op code, 1 is for BTS, 2 for MS. Default is BTS You must be in the LTEATDD/LTEAFDD mode. Use :INSTrument:SELect to set the mode
Couplings	When System Bandwidth of the parameter set is changed, the value of this parameter also changes as shown in the following table.

System Bandwidth	BTS ACP Meas Noise BW	MS ACP Meas Noise BW
1.4 MHz (B1M4)	1.095 MHz	1.08 MHz
3 MHz (B3M)	2.715 MHz	2.7 MHz
5 MHz (B5M)	4.515 MHz	4.5 MHz
10 MHz (B10M)	9.015 MHz	9.0 MHz
15 MHz (B15M)	13.515 MHz	13.5 MHz
20 MHz (B20M)	18.015 MHz	18.0 MHz
200 kHz(B200K)	180 kHz	180 kHz

Preset	4.515 MHz|4.5 MHz
State Saved	Yes
Min	100 kHz
Max	20 MHz
Backwards Compatibility SCPI	`[:SENSe]:ACPower:CARRier[1]|2:LIST:BANDwidth[:INTegration]` `[:SENSe]:ACPower:CARRier[1]|2:LIST:BWIDth[:INTegration]`

SEM Power Integ BW

Specifies the integration bandwidth used to calculate the power in the component carriers in SEM measurement.

Remote Command	`[:SENSe]:CCARrier0|…|4:SEMask:BANDwidth[1]|2:INTegration <freq>` `[:SENSe]:CCARrier0|…|4:SEMask:BANDwidth[1]|2:INTegration?`
Example	`:CCAR0:SEM:BAND:INT 20MHz` `:CCAR0:SEM:BAND:INT?`
Notes	Bandwidth sub op code, 1 is for BTS, 2 for MS. Default is BTS You must be in LTEATDD/LTEAFDD Mode to use this command. Use :INSTrument:SELect to set the mode
Couplings	When System Bandwidth of the parameter set is changed, the value of this parameter also changes as shown in the following table. Note that you cannot set the value exceeding the corresponding System Bandwidth

System Bandwidth	BTS SEM Integ BW	MS SEM Integ BW
1.4 MHz (B1M4)	1.095 MHz	1.08 MHz
3 MHz (B3M)	2.715 MHz	2.7 MHz
5 MHz (B5M)	4.515 MHz	4.5 MHz
10 MHz (B10M)	9.015 MHz	9.0 MHz
15 MHz (B15M)	13.515 MHz	13.5 MHz
20 MHz (B20M)	18.015 MHz	18.0 MHz
200 kHz(B200K)	180 kHz	180 kHz

Preset	4.515 MHz|4.5 MHz
State Saved	Saved in instrument state
Min	100 kHz
Max	20 MHz
Backwards Compatibility SCPI	`[:SENSe]:SEMask:BANDwidth[1]|2:INTegration`

Carrier Config Presets

Lets you configure the Component Carrier presets.

Preset ETC

The ETC configuration is applied. The component carrier parameters are dynamically changed using values of the parameters of each test configuration under Carrier Config Presets menu when some test configuration is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig NONE | ETC1 | ETC2 | ETC3` `[:SENSe]:CCARrier:CONFig?`
Example	`:CCAR:CONF ETC1` `:CCAR:CONF?`
Notes	The control for NONE is not available
State Saved	Saved in instrument state
Range	ETC1|ETC2|ETC3

Max BTS RF Bandwidth

Sets max BS RF bandwidth used when the carrier configuration preset runs. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:RFBW <freq>` `[:SENSe]:CCARrier:CONFig:RFBW?`
Example	`:CCAR:CONF:RFBW 40MHz` `:CCAR:CONF:RFBW?`
Preset	40MHz
State Saved	Saved in instrument state
Min	1.4MHz
Max	200 MHz

Carrier Spacing Delta

Sets delta channel spacing used when the carrier configuration preset runs. Channel spacing is determined from this value and the default channel spacing defined in the standard, i.e. Channel spacing = $(BW_{chan1} + BW_{chan2}) * 0.5$ + [the delta spacing]. Since this value is a difference from the default spacing, this value can be negative to allow narrower channel spacing. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:SPACing:DELTa <freq>` `[:SENSe]:CCARrier:CONFig:SPACing:DELTa?`
Example	`:CCAR:CONF:SPAC:DELT -200kHz`

	`:CCAR:CONF:SPAC:DELT?`
Preset	0Hz
State Saved	Saved in instrument state
Min	-1.0 MHz
Max	10.0 MHz

ETC1 Attributes

Sets ETC1 carrier configuration.

Max Number of Component Carriers

Sets max component carriers placed when the ETC1 carrier configuration preset runs. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:ETC1:CMAX <integer>` `[:SENSe]:CCARrier:CONFig:ETC1:CMAX?`
Example	`:CCAR:CONF:ETC1:CMAX 5` `:CCAR:CONF:ETC1:CMAX?`
Preset	5
State Saved	Saved in instrument state
Max	5
Min/Max	1

Component Carrier System BW

Sets bandwidth of the component carriers placed when the ETC1carrier configuration preset runs. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:ETC1:BANDwidth B1M4 | B3M | B5M | B10M | B15M | B20M | B200K` `[:SENSe]:CCARrier:CONFig:ETC1:BANDwidth?`
Example	`:CCAR:CONF:ETC1:BAND B5M` `:CCAR:CONF:ETC1:BAND?`
Preset	B5M
State Saved	Saved in instrument state
Range	1.4MHz|3MHz|5MHz|10MHz|15MHz|20MHz|200kHz

Component Carrier Narrowest BW

Sets narrowest bandwidth of the component carriers placed when the ETC1 carrier configuration preset runs. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:ETC1:BANDwidth:NARRowest B1M4 | B3M | B5M | B10M | B15M | B20M | B200K` `[:SENSe]:CCARrier:CONFig:ETC1:BANDwidth:NARRowest?`
Example	`:CCAR:CONF:ETC1:BAND:NARR B1M4` `:CCAR:CONF:ETC1:BAND:NARR?`
Preset	B1M4
State Saved	Saved in instrument state
Range	1.4MHz|3MHz|5MHz|10MHz|15MHz|20MHz|200kHz

ETC2 Attributes

Sets ETC2 carrier configuration.

Max Number of Component Carriers

Sets max component carriers placed when the ETC2 carrier configuration preset runs. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:ETC2:CMAX <integer>` `[:SENSe]:CCARrier:CONFig:ETC2:CMAX?`
Example	`:CCAR:CONF:ETC2:CMAX 5` `:CCAR:CONF:ETC2:CMAX?`
Preset	5
State Saved	Saved in instrument state
Min	1
Max	5

Carrier Side (with BTS RF BW)

Select the side of RF bandwidth to place the ETC2 component carriers. When this value is changed, the carrier configuration preset is initiated.

- NEGative - Negative (lower) edge of RF bandwidth. If the option is selected, the available component carriers will be placed sequentially from the lower edge of the RF bandwidth starting from first
- POSitive - Positive (upper) edge of RF bandwidth, If the option is selected, the available component carriers will be placed sequentially from the upper edge of the RF bandwidth starting from first

Remote Command	`[:SENSe]:CCARrier:CONFig:ETC2:BANDwidth:SIDE NEGative | POSitive` `[:SENSe]:CCARrier:CONFig:ETC2:BANDwidth:SIDE?`
Example	`:CCAR:CONF:ETC2:BAND:SIDE NEG` `:CCAR:CONF:ETC2:BAND:SIDE?`
Preset	NEGative
State Saved	Saved in instrument state
Range	NEGative|POSitive

Component Carrier System BW

Sets carrier bandwidth of the component carriers placed when the ETC2 carrier configuration preset runs. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:ETC2:BANDwidth:CARRier[1]|2|…|5 B1M4 | B3M | B5M | B10M | B15M | B20M | B200K` `[:SENSe]:CCARrier:CONFig:ETC2:BANDwidth:CARRier?`
Example	`:CCAR:CONF:ETC2:BAND:CARR B5M` `:CCAR:CONF:ETC2:BAND:CARR?`
Dependencies	The Carrier Bandwidth is coupled to Max Component Carriers. The settings are enabled following the Max Component Carriers. For example, the 1st Carrier Bandwidth and 2nd Carrier Bandwidth will be available if the Max Component Carriers is 2
Preset	B5M
State Saved	Saved in instrument state
Range	1.4MHz|3MHz|5MHz|10MHz|15MHz|20MHz|200kHz

ETC3 CC Bandwidth

Sets the bandwidth of the component carriers placed when the ETC3 carrier configuration preset runs. When this value is changed, the carrier configuration preset is initiated.

Remote Command	`[:SENSe]:CCARrier:CONFig:ETC3:BANDwidth B1M4 | B3M | B5M | B10M | B15M | B20M | B200K`

	`[:SENSe]:CCARrier:CONFig:ETC3:BANDwidth?`
Example	`:CCAR:CONF:ETC3:BAND B5M` `:CCAR:CONF:ETC3:BAND?`
Preset	B5M
State Saved	Saved in instrument state
Range	1.4MHz|3MHz|5MHz|10MHz|15MHz|20MHz|200kHz

3.12.8.4 Meas Standard

Enables you to access Preset to Standard functions.

In LTE-Advanced TDD Mode, the parameters under Predefined Params impact the gate or trigger length and delay of the following measurements:

- Monitor Spectrum
- Channel Power
- ACP
- Power Stat CCDF
- Occupied BW
- Spectrum Emission Mask
- Spurious Emission

In LTE-Advanced FDD Mode, the Predefined Parameters in this section are used in the Transmit On/Off Power measurement. The Modulation Analysis measurement has its specific Predefined Parameters setting.

In LTE V2X Mode, Predefined parameters apply to all LTE V2X measurements.

System BW

Sets the demodulator to the specified bandwidth and configures the settings of every component carrier according to the default values listed in table for the current direction (Uplink or Downlink).

For example, when Number of Component is 3, after executing the command RAD:STAN:PRES B5M or selecting corresponding Bandwidth in the dropdown menu, all the 3 component carriers are configured as 5Mhz bandwidth, and all the settings of these 3 component carriers are set according to the table.

Remote	`[:SENSe]:RADio:STANdard:PRESet B1M4 | B3M | B5M | B10M | B15M | B20M | B200K`

Command	
Example	`:RAD:STAN:PRES B5M`
Notes	B200K selection is available in LTE-A FDD mode B200K option is for NB-IoT which requires N9080EM3E license
Couplings	Preset To Standard presets parameter values listed in section “Values for each Preset To Standard”. And the system bandwidth of each component carrier under the Component Carrier Setup will be preset to the selected one
Preset	B5M
State Saved	Yes
Range	1.4 MHz (6 RB) | 3 MHz (15 RB) | 5 MHz (25 RB) | 10 MHz (50 RB) | 15 MHz (75 RB) | 20 MHz (100 RB) | 200 kHz (NB-IoT)

UL/DL Config

Sets the TDD UL/DL Allocation parameter of each carrier to the selected value.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:ULDL CONF0 | … | CONF6` `[:SENSe]:RADio:STANdard:PRESet:ULDL?`
Example	`:RAD:STAN:PRES:ULDL CONF0`
Notes	CONF0: Configuration 0 (DSUUUDSUUU) CONF1: Configuration 1 (DSUUDDSUUD) CONF2: Configuration 2 (DSUDDDSUDD) CONF3: Configuration 3 (DSUUUDDDDD) CONF4: Configuration 4 (DSUUDDDDDD) CONF5: Configuration 5 (DSUDDDDDDD) CONF6: Configuration 6 (DSUUUDSUUD)
Dependencies	When the setting is selected, the ULDL Alloc per component carrier under the Component carrier Setup will be preset to the selected value
Preset	CONF0
State Saved	Yes
Range	Configuration 0|Configuration 1|Configuration 2|Configuration 3|Configuration 4|Configuration 5|Configuration 6

Dw/GP/Up Len

Sets the TDD special sub-frame configuration of each component carrier to the selected value.

Remote Command	`[:SENSe]:RADio:STANdard:PRESet:DGPU CONF0 | … | CONF9` `[:SENSe]:RADio:STANdard:PRESet:DGPU?`

Example	`:RAD:STAN:PRES:DGPU CONF0`
Notes	CONF0: Configuration 0 CONF1: Configuration 1 CONF2: Configuration 2 CONF3: Configuration 3 CONF4: Configuration 4 CONF5: Configuration 5 CONF6: Configuration 6 CONF7: Configuration 7 CONF8: Configuration 8 CONF9: Configuration 9
Dependencies	When the setting is selected, the Dw/GP/Up Len per Component Carrier under the Component Carrier Setup will be preset to the selected value The special sub-frame configuration 9 is only enabled when it is LTE-Advanced TDD
Preset	CONF0
State Saved	Yes
Range	Configuration 0|Configuration 1|Configuration 2|Configuration 3|Configuration 4|Configuration 5|Configuration 6|Configuration 7|Configuration 8|Configuration 9

Analysis Slot

Specifies the starting analysis slot. The measurement will adjust the gate delay or trigger delay according to this parameter.

Remote Command	`[:SENSe]:RADio:SLOT TS0 | TS1 | DPTS1 | UPTS1 | TS4 | TS5 | TS6 | TS7 | TS8 | TS9 | TS10 | TS11 | TS12 | TS13 | TS14 | TS15 | TS16 | TS17 | TS18 | TS19` `[:SENSe]:RADio:SLOT?`
Example	`:RAD:SLOT TS0`
Couplings	Measurement's gate length or meas interval will couple to the parameter
Preset	TS0
State Saved	Yes
Range	TS0 | TS1 | DwPTS1 | UpPTS1 | TS4 | TS5 | TS6 | TS7 | TS8 | TS9 | TS10 | TS11 | TS12(DwPTS2) | TS13 (UpPTS2) | TS14 | TS15 | TS16 | TS17 | TS18 | TS19

Meas Interval

This parameter specifies the desired slots count that needs to be analyzed. The measurement will adjust the gate length or meas interval according to this parameter.

For NB-IoT uplink cases scenarios, when Measure NPRACH is Off, this parameter indicates not only the slots' count to be analyzed, but the time elapse of the off power measurements as well.

In LTE-A FDD Mode, this parameter only appears in the Transmit On|Off Power measurement.

Remote Command	`[:SENSe]:RADio:MINTerval <integer>` `[:SENSe]:RADio:MINTerval`
Example	`:RAD:MINT 1`
Notes	The backwards compatible command [:SENSe]:PVTime:MINTerval is available in LTE FDD & LTE-A FDD Modes
Dependencies	This parameter is disabled when all the below conditions are met at the same time: – System BW is “200 kHz (NB-IoT)” – Direction is “uplink” – NB-IoT Subcarrier Spacing is “3.75kHz” – Meas NPRACH is “OFF”
Couplings	Disabled when the “Measure PRACH” is in scope and its value is not off, then the actual meas interval is the length PRACH or SRS channel For NB-IoT case scenario, when the parameter is disabled, its value is automatically determined by both Meas NPRACH: **Meas NPRACH** – **Meas Interval** Preamble0 – 3 slots Preamble1 – 4 slots
Preset	1
State Saved	Yes
Min	1
Max	20, when System BW is NOT “200 kHz (NB-IoT) 16, otherwise
Backwards Compatibility SCPI	LTE: `[:SENSe]:PVTime:MINTerval`

CP Length

Specifies whether the cyclic prefix is configured as NORMal or EXTended for power measurement. The parameter will affect the gate length or meas interval parameters.

In LTE-A FDD Mode, this parameter only appears in the Transmit On|Off Power measurement.

Remote Command	`[:SENSe]:RADio:CPLength NORMal | EXTended` `[:SENSe]:RADio:CPLength?`
Example	`:RAD:CPL NORM`
Notes	The backwards compatible SCPI command [:SENSe]:PVTime:CPLength is available in LTE FDD & LTE-A FDD Modes
Dependencies	Disabled when System BW is set to “200 kHz (NB-IoT)” and Direction is “uplink”
Couplings	Set to NORMal when System BW is set to “200 kHz (NB-IoT)”
Preset	NORMal
State Saved	Yes
Range	Normal|Extended
Backwards Compatibility SCPI	LTE: `[:SENSe]:PVTime:CPLength`

Measure PRACH/SRS

Specifies whether the analysis slot is used for PRACH channel or SRS and the PRACH preamble format of the analysis slot.

The measurement will adjust the gate length or meas interval according to this parameter.

Remote Command	`[:SENSe]:RADio:MEASure OFF | PPF0 | PPF1 | PPF2 | PPF3 | PPF4 | SRS | DSRS` `[:SENSe]:RADio:MEASure?`
Example	`:RAD:MEAS OFF`
Couplings	If direction is downlink, the control is disabled and the value is set to off If this control value is not off, Meas Interval is disabled
Preset	OFF
State Saved	Yes
Range	Off|Preamble 0|Preamble 1|Preamble 2|Preamble 3|Preamble 4|SRS|DSRS

Reference Config

Specifies which component carrier’s ULDL Allocation Configuration and Dw/Up Length Configuration settings are used to adjust time slot to be measured automatically. For Modulation Analysis measurement, this control specifies which CC is used as the reference CC for time alignment results.

In LTE-A FDD Mode, this parameter only appears in the Transmit On|Off Power and Modulation Analysis measurements.

Remote Command	`[:SENSe]:RADio:RCONfig CC0 | … | CC4`

	`[:SENSe]:RADio:RCONfig?`
Example	`:RAD:RCON CC0`
Notes	The options CC1~CC4 can be enabled with 9080B/9082B-2FP license
Dependencies	Reference Configuration is coupled to Number of Component Carriers. For example, reference configuration list will include CC0~CC1 if the number of Component Carriers is 2
Preset	CC0
State Saved	Yes
Range	CC0|CC1|CC2|CC3|CC4

3.12.8.5 Advanced

Contains advanced functions that are used for specific applications. These settings should not be changed for most measurements.

Does not appear in VXT.

Phase Noise Optimization

Sets the LO (local oscillator) phase noise behavior for various desired operating conditions.

Remote Command	`[:SENSe]:WAVeform:FREQuency:SYNThesis[:STATe] 1 | … | 5`
	For the meaning of each numeric option value, see "Parameter Options & Installed Options" on page 2263 below
	`[:SENSe]:WAVeform:FREQuency:SYNThesis[:STATe]?`

Example	`:WAV:FREQ:SYNT 2` Selects optimization for best wide offset phase noise
Dependencies	Does not appear in all models. For models that do not display this control, the SCPI command is accepted for compatibility, but no action is taken Not available in VXT models M9410A/11A/15A/16A and M9410E/11E/15E/116E
Preset	Because this function is in AUTO after **Preset**, the state of this function after **Preset** will be automatically calculated
State Saved	Saved in instrument state
Range	See "Ranges" on page 2267 below

Auto Function

Remote Command	`[:SENSe]:WAVeform:FREQuency:SYNThesis:AUTO[:STATe] OFF | ON | 0 | 1` `[:SENSe]:WAVeform:FREQuency:SYNThesis:AUTO[:STATe]?`
Example	`:WAV:FREQ:SYNT:AUTO ON`
Preset	ON

Parameter Options & Installed Options

The Phase Noise Optimization control lets you optimize the setup and behavior of the Local Oscillator (LO) depending on your specific measurement conditions. You may wish to trade off noise and speed, for example, to make a measurement faster without regard to noise or with optimum noise characteristics without regard to speed.

Parameter Values Summary

Option	#	Description
"Balanced" on page 2264	1	– In instruments with EP0, balances close-in phase noise with spur avoidance – In instruments without EP0 optimizes phase noise for small frequency offsets from the carrier
"Best Wide-offset" on page 2264	2	Optimizes phase noise for wide frequency offsets from the carrier
"Fast Tuning" on page 2265	3	Optimizes LO for tuning speed
"Best Close-in" on page 2263	4 or 1*	– In instruments with EP0, emphasizes close-in phase noise performance without regard to spur avoidance – In instruments without EP0, this setting is accepted but no action is taken
"Best Spurs" on page 2264	5	– In instruments with EP0, emphasizes spur avoidance over close-in phase noise performance – In instruments without EP0, this setting is accepted but no action taken
Auto	-	Automatically selects LO (local oscillator) phase noise behavior to optimize dynamic range and speed for various instrument operating conditions

*Dependent on Option EP0 installation. See "Best Close-in" on page 2263 below.

The actual behavior varies somewhat depending on model number and option; for example, you always get Fast Tuning by choosing Option #3, but in some models, "Fast Tuning" on page 2265 is identical in effect to "Best Close-in" on page 2263.

Best Close-in

Without option EP0

`:FREQ:SYNT 1`

The LO phase noise is optimized for smaller offsets from the carrier, at the expense of phase noise farther out.

The actual frequency offset within which noise is optimized is shown with in square brackets, as this can vary depending on the hardware set in use. For example, in some instruments this annotation appears as [offset <20 kHz]

With option EP0

`:FREQ:SYNT 4`

In instruments with Option EP0, the LO is configured for the best possible close-in phase noise (offsets up to 600 kHz from the carrier), regardless of spurious products that occur with some center frequencies. Because this is generally less desirable for close-in measurements than the "Balanced" on page 2264 setting, parameter 1 selects "Balanced" on page 2264 in EP0 instruments, in the interests of optimizing code compatibility across the family. Parameter 4 selects "Best Close-in" on page 2263, which is usually not as good a choice as "Balanced" on page 2264.

Balanced

`:FREQ:SYNT 1`

In instruments with EP0, the LO is configured for the best possible phase noise at offsets up to 600 kHz from the carrier whenever there are no significant spurs within the span observed with an on-screen carrier. When there will be such a spur, the LO is reconfigured in a way that allows the phase noise to increase by 7 dB mostly within ±1 octave around 400 kHz offset. The spurs will always be below –70 dBc.

Best Spurs

`:FREQ:SYNT 5`

In instruments with EP0, the LO is configured for better phase noise than the "Best Wide-offset" on page 2264 case close to the carrier, but the configuration has 11 dB worse phase noise than the "Best Close-in" on page 2263 case mostly within ±1 octave around 300 kHz offset. Spurs are even lower than in the "Balanced" on page 2264 case at better than –90 dBc, whether or not the carrier is on-screen.

This setting is never selected when Phase Noise Optimization is in Auto, you must select it manually.

Best Wide-offset

`:FREQ:SYNT 2`

The LO phase noise is optimized for wider offsets from the carrier. Optimization is especially improved for offsets from 70 kHz to 300 kHz. Closer offsets are compromised and the throughput of measurements (especially remote measurements where the center frequency is changing rapidly), is reduced.

The actual frequency offset beyond which noise is optimized is shown with in square brackets, as this can vary depending on the hardware set in use. For example, in some instruments this annotation appears as [offset >30 kHz]

In instruments with Option EP0, the LO is configured for the best possible phase noise at offsets up to 600 kHz from the carrier whenever there are no significant spurs within the span observed with an on-screen carrier. When there will be such a spur, the LO is reconfigured in a way that allows the phase noise to increase by 7 dB mostly within ±1 octave around 400 kHz offset. The spurs will always be below –70 dBc.

Fast Tuning

`:FREQ:SYNT 3`

In this mode, the LO behavior compromises phase noise at many offsets from the carrier in order to allow rapid measurement throughput when changing the center frequency or span. The term "Fast Tuning" on page 2265 refers to the time it takes to move the local oscillator to the start frequency and begin a sweep; this setting does not impact the actual sweep time in any way.

In instruments with EP1, the LO behavior compromises phase noise at offsets below 4 MHz in order to improve measurement throughput. The throughput is especially affected when moving the LO more than 2.5 MHz and up to 10 MHz from the stop frequency to the next start frequency.

In instruments with Option EP0, this is the same configuration as "Best Spurs" on page 2264. It is available with the "Fast Tuning" on page 2265 label for convenience, and to make the user interface more consistent with other X-Series instrument family members.

(In models whose hardware does not provide for a "Fast Tuning" on page 2265 option, the settings for "Best Close-in" on page 2263 are used if "Fast Tuning" on page 2265 is selected. This gives the fastest possible tuning for that hardware set.)

Auto

`:FREQ:SYNT:AUTO ON`

Selects the LO (local oscillator) phase noise behavior to optimize dynamic range and speed for various instrument operating conditions. The selection rules are as follows.

Auto Optimization Rules

X-Series instruments have several grades of LO, offering different configurations when in the Auto Mode. The rules for Auto selection are as follows:

Models with Option	Conditions	Selection
EP0 Models with option EP0 have a two stage local oscillator, which switches to a single loop for fast tuning (available in UXA)	Center frequency is < 699.9 kHz	"Balanced" on page 2264
	Span > 114.1 MHz, *or* RBW > 800 kHz	"Fast Tuning" on page 2265
	RBW > 290 kHz, *or* Span > 4.2 MHz	"Best Wide-offset" on page 2264
	Other conditions	"Balanced" on page 2264
EP1 Models with option EP1 have a two-loop local oscillator, which switches to a single loop for fast tuning (available in PXA)	Span > 44.44 MHz, *or* RBW > 1.9 MHz, *or* Source Mode is set to "Tracking"	"Fast Tuning" on page 2265
	Center frequency is < 195 kHz, *or* CF >= 1 MHz *and* Span <= 1.3 MHz *and* RBW <= 75 kHz	"Best Close-in" on page 2263
	All other conditions	"Best Wide-offset" on page 2264
EP2 Models with option EP2 use a different loop bandwidth for the fast-tuning choice, which is a compromise between tuning speed and phase noise, giving good tuning speed at all offsets. Although not as good as for "Best Close-in" on page 2263; this is useful when you have to look across a wide range of spans (available, for example, in MXA for excellent phase noise)	CF < 130 kHz , *or* CF > 12 MHz *and* Span < 495 kHz *and* RBW < 40 kHz	"Best Close-in" on page 2263
	Span > 22 MHz, *or* RBW > 400 kHz, *or* CF ≤ 12 MHz *and* Span < 495 kHz *and* RBW < 23 kHz	"Fast Tuning" on page 2265
	All other conditions	"Best Wide-offset" on page 2264
EP4 (available in CXA for improved phase noise)	Span > 101 MHz *or* RBW > 1.15 MHz *or* Source Mode is set to "Tracking"	"Fast Tuning" on page 2265
	CF is < 109 kHz *or* CF >= 4.95 MHz *and* Span <= 666 kHz *and* RBW < 28 kHz	"Best Close-in" on page 2263
	All other conditions	"Best Wide-offset" on page 2264
All Other Models	Span > 12.34 MHz, *or* RBW > 250 kHz, *or*	"Fast Tuning" on page 2265

Models with Option	Conditions	Selection
Note that in these models, the hardware does not actually provide for an extra-fast tuning option, so the settings for "Fast Tuning" on page 2265 are actually the same as "Best Close-in" on page 2263, but the rules are implemented this way so that the user who doesn't care about phase noise but does care about tuning speed doesn't have to remember which of the other two settings gives faster tuning	Source Mode is set to "Tracking"	
	Center frequency is < 25 kHz, *or* CF >= 1 MHz *and* Span <= 141.4 kHz *and* RBW <= 5 kHz	"Best Close-in" on page 2263
	All other conditions	"Best Wide-offset" on page 2264

In all the above cases:

- The RBW to be used in the calculations is the equivalent –3 dB bandwidth of the current RBW filter
- The rules apply whether in swept spans, zero span, or FFT spans

Ranges

Option	Option #	Phase Noise Option	Range
No EPx Option	1	Best Close-in	[offset < 20 kHz]
	2	Best Wide-offset	[offset > 30 kHz]
	3	Fast Tuning	[same as Best Close-In]
EP0	4	Best Close-in	[offset < 600 kHz]
	1	Balanced	[offset < 600 kHz]
	5	Best Spurs	[offset < 600 kHz]
	2	Best Wide-offset	[offset > 800 kHz]
	3	Fast Tuning	[same as Best Close-In]
EP1	1	Best Close-in	[offset < 140 kHz]
	2	Best Wide-offset	[offset > 160 kHz]
	3	Fast Tuning	[single loop]
EP2, EP3, EP5	1	Best Close-in	[offset < 70 kHz]
	2	Best Wide-offset	[offset > 100 kHz]
	3	Fast Tuning	[medium loop bw]
EP4	1	Best Close-in	[offset < 90 kHz]
	2	Best Wide-offset	[offset > 130 kHz]
	3	Fast Tuning	[same as Best Close-In]

ADC Dither

Toggles the dither function On and Off. The dither function improves linearity for low level signals, at the expense of a higher noise floor.

The reduced clipping-to-noise ratio results in higher noise because the clipping level of the ADC relative to the front terminals remains unchanged with the introduction of dither. The enhanced linearity is mostly improved scale fidelity.

With dither on, the third-order distortions are usually invisible for mixer levels below -35 dBm. With dither off, these distortions can be visible, with typical power levels of -110 dBm referred to the mixer. Detection nonlinearity can reach 1 dB for dither off at mixer levels around -70 dBm and lower, while the specified nonlinearity is many times smaller with dither on.

Remote Command	`[:SENSe]:WAVeform:ADC:DITHer[:STATe] OFF | ON | 0 | 1` `[:SENSe]:WAVeform:ADC:DITHer[:STATe]?`
Example	`:WAV:ADC:DITH ON` `:WAV:ADC:DITH?`
Notes	The dither function improves linearity for low level signals, at the expense of a higher noise floor
Preset	`OFF`
State Saved	Saved in instrument state
Range	`ON|OFF`
Backwards Compatibility SCPI	`[:SENSe]:WAVeform:WBIF:ADC:DITHer` `[:SENSe]:WAVeform:PDITher`

Auto Function

Remote Command	`[:SENSe]:WAVeform:ADC:DITHer:AUTO[:STATe] OFF | ON | 0 | 1` `[:SENSe]:WAVeform:ADC:DITHer:AUTO[:STATe]?`
Example	`:WAV:ADC:DITH:AUTO ON` `:WAV:ADC:DITH:AUTO?`
Notes	Sets ADC dithering to automatically select whether dithering is needed The dither function improves linearity for low level signals, at the expense of a higher noise floor
Preset	`OFF`
State Saved	Saved in instrument state
Range	`Auto|Man`

LO Dither

When **LO Dither** is turned on, the local oscillator frequency is rapidly changed by small, random amounts. This helps spread the power of spurious signals within the passband, which lowers their level, thus increasing dynamic range. This is only required in very wide passbands, so this feature only appears with Option H1G.

Remote Command	`[:SENSe]:WAVeform:LO:DITHer[:STATe] ON | OFF | 1 | 0` `[:SENSe]:WAVeform:LO:DITHer[:STATe]?`
Example	`:WAV:LO:DITH 1` `:WAV:LO:DITH?`
Dependencies	Only available when the instrument has the Option H1G installed. If you try to turn `ON` LO Dither in any other case, an error message is generated, -241,"Hardware missing; Option H1G required" Only appears in some Modes (for example, VMA and IQ Analyzer) The **LO Dither** function is turned `OFF` and grayed-out when the **IF Path** is set to a path other than 1 GHz. If you press the grayed-out control, a warning message "LO Dither only available with IF Path 1 GHz" is shown. If you try to set **LO Dither** to `ON` remotely while it is grayed-out, a message "-221,Settings conflict; LO Dither only available with IF Path 1 GHz" is returned When **LO Dither** is turned `ON`, the **Phase Noise Optimization** control is grayed-out. If you try to change the PNO value via front panel or SCPI in that case, an error is generated, "LO Dither must be turned off to change this value"
Couplings	As with most parameters with an `AUTO` state, "Auto Couple" on page 2242 sets it to Auto, which then selects `AUTOrange`. Setting any specific value (`AUTOrange`, `LOW` or `HIGH`) sets the `AUTO` state to false When **LO Dither** is turned `ON`, **Phase Noise Optimization** is set to "Best Close-In". If the **Phase Noise Optimization** value changes due to turning on **LO Dither**, a warning message "Phase Noise Optimization changed due to LO Dither activation" is displayed
Preset	`OFF`
State Saved	Saved in instrument state

IF Gain

Selects the range of IF gain.

When in `AUTOrange` mode, the IF checks its range once for data acquisition, to provide the best signal to noise ratio. You can specify the range for the best speed, and optimize for noise or for large signals.

When **IF Gain** is set to `AUTOrange`, the IF Gain is set to `HIGH` initially for each chunk of data. The data is then acquired. If the IF overloads, then the IF Gain is set to `LOW,` and the data is re-acquired. Because of this operation, the `AUTOrange` setting requires more measurement time, as the instrument checks/resets its range. You can get faster measurement speed by forcing the range to either the `HIGH` or `LOW` gain setting, *but* you must ensure that your measurement conditions will not overload the IF (in the `HIGH` gain range), that your signals are well above the noise floor (for the `LOW` gain range), and that the signals are not changing.

When **Digital Bus Out** (under the **Input/Output** menu) is `ON`, the IF Gain State `AUTOrange` selection is not allowed. Thus, in this case IF Gain State will be set to `LOW`.

This only applies to the RF input. It does not apply to baseband I/Q input.

Remote Command	`[:SENSe]:WAVeform:IF:GAIN[:STATe] AUTOrange | LOW | HIGH | OTHer` `[:SENSe]:WAVeform:IF:GAIN[:STATe]?`
Example	`:WAV:IF:GAIN HIGH` `:WAV:IF:GAIN?`
Notes	Only applies to the RF input. Does not apply to baseband I/Q input
Dependencies	If you try to select `AUTOrange` via SCPI while **Digital Bus Out** is `ON`, an error message -224, "Illegal parameter value; "IF Gain Autorange not allowed when Digital Bus Out is on" is displayed If you try to select `AUTOrange` via the front panel while **Digital Bus Out** is `ON`, an error message -221 "Settings conflict; "IF Gain Autorange not allowed when Digital Bus Out is ON" is displayed Other IF Gain is available only in models with DIF40
Couplings	As for most parameters that have an `AUTO` state, "Auto Couple" on page 2242 sets it to `AUTOrange`, which then selects `LOW` or `HIGH` depending on the IF Path. Setting any specific value (`AUTOrange`, `LOW`, `HIGH`, or `OTHer`) sets the `AUTO` state to `OFF`
Preset	`LOW`
State Saved	Saved in instrument state
Range	Autorange (Slower Follows Signals) | Low (Best for Large Signals) | High (Best Noise Level) | Other (Explicit)

Auto Function

Remote Command	`[:SENSe]:WAVeform:IF:GAIN:AUTO[:STATe] ON | OFF | 1 | 0` `[:SENSe]:WAVeform:IF:GAIN:AUTO[:STATe]?`
Example	`:WAV:IF:GAIN:AUTO ON` `:WAV:IF:GAIN:AUTO?`
Notes	Activates the auto rules for IF Gain
Preset	`ON`
Range	`OFF|ON`

IF Gain Offset

Sets **IF Gain Offset** for the 40 MHz, 140 MHz, 160 MHz IF Paths in 1 dB steps from the minimum gain available to the maximum. Increasing the gain can increase the amplitude of small signals, as long as you do not overdrive the hardware. Wideband gain should usually be adjusted after setting the input attenuation.

Internally, the **IF Gain** value will change based on the current configuration of the Hardware. You can choose to offset this value with this parameter. Hence the value specified is not an absolute value but relative to the current internal **IF Gain** setting.

For example:

- IF Gain Low + IF Gain Offset +4 dB = Total IF Gain of +4 dB (0 + 4 = 4)
- IF Gain High + IF Gain Offset +4 dB = Total IF Gain of +14 dB (10 + 4 = 14)
- IF Gain Low + IF Gain Offset -6 dB = Total IF Gain of -6 dB (0 – 6 = -6)
- IF Gain High + IF Gain Offset -6 dB = Total IF Gain of +6dB (10 – 6 = 4)

The available **IF Gain** depends on the **IF Path** and center frequency. The maximum **IF Gain** may not be achievable at all times, depending on the configuration.

Remote Command	`[:SENSe]:WAVeform:IF:GAIN:OFFSet <rel_ampl>` `[:SENSe]:WAVeform:IF:GAIN:OFFSet?`
Example	Set **IF Gain Offset** to 2: `:WAV:IF:GAIN:OFFS 2`
Couplings	Not available in EXM, or UXM When "IF Gain" on page 2269 State is set to `OTHer`, the "Other IF Gain" on page 2271 value is used and **IF Gain Offset** is ignored
Preset	0
State Saved	Saved in instrument state
Min/Max	Depends on hardware present

Other IF Gain

Explicitly specifies the IF gain value.

Only applies when "IF Gain" on page 2269 is set to `OTHer`. When **IF Gain** is set to `AUTOrange`, `LOW`, or `HIGH`, this value is ignored.

Available only in models with DIF40.

Remote Command	`[:SENSe]:WAVeform:IF:GAIN:LEVel <rel_ampl>` `[:SENSe]:WAVeform:IF:GAIN:LEVel?`
Example	`:WAV:IF:GAIN:LEV -10` `:WAV:IF:GAIN:LEV?`
Preset	0
State Saved	Saved in instrument state
Min/Max	Depends upon hardware present

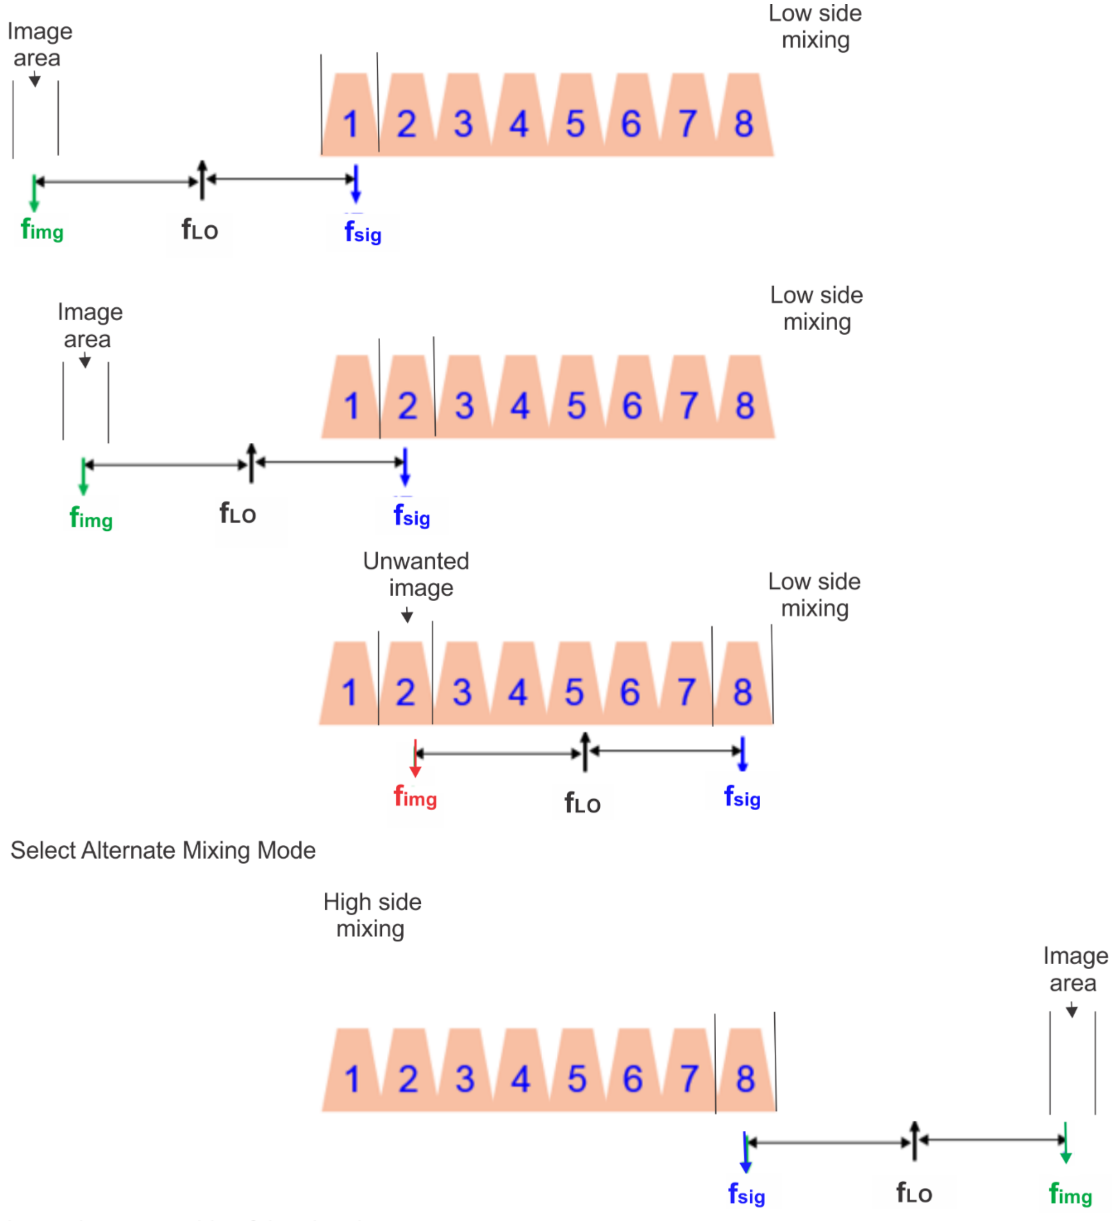
Mixing Mode

Lets you alternate between mixing modes for the Local Oscillator (LO). The default setting is `NORMal` LO mixing mode, which is determined by the instrument configuration to be either “high side” or “low side”. Typically, “high side” mixing mode is used for the `NORMal` LO mixing mode. Selecting the `ALTernate` mixing mode selects “low side” mixing when the `NORMal` mixing mode is “high side” mixing, and selects “high side” mixing mode when the `NORMal` mixing mode is “low side” mixing.

This function can be useful in eliminating images that may be seen from adjacent channels. Whenever you have signals that are twice the IF above your signal of interest, they will alias on top of your signal. To eliminate this issue, switch to `ALTernate` side mixing and your measurement will be image free.

Example

When testing a 5G signal with all 8 channels `ON`, where each channel is 100 MHz wide, there may be cases where you see images from adjacent channels. To measure the highest frequency carrier, you will need to switch to alternate side mixing, to avoid the 8th carrier from aliasing on top of other carriers.



Select Alternate Mixing Mode

Image is now outside of the signal.

Remote Command	`[:SENSe]:WAVeform:LO:MIXMode NORMal | ALTernate` `[:SENSe]:WAVeform:LO:MIXMode?`
Example	`:WAV:LO:MIXM NORM` `:WAV:LO:MIXM?`
Dependencies	Not available in N9000B Grayed-out when the RF Input is set to something other than `RF` (such as External Mixer). If you press

	the grayed-out control, a warning message "Feature only available with Signal Input RF" appears If you try to set **Mixing Mode** via SCPI when disabled, a message -221,"Settings conflict; Feature only available with signal input RF" is returned
Preset	`NORMal`
State Saved	Yes
Range	`NORMal|ALTernate`

Invert Spectrum

When set to NORMal, the Spectrum toggle has no effect on the measurement. When set to INVert, the I/Q data is conjugated, which inverts the spectrum. This parameter also affects the results of the `:MEASure`, `:READ`, and `:FETCh` queries for `WAVeform4` data. If set to INVert, the I/Q data returned is conjugated, otherwise the data is raw I/Q.

Remote Command	`[:SENSe]:WAVeform:SPECtrum NORMal | INVert` `[:SENSe]:WAVeform:SPECtrum?`
Example	`:WAV:SPEC INVert`
Preset	`NORMAL`
State Saved	Saved in instrument state

Power Reference Plane

Allows you to increase the power by 3 dB for Baseband I+jQ measurements. Options are:

Menu	SCPI
Baseband	`BASeband`
RF	`RF`

Remote Command	For valid `<meas>` values, see "Valid Measurement Keywords" on page 2275
	`[:SENSe]:<meas>:POWer:IQ:REFerence:PLANe RF | BASeband`
	`[:SENSe]:<meas>:POWer:IQ:REFerence:PLANe?`

Example	(Complex Spectrum measurement)
	`SPEC:POW:IQ:REF:PLAN BAS`
	`SPEC:POW:IQ:REF:PLAN?`

Dependencies	Only available if the I/Q input exists Enabled only when the input is I/Q and I/Q Path is I+jQ Disabled for all other conditions
Preset	`RF`
State Saved	Saved in instrument state

Valid Measurement Keywords

This function is available *only* in certain Modes and measurements. Only the following listed values of `<meas>` are valid.

Mode(s)	Meas	`<meas>`
`BASIC`	Complex Spectrum	`SPECtrum`

`BASIC`
`CQM`
`EDGEGSM`
`LTEAFDD`
`LTEATDD`
`MSR`
`NR5G`
`PNOISE`
`SRCOMMS`
`VMA`
`WCDMA`
`WLAN`
	IQ Waveform	`WAVeform`

`WLAN`	Modulation Analysis	`EVM`
`WLAN`	MIMO Modulation Analysis	`EVMMimo`

Mixing Mode State (Remote Command Only)

Available *only* in the Complex Spectrum, Streaming, and Waveform measurements.

Lets you alternate between mixing modes for the Local Oscillator (LO). The default setting is `NORMal` LO mixing mode, which is determined by the instrument configuration to be either “high side” or “low side”. The query returns “High” or “Low” to determine whether the mixing is “high side” or “low side”. If **Mixing Mode** is toggled between `NORMal` and `ALTernate`, then **Mixing Mode State** also toggles between “High” and “Low”.

Remote Command	`[:SENSe]:SPECtrum:LO:MIXMode:SIDE?` `[:SENSe]:WAVeform:LO:MIXMode:SIDE?`
Example	`:SPEC:LO:MIXM:SIDE?` `:WAV:LO:MIXM:SIDE?`
Dependencies	Not available in N9000B
Couplings	When **Mixing Mode** is toggled between `NORMal` and `ALTernate`, **Mixing Mode State** also toggles

	between High and Low
Range	High | Low

IF Frequency (Remote Command Only)

Available *only* in the Complex Spectrum, Streaming, and Waveform measurements.

Returns the current IF Frequency used in the IF Path.

Remote Command	`[:SENSe]:SPECtrum:IF:FREQuency?` `[:SENSe]:WAVeform:IF:FREQuency?`
Example	`:SPEC:IF:FREQ?` `:WAV:IF:FREQ?`
Couplings	A change in **Span**, **Digital IF BW** or **IF Path** parameters can result in a change of the **IF Frequency** value

3.12.8.6 Global

The controls in this menu apply to all Modes in the instrument.

Some controls (for example, "Global Center Freq" on page 2276) allow you to switch certain Meas Global parameters to a Mode Global state. These switches apply to all Modes that support global settings. For example, no matter what Mode you are in when you set **Global Center Freq** to `ON`, it applies to all Modes that support Global settings.

Other controls (for example, **Extend Low Band**) are actually set in this menu, but apply to all Modes.

Global Center Freq

The software maintains a Mode Global value called **Global Center Freq**.

When **Global Center Freq** is switched `ON`, the current Mode’s center frequency is copied into the **Global Center Frequency**, and from then on all Modes that support global settings use the **Global Center Frequency**, so you can switch between any of these Modes and the **Center Frequency** remains unchanged.

Adjusting the **Center Frequency** of any Mode that supports Global Settings, while **Global Center Freq** is `ON`, modifies the **Global Center Freq**.

When **Global Center Freq** is switched `OFF`, the **Center Frequency** of the current Mode is unchanged, but now the **Center Frequency** of each Mode is once again independent.

When **Mode Preset** is pressed while **Global Center Freq** is `ON`, the **Global Center Freq** is preset to the preset **Center Frequency** of the current Mode.

This function resets to `OFF` when "Restore Defaults" on page 2278 is pressed, or when **System**, **Restore Defaults**, **All Modes** is pressed.

Remote Command	`:INSTrument:COUPle:FREQuency:CENTer ALL | NONE` `:INSTrument:COUPle:FREQuency:CENTer?`
Example	`:INST:COUP:FREQ:CENT ALL` `:INST:COUP:FREQ:CENT?`
Preset	Set to `OFF` on **Global** Settings, **Restore Defaults** and **System, Restore Defaults, All Modes**
Range	`ALL|NONE`

Preset	`OFF`
Backwards Compatibility SCPI	`:GLOBal:FREQuency:CENTer[:STATe] 1 | 0 | ON | OFF` `:GLOBal:FREQuency:CENTer[:STATe]?`

Global EMC Std

When this control is switched `ON`, the current Mode’s EMC Std is copied into the **Global EMC Std**, and from then on all Modes that support global settings use the **Global EMC Std**, so you can switch between any of these Modes and the EMC Std remains unchanged.

Adjusting the EMC Std of any Mode that supports Global settings, while **Global EMC Std** is `ON` modifies the **Global EMC Std**.

When **Global EMC Std** is switched `OFF`, the EMC Std of the current Mode remains unchanged, but now the EMC Std of each Mode is once again independent. When **Mode Preset** is pressed while **Global EMC Std** is `ON`, **Global EMC Std** is preset to the preset EMC Std of the current Mode.

This function resets to `OFF` when "Restore Defaults" on page 2278 is pressed, or when **System, Restore Defaults, All Modes** is pressed.

Remote Command	`:INSTrument:COUPle:EMC:STANdard ALL | NONE` `:INSTrument:COUPle:EMC:STANdard?`
Example	`:INST:COUP:EMC:STAN ALL` `:INST:COUP:EMC:STAN?`
Dependencies	Only available if Option EMC is installed
Preset	Set to `OFF` on **Global** Settings, **Restore Defaults** and **System, Restore Defaults, All Modes**
Range	`ALL | NONE`

Extend Low Band

The software maintains a Mode Global value called **Extend Low Band**.

Under the current sweep configuration crossing over two bands, when **Extend Low Band** is turned `ON`, the instrument checks whether one band can cover the whole sweep frequency range or not. If it can, then the instrument locks the band; otherwise, it does nothing (the band crossover occurs).

This function does *not* work when **Band Lock** under **System** > **Service** > **Lock Functions** is not -1 (no Band Lock). In that case, **Band Lock** takes priority over **Extend Low Band**.

This function resets to `OFF` when "Restore Defaults" on page 2278 is pressed, or when **System**, **Restore Defaults**, **All Modes** is pressed.

Remote Command	`:INSTrument:COUPle:FREQuency:BAND:EXTend 0 | 1 | ON | OFF` `:INSTrument:COUPle:FREQuency:BAND:EXTend?`
Example	`:INST:COUP:FREQ:BAND:EXT 1` `:INST:COUP:FREQ:BAND:EXT?`
Preset	Set to `OFF` by **Global** Settings > **Restore Defaults** and **System** > **Restore Defaults** > **All Modes**
Range	`ON|OFF`

Restore Defaults

Resets all functions in the **Global** settings menu to `OFF`. Pressing **System**, **Restore Defaults**, **All Modes** has the same effect.

Remote Command	`:INSTrument:COUPle:DEFault`
Example	`:INST:COUP:DEF`
Backwards Compatibility SCPI	`:GLOBal:DEFault`

3.12.8.7 Sample Period (Aperture) Setting (Remote Query Only)

Returns the time between samples (sample period or aperture).

Remote Command	`[:SENSe]:WAVeform:APERture?`
Example	`:WAV:APER?`
Couplings	Coupled to Sample Rate by the following equation Sample Period = 1/(Sample Rate)
Preset	1/(Sample Rate Default)
Min/Max	1/(Max Sample Rate)/1/(Min Sample Rate)

3.12.9 Sweep

Accesses controls to configure and control the acquisition of data, and the X-axis parameters of the instrument.

Depending on the selected mode and measurement, these controls might include: **Sweep Time**, **Continuous/Single**, **Pause/Resume**, **X Scale** and **Number of Points**.

3.12.9.1 Sweep/Control

Accesses controls that let you operate the sweep and control functions of the instrument, such as **Sweep Time** and **Continuous/Single**.

Restart

Restarts the current sweep, or measurement, or set of averaged/held sweeps or measurements. If you are Paused, pressing **Restart** performs a Resume.

The front-panel key **Restart** performs exactly the same function.

The **Restart** function is accessed in several ways:

- Pressing the **Restart** key
- Sending `:INIT:IMM`
- Sending `:INIT:REST`

See "More Information" on page 2280

Remote Command	`:INITiate[:IMMediate]` `:INITiate:RESTart`
Example	`:INIT:IMM` `:INIT:REST`
Notes	`:INIT:REST` and `:INIT:IMM` perform exactly the same function
Couplings	Resets average/hold count k. For the first sweep overwrites all active (update = on) traces with new current data. For application modes, it resets other parameters as required by the measurement
Status Bits/OPC dependencies	This is an Overlapped command The `STATus:OPERation` register bits 0 through 8 are cleared , *except* bit 6 (Waiting for Periodic Sync). Initiating a measurement and Waiting for Periodic Sync could be asynchronous The `STATus:QUEStionable` register bit 9 (`INTegrity` sum) is cleared The `SWEEPING` bit is set The `MEASURING` bit is set

Backwards Compatibility Notes	For Spectrum Analysis Mode in ESA and PSA, the **Restart** hardkey and the `:INIT:REST` command restarted trace averages (displayed average count reset to 1) for a trace in **Clear Write**, but did not restart **Max Hold** and **Min Hold** In X-Series, the **Restart** hardkey and the `:INIT:REST` command restart not only **Trace Average**, but **MaxHold** and **MinHold** traces as well

More Information

The **Restart** function first aborts the current sweep or measurement as quickly as possible. It then resets the sweep and trigger systems, sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the instrument is in the process of aligning when a **Restart** is executed, the alignment finishes before the restart function is performed.

Even when set for **Single** operation, multiple sweeps may be taken when **Restart** is pressed (for example, when averaging/holding is on). Thus, when we say that **Restart** "restarts a measurement", depending on the current settings, we may mean that it:

- Restarts the current sweep
- Restarts the current measurement
- Restarts the current set of sweeps if any trace is in Trace Average, Max Hold or Min Hold
- Restarts the current set of measurements if Averaging, or Max Hold, or Min Hold is on for the measurement

If there is no Average or Max/Min Hold function (no trace in Trace Average or Hold, or **Average/Hold Num** set to 1), and no **Waterfall** window is being displayed, a single sweep is equivalent to a single measurement. A single sweep is taken after the trigger condition is met; and the instrument stops sweeping once that sweep has completed. However, with **Average/Hold Num** >1, and at least one trace set to Trace Average, Max Hold, or Min Hold, or a **Waterfall** window being displayed, multiple sweeps/data acquisitions are taken for a single measurement. The trigger condition must be met prior to each sweep. The sweep is stopped when the average count k equals the number N set for **Average/Hold Num**.

Once the full set of sweeps has been taken, the instrument goes to the idle state. To take one more sweep without resetting the average count, increment the average count by 1, by pressing the **Step-Up** key while **Average/Hold Number** is the active function, or by sending the remote command `:CALC:AVER:TCON UP`.

Trace Update

The numeric results are not blanked at any time during the restart cycle.

For slow sweeps (see **Trace Update** section in **Trace/Detector**), the traces are updated real-time during the sweep. There may be a special circumstance in application mode measurements where an exception is made and the traces and/or results need to be blanked before displaying the new results.

To summarize, the following list shows what happens to the trace data on various events:

Event	Trace Effect
Clear/Write pressed (even if already in Clear/Write)	Set to mintracevalue
Max Hold pressed (even if already in Max Hold)	Set to mintracevalue
Min Hold pressed (even if already in Min Hold)	Set to maxtracevalue
Trace Average pressed (even if already in Trace Average)	Trace data unaffected but start new sweep/avg/hold
Restart pressed	Trace data unaffected but start new sweep/avg/hold
Parameter requiring restart changed (e.g., RBW)	Trace data unaffected but start new sweep/avg/hold

Sweep and Trigger Reset

Resetting the sweep system resets the average/hold count k to 0. It also resets the set point counter to 0. Resetting the trigger system resets the internal auto trig timer to the value set by the **Auto Trig** control.

Averaging

The weighting factor used for averaging is k. This k is also the average/hold count for how many valid sweeps (data acquisitions) have been done. This k is used for comparisons with N, as those comparisons always needs to be based on valid completed sweeps.

The displayed average/hold, K, shows the count for the sweep (data acquisition) in progress. K = k + 1, with a limit of N. The displayed value K changes from its previous value to 1 as soon as the trigger condition for the first data acquisition (sweep) is met.

Pause/Resume

Pauses a measurement after the current data acquisition is complete.

When paused, the label on the control changes to **Resume**. Pressing **Resume** un-pauses the measurement. When paused, pressing **Restart** performs a Resume.

Remote Command	`:INITiate:PAUSe` `:INITiate:RESume`
Example	`:INIT:PAUS` `:INIT:RES`
Dependencies	Not displayed in Modes that do not support pausing
Annotation	Only on control

Sweep/Measure

Lets you toggle between **Continuous** and **Single** sweep or measurement operation. The single/continuous state is Meas Global, so the setting affects all measurements.

The front-panel key **Single/Cont** performs exactly the same function

See "More Information" on page 2283

Remote Command	`:INITiate:CONTinuous OFF | ON | 0 | 1` `:INITiate:CONTinuous?`

Example	Put instrument into **Single** measurement operation:
	`:INIT:CONT 0`
	`:INIT:CONT OFF`
	Put instrument into **Continuous** measurement operation:
	`:INIT:CONT 1`
	`:INIT:CONT ON`

Preset	`ON` Note that `:SYST:PRES` sets `:INIT:CONT` to `ON`, but `*RST` sets `:INIT:CONT` to `OFF`
State Saved	Saved in instrument state
Annunciation	The **Single/Continuous** icon in the Meas Bar changes depending on the setting: – A line with an arrow is **Single** – A loop with an arrow is **Continuous**
Backwards Compatibility Notes	X-Series A-models had **Single** and **Cont** hardkeys in place of the **SweepSingleCont** softkey. In the X-Series A-models, if in single measurement, the **Cont** hardkey (and `INIT:CONT ON`) switched to continuous measurement, but never restarted a measurement and never reset a sweep

X-Series B-models have a **Cont/Single** toggle control instead of **Single** and **Cont** hardkeys, but it is still true that, if in single measurement, the **Cont/Single** toggle control never restarts a measurement and never resets a sweep

More Information

Continuous Mode	The instrument takes repetitive sweeps, averages, measurements, etc., when in continuous mode. If in average or Max/Min Hold, and the average/hold count reaches the **Average/Hold Num**, the count stops incrementing, but the instrument keeps sweeping See the **Trace** key description under **Trace Average** for the averaging formula used both before and after the **Average/Hold Num** is reached. The trigger condition must be met prior to each sweep The type of trace processing for multiple sweeps is set under the **Trace** key, with choices of **Trace Average**, **Max Hold**, or **Min Hold**
Single Mode	The instrument takes a single sweep when in **Single** mode, or if in average or Max/Min Hold, or if there is a **Waterfall** window displayed, it takes multiple sweeps until the average/hold count reaches the **Average/Hold Num**, then the count stops incrementing, and the instrument stops sweeping See the **Trace** key description under **Trace Average** for the averaging formula used. The trigger condition must be met prior to the sweep The type of trace processing for multiple sweeps is set under the **Trace** key, with choices of **Trace Average**, **Max Hold**, or **Min Hold**

If the instrument is in **Single** measurement mode, pressing the **Cont/Single** toggle control does not zero the count and does not cause the sweep to be reset; the only action is to put the instrument into Continuous measurement operation.

If the instrument is already in **Continuous** sweep:

- `:INIT:CONT 1` has no effect
- `:INIT:CONT 0` places the instrument in Single Sweep but has no effect on the current sequence until k = N, at which point the current sequence will stop and the instrument will go to the idle state

See "Restart" on page 2279 for details of `:INIT:IMMediate`.

If the instrument is already in **Single** sweep, `:INIT:CONT OFF` has no effect.

If the instrument is already in **Single** sweep, then pressing **Cont/Single** in the middle of a sweep does not restart the sweep or sequence. Similarly, pressing **Cont/Single** does not restart the sweep or sequence if the sweep is not in the idle state (for example, if you are taking a very slow sweep, or the instrument is waiting for a trigger). Even though pressing **Cont/Single** in the middle of a sweep does not restart the sweep, sending `:INIT:IMM` *does* reset it.

If the instrument is in **Single** sweep, and *not* Averaging/Holding, and you want to take one more sweep, press **Restart**.

If the instrument is in **Single** sweep, *and* Averaging/Holding, and you want to take one more sweep without resetting the Average trace or count, go to **Meas Setup** and increment the average count by 1 by pressing the **Step-Up** key while **Average/Hold Num** is the active function. You can also do this by sending `:CALC:AVER:TCON UP`.

Abort (Remote Command Only)

Stops the current measurement. Aborts the current measurement as quickly as possible, resets the sweep and trigger systems, and puts the measurement into an "idle" state. If the instrument is in the process of aligning when `:ABORt` is sent, the alignment finishes *before* the abort function is performed, so `:ABORt` does not abort an alignment.

If the instrument is set for **Continuous** measurement, it sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the instrument is set for **Single** measurement, it remains in the "idle" state until an `:INIT:IMM` command is received.

Remote Command	`:ABORt`
Example	`:ABOR`
Notes	If `:INIT:CONT` is `ON`, then a new continuous measurement will start immediately, with sweep (data acquisition) occurring once the trigger condition has been met If `:INIT:CONT` is `OFF`, then `:INIT:IMM` is used to start a single measurement, with sweep (data acquisition) occurring once the trigger condition has been met
Dependencies	For continuous measurement, `:ABORt` is equivalent to the **Restart** key Not all measurements support this command
Status Bits/OPC dependencies	The `STATus:OPERation` register bits 0 through 8 are cleared , *except* bit 6 (Waiting for Periodic Sync). Initiating a measurement and Waiting for Periodic Sync could be asynchronous The `STATus:QUEStionable` register bit 9 (`INTegrity` sum) is cleared Since all the bits that feed into OPC are cleared by `:ABORt`, the Abort command will cause the `*OPC` query to return true

3.12.9.2 X Scale

Accesses controls that enable you to set the horizontal scale parameters.

Ref Value

Sets the display X reference value.

Remote Command	`:DISPlay:WAVeform:VIEW[1]|2:WINDow[1]:TRACe:X[:SCALe]:RLEVel <time>` `:DISPlay:WAVeform:VIEW[1]|2:WINDow[1]:TRACe:X[:SCALe]:RLEVel?`
Example	`:DISP:WAV:VIEW:WIND:TRAC:X:RLEV 10 ms` `:DISP:WAV:VIEW:WIND:TRAC:X:RLEV?`
Notes	View 1 is the RF Envelope View View 2 is the I/Q Waveform View
Couplings	If X "Auto Scaling" on page 2286 is ON, this value is automatically determined by the measurement result. When you set a value manually, X **Auto Scaling** automatically changes to OFF
Preset	0.000 s
State Saved	Saved in instrument state
Min/Max	-1 s /10.0 s
Annotation	<value> s bottom left of graph

Scale/Div

Sets the display X scale/division value.

Remote Command	`:DISPlay:WAVeform:VIEW[1]|2:WINDow[1]:TRACe:X[:SCALe]:PDIVision <time>` `:DISPlay:WAVeform:VIEW[1]|2:WINDow[1]:TRACe:X[:SCALe]:PDIVision?`
Example	`:DISP:WAV:VIEW:WIND:TRAC:X:PDIV 500 us` `:DISP:WAV:VIEW:WIND:TRAC:X:PDIV?`
Notes	View 1 is the RF Envelope View View 2 is the I/Q Waveform View
Couplings	If X "Auto Scaling" on page 2286 is ON, this value is automatically determined by the measurement result. When you set a value manually, X **Auto Scaling** automatically changes to OFF
Preset	200.0 us
State Saved	Saved in instrument state
Min	1.00 ns
Max	320 s

Ref Position

Sets the reference position for the X axis to `LEFT`, `CENTer` or `RIGHt`.

Remote Command	`:DISPlay:WAVeform:VIEW[1]|2:WINDow[1]:TRACe:X[:SCALe]:RPOSition LEFT | CENTer | RIGHt` `:DISPlay:WAVeform:VIEW[1]|2:WINDow[1]:TRACe:X[:SCALe]:RPOSition?`
Example	`:DISP:WAV:VIEW:WIND:TRAC:X:RPOS LEFT` `:DISP:WAV:VIEW:WIND:TRAC:X:RPOS?`

Preset	`LEFT`
State Saved	Saved in instrument state
Range	`LEFT|CENTer|RIGHt`

Auto Scaling

Toggles the scale coupling function `ON` or `OFF`.

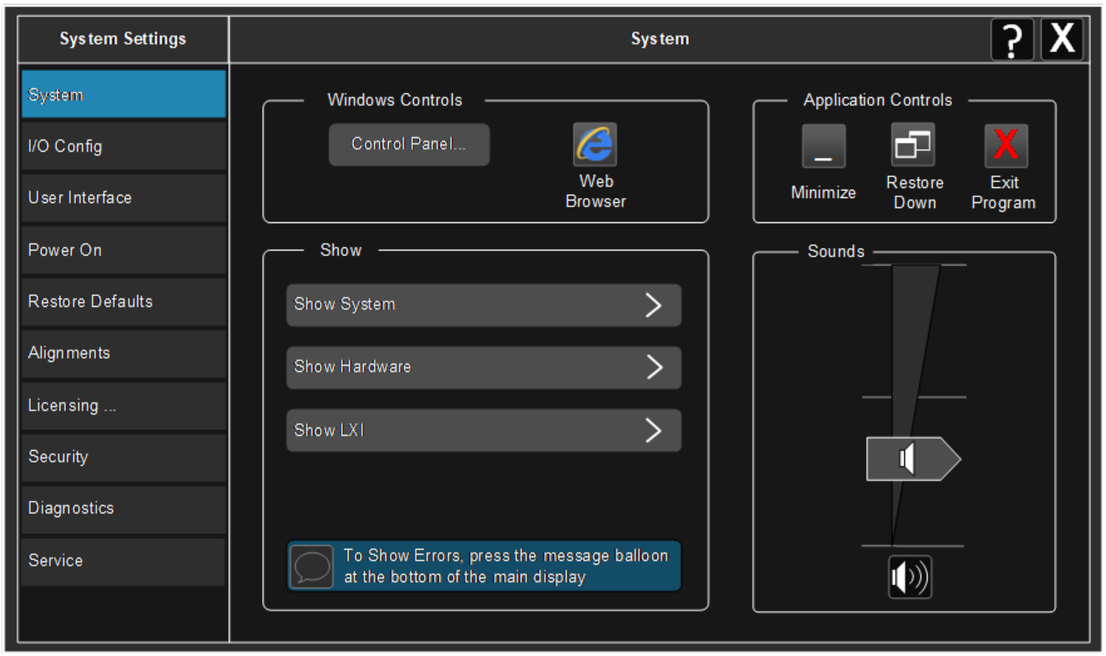
Remote Command	`:DISPlay:WAVeform:VIEW[1]|2:WINDow[1]:TRACe:X[:SCALe]:COUPle 0 | 1 | OFF | ON` `:DISPlay:WAVeform:VIEW[1]|2:WINDow[1]:TRACe:X[:SCALe]:COUPle?`
Example	`:DISP:WAV:VIEW:WIND:TRAC:X:COUP ON` `:DISP:WAV:VIEW:WIND:TRAC:X:COUP?`
Couplings	When **Auto Scaling** is `ON` and the **Restart** front-panel key is pressed, this function automatically determines the scale per division and reference values based on the measurement results When you set the value of either "Scale/Div" on page 2285 or "Ref Value" on page 2284 manually, **Auto Scaling** automatically changes to `OFF`
Preset	`ON`
State Saved	Saved in instrument state
Range	`OFF|ON`

3.12.10 Trace

There are no **Trace** controls in this measurement.

4 System

The **System** hardkey and the “gear” icon both open the **System Settings** dialog, which allows you to access various configuration menus and dialogs. The line of tabs down the left side let you choose various pages for configuring your instrument.



To Show Errors, press the message balloon at the bottom of the main display

Notes	No remote command for this key specifically

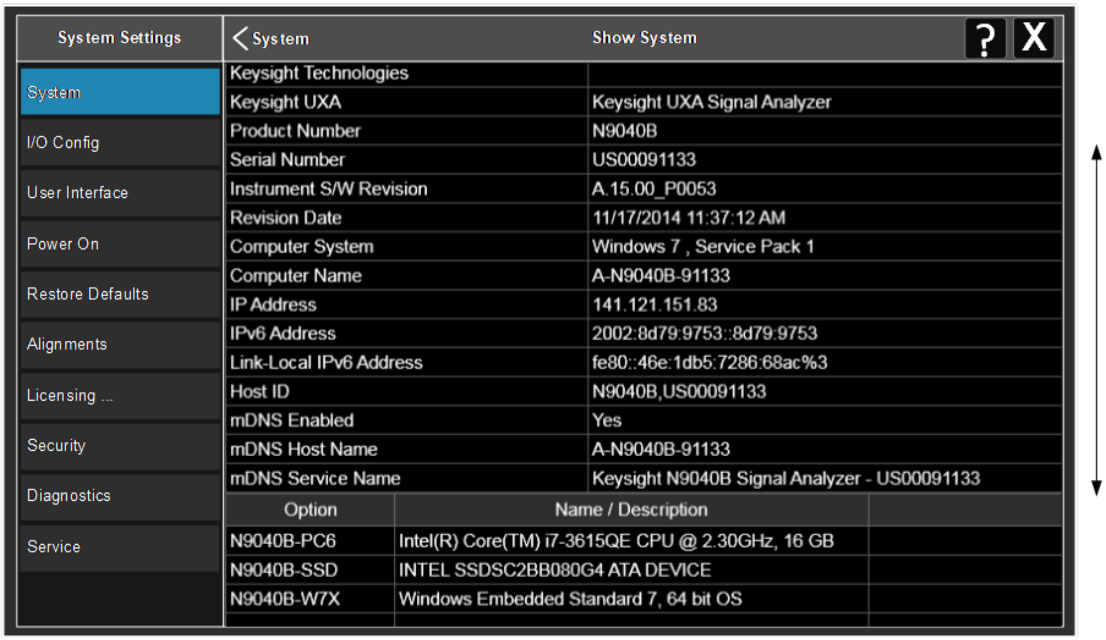
4.1 System

Allows access to several general system functions, including three **Show** screens for viewing system parameters. Several such **Show** screens are available on this and other **System** menu pages. They can also be accessed with the SCPI command described here.

Remote Command	`:SYSTem:SHOW OFF | ERRor | SYSTem | HARDware | LXI | HWSTatistics | ALIGnment | SOFTware | CAPPlication` `:SYSTem:SHOW?`
Example	`:SYST:SHOW SYST`
Notes	Displays (or exits) the System information screens
Preset	`OFF`
State Saved	No
Range	`OFF| ERRor | SYSTem | HARDware | LXI | HWSTatistics | ALIGNment | SOFTware | CAPPlication`

4.1.1 Show System

This screen is divided into three groups: product descriptive information, options tied to the hardware, and software products. Swipe up and down on this screen to scroll the display.



Keysight Technologies	
Keysight UXA	Keysight UXA Signal Analyzer
Product Number	N9040B
Serial Number	US00091133
Instrument S/W Revision	A.15.00_P0053
Revision Date	11/17/2014 11:37:12 AM
Computer System	Windows 7 , Service Pack 1
Computer Name	A-N9040B-91133
IP Address	141.121.151.83
IPv6 Address	2002:8d79:9753::8d79:9753
Link-Local IPv6 Address	fe80::46e:1db5:7286:68ac%3
Host ID	N9040B,US00091133
mDNS Enabled	Yes
mDNS Host Name	A-N9040B-91133
mDNS Service Name	Keysight N9040B Signal Analyzer - US00091133

Option	Name / Description	
N9040B-PC6	Intel(R) Core(TM) i7-3615QE CPU @ 2.30GHz, 16 GB	
N9040B-SSD	INTEL SSDSC2BB080G4 ATA DEVICE	
N9040B-W7X	Windows Embedded Standard 7, 64 bit OS	

Example	`:SYST:SHOW SYST`

4.1.1.1 Show System contents (Remote Query Only)

Returns the contents of the **Show System** screen (the entire contents, not just the currently displayed page).

Remote Command	`:SYSTem:CONFigure[:SYSTem]?`
Example	`:SYST:CONF?`
Notes	The output is an IEEE Block format of the **Show System** contents. Each line is separated by a new-line character

4.1.1.2 Computer System description (Remote Query Only)

Returns the **Computer System** description, which consists of the operating system and patch level, as reported by operating system.

Remote Command	`:SYSTem:CSYStem?`
Example	`:SYST:CSYS?`
Notes	Returns the Computer System name and service pack level

4.1.2 Show Hardware

Displays details of the installed hardware. This information can be used to determine versions of hardware assemblies and field-programmable devices, in the advent of future upgrades or potential repair needs.

The screen is divided into two groups: product descriptive information and hardware information. The hardware information is listed in a table format.

Example	`:SYST:SHOW HARD`

4.1.3 Show LXI

Displays the product number, serial number, firmware revision, computer name, IP address, Host ID, LXI Class, LXI Version, MAC Address, and the Auto-MDIX Capability.

Example	`:SYST:SHOW LXI`

4.1.4 Show Support Subscriptions

Displays the software support subscription information for the licenses available on the instrument.

Shows the software license, description, software support expiration date (format is `YYYY.MMDD`), and the software support status. The **Software Version Date** (format is `YYYY.MMDD`) shown in the header indicates the date required to access the latest software enhancements included in this version of the software. If any license has a **Software Support Expiration Date** earlier than the **Software Version Date**, then enhancements may be available that the license does *not* enable.

Example `:SYST:SHOW SSINformation`

4.1.5 Show Support ID

Displays the Support ID for each license available in the instrument. Shows the **Software License**, **Description**, software support expiration date, and **Support ID** for that license.

Each license has a copy icon, which copies just the **Support ID** for that license to the Windows clipboard. This is useful to avoid typing mistakes when entering this value into another program or web site.

The **Copy all to clipboard ...** control copies all the data to the Windows clipboard, in comma-separated value (CSV) format.

Keysight PXA	Keysight PXA Signal Analyzer
Product Number	N9030A

Example	`:SYST:SHOW SID`

4.1.6 Control Panel...

Opens the Windows Control Panel. **Control Panel** is used to configure certain elements of Windows that are not configured via the Multitouch UI System menus.

NOTE This feature is *not* available if Option SF1 is installed.

Control Panel is a separate Windows application, so to return to the Instrument Application, either:

- Exit by tapping on the red **X** in the upper right-hand corner
- Use **Alt+Tab**. Press and hold the **Alt** key and press and release the **Tab** key until the Instrument logo is showing in the window in the center of the screen, then release the **Alt** key

Notes	No remote command for this key

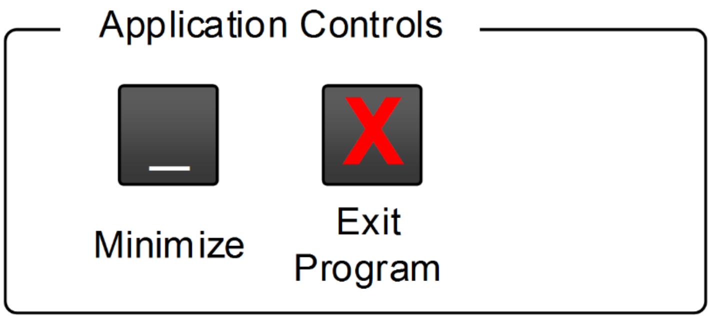
4.1.7 Web Browser

Launches the instrument's default **Web Browser**. Usually, the default is Microsoft Edge. A mouse and external keyboard are highly desirable for using the browser. To return focus to the Instrument Application, close the browser (or use **Alt-Tab**).

NOTE This feature is *not* available if Option SF1 is installed.

4.1.8 Application Controls

Lets you Minimize or Exit the application.



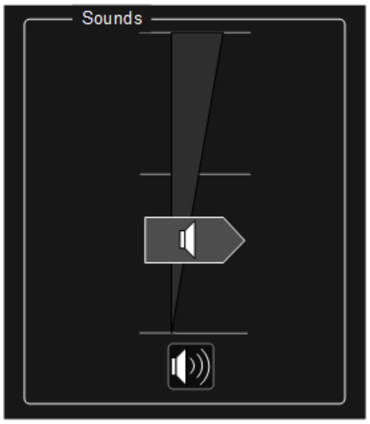
Pressing **Exit Program** displays a prompt asking if you are sure you want to close the program. If you select **OK**, the entire analyzer application will shut down, and you will lose any unsaved trace or measurement data.

Notes	No equivalent remote command for this key

4.1.9 Sounds

Lets you adjust the speaker volume using the slider, or mute/unmute the speaker, by tapping the **Speaker** icon.

Moving the slider up and down changes the speaker volume, and *also* unmutes the speaker if muted.



Sounds

Icon when muted

4.2 I/O Config

Allows you to specify and change the I/O configuration for remote control. Controls in this menu allow configuration of the I/O ports used for SCPI remote control over GPIB and LAN.

The SCPI LAN parameters are set using controls in this menu, but configuration of LAN settings themselves is performed using the Windows Control Panel (DHCP, Gateway, Subnet Mask, etc.).

The USB port is also available for remote control, but requires no configuration.

4.2.1 GPIB

Allows you to configure the GPIB I/O port.

Dependencies	Not available in UXM

4.2.1.1 GPIB Address

Select the GPIB remote address.

Remote Command	`:SYSTem:COMMunicate:GPIB[1][:SELF]:ADDRess <integer>` `:SYSTem:COMMunicate:GPIB[1][:SELF]:ADDRess?`
Example	`:SYST:COMM:GPIB:ADDR 17`
Notes	If the GPIB port address is changed, all further communication must use the *new* address
Preset	Unaffected by **Preset**, but set to 18 by **Restore Defaults** >"Misc" on page 2343
State Saved	No
Min	0
Max	30

4.2.1.2 GPIB Controller

Sets the GPIB port into Controller (`ON`) or Device (`OFF`) mode. In the normal state, **GPIB Controller** is disabled (`OFF`), which allows the instrument to be controlled by a remote computer. When **GPIB Controller** is enabled (`ON`), the instrument can run software applications that use the instrument's computer as a GPIB controller for devices connected to the GPIB port.

NOTE When **GPIB Controller** is enabled, the analyzer application itself cannot be controlled over GPIB. In this case, it can be controlled via LAN or USB. The GPIB port cannot be a Controller and Device at the same time. Only one Controller can be active on the GPIB bus at any given time. If the instrument is the Controller, an external PC cannot also be a Controller.

To control the instrument from the software that is performing GPIB Controller operation, you can use an internal TCP/IP connection to the analyzer application. Use the following IP Address to send commands to the analyzer application:

`TCPIP0:localhost:inst0:INSTR`

Remote Command	`:SYSTem:COMMunicate:GPIB[1][:SELF]:CONTroller[:ENABle] ON | OFF | 0 | 1` `:SYSTem:COMMunicate:GPIB[1][:SELF]:CONTroller[:ENABle]?`

Example	Set GPIB port to Controller:
	`:SYST:COMM:GPIB:CONT ON`
	Set GPIB port to Device:
	`:SYST:COMM:GPIB:CONT OFF`

Notes	When the instrument becomes the Controller, Bit 0 in the Standard Event Status Register is set. When the instrument relinquishes Controller capability, bit 0 is cleared
Preset	Unaffected by Preset, but set to `OFF` (Disabled) by **Restore Defaults** > "Misc" on page 2343
State Saved	No
Range	Disabled | Enabled

4.2.2 SCPI LAN

Displays a menu for identifying and changing SCPI over a LAN configuration. There are several ways to send SCPI remote commands to the instrument over LAN.

Having multiple users simultaneously accessing the instrument over the LAN may lead to communication problems. These controls can help to prevent that, by disabling the telnet, socket, and/or SICL capability.

NOTE When multiple instances of the application are running, Telnet port 5023, socket port 5025, SICL server inst0 and HiSLIP server Device 0 will be assigned to the first instance; Telnet port 5123, socket port 5125, SICL server inst1 and HiSLIP server Device 1 will be assigned to the second instance; Telnet port 5223, socket port 5225, SICL server inst2 and HiSLIP server Device 2 will be assigned to the third instance; Telnet port 5323, socket port 5325, SICL server inst3 and HiSLIP server Device 3 will be assigned to the fourth instance.

- "SCPI Telnet" on page 2296
- "SCPI Socket" on page 2296
- "SICL Server" on page 2297
- "HiSLIP Server" on page 2298
- "Verbose SCPI On/Off" on page 2298
- "SCPI Socket Control Port (Remote Query Only)" on page 2300

4.2.2.1 SCPI Telnet

Turns SCPI LAN telnet capability On or Off, allowing you to limit SCPI access over LAN through telnet.

Remote Command	`:SYSTem:COMMunicate:LAN:SCPI:TELNet:ENABle OFF | ON | 0 | 1` `:SYSTem:COMMunicate:LAN:SCPI:TELNet:ENABle?`
Example	`:SYST:COMM:LAN:SCPI:TELN:ENAB OFF`
Preset	Unaffected by **Preset**, but set to ON by **Restore Defaults** > "Misc" on page 2343 If not set up or specified, the Secure Instrument Communications configuration setting: is ON
State Saved	No
Range	OFF|ON

4.2.2.2 SCPI Socket

Turns the capability to establish Socket LAN sessions ON or OFF, to limit SCPI access over LAN through socket sessions.

Connection String & Copy Button

In "SCPI LAN" on page 2295, the full SCPI connection string is displayed to the right of the **SCPI Socket**ON/OFF control. Pressing **Copy**, to the right of the string, copies the connection string to the Windows clipboard.

Remote Command	`:SYSTem:COMMunicate:LAN:SCPI:SOCKet:ENABle OFF | ON | 0 | 1` `:SYSTem:COMMunicate:LAN:SCPI:SOCKet:ENABle?`
Example	`:SYST:COMM:LAN:SCPI:SOCK:ENAB OFF`
Dependencies	If the Secure Instrument Communications configuration has disabled this connection, local changes are not allowed, and an attempt to do so results in error -221,“Disabled by Secure Instrument Communications configuration”

Preset	Unaffected by **Preset**, but set to ON by **Restore Defaults** > "Misc" on page 2343 If not set up or specified, the Secure Instrument Communications configuration setting: is ON
State Saved	No
Range	`OFF`|`ON`

4.2.2.3 SICL Server

Turns the **SICL Server** capability ON or `OFF`, to limit SCPI access over LAN through the SICL server. (SICL IEEE 488.2 protocol.)

Parameter	Description	Setting
Maximum Connections	The maximum number of connections that can be accessed simultaneously	5
Instrument Name	The name (same as the remote SICL address) of your instrument	inst0
Instrument Logical Unit	The unique integer assigned to your instrument when using SICL LAN	8
Emulated GPIB Name	The name (same as the remote SICL address) of the device used when communicating with your instrument	gpib7
Emulated GPIB Logical Unit	The unique integer assigned to your device when it is being controlled using SICL LAN	8
Emulated GPIB Address	The emulated GPIB address assigned to your transmitter tester when it is a SICL server (the same as your GPIB address)	18

Connection String & Copy Button

In "SCPI LAN" on page 2295, the full connection string is displayed to the right of the **SICL Server**`ON/OFF` control. Pressing **Copy**, to the right of the string copies the connection string to the Windows clipboard.

Remote Command	`:SYSTem:COMMunicate:LAN:SCPI:SICL:ENABle OFF | ON | 0 | 1` `:SYSTem:COMMunicate:LAN:SCPI:SICL:ENABle?`
Example	`:SYST:COMM:LAN:SCPI:SICL:ENAB OFF`
Dependencies	Not available in UXM If the Secure Instrument Communications configuration has disabled this connection, local changes are not allowed, and an attempt to do so results in error -221,“Disabled by Secure Instrument Communications configuration”
Preset	Unaffected by **Preset**, but set to ON by **Restore Defaults** > "Misc" on page 2343 If not set up or specified, the Secure Instrument Communications configuration setting: is ON
State Saved	No
Range	`OFF`|`ON`

4.2.2.4 HiSLIP Server

Turns the **HiSLIP Server** capability `ON` or `OFF`, to limit SCPI access over LAN through the HiSLIP server.

HiSLIP stands for High-Speed LAN Instrument Protocol, and is part of the IVI-6.1 specification.

Example of a VISA connection string used to connect to the HiSLIP Server on an X-Series Spectrum Analyzer:

`TCPIP0::a-n9030a-93016::hislip0::INSTR`

In the example above, `hislip0` is the HiSLIP device name that VISA users must include in HiSLIP VISA Address strings. Your HiSLIP device name may differ, depending on your VISA settings.

Connection String & Copy Button

In "SCPI LAN" on page 2295, the full connection string is displayed to the right of the **HiSLIP Server**`ON/OFF` control. Pressing **Copy**, to the right of the string copies the connection string to the Windows clipboard.

Remote Command	`:SYSTem:COMMunicate:LAN:SCPI:HISLip:ENABle OFF | ON | 0 | 1` `:SYSTem:COMMunicate:LAN:SCPI:HISLip:ENABle?`
Example	`:SYST:COMM:LAN:SCPI:HISL:ENAB OFF`
Preset	Unaffected by **Preset**, but set to `ON` by **Restore Defaults** >"Misc" on page 2343 If not set up or specified, the Secure Instrument Communications configuration setting: is `ON`
State Saved	No
Range	`OFF|ON`

4.2.2.5 Verbose SCPI On/Off

When you turn **Verbose SCPI**`ON`, additional information is returned by `:SYSTem:ERRor?`. The additional information consists of the characters that stimulated the error. This can aid you in debugging your test programs, by indicating where in the parsing of a SCPI command the instrument encountered an invalid command or query.

Specifically, with **Verbose SCPI**`ON`, `:SYSTem:ERRor?` is expanded to show the SCPI data received, with the indicator `<Err>` at the point in the stream that the error occurred.

Verbose SCPI has no effect on the **Show Errors** screen or front-panel Message Line; and only changes the response to `:SYST:ERR?`.

See the example below, where the invalid command `:SENS:BOGUS` is sent:

Normal response to `:SYST:ERR?` (using the Telnet window):

```
SCPI> SENS:BOGUS
SCPI> SYST:ERR?
-113,"Undefined header"
```

After turning on **Verbose SCPI**:

```
SCPI> SYST:BOGUS
SCPI> SYST:ERR?
-113,"Undefined header;SYST:BOGUS<Err>"
```

Remote Command	`:SYSTem:ERRor:VERBose OFF | ON | 0 | 1` `:SYSTem:ERRor:VERBose?`
Example	`:SYST:ERR:VERB ON`
Preset	Unaffected by **Preset**, but set to `OFF` by **Restore Defaults** > "Misc" on page 2343
State Saved	No
Range	`OFF|ON`

4.2.2.6 Device Clear on Disconnect

When using HiSLIP (High Speed LAN Instrument Protocol), Telnet, or Sockets, a communication session with the instrument is opened when you connect, and closed when you disconnect. This differs from other connections such as GPIB, USB and VXI-11 connections, which are never actually closed but stay open as long as the instrument is running.

When a session is closed, a Device Clear function is generated, which affects the entire instrument, not just the current connection. Thus, when using HiSLIP, Telnet, or Sockets, unexpected Device Clears may occur, which can disrupt measurements in ways that GPIB and VXI-11 “sessions” do not.

Device Clear on Disconnect enables these auto-generated Device Clears for Telnet, Socket, and HiSLIP sessions. For backwards compatibility, they are *not* generated unless you explicitly enable them.

There is no change in VXI-11, USB, or GPIB session behavior. These sessions do not close when you disconnect, have never generated Device Clear events, and still do not generate Device Clear events, regardless of the setting of this switch.

Remote Command	`:SYSTem:COMMunicate:LAN:SCPI:EOSession:DCLEar:ENABle 0 | 1 | ON | OFF` `:SYSTem:COMMunicate:LAN:SCPI:EOSession:DCLEar:ENABle?`
Example	`:SYST:COMM:LAN:SCPI:EOS:DCLE:ENAB ON`
Preset	Unaffected by **Preset**, but set to `OFF` by **Restore Defaults** > "Misc" on page 2343

State Saved	No
Range	`OFF|ON`

4.2.2.7 SCPI Socket Control Port (Remote Query Only)

Returns the TCP/IP port number of the control socket associated with the SCPI socket session. This query lets you obtain the unique port number to open when a device clear is to be sent to the instrument. Every time a connection is made to the SCPI socket, the instrument creates a peer control socket. The port number for this socket is random. You must use this command to obtain the port number of the control socket. To force a device clear on this socket, open the port and send the string `DCL\n` to the instrument.

If this query is sent to a non-SCPI Socket interface, then 0 is returned.

Remote Command	`:SYSTem:COMMunicate:LAN:SCPI:SOCKet:CONTrol?`
Example	`:SYST:COMM:LAN:SCPI:SOCK:CONT?`
Preset	Unaffected by **Preset** or **Restore Defaults** > "Misc" on page 2343
State Saved	No
Range	0 to 65534
Min	0
Max	65534
Backwards Compatibility SCPI	`:SYSTem:COMMunicate:TCPip:CONTrol?`

4.2.2.8 SCPI Instrument Port (Remote Query Only)

Some MIMO applications need to be able to determine the port to use to communicate with the instrument. This query returns the port number to use for communications.

Remote Command	`:SYSTem:COMMunicate:LAN:INSTrument:PORT?`

4.2.3 Web Password Reset

The embedded web server contains certain capabilities that are password-protected; modifying the LAN configuration of the instrument, and access to web pages that can change the settings of the instrument. The default password from the factory is:

`measure4u`

This control lets you set the web password as desired, or to reset the password to the factory default.

Selecting **Web Password Reset** displays a control for resetting the password as desired, or to the factory default. The built-in alpha keyboard appears. You may change the password from the factory default of “`measure4u`”.

You can cancel this entry by pressing the **Cancel (ESC)** front-panel key.

Dependencies	Not available in UXM

4.2.4 System IDN Response

Allows you to specify a response to `*IDN?`, return the instrument to the `FACTory` response if you have changed it, or, if your test software is expecting the `*IDN` response to indicate Agilent Technologies, configure the instrument to respond with Agilent as the manufacturer.

The current `*IDN` response is displayed at the top of the panel, followed by the **System IDN Response** and **User IDN** controls.

4.2.4.1 System IDN Response

To select the factory-set response, select `FACTory`. To specify your own response, select `USER`. You can enter your desired response using "User IDN" on page 2302.

If your test software expects the response to indicate Agilent Technologies as the Manufacturer, you can configure this response by selecting `AGILent`.

Remote Command	`:SYSTem:IDN:CONFigure FACTory | AGILent | USER`
	For option details, see "More Information" on page 2301
	`:SYSTem:IDN:CONFigure?`

Example	`:SYST:IDN:CONF FACT`
Notes	Affects the response returned by all Modes of the instrument, unless the current Mode has *also* specified a custom response, in which case the current Mode’s custom IDN response takes precedence over the System’s, but only while that Mode is current Survives shutdown and restart of the software and therefore survives a power cycle
Preset	The `*IDN` response is reset to `FACTory` by **Restore Defaults** > "Misc" on page 2343 or **Restore Defaults** > "All" on page 2344 and survives subsequent running of the software

More Information

Here are details of the options available for the System `*IDN` response:

Factory

SCPI example:	:SYST:IDN:CONF FACT

Selects the factory default configuration of `*IDN?`, which indicates the Manufacturer as Keysight Technologies. For example,

`“Keysight Technologies,N9040B,MY00012345,A.15.00”`

where the fields are Manufacturer, Model Number, Serial Number, Firmware Revision.

NOTE In products that run multiple instances of the X-Series Application, all instances use the *same* factory System IDN response.

Agilent

SCPI example:	:SYST:IDN:CONF AGIL

Starting with software version x.14.50, the `*IDN?` response in the Factory configuration indicates the Manufacturer as Keysight Technologies. If your test software is expecting the response to indicate Agilent Technologies, you can configure the response with this menu selection or SCPI command.

For example:

`“Agilent Technologies,N9020A,MY00012345,A.05.01”`

NOTE In products that run multiple instances of the X-Series Application, all instances use the *same* Agilent System IDN response.

User

SCPI example:	:SYST:IDN:CONF USER

Selects your customized configuration of `*IDN?`

Enter your desired response using "User IDN" on page 2302.

4.2.4.2 User IDN

Allows you to specify your own response to `*IDN?`. You may enter your desired response with the Alpha Editor or a plugin PC keyboard. Once the value is entered, select `USER` under **System IDN Response**.

When you select this control, the active function becomes the current User string and is highlighted, so typing replaces it. If instead you wish to edit the existing string, press the left or right arrow to go to the beginning or the end.

If you enter a null string (for example, by clearing the User String while editing and then pressing **Done**), the instrument automatically reverts to the `FACTory` setting.

NOTE **In products that run multiple instances of the X-Series Application, all instances use the *same* User System IDN response.**

Remote Command	`:SYSTem:IDN <string>` `:SYSTem:IDN?`

Notes	The `<string>` must consist of four fields, each separated by a comma, example:
	`:SYST:IDN “XYZ Corp,Model 12,012345,A.01.01”`
	The four fields are `<manufacturer>`, `<model number>`, `<serial number>`, `<firmware revision>`. The fields are comma-delimited, so text within a field cannot contain a comma
	This affects the response given in all Modes of the instrument, unless the current Mode has *also* specified a custom response, in which case the current Mode’s custom IDN response takes precedence over the System’s, but only while that Mode is current
	Survives shutdown and restart of the software and therefore survives a power cycle
	Null string as parameter restores the `FACTory` setting, example:
	`:SYST:IDN ""`

Preset	Unaffected by **Preset**, but set to the original `FACTory` setting by **Restore Defaults** > "Misc" on page 2343

4.2.4.3 SYSTem:PERSona (Remote Commands Only)

The `:SYSTem:PERSona` command set permits setting of individual fields of the `*IDN?` response.

- "SYSTem:PERSona:DEFault" on page 2303
- "SYSTem:PERSona:MANufacturer" on page 2304
- "SYSTem:PERSona:MANufacturer:DEFault" on page 2304
- "SYSTem:PERSona:MODel" on page 2304
- "SYSTem:PERSona:MODel:DEFault" on page 2305

SYSTem:PERSona:DEFault

Resets the `*IDN` response to the instrument default.

Remote Command	`:SYSTem:PERSona:DEFault` `:SYSTem:PERSona:DEFault?`
Notes	`:SYST:PERS:DEF?` returns the default value of `*IDN?` even if the current setting of `*IDN?` is the

	non-default value. The query return type is a `<string>`
	`:SYST:PERS:DEF`
	is equivalent to:
	`:SYSTem:IDN “”`
	`:SYSTem:IDN:CONF DEF`

SYSTem:PERSona:MANufacturer

Sets the `MANufacturer` field of the `*IDN?` response. This is the first field of the `*IDN?` response.

Remote Command	`:SYSTem:PERSona:MANufacturer <string>` `:SYSTem:PERSona:MANufacturer?`
Notes	When setting the `MANufacturer` field, the current IDN response string is modified to replace the manufacturer field with the string specified by the command. If the resulting IDN response matches one of the predefined responses (`:SYST:IDN:CONF FACT | AGIL`), then the `:SYST:IDN:CONF` is set to the corresponding value. If the IDN response with the new manufacturer field is not one of the predefined values, then `:SYST:IDN:CONF` will be set to `USER` and `:SYST:IDN` will be set to the new IDN response string The query returns the current value of the `*IDN?` Manufacturer field

SYSTem:PERSona:MANufacturer:DEFault

Resets the `MANufacturer` field of the `*IDN?` response to the default value.

Remote Command	`:SYSTem:PERSona:MANufacturer:DEFault` `:SYSTem:PERSona:MANufacturer:DEFault?`
Notes	The query returns the default `MANufacturer` field value of `*IDN?` even if the current setting of `*IDN?` is the non-default value. The return type is a `<string>`

SYSTem:PERSona:MODel

Sets the `MODel` field of the `*IDN?` response. This is the second field of the `*IDN?` response.

Remote Command	`:SYSTem:PERSona:MODel <string>` `:SYSTem:PERSona:MODel?`
Notes	When setting the `MODel` field, the current IDN response string is modified to replace the model field with the string specified by the command. If the resulting IDN response matches one of the predefined responses (`:SYST:IDN:CONF FACT | AGIL`), then `:SYST:IDN:CONF` is set to the corresponding value. If the IDN response with the new model field is not one of the predefined values, then `:SYST:IDN:CONF` will be set to `USER` and `:SYST:IDN` will be set to the new IDN response string

	The query returns the current value of the `*IDN?MODel` field

SYSTem:PERSona:MODel:DEFault

Resets the `MODel` field of the `*IDN?` response to the default value.

Remote Command	`:SYSTem:PERSona:MODel:DEFault` `:SYSTem:PERSona:MODel:DEFault?`
Notes	The query returns the default `MODel` field value of `*IDN?` even if the current setting of `*IDN?` is the non-default value. The return type is a `<string>`

4.2.5 LXI

Accesses various **LXI** configuration properties.

Dependencies	Not available in UXM

4.2.5.1 LAN Reset

Resets the LAN connection. This sets parameters as follows, and restarts the LAN operation:

DHCP	Enabled
Automatic IP Address	Enabled
ICMP Ping Responder	Enabled
Web Password	`keysight`
Dynamic DNS	Enabled
mDNS and DNS-SD	Enabled
Dynamic Link Local Addressing	Enabled
Auto Negotiation	Enabled

There is no SCPI command for this function.

4.2.5.2 Device Identification (Remote Command Only)

Enabling LXI device identification places the LXI Status Indicator in the **Identify** state. Disabling LXI device identification places the LXI Status Indicator in the **No Fault** state. The LXI Status indicator is in the upper left region of the instrument’s graphical user interface.

Remote Command	`:LXI:IDENtify[:STATe] OFF | ON | 0 | 1`

	`:LXI:IDENtify[:STATe]?`
Example	`:LXI:IDEN ON`
Preset	Not part of **Preset**, but reset to `OFF` by **Restore Defaults** > "All" on page 2344
State Saved	No
Range	`OFF | ON`

4.2.6 Restore I/O Config Defaults

Causes the group of settings associated with the **I/O Config** menu to be reset to their default values. This also happens on **Restore Misc Defaults**, which has a SCPI command.

When **Restore I/O Config Defaults** is selected, a message appears saying:

```
This will reset all of the I/O Config variables to their default state,
including the GPIB address and SCPI LAN settings

It will not affect Alignment data or settings

This action cannot be undone. Do you want to proceed?
```

The message provides **OK** and **Cancel** buttons so you can affirm or cancel the operation.

4.2.7 Query USB Connection (Remote Query Only)

Enables you to determine the speed of the USB connection.

Remote Command	`:SYSTem:COMMunicate:USB:CONNection?`	
Example	`:SYST:COMM:USB:CONN?`	
Notes	`NONE`	Indicates no USB connection has been made
	`LSPeed`	Indicates a USB low speed connection (1.5 Mbps) Note that this is reserved for future use, the T+M488 protocol is not supported on low-speed connections
	`HSPeed`	Indicates that a USB high speed connection (480 Mbps) has been negotiated
	`FSPeed`	Indicates that a USB full speed connection (12 Mbps) has been negotiated
State Saved	No	
Range	`NONE | LSPeed | HSPeed | FSPeed`	

4.2.8 USB Connection Status (Remote Query Only)

Lets you determine the current status of the USB connection.

Remote Command	`:SYSTem:COMMunicate:USB:STATus?`
Example	`:SYST:COMM:USB:STAT?`
Notes	`SUSPended` – Indicates that the USB bus is currently in its suspended state. The bus is in the suspended state when: – The bus is not connected to any controller – The controller is currently powered off – The controller has explicitly placed the USB device into the suspended state When in the suspended state, no USB activity, including start of frame packets are received `ACTive` – Indicates that the USB device is in the active state. When the device is in the active state, it receives periodic frame starts, but is not necessarily receiving or transmitting data
State Saved	No
Range	`SUSPended | ACTive`

4.2.9 USB Packet Count (Remote Query Only)

Lets you determine the number of packets received and transmitted on the USB bus.

Remote Command	`:SYSTem:COMMunicate:USB:PACKets?`
Example	`:SYST:COMM:USB:PACK?`
Notes	Two integers are returned: 1. The number of packets received since application invocation 2. The number of packets transmitted since application invocation If no packets have been received or transmitted, the response is `0,0` The packet count is initialized to `0,0` when the instrument application is started
State Saved	No

4.2.10 Lock Remote I/O Session (Remote Command only)

An instrument can support multiple remote I/O sessions at the same time. However, you cannot *simultaneously* send remote commands from multiple sessions to the same instrument. The results in such a case are undefined.

Ensure that only *one* session actively controls the instrument at a time. Other sessions must wait until the active session finishes the instrument control.

To help achieve this cooperative instrument sharing, the following remote commands are provided:

- "Lock Remote I/O Request (Remote Query only)" on page 2309
- "Unlock Remote I/O Session (Remote Command only)" on page 2310
- "Remote I/O Session Lock Name (Remote Query only)" on page 2311
- "Remote I/O Session Lock Owner (Remote Query only)" on page 2311

Example Procedure for Lock Usage

Step	Action
1	Each session tries to obtain a lock by sending `:SYSTem:LOCK:REQuest?` This query can be sent simultaneously from multiple sessions
2	Only one session will be granted. The granted session receives `1` in response to its query
3	The granted session actively controls the instrument Meanwhile, other sessions must wait, and must periodically send `:SYSTem:LOCK:REQuest?`, requesting the lock
4	When the active session finishes its task, it releases the lock by sending `:SYSTem:LOCK:RELease`
5	Now the lock has become available, so when one of the waiting sessions sends `:SYSTem:LOCK:REQuest?`, it receives `1` in response, granting the lock to that session

By repeating steps 3, 4, and 5 above, multiple sessions can share the same instrument in a cooperative fashion.

NOTE

A session can query its own unique session name by sending `:SYSTem:LOCK:NAME?`. This session name is determined by the instrument.

A session also can query the name of the currently granted session by sending `:SYSTem:LOCK:OWNer?`.

NOTE

Remote I/O interfaces are grouped in two types: single-session interface and multi-session interface. Both types of interfaces can be used for cooperative instrument sharing.

The recommended interface is LAN HiSLIP.

Interface	Single-session	Multi-Session
GPIB	ü	
USB-488	ü	
LAN VXI-11 (SICL)	ü	
LAN Socket		ü
LAN HiSLIP		ü
LAN Telnet		ü

If using a single-session interface, care must be taken to ensure only one client uses the single-session interface.

In particular, LAN VXI-11 (SICL) interface is a single-session interface, even though multiple clients could simultaneously connect to this interface. Such multiple VXI-11 clients share the same session context; the same status registers and the same error queue. Even a SCPI query response can be received by another client. Furthermore, the lock obtained by `:SYSTem:LOCK:REQuest?` is shared among all VXI-11 clients, allowing all of them to actively control the instrument.

If a LAN VXI-11 (SICL) interface must be used by multiple clients for a cooperative instrument sharing, then VISA locking *must* be used, *in addition to* Remote I/O Session Lock.

4.2.10.1 Lock Remote I/O Request (Remote Query only)

You can lock the SCPI control of the instrument to the I/O Interface and Session by sending `:SYSTem:LOCK:REQuest?`. This permits cooperative sharing of the instrument between multiple computers, or multiple sessions from the same computer.

Remote Command	`:SYSTem:LOCK:REQuest?`
Example	`:SYST:LOCK:REQ?`
Notes	Returns 1 if the lock request is granted, or 0 if the request is denied Lock requests on an individual interface and session can be nested and each request will increase an internal lock count by 1. For every granted request, send `:SYST:LOCK:REL` to decrement the internal lock count to fully relinquish the lock When the instrument is locked, Bit 0 is set in the Operation Instrument status register

Disconnecting the individual interface and session releases the lock if the lock is granted to the interface and session

A Device Clear over any interface and session releases the lock, regardless of the interface and session which obtained the lock

The following queries are permitted over any interface and session, even if an interface has the instrument locked:

- `*IDN?`
- `*OPT?`
- `*STB?`
- `*ESR?`
- `:SYSTem:DATE?`
- `:SYSTem:TIME?`
- `:SYSTem:PON:TIME?`
- Queries in the `:STATus` subsystem
- Queries in the `:SYSTem:ERRor` subsystem
- Queries in the `:SYSTem:LKEY` subsystem
- Queries in the `:SYSTem:LOCK` subsystem
- Queries in the `:SYSTem:METRics` subsystem
- Queries in the `:SYSTem:MODule` subsystem

All other commands and queries result in error: -203,"Command protected; Instrument locked by another I/O session"

State Saved	Not part of Save/Recall

4.2.10.2 Unlock Remote I/O Session (Remote Command only)

You can unlock the SCPI control of the current I/O Interface and Session by sending `:SYSTem:LOCK:RELease`. Lock requests on an individual interface and session can be nested, and each request increases an internal lock count by 1. For every granted request, you will need to perform a release. The lock is not relinquished until the internal lock count reaches 0.

Remote Command	`:SYSTem:LOCK:RELease`
Example	`:SYST:LOCK:REL`
Notes	When the instrument is unlocked, Bit 0 is cleared in the Operation Instrument status register

4.2.10.3 Remote I/O Session Lock Name (Remote Query only)

Use this query to obtain the name of the current I/O Interface and Session.

Remote Command	`:SYSTem:LOCK:NAME?`
Example	`:SYST:LOCK:NAME?`
Notes	The information returned is a string of the format: `<I/O Interface>[/<IP address>/<Session ID>]` Where `IP address` and `Session ID` are only provided for interfaces that provide multiple sessions Single Session interfaces (GPIB, USB-488, and LAN VXI-11) only list interface name `Session ID` is an internally generated identifier. It is not guaranteed to be consistent across instrument software versions (the identifier is subject to change when the software of the instrument is updated). The absolute value of `Session ID` is not significant, but the identifier will be consistent for a given software version, and can be relied upon for lock owner logic comparisons

4.2.10.4 Remote I/O Session Lock Owner (Remote Query only)

Use this query to determine which I/O Interface and Session has the SCPI locked.

If no interface and session has the SCPI locked, then the return value is `NONE`.

Remote Command	`:SYSTem:LOCK:OWNer?`
Example	`:SYST:LOCK:OWN?`
Notes	The information returned is a string of the format: `<I/O Interface>[/<IP address>/<Session ID>]` Where `IP address` and `Session ID` are only provided for interfaces that provide multiple sessions Single Session interfaces (GPIB, USB-488, and LAN VXI-11) only list interface name `Session ID` is an internally generated identifier. It is not guaranteed to be consistent across instrument software versions (the identifier is subject to change when the software of the instrument is updated). The absolute value of `Session ID` is not significant, but the identifier will be consistent for a given software version, and can be relied upon for lock owner logic comparisons If no interface and session has the SCPI locked, then the return value is `NONE`

4.2.11 Multiple Network Interface Card Configuration (Remote Commands Only)

Systems that have multiple Network Interface Cards (**NICs**) require additional configuration information. The following keys can be added to the XApps configuration file:

- `PrimaryNICIpv4` – IP address value is a string with the exact IP V4 format. Required field in IP v4 networks.
- `PrimaryNICIpv6` – IP address value is a string with the exact IP V6 format. Required field in IP v6 networks.

These commands do not apply to instruments that have only one NIC. The commands apply to all modular deployments that have a controller with multiple NICs.

To configure and query these configuration options, the following remote commands are provided:

- "Multiple Network Adapters Enabled (Remote Query Only)" on page 2312
- "Config IPV4 Address (Remote Command Only)" on page 2313
- "Config IPV6 Address (Remote Command Only)" on page 2313
- "List All Physical Network Adapter IP Addresses (Remote Query Only)" on page 2313

4.2.11.1 Multiple Network Adapters Enabled (Remote Query Only)

Remote Command	`:SYSTem:COMMunicate:LAN:MULTiple:NIC:ENABled?`
Example	`:SYSTem:COMMunicate:LAN:MULTiple:NIC:ENABled?`
Notes	Applies to Instruments that have multiple Network Adapters. When more than one network adapter is present in the system, and they are **Enabled** (that is, they have a valid IP Address), this query returns: – 1, if more than one NIC enabled – 0, if only one or No NICs are enabled
State Saved	No

4.2.11.2 Config IPV4 Address (Remote Command Only)

Remote Command	`:SYSTem:COMMunicate:LAN:IPV4:CONFig <ipaddress>` `:SYSTem:COMMunicate:LAN:IPV4:CONFig?`
Example	`:SYSTem:COMMunicate:LAN:IPV4:CONFig "192.168.1.146"` `:SYSTem:COMMunicate:LAN:IPV4:CONFig?`
Notes	Applies to instruments that have multiple Network Adapters. When more than one network adapter is present in the system, you must specify in the instrument config file the IP address to use to enable Remoting channel bindings. If this is not provided, Remoting connections are likely to fail on systems where multiple NICs are enabled Sets the valid IPV4 address, passed in as string in the config file The query returns IPV4 address, as a string If config file is missing, “” (empty string) is returned Changing the IPV4 value requires a restart of the instrument software, to ensure that servers use the configured IP address
State Saved	No

4.2.11.3 Config IPV6 Address (Remote Command Only)

Remote Command	`:SYSTem:COMMunicate:LAN:IPV6:CONFig <ipaddress>` `:SYSTem:COMMunicate:LAN:IPV6:CONFig?`
Example	`:SYSTem:COMMunicate:LAN:IPV6:CONFig "2001:0db8:85a3:0000:0000:8a2e:0370:7334"` `:SYSTem:COMMunicate:LAN:IPV6:CONFig?`
Notes	Applies to instruments that have multiple Network Adapters. When more than one network adapter is present in the system, you must specify in the instrument config file the IP address to use to enable Remoting channel bindings. If this is not provided, Remoting connections are likely to fail on systems where multiple NICs are enabled Sets the valid IPV6 address, passed in as string in the config file The query returns IPV6 address, as a string If config file is missing, “” (empty string) is returned Changing the IPV6 value requires a restart of the instrument software, to ensure servers use the configured IP address
State Saved	No

4.2.11.4 List All Physical Network Adapter IP Addresses (Remote Query Only)

Remote Command	`:SYSTem:COMMunicate:LAN:PHYSical:IPADdress:LIST?`
Example	`:SYSTem:COMMunicate:LAN:PHYSical:IPADdress:LIST?`

	`:"192.168.1.146,2001:0db8:85a3:0000:0000:8a2e:0370:7334"`
Notes	Returns the IP Addresses of the physical network adapters found in the PC/Instrument
State Saved	No

4.3 Preload / Unload Modes

The X-Series platform supports many Modes. Each Mode that is loaded uses a portion of the total available memory. At some point, this may result in insufficient free memory. This can occur during a measurement, or when loading a new Mode. A limited number of Modes can be loaded without impacting performance.

Preload / Unload Modes allows you to select and enable Modes to be preloaded at startup, and to specify the default **Power-On Mode**.

The dialog includes the following controls:

- "Power-On Mode" on page 2315
- "Table of Modes" on page 2316
- "Preload: Select All, Preload: Deselect All" on page 2316
- "Move Up, Move Down" on page 2316
- "Unload" on page 2316

Modes that are not preloaded may be loaded at runtime as needed, resources permitting. However, note that loading more Modes increases memory consumption and may adversely impact performance.

When a memory-full situation occurs, the instrument notifies you with the following message:

```
Out of memory; Insufficient resources. Please save state if needed. You have
following options:

1. Open System Settings > Configure Preload Modes to unload unused Modes

2. Reconfigure preloaded Modes on the above dialog, close and restart the
analyzer SW

3. Close and restart the analyzer SW
```

Option 1 allows you to unload unused Modes and continue running the software, without having to restart it.

The command `:INSTrument:UNLoad <mode>` provides equivalent functionality; see "Unload" on page 2316.

4.3.1 Power-On Mode

Displays a list of licensed Modes. Use this control to change the factory default Power-On Mode. The instrument will execute the selected Mode after power up. Selecting the Power-On Mode here automatically enables that Mode for preloading.

4.3.2 Table of Modes

The table of Modes becomes scrollable when the number of Modes exceeds the dialog’s displayable size.

Use the check boxes in the **Preload** column to enable or disable the preloading of the Modes that you want.

Use the check boxes in the **Unload** column to select the Modes that you want to unload.

The Unload check boxes are grayed-out when the Modes are used by other Modes.

Example:

5G NR & V2X Mode cannot be loaded when either Sequence Analyzer Mode or Power Amplifier Mode are already loaded, because these Modes use 5G NR & V2X Mode. To unload 5G NR & V2X Mode, both Sequence Analyzer Mode and Power Amplifier Mode must be unloaded first.

When the active Mode is unloaded, the screen becomes blank except for the message; “`No Mode is active`”. You can then select another desired Mode.

When multiple screens are open, and a Mode is unloaded, inactive screens that have that Mode as their active Modes are closed.

The active screen is never closed.

4.3.3 Preload: Select All, Preload: Deselect All

Toggles the **Preload** checkbox state for all Applications listed, except for the Power-On Application, which is always selected.

4.3.4 Move Up, Move Down

The default order in which Applications are listed in the table is the order in which they are displayed in the **Mode/Measurement/View** Selector dialog. To change the order in this list, select the desired Application row from the table, then click **Move Up** or **Move Down** to move it to the desired position.

4.3.5 Unload

Unloads the specified Mode.

Remote	`:INSTrument:UNLoad <mode>`

Command	
Example	`:INST:UNL NR5G`

Notes	Error message if the specified Mode is not available,
	`-224,"Illegal parameter value;<mode> is not a valid choice"`
	Error message if the specified Mode is not loaded and therefore cannot be unloaded,
	`-221,"Settings conflict;<mode> is not loaded"`
	Error message if the specified Mode is used by other Modes and therefore cannot be unloaded,
	`-221,"Settings conflict;<mode> is used by <other modes>"`
	Error message if the specified Mode does not support Unload Mode feature and therefore cannot be unloaded,
	`-221,"Settings conflict;Feature not supported for this Mode"`

4.3.6 Loaded Modes (Remote Query Only)

Returns a list of loaded Modes.

Remote Command	`:SYSTem:APPLication:LOADed?`
Example	`:SYST:APPL:LOAD?`
Preset	Not affected by Preset

4.3.7 User Interface

Configures functions specific to the User Interface, such as the menu panel orientation and the display color theme.

4.3.7.1 Menu Panel Position

Allows the Menu Panel to be positioned on the `RIGHt` or `LEFT` side of the display.

Remote Command	`:SYSTem:DISPlay:MPPosition RIGHt | LEFT` `:SYSTem:DISPlay:MPPosition?`
Example	`:SYST:DISP:MPP LEFT`
Preset	This is unaffected by **Preset** but is set to `RIGHt` by **Restore Defaults** > "User Interface" on page 2342 or **Restore Defaults** >"All" on page 2344
State Saved	Power On Persistent (survives shutdown and restart)

4.3.7.2 Menu Panel Tabs

Allows the **Menu Panel Tabs** to be positioned on the `RIGHt` or `LEFT` side of the menu panel.

Remote Command	`:SYSTem:DISPlay:MPTab RIGHt | LEFT` `:SYSTem:DISPlay:MPTab?`
Example	`:SYST:DISP:MPT LEFT`
Preset	This is unaffected by **Preset** but is set to `RIGHt` by **Restore Defaults** > "User Interface" on page 2342 or **Restore Defaults** >"All" on page 2344
State Saved	Power On Persistent (survives shutdown and restart)

4.3.7.3 Annotations Local Settings/All Off

Overrides the annotation settings for all measurement in all modes and turns them all off. This provides the security based "annotation off" function of previous instruments; hence it uses the legacy SCPI command.

When this control is set to **All Off,** the **Screen Annotation, Meas Bar, Trace Annotation,** and **Control Annotation** controls under the **Display, Annotation** menu are grayed-out and forced to `OFF` for all measurements in all modes. When **Local Settings** is selected, you can set the local annotation settings on a measurement-by-measurement basis.

Remote Command	`:DISPlay:WINDow[1]:ANNotation[:ALL] OFF | ON | 0 | 1` `:DISPlay:WINDow[1]:ANNotation[:ALL]?`
Example	`:DISP:WIND:ANN OFF`
Preset	This is unaffected by **Preset** but is set to `ON` by **Restore Defaults** > "User Interface" on page 2342, **Restore Defaults** >"Misc" on page 2343 or **Restore Defaults** >"All" on page 2344
State Saved	Power On Persistent (survives shutdown and restart)
Backwards Compatibility Notes	The `WINDow` parameter and optional subopcode is included for backwards compatibility but ignored – all windows are equally affected

4.3.7.4 Display Theme

Allows you to change the **Display Theme**. This is similar to the Themes selection under Page Setup and Save Screen Image.

The two available themes are:

- `FILLed`: this is the normal theme using filled objects
- `OUTLine`: this theme uses color, but does not use fill for most areas on the display. It is ideal for images that need to be printed on inkjet printers. Although setting **Display Theme** to `OUTLine` does not affect screen image saves or prints, it does show you exactly how screen images will look when using the `OUTLine` theme under **Save Screen Image**, and how prints will look when using the `OUTLine` theme under **Page Setup**.

NOTE **Although the `OUTLine` theme eliminates most of the filled area, some objects remain filled. In particular, the selected marker remains filled with the green marker color, to distinguish it from the other markers. This is important, as it is the selected marker whose readout appears in the upper right corner of the display.**

Remote Command	`:DISPlay:THEMe TDColor | TDMonochrome | FCOLor | FMONochrome | FILLed | OUTLine` `:DISPlay:THEMe?`
Example	`:SYST:DISP:THEM OUTL` sets the display style to `OUTLine`
Notes	To permit code compatibility with A-model X-Series Signal Analyzer instruments, the command parameters from the A-models are mapped as follows: – `TDColor` and `TDMonochrome` are both mapped to `FILLed` (exact full color representation of what is on the screen) – `FCOLor` and `FMONochrome` are both mapped to `OUTLine` (uses color for traces and other items, but most filled areas are white) There is no Monochrome theme in the B-model instruments, so the monochrome commands for the A-model instruments yield color themes The query of `:DISPlay:THEMe?` always returns `FILLed` or `OUTLine`. It never returns `FCOLor`, `FMONochrome`, `TDColor`, or `TDMonochrome`
Preset	This is unaffected by **Preset** but is set to `FILLed` by **Restore Defaults** > "User Interface" on page 2342, **Restore Defaults** >"Misc" on page 2343 or **Restore Defaults** >"All" on page 2344
State Saved	Power On Persistent (survives shutdown and restart)

4.3.7.5 Backlight

Turns the display **Backlight** on and off. This setting may interact with settings under the Windows **Power** menu.

When the backlight is `OFF`, pressing ESC, TAB, SPACE, ENTER, UP, DOWN, LEFT, RIGHT, DEL, BKSP, CTRL, or ALT turns the backlight `ON` without affecting the application. Pressing any other key turns backlight ON, and could potentially perform the action as well.

Remote Command	`:DISPlay:BACKlight ON | OFF` `:DISPlay:BACKlight?`

Example	Turn backlight ON:
	`:DISP:BACK ON`
	Turn backlight OFF:
	`:DISP:BACK OFF`

Preset	Pressing any key turns the backlight back ON, as does **Restore Defaults** > "User Interface" on page 2342, **Restore Defaults** >"Misc" on page 2343 or **Restore Defaults** >"All" on page 2344
State Saved	Not saved in State

4.3.7.6 Backlight Intensity

Allows the **Backlight Intensity** to be controlled from the UI settings panel.

Remote Command	`:SYSTem:DISPlay:BACKlight:INTensity <integer>` `:SYSTem:DISPlay:BACKlight:INTensity?`
Example	`:SYST:DISP:BACK:INT 67`
Preset	100
State Saved	Power On Persistent (survives shutdown and restart)
Range	0-100

4.3.7.7 Hints

Hints are descriptions that provide additional information for a control. You can set **Hints** to be enabled or disabled.

Remote Command	`:SYSTem:DISPlay:HINTs[:STATe] OFF | ON | 0 | 1` `:SYSTem:DISPlay:HINTs?`
Example	`:SYST:DISP:HINT OFF`
Preset	This is unaffected by **Preset** but is set to ON by **Restore Defaults** > "User Interface" on page 2342 or **Restore Defaults** >"All" on page 2344
State Saved	Power On Persistent (survives shutdown and restart)

4.3.7.8 Numeric Entry Auto Open

Configures whether the **Numeric Entry** Panel will appear immediately when an active function control is activated (Auto Open ON), or be deferred until you touch it again or begin to enter a value (Auto Open OFF). When configured for Auto Open

`OFF` (the default), adjusting the value with the front panel Up/Down keys or the RPG hides the **Numeric Entry** Panel.

Remote Command	`:SYSTem:DISPlay:NEPimmediate ON | OFF | 1 | 0` `:SYSTem:DISPlay:NEPimmediate?`
Example	`:SYST:DISP:NEP OFF`
Preset	This is unaffected by **Preset** but is set to `ON` by **Restore Defaults** > "User Interface" on page 2342 or **Restore Defaults** >"All" on page 2344
State Saved	Power On Persistent (survives shutdown and restart)

4.3.7.9 Touch On/Off

Turns the touch functionality on and off on the display. If `OFF`, you can turn it back on using the front panel **Touch On/Off** key, or by using a mouse to toggle this control.

Preset	Always starts up `ON` Unaffected by **Preset** but is turned `ON` by **Restore Defaults** > "User Interface" on page 2342 or **Restore Defaults** >"All" on page 2344
State Saved	Not saved in state, not affected by **Preset**, not Power On Persistent (does not survive shutdown and restart)

4.3.7.10 Control Size

Configures the size of the controls in the user interface. This can be used to make screen dumps from a large screen instrument match those from a smaller screen instrument, to make the controls more readable on a large-screen instrument, or to display more information on a smaller screen instrument.

Remote Command	`:DISPlay:UINTerface:CSIZe SMALl | LARGe` `:DISPlay:UINTerface:CSIZe?`
Example	`:DISP:UINT:CSIZ LARG`
Preset	This is unaffected by **Preset** but is set to `SMALl` by **Restore Defaults** > "User Interface" on page 2342 or **Restore Defaults** >"All" on page 2344
State Saved	Power On Persistent (survives shutdown and restart)

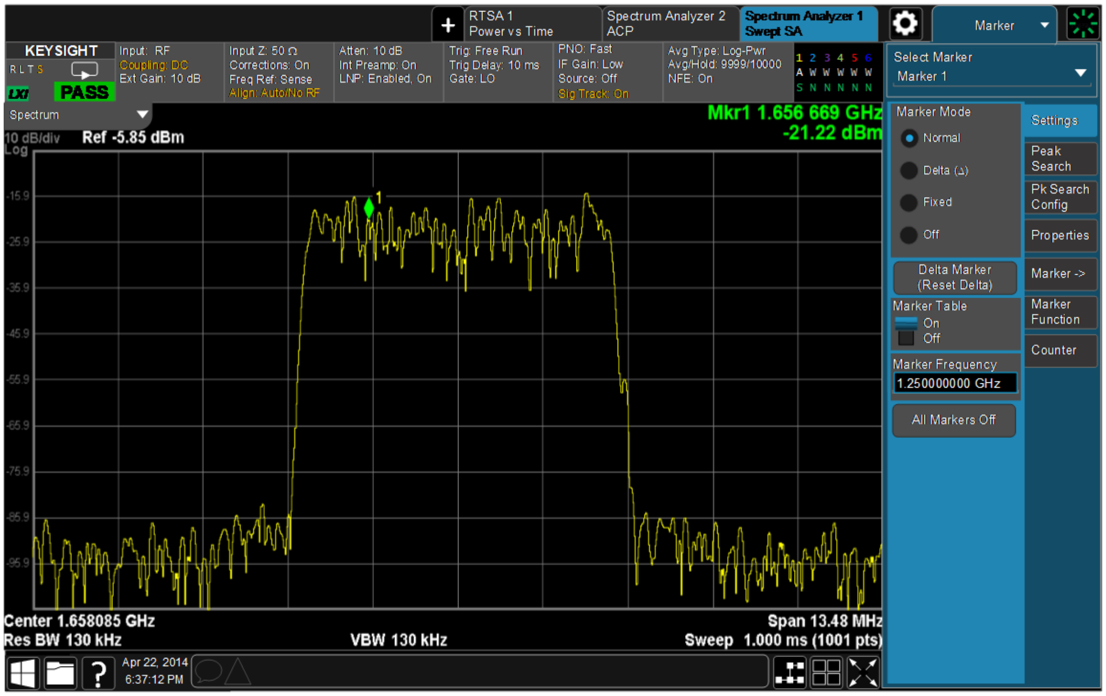
4.3.7.11 Quick Save Mode

When **Quick Save Mode** is `NORMal` (the default setting), the instrument does an immediate save of a new file of the same type and to the same directory as the previous **Save** action. When **Quick Save Mode** is in the `PROMpt` state, instead of immediately performing a **Save**, the Alpha Keyboard appears with the proposed auto-filename in the entry area. You can then press **Enter** to accept the auto filename, or edit the name then press **Enter**. This allows you to easily save a file with a custom file name.

Remote Command	`:MMEMory:STORe:QSAVe NORMal | PROMpt` `:MMEMory:STORe:QSAVe?`
Example	`:MMEM:STOR:QSAV PROM`
Preset	This is unaffected by **Preset** but is set to `NORMal` by **Restore Defaults** > "User Interface" on page 2342 or **Restore Defaults** >"All" on page 2344
State Saved	Power On Persistent (survives shutdown and restart)

4.3.7.12 Screen Tabs Left/Right

This switch, when in the `RIGHt` position, makes the screen tabs start on the right and build across to the left, thus minimizing the finger travel over to the screen tab when there is only one screen. When tabs are added from right to left, they appear as below:



Input: RF
Coupling: DC
Ext Gain: 10 dB
Input Z: 50 Ω
Corrections: On
Freq Ref: Sense
Align: Auto/No RF
Atten: 10 dB
Int Preamp: On
LNP: Enabled, On
Trig: Free Run
Trig Delay: 10 ms
Gate: LO
PNO: Fast
IF Gain: Low
Source: Off
Sig Track: On
Avg Type: Log-Pwr
Avg|Hold: 9999/10000
NFE: On
Mkr1 1.656 669 GHz
-21.22 dBm
10 dB/div Ref -5.85 dBm
Center 1.658085 GHz
Res BW 130 kHz
VBW 130 kHz
Span 13.48 MHz
Sweep 1.000 ms (1001 pts)
Marker Frequency 1.250000000 GHz

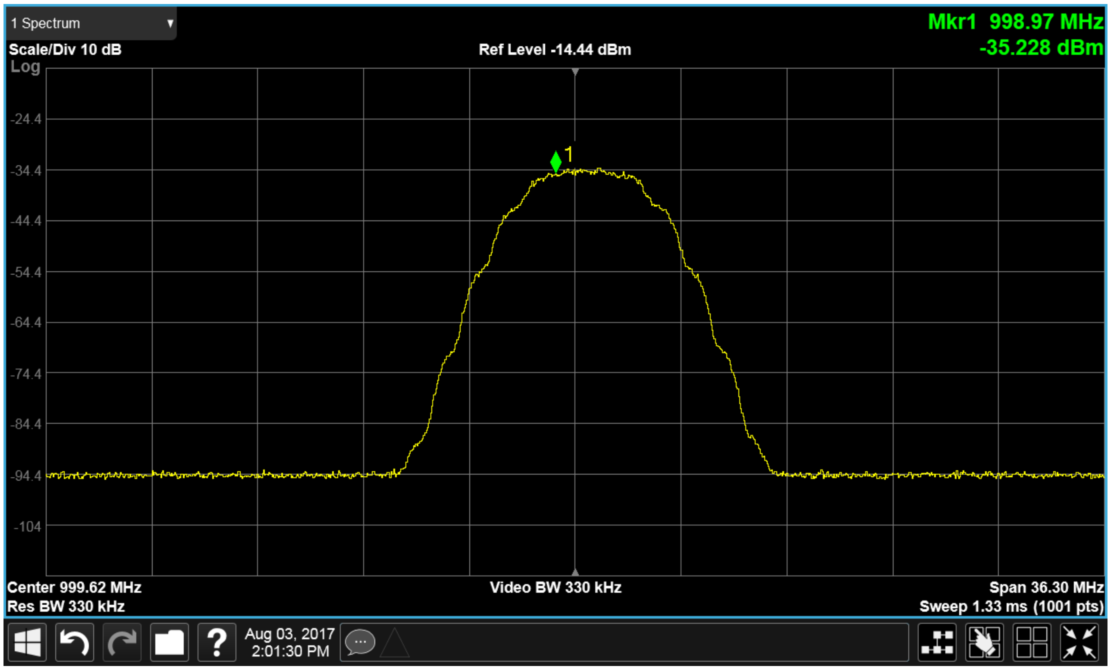
The default is `LEFT`.

Remote Command	`:DISPlay:UINTerface:STAB RIGHt | LEFT` `:INSTrument:SCReen:STAB?`

Example	`:DISP:UINT:STAB RIGH`
Preset	This is unaffected by **Preset** but is set to `LEFT` by **Restore Defaults** > "User Interface" on page 2342 or **Restore Defaults** >"All" on page 2344
State Saved	Power On Persistent (survives shutdown and restart)

4.3.7.13 Hide Screen Tabs in Full Screen

This switch, when in the `ON` position, causes the Screen Tabs to be hidden when in Full Screen view, thus maximizing the display area available for results. By also turning off the Meas Bar (in the **Display, Annotation** menu), you can maximize the available area for results, as shown below:

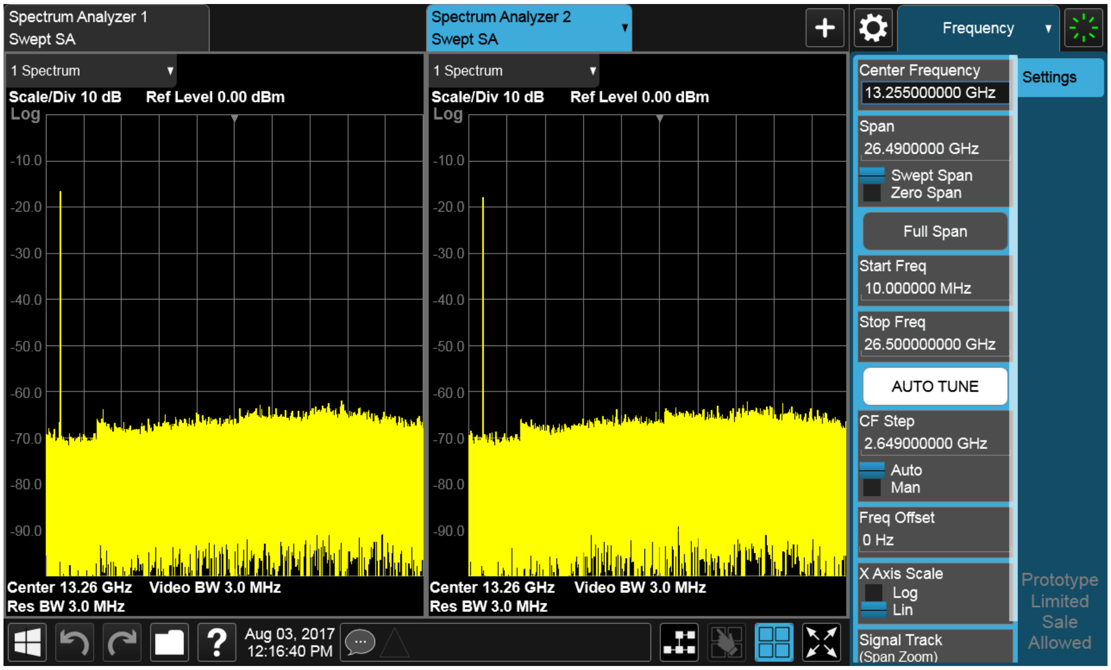


Remote Command	`:DISPlay:UINTerface:HTABs ON | OFF | 1 | 0`
	`:DISPlay:UINTerface:HTABs?`
	`:DISPlay:UINTerface:STFScreen ON | OFF | 1 | 0`
	Implemented but with wrong sense; ON turns them off and OFF turns them on; so, don’t document to customer

Example	`:DISP:UINT:HTAB ON` Hide the tabs in full screen
Preset	This is unaffected by **Preset** but is set to `OFF` by **Restore Defaults** > "User Interface" on page 2342 or **Restore Defaults** >"All" on page 2344
State Saved	Power On Persistent (survives shutdown and restart)

4.3.7.14 2-Screen Orientation

When you add a second Screen using the “+” control on the Screen Tabs bar, normally the screen is added to the right of the first screen. However, sometimes it is better to add the new screen below the first screen rather than to the right, as shown below.



Scale/Div 10 dB Ref Level 0.00 dBm

Log
Lin

New screen added below (vertical orientation)

The **2-Screen Orientation** switch allows you to choose between these two orientations for 2-Screen configurations. The default is the `HORizontal` configuration, two Screens side-by-side.

Remote Command	`:INSTrument:SCReen:ORIentation VERTical | HORizontal`
Example	`:INST:SCR:ORI VERT` Set the 2 screens to be above/below each other
Preset	`HOR` This is unaffected by **Preset** but is set to `HORizontal` by **Restore Defaults** > "User Interface" on page 2342 or **Restore Defaults** >"All" on page 2344

4.3.7.15 Clock Format

Allows the **Clock Format** to be switched between 12-Hour Format (`HR12`) and 24-Hour Format (`HR24`).

Remote Command	`:SYSTem:DISPlay:CFORmat HR12 | HR24` `:SYSTem:DISPlay:CFORmat?`
Example	`:SYST:DISP:CFOR HR12`
Preset	`HR12`
State Saved	Power On Persistent (survives shutdown and restart)
Range	12-Hour | 24-Hour

4.3.7.16 Language

Accesses the selection of **Language** displayed on the menus and controls. `ENGLish` is the default.

All Measurement Applications that share common controls will display the localized controls.

The description on the control labels is bounded by the control size. Any given language will have labels in that language that are shorter or longer than the equivalent label in English. Any localized text on the controls that does not fit the label size remains in English. Thus, for any given menu, controls may be displayed in English *and* the selected language.

- Labels that are acronyms, engineering, or technology specific terms may remain in English.
- All Application and Measurement names remain in English.
- All data in exported files remain in English.
- The Diagnostic and Service menus in the System Subsystem remain in English.
- The Windows operating system must remain in English. Changing the **Region and Language** settings in the Windows Control Panel is not supported.

External keyboards in English are supported. Localized external keyboards are not supported. When the language selected is not English, a message is displayed to explain that any external keyboard must remain in English.

Other aspects of the Graphical User Interface remain in English. The Remote User Interface (SCPI) remains in English.

Remote Command	`:SYSTem:DISPlay:LANGuage ENGLish | RUSSian` `:SYSTem:DISPlay:LANGuage?`

Example	`:SYST:DISP:LANG ENGL`
	`:SYST:DISP:LANG RUSS`
	Requires Option AKT

Preset	This is unaffected by **Preset** but is set to `ENGLish` by **Restore Defaults** > "User Interface" on page 2342,**Restore Defaults** >"Misc" on page 2343 or **Restore Defaults** >"All" on page 2344

4.3.7.17 Restore User Interface Defaults

Causes the group of settings associated with the **User Interface** menu to be reset to their default values. This also happens on **Restore Misc Defaults**.

When **User Interface** is selected, a message appears saying:

```
This will reset all of the User Interface variables to their default state,
including the menu panel location, display theme, and language.
```

```
It will not affect Alignment data or settings.
```

```
This action cannot be undone. Do you want to proceed?
```

The message provides **OK** and **Cancel** buttons for you to affirm or cancel the operation.

Example	`:SYST:DEF UINT`

4.3.7.18 User Interface Type (Remote Query Only)

Use this query to determine if the instrument is running the Multi-Touch user interface or Softkey user interface. This is an easy way to distinguish between A-models (Softkey) instruments and Touch UI (Multi-Touch) instruments.

Remote Command	`:DISPlay:UINTerface:TYPE?`
Example	`:DISP:UINT:TYPE?`
Notes	The query returns `MULTITOUCH` for instruments with the Multi-Touch UI or `SOFTKEY` for instruments with the Softkey UI

4.4 Power On

Lets you select how the instrument should power on.

NOTE In products that run multiple instances of the X-Series Application, the same Power On type is shared between all the instances.

4.4.1 Power On State

Lets you select whether the instrument powers up in a default state, or some other state. The options are:

- `MODE` and Input/Output Defaults
- `USER` Preset
- `LAST` State

Remote Command	`:SYSTem:PON:TYPE MODE | USER | LAST` `:SYSTem:PON:TYPE?`

Example	`:SYST:PON:TYPE MODE`
	`:SYST:PON:TYPE USER`
	`:SYST:PON:TYPE LAST`

Preset	This is unaffected by **Preset** but is set to `MODE` by **Restore Defaults** > "All" on page 2344
State Saved	No
Backwards Compatibility SCPI	`:SYSTem:PON:TYPE PRESet` The `PRESet` parameter is supported for backward compatibility only, and behaves the same as `MODE`

Mode and Input/Output Defaults

When the instrument is powered-on in `MODE` and Input/Output Defaults, it performs "Restore Mode Defaults" on page 2452 for all Modes in the instrument, and performs **Restore Input/Output Defaults**.

Persistent parameters (such as Amplitude Correction tables or Limit tables) are not affected at power-on, even though they are normally cleared by **Restore Input/Output Defaults** and/or **Restore Mode Defaults**.

User Preset

Sets **Power On State** to `USER` Preset. When the instrument is powered on in User Preset, it will **User Preset** each mode and switch to the "Power On Application" on page 2330. **Power OnUser Preset** does not affect any settings other than those set by a normal **User Preset**.

Backwards Compatibility Note: Power On: **User Preset** causes the instrument to power up in the "Power On Application" on page 2330, *not* the last Mode the instrument was in prior to shutdown. Also, **Power On**: **User Preset** will **User Preset** all Modes. This does *not* exactly match legacy behavior.

NOTE In products that run multiple instances of the X-Series Application, the same **User Preset** is shared between all the instances.

NOTE An instrument can never power up for the first time in `USER` preset.

Last State

Sets **Power On State** to `LAST`. When the instrument is powered on, it will put all modes in the last state they were in prior to when the instrument was put into Power Standby, and it will start up in the mode it was last in prior to powering off the instrument. The saving of the active mode prior to shutdown happens behind the scenes when a controlled shutdown is requested, either via the front panel **Standby** key, or the remote command `:SYSTem:PDOWn`. The non-active modes are saved as they are deactivated and recalled by Power On: Last State.

Power On: **Last State** only works if you completed a controlled shutdown prior to powering on in `LAST`. If a controlled shutdown is not completed when in **Power On**: **Last State**, the instrument powers up in the last active Mode, but it may not power up in the active Mode’s last state. If an invalid Mode state is detected, a **Mode Preset** occurs. To control the shutdown under remote control, use `:SYSTem:PDOWn`.

Backwards Compatibility Note: It is no longer possible to power-up the instrument in the last Mode the instrument was running with that Mode in the preset state. (ESA/PSA `SYST:PRESET:TYPE MODE` with `SYST:PON:PRESET`) You can power-on the instrument in the last Mode the instrument was running in its last state (`:SYST:PON:TYPE LAST`), or you can specify the Mode to power-up in its preset state (`:SYST:PON:MODE <mode>`).

NOTE In products that run multiple instances of the X-Series Application, each instance has a unique **Last State**.

NOTE An instrument can never power up for the first time in `LAST`.

If line power to the instrument is interrupted, for example by pulling the line cord plug or by switching off power to a test rack, **Power OnLast State** may not work properly. For proper operation, **Power On Last State** depends on your shutting down the instrument using the **Standby** key or the `:SYSTem:PDOWn` command. This ensures the last state of each Mode is saved and can be recalled during a power-up.

4.4.2 Power On Application

Accesses a menu that lists the available Modes, and lets you select which Mode is to be the **Power On Application**. Whichever application is selected runs at power-on when the Power On Type is set to "`MODE` and Input/Output Defaults".

NOTE In products that run multiple instances of the X-Series Application, the same Power On Application is shared between all the instances.

Remote Command	`:SYSTem:PON:MODE <mode>`
	where `<mode>` is an item from the same set that can be sent using the `:INSTrument[:SELect]` command
	`:SYSTem:PON:MODE?`

Example	`:SYST:PON:MODE SA`
Notes	The displayed list of possible Modes (and remote parameters) depends on which Modes are installed in the instrument
Preset	Unaffected by **Preset** but is set by **Restore Defaults** > "All" on page 2344 to `SA`, except in the cases noted below:

N8973B, N8974B, N8975B, N8976B	`NFIG`
`VXT models`	`BASIC`
`M9410E/11E/15E/16E`	`BASIC`

State Saved	No

4.4.3 FPGA Configuration

Lets you choose which FPGA image you want loaded into the instrument.

Depending on your hardware configuration, your instrument may contain a Field Programmable Gate Array (FPGA) which handles much of the processing for some of the mathematically intensive features, such as Time Domain Scan (Option TDS) and Enhanced Sweep Speed (Option FS2). The FPGA is not big enough to hold the functionality for both options, so you must decide which FPGA program you want loaded.

When licenses allow for both FPGA image versions to be available, and you have not explicitly chosen an FPGA image version, then, when the firmware is updated, the Time Domain Scan version will be loaded. In the absence of all licenses, the Enhanced Sweep Speed version will be loaded. Once you have explicitly chosen an FPGA image version, using the FPGA Configuration dialog, any future firmware updates will continue to load the chosen version as long as it is licensed.

Example: loading the Time Domain Scan FPGA image, removing the TDS license, and then updating the firmware will result in the Enhanced Sweep Speed version being loaded.

When multiple capabilities are licensed, the FPGA Configuration presents a dialog that tells you that there is insufficient space to fit all the licensed capabilities, and asks you to choose one of the FPGA programs (images).

If you remove licenses, it is possible to end up with an unlicensed capability loaded in the FPGA while a licensed capability is not loaded. In this case, the dialog does not present the **Preference** group and shows a message about unlicensed/licensed capabilities. You can dismiss the dialog if the licensed capability is not currently needed, and you do not want to take the time to load the licensed FPGA image. However, this dialog will continue to appear each time the instrument is restarted.

Behavior when the Enhanced Sweep Speed FPGA Image is Loaded

When the Enhanced Sweep Speed version of the FPGA image is loaded, sweep behavior still depends on the licenses:

- Option FS2 gives full FPGA enhanced sweep speed
- Option FS1 gives software implemented enhanced sweep speed
- Neither Option FS1 nor FS2 – no enhanced sweep speed
- Both Options FS1 and FS2 – same as Option FS2, the full FPGA enhanced sweep speed

If EMI Receiver Mode and TDS option are licensed, and the Enhanced Sweep Speed FPGA image is loaded, then you will not have the proper FPGA image loaded to fully support EMI Receiver Mode. In particular, the Frequency Scan measurement cannot use Scan Type “Time Domain Scan” (this is the normally the default Scan Type for instruments with the TDS option). Instead, EMI Receiver Mode behaves as if the TDS option is not licensed.

Behavior when the Time Domain Scan FPGA Image is loaded

When the Time Domain Scan version of the FPGA image is loaded, EMI Receiver Mode works as expected with the TDS option licensed, but the Option FS2 capability silently reverts to FS1 behavior.

Switching Between Enhanced Sweep Speed and Time Domain Scan FPGA Images

You cannot have both full TDS and FS2 images at the same time, so to switch to the other image, you must go through the process of reloading the FPGA by choosing the desired image with the Selected FPGA control, and pressing "Load FPGA" on page 2334, or issuing the “Load FPGA” SCPI command below with the proper parameter.

Incorrect FPGA Configuration

If EMI Receiver Mode, Option TDS, or Option FS2 license is removed while the FPGA image for that license is loaded, the instrument ends up in an incorrect configuration, since the loaded FPGA image version has support for unlicensed functionality that is not accessible and does not support the currently licensed functionality. It will still function, but when the instrument recognizes this situation at startup, it automatically displays the **FPGA Configuration** dialog. The only selections available will be the licensed ones, but you can choose to dismiss the dialog and continue with the current FPGA image version if you do not want to take the time to load the correct FPGA image. The dialog will continue to be presented at each startup until the correct FPGA image is loaded.

FPGA Updates When Firmware Installs

The FPGA image and X-Series firmware are tightly coupled, so whenever the firmware is updated, the FPGA image is also checked and updated if needed. The rules for choosing between Time Domain Scan and Enhanced Sweep Speed versions of the FPGA image are:

1. Always use Time Domain Scan FPGA image for MXE
2. If neither EMC Mode nor Option TDS nor Option FS2 are licensed, the Enhanced Sweep Speed FPGA image is loaded
3. If EMC Mode and Option TDS are licensed and Option FS2 is not licensed, the Time Domain Scan FPGA image is loaded
4. If EMC Mode and Option TDS are not licensed, and Option FS2 is licensed, the Enhanced Sweep Speed FPGA image is loaded
5. If all are licensed
    a. If "FPGA Load Preference" on page 2333 is **Time Domain Scan**, the Time Domain Scan FPGA image is loaded

b. If **FPGA Load Preference** is **Enhanced Sweep Speed**, the Enhanced Sweep Speed FPGA image is loaded

c. If **FPGA Load Preference** is **Prompt at Startup**:

   a. If the last FPGA Configuration Load was Time Domain Scan, the Time Domain Scan FPGA image is loaded

   b. If the last FPGA Configuration Load was Enhanced Sweep Speed, the Enhanced Sweep Speed FPGA image is loaded

   c. If no FPGA has been explicitly loaded, the Time Domain Scan FPGA image is loaded

4.4.3.1 FPGA Load Preference

Select either image from the radio buttons at the top of the dialog:

Option	SCPI	Description
Time Domain Scan	`TDS`	Load the Time Domain Scan version of the FPGA image
Enhanced Sweep Speed	`FS2`	Load the Enhanced Sweep Speed version of the FPGA image
Prompt at Startup	`PROMpt`	Prompt at each startup, displaying the **FPGA Configuration** dialog. You can choose to continue with the currently loaded FPGA image version, or load a different version

If you select the image that is already loaded, you will not be prompted again. If you select a different one, the Selected FPGA control changes to that one and you must then press "Load FPGA" on page 2334 to load the other image.

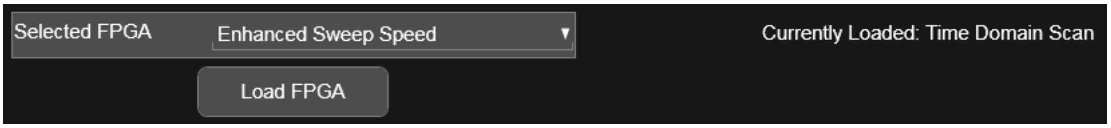
When installing new firmware, the **FPGA Load Preference** setting is used to load the preferred FPGA image version if more than one version is available. Selecting **Prompt at Startup** causes you to be prompted at each startup to select the desired version of the FPGA image.

Remote Command	`:SYSTem:PON:FPGA:PREFerence TDS | FS2 | PROMpt`
Example	`:SYST:PON:FPGA:PREF TDS` `:SYST:PON:FPGA:PREF?`
Notes	This SCPI is always available, but if the hardware does not support multiple FPGA image choices, the returned value is always: `NA` = Not available for this hardware Also, when not supported, any attempt to change away from `NA` generates error -224, “Illegal parameter value”
Dependencies	Dialogs and menus available only when EMC Mode, Option `TDS` and Option `FS2` are all licensed

Preset	`PROMpt` Not affected by **Mode Preset** but set to `PROMpt` by **Restore Defaults** >"All" on page 2344 or **Power On**

4.4.3.2 Load FPGA

Depending on the "FPGA Load Preference" on page 2333 selection, there may be a mismatch between the desired FPGA image, and the one that is currently loaded. In that case the **Load FPGA** control at the bottom of the dialog is not grayed-out, and you must press it to actually load the desired FPGA image. The image that is currently loaded is shown on the right:



Selected FPGA Enhanced Sweep Speed

Currently Loaded: Time Domain Scan

If you have a mismatch, but do not actually load the other image, the **FPGA Load Preference** is remembered, but the image you had before remains until you return to this dialog and press **Load FPGA**, or until the next time the instrument firmware is updated.

If you press **Load FPGA**, the X-series software exits, the FPGA update program runs, and the instrument reboots. After rebooting, the new image will be loaded in the FPGA.

NOTE This can take 15 minutes or more.

CAUTION If power is lost during the FPGA load process, the FPGA can become corrupted, in which case the only solution is to return it to Keysight for servicing.

Remote Command	`:SYSTem:PON:FPGA:LOAD TDS | FS2`

Example	`:SYST:PON:FPGA:LOAD TDS`
	For options, see Dependencies row below
	`:SYST:PON:FPGA:LOAD?`

Notes	If the specified FPGA image version is the one already loaded, then the command does nothing. If the FPGA image needs to change, the analyzer software exits (terminating the SCPI session), and the FPGA update utility is launched. Once the FPGA has updated, the instrument will reboot This SCPI is always available, but if the hardware does not support multiple FPGA image choices, the value returned is always: NA = Not available for this hardware Also, when not supported, any attempt to change away from NA generates error -224, “Illegal parameter value”
Dependencies	Available only when there are multiple versions of the FPGA image that could be loaded

	Selection limited to licensed features: – `TDS` selection requires EMC Mode and Option TDS – `FS2` requires Option FS2 The UI is blanked when there is only one licensed selection, and that selection is already loaded. Sending the SCPI for an unlicensed selection results in error: -224, “Illegal parameter value; <option> is not licensed”
Preset	None. Not affected by **Mode Preset** nor any "Restore Defaults" on page 2341

4.4.4 Restore Power On Defaults

This selection causes the **Power On** settings to be reset to their default values.

When this button is pressed, a message appears saying:

This will reset Power On State and Power On Application to their default state.

It will not affect Alignment data or settings.

This action cannot be undone. Do you want to proceed?

The message provides **OK** and **Cancel** buttons for you to confirm or cancel the operation.

Example	`:SYST:DEF PON`

4.4.5 Configure Applications – Desktop application

The **Configure Applications** utility runs from the instrument’s desktop. You must close the Instrument Application before running **Configure Applications.**

This utility can be used to:

- select applications (Modes) for preload
- determine how many Modes can fit in memory at one time
- specify the order of the Modes in the Mode menu.

The utility consists of a window with instructions, a set of **Select Application** checkboxes, a “fuel bar” style memory gauge, and keys that help you set up your configuration.

NOTE

In products that run multiple instances of the X-Series Application, the same Configure Applications utility is shared between all the instances.

For more details, see the following topics:

- "Preloading Applications" on page 2336
- "Access to Configure Applications utility" on page 2336
- "Virtual memory usage" on page 2337

Example	Display the Config Applications screen: `:SYST:SHOW CAPP`

Preloading Applications

During runtime, if a Mode that is not preloaded is selected using the **Mode** menu or by sending SCPI commands, there will be a pause while the Application is loaded. During this pause, a message that says "`Loading application, please wait …`" is displayed. Once loaded, the application stays loaded, so the next time you select it during a session, there is no delay.

Preloading lets you "preload" at startup, to eliminate the runtime delay. Preloading an application causes it to be loaded into the instrument's memory when the analyzer program starts up. If you do this, the delay will increase the time it takes to start up the analyzer program, but this may be preferable to having to wait the first time you select an application. Note that, once an application is loaded into memory, it cannot be unloaded without exiting and restarting the analyzer program.

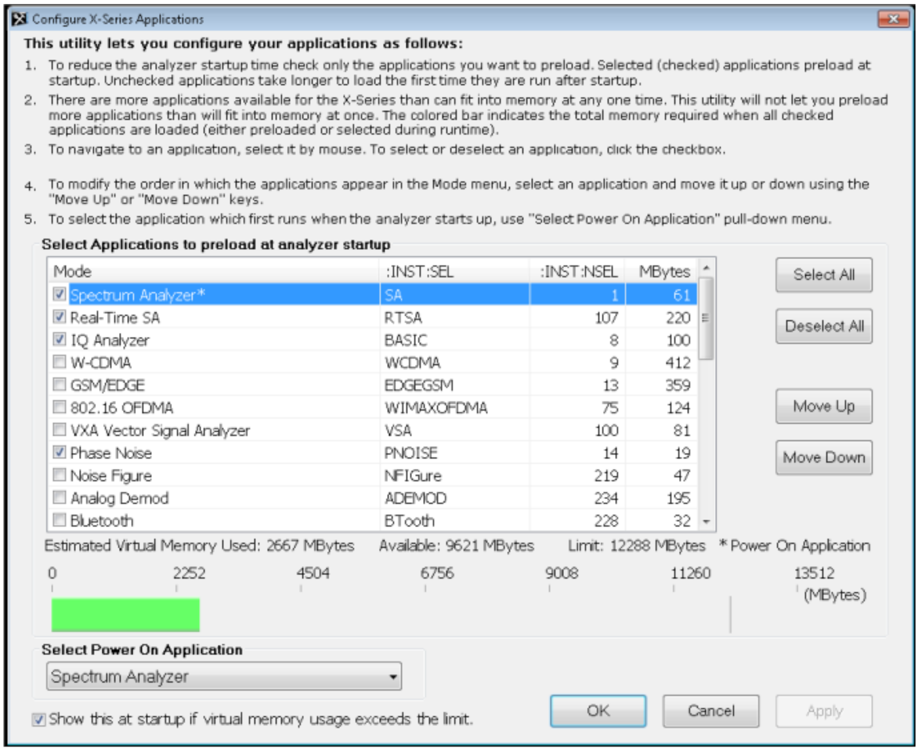
Note that there are more applications available for X-Series than can fit into Windows Virtual Memory. By allowing you to choose which licensed applications to load at startup, the **Configure Applications** utility allows you to make optimal use of the instrument memory.

Access to Configure Applications utility

A version of the utility runs the first time you power up the instrument after purchasing it from Keysight. The utility automatically configures preloads so that as many licensed applications as possible are preloaded while keeping the total estimated virtual memory usage below the limit. This auto-configuration only takes place at the very first run, and after analyzer software upgrades.

At any time, you can manually start the **Configure Applications** utility by closing the analyzer application and double-tapping the **Configure Applications** icon on the desktop.

The utility's main dialog looks like this:



This utility lets you configure your applications as follows:

1. To reduce the analyzer startup time check only the applications you want to preload. Selected (checked) applications preload at startup. Unchecked applications take longer to load the first time they are run after startup.
2. There are more applications available for the X-Series than can fit into memory at any one time. This utility will not let you preload more applications than will fit into memory at once. The colored bar indicates the total memory required when all checked applications are loaded (either preloaded or selected during runtime).
3. To navigate to an application, select it by mouse. To select or deselect an application, click the checkbox.
4. To modify the order in which the applications appear in the Mode menu, select an application and move it up or down using the "Move Up" or "Move Down" keys.
5. To select the application which first runs when the analyzer starts up, use "Select Power On Application" pull-down menu.

Select Applications to preload at analyzer startup

Mode	:INST:SEL	:INST:NSEL	MBytes
☑ Spectrum Analyzer*	SA	1	61
☑ Real-Time SA	RTSA	107	220
☑ IQ Analyzer	BASIC	8	100
☐ W-CDMA	WCDMA	9	412
☐ GSM/EDGE	EDGEGSM	13	359
☐ 802.16 OFDMA	WIMAXOFDMA	75	124
☐ VXA Vector Signal Analyzer	VSA	100	81
☑ Phase Noise	PNOISE	14	19
☐ Noise Figure	NFIGure	219	47
☐ Analog Demod	ADEMOD	234	195
☐ Bluetooth	BTooth	228	32

Estimated Virtual Memory Used: 2667 MBytes Available: 9621 MBytes Limit: 12288 MBytes *Power On Application

Select Power On Application

Spectrum Analyzer

☑ Show this at startup if virtual memory usage exceeds the limit.

Instructions are provided below and in the utility. Use the utility to find a configuration that works best for you, and then restart the analyzer program.

Select All	Marks all applications in the selection list. This allows you to enable all applications licensed on the instrument for pre-loading, or is a convenience for selecting all applications in one operation and then letting you deselect individual applications
Deselect All	Clears the marks from all applications in the selection list, except the Power On application. The Power On application cannot be eliminated from the pre-load list
Move Up **Move Down**	The application list is the order that applications appear in the Mode Menu. These keys let you shift the selected application up or down in the list, thus moving the selected application earlier or later in the Mode Menu
Select Power On Application	This is the same as the “Power On Application” selection on the Power On page of the System Settings dialog

Virtual memory usage

There are more applications available for X-Series than can fit into memory at any one time, so the **Configure Applications** utility includes a memory tracker that serves two purposes:

1. It will not let you preload more applications than will fit into memory at once
2. You can determine how many of your favorite applications can reside in memory at one time

The utility provides a graphical representation of the amount of memory (note that the amount of memory shown here is *virtual* memory, which is a limitation imposed by the operating system, not by the amount of physical memory you have in your instrument). You select applications to preload by checking the boxes on the left. Checked applications preload at startup. The colored fuel bar indicates the total memory required when all the checked applications are loaded (either preloaded or selected during runtime).

Here is what the fuel bar colors mean:

- RED: the applications you have selected cannot all fit into the instrument’s memory. You must deselect applications until the fuel bar turns yellow
- YELLOW: the applications you have selected can all fit into the instrument’s memory, but there is less than 10% of the memory left, probably not enough to load any other applications, either via preload or by selecting a Mode while the instrument is running
- GREEN: The indicator is green when <90% of the memory limit is consumed. This means the applications you have selected can all fit into the instrument’s memory with room to spare. You will be able to load one or more other applications without running out of memory

If Sequence Analyzer is selected to be preloaded, all apps that are part of the Sequencer Mode (GSM/EDGE, WCDMA, CDMA2K and 1xEVDO) are preloaded (if licensed).

4.4.6 Configure Applications - Instrument boot-up

When the Instrument Application starts, a dialog box similar to the one you see when you run **Configure Applications** is displayed, allowing you to choose which licensed applications are to be loaded. This dialog is only displayed if the memory required to pre-load all the licensed applications exceeds the virtual memory available.

4.4.7 Configure Applications - Remote Commands

The following topics provide details on using remote commands to configure the list of applications you want to load into the instrument memory, or query the virtual memory utilization for your applications.

- "Configuration list (Remote Command Only)" on page 2339
- "Configuration Memory Available (Remote Query Only)" on page 2339
- "Configuration Memory Total (Remote Query Only)" on page 2339
- "Configuration Memory Used (Remote Query Only)" on page 2340
- "Configuration Application Memory (Remote Query Only)" on page 2340

4.4.7.1 Configuration list (Remote Command Only)

Used to set or query the list of applications to be loaded in-memory.

Remote Command	`:SYSTem:PON:APPLication:LLISt <string of INSTrument:SELect names>` `:SYSTem:PON:APPLication:LLISt?`
Example	`:SYST:PON:APPL:LLIS "SA,BASIC,WCDMA"`
Notes	`<string of INSTrument:SELect names>` contains items that are valid options for the `:INSTrument:SELect` command The order of the `<INSTrument:SELect names>` specifies the order in which the applications are loaded into memory, and the order that they appear in the **Mode** menu `Error message -225 "Out of Memory"` is reported when more applications are listed than can reside in virtual memory. When this occurs, the existing applications load list is unchanged
Preset	Not affected by Preset
State Saved	Not saved in instrument state

4.4.7.2 Configuration Memory Available (Remote Query Only)

Returns the amount of Virtual Memory remaining.

Remote Command	`:SYSTem:PON:APPLication:VMEMory[:AVAilable]?`
Example	`:SYST:PON:APPL:VMEM?`
Preset	Not affected by Preset

4.4.7.3 Configuration Memory Total (Remote Query Only)

Returns the limit of Virtual Memory allowed for applications.

Remote Command	`:SYSTem:PON:APPLication:VMEMory:TOTal?`
Example	`:SYST:PON:APPL:VMEM:TOT?`
Preset	Not affected by Preset

4.4.7.4 Configuration Memory Used (Remote Query Only)

Returns the amount of Virtual Memory used by all measurement applications.

Remote Command	`:SYSTem:PON:APPLication:VMEMory:USED?`
Example	`:SYST:PON:APPL:VMEM:USED?`
Preset	Not affected by Preset

4.4.7.5 Configuration Application Memory (Remote Query Only)

Returns the amount of Virtual Memory a particular application consumes.

Remote Command	`:SYSTem:PON:APPLication:VMEMory:USED:NAME? <INSTrument:SELect name>`
Example	`:SYST:PON:APPL:VMEM:USED:NAME? CDMA2K`
Notes	`<INSTrument:SELect name>` is an item from the same set used by the `:INSTrument:SELect` command If the name provided is invalid, 0 (zero) is returned
Preset	Not affected by Preset

4.5 Restore Defaults

Provides initialization of system setting groups, including the option to set the entire instrument back to a factory default state.

NOTE In products that run multiple instances of the X-Series Application, all instances have the same factory default states for **Restore Defaults**.

Remote Command	`:SYSTem:DEFault [ALL] | ALIGn | INPut | MISC | MODes | PON | UINTerface | SCReen`
Example	`:SYST:DEF`
State Saved	No

4.5.1 Input/Output

Input/Output Preset resets the group of settings and data associated with the **Input/Output** front-panel key to their default values. These settings are not affected by a **Mode Preset** because they are associated with connections to the instrument, which you will probably not want to reset every time you press **Mode Preset**.

By using **Input/Output** Preset and "Restore Mode Defaults" on page 2452, a full preset of the current mode will be performed, with the caveat that since **Input/Output** Preset is a global function, it will affect *all* modes.

This is the same as the **Input/Output Preset** button in the **Preset** dropdown and the **Input/Output** menu.

When **Input/Output** is selected, a message appears saying:

```
This will reset all of the Input/Output variables to their default state,
including which input is selected, all Amplitude Correction settings and data,
all External Mixing settings, all Frequency Reference settings and all Output
settings

It will not affect Alignment data or settings

This action cannot be undone. Do you want to proceed?
```

The dialog includes **OK** and **Cancel** controls, for you to confirm or cancel the operation.

Example	`:SYST:DEF INP`

4.5.2 I/O Config

Causes the group of settings associated with the **I/O Config** menu to be reset to their default values. This also happens on **Restore Misc Defaults**, which has a SCPI command, although **I/O Config** does not.

When **I/O Config** is selected, a message appears saying:

`This will reset all of the I/O Config variables to their default state, including the GPIB address and SCPI LAN settings`

`It will not affect Alignment data or settings`

`This action cannot be undone. Do you want to proceed?`

The dialog includes **OK** and **Cancel** controls, for you to affirm or cancel the operation.

4.5.3 User Interface

Causes the group of settings associated with the **User Interface** menu to be reset to their default values. This also happens on a **Restore Misc Defaults**.

When **User Interface** is selected, a message appears saying:

`This will reset all of the User Interface variables to their default state, including the menu panel location, display theme, and language`

`It will not affect Alignment data or settings`

`This action cannot be undone. Do you want to proceed?`

The dialog includes **OK** and **Cancel** controls, for you to affirm or cancel the operation.

Example	`:SYST:DEF UINT`

4.5.4 Power On

Causes the **Power On** settings to be reset to their default values.

The Power On settings are **Power On State** and **Power On Application**.

When **Power On** is selected, a message appears saying:

`This will reset Power On State and Power On Application to their default state`

`It will not affect Alignment data or settings`

`This action cannot be undone. Do you want to proceed?`

The dialog includes **OK** and **Cancel** controls, for you to affirm or cancel the operation.

Example	`:SYST:DEF PON`

4.5.5 Alignments

Causes the **Alignments** system settings to be reset to their default values. This does not affect any Alignment data stored in the system.

After performing this function, it may impact the auto-alignment time of the instrument until a new alignment baseline has been established.

When **Alignments** is selected, a message appears saying:

`This will reset all of the settings for the Alignment system to their default values`

`No alignment data will be erased`

`This action cannot be undone. Do you want to proceed?`

The dialog includes **OK** and **Cancel** controls, for you to affirm or cancel the operation.

Example	`:SYST:DEF ALIG`

4.5.6 Misc

Causes miscellaneous system settings to be reset to their default values.

CAUTION **This function resets the GPIB address to 18.**

When **Misc** is selected, a message appears saying:

`This will reset miscellaneous system settings to their default values. This includes settings for I/O Config (GPIB and SCPI LAN), the User Interface, the Save/Recall system, and the Preset type`

`It will not affect Alignment data or settings`

`This action cannot be undone. Do you want to proceed?`

The dialog includes **OK** and **Cancel** controls, for you to affirm or cancel the operation.

This Miscellaneous group contains settings that are *not* part of the other Restore Defaults groups. These include:

- All settings on the **I/O Config** page of the **System Settings** dialog
- All settings in the following table:

Miscellaneous Setting	Default Value
The SYST:PRES:TYPE	MODE
Auto File Name Number	000
Save Type	State
State Save To	Register 1
Screen Save To	SCREEN000.png
Save/Recall Shortcuts	Deleted
Display Theme	Filled
Backlight	ON
System Annotation	Local Settings
Language	English
DISP:ENABle	ON
Full Screen	Off

Example `:SYST:DEF MISC`

4.5.7 All

Comprehensively resets **All** instrument settings to their factory default values.

Resets all **System Settings** groups, performs "Restore Mode Defaults" on page 2452 for all Modes in the instrument, and switches back to the power-on mode. Does not affect the User Preset file, or any user saved files.

When **All** is selected, a message appears:

```
This will reset all of the settings in the instrument to their factory default
values, including the state of all Modes and Screens, the GPIB settings, the
Alignment settings, and the Power On Mode

It will not affect Alignment data or settings

This action cannot be undone. We recommend canceling this operation and
restoring settings individually (I/O Config, User Interface, Alignments, etc.)
instead

Do you want to proceed?
```

The dialog includes **OK** and **Cancel** controls, for you to confirm or cancel the operation.

NOTE If you are using a Keysight USB External Mixer, then you will need to perform **Refresh USB Mixer Connection** (SCPI command `:MIX:BAND USB`) after **Restore Defaults > All**.

Example	`:SYST:DEF ALL`
Couplings	**All** causes the currently running measurement to be aborted, and sets all modes to a consistent state, so it is unnecessary to couple any settings

Backwards Compatibility SCPI

Notes	`:SYST:PRES:PERS` is the same as `:SYST:DEF ALL`
Backwards Compatibility SCPI	`:SYSTem:PRESet:PERSistent`

4.6 Alignments

Accesses the alignment system of the instrument. You can control the automatic alignments, view alignment statistics and manually perform alignments.

The current setting of the alignment system is displayed in the Meas Bar along the top of the display. For conditions that may cause specifications to be impacted, this annotation will be in amber.

4.6.1 Auto Align

Lets you configure the automatic background alignments and the alerts from the automatic alignment system.

Dependencies	Does not appear in VXT or M9410E/11E/15E/16E

4.6.1.1 Auto Align

Configures the method the automatic background alignment will use when it runs.

Automatic background alignments are run periodically between measurement acquisitions. The instrument’s software determines when alignments are to be performed to maintain warranted operation. The recommended setting for Auto Align is Normal.

Auto Align execution *cannot* be aborted with the **Cancel (ESC)** key. To interrupt **Auto Align** execution, select **Auto Align Off**.

Remote Command	`:CALibration:AUTO ON | LIGHt | PARTial | OFF`
	For details of each option, see "Auto Align Options" on page 2347
	`:CALibration:AUTO?`

Example	`:CAL:AUTO ON`
Notes	While Auto Align is executing, bit 0 of Status Operation register is set
Couplings	Auto Align is set to Off if Restore Align Data is invoked
Preset	This is unaffected by **Preset** but is set to ON by **Restore Defaults** > "Alignments" on page 2343
State Saved	No
Annotation	In the Meas Bar: – Normal with “All But RF” off: Auto (white) – Normal with “All But RF” on: Auto/No RF (amber) – Partial: Partial (amber)

	– Off: Off (amber)
Status Bits/OPC dependencies	When **Auto Align** is executing, Bit 0 in the Status Operational register is set An interfering signal at the RF Input may prevent automatic alignment of the RF subsystem. If this occurs, the Error Condition message "Align RF skipped" is reported, the Status Questionable Calibration bit 11 is set, and the alignment proceeds. When a subsequent alignment of the RF subsystem succeeds, either by the next cycle of automatic alignment or from an Align Now, RF, the Error Condition and Status Questionable Calibration bit 11 are cleared
Backwards Compatibility SCPI	`:CALibration:AUTO ALERt` Parameter `ALERt` is for backwards compatibility only, and is mapped to `PARTial`

Auto Align Options

The available settings for Auto Align are as follows:

Normal

SCPI example `:CAL:AUTO ON`

Auto Align, **Normal** turns on the automatic alignment of all measurement systems. This selection maintains the instrument in warranted operation across varying temperature and over time.

If the condition "Align Now All required" is set, transitioning to **Auto Align**, **Normal** performs the required alignments, clears the "Align Now All required" condition, then continues with further alignments as required to maintain the instrument adequately aligned for warranted operation.

When **Auto Align**, **Normal** is selected, the **Auto Align Off** time is set to zero.

When **Auto Align**, **Normal** is selected, the Meas Bar indicates Align: Auto (in white) or Align: Auto/No RF (in amber). The amber color reminds you that you are responsible for maintaining the RF alignment of the instrument.

Alignment processing because of the transition to **Normal** is executed sequentially. Thus, `*OPC?` or `*WAI` following `:CAL:AUTO ON` will return when the alignment processing is complete.

Light

SCPI example `:CAL:AUTO LIGH`

Auto Align, **Light** turns on the automatic alignment of all measurement systems. The **Auto Align**, **Light** selection allows more drift in amplitude accuracy to allow much less frequent measurement interruptions to perform alignments. The temperature changes required to trigger each alignment are increased by a factor of three. Alignments also expire from time as well as temperature. In a stable thermal environment, the alignments occur one-ninth as often as in Normal. With these less frequent alignments, all accuracy specifications (those expressed with ±x dB tolerances) change by nominally a factor of 1.4.

If the condition “Align Now, All required” is set, transitioning to **Auto Align**, **Light** performs the required alignments, clears the “Align Now, All required” condition, and continues with further alignments as required to maintain the instrument adequately aligned for warranted operation.

Alignment processing because of the transition to **Light** is executed sequentially. Thus, `*OPC?` or `*WAI` following `:CAL:AUTO LIGHT` will return when the alignment processing is complete.

When **Auto Align**, **Light** is selected, the **Auto Align Off** time is set to zero.

When **Auto Align**, **Light** is selected, the Settings Panel indicates Align: Light.

Partial

SCPI example `:CAL:AUTO PART`

Auto Align, **Partial** disables the full automatic alignment and the maintenance of warranted operation for the benefit of improved measurement throughput. Accuracy is retained for the Resolution Bandwidth filters and the IF Passband, which is critical to FFT accuracy, demodulation, and many measurement applications. With Auto Align set to Partial, you are now responsible for maintaining warranted operation by updating the alignments when they expire. The Auto Align, Alert mechanism will notify you when alignments have expired. One solution to expired alignments is to perform the Align All, Now operation. Another is to return the Auto Align selection to Normal.

Auto Align, **Partial** is recommended for measurements where the throughput is so important that a few percent of improvement is more valued than an increase in the accuracy errors of a few tenths of a decibel. One good application of **Auto Align**, **Partial** would be an automated environment where the alignments can be called during overhead time when the device-under-test is exchanged.

When **Auto Align**, **Partial**, is selected the elapsed time counter begins for **Auto Align Off** time.

When **Auto Align**, **Partial** is selected, the Settings Panel indicates Align: Partial in an amber color. The amber color reminds you that you are responsible for maintaining the warranted operation of the instrument.

Off

SCPI example `:CAL:AUTO OFF`

Auto Align, **Off** disables automatic alignment and the maintenance of warranted operation, for the benefit of maximum measurement throughput. With **Auto Align**

set to **Off**, you are now responsible for maintaining warranted operation by updating the alignments when they expire. The Auto Align, Alert mechanism will notify you when alignments have expired. One solution to expired alignments is to perform the **Align All**, **Now** operation. Another is to return the **Auto Align** selection to **Normal**.

The **Auto Align Off** setting is rarely the best choice, because **Partial** gives almost the same improvement in throughput while maintaining the warranted performance for a much longer time. The choice is intended for unusual circumstances, such as the measurement of radar pulses where you might want the revisit time to be as consistent as possible.

When **Auto AlignOff** is selected, the **Auto Align Off** time is initialized and the elapsed time counter begins.

When **Auto AlignOff** is selected, the Settings Panel indicates Align: Off in an amber color. The amber color reminds you that you are responsible for maintaining the warranted operation of the instrument.

4.6.1.2 All but RF

Configures automatic alignment to include or exclude the RF subsystem. (Eliminating the automatic alignment of the RF subsystem prevents the input impedance from changing. The normal input impedance of 50 ohms can change to an open circuit when alignments are being used. Some devices under test do not behave acceptably under such circumstances, for example by showing instability.)

When **All but RF** is `ON`, the operator is responsible for performing an **Align Now RF** when RF-related alignments expire. The Auto Align, Alert mechanism will notify you to perform an **Align Now All** when the combination of time and temperature variation is exceeded.

When **All But RF** is `ON`, the Settings Panel indicates Align: Auto/No RF (in amber). The amber color reminds you that you are responsible for maintaining the RF alignment of the instrument.

Remote Command	`:CALibration:AUTO:MODE ALL | NRF` `:CALibration:AUTO:MODE?`
Example	`:CAL:AUTO:MODE NRF`
Preset	Unaffected by **Preset** but set to `ALL` by **Restore Defaults** > "Alignments" on page 2343
State Saved	No

4.6.1.3 Alert

The instrument signals an **Alert** when conditions exist such that you will need to perform a full alignment (for example, **Align Now All**). Alert can be configured in one of four settings:

Setting	Option
Time & Temperature	`TTEMperature`
Time & Temperature Light	`LIGHt`
7 days	`WEEK`
None	`NONE`

With **Auto Align** set to **Normal**, the configuration of **Alert** is not relevant, because the instrument's software maintains the instrument in warranted operation.

A confirmation is required when a selection other than `TTEMperature` is chosen. This prevents accidental deactivation of alerts. When setting **Alert** from the front panel to any value but `TTEMperature`, confirmation is required to transition into this setting of Alert. The confirmation dialog is:

```
This will suppress alerts from the Alignment system, which would notify you when
an Alignment is required to maintain warranted operation. Without the alerts you
will be responsible for performing an Align Now All at appropriate intervals to
maintain warranted operation
```

```
Do you want to proceed?
```

The dialog includes **OK** and **Cancel** controls, for you to affirm or cancel the operation.

No confirmation is required when **Alert** is configured through a remote command.

For more information see "Time & Temperature" on page 2350

Remote Command	`:CALibration:AUTO:ALERt TTEMperature | LIGHt | DAY | WEEK | NONE` `:CALibration:AUTO:ALERt?`
Example	`:CAL:AUTO:ALER TTEM`
Preset	Unaffected by **Preset** but set to `TTEMperature` by **Restore Alignment Defaults**
State Saved	No
Status Bits/OPC dependencies	When an alert is generated, the condition message "Align Now All required" appears in the Status Bar, and bit 14 is set in the Status Questionable Calibration register

The settings for **Alert** are detailed below.

Time & Temperature

SCPI Example	CAL:AUTO:ALER TTEM

The instrument signals an alert when alignments expire due to the combination of the passage of time and changes in temperature. The alert is the Error Condition message "Align Now All required". If this choice for Alert is selected, the absence of an alert means that the instrument alignment is sufficiently up-to-date to maintain warranted accuracy.

Time & Temperature Light

SCPI Example	`CAL:AUTO:ALER LIGH`

This is a light version of Time & Temperature which means for this setting the time/temperature changes required to trigger an alert are increased by a factor of three and the time alerts will occur one-ninth as often as for Time and Temperature.

24 hours

SCPI Example	`CAL:AUTO:ALER DAY`

The instrument signals an alert after a time span of 24 hours since the last successful full alignment (for example, **Align Now All** or completion of a full **Auto Align**). You may want to select this option in an environment where the temperature is stable on a daily basis, at a small risk of accuracy errors in excess of the warranted specifications. The alert is the Error Condition message “Align Now All required”.

7 days

SCPI Example	`CAL:AUTO:ALER WEEK`

The instrument signals an alert after a time span of 168 hours since the last successful full alignment (for example, **Align Now All** or completion of a full **Auto Align**). You may want to select this option in an environment where the temperature is stable on a weekly basis, at a modest risk of accuracy degradations in excess of warranted performance. The alert is the Error Condition message “Align Now All required”.

None

SCPI Example	`CAL:AUTO:ALER NONE`

The instrument does not signal an alert. This is provided for rare occasions where you are making a long measurement that cannot tolerate **Auto Align** interruptions, and must have the ability to capture a screen image at the end of the measurement without an alert posted to the display. Keysight does not recommend using this selection in any other circumstances, because of the risk of accuracy performance drifting well beyond expected levels without the operator being informed.

4.6.2 Align Now

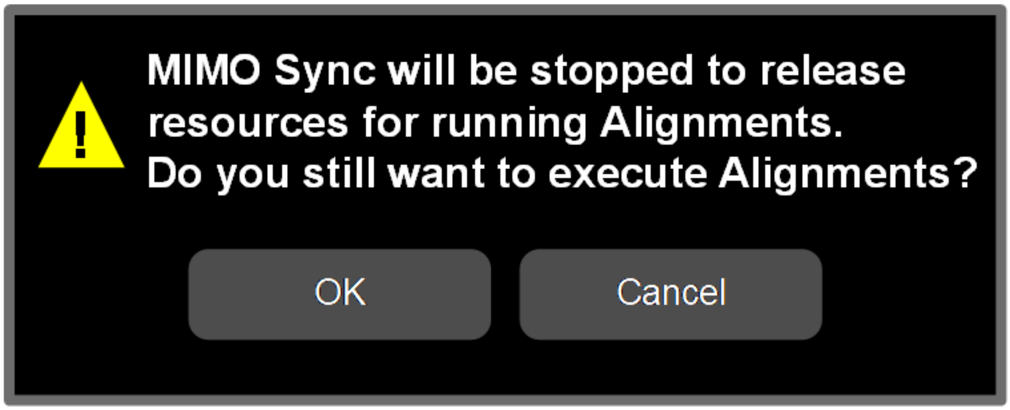
Accesses alignment processes that are immediate action operations. They perform complete operations and run until they are complete.

Executing immediate alignments from SCPI can be problematic due to the length of time required for the alignments to complete. Alignment commands are by their nature sequential, meaning they must complete before any other SCPI commands can be processed. In many cases the alignment itself will take longer than the typical SCPI timeout value. Furthermore, status cannot be easily queried while a sequential command is running.

For this reason, overlapped versions of the **Align Now** commands are provided. When using these No-Operation-Pending (`NPENDing`) commands, the SCPI thread will not be blocked (will be released immediately), so that you can use `:STATus:OPERation:CONDition?` to query the alignment status bit and use `:STATus:QUEStionable:CALibration:CONDition?` to check the alignment results. As an example, `:CALibration[:ALL]:NPENDing` is the overlapped replacement for `:CALibration[:ALL]`.

While the alignment is executing, the coming NOP calibration will be ignored, and `error message “Setting Conflict, Alignment is in process”` will be posted. Also, any other operations to the instrument will be pended and postponed until the alignment is completed. The operations include: Preset, Initiate a new measurement, Device clear and so on. Accordingly, changing parameters will not take effect although the UI is updated immediately. To avoid unexpected timeouts and results, these operations are not recommended during any such alignments.

NOTE The Alignments are not performed if the MIMO Sync is running, because the MIMO and Alignments require the same hardware resource. If the instrument is in MIMO Sync and you press a button to execute Alignments, a pop-up window appears as below. Click **OK** to stop MIMO and execute Alignments.



MIMO Sync will be stopped to release resources for running Alignments.
Do you still want to execute Alignments?

If the instrument is in MIMO sync, and you send a SCPI command to run Alignments, the align process is not executed, and a warning is generated. To execute Alignments, you must first stop MIMO via SCPI (or manually).

Controls in this Dialog

The selection and order of controls displayed in this dialog depends on the instrument type and options. Select the control of interest from the following list:

4.6.2.1 Align Now All

In PXE, the key label is **Align Now All (plus RF Presel 20 Hz – 3.6 GHz)**

Immediately executes an alignment of all subsystems. The instrument stops any measurement currently underway, performs the alignment, then restarts the measurement from the beginning (similar to pressing the **Restart** key).

If an interfering user signal is present at the RF Input, the alignment is performed on all subsystems except the RF. After completion, the Error Condition message “Align RF skipped” is generated. In addition, the Error Condition message “Align Now, RF required" is generated, and bits 11 and 12 are set in the Status Questionable Calibration register.

The query form of the remote commands (`:CALibration[:ALL]?` or `*CAL?`) invokes the alignment of all subsystems and returns a success or failure value. An interfering user signal is not grounds for failure; if the alignment was able to succeed on all portions but unable to align the RF because of an interfering signal, the resultant will be the success value.

Successful completion of **Align Now All** will clear the "Align Now All required" Error Condition, and clear bit 14 in the Status Questionable Calibration register. It will also begin the elapsed time counter for Last Align Now All Time, and capture the Last Align Now All Temperature.

If the Align RF subsystem succeeded in aligning (no interfering signal present), the elapsed time counter begins for Last Align Now, RF Time, and the temperature is captured for the Last Align Now, RF Temperature. In addition, the Error Conditions "Align RF skipped" are cleared, the Error Condition "Align Now, RF required" is cleared, and bits 11 and 12 are cleared in the Status Questionable Calibration register

Align Now All can be interrupted, by pressing the **Cancel (ESC)** front-panel key, or remotely with Device Clear followed by the `:ABORt` SCPI command. When this occurs, the Error Condition message "Align Now All required" is generated, and bit 14 is set in the Status Questionable Condition register. This is because new alignment data may be employed for an individual subsystem, but not a cohesive set of data for all subsystems.

In many cases, you might find it more convenient to change alignments to **Normal**, instead of executing **Align Now All**. When the Auto Align process transitions to **Normal**, the instrument will immediately start to update only the alignments that have expired, thus efficiently restoring the alignment process.

Remote Command	`:CALibration[:ALL]` `:CALibration[:ALL]?`
Example	`:CAL`
Notes	`:CALibration[:ALL]?` returns 0 if successful, or 1 if failed `:CALibration[:ALL]?` is the same as `*CAL?` While **Align Now All** is performing the alignment, the Calibrating bit (Bit 0 in the Status Operation register) is set. Completion, or termination, will clear Bit 0 in the Status Operation register This command is sequential; it must complete before further SCPI commands are processed. Interrupting the alignment from remote is accomplished by invoking Device Clear followed by the `:ABORt` command Successful completion will clear bit 14 in the Status Questionable Calibration register An interfering user signal is not grounds for failure of **Align Now All**. However, Bits 11 and 12 are set in the Status Questionable Calibration register to indicate Align Now, RF is required An interfering user-supplied signal will result in the instrument requiring an Align Now, RF with the

	interfering signal removed
Couplings	Initializes the time for the Last Align Now All Time Records the temperature for the Last Align Now All Temperature If Align RF component succeeded, initializes the time for the Last Align Now, RF Time If Align RF component succeeded, records the temperature for the Last Align Now, RF Temperature
Status Bits/OPC dependencies	Bits 11, 12, or 14 may be set in the Status Questionable Calibration register

IEEE Command

Remote Command	`*CAL`
Example	`*CAL?`
Notes	Returns 0 if successful, or 1 if failed `:CALibration[:ALL]?` is exactly the same as `*CAL?`, including all conditions, status register bits, and couplings See additional remarks described with `:CALibration[:ALL]?`

Overlapped Command

Remote Command	`:CALibration[:ALL]:NPENding`
Example	`:CAL:NPEN`
Notes	`:CALibration[:ALL]:NPENding` is the same as `:CALibration[:ALL]`, including all conditions, status register bits, except this SCPI command *does not block* the SCPI session, so you should use status register bits to query whether the calibration is successfully completed or not Typical usage is: 1. `:CALibration:ALL:NPENding` (Start a calibration) 2. `:STATus:OPERation:CONDition?` (Check if the calibration is completed or not, If bit 0 is set, then the system is doing calibration, you should repeat this SCPI query until the bit is cleared) 3. `:STATus:QUEStionable:CALibration:CONDition?` (Check if there are any errors/-failures in previous calibration procedure

4.6.2.2 Align Now All but RF

In PXE, the key label is **Align Now All but RF (not including RF Presel)**

Immediately executes an alignment of all subsystems except the RF subsystem. The instrument will stop any measurement currently underway, perform the alignment, and then restart the measurement from the beginning (similar to pressing the **Restart** key). This can be used to align portions of the instrument that are not impacted by an interfering user input signal.

This operation might be chosen instead of **All** if you do not want the device under test to experience a large change in input impedance, such as a temporary open circuit at the instrument input.

The query form of the remote commands (`:CALibration:NRF?`) invokes the alignment and returns a success or failure value.

Successful completion of **Align Now All but RF** clears the “Align Now All required” Error Condition, and clears Bit 14 in the Status Questionable Calibration register. If “Align Now All required” was in effect prior to executing **All but RF**, the Error Condition message “Align Now RF required” is generated and Bit 12 in the Status Questionable Calibration register is set. It will also begin the elapsed time counter for Last Align Now All Time, and capture the Last Align Now All Temperature.

Align Now All but RF can be interrupted, by pressing the **Cancel (ESC)** front-panel key, or remotely with Device Clear followed by the `:ABORt` SCPI command. When this occurs, the Error Condition message “Align Now All required” is generated, and Bit 14 is set in the Status Questionable Condition register. This is because new alignment data may be used for an individual subsystem, but not a full new set of data for all subsystems.

Remote Command	`:CALibration:NRF` `:CALibration:NRF?`
Example	`:CAL:NRF`
Notes	Returns 0 if successful, or 1 if failed While **Align Now All but RF** is performing the alignment, Bit 0 in the Status Operation register is set. Completion, or termination, will clear Bit 0 in the Status Operation register This command is sequential; it must complete before further SCPI commands are processed. Interrupting the alignment from remote is accomplished by invoking Device Clear followed by the `:ABORt` command Successful completion clears Bit 14 in the Status Questionable Calibration register and sets Bit 12 if invoked with “Align Now All required”
Couplings	Initializes the time for the Last Align Now All Time Records the temperature for the Last Align Now All Temperature
Status Bits/OPC dependencies	Bits 12 or 14 may be set in the Status Questionable Calibration register

Overlapped Command

Remote Command	`:CALibration:NRF:NPENding`
Example	`:CAL:NRF:NPEN`
Notes	`:CALibration:NRF:NPENding` is the same as `:CALibration:NRF`, including all conditions, status register bits, except that this SCPI command *does not block* the SCPI session, so you should use status register bits to query whether the calibration is successfully completed or not Typical usage is:

1. `:CALibration:NRF:NPENding` (start the All but RF calibration)
2. `:STATus:OPERation:CONDition?` (If bit 0 is set, then the system is doing calibration, you should do re-query until this bit is cleared)
3. `:STATus:QUEStionable:CALibration:CONDition?` (to check if there are any errors/-failures in previous calibration procedure)

4.6.2.3 Align Now RF

In PXE, the key label is **Align Now RF Only**

Immediately executes an alignment of the RF subsystem. The instrument stops any measurement currently underway, performs the alignment, then restarts the measurement from the beginning (similar to pressing the **Restart** key).

This operation might be desirable if the alignments had been set to not include RF alignments, or if previous RF alignments could not complete because of interference which has since been removed.

If an interfering user signal is present at the RF Input, the alignment will terminate and generate the Error Condition message “Align RF skipped”, and Error Condition “Align Now, RF required”. In addition, bits 11 and 12 will be set in the Status Questionable Calibration register.

The query form of the remote commands (`:CALibration:RF?`) invokes the alignment of the RF subsystem and returns a success or failure value. An interfering user signal is grounds for failure.

Successful completion of **Align Now RF** begins the elapsed time counter for Last Align Now, RF Time, and capture the Last Align Now, RF Temperature.

Align Now RF can be interrupted, by pressing the **Cancel (ESC)** front-panel key, or remotely with Device Clear followed by the `:ABORt` SCPI command. When this occurs, the Error Condition message “Align Now, RF required” is generated, and Bit 12 is set in the Status Questionable Condition register. None of the new alignment data is used.

Remote Command	`:CALibration:RF` `:CALibration:RF?`
Example	`:CAL:RF`
Notes	Returns 0 if successful, or 1 if failed (including interfering user signal) While **Align Now RF** is performing the alignment, Bit 0 in the Status Operation register is set. Completion, or termination, clears Bit 0 in the Status Operation register This command is sequential; it must complete before further SCPI commands are processed. Interrupting the alignment from remote is accomplished by invoking Device Clear followed by the `:ABORt` command

	Successful completion clears the Error Conditions “Align RF skipped” and the Error Conditions “Align RF failed” and “Align Now, RF required”, and clears Bits 3, 11, and 12 in the Status Questionable Calibration register A failure encountered during alignment generates the Error Condition message “Align RF failed” and sets Bit 3 in the Status Questionable Calibration register An interfering user signal will result in Bits 11 and 12 being set in the Status Questionable Calibration register, to indicate Align Now, RF is required An interfering user supplied signal results in the instrument requiring **Align Now RF** with the interfering signal removed
Couplings	Initializes the time for the Last Align Now, RF Time Records the temperature for the Last Align Now, RF Temperature
Status Bits/OPC dependencies	Bits 11, 12, or 14 may be set in the Status Questionable Calibration register

Overlapped Command

Remote Command	`:CALibration:RF:NPENding`
Example	`:CAL:RF:NPEN`
Notes	`:CALibration:RF:NPENding` is the same as `:CALibration:RF`, including all conditions, status register bits, except that this SCPI command *does not block* the SCPI session, so you should use status register bits to query whether the calibration is successfully completed or not Typical usage is: 1. `:CALibration:RF:NPENding` (Start a RF calibration) 2. `:STATus:OPERation:CONDition?` (If Bit 0 is set, then the system is doing calibration, you should do re-query until this bit is cleared) 3. `:STATus:QUEStionable:CALibration:CONDition?` (to check if there are any errors/-failures in previous calibration procedure)

4.6.2.4 Align Now Expired

Alignments can be Expired when **Auto Align** is `PARTial` or `OFF`.

This control runs the alignments that have expired. This differs from performing **Align All, Now**., which performs an alignment of all subsystems regardless of whether they are needed or not, whereas **Execute Expired Alignments** aligns only the individual subsystems that have become due.

Remote Command	`:CALibration:EXPired` `:CALibration:EXPired?`
Example	`:CAL:EXP?`
Notes	`:CALibration:EXPired?` returns 0 if successful, or 1 if failed

	While **Align Now Expired** is performing the alignment, the Calibrating bit (Bit 0 in the Status Operation register) is set. Completion, or termination, clears Bit 0 in the Status Operation register This command is sequential; that is, it must complete before further SCPI commands are processed. Interrupting the alignment from remote is accomplished by invoking Device Clear followed by `:ABORt` Successful completion clears bit 14 in the Status Questionable Calibration register An interfering user signal is not grounds for failure of **Align Now Expired.** However, if RF Alignment was required, Bits 11 and 12 are set in the Status Questionable Calibration register to indicate Align Now, RF is required
Status Bits/OPC dependencies	Bits 11, 12, or 14 may be set in the Status Questionable Calibration register

4.6.2.5 Align Now Preselector

Normally, Preselector Alignment runs during power up, and during the twenty minutes after power up, whenever there is a 1-degree internal temperature change.

This alignment is also run when an "Align Now All" on page 2353 is performed. This feature is helpful during the 20-minute warm-up time to correct for preselector drift while alignments are being held off. This feature can also be used in lieu of using the Preselector Center functionality, to improve speed throughput for remote testing with minimal impact to amplitude accuracy specs. The algorithm centers the preselector at the upper and lower operating frequencies of the YTF preselector.

The **Align Now Preselector** alignment is *not* a substitute for the Characterizer Preselector Advanced Alignment, which creates the default preselector centering curves for the YTF Preselector and is typically run annually.

Remote Command	`:CALibration:PRESelector` `:CALibration:PRESelector?`
Example	`:CAL:PRES`
Notes	Returns 0 if successful, or 1 if failed (including interfering user signal) While **Align Now Preselector** is performing the alignment, Bit 0 in the Status Operation register is set. Completion, or termination, clears Bit 0 in the Status Operation register This command is sequential; that is, it must complete before further SCPI commands are processed. Interrupting the alignment from remote is accomplished by invoking Device Clear followed by `:ABORt` Successful completion clears the Error Conditions “Align Preselector failed” and clears Bit 3 in the Status Questionable Calibration Failure (Extended) register A failure encountered during alignment generates the Error Condition message “Align Preselector failed” and sets Bit 3 in the Status Questionable Calibration Failure (Extended) register
Status Bits/OPC dependencies	Bit 3 may be set in the Status Questionable Calibration Failure (Extended) register

4.6.2.6 Align Now All but RF Preselector

Only available in models with the RF Preselector, such as the N9048B. It is identical to the "Align Now All" on page 2353 (plus RF Presel) function, except that the RF Preselector is only partially aligned. Only the System Gain, Mechanical attenuator and Electronic attenuator alignments on the RF Preselector path are aligned. The purpose of these alignments is to improve the RF Preselector path amplitude variation compared to the bypass path.

Remote Command	`:CALibration:NRFPselector` `:CALibration:NRFPselector?`
Example	`:CAL:NRFP`
Dependencies	Only appears in N9048B. Sending the SCPI command or query in other models generates an error
Status Bits/OPC dependencies	Bits 12 or 14 may be set in the Status Questionable Calibration register

4.6.2.7 Align Now RF Presel Only (20 Hz to 3.6 GHz)

Only available in models with the RF Preselector, such as the N9048B. It executes an alignment of the RF Preselector section. The receiver will stop any measurement currently underway, perform the alignment, and then restart the measurement from the beginning (similar to pressing the **Restart** key). *Only* the RF Preselector is aligned; no Align Now All function is performed first.

The query (`:CALibration:RFPSelector:ONLY?`) invokes the alignment of the RF Preselector on both Conducted and Radiated Band, and returns a success or failure value. Successful completion clears the “Align 20 Hz to 3.6 GHz required” Error Condition, and clears Bit 1 and Bit 2 in the Status Questionable Calibration Extended Needed register.

The elapsed time counter will begin for Last Align Now, Conducted Time and Last Align Now Radiated Time and the temperature is captured for Last Align Now, Conducted Temperature and Last Align Now, Radiated Temperature. The alignment can be interrupted by pressing the **Cancel (ESC)** front-panel key or remotely with Device Clear followed by the `:ABORt` SCPI command. When this occurs, the Error Condition “Align 20 Hz to 3.6 GHz required” is set because new alignment data may be employed for an individual subsystem, but not a cohesive set of data for all subsystems.

The “Align 20 Hz to 3.6 GHz required” Error Condition will appear when this alignment has expired. The user is now responsible to perform the Align Now, 20 Hz to 3.6 GHz in order to keep the receiver in warranted operation. This alignment can only be performed by the user, as it is not part of the Auto Align process.

Remote Command	`:CALibration:RFPSelector:ONLY`

	`:CALibration:RFPSelector:ONLY?`
Example	`:CAL:RFPS:ONLY`
Notes	Query returns 0 if successful, or 1 if failed When Align 20 Hz to 3.6 GHz is performing the alignment, bit 0 in the Status Operation register is set. Completion, or termination, will clear bit 0 in the Status Operation register This command is sequential; it must complete before further SCPI commands are processed. Interrupting the alignment from remote is accomplished by invoking Device Clear followed by the `:ABORt` command. Successful completion clears Bits 1 and 2 in the Status Questionable Calibration Extended Needed register and Bits 0 and 1 in Status Questionable Calibration Extended Failure register A failure encountered during alignment sets the Error Condition “20 Hz to 3.6 GHz Alignment Failure”, sets Bits 1 and 2 in the Status Questionable Calibration Extended Needed register, and Bit 9 in Status Questionable Calibration register
Dependencies	Only appears in N9048B. Sending the SCPI command or query in other models generates an error This key is grayed-out if the instrument is displaying an “Align Now All required” message. If you press the key while it is grayed-out, you will see the informational message, “Align Now All required first”
Couplings	Initializes the time for the Last Align Conducted Now, Conducted Time Initializes the time for the Last Align Radiated Now, Radiated Time Records the temperature for the Last Align Conducted Now, Conducted Temperature Records the temperature for the Last Align Radiated Now, Radiated Temperature
Status Bits/OPC dependencies	Bit 8 or 9 may be set in the Status Questionable Calibration register Bit 1 and 2 may be set in the Status Questionable Calibration Extended Needed register Bit 0 and 1 may be set in the Status Questionable Calibration Extended Failure register

4.6.2.8 Align Now External Mixer

Immediately executes an alignment of the External Mixer that is plugged into the USB port. The instrument stops any measurement currently underway, performs the alignment, then restarts the measurement from the beginning (similar to pressing the **Restart** key). As this alignment calibrates the LO power to the mixer, this is considered an LO alignment; and failure is classified as an LO alignment failure.

The query (`:CALibration:EMIXer?`) invokes the alignment of the External Mixer and returns a success or failure value.

Remote Command	`:CALibration:EMIXer` `:CALibration:EMIXer?`
Example	`:CAL:EMIX`
Notes	Returns 0 if successful, or 1 if failed While **Align Now External Mixer** is performing the alignment, Bit 0 in the Status Operation register is set. Completion, or termination, clears Bit 0 in the Status Operation register This command is sequential; it must complete before further SCPI commands are processed.

	Interrupting the alignment from remote is accomplished by invoking Device Clear followed by the `:ABORt` command A failure encountered during alignment generate the Error Condition message “Align LO failed” and sets Bit 5 in the Status Questionable Calibration register. Successful completion clears the “Align LO failed” message and Bit 5 in the Status Questionable Calibration register
Dependencies	This control does not appear unless option EXM is present and is grayed-out, unless a USB mixer is plugged in to the USB
Status Bits/OPC dependencies	Bit3 may be set in the Status Questionable Calibration Extended Failure register

4.6.2.9 Align Source

Accesses source alignment processes that are immediate action operations. They perform complete operations and run until they are complete.

The instrument stops any sequence of the source, performs the alignment, then restarts the sequence from the beginning.

Note: This alignment corrects slow-rate drift, which does not impair specifications for time periods shorter than one week. Thus, it is required to perform this alignment on a weekly basis to maintain specifications. This alignment typically takes >2 minutes to complete.

There is no alert available for the source alignment. Operators are responsible for checking temperature shift since the last **Align Now Source** to determine whether the source alignment needs to be executed.

Remote Command	`:CALibration:INTernal:SOURce[:ALL]` `:CALibration:INTernal:SOURce[:ALL]?`
Example	`:CAL:INT:SOUR`
Notes	`:CAL:INT:SOUR?` Initiates an Alignment and returns 0 if successful, or 1 if failed
Dependencies	Only appears in VXT models M9410A/11A
Couplings	Initializes the time for the Last Align Source Now, All Time Records the temperature for the Last Align Source Now, All Temperature

Overlapped Command

Remote Command	`:CALibration:INTernal:SOURce[:ALL]:NPENding`
Example	`:CAL:INT:SOUR:NPEN`
Notes	`:CALibration:INTernal:SOURce[:ALL]:NPENding` is the same as `:CALibration:INTernal:SOURce[:ALL]`, including all conditions and status register bits, except that this SCPI command *does not block* the SCPI session, so you should use status register bits to query whether the calibration is successfully completed or not Typical usage is:

	1. `:CALibration:INTernal:SOURce:NPENding` (start an internal source calibration) 2. `:STATus:OPERation:CONDition?` (Check if the calibration is completed or not, If Bit 0 is set, then the system is doing calibration. Repeat this query until the bit is cleared) 3. `:STATus:QUEStionable:CALibration:EXTended:FAILure:CONDition?` (Check if Bit 14 is set or not. If this bit is set, that means there are some errors in previous internal source calibration)
Dependencies	Only appears in VXT models M9410A/11A

4.6.2.10 Align Receiver

Accesses receiver alignment processes that are immediate action operations. They perform complete operations and run until they are complete.

NOTE

This alignment corrects slow-rate drift, which does not impair specifications for time periods shorter than one week. Thus, it is required to perform this alignment on a weekly basis to maintain specifications. This alignment typically takes >2 minutes to complete.

There is no alert available for the receiver alignment. Operators are responsible for checking temperature shift since the last Align Now, Align Receiver, to determine whether the receiver alignment needs to be executed.

Remote Command	`:CALibration:INTernal:RECeiver[:ALL]` `:CALibration:INTernal:RECeiver[:ALL]?`
Example	`:CAL:INT:REC`
Notes	The query initiates an Alignment and returns 0 if successful, or 1 if failed
Dependencies	Only appears in VXT models M9410A/11A
Couplings	Initializes the time for the Last Align Receiver Now, All Time Records the temperature for the Last Align Receiver Now, All Temperature

4.6.2.11 Align Fast

Accesses fast alignment processes, which are immediate action operations and perform complete operations, running until they are complete.

This aligns the subsystem that is most sensitive to temperature and time and includes:

- compensating the DC offset, gain imbalance and quadrature phase imbalance of IQ Modulator and/or Demodulator
- compensating the gain offset of RF path

It is suggested to perform Fast Alignment every 8 hours or when temperature has changed more than 5°C from the previous Fast Alignment.

Remote Command	`:CALibration:INTernal:FAST[:ALL]` `:CALibration:INTernal:FAST[:ALL]?`
Example	`:CAL:INT:FAST`
Notes	The query initiates an Alignment and returns 0 if successful, or 1 if failed
Dependencies	Only appears in VXT models M9410A/11A /15A/16A

4.6.2.12 Align LO Leakage

Accesses LO Leakage alignment processes, which are immediate action operations and perform complete operations, running until they are complete.

This alignment reduce the LO Leakage of the instrument.

Remote Command	`:CALibration:INTernal:LOLeakage` `:CALibration:INTernal:LOLeakage?`
Example	`:CAL:INT:LOL`
Notes	The query initiates an Alignment and returns 0 if successful, or 1 if failed
Dependencies	Only appears in VXT models M9410A/11A /15A/16A

4.6.2.13 Align IF Cable

Accesses IF Cable alignment processes, which are immediate action operations and perform complete operations, running until they are complete.

This alignment aligns the IF cabling to the remote heads.

Remote Command	`:CALibration:INTernal:RRHead:IFCable` `:CALibration:INTernal:RRHead:IFCable?`
Example	`:CAL:INT:RRH:IFC`
Notes	The query initiates an Alignment and returns 0 if successful, or 1 if failed
Dependencies	Only appears in VXT based solutions with M1740A/41A/42A/49A/49B RRH
Backwards Compatibility SCPI	`:CALibration:INTernal:IFCable` `:CALibration:INTernal:IFCable?`

4.6.2.14 Align RRH Amplitude

This is an immediate action operation, which runs until complete.

Aligns the Amplitude of Remote Radio Head. This operation could take quite a long time to run.

CAUTION **For M1741A/49A/49B RRH, make sure to connect 50-ohm terminations to Head Tx/Rx 1 and 2 ports.**

Remote Command	`:CALibration:INTernal:RRHead:AMPLitude` `:CALibration:INTernal:RRHead:AMPLitude?`
Example	`:CAL:INT:RRH:AMPL?`
Notes	The query initiates an Alignment and returns 0 if successful, or 1 if failed
Dependencies	Only appears in VXT based solutions with M1741A/42A/49A/49B RRH
Backwards Compatibility SCPI	`:CALibration:INTernal:RRHAmp` `:CALibration:INTernal:RRHAmp?`

4.6.2.15 Align Fast RRH Amplitude

This is an immediate action operation, which runs until complete.

Compare to Align RRH Amplitude, it aligns the amplitude of Remote Radio Head with a wider frequency interval. This operation takes about one minute.

Remote Command	`:CALibration:INTernal:RRHead:AMPLitude:FAST` `:CALibration:INTernal:RRHead:AMPLitude:FAST?`
Example	`:CAL:INT:RRH:AMPL:FAST?`
Notes	The query initiates an alignment and returns 0 if successful, or 1 if failed
Dependencies	Only appears in VXT based solutions with M1742A RRH

4.6.2.16 Align RRH LO Power

This is an immediate action operation, which runs until complete.

Aligns the LO Power of Remote Radio Head.

Remote Command	`:CALibration:INTernal:RRHead:LOPower` `:CALibration:INTernal:RRHead:LOPower?`
Example	`:CAL:INT:RRH:LOP`
Notes	The query initiates an alignment and returns 0 if successful, or 1 if failed
Dependencies	Only appears in VXT based solutions with M1741A/49A/49B RRH

4.6.2.17 Align LO Clock

This is an immediate action operation, which runs until complete.

Synchronizes RRH LO Clocks.

Remote Command	`:CALibration:INTernal:RRHead:LOSync` `:CALibration:INTernal:RRHead:LOSync?`
Example	`:CAL:INT:RRH:LOS?`
Notes	The query initiates an Alignment and returns 0 if successful, or 1 if failed
Dependencies	Only appears in VXT based solutions with M1741A/42A/49A/49B RRH
Backwards Compatibility SCPI	`:CALibration:INTernal:LOSync` `:CALibration:INTernal:LOSync?`

4.6.2.18 Align VXT Transceiver

In M941xE(M941xA+M9471A) system, accesses alignment processes in VXT Transceiver(M9410A/11A/15A/16A), which are immediate action operations and perform complete operations, running until they are complete.

The instrument stops any measurement currently underway, performs the alignment, then restarts the measurement from the beginning (similar to pressing the **Restart** key).

There is no alert available for the VXT Transceiver alignment. Operators are responsible for checking temperature shift since the last **Align VXT Transceiver** to determine whether the VXT Transceiver alignment needs to be executed.

Remote Command	`:CALibration:INTernal:VXT:TRANsceiver` `:CALibration:INTernal:VXT:TRANsceiver?`
Example	`:CAL:INT:VXT:TRAN`
Notes	The query initiates an Alignment and returns 0 if successful, or 1 if failed
Dependencies	Only appears on M9410E/11E/15E/16E

4.6.2.19 Align up down converter

In M941xE(M941xA+M9471A) system, accesses alignment processes in up down converter (M9471A), which are immediate action operations and perform complete operations, running until they are complete.

The instrument stops any measurement currently underway, performs the alignment, then restarts the measurement from the beginning (similar to pressing the **Restart** key).

There is no alert available for the up down converter alignment. Operators are responsible for checking temperature shift since the last **Align up down converter** to determine whether the up down converter alignment needs to be executed.

Remote Command	`:CALibration:UPDown:CONVerter` `:CALibration:UPDown:CONVerter?`
Example	`:CAL:UPD:CONV`
Notes	The query initiates an Alignment and returns 0 if successful, or 1 if failed
Dependencies	Only appears on M9410E/11E/15E/16E

4.6.2.20 Align Selected Freq Ranges

VXT models M9410A/11A provide five alignments: **Align Now** All, **Align Source**, **Align Receiver**, **Align Fast** and **Align LO Leakage**. Every time you execute one of these alignments, the system performs a full span alignment. To save time, it is possible to limit the range of alignment frequency settings. **Align Selected Freq Ranges** allows you to set the start and stop frequency of an alignment.

The example below shows the steps for processing Align Receiver on VXT model M9410A, specifying a frequency range from 1.3 GHz to 1.8 GHz, and 2.5 GHz to 3.9 GHz.

- First row: set the Start and Stop Frequency to 1.3 GHz and 1.8 GHz. Enable the first row
- Second row: set the Start and Stop Frequency to 2.5 GHz and 3.9 GHz. Enable the second row
- Click **Align Receiver**. A message appears: “Aligning Selected Freq Ranges 1 of 7”

The equivalent SCPI command sequence is:

```
:CAL:INT:ASFR ON
:CAL:INT:ASFR:FRAN 1.3 GHz, 1.8 GHz, 2.5 GHz, 3.9 GHz
:CAL:INT:REC
```

Remote Command	`:CALibration:INTernal:ASFRanges[:STATe] ON | OFF | 1 | 0` `:CALibration:INTernal:ASFRanges?`
Example	`:CAL:INT:ASFR ON` `:CAL:INT:ASFR?`
Notes	When **Align Selected Freq Ranges** is ON, the table is displayed for setting up the frequency ranges to be aligned
Dependencies	Only available in: – VXT models M9410A/11A – VXT models M9410A/11A with RRH and/or CIU – M9410E/11E

	Only functional for the following alignments: – Align Now All of VXT models M9410A/11A and M9410E/11E – Align Source – Align Receiver – Align Fast – Align LO Leakage – Align VXT Transceiver of M910E/11E – Align Up Down Converter of M9410E/11E **Align Selected Freq Ranges** only guarantees the hardware performance within the frequency range
Preset	`OFF`

Enable Extended Freq Range

Allows you to set frequency ranges for VXT models M9410A/11A/15A with Remote Head and/or CIU. When Enable Extended Freq Range is not active, the frequency range is limited by VXT models only.

Remote Command	`:CALibration:INTernal:ASFRanges:EXTend[:STATe] ON | OFF | 1 | 0` `:CALibration:INTernal:ASFRanges:EXTend[:STATe]?`
Example	`:CAL:INT:ASFR:EXT ON` `:CAL:INT:ASFR:EXT?`
Dependencies	Only available in VXT models M9410A/11A/15A/16A with Remote Head and/or CIU Only available when **Align Specified Freq Ranges** is ON
Preset	`OFF`

Frequency Range

Allows you to set the alignment frequency range.

Remote Command	`:CALibration:INTernal:ASFRanges:FRANges <startFreq>,<stopFreq>[,<startFreq>,<stopFreq>][,<startFreq>,<stopFreq>][,<startFreq>,<stopFreq>][,<startFreq>,<stopFreq>]`
Example	`:CAL:INT:ASFR:FRAN 1.3 GHz,1.8 GHz,2.5 GHz,3.9 GHz` `:CAL:INT:ASFR:FRAN?`
Notes	`<startFreq>`: Start frequency of an alignment `<stopFreq>`: Stop frequency of an alignment To process alignment for a single frequency point, set `<startFreq>` = `<stopFreq>`

Dependencies	Only appears when "Align VXT Transceiver" on page 2366 is ON `Error message "Invalid alignment frequency range"` is reported if start and stop frequencies are invalid, such as: 1. Stop frequency - Start frequency < 0 2. the count of start and stop frequency is not even 3. the frequency is out of range. See "More Information" on page 2369 4. more than 5 pairs of start and stop frequency are listed
Preset	1.0 GHz, 2.0 GHz

More Information

When "Enable Extended Freq Range" on page 2368 is not active, the frequency range depends on the VXT models. The table below lists the Start and Stop Frequency Ranges for VXT models M9410A/11A/15A:

Hardware	Options	Min Frequency	Max Frequency
M9410A/11A	F06	330 MHz	6.08 GHz
M9410A/11A	F06 & EP6	330 MHz	6.6 GHz
M9410A/11A	F06 & LFE & EP6	6.5 kHz	6.6 GHz
M9415A/16A	F06	330 MHz	6.6 GHz
M9415A/16A	F08	330 MHz	8.6 GHz
M9415A/16A	F12	330 MHz	12.9 GHz

When **Enable Extended Freq Range** is active, the frequency range depends on the extensions connected to VXT models. The table below lists the Start and Stop Frequency Range of VXT models with Radio Heads/CIU:

Connected with Radio Heads/CIU	Min frequency	Max frequency	IF Frequency range
VXT + CIU	5.9 GHz	12 GHz	1.4 GHz ~ 4.6 GHz
VXT + CIU + RRH	24.25 GHz	43.5 GHz	2.5 GHz ~ 4.5 GHz
VXT + M1742A	10 GHz	32 GHz	3.0 GHz ~ 5.5 GHz

NOTE

The Min frequency and Max frequency are also the preset frequencies. It is recommended to keep the preset frequency range for VXT models with extensions. An alignment with the full IF Frequency range will be executed ignoring the specific ranges.

The table below lists the Frequency Range of M941xE(VXT Models with M9471A)

Products with M9471A	Preset	Receiver minimum settable frequency	Source minimum settable (center)frequency	Minimum center frequency with Spec	Receiver maximum settable(center) frequency	Source maximum settable (center) frequency
M941xE without LFE option	1 GHz	330.000005 MHz	330 MHz	380MHz	26.499999995 GHz	26.5GHz
M941xE with LFE option (LFE option in M9411A or M9471A)	1 GHz	750.005 KHz	750 KHz	1MHz	26.499999995 GHz	26.5GHz

NOTE

The minimum spec frequency is 380 MHz, but the receiver minimum settable center frequency is 330.000005 MHz, the source minimum settable center frequency is 330 MHz.

With Option LFE in M9411A or in M9471A, the receiver minimum settable frequency is 750.005 kHz, the source minimum settable frequency is 750 kHz, but Spec to customer only ensure down to 1 MHz.

Enable

Enables or disables the selected frequency ranges.

Preset	`Row 1: ON` `Other rows: OFF`

4.6.2.21 Align External Mixer Path

Immediately executes an alignment of the External Mixer Path inside the VXT models M9415A/16A. External Mixer Path is used when the RF Port is connected to an external Remote Radio Head (RRH). It provides a better performance compared to the normal path. External Mixer Path Alignment covers frequencies from 2.4 GHz to 3.4 GHz of the external mixer path.

NOTE

This alignment corrects slow-rate drift, which does not impair specifications for time periods shorter than one week. Thus, you need only perform this alignment on a weekly basis to maintain specifications. This alignment typically takes >2 minutes to complete.

There is no alert for the External Mixer Path alignment. You are responsible for checking the temperature shift since the last **Align Now, External Mixer Path**, to determine whether the external mixer path alignment needs to be executed.

Remote Command	`:CALibration:INTernal:EMPath` `:CALibration:INTernal:EMPath?`
Example	`:CAL:INT:EMP`
Notes	The query initiates an alignment and returns 0 if successful, or 1 if failed
Dependencies	Only appears in VXT models M9415A/16A when Option MXP is installed
Couplings	Initializes the time for the Last Align External Mixer Path Now, All Time Records the temperature for the Last Align External Mixer Path Now, All Temperature

4.6.2.22 Align Low Band

Accesses Low Band alignment processes that are immediate action operations. They perform complete operations and run until they are complete. Low Band Alignment covers frequencies from 380 MHz to 4.3 GHz of the non-external mixer path.

NOTE **This alignment corrects slow-rate drift, which does not impair specifications for time periods shorter than one week. Thus, you need only perform this alignment on a weekly basis to maintain specifications. This alignment typically takes >2 minutes to complete.**

There is no alert for the Low Band alignment. You are responsible for checking the temperature shift since the last **Align Now, Align Low Band**, to determine whether the Low Band alignment needs to be executed.

Remote Command	`:CALibration:INTernal:LBANd[:ALL]` `:CALibration:INTernal:LBANd[:ALL]?`
Example	`:CAL:INT:LBAN`
Notes	The query initiates an Alignment, and returns 0 if successful, or 1 if failed
Dependencies	Only appears in VXT models M9415A/16A
Couplings	Initializes the time for the Last Align Low Band Now, All Time Records the temperature for the Last Align Low Band Now, All Temperature

4.6.2.23 Align High Band

Accesses High Band alignment processes that are immediate action operations. They perform complete operations and run until they are complete. High Band Alignment covers frequencies from 4.3 GHz to 12 GHz of the non-external mixer path.

NOTE **This alignment corrects slow-rate drift, which does not impair specifications for time periods shorter than one week. Thus, you need only perform this alignment on a weekly basis to maintain specifications. This alignment typically takes >2 minutes to complete.**

There is no alert for the High Band alignment. You are responsible for checking the temperature shift since last **Align Now, Align High Band**, to determine whether the High Band alignment needs to be executed.

Remote Command	`:CALibration:INTernal:HBANd[:ALL]` `:CALibration:INTernal:HBANd[:ALL]?`
Example	`:CAL:INT:HBAN`
Notes	The query initiates an Alignment, and returns 0 if successful, or 1 if failed
Dependencies	Only appears in VXT models M9415A/16A
Couplings	Initializes the external time for the Last Align High Band Now, All Time Records the temperature for the Last Align High Band Now, All Temperature

4.6.3 Path Delay Calibration

Path Delay Calibration is used to remove the time delay differences between multiple power channels of a module.

Dependencies

Only available in VXT modules M9410A/11A

Only for modules with matched Digital board hardware version, which means the modules are in same FPGA version

The matched hardware version information is in below table

	Digital board Hardware version	Matched module
M9410A	2,3,4,6,10,11	Yes
M9410A	12, 13	Yes
M9411A	18	Yes
M9411A	20,21	Yes
M9411A	12,13	Yes
M9411A	0,1,2,3,4,6,10,11	Yes

4.6.3.1 Source Path Delay Calibration

Accesses the Source Path Delay Calibration processes, which are immediate-action operations and perform complete operations, running until they are complete.

NOTE Connect the RF In of the primary module to the OUT port (COMMON, PORT 1) of the combiner.

NOTE Before performing Path Delay Calibration of Sources, please confirm that:

NOTE Each of the RF Out ports is connected to the RF In port of the Primary channel, using an RF combiner.

NOTE The cables between the combiner and the Source output ports are of the same length.

NOTE A pop-up window appears (as shown below); press OK to continue calibration.

NOTE If the is in MIMO sync, and you send a SCPI command to run Calibration, the calibration process is not executed and instrument a warning is generated ("-221,Setting Conflict; Calibrations are not available while MIMO Sync is On"). To execute Calibration, you must first stop MIMO, manually or via SCPI.

Remote Command	`:CALibration:PDELay:SOURce` `:CALibration:PDELay:SOURce?`
Example	`:CAL:PDEL:SOUR`
Notes	The query initiates an Alignment and returns 0 if successful, or 1 if failed If the calibration process detected a faulty state, an error will be generated: "Misc/System Alignment Failure". Calibration will be aborted. Please see event log for more information: 1. Cables are not connected 2. Power control failure 3. Hardware failure 4. M9300A 10MHz reference open failure
Dependencies	Only appears in VXT models M9410A/11A Only for modules with matched Digital board hardware version, which means the modules are in same FPGA version

4.6.3.2 Path Delay Correction On/Off(Remote Command only)

On/Off the path delay correction to enable the calibration data on the source of the module.

Remote Command	`:CALibration:PDELay:CORRection ON | OFF` `:CALibration:PDELay:CORRection?`
Example	`:CAL:PDEL:CORR ON`
Notes	If the **Path Delay Calibration** has never been performed and there is no calibration correction data in the controller, an alert is generated
Preset	`OFF`
Range	`ON|OFF`

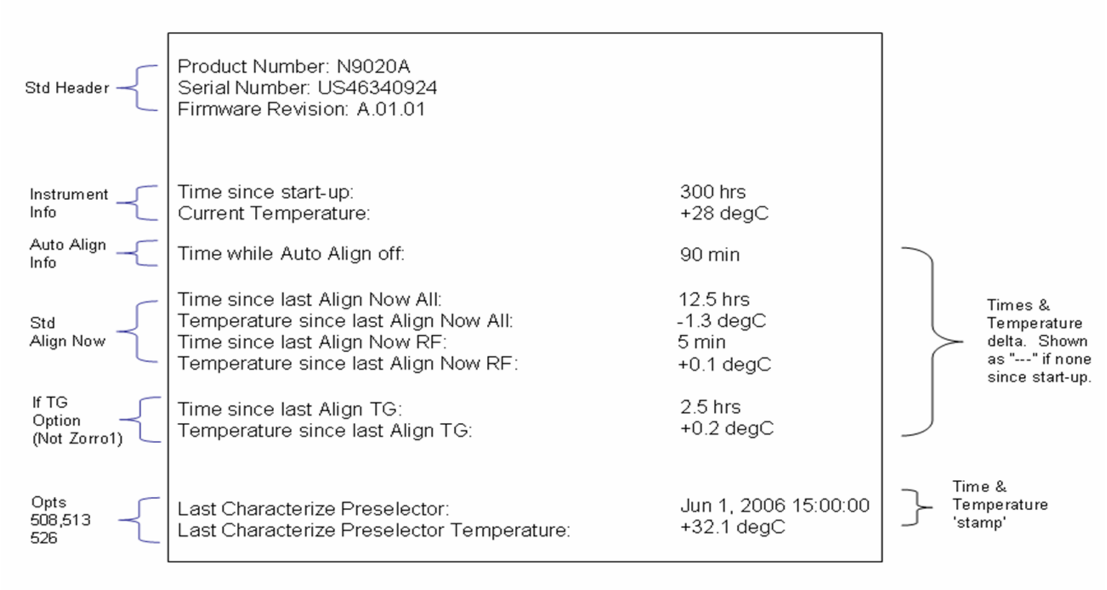
4.6.4 Show Alignment Statistics

Shows alignment information you can use to ensure that the instrument is operating in a specific manner. The **Show Alignment Statistics** screen is where you can view time and temperature information.

Values displayed are only updated when the **Show Alignment Statistics** screen is invoked. They are not updated while the **Show Alignment Statistics** screen is being displayed. The remote commands that access this information obtain current values.

Note that some of these statistics only display if your instrument supports them; for example, Last Source Align Now All Time only shows up in instruments which contain a source which supports auto alignments.

An example of the **Show Alignment Statistics** screen would be similar to:



Product Number: N9020A
Serial Number: US46340924
Firmware Revision: A.01.01

Time since start-up:	300 hrs
Current Temperature:	+28 degC
Time while Auto Align off:	90 min
Time since last Align Now All:	12.5 hrs
Temperature since last Align Now All:	-1.3 degC
Time since last Align Now RF:	5 min
Temperature since last Align Now RF:	+0.1 degC
Time since last Align TG:	2.5 hrs
Temperature since last Align TG:	+0.2 degC
Last Characterize Preselector:	Jun 1, 2006 15:00:00
Last Characterize Preselector Temperature:	+32.1 degC

“Time while Auto Align off” is not available in VXT models M9410A/11A.

A successful **Align Now, RF** sets the Last Align RF temperature to the current temperature, and resets the Last Align RF time. A successful **Align Now All** or **Align Now All but RF** sets the Last Align Now All temperature to the current temperature, and resets the Last Align Now All time. A successful **Align Now All** also resets the Last Align RF items if the RF portion of the **Align Now** succeeded.

Example	`:SYST:SHOW ALIGN`
Notes	The values displayed on the screen are only updated upon entry to the screen, and not updated while the screen is being displayed

The following data-specific queries are available:

Query Time since Startup

Remote Command	`:SYSTem:PON:TIME?`
Example	`:SYST:PON:TIME?`
Notes	Value is the time since the most recent start-up in seconds
State Saved	No

Query Current Temperature

Remote Command	`:CALibration:TEMPerature:CURRent?`
Example	`:CAL:TEMP:CURR?`
Notes	Value is in degrees Centigrade
State Saved	No

Query Current Temperature at Remote Radio Head

Remote Command	`:CALibration:TEMPerature:CURRent:RRHead?`
Example	`:CAL:TEMP:CURR:RRH?`
Notes	Value is in degrees Centigrade
Dependencies	Only appears when Align RRH Amplitude is available
State Saved	No

Query Current Temperature at Remote Radio Head LO

Remote Command	`:CALibration:TEMPerature:CURRent:RRHead:LO?`
Example	`:CAL:TEMP:CURR:RRH:LO?`
Notes	Value is in degrees Centigrade
Dependencies	Only appears when Align RRH LO Power is available
State Saved	No

Query Time since Last Align Now All

Remote Command	`:CALibration:TIME:LALL?`
Example	`:CAL:TIME:LALL?`
Notes	Value is the elapsed time, in seconds, since the last successful **Align Now All** or **Align Now All but RF** was executed
State Saved	No

Query Temperature of Last Align Now All

Remote Command	`:CALibration:TEMPerature:LALL?`
Example	`:CAL:TEMP:LALL?`
Notes	Value is in degrees Centigrade at which the last successful **Align Now All** or **Align Now All but RF** was executed
State Saved	No

Query Time since Last Align Now Receiver

Remote Command	`:CALibration:TIME:INTernal:RECeiver?`
Example	`:CAL:TIME:INT:REC?`
Notes	Value in hours since the last successful **Align Now Receiver**
Dependencies	Only appears in VXT models M9410A/11A
State Saved	No

Query Temperature of Last Align Now Receiver

Remote Command	`:CALibration:TEMPerature:INTernal:RECeiver?`
Example	`:CAL:TEMP:INT:REC?`
Notes	Value in degrees Centigrade when the last successful **Align Now Receiver** was executed
Dependencies	Only appears in VXT models M9410A/11A
State Saved	No

Query Time since Last Align Now Source

Remote Command	`:CALibration:TIME:INTernal:SOURce?`
Example	`:CAL:TIME:INT:SOUR?`
Notes	Value in hours since the last successful **Align Now Source**
Dependencies	Only appears in VXT models M9410A/11A
State Saved	No

Query Temperature of Last Align Now Source

Remote Command	`:CALibration:TEMPerature:INTernal:SOURce?`
Example	`:CAL:TEMP:INT:SOUR?`
Notes	Value in degrees Centigrade when the last successful **Align Now Source** was executed
Dependencies	Only appears in VXT models M9410A/11A
State Saved	No

Query Time since Last Align Now Fast

Remote Command	`:CALibration:TIME:INTernal:FAST?`
Example	`:CAL:TIME:INT:FAST?`
Notes	Value in hours since the last successful **Align Now Fast**
Dependencies	Only appears in VXT models M9410A/11A/15A/16A
State Saved	No

Query Temperature of Last Align Now Fast

Remote Command	`:CALibration:TEMPerature:INTernal:FAST?`
Example	`:CAL:TEMP:INT:FAST?`
Notes	Value in degrees Centigrade when the last successful **Align Now Fast** was executed
Dependencies	Only appears in VXT models M9410A/11A/15A/16A
State Saved	No

Query Time since Last Align Now LO Leakage

Remote Command	`:CALibration:TIME:INTernal:LOLeakage?`
Example	`:CAL:TIME:INT:LOL?`
Notes	Value in hours since the last successful **Align Now LO Leakage**
Dependencies	Only appears in VXT models M9410A/11A/15A/16A
State Saved	No

Query Temperature of Last Align Now LO Leakage

Remote Command	`:CALibration:TEMPerature:INTernal:LOLeakage?`
Example	`:CAL:TEMP:INT:LOL?`
Notes	Value in degrees Centigrade when the last successful **Align Now LO Leakage** was executed
Dependencies	Only appears in VXT models M9410A/11A/15A/16A
State Saved	No

Query Time since Last Align Now IF Cable

Remote Command	`:CALibration:TIME:INTernal:RRHead:IFCable?`
Example	`:CAL:TIME:INT:RRH:IFC?`
Notes	Value in hours since the last successful **Align Now IF Cable**
Dependencies	Only appears in VXT based solutions with M1740A/41A/42A/49A/49B RRH
State Saved	No
Backwards Compatibility SCPI	`:CALibration:TIME:INTernal:IFCable?`

Query Temperature of Last Align Now IF Cable

Remote Command	`:CALibration:TEMPerature:INTernal:RRHead:IFCable?`
Example	`:CAL:TEMP:INT:RRH:IFC?`
Notes	Value in degrees Centigrade when the last successful **Align Now IF Cable** was executed
Dependencies	Only appears in VXT based solutions with M1740A/41A/42A/49A/49B RRH
State Saved	No
Backwards Compatibility SCPI	`:CALibration:TEMPerature:INTernal:IFCable?`

Query Time since Last Align LO Clock

Remote Command	`:CALibration:TIME:INTernal:RRHead:LOSync?`

Example	`:CAL:TIME:INT:RRH:LOS?`
Notes	Value in hours since the last successful Align LO Clock
Dependencies	Only appears in VXT based solutions with M1741A/42A/49A/49B RRH
State Saved	No
Backwards Compatibility SCPI	`:CALibration:TIME:INTernal:LOSync?`

Query Temperature of Last Align LO Clock

Remote Command	`:CALibration:TEMPerature:INTernal:RRHead:LOSync?`
Example	`:CAL:TEMP:INT:RRH:LOS?`
Notes	Value in degrees Centigrade when the last successful Align LO Clock was executed
Dependencies	Only appears in VXT based solutions with M1741A/42A/49A/49B RRH
State Saved	No
Backwards Compatibility SCPI	`:CALibration:TEMPerature:INTernal:LOSync?`

Query Time since Last Align RRH Amplitude

Remote Command	`:CALibration:TIME:INTernal:RRHead:AMPLitude?`
Example	`:CAL:TIME:INT:RRH:AMPL?`
Notes	Value in hours since the last successful Align RRH Amplitude
Dependencies	Only appears in VXT based solutions with M1741A/42A/49A/49B RRH
State Saved	No
Backwards Compatibility SCPI	`:CALibration:TIME:INTernal:RRHAmp?`

Query Temperature of Last Align RRH Amplitude

Remote Command	`:CALibration:TEMPerature:INTernal:RRHead:AMPLitude?`
Example	`:CAL:TEMP:INT:RRH:AMPL?`
Notes	Value in degrees Centigrade when the last successful Align RRH Amplitude was executed
Dependencies	Only appears in VXT based solutions with M1741A/42A/49A/49B RRH
State Saved	No
Backwards Compatibility SCPI	`:CALibration:TEMPerature:INTernal:RRHAmp?`

Query Time since Last Align Fast RRH Amplitude

Remote Command	`:CALibration:TIME:INTernal:RRHead:AMPLitude:FAST?`
Example	`:CAL:TIME:INT:RRH:AMPL:FAST?`
Notes	Value in hours since the last successful Align Fast RRH Amplitude
Dependencies	Only appears in VXT based solutions with M1742A RRH
State Saved	No

Query Temperature of Last Align Fast RRH Amplitude

Remote Command	`:CALibration:TEMPerature:INTernal:RRHead:AMPLitude:FAST?`
Example	`:CAL:TEMP:INT:RRH:AMPL:FAST?`
Notes	Value in degrees Centigrade when the last successful Align Fast RRH Amplitude was executed
Dependencies	Only appears in VXT based solutions with M1742A RRH
State Saved	No

Query Time since Last Align RRH LO Power

Remote Command	`:CALibration:TIME:INTernal:RRHead:LOPower?`
Example	`:CAL:TIME:INT:RRH:LOP?`
Notes	Value in hours since the last successful Align RRH LO Power
Dependencies	Only appears in VXT based solutions with M1741A/49A/49B RRH
State Saved	No

Query Temperature of Last Align RRH LO Power

Remote Command	`:CALibration:TEMPerature:INTernal:RRHead:LOPower?`
Example	`:CAL:TEMP:INT:RRH:LOP?`
Notes	Value in degrees Centigrade when the last successful Align RRH LO Power was executed
Dependencies	Only appears in VXT based solutions with M1741A/49A/49B RRH
State Saved	No

Query Time since Last Align Now RF

Remote Command	`:CALibration:TIME:LRF?`
Example	`:CAL:TIME:LRF?`
Notes	Value is the elapsed time, in seconds, since the last successful **Align Now, RF** was executed, either individually or as a component of **Align Now All**
State Saved	No

Query Temperature of Last Align Now RF

Remote Command	`:CALibration:TEMPerature:LRF?`
Example	`:CAL:TEMP:LRF?`
Notes	Value is in degrees Centigrade at which the last successful **Align Now RF** was executed, either individually or as a component of **Align Now All**
State Saved	No

Query Time since Last Align IF

Remote Command	`:CALibration:TIME:LIF?`
Example	`:CAL:TIME:LIF?`
Notes	Value is the elapsed time, in seconds, since the last successful **Align IF** was executed
State Saved	No

Query Temperature of Last Align IF

Remote Command	`:CALibration:TEMPerature:LIF?`
Example	`:CAL:TEMP:LIF?`
Notes	Value is in degrees Centigrade at which the last successful **Align IF** was executed
State Saved	No

Query Time since Last Characterize Preselector

Remote Command	`:CALibration:TIME:LPReselector?`
Example	`:CAL:TIME:LPR?`
Notes	Value is the date and time the last successful **Characterize Preselector** was executed. The date is separated from the time by a space character Returns “” if no **Characterize Preselector** has ever been performed on the instrument
Dependencies	In models that do not include preselectors, this command is not enabled and any attempt to set or query yields an error
State Saved	No

Query Temperature of Last Characterize Preselector

Remote Command	`:CALibration:TEMPerature:LPReselector?`
Example	`:CAL:TEMP:LPR?`
Notes	Value is in degrees Centigrade at which the last successful **Characterize Preselector** was executed

Dependencies	In models that do not include preselectors, this command is not enabled and any attempt to set or query yields an error
State Saved	No

Query Time since Auto Align Off

Remote Command	`:CALibration:AUTO:TIME:OFF?`
Example	`:CAL:AUTO:TIME:OFF?`
Notes	Value is the elapsed time, in seconds, since **Auto Align** has been set to **Off** or **Off with Alert**. The value is 0 if **Auto Align** is `ALL` or `NORF`
State Saved	No

Query Time since Last Align Now 20 Hz - 30 MHz

Remote Command	`:CALibration:TIME:RFPSelector:LCONducted?`
Example	`:CAL:TIME:RFPS:LCON?`
Notes	Values are the date and time the last successful **Align Now, 20 Hz – 30 MHz** was executed. The date is separated from the time by a semi-colon character
State Saved	No

Query Temperature of Last Align Now 20 Hz - 30 MHz

Remote Command	`:CALibration:TEMPerature:RFPSelector:LCONducted?`
Example	`:CAL:TEMP:RFPS:LCON?`
Notes	Value is in degrees Centigrade at which the last successful **Align Now, 20 Hz – 30 MHz** was executed
State Saved	No

Query Time since Last Align Now 30 MHz - 3.6 GHz

Remote Command	`:CALibration:TIME:RFPSelector:LRADiated?`
Example	`:CAL:TIME:RFPS:LRAD?`
Notes	Value is the date and time the last successful **Align Now, 30 MHz – 3.6 GHz** was executed. The date is separated from the time by a semi-colon character
State Saved	No

Query Temperature of Last Align Now 30 MHz - 3.6 MHz

Remote Command	`:CALibration:TEMPerature:RFPSelector:LRADiated?`
Example	`:CAL:TEMP:RFPS:LRAD?`
Notes	Value is in degrees Centigrade at which the last successful **Align Now, 30 MHz – 3.6 GHz** was executed
State Saved	No

Query Next Scheduled Alignment Time

Remote Command	`:CALibration:RFPSelector:SCHeduler:TIME:NEXT?` Returns data using the following format: YYYY/MM/DD; HH:MM:SS
Example	`:CAL:RFPS:SCH:TIME:NEXT?`

Notes	The next run time will be updated based on the start date/time and recurrence set by the user
	“date” is representation of the date the task will run in the form:
	`YYYY/MM/DD`
	where:
	– `YYYY` is the four-digit representation of year. (for example, 2009)
	– `MM` is the two-digit representation of month. (for example, 01 to 12)
	– `DD` is the two-digit representation of the day. (for example, 01 to 28, 29, 30 or 31 depending on the month and year)
	“time” is a representation of the time of day the task will run in the form:
	`HH:MM:SS`
	where:
	– `HH` is the two-digit representation of the hour in 24-hour format
	– `MM` is the two-digit representation of minute
	– `SS` is the two-digit representation of seconds

State Saved	No

Query Time since Last Align Now External Mixer Path

Remote Command	`:CALibration:TIME:INTernal:EMPath?`
Example	`:CAL:TIME:INT:EMP?`
Notes	Value in hours since the last successful **Align Now External Mixer Path**
Dependencies	Only appears option MXP is installed
State Saved	No

Query Temperature of Last Align Now External Mixer Path

Remote Command	`:CALibration:TEMPerature:INTernal:EMPath?`
Example	`:CAL:TEMP:INT:EMP?`
Notes	Value in degrees Centigrade when the last successful **Align Now External Mixer Path** was executed
Dependencies	Only appears option MXP is installed
State Saved	No

Query Time since Last Align Now Low Band

Remote Command	`:CALibration:TIME:INTernal:LBANd?`
Example	`:CAL:TIME:INT:LBAN?`
Notes	Value in hours since the last successful **Align Now Low Band**
Dependencies	Only appears in VXT models M9415A/16A
State Saved	No

Query Temperature of Last Align Now Low Band

Remote Command	`:CALibration:TEMPerature:INTernal:LBANd?`
Example	`:CAL:TEMP:INT:LBAN?`
Notes	Value in degrees Centigrade when the last successful **Align Now Low Band** was executed
Dependencies	Only appears in VXT models M9415A/16A
State Saved	No

Query Time since Last Align Now High Band

Remote Command	`:CALibration:TIME:INTernal:HBAN?`
Example	`:CAL:TIME:INT:HBAN?`
Notes	Value in hours since the last successful **Align Now High Band**
Dependencies	Only appears in VXT models M9415A/16A
State Saved	No

Query Temperature of Last Align Now High Band

Remote Command	`:CALibration:TEMPerature:INTernal:HBANd?`
Example	`:CAL:TEMP:INT:HBAN?`
Notes	Value in degrees Centigrade when the last successful **Align Now High Band** was executed
Dependencies	Only appears in VXT models M9415A/16A
State Saved	No

Query Time since Last Align VXT Transceiver

Remote Command	`:CALibration:TIME:INTernal:VXT:TRANsceiver?`
Example	`:CAL:TIME:INT:VXT:TRAN?`
Notes	Value in hours since the last successful **Align VXT Transceiver** Returns `NaN` if Align VXT Transceiver has never been performed on the instrument
Dependencies	Only appears in M9410E/11E/15E/16E
State Saved	No

Query Temperature of Last Align VXT Transceiver

Remote Command	`:CALibration:TEMPerature:INTernal:VXT:TRANsceiver?`
Example	`:CAL:TEMP:INT:VXT:TRAN?`
Notes	Value in degrees Centigrade when the last successful **Align VXT Transceiver** was executed Returns 9.91E+37(`NaN`) if Align VXT Transceiver has never been performed on the instrument
Dependencies	Only appears in M9410E/11E/15E/16E
State Saved	No

Query Time since Last Align Up Down Converter

Remote Command	`:CALibration:TIME:UPDown:CONVerter?`
Example	`:CAL:TIME:UPD:CONV?`
Notes	Value in hours since the last successful **Align Up Down Converter** Returns `NaN` if Align Up Down Converter has never been performed on the instrument
Dependencies	Only appears in M9410E/11E/15E/16E
State Saved	No

Query Temperature of Last Align Up Down Converter

Remote Command	`:CALibration:TEMPerature:UPDown:CONVerter?`
Example	`:CAL:TEMP:UPD:CONV?`
Notes	Value in degrees Centigrade when the last successful **Align Up Down Converter** was executed Returns 9.91E+37(`NaN`) if Align Up Down Converter has never been performed on the instrument
Dependencies	Only appears in VXT models M9410A/11A and M9410E/11E
State Saved	No

Query Time since Last Path Delay Calibration

Remote Command	`:CALibration:TIME:PDELay:SOURce?`

Example	`:CAL:TIME:PDEL:SOUR?`
Notes	The value is the elapsed time in hours since the last successful **Path Delay Calibration** has been performed Returns NaN if the **Path Delay Calibration** has never been performed
State Saved	No

Query Temperature of Last Path Delay Calibration

Remote Command	`:CALibration:TEMPerature:PDELay:SOURce?`
Example	`:CAL:TEMP:PDEL:SOUR?`
Notes	The value is in degrees Centigrade at which the last successful **Path Delay Calibration** has been performed Returns 9.91E+37(NaN) if the **Path Delay Calibration** has never been performed
State Saved	No

4.6.5 Timebase DAC

Lets you change the setting of the **Timebase DAC** from a factory calibrated setting to your own desired setting.

The display shows the current **Timebase DAC** setting at the top, and gives you a choice of `CALibrated` or `USER` setting. There is also a field for you to enter your desired setting.

Dependencies	Does not appear in VXT and M941xE

4.6.5.1 Timebase DAC

Allows control of the internal 10 MHz reference oscillator timebase. This may be used to adjust for minor frequency alignment between your signal’s reference and the internal frequency reference. This adjustment has no effect if the instrument is operating with an External Frequency Reference.

If the value of the **Timebase DAC** changes (by switching to `CALibrated` from `USER` with **User Value** set to a different value, or in `USER` with a new value entered) an alignment may be necessary. The alignment system will take appropriate action; which will either invoke an alignment or cause an **Alert**.

The `CALibrated` setting sets the **Timebase DAC** to the value established during factory or field calibration. In this case the value displayed at the top of the screen is the calibrated value.

The `USER` setting sets the **Timebase DAC** to the value set on the **User Value** control. In this case the value displayed at the top of the screen is the user value.

Remote Command	`:CALibration:FREQuency:REFerence:MODE CALibrated | USER` `:CALibration:FREQuency:REFerence:MODE?`
Example	`:CAL:FREQ:REF:MODE CAL`
Notes	If the value of the timebase is changed the alignment system automatically performs an alignment or alerts that an alignment is due
Dependencies	Not available in UXM
Preset	Unaffected by **Preset**, but set to `CALibrated` by **Restore Defaults** > "Alignments" on page 2343
State Saved	No

4.6.5.2 User Value

Lets you set the **Timebase DAC** to a value other than the value established during the factory or field calibration. The current value of the DAC is displayed at the top of the screen. This will be the Calibrated value if **Timebase DAC** is set to `CALibrated`.

Remote Command	`:CALibration:FREQuency:REFerence:FINE <integer>` `:CALibration:FREQuency:REFerence:FINE?`
Example	`:CAL:FREQ:REF:FINE 8191`
Notes	If the value of the timebase is changed the alignment system automatically performs an alignment or alerts that an alignment is due
Couplings	Setting `:CAL:FREQ:REF:FINE` sets `:CAL:FREQ:REF:MODE USER`
Preset	Unaffected by **Preset**, but set to the factory setting by **Restore Defaults** > "Alignments" on page 2343
State Saved	No
Min	0
Max	16383
Backwards Compatibility SCPI	`:CALibration:FREQuency:REFerence:COARse` ESA hardware contained two DAC controls for the Timebase. In X-Series the command `:CALibration:FREQuency:REFerence:FINE` is the method for adjusting the timebase. The `COARse` option is provided as an alias to `FINE`

Backwards Compatibility Command

Remote Command	`:CALibration:FREQuency:REFerence:COARse <integer>` `:CALibration:FREQuency:REFerence:COARse?`
Example	`:CAL:FREQ:REF:COAR 8191`
Notes	This is an alias for `:CAL:FREQ:REF:FINE`. Any change to `COARse` is reflected in `FINE` and *vice-versa*. See `:CAL:FREQ:REF:FINE` for description of functionality
Couplings	Setting `:CAL:FREQ:REF:COAR` sets `:CAL:FREQ:REF:MODE USER`

4.6.6 Advanced

Accesses alignment processes that are immediate action operations that perform operations that run until complete. **Advanced** alignments are performed on an irregular basis, or require additional operator interaction.

Dependencies	Not available in UXM

4.6.6.1 Characterize Preselector

The Preselector tuning curve drifts over temperature and time. Recognize that the Amplitude, Presel Center function adjusts the preselector for accurate amplitude measurements at an individual frequency. Characterize Preselector improves the amplitude accuracy by ensuring the Preselector is approximately centered at all frequencies without the use of the Amplitude, Presel Center function. Characterize Preselector can be useful in situations where absolute amplitude accuracy is not of utmost importance, and the throughput savings or convenience of not performing a Presel Center is desired. Presel Center is required prior to any measurement for best (and warranted) amplitude accuracy.

Keysight recommends that the Characterize Preselector operation be performed yearly as part of any calibration, but performing this operation every three months can be worthwhile.

Characterize Preselector immediately executes a characterization of the Preselector, which is a YIG-tuned filter (YTF). The instrument stops any measurement currently underway, performs the characterization, then restarts the measurement from the beginning (similar to pressing the **Restart** key).

The query (`:CALibration:YTF?`) invokes the alignment of the YTF subsystem, and returns a success or failure value.

A failure encountered during alignment generates the Error Condition message “Characterize Preselector failure” and sets Bit 3 in the `STATus:QUEStionable:CALibration:EXTended:FAILure` status register. Successful completion of **Characterize Preselector** clears this Condition. It also begins the elapsed time counter for Last Characterize Preselector Time, and captures the Last Characterize Preselector Temperature.

The last Characterize Preselector Time and Temperature survives across the power cycle, as this operation is performed infrequently.

NOTE **The Characterize Preselector function can be interrupted, by pressing the Cancel (ESC) front-panel key, or remotely with Device Clear followed by the `:ABORt SCPI` command. None of the new characterization data is then used.**

However, since the old characterization data is purged at the beginning of the characterization, you now have an uncharacterized preselector. You should re-execute this function and allow it to finish before making any further preselected measurements.

Remote Command	`:CALibration:YTF` `:CALibration:YTF?`
Example	`:CAL:YTF`
Notes	`:CALibration:YTF?` returns 0 if successful, or 1 if failed (including interfering user signal) While **Advanced**, **Characterize Preselector** is performing the alignment, Bit 0 in the Status Operation register is set. Completion, or termination, clears Bit 0 in the Status Operation register This command is sequential; it must complete before further SCPI commands are processed. Interrupting the alignment from remote is accomplished by invoking Device Clear followed by the `:ABORt` command Successful completion clears Bit 9 in the Status Questionable Calibration register A failure encountered during alignment generates the Error Condition message "Characterize Preselector failed" and sets Bit 9 in the Status Questionable Calibration register For Options that support frequencies > 3.6 GHz only
Dependencies	This control does not appear in models that do not contain preselectors. In these models the SCPI command is accepted without error, but no action is taken
Couplings	Initializes the time for the Last Characterize Preselector Time Records the temperature for the Last Characterize Preselector Temperature

Overlapped Command

Remote Command	`:CALibration:YTF:NPENding`
Example	`:CAL:YTF:NPEN`
Notes	`:CALibration:YTF:NPENding` is the same as `:CALibration:YTF`, including all conditions, status register bits, except that this SCPI command *does not block* the SCPI session, so you should use status register bits to query if the calibration is successfully completed or not Typical usage is: 1. `:CALibration:YTF:NPENding` (Start a YTF calibration) 2. `:STATus:OPERation:CONDition?` (Check if the calibration is completed or not, If Bit 0 is set, then the system is doing calibration, and you should repeat this query until the bit is cleared) 3. `:STATus:QUEStionable:CALibration:EXTended:FAILure:CONDition?` (Check whether Bit 2 is set. If this bit is set, that means there are some errors in previous internal source calibration)

4.6.6.2 Characterize Reference Clock

Calibrates the Reference Input Phase with the External Reference Output. This feature is only available when either option DP2 or B40 is present. It requires connecting the 10 MHz OUT to the EXT REF IN port with a BNC cable before running the characterization.

See "Front panel guided calibration sequence" on page 2391

Remote Command	`:CALibration:REFerence:CLOCk?`

Example	`:CAL:REF:CLOC:INIT?`
	connect cable
	`:CAL:REF:CLOC?`
	disconnect cable
	`:CAL:REF:CLOC:END?`

Notes	`:CALibration:REFerence:CLOCk?` returns 0 if successful, or 1 if failed
Dependencies	Option DP2 or B40
Couplings	Initializes the time for the Last Characterize Reference Clock Time Records the temperature for the Last Characterize Reference Clock Temperature. Expected to be run after `:CAL:REF:CLOC:INIT`, and before `:CAL:REF:CLOC:END`

Remote Command	`:CALibration:REFerence:CLOCk:INITialize?`
Example	`:CAL:REF:CLOC:INIT?`
Notes	Returns 0 if successful, or 1 if failed
Dependencies	Option DP2 or B40
Couplings	Expected to be run before sending `:CAL:REF:CLOC?`. This will stop the current measurement when it has completed (does not abort the current data acquisition), and prepare the instrument for the expected cabling

Remote Command	`:CALibration:REFerence:CLOCk:END?`
Example	`:CAL:REF:CLOC:END?`
Notes	Returns 0 if successful, or 1 if failed
Dependencies	Option DP2 or B40
Couplings	Expected to be run after sending `:CAL:REF:CLOC?`, and after removing the cable used in that Characterize Reference Clock step. This will resume any queued measurements, and concludes the reference clock characterization

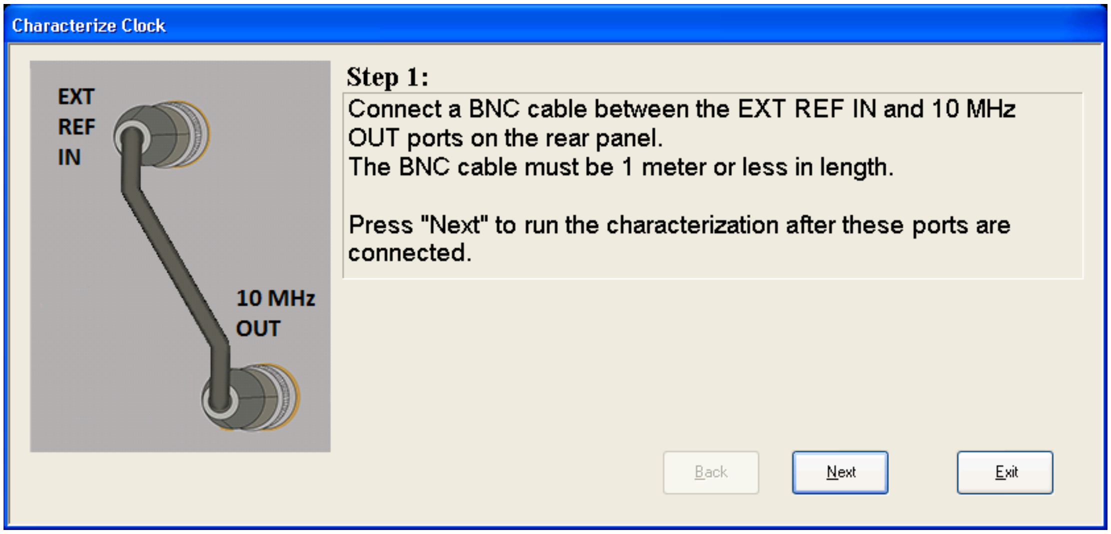
Remote Command	`:CALibration:TIME:REFerence:CLOCk?`
Example	`:CAL:TIME:REFerence:CLOCk?`

Notes	Value is the date and time the last successful Characterize Reference Clock was executed. The date is separated from the time by a space character. Returns "" if Characterize Reference Clock has never been performed on the instrument
Dependencies	Option DP2 or B40
State Saved	No

Front panel guided calibration sequence

When selecting **Characterize Reference Clock** via the front panel, the following form is displayed.

Step 1 of the guided calibration sequence:

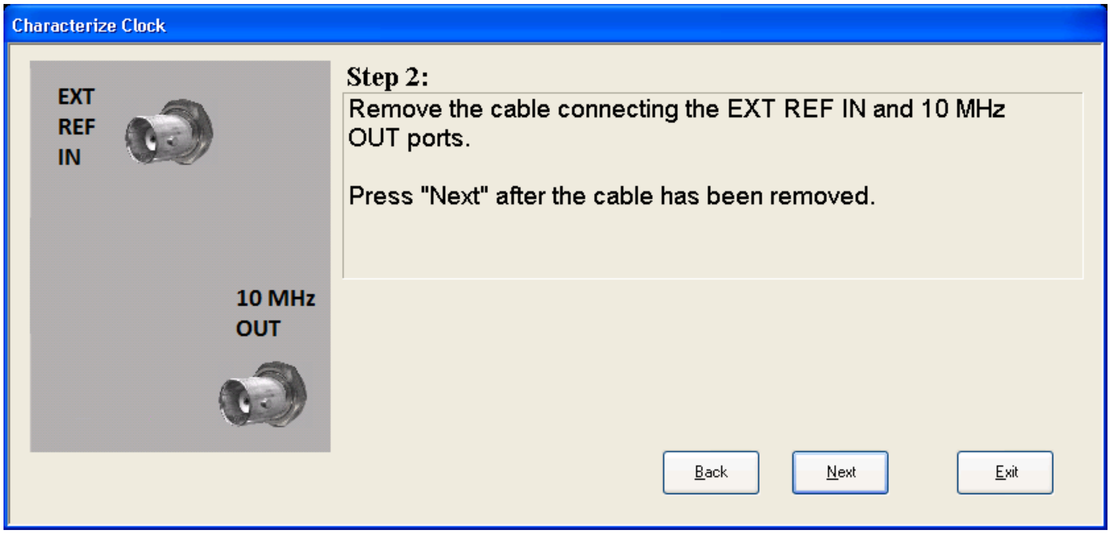


Step 1:

Connect a BNC cable between the EXT REF IN and 10 MHz OUT ports on the rear panel.
The BNC cable must be 1 meter or less in length.

Press "Next" to run the characterization after these ports are connected.

Step 2 of the guided calibration sequence:

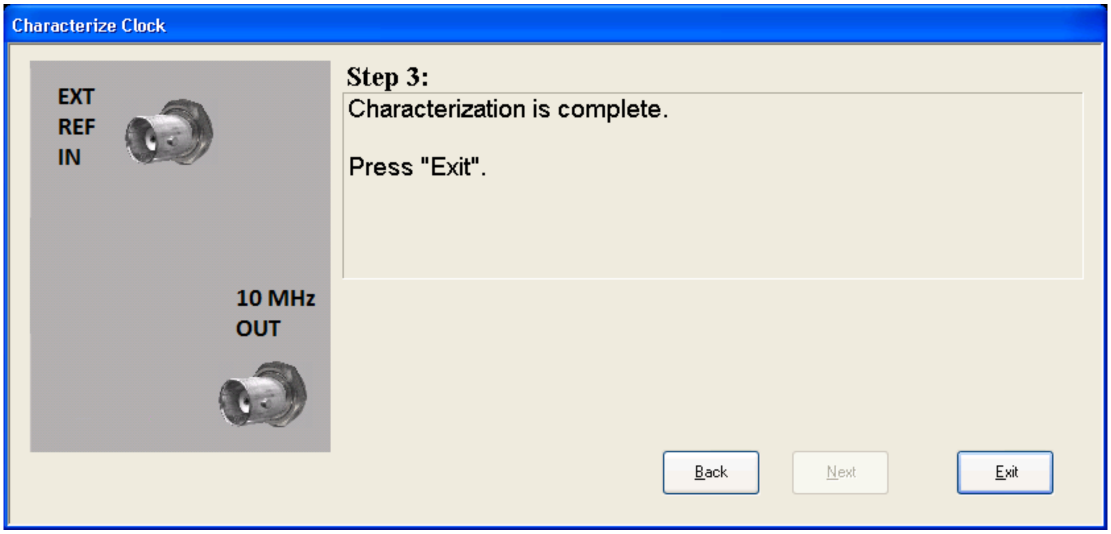


Step 2:

Remove the cable connecting the EXT REF IN and 10 MHz OUT ports.

Press "Next" after the cable has been removed.

Step 3 of the guided calibration sequence:



Step 3:

Characterization is complete.

Press "Exit".

4.6.6.3 Characterize Noise Floor

On instruments with the NF2 license installed, the calibrated Noise Floor used by Noise Floor Extensions should be refreshed periodically. To do this, press **Characterize Noise Floor**. When you press this control, the instrument stops any measurement currently underway, and a dialog appears with an **OK** and **Cancel** button that says:

```
This action will take several minutes to perform. Please disconnect all cables
from the RF input and press Enter to proceed. Press ESC to cancel
```

When you press **Enter** or **OK**, the characterization proceeds. After the characterization, the instrument restarts the measurement from the beginning (similar to pressing the **Restart** key). The characterization takes many minutes to run.

The noise floor model used by Noise Floor Extensions includes an estimation of the temperature behavior of the noise floor, but this is only an estimation. The noise floor changes little with the age of the components. However, even small changes in the estimated level of the noise floor can make large changes in the effective noise floor, because the effective noise floor is the error in the estimation of the noise floor. Keysight recommends that the **Characterize Noise Floor** operation be performed when the instrument is operating at an ambient temperature that is significantly different than the ambient temperature at which this alignment was last run. In addition, Keysight recommends that the **Characterize Noise Floor** operation be performed after the first 500 hours of operation, and once every calendar year.

The noise floor model from the last operation of **Characterize Noise Floor** survives across the power cycle.

NOTE The **Characterize Noise Floor** function can be interrupted, by pressing the **Cancel (ESC)** front-panel key, or remotely with Device Clear followed by the `:ABORt SCPI` command. None of the new characterization data is then used. However, since the old characterization data is purged at the beginning of the characterization, you now have an uncharacterized noise floor. You should re-execute this function and allow it to finish before making any further measurements with NFE. Until you do, the instrument will display a “Characterize Noise Floor required” message and set bit 12 in the Status Questionable Calibration register (`STATus:QUEStionable:CALibration:EXTended:NEEDed`).

Remote Command	`:CALibration:NFLoor` `:CALibration:NFLoor?`
Example	`:CAL:NFL`
Notes	`:CALibration:NFLoor?` returns 0 if successful, or 1 if failed (including interfering user signal) This command is sequential; it must complete before further commands are processed. Interrupting the alignment from remote is accomplished by invoking Device Clear followed by the `:ABORt` command
Dependencies	This control does not appear in models that do not contain NF2. In these models the command is accepted without error, but no action is taken
Couplings	Successful completion of **Characterize Noise Floor** begin the elapsed time counter or the Last Characterize Noise Floor Time

Remote Command	`:CALibration:TIME:NFLoor?`
Example	`:CAL:TIME:NFL?`
Notes	Value is the date and time the last successful **Characterize Noise Floor** was executed. The date is separated from the time by a space character Returns “” if no **Characterize Noise Floor** has ever been performed on the instrument

Dependencies	In models that do not include NF2, this command is not enabled and any attempt to set or query yields an error
State Saved	No

Remote Command	`:CALibration:TEMPerature:NFLoor?`
Example	`:CAL:TEMP:NFL?`
Notes	Value is the temperature of the last successful **Characterize Noise Floor** was executed Returns "" if no **Characterize Noise Floor** has ever been performed on the instrument
Dependencies	In models that do not include NF2, this command is not enabled and any attempt to set or query yields an error
State Saved	No

Remote Command	`:CALibration:TIME:ELAPsed:NFLoor?`
Example	`:CAL:TIME:ELAP:NFL?`
Notes	Value is the elapsed time the instrument was powered-on since the last successful **Characterize Noise Floor** was executed Returns "" if no **Characterize Noise Floor** has ever been performed on the instrument
Dependencies	In models that do not include NF2, this command is not enabled and any attempt to set or query yields an error
State Saved	No

4.6.6.4 Calibration Temperature History

The following queries let you retrieve various statistics regarding the Calibration Temperature history.

Minimum Temperature Within Last Number of Seconds

Lets you query the minimum temperature within the last number of seconds. If no data exists for the requested time, the returned value is 9.91e+37.

Remote Command	`:CALibration:TEMPerature:MINimum? <seconds>`
Example	`:CAL:TEMP:MIN? 60`

Maximum Temperature Within Last Number of Seconds

Lets you query the maximum temperature within the last number of seconds. If no data exists for the requested time, the returned value is 9.91e+37.

Remote Command	`:CALibration:TEMPerature:MAXimum? <seconds>`
Example	`:CAL:TEMP:MAX? 60`

Temperature Seconds Ago

Lets you query temperature X seconds ago. If no data exists for the requested time, the returned value is 9.91e+37.

Remote Command	`:CALibration:TEMPerature:AGO? <seconds>`
Example	`:CAL:TEMP:AGO? 75`

Oldest Temperature Value

Lets you query the oldest recorded temperature value.

Remote Command	`:CALibration:TEMPerature:OLDest[:TEMPerature]?`
Example	`:CAL:TEMP:OLD?`

Oldest Temperature Time

Lets you query how long ago the oldest temperature value was recorded.

Remote Command	`:CALibration:TEMPerature:OLDest:SEConds?`
Example	`:CAL:TEMP:OLD:SEC?`

4.6.6.5 TDS Alignment

Only appears in N9038B (MXE-B) when Option TDS is installed and licensed.

The TDS alignment includes `AlignNowAll` and `RFPresel` alignment. Immediately executes an alignment of the TDS subsystem. The instrument stops any measurement currently underway, performs the alignment, and then restarts the measurement from the beginning (similar to pressing the **Restart** key).

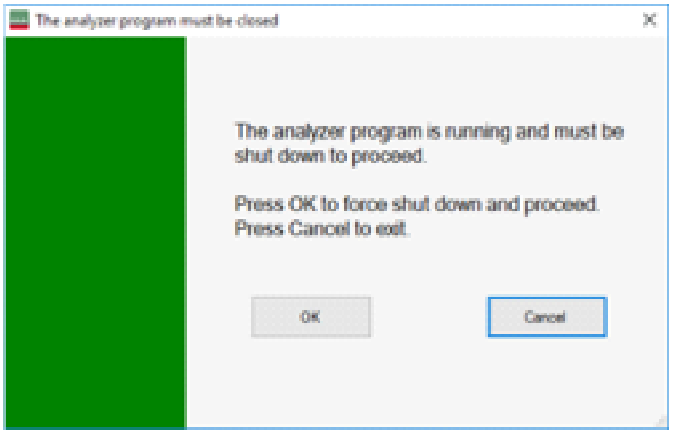
Align TDS can be interrupted by pressing the **Cancel (ESC)** front-panel key or from remote with Device Clear followed by `:ABORt`. When this occurs, no new TDS alignment data will be employed.

Remote Command	`:CALibration:TDS`
	Params missing? What does the query return?
	`:CALibration:TDS?`

Example	`:CAL:TDS`
Notes	This command is sequential; it must complete before further commands are processed. Interrupting the alignment from remote is accomplished by invoking Device Clear followed by the `:ABORt` command
Dependencies	Only appears in N9038B (MXE-B) models with Option TDS installed and licensed

4.6.6.6 Backup or Restore Align Data...

Opens the utility for backing-up or restoring alignment data. Since this utility cannot be run while the instrument software is running, a prompt tells you to shut down the instrument first:



The analyzer program is running and must be shut down to proceed.

Press OK to force shut down and proceed.
Press Cancel to exit.

Press **OK** and the instrument will shut down and open the backup utility.

Alignment data for the instrument resides on the hard drive in a database. Keysight uses high quality hard drives; however, it is highly recommended the alignment data be backed-up to storage outside of the instrument. Additionally, for customers who use multiple CPU Assemblies or multiple disk drives, the alignment that pertains to the instrument must be transferred to the resident hard drive after a CPU or hard drive is replaced. This utility facilitates backing-up and restoring the alignment data.

NOTE **This utility allows you to navigate to any location of the Windows file system. If you are backing up alignment data to storage outside of the instrument, then it is assumed that you will use a USB memory device, or Mapped Network Drive.**

Processor Assembly types PC6 and PC7 contain a removable SD memory card. When one of these CPUs is installed, the Backup and Restore Alignment Data wizard defaults to the SD card as the backup location. At every power-on, the software will check to determine if the calibration data on the SD memory card (the backup) is newer than the data in use on the disk. In such situations, before the application is loaded, you are given the opportunity to restore the data from the backup. If you respond **Yes**, the Backup and Restore Alignment Data wizard (see "Alignment Data Wizard (without Flash)" on page 2397) will be invoked to perform the restore.

Processor Assembly types PC6S and PC7S contain an internal flash EEPROM, as well as a removable SD card. When one of these CPUs is installed, the Backup and Restore Alignment Data wizard defaults to the internal flash as the backup location.

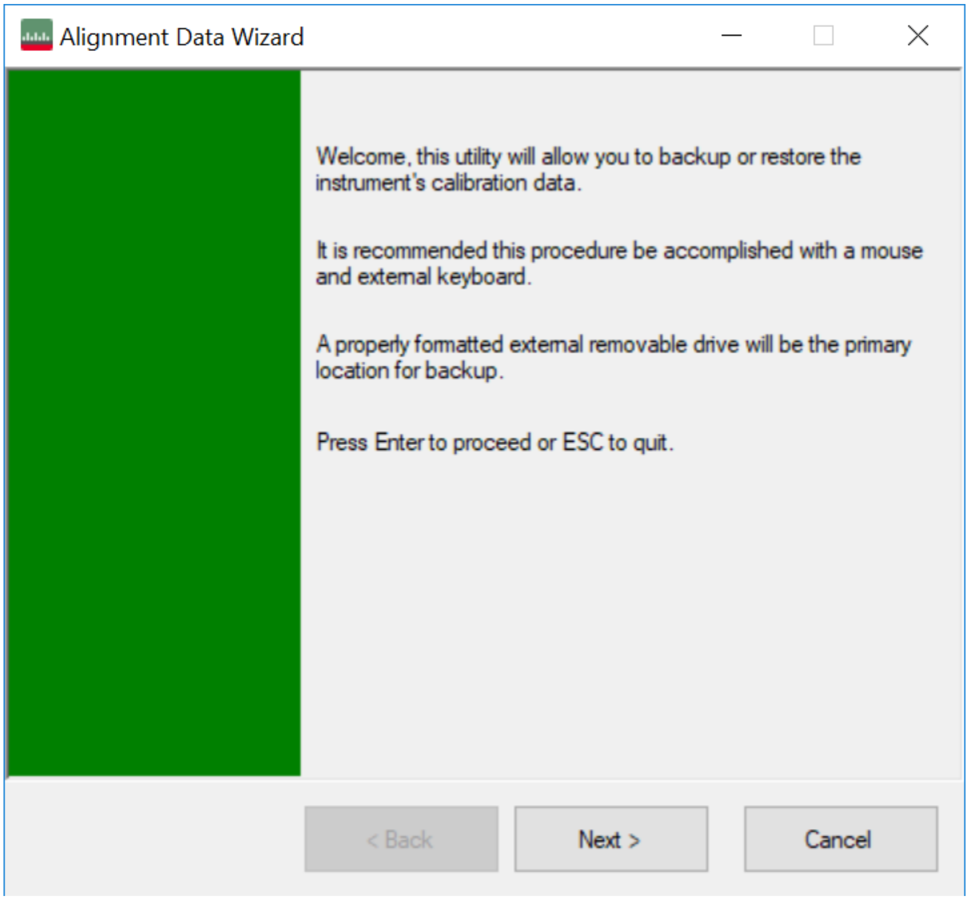
As with the PC6 and PC7, at every power-on, the software compares the timestamp of the backup on the flash and the timestamp of the alignment data in use on the disk. If the backup on the flash has newer data, you are given the opportunity to restore the data from the backup before the application is loaded. If you respond **Yes**, the Backup and Restore Alignment Data wizard (see "Alignment Data Wizard (with Flash)" on page 2407) will be invoked and will prompt you to restore that backup.

For purposes of these instructions, “alignment data” and “calibration data” are used interchangeably.

Dependencies	Not available in UXM
Remote Command	`:CALibration:DATA:DEFault`
Example	`:CAL:DATA:DEF`
Notes	Restores the alignment data files to their default state
Couplings	Sets **Auto Align** to `OFF`. Sets Bit 14 in the Status Questionable Calibration register. The Error Condition message “Align Now All required” is generated

Alignment Data Wizard (without Flash)

Guides you through the operation of backing-up or restoring the alignment data.

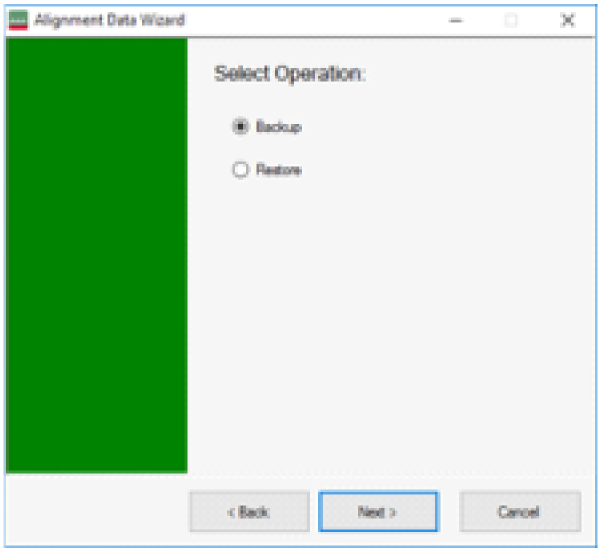


Welcome, this utility will allow you to backup or restore the instrument's calibration data.

It is recommended this procedure be accomplished with a mouse and external keyboard.

A properly formatted external removable drive will be the primary location for backup.

Press Enter to proceed or ESC to quit.



Select Operation:

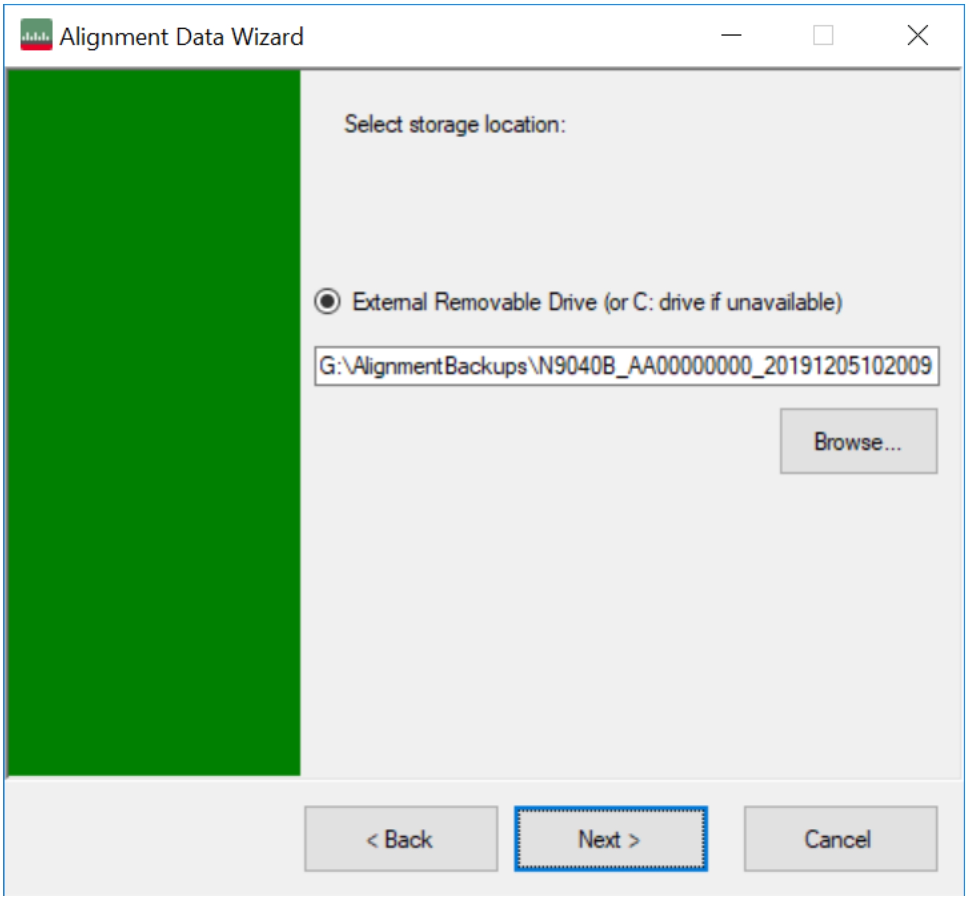
● Backup

○ Restore

The default backup location for instruments *without* internal flash will be the first drive identified as an external drive (USB or LAN) if such is available; or, if not, the internal D: partition.

The default file name is `<model number>_<serial number>_<date in YYYYMMDDHHMMSS>.bkz`.

The default file extension for legacy backup files was `.bak`. The Backup and Restore operations support both the `.bak` (legacy format) and `.bkz` formats.



Select storage location:

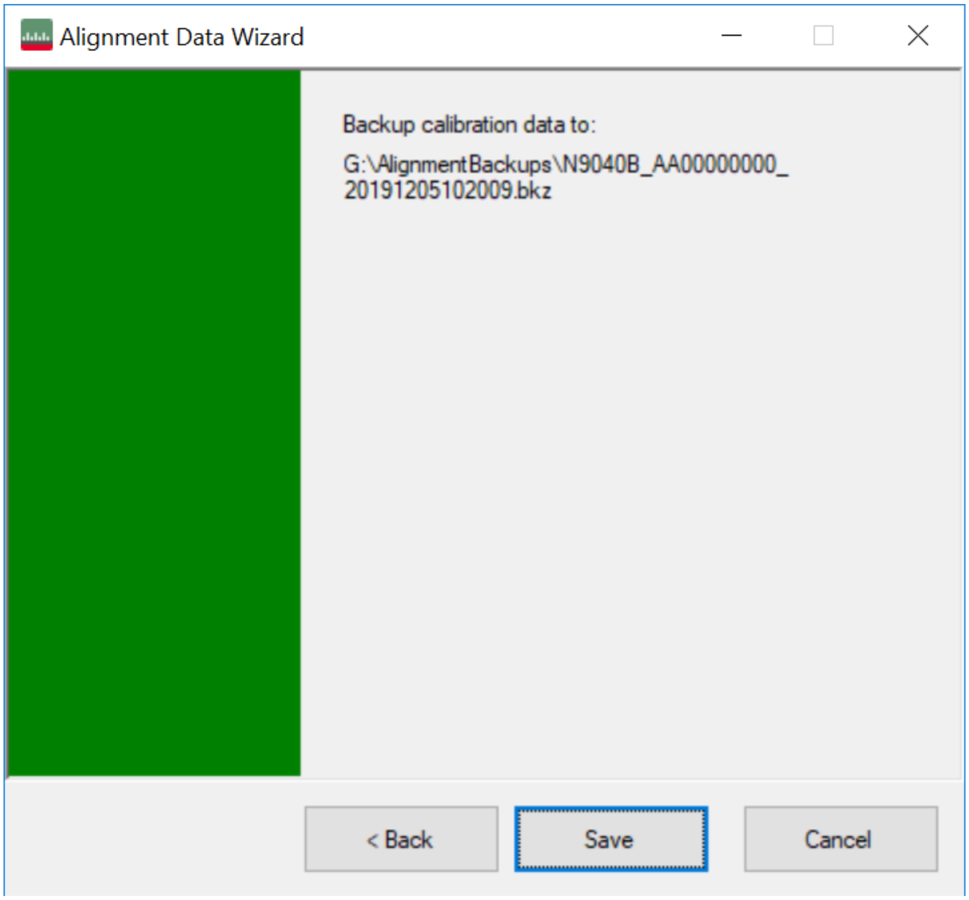
● External Removable Drive (or C: drive if unavailable)

G:\AlignmentBackups\N9040B_AA00000000_20191205102009

If a USB drive is present, it will be selected by default. The path defaults to the `AlignmentBackups` folder, and a filename is automatically created, in the form: `<model>_<serial number>_<date><time>.bkz`

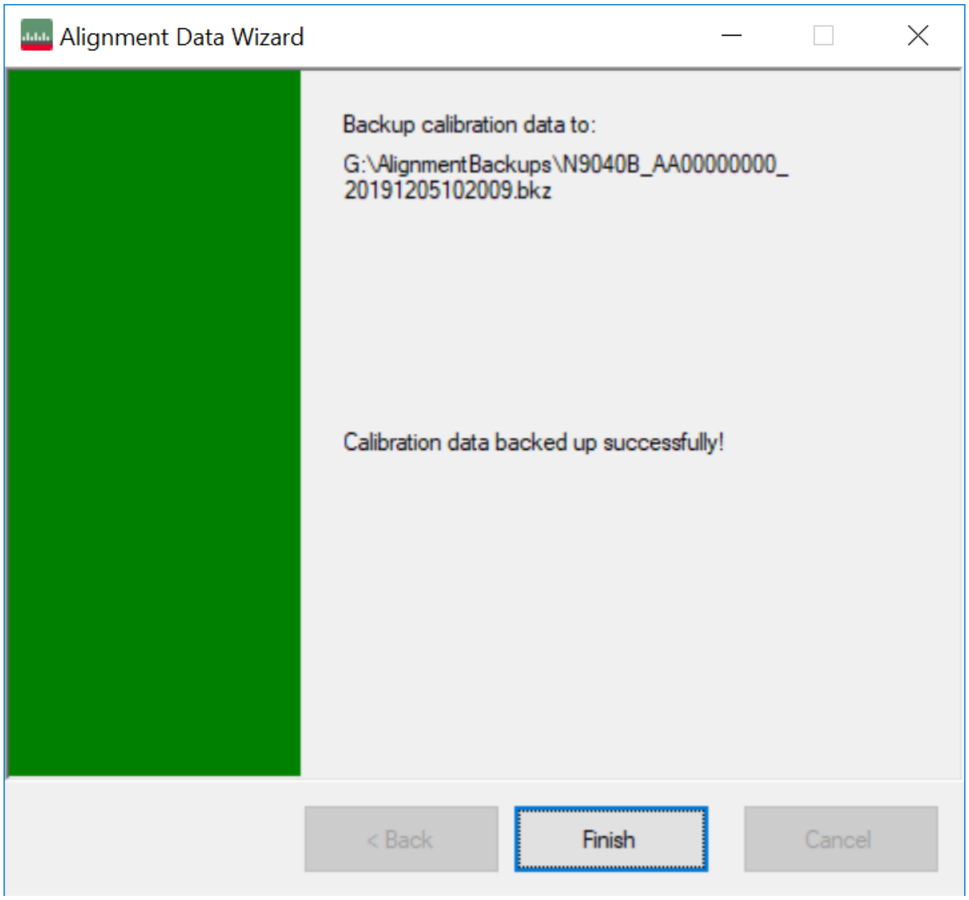
If you wish to enter a customer filename, you can do so with an external keyboard, or by opening the onscreen Alpha keyboard, by pressing the **Keyboard** hardkey on the front panel:

When the **Next >** button is pressed, you will be prompted to create a new folder if the chosen path does not yet exist.



Backup calibration data to:

G:\AlignmentBackups\N9040B_AA00000000_20191205102009.bkz



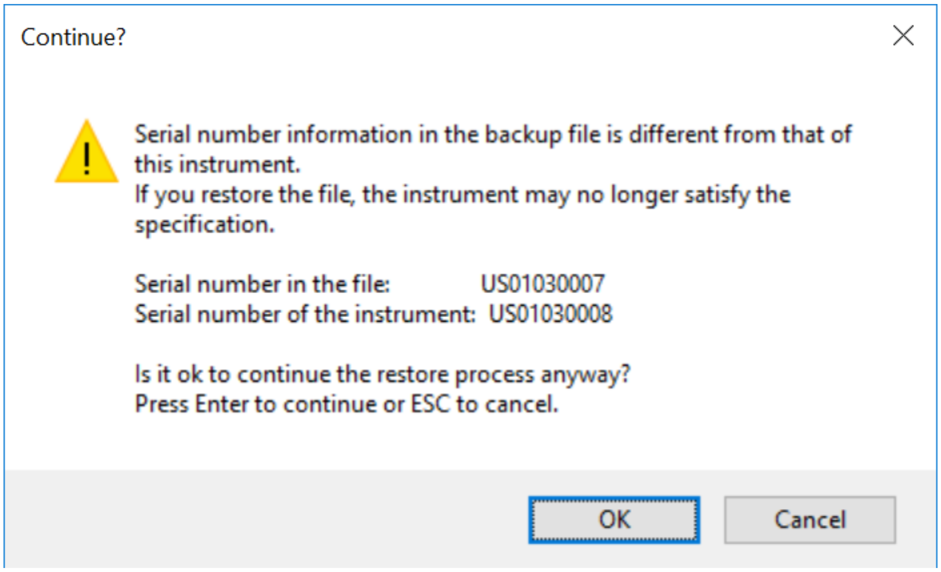
Backup calibration data to:

G:\AlignmentBackups\N9040B_AA00000000_20191205102009.bkz

Calibration data backed up successfully!

The restore operation checks the validity of the restore file using the database's built-in file validation. If the restore file is corrupt, the existing alignment data will remain in use.

If the serial number information in the backup file being restored is different from that of the instrument, the following message appears (the serial numbers shown are examples):

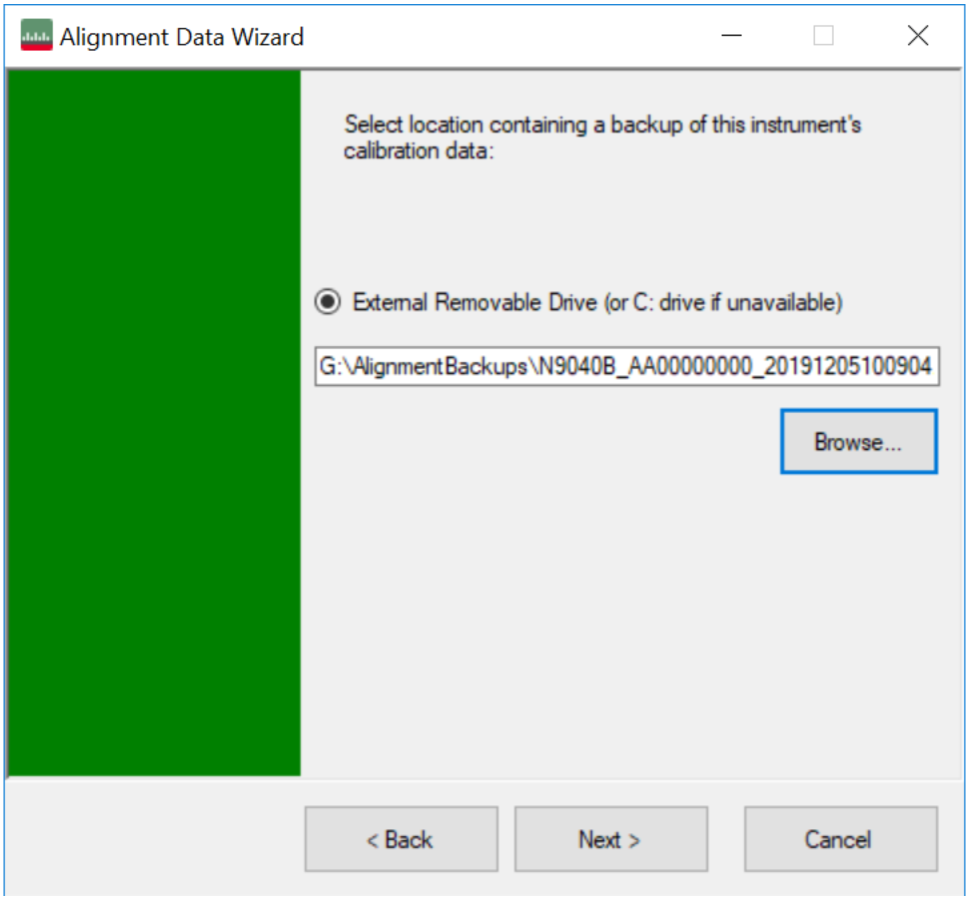


Serial number information in the backup file is different from that of this instrument.
If you restore the file, the instrument may no longer satisfy the specification.

Serial number in the file: US01030007
Serial number of the instrument: US01030008

Is it ok to continue the restore process anyway?
Press Enter to continue or ESC to cancel.

The default restore location for instruments *without* internal flash will be the first drive identified as an external drive (USB or LAN) if such is available; or, if not, the internal D: partition. The default restore file will be the most recent file that matches the default backup file name format: `<model number>_<serial number>_<date>.bkz`



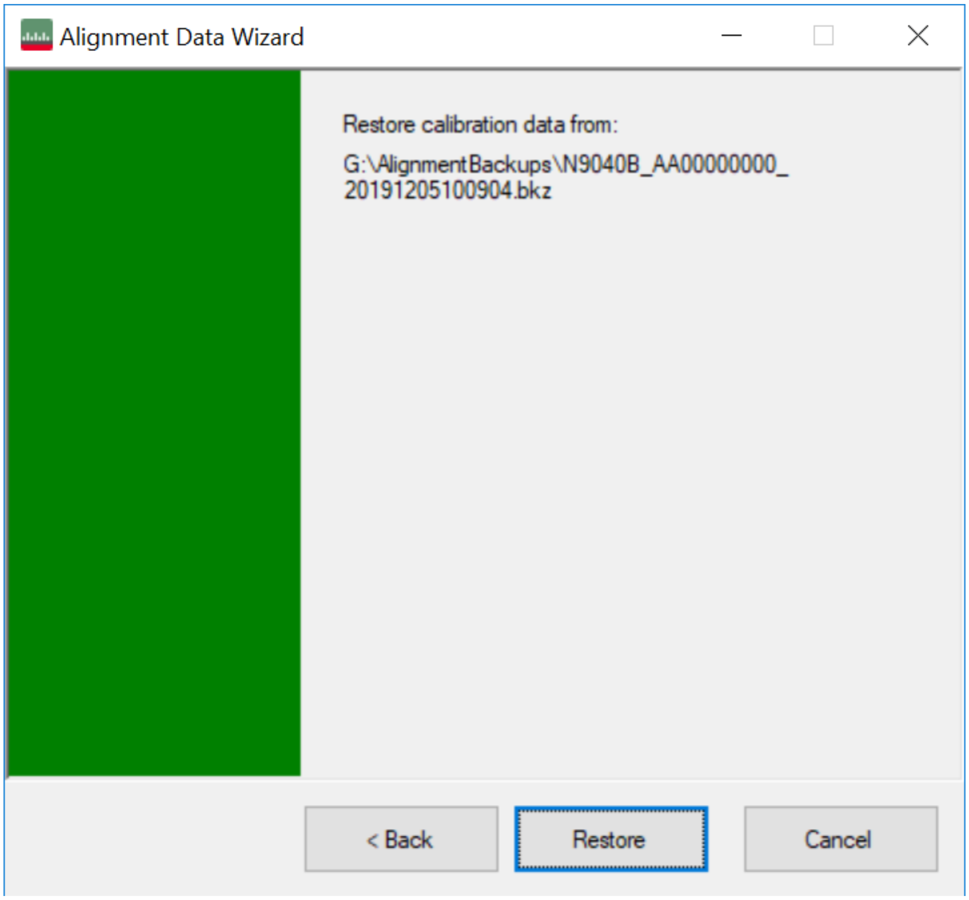
Select location containing a backup of this instrument's calibration data:

● External Removable Drive (or C: drive if unavailable)

G:\AlignmentBackups\N9040B_AA00000000_20191205100904

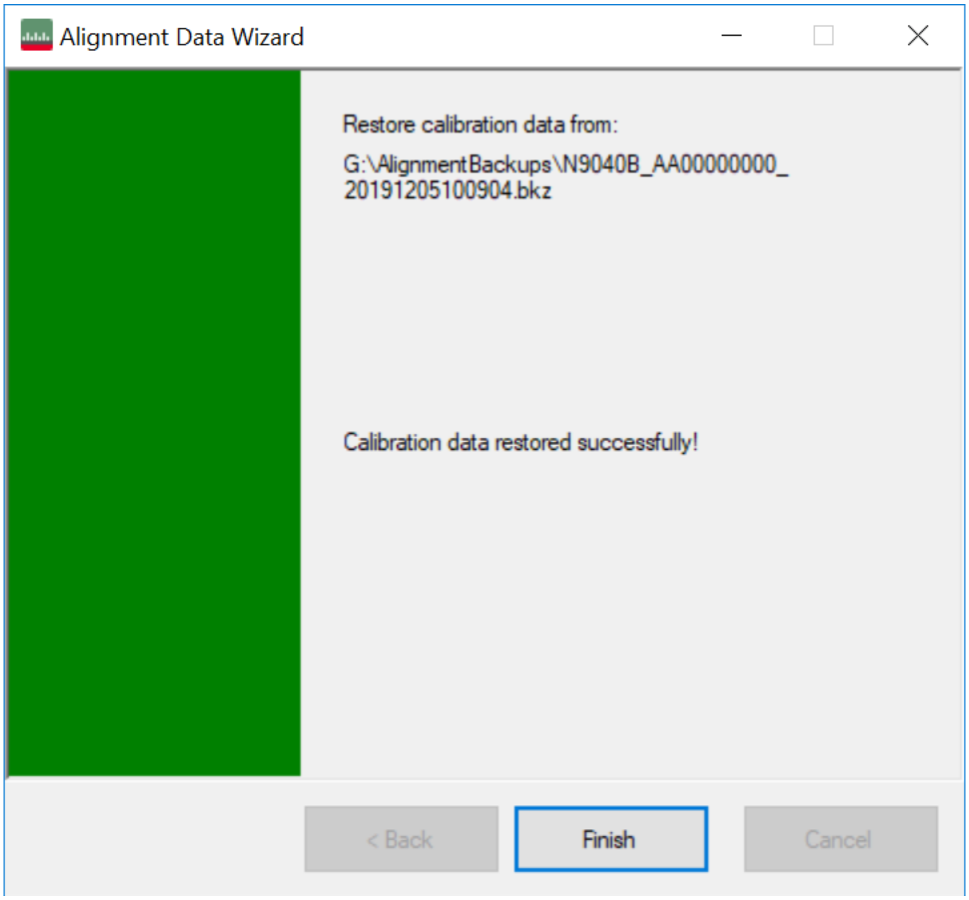
Changing the drive letter also modifies the path displayed in the box below. When this step is first loaded, the drive drop-down menu is populated with connected drives, which provide you with read access.

The path defaults to the `AlignBackups` folder. The most recent backup (`*.bkz` or `*.bak`) file in the folder will also be selected by default.



Restore calibration data from:

G:\AlignmentBackups\N9040B_AA00000000_
20191205100904.bkz

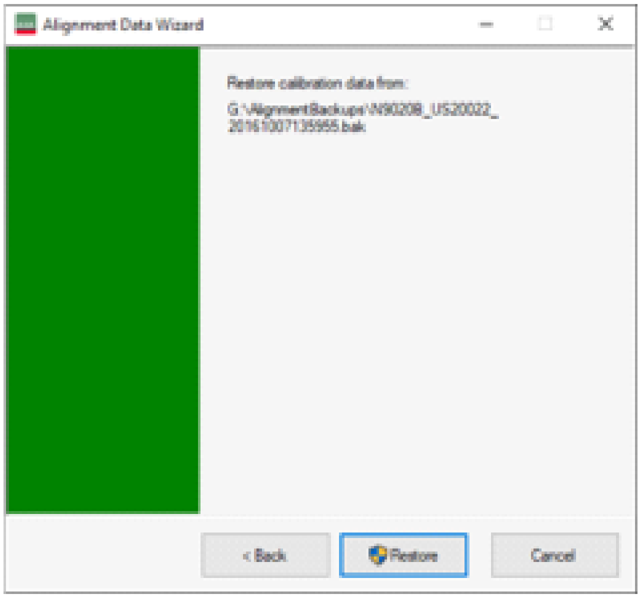


Restore calibration data from:

G:\AlignmentBackups\N9040B_AA00000000_
20191205100904.bkz

Calibration data restored successfully!

When restoring data in the legacy `.bak` format, Administrator privileges are required. You will be prompted when you attempt a restore (indicated by the UAC Shield on the **Restore** button below).



Restore calibration data from:

G:\AlignmentBackups\N9020B_US20022_20161007135955.bak

Perform Backup (without Flash) (Remote Command Only)

Invokes an alignment data backup operation to the provided location.

NOTE Keysight recommends that the specified location should be external to the instrument (USB or Mapped Network Drive).

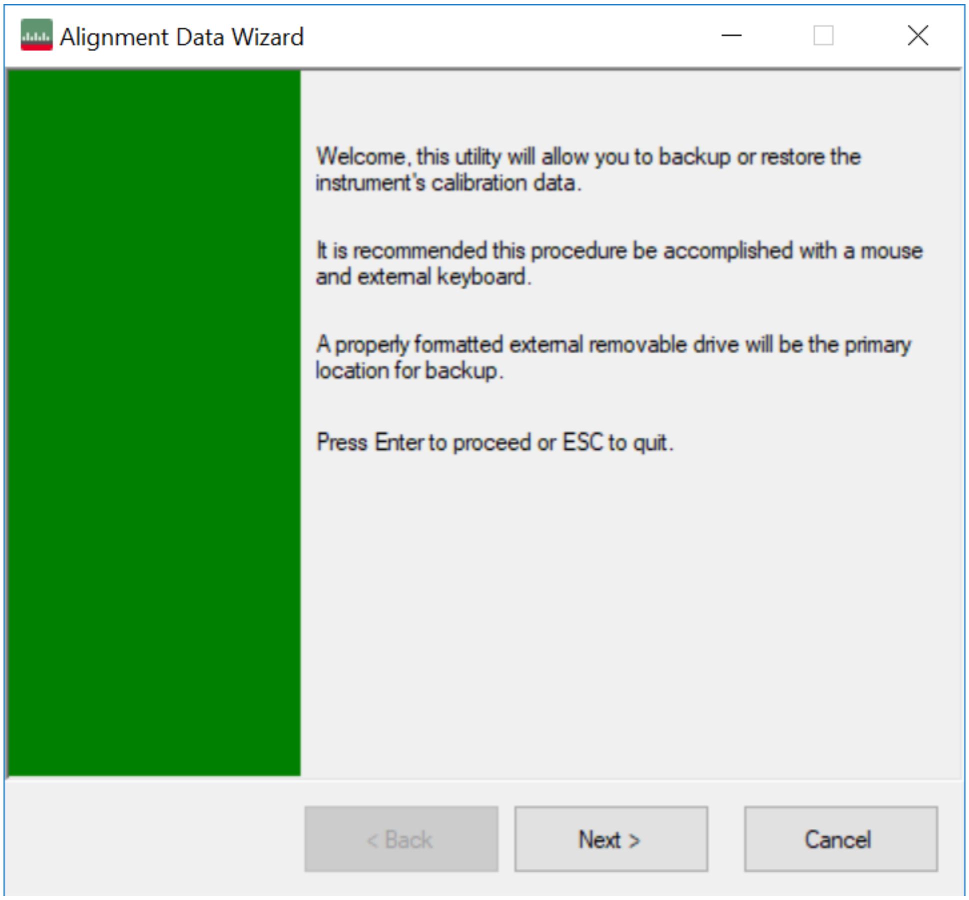
Remote Command	`:CALibration:DATA:BACKup <filename>`
Example	`:CAL:DATA:BACK "F:\AlignDataBackup_N9020A_US00000001_2008140100.bkz"`

Perform Restore (without Flash) (Remote Command Only)

Invokes an alignment data restore operation from the provided filename.

Remote Command	`:CALibration:DATA:RESTore <filename>`
Example	`:CAL:DATA:REST "F:\ AlignDataBackup_N9020A_US00000001_2008140100.bkz"`

Alignment Data Wizard (with Flash)



Welcome, this utility will allow you to backup or restore the instrument's calibration data.

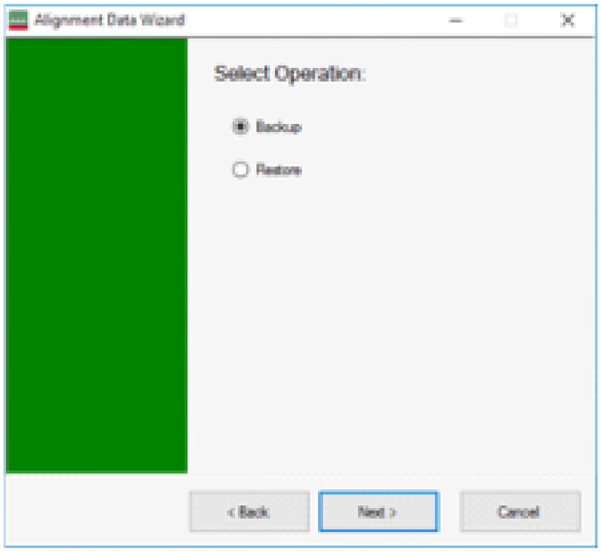
It is recommended this procedure be accomplished with a mouse and external keyboard.

A properly formatted external removable drive will be the primary location for backup.

Press Enter to proceed or ESC to quit.

If your instrument has Processor Assembly type PC6S or PC7S (see "Show System" on page 2288) the instrument has an internal flash EEPROM that can store a backup of the alignment data. In this case, the interface to the Alignment Data Wizard is enhanced to accommodate this internal storage. This section details the use of this internal flash. For details on using external storage, see the previous section ("Alignment Data Wizard (without Flash)" on page 2397).

The Alignment Data Wizard guides you through the operations of backing up or restoring alignment data.



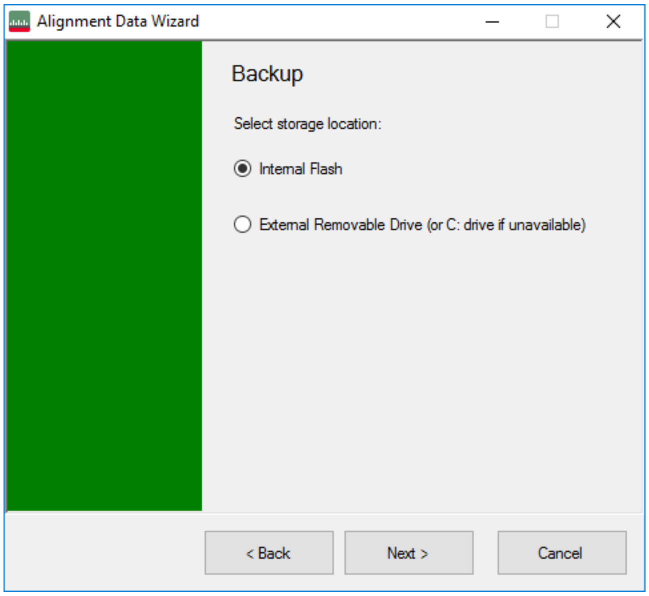
Select Operation:

● Backup

○ Restore

Having selected **Backup** or **Restore**, you then select the source or destination for the alignment data. As shown below, you can select either:

- Internal flash EEPROM, or,
- External Removable Drive (which includes the SD card described in "Backup or Restore Align Data..." on page 2396)

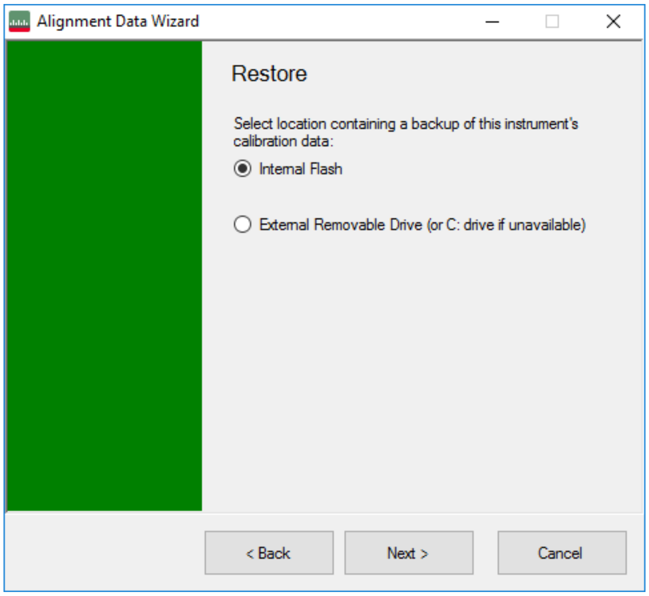


Backup

Select storage location:

● Internal Flash

○ External Removable Drive (or C: drive if unavailable)



Restore

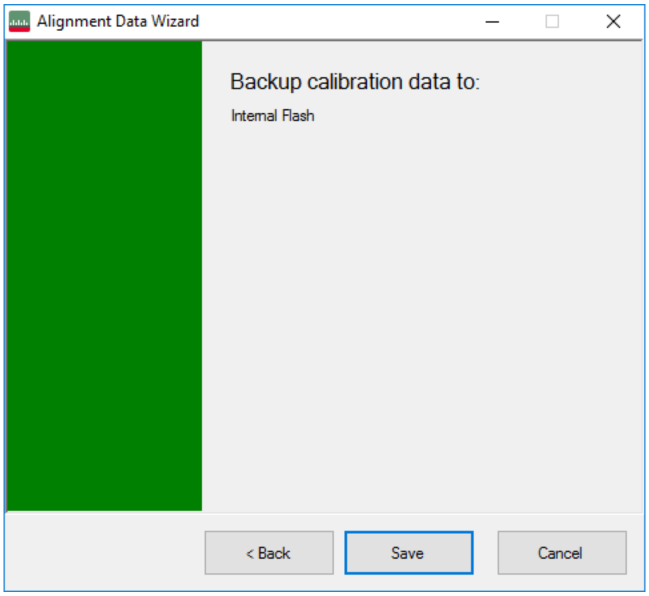
Select location containing a backup of this instrument's calibration data:

● Internal Flash

○ External Removable Drive (or C: drive if unavailable)

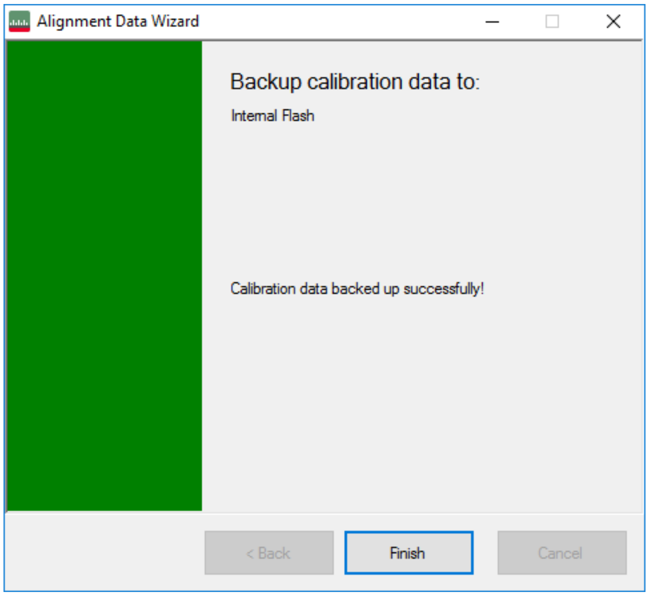
The final page of the wizard asks you to confirm the choices made in the previous pages. When the operation is complete, an indication is displayed on the same page, as below.

Backup



Backup calibration data to:

Internal Flash

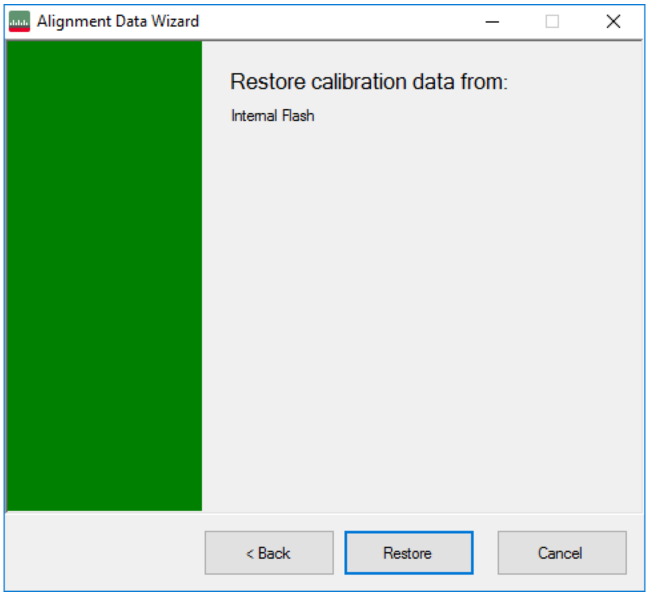


Backup calibration data to:

Internal Flash

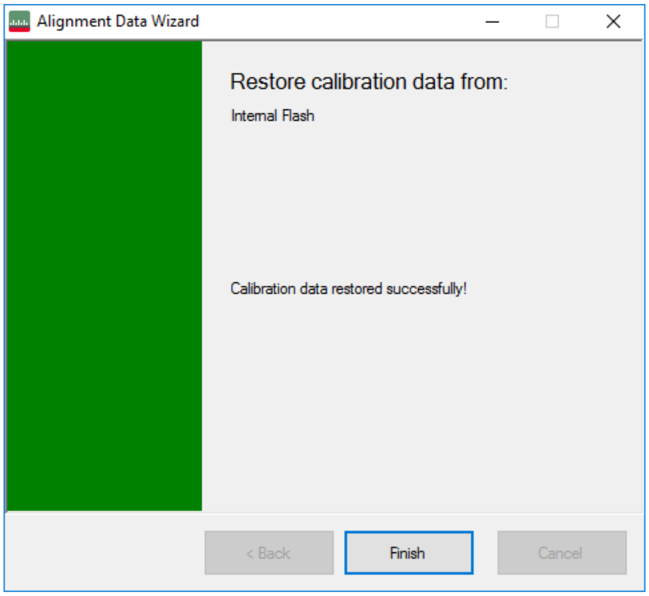
Calibration data backed up successfully!

Restore



Restore calibration data from:

Internal Flash

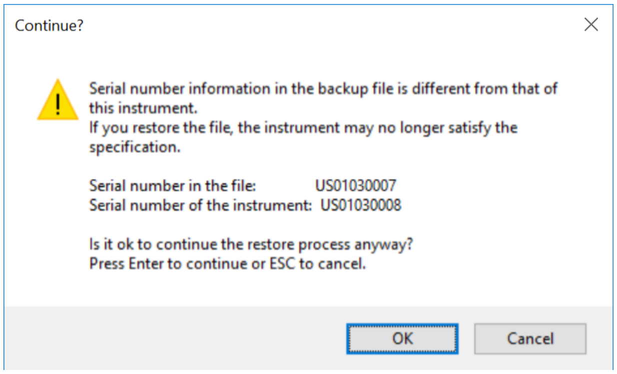


Restore calibration data from:

Internal Flash

Calibration data restored successfully!

When restoring alignment data, if the serial number information in the backup file being restored is different from that of the instrument, the following message appears (the serial numbers shown are examples):

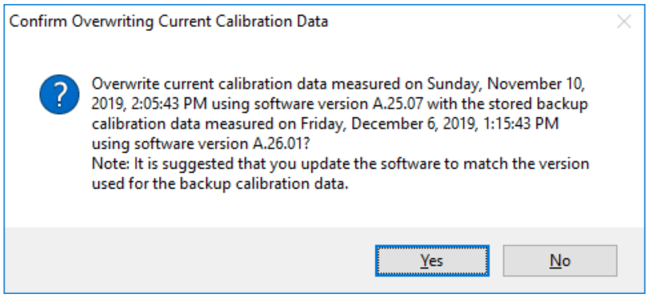


Serial number information in the backup file is different from that of this instrument.
If you restore the file, the instrument may no longer satisfy the specification.

Serial number in the file: US01030007
Serial number of the instrument: US01030008

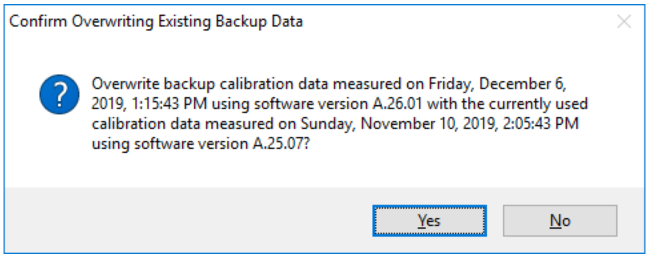
Is it ok to continue the restore process anyway?
Press Enter to continue or ESC to cancel.

Immediately before the actual restoration, a final confirmation message is displayed detailing what is being restored and the current database that will be overwritten on the disk (the dates and versions are examples):



Overwrite current calibration data measured on Sunday, November 10, 2019, 2:05:43 PM using software version A.25.07 with the stored backup calibration data measured on Friday, December 6, 2019, 1:15:43 PM using software version A.26.01?
Note: It is suggested that you update the software to match the version used for the backup calibration data.

When backing up alignment data to the flash, if there is already an existing backup on the flash, a final confirmation message is displayed detailing what is being backed up and what will be overwritten on the flash (again, the dates and versions are examples):



Confirm Overwriting Existing Backup Data

Overwrite backup calibration data measured on Friday, December 6, 2019, 1:15:43 PM using software version A.26.01 with the currently used calibration data measured on Sunday, November 10, 2019, 2:05:43 PM using software version A.25.07?

Perform Backup (with Flash) (Remote Command Only)

Invokes an alignment data backup operation to the internal flash EEPROM.

Remote Command	`:CALibration:DATA:INTernal:BACKup`
Example	`:CAL:DATA:INT:BACK`

Perform Restore (With Flash) (Remote Command Only)

Invokes an alignment data restore operation from the internal flash EEPROM.

Remote Command	`:CALibration:DATA:INTernal:RESTore`
Example	`:CAL:DATA:INT:REST`

Restore Alignment Defaults

Causes the Alignment system settings to be reset to their default values. This does not affect any Alignment data stored in the system.

After performing this function, it may impact the auto-alignment time of the instrument until a new alignment baseline has been established.

When **Alignments** is selected, a message appears saying:

```
This will reset all of the settings for the Alignment system to their default
values

No alignment data will be erased

This action cannot be undone. Do you want to proceed?
```

The dialog includes **OK** and **Cancel** controls, for you to affirm or cancel the operation.

Align Now All must be executed if the value of the Timebase DAC results in a change.

Example	`:SYST:DEF ALIG`
Notes	Alignment processing that results as the transition to **Auto Align Normal** will be executed sequentially; thus `*OPC?` or `*WAI` will wait until the alignment processing is complete

The parameters affected are:

Parameter	Setting
Timebase DAC	Calibrated
Timebase DAC setting	Calibrated value
Auto Align State	Normal (if the instrument is not operating with default alignment data, Off otherwise)
Auto Align All but RF	Off
Auto Align Alert	Time & Temperature

4.6.6.7 oGRF Preselector

This menu and all its submenus are only available in models with the RF Preselector, such as N9038B, or N9048B.

Dependencies	Only available in RF Preselector models

Align Now, 20 Hz to 30 MHz

Immediately executes an alignment of the receiver subsystem. The receiver will stop any measurement currently underway, perform an Align Now All, then perform the RF Preselector alignment, and then restart the measurement from the beginning (similar to pressing the Restart key).

The query `:CALibration:RFPSelector:CONDucted?` invokes the alignment of the RF Preselector on Conducted Band and returns a success or failure value. Successful completion clears the “Align 20 Hz to 30 MHz required” Error Condition, and clears bit 1 in the Status Questionable Calibration Extended Needed register. The elapsed time counter will begin for Last Align Now, Conducted Time, and the temperature is captured for the Last Align Now, Conducted Temperature. The alignment can be interrupted by pressing the Cancel (ESC) front-panel key or remotely with Device Clear followed by the :ABORt SCPI command. When this occurs, the Error Condition “Align 20 Hz to 30 MHz required” is set because new alignment data may be employed for an individual subsystem, but not a cohesive set of data for all subsystems.

The “Align 20 Hz to 30 MHz required” Error Condition will appear when this alignment has expired. User is now responsible to perform the Align Now, 20 Hz to 30 MHz to keep the receiver in warranted operation. This alignment can only be performed by user as it is not part of the Auto Align process.

Remote Command	`:CALibration:RFPSelector:CONDucted` `:CALibration:RFPSelector:CONDucted?`
Example	`:CAL:RFPS:COND`
Notes	The query returns 0 if successful, or 1 if failed When Align 20 Hz to 30 MHz is performing the alignment, bit 0 in the Status Operation register is set. Completion, or termination, will clear bit 0 in the Status Operation register This command is sequential; it must complete before further SCPI commands are processed. Interrupting the alignment from remote is accomplished by invoking Device Clear followed by the :ABORt command. Successful completion will clear bit 1 in the Status Questionable Calibration Extended Needed register and bit 0 in Status Questionable Calibration Extended Failure register A failure encountered during alignment will set the Error Condition “20 Hz to 30 MHz Alignment Failure” and set both bit 1 in the Status Questionable Calibration Extended Needed register and bit 9 in Status Questionable Calibration register
Dependencies	Does not appear in non-RF Preselector models, setting or querying the SCPI will generate an error
Couplings	Initializes the time for the Last Align Conducted Now, Conducted Time Records the temperature for the Last Align Conducted Now, Conducted Temperature
State Saved	No
Status Bits/OPC dependencies	Bit 8 or 9 may be set in the Status Questionable Calibration register Bit 1 may be set in the Status Questionable Calibration Extended Needed register Bit 0 may be set in the Status Questionable Calibration Extended Failure register

Align Now, 30 MHz to 3.6 GHz

Immediately executes an alignment of the receiver subsystem. The receiver will stop any measurement currently underway, perform an Align Now All, then perform the RF Preselector alignment, and then restart the measurement from the beginning (similar to pressing the **Restart** key).

The query (`:CALibration:RFPSelector:RADiated?`) invokes the alignment of the RF Preselector on Radiated Band and returns a success or failure value. Successful completion clears the “Align 30 MHz to 3.6 GHz required” Error Condition, and clears bit 2 in the Status Questionable Calibration Extended Needed register. The elapsed time counter begins for Last Align Now, Radiated Time, and the temperature is captured for the Last Align Now, Radiated Temperature. The alignment can be interrupted by pressing the **Cancel (ESC)** front-panel key, or remotely with Device Clear followed by `:ABORt`. When this occurs, the Error Condition “Align 30 MHz to 3.6 GHz required” is set, because new alignment data may be employed for an individual subsystem, but not a cohesive set of data for all subsystems.

The “Align 30 MHz to 3.6 GHz required” Error Condition appears when this alignment has expired. You must now perform **Align Now, 30 MHz to 3.6 GHz** to keep the receiver in warrantied operation.

Remote Command	`:CALibration:RFPSelector:RADiated` `:CALibration:RFPSelector:RADiated?`
Example	`:CAL:RFPS:RAD`
Notes	The query returns 0 if successful, or 1 if failed When **Align 30 MHz to 3.6 GHz** is performed, alignment, bit 0 in the Status Operation register is set. Completion, or termination, clears bit 0 in the Status Operation register This command is sequential; it must complete before further SCPI commands are processed. Interrupting the alignment from remote is accomplished by invoking Device Clear followed by `:ABORt`. Successful completion clears bit 2 in the Status Questionable Calibration Extended Needed register and bit 1 in Status Questionable Calibration Extended Failure register A failure encountered during alignment sets the Error Condition “30 MHz to 3.6 GHz Alignment Failure” and sets both bit 2 in the Status Questionable Calibration Extended Needed register and bit 9 in Status Questionable Calibration register
Dependencies	Does not appear in non-RF Preselector models, setting or querying the SCPI will generate an error
Couplings	Initializes the time for the Last Align Radiated Now, Radiated Time Records the temperature for the Last Align Radiated Now, Radiated Temperature
State Saved	No
Status Bits/OPC dependencies	May set Bit 8 or 9 in the Status Questionable Calibration register May set Bit 2 in the Status Questionable Calibration Extended Needed register May set Bit 1 in the Status Questionable Calibration Extended Failure register

Align Now, 20 Hz to 3.6 GHz

Immediately executes an alignment of the receiver subsystem. The receiver will stop any measurement currently underway, perform an Align Now All, then perform the RF Preselector alignment, and then restart the measurement from the beginning (similar to pressing the **Restart** key).

The query (`:CALibration:RFPSelector:FULL?`) invokes the alignment of the RF Preselector on both Conducted and Radiated Band and return a success or failure value. Successful completion clears the “Align 20 Hz to 3.6 GHz required” Error Condition, and clears bit 1 and bit 2 in the Status Questionable Calibration Extended Needed register. The elapsed time counter begins for Last Align Now, Conducted Time and Last Align Now Radiated Time and the temperature is captured for Last Align Now, Conducted Temperature and Last Align Now, Radiated Temperature. The alignment can be interrupted by pressing the **Cancel (ESC)** front-panel key or remotely with Device Clear, followed by `:ABORt`. When this occurs, the Error Condition “Align 20 Hz to 3.6 GHz required” is set, because new alignment data may be employed for an individual subsystem, but not a cohesive set of data for all subsystems.

The “Align 20 Hz to 3.6 GHz required” Error Condition appears when this alignment has expired.You must now perform the Align Now, 20 Hz to 3.6 GHz to keep the receiver in warrantied operation.

Remote Command	`:CALibration:RFPSelector:FULL` `:CALibration:RFPSelector:FULL?`
Example	`:CAL:RFPS:FULL`
Notes	The query returns 0 if successful, or 1 if failed When Align 20 Hz to 3.6 GHz is performed, alignment, bit 0 in the Status Operation register is set. Completion, or termination, clears bit 0 in the Status Operation register This command is sequential; it must complete before further SCPI commands are processed. Interrupting the alignment from remote is accomplished by invoking Device Clear, followed by `:ABORt`. Successful completion clears bit 1, bit 2 in the Status Questionable Calibration Extended Needed register and bit 0, bit 1 in Status Questionable Calibration Extended Failure register A failure encountered during alignment sets the Error Condition “20 Hz to 3.6 GHz Alignment Failure” and sets bit1, bit 2 in the Status Questionable Calibration Extended Needed register and bit 9 in Status Questionable Calibration register
Dependencies	Does not appear in non-RF Preselector models, setting or querying the SCPI generates an error
Couplings	Initializes the time for the Last Align Conducted Now, Conducted Time Initializes the time for the Last Align Radiated Now, Radiated Time Records the temperature for the Last Align Conducted Now, Conducted Temperature Records the temperature for the Last Align Radiated Now, Radiated Temperature
State Saved	No
Status Bits/OPC dependencies	May set Bit 8 or 9 in the Status Questionable Calibration register May set Bit 1 and 2 in the Status Questionable Calibration Extended Needed register May set Bit 0 and 1 in the Status Questionable Calibration Extended Failure register

Alert

Enables or disables the display of RF Preselector alignment required message on the status line. The instrument powers up with Alert ON.

Remote Command	`:CALibration:RFPSelector:ALERt ON | OFF | 0 | 1` `:CALibration:RFPSelector:ALERt?`
Example	`:CAL:RFPS:ALER OFF`
Notes	Error Condition is generated when alert is ON and any of the RF Preselector alignments has expired
Preset	Unaffected by Preset, but set to ON by **Restore Defaults** >"Alignments" on page 2343
State Saved	No
Range	OFF|ON

4.6.6.8 Scheduler

Setting the Scheduler to `ON` triggers execution of the scheduled task based on the recurrence and time set in the scheduler since the last successful of the specific alignment. A warning condition of “RF Preselector alignment scheduler is ON” appears when the scheduler is set to `ON`. `OFF` prevents the Scheduler from running any scheduled task.

Remote Command	`:CALibration:RFPSelector:SCHeduler:STATe ON | OFF | 0 | 1` `:CALibration:RFPSelector:SCHeduler:STATe?`
Example	`:CAL:RFPS:SCH:STAT OFF`
Preset	Unaffected by Preset, but set to `ON` by **Restore Defaults** > "Alignments" on page 2343
State Saved	No
Range	`OFF|ON`

Schedule Setup

Lets you schedule a task to run automatically at the background based on the recurrence and time set in the scheduler. Make sure that the instrument’s local time is accurate, because the Scheduler relies on this information to execute the task.

This dialog contains the following controls:

- "Task" on page 2417
- "Date/Time" on page 2418
- "Hour" on page 2419
- "Minute" on page 2419
- "Recurrence" on page 2419
- "Number of Weeks" on page 2419
- "Day" on page 2420

Task

There are 3 tasks that can be selected for the scheduler to run.

- Task 1 is the 20 Hz to 30 MHz alignment
- Task 2 is the 30 MHz to 3.6 GHz alignment

– Task 3 is the 20 Hz to 3.6 GHz alignment

Remote Command	`:CALibration:RFPSelector:SCHeduler:TASK T1 | T2 | T3` `:CALibration:RFPSelector:SCHeduler:TASK?`
Example	`:CAL:RFPS:SCH:TASK T1`
Notes	Changing the task does not reset the Scheduler time, and the alignment is based on the current scheduled configuration to occur
Preset	Unaffected by **Preset** but set to `T3` by **Restore Defaults** > "Alignments" on page 2343
State Saved	No
Range	Task 1 | Task 2 | Task 3

Date/Time

Lets you configure the scheduler to run a task starting from this date and time. The date and time rely on the instrument's local time to execute a scheduled task. The date format is "YYYY/MM/DD" and the time is 24-hour clock.

Remote Command	`:CALibration:RFPSelector:SCHeduler:TIME:STARt ”date”,”time”`
	`:CALibration:RFPSelector:SCHeduler:TIME:STARt?`
	This query returns data using the format ”YYYY/MM/DD; HH:MM:SS”

Example	`:CAL:RFPS:SCH:TIME:STAR ”2009/8/20”,”12:00:00”`
Notes	`“date”` is the date the task will run, in the form `YYYY/MM/DD` where: – `YYYY` is the four-digit representation of year (for example, 2009) – `MM` is the two-digit representation of month (for example, 01 to 12) – `DD` is the two-digit representation of the day (for example, 01 to 28, 29, 30 or 31 depending on the month and year) `“time”` is the time of day the task will run, in the form `HH:MM:SS` where: – `HH` is the two-digit representation of the hour in 24-hour format – `MM` is the two-digit representation of minute – `SS` is the two-digit representation of seconds
Preset	Unaffected by **Preset** but set to Current date and 00:00:00 by **Restore Defaults** > "Alignments" on page 2343
State Saved	No

Hour

Lets you configure the hour for the scheduled task. The command to configure the date and time parameters of the scheduler is the same; but they each have their own front panel-control.

Notes	See "Date/Time" on page 2418
Preset	Unaffected by **Preset** but set to Current hour and 00 by **Restore Defaults** > "Alignments" on page 2343
State Saved	No

Minute

Lets you configure the minute for the scheduled task. The command to configure the date and time parameters of the scheduler is the same; but they each have their own front panel-control.

Notes	See "Date/Time" on page 2418
Preset	Unaffected by **Preset** but set to Current minute and 00 by **Restore Defaults** > "Alignments" on page 2343
State Saved	No

Recurrence

Lets you configure the scheduler to run the task recurrently on a scheduled date and time. You can schedule it to run daily, weekly, or alternate weeks.

Remote Command	`:CALibration:RFPSelector:SCHeduler:RECurrence DAY | WEEK | OFF` `:CALibration:RFPSelector:SCHeduler:RECurrence?`
Example	`:CAL:RFPS:SCH:REC DAY`
Preset	Unaffected by **Preset** but set to `OFF` by **Restore Defaults** > "Alignments" on page 2343
State Saved	No
Range	`DAY | WEEK | OFF`

Number of Weeks

Lets you set the number of weeks that the scheduler will wait to trigger a task.

Remote Command	`:CALibration:RFPSelector:SCHeduler:RECurrence:WEEK <integer>` `:CALibration:RFPSelector:SCHeduler:RECurrence:WEEK?`

Example	`:CAL:RFPS:SCH:REC:WEEK 2`
Notes	New scheduled date to run the alignment task is updated when this parameter is changed
State Saved	No
Range	1-52
Min	1
Max	52

Day

Lets you set the Day of the Week the scheduler will run a scheduled task.

Remote Command	`:CALibration:RFPSelector:SCHeduler:RECurrence:DAY SUN | MON | TUE | WED | THU | FRI | SAT` `:CALibration:RFPSelector:SCHeduler:RECurrence:DAY?`
Example	`:CAL:RFPS:SCH:REC:DAY SUN`
State Saved	No
Range	Sunday | Monday | Tuesday | Wednesday | Thursday | Friday | Saturday

4.7 Licensing

Accesses capabilities for configuring the licenses in your instrument.

4.7.1 License Manager

Opens the License Explorer for Fixed and Transportable licenses.

NOTE **This feature is not available if Option SF1 is installed.**

For help on licensing, select **Help** in the menu bar at the top of the License Explorer window.

There are also several remote commands available for licensing. See:

- "Install License (Remote Command Only)" on page 2429
- "Remove License (Remote Command Only)" on page 2429
- "List Licenses (Remote Query Only)" on page 2430
- "Validate License (Remote Query Only)" on page 2431
- "Host ID Query (Remote Query Only)" on page 2431
- "List Borrowed Licenses (Remote Query Only)" on page 2426
- "Return a Borrowed License (Remote Command Only)" on page 2427

Notes	No equivalent remote command for this control

4.7.2 System Software Version Date

The date of the newest features introduced in this release of the firmware. This is *not* necessarily the same as the build date of the firmware, because the version date only changes when new features are added. For example, if A.18.06 has only defect fixes and no new features compared to A.18.05, then both A.18.05 and A.18.06 would have the same software version date.

For any feature to be enabled, the SW Support Expiration Date of the enabling license must be greater than or equal to the software version date when that feature was first introduced. See the Keysight web site for features related to a specific software application and their required support date.

The SCPI response is 3 integer values: `<year>,<month>,<day>`.

Remote Command	`:SYSTem:SOFTware:VERSion:DATE?`
Example	`:SYST:SOFT:VERS:DATE?`

4.7.3 Software Support Expiration Date

This date is encoded in each software license’s Version field in the `YYYY.MMDD` format. It specifies the end date of the support contract associated with this license. When a support contract is renewed, a new license is issued with an updated Version corresponding to the new contract’s end date. The functionality available for a license is determined by the features available before the expiration date. For example, if feature X is introduced in a release with System Software Version Date of `2017.0831`, then a license with a Software Support Expiration Date of `2017.0831` or greater would enable feature X, but `2017.0830` or earlier would not enable feature X.

The SCPI response is 3 integer values: `<year>,<month>,<day>`.

Remote Command	`:SYSTem:LKEY:SOFTware:SUPPort:EXPiration:DATE? <feature>`
Example	`:SYST:LKEY:SOFT:SUPP:EXP:DATE? "N9084EM0E-1FP"`
Dependencies	When `<feature>` is not a valid license, one of the following errors will be issued: – -224,“IllegalParameterValue;License is not installed” – -224,“IllegalParameterValue;Unknown license feature” – -224,“IllegalParameterValue;Support contract not offered for this license”

4.7.4 Network Licenses

Network Licenses are available over the customer’s network from a server the customer configures. The server has a count for each license and will only allow instruments to “check-out” a license up to that count. Once the count is reached for a specific license, further check-outs fail until one of the licenses is checked back in to the server. What this means is that it is possible for an instrument to have different features available to it based on what licenses are still available on the server when it tries to get licenses.

Setting up network licenses is done via the Keysight Floating License Manager (available on external Keysight web) and it has an Installation Guide that can be downloaded from that web page.

4.7.4.1 Application Licenses

Application Licenses (like N9077EM0E-1NP) are automatically checked out when entering the Mode that uses them, and they are automatically checked-in when leaving that Mode. Because the server may have already checked out the last license for the application to another instrument, there is now the possibility that a mode switch will fail because a required license could not be checked out from the server. If the server has a limited number of licenses compared to the number of users desiring to use that license, this may mean that switching from Mode A to Mode B then back to Mode A may fail when returning to Mode A because another instrument checked out the last available license while the user was in Mode B. Also, for Modes with multiple licenses for different features (like Multi-Standard Radio), the features available may also change when switching out of the Mode and back into it.

So, when using network licenses, it is necessary to check `:SYST:ERR?` after every Mode switch, to verify that it successfully switched. If the Mode's required licenses were not successfully checked out, the instrument posts the error:

-310,"System error; feature not licensed"

There is also a potential performance issue when using network licenses, because the instrument must communicate with the server on each license check-out and check-in. This operation is usually fast (a few milliseconds), but it depends on the network communication lag between the instrument and server. For remote servers on slow or congested networks, this could be significantly slower than that.

4.7.4.2 Instrument Software Options

Instrument software licenses are those that are reported via `*OPT?` the same as HW options. For example, N9040RT1B-1NP is an instrument software option, and is reported via `*OPT?` as `RT1`. Note that the license is composed of the model number (in this case `N9040B`) combined with the option code (`RT1`).

When instrument software options are available from a network server, the instrument automatically checks them out at start-up, and only checks them in when shutting down.

4.7.4.3 License Checked Out Query (Remote Query Only)

Shows whether the specified license is checked out from a server. Since network served licenses may not always be available when there are limited licenses available compared to the desired number of users, the features available on an instrument can vary. Use this query to see whether the feature is currently checked-out to the instrument. The return value is boolean (0 or 1), returning 1 if the feature exists and is checked out from a server. Note that querying a license that is local to the instrument (-xFP or -xTP) also returns 0, even though the license exists and is valid, because it does not require a check-out. Also, querying a license that does not exist returns 0.

Remote Command	`:SYSTem:LKEY:COUT? <feature>`
Example	`:SYST:LKEY:COUT? "N9080EM0E"` `1`
Notes	`<"OptionInfo">` contains the feature and the version. You must specify the feature but can omit the version. If you omit the version, the system regards it as the latest one Return Value: 0 if not checked out, 1 if checked out

4.7.4.4 List Licenses Checked Out (Remote Query Only)

Lists the licenses checked out from a server. Since network served licenses may not always be available when there are limited licenses available compared to the desired number of users, the features available on an instrument can vary. Use this query to see which features are currently checked-out to the instrument.

Remote Command	`:SYSTem:LKEY:COUT:LIST?`

Example	`:SYST:LKEY:COUT:LIST?`
	`#284`
	`N9073EM0E,2018.0831`
	`N9077EM0E,2018.0831`
	`N9080EM0E,2018.0831`
	`N9081EM0E,2018.0831`

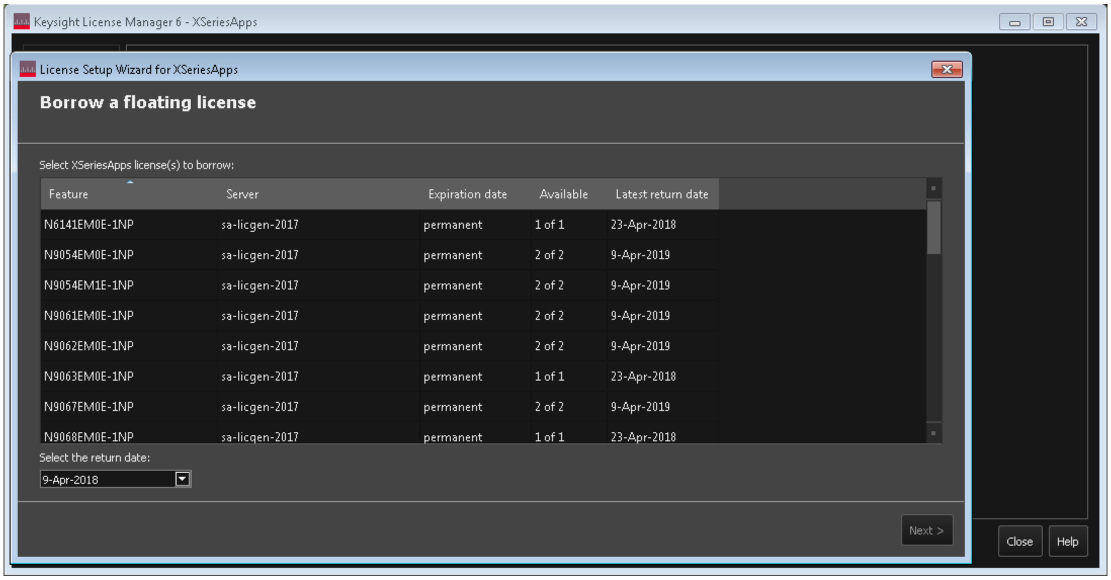
4.7.4.5 Borrowed Network Licenses

Network licenses can be borrowed from the network license server for a time. The maximum amount of time a license can be borrowed is specified in the license installed on the server and is set at the time the license is generated by Keysight. As part of the borrow operation, you specify how long to borrow the license. This borrow period is in hours and can be any time up to the maximum allowed by the license. Once borrowed, the license appears as a local license and can be used even when not connected to the network, and the instrument software treats them the same as other time-based licenses that are installed on the instrument. This means the licenses are validated when the instrument is started and then are used without the overhead of checking them out and back in when switching Modes. At the time of the borrow, a time is specified for how long the license will be borrowed. When that time expires, the license is automatically returned to the network license server even if the instrument is not connected to the network. If you are done with the license before it automatically returns to the network server, the license can be explicitly returned earlier.

4.7.4.6 Borrow a License

Licenses are borrowed by using the Keysight License Manager 6 application. This can be launched from the **System Licensing** screen.

Graphic



Borrow a floating license

Select XSeriesApps license(s) to borrow:

Feature	Server	Expiration date	Available	Latest return date
N6141EM0E-1NP	sa-licgen-2017	permanent	1 of 1	23-Apr-2018
N9054EM0E-1NP	sa-licgen-2017	permanent	2 of 2	9-Apr-2019
N9054EM1E-1NP	sa-licgen-2017	permanent	2 of 2	9-Apr-2019
N9061EM0E-1NP	sa-licgen-2017	permanent	2 of 2	9-Apr-2019
N9062EM0E-1NP	sa-licgen-2017	permanent	2 of 2	9-Apr-2019
N9063EM0E-1NP	sa-licgen-2017	permanent	1 of 1	23-Apr-2018
N9067EM0E-1NP	sa-licgen-2017	permanent	2 of 2	9-Apr-2019
N9068EM0E-1NP	sa-licgen-2017	permanent	1 of 1	23-Apr-2018

Select the return date: 9-Apr-2018

The corresponding remote command is:

Remote Command	`:SYSTem:LKEY:BORRow "<feature>[,<version>]",<return date>` `:SYSTem:LKEY:BORRow? "<feature>[,<version>]"`

Example	`:SYST:LKEY:BORR "N9080EM0E","20-Aug-2018"`
	`:SYST:LKEY:BORR? "N9080EM0E"`
	`:"20-Aug-2018"`

Notes	If `<version>` is not specified, the highest available version will be borrowed The `<return date>` is the day when the borrow will automatically be returned to the server
Dependencies	For the command, when `<feature>` is not a valid license, or when a license is not currently available for borrowing, one of the following errors is issued: – -224,“IllegalParameterValue;License is not installed” – -224,“IllegalParameterValue;Unknown license feature”

- -224,“IllegalParameterValue;License not available for borrowing”

Additionally, the return date is evaluated. If it is not a valid date, the following error is issued:

- -224,“IllegalParameterValue;Invalid return date”
- -200,"Execution error; No Available Borrow Licenses For Feature: <feature>"

The return date may be clipped to the maximum borrow allowed by the license. When this happens, the following warning is issued:

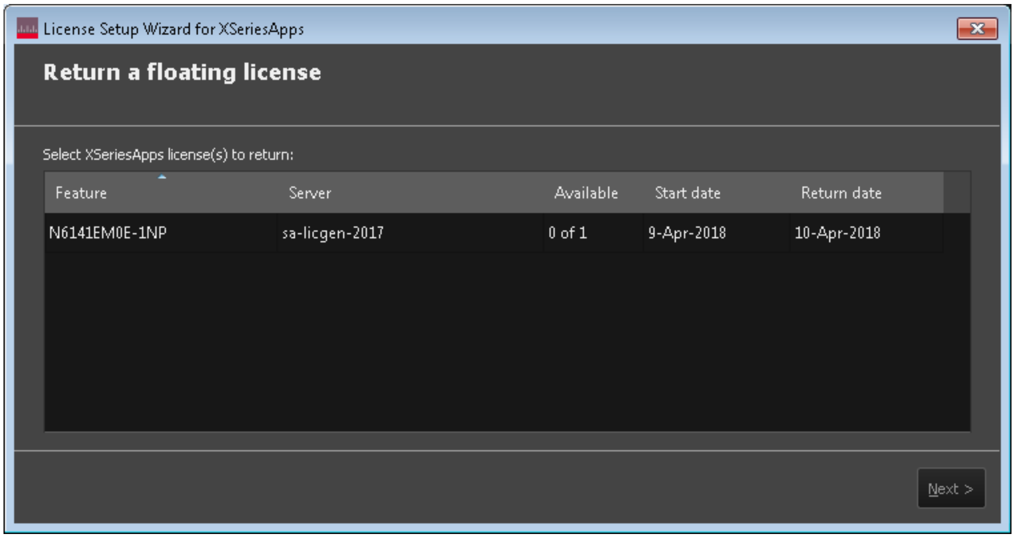
- -221,”Return date clipped to maximum of <max date>”

For the query, the return is the borrow return date (as a string in `dd-mmm-yyyy` format) if the license is borrowed. In all other cases, (not borrowed, not installed, etc.) the return is an empty string

4.7.4.7 Listing Borrowed Licenses and Return a Borrowed License

The Keysight License Manager 6 can also be used to see the currently borrowed licenses or return a license before the automatic return time.

Graphic



Return a floating license

Select XSeriesApps license(s) to return:

Feature	Server	Available	Start date	Return date
N6141EM0E-1NP	sa-licgen-2017	0 of 1	9-Apr-2018	10-Apr-2018

List Borrowed Licenses (Remote Query Only)

Remote Command	`:SYSTem:LKEY:BORRow:LIST?`
Example	`:SYST:LKEY:BORR:LIST?` `#266`

```
N9073EM0E,2018.0831,20-Aug-2018
N9077EM0E,2018.0831,20-Aug-2018
```

Return a Borrowed License (Remote Command Only)

Remote Command	`:SYSTem:LKEY:BORRow:RETurn "<feature>"`
Example	`:SYST:LKEY:BORR:RET "N9080EM0E"`
Dependencies	When `<feature>` is not a valid license or when a license is not borrowed, one of the following errors is issued: – -224,“IllegalParameterValue;License is not installed” – -224,“IllegalParameterValue;Unknown license feature” – -224,“IllegalParameterValue;License not borrowed”

4.7.4.8 Enabling Network Checkouts While Borrowed

The default for borrowed license use is that you will be explicitly borrowing all desired network licenses, and that all other available network licenses should be ignored. This allows you to intentionally limit the functionality available to the instrument to what is explicitly borrowed.

For example, the RT1/RT2 options that enable the RTSA Mode are automatically checked out when the instrument is started, because the hardware must be configured for them at startup time. If you do not intend to use RTSA, then by borrowing only the licenses you want to use and disabling other network checkouts, the RT1/RT2 licenses will not be checked out at startup. This leave more RTSA licenses available for others to use. Note that the instrument must be restarted after the borrowing has been done to ensure the release of any network licenses already acquired.

If your intent in borrowing is to ensure access to a particular feature or application, but you still want to opportunistically use other features or applications, the default behavior can be changed to enable network license checkouts even when licenses have been borrowed.

Remote Command	`:SYSTem:LKEY:BORRow:NETWork:COUT:ENABle`
Example	`:SYST:LKEY:BORR:NETW:COUT:ENAB 0` `:SYST:LKEY:BORR:NETW:COUT:ENAB?`
Dependencies	Only visible when licensing is configured to use a network server. SCPI is always available
Preset	Unaffected by **Preset** but set to 0 by **Restore Defaults** > "Misc" on page 2343 or **Restore Defaults** > "All" on page 2344
State Saved	Power On Persistent (survives shutdown and restart)

4.7.5 USB Portable Licenses

The USB Portable license is implemented with a physical dongle that is a USB device, like a USB thumb drive. It has a Host ID fixed in the dongle HW. It does not contain any writable data and so is acceptable to high security A/D customers. Transporting licenses from one instrument to another just requires moving the dongle and license files to the desired instrument. The license files can be installed on many instruments, but they will only be valid the one instrument that has the dongle. The use of USB portable licenses requires that the Keysight Floating License Manager is installed on the instrument. The licenses can then be added to the instrument's server.

USB Portable licenses are checked out and in like Network licenses. Because the licenses are local, there will be no network latency involved in the check-out/check-in, but there can still be a slight performance degradation compared to Fixed and Transportable licenses. If the instrument allows multiple concurrent instances of the X-Series software (as is the case for modular products), there may also be availability issues if all licenses are already checked out to other X-Series instances. Plugging/un-plugging the dongle is equivalent to transporting a license to/from the instrument, however, the software must be restarted whenever the dongle is plugged in.

4.7.6 Configuring Network and USB Portable Licenses

The Keysight Floating License Manager must be used to configure the Network or USB Portable licenses before the licenses can be used. Currently, an instrument can only be configured for Network or USB Portable licenses or both.

- To set up USB Portable licenses, in the Keysight Floating License Manager select “Start a floating license server with a license file” and add files containing the USB Portable licenses desired
- To set up Network licenses, in the Keysight Floating License Manager select “Connect to a floating license server” and enter the network server's name preceded by the “@” character (example: “@myserver”)
- To set up both Network and USB Portable license, first configure the USB Portable license, then configure the Network licenses, but append “;@localhost” to the server name (example: “@myserver;@localhost”). Whenever the configuration is changed, the X-Series software must be restarted

4.7.7 Floating License Manager

Opens the License Explorer for Network and USB Portable licenses.

NOTE **This feature is not available if Option SF1 is installed.**

For help on licensing, select **Help** in the menu bar at the top of the License Explorer window.

4.7.8 Install License (Remote Command Only)

Used to add a license to the instrument.

An example of such a command would be as below. The parameter is a unique 120-character code for each license.

```
SYST:LKEY “N9073A-
1FP”,”027253AD27F83CDA5673A9BA5F427FDA5E4F25AEB1017638211AC9F60D9C639FE53973590
9C551DE0A91”
```

Another example using one of the optional clauses.

```
SYST:LKEY "N9063EM0E-
1FP,2019.0330","02220210867E187713C9AFD4C90EA0DE2B674615DD0255798EE5B237A146A0D
4E411E0ABFE04D3CAFDFA","ISSUED=30-Mar-2018"
```

NOTE **This command does not work for Transportable, Network or USB Portable licenses.**

Remote Command	`:SYSTem:LKEY <"OptionInfo">, <"LicenseInfo">,<"Optional1">,<"Optional2">,<"Optional3">,<"Optional4">,<"Optional5">`
Notes	`<”OptionInfo”>` contains the feature and the version. You must specify the feature but can omit the version. If you omit the version, the system regards it as the latest one, since the system knows which version is supported for each feature `<”LicenseInfo”>` contains the signature, the expiration date, and serial number for transport if transportable. You must specify the signature, but you can omit the other information. If you omit the expiration date, the system regards it as permanent. If you omit the serial number, the system regards it as non-transportable. As a result, this supports reverse compatibility `<”Optional#”>` are optional parameters that may be needed to match the information in the original license

4.7.9 Remove License (Remote Command Only)

Removes a particular license.

An example of such a command would be as below. The parameter is a unique 120-character code for each license.

```
SYST:LKEY:DEL “N9073A-
```

`1FP”,”027253AD27F83CDA5673A9BA5F427FDA5E4F25AEB1017638211AC9F60D9C639FE53973590 9C551DE0A91”`

NOTE This command does not work for Transportable, Network or USB Portable licenses.

Remote Command	`:SYSTem:LKEY:DELete <"OptionInfo">,<"LicenseInfo">`
Notes	`<”OptionInfo”>` contains the feature and the version. You must specify the feature but can omit the version. If you omit the version, the system regards it as the latest one, if more than one version is installed `<”LicenseInfo”>` contains the signature, the expiration date, and whether be transportable. You must specify the signature, but you can omit the other information. If you omit the expiration date, the system regards it as permanent. If you omit the transportability, the system regards it as non-transportable. As a result, this supports reverse compatibility

4.7.10 List Licenses (Remote Query Only)

Returns a list of installed licenses.

Remote Command	`:SYSTem:LKEY:LIST?`

Notes	Return Value:
	An `<arbitrary block data>` of all the installed instrument licenses
	The format of each license is as follows
	`<Feature>,<Version>,<Signature>,<Expiration Date>,<Serial Number for Transport>,…`
	Return Value Example:
	`#3136`
	`N9073A-1FP,1.000,B043920A51CA`
	`N9060A-2FP,1.000,4D1D1164BE64`
	`N9020A-508,1.000,389BC042F920`
	`N9073A-1F1,1.000,5D71E9BA814C,13-aug-2005`
	<arbitrary block data> is:
	`#NMMM<data>`
	Where:
	`N` is the number of digits that describes the number of `MMM` characters. For example, if the data was 55 bytes, N would be 2
	`MMM` would be the ASCII representation of the number of bytes. In the previous example, N would be 55
	`<data>` ASCII contents of the data
	Additional fields may appear depending on the type of license (Fixed, Transportable, Network, USB Portable)

4.7.11 Validate License (Remote Query Only)

Lets you query whether a particular license is currently valid.

Remote Command	`:SYSTem:LKEY? <"OptionInfo">`
Example	`:SYST:LKEY? "N9073A-1FP"`
Notes	`<"OptionInfo">` contains the feature and the version. You must specify the feature but can omit the version. If you omit the version, the system regards it as the latest one Return Value: `<"LicenseInfo">` if the license is valid, null otherwise `<"LicenseInfo">` contains the signature, the expiration date, and serial number if transportable Return Value Example: `"B043920A51CA"`

4.7.12 Host ID Query (Remote Query Only)

Returns the Host ID as a string.

Remote Command	`:SYSTem:HID?`

4.8 Security

Accesses capabilities for operating the instrument in a security-controlled environment.

The **Security** page of the **System** menu has two controls: **USB Read/Write** and **Restore Security Defaults**.

Dependencies	Not available in UXM

4.8.1 USB Write Protect

The Windows operating system can be configured to disable write access to the USB ports for users who are in a secure environment where transferring data from the instrument is prohibited. The **USB Write Protect** control is a convenient way for you to disable write access to USB.

NOTE This control is only available to users with Administrator privileges.

Remote Command	`:SYSTem:SECurity:USB:WPRotect[:ENABle] ON | OFF | 0 | 1` `:SYSTem:SECurity:USB:WPRotect[:ENABle]?`

Example	Set USB ports to Read-only:
	`:SYST:SEC:USB:WPR ON`
	Set USB ports to Read-Write:
	`:SYST:SEC:USB:WPR OFF`

Notes	When the USB ports are in Read-only mode, then no data can be stored to USB, including the internal USB memory used for a back-up location for the calibration data
Dependencies	Grayed-out unless the current user has Administrator privileges
Preset	Unaffected by **Preset** or any "Restore Defaults" on page 2341. A Keysight Recovery sets the USB to write protect `OFF`
State Saved	No
Range	Read-Write | Read only

4.8.2 Restore Security Defaults

Sets USB Read/Write to Enable.

NOTE This control is only available to users with Administrator privileges.

4.9 Diagnostics

Displays a slider that allows you to view Hardware Statistics.

Dependencies	Not available in UXM

4.9.1 Show Hardware Statistics

Provides a display of various hardware statistics. The statistics include the following:

- Mechanical relay cycles (on models with mechanical relays)
- High and Low temperature extremes
- Elapsed time that the instrument has been powered-on (odometer)

Modular instruments display only time and temperature information.

Example	`:SYST:SHOW HWST`
Notes	The values displayed on the screen are only updated upon entry to the screen and not updated while the screen is being displayed

4.9.2 Pathwave Calibration Advisor...

This is a separate application that helps maintain your instrument at peak performance. You can set the cal interval, configure cal due reminders, check the cal status, view cal certificates and test reports, and contact Keysight for a cal service.

The embedded help documentation can be accessed in the instrument at: C:\Program Files\Keysight\Calibration Advisor\PCA.chm, or via the **?** button at the top right of the **PathWave Calibration Advisor** window.

4.9.3 Query the Mechanical Relay Cycle Count (Remote Query Only)

Returns the count of mechanical relay cycles.

Remote Command	`:SYSTem:MRELay:COUNt?`
Example	`:SYST:MREL:COUN?`
Notes	Query Only The return value is a comma-separated list of the individual counts for each mechanical relay The position of the relays in the list is:

	`“<Cal Signal>,<AC/DC>,<2dB #1 Atten>,<2dB #2 Atten>,<6dB Atten>,<10dB Atten>,<20dB Atten>,<30dB Atten>,<Fixed Atten>,<Low Noise Path Switch>,<Presel Bypass>”` Items in the list not pertaining to your hardware configuration return as `-999` for those items
Dependencies	*Not* supported by E6607C

4.9.4 Query the Operating Temperature Extremes (Remote Query Only)

Returns the low operating temperature extreme value. The value survives a power-cycle and is the temperature extreme encountered since the value was reset by the factory or service center.

Remote Command	`:SYSTem:TEMPerature:LEXTreme?`
Example	`:SYST:TEMP:LEXT?`
Notes	Value is in degrees Celsius at which the lowest operating temperature has been recorded since 1st power-up
State Saved	No

Returns the high operating temperature extreme value. The value survives a power-cycle and is the temperature extreme encountered since the value was reset by the factory or service center.

Remote Command	`:SYSTem:TEMPerature:HEXTreme?`
Example	`:SYST:TEMP:HEXT?`
Notes	Value is in degrees Celsius at which the highest operating temperature has been recorded since 1st power-up
State Saved	No

4.9.5 Query the Elapsed Time since 1st power on (Remote Query Only)

Returns the elapsed on-time in minutes since 1st power-on.

Remote Command	`:SYSTem:PON:ETIMe?`
Example	`:SYST:PON:ETIM?`
Notes	Query Only

4.10 Service

Accesses capabilities performed in the factory or under instructions from repair procedures. This key is only visible when the logged-in user is “`advanceduser`” or “`saservice`”. The first access to the **Service** menu after invoking the instrument application will require an authentication Service Code.

Dependencies	Not available in UXM

4.11 SCPI Recorder

Allows you to view active recording content, and edit the content. Right-click or touch and hold on any UI control to display a menu allowing you to record the SCPI associated with the control.

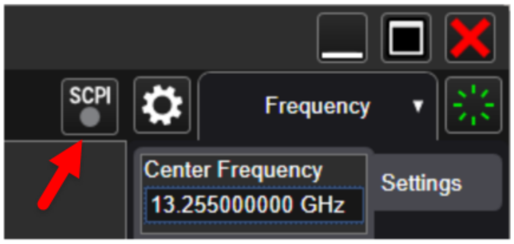
Selecting this tab displays the **Recorder** dialog on the right. The dialog displays the recorder table with the data in chronological order of recording. The Function Label column shows the feature name, for example, Center Frequency, and the SCPI column shows the full mnemonic corresponding to the feature.

4.11.1 Continuous SCPI Recording

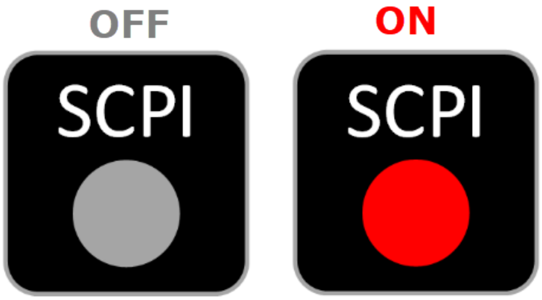
Toggles the state of continuous recording.

When enabled (`ON`), *all* user interaction with settings that are Immediate Actions, and that have associated SCPI commands or queries, are added as recording entries in chronological order. Not every User Interface action has a corresponding SCPI command/query, for example, navigation actions between dialogs and menus in the User Interface do not have corresponding SCPI commands. All settings or a measurement that are accessible via menus have SCPI commands, so modifying those settings will create entries in the Recorder.

As a convenience, this feature can also be toggled (without visiting the SCPI Recording menu) by clicking the SCPI icon which has been added to the left of the "gear" icon (as illustrated below):



Center Frequency
13.255000000 GHz



NOTE When recording is turned on, some entries are automatically created and added to the recording. These are: `:INST:CONF:<mode>:<meas>` (see "Mode" on page 106) and `*OPC?` (see "*OPC? - Operation Complete" on page 2991). These commands set the current Mode and Measurement, perform a **Mode Preset**, then cause the instrument to wait for the completion of any previous commands. When **Continuous SCPI Recording** fills the recording container to the limit, a warning message is displayed to notify you that the recording container is full and recording will be stopped, unless the recording limit is increased.

NOTE To maintain the integrity of recording, stop recording *before* sending remote commands to the instrument. Changes made to the instrument via remote SCPI are *not* recorded.

4.11.2 Recording Limit

When "Continuous SCPI Recording" on page 2436 is enabled, every change you make is recorded into the recording system, which can lead to extremely large recordings.

This value limits how much content can be saved into the recording table. You may change this number to suit your needs, but the value cannot be less than 0 or greater than 500. When the recording length reaches the limit, a warning is displayed to indicate that the recording size has reached the limit and recording will be stopped.

The default limit is 250. If the limit is reduced after recording entries are added, the reduced count cannot be less than the current number of entries in the recording. If the newly-entered limit is smaller than the existing number of entries, then the actual new limit is set to the current number of entries. Increasing the limit will increase memory consumption.

4.11.3 Play All

Clicking this control causes each of the entries in the SCPI Recorder table to be executed.

If execution results in any errors, then a message box showing the SCPI command, and its corresponding error are displayed after play has completed.

4.11.4 Play Selected

You can select a row in the SCPI recording table, then click **Play Selected** to play that entry. **Play Selected** is disabled if the recording table is empty, or when no row is selected. You can then select another row and play the selection, but, if you want to play back in a particular order, you must execute the plays in the desired sequence.

After playing the selected entry, the selected row is moved down by one entry.

4.11.5 Copy

Copies the SCPI column data to the system clipboard, to make it available for Paste operations.

4.11.6 Insert *OPC? Below

Certain queries and commands must be sent during instrument programming, but there is no corresponding user-interface control for these commands. This control allows you to insert one such query: `*OPC?` below the selected row.

4.11.7 Move Up

Moves the selected / highlighted row up by 1 slot. Note that moving a mode or measurement switch entry in the table may impact context for subsequent entries in the table.

4.11.8 Move Down

Moves the selected / highlighted row down by 1 slot. Note that moving a mode or measurement switch entry in the table may impact context for subsequent entries in the table.

4.11.9 Delete Row

Deletes the selected entry from the recording table. Note that some entries may have subsequent entries related to the row that you delete, for example, `*OPC?`, which may be added automatically after a mode or measurement switch.

4.11.10 Delete All

Deletes all entries from the recording table. A warning message is displayed: “All recording data will be deleted”.

To confirm that you want to delete the entire recording content, click **OK**, or click **Cancel** to avoid deleting it.

4.12 System Remote Commands (Remote Commands Only)

These commands have no front-panel key equivalent.

- "List installed Options (Remote Query Only)" on page 2439
- "Lock the Front-panel keys (Remote Command Only)" on page 2440
- "Lock Workstation (Remote Command Only)" on page 2440
- "List SCPI Commands (Remote Query Only)" on page 2442
- "Front Panel activity history (Remote Query only)" on page 2442
- "SCPI activity history (Remote Query only)" on page 2443
- "Instrument start time (Remote Query only)" on page 2443
- "SCPI Version Query (Remote Query Only)" on page 2444
- "Date (Remote Command Only)" on page 2444
- "Time (Remote Command Only)" on page 2444
- "Input Overload Enable (Remote Command Only)" on page 2445
- "Power Up (Remote Query Only)" on page 2445

4.12.1 List installed Options (Remote Query Only)

Lists the installed options that pertain to the instrument (signal analyzer).

Remote Command	`:SYSTem:OPTions?`
Example	`:SYST:OPT?`
Notes	The return string is a comma-separated list of the installed options. For example: `“503,P03,PFR”` `:SYSTem:OPTions?` and `*OPT?` are the same
State Saved	No

4.12.2 Lock the Front-panel keys (Remote Command Only)

Disables the instrument keyboard to prevent local input when the instrument is controlled remotely. Annunciation showing a “K” for `KLOCk` (keyboard lock) alerts the local user that the keyboard is locked. `KLOCk` is similar to the GPIB Local Lockout function; namely that no front-panel keys are active except for the **Power Standby** key. (The instrument is allowed to be turned-off if `KLOCk` is `ON`.) The `KLOCk` command is used in remote control situations where Local Lockout cannot be used.

Although primary intent of `KLOCk` is to lock-out the front panel, it will lock-out externally connected keyboards through USB. `KLOCk` has no effect on externally connected pointing devices (mice).

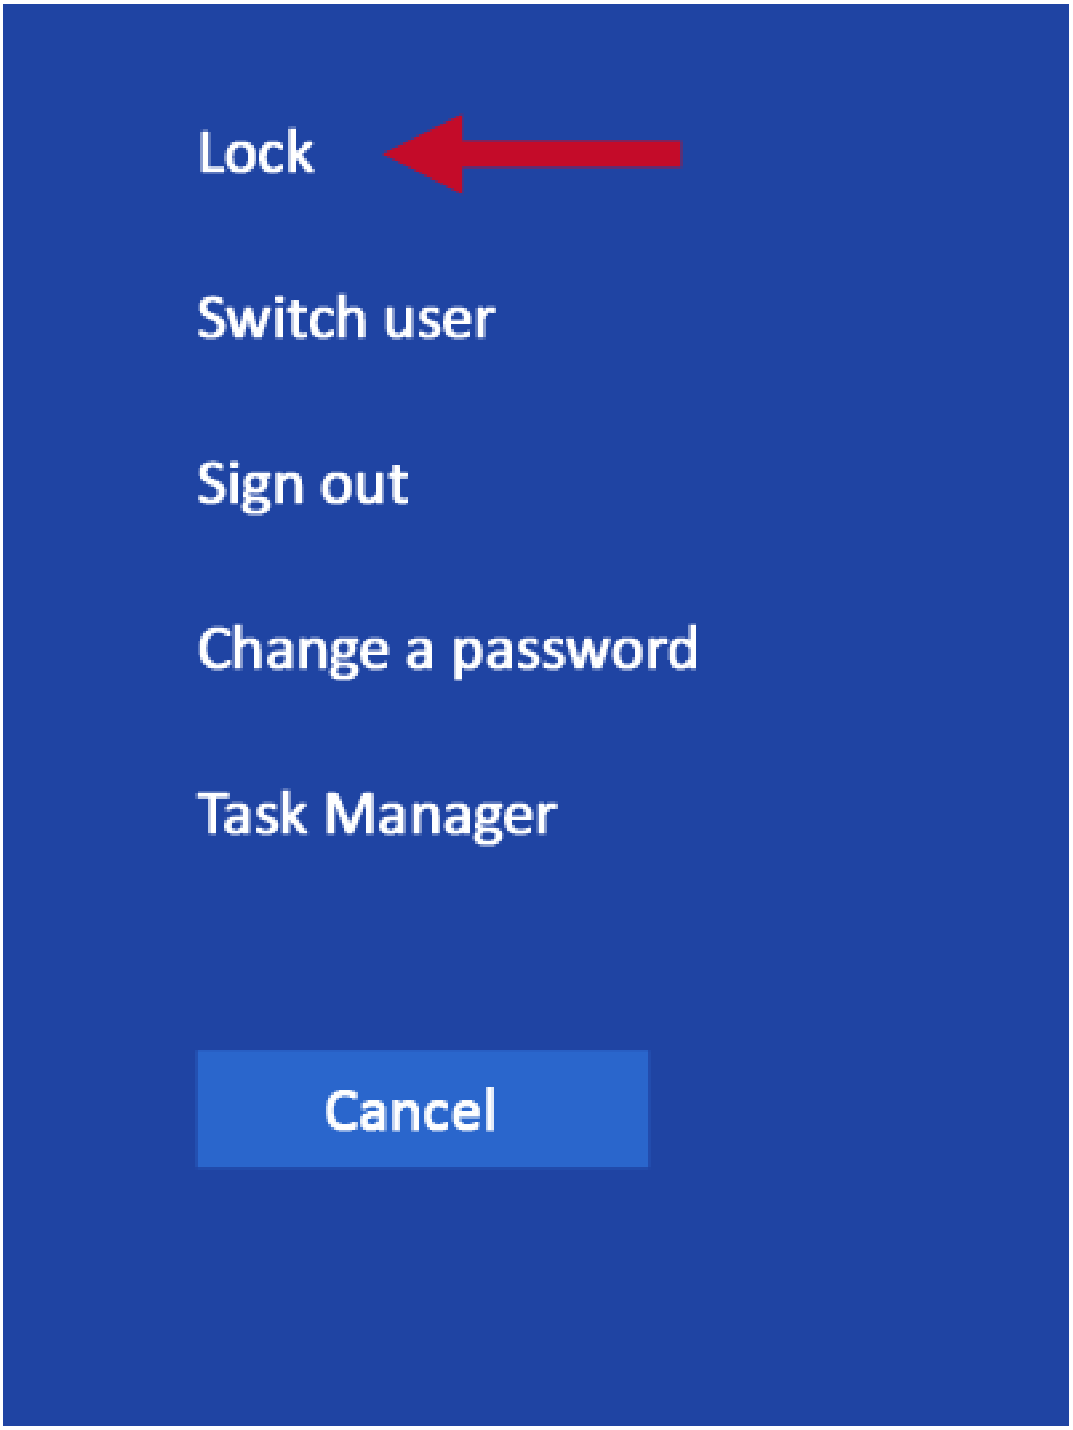
The front panel ‘**Local**’ key (**Cancel**/**Esc**) has no effect if `KLOCk` is `ON`.

See also "Local Button" on page 153.

Remote Command	`:SYSTem:KLOCk OFF | ON | 0 | 1` `:SYSTem:KLOCk?`
Example	`:SYST:KLOC ON`
Notes	Keyboard lock remains in effect until turned-off, or until the instrument is power-cycled
Preset	Initialized to `OFF` at startup, unaffected by **Preset**
State Saved	No

4.12.3 Lock Workstation (Remote Command Only)

Performs the same functionality as the `Win+L` function or the “Lock” function on the `CTL-ALT-DEL` screen in Windows.



As soon as you do this, the computer is locked. The initial login screen appears; no-one can access the computer at that point unless they have an account and know the account’s password.

Failure to initiate adds an error to the Windows event log for SA;

`"LockWorkStation - Failed to initiate function"`

See also "Local Button" on page 153.

Remote Command	`:SYSTem:LWSTation`
Example	`:SYST:LWST`
Notes	The lock remains in effect until a user logs in
State Saved	No

4.12.4 List SCPI Commands (Remote Query Only)

Outputs a list of the valid SCPI commands for the currently selected Mode.

Remote Command	`:SYSTem:HELP:HEADers?`
Example	`:SYST:HELP:HEAD?`
Notes	The output is an IEEE Block format, with each command separated with the New-Line character (`0x0A`)

4.12.5 Front Panel activity history (Remote Query only)

Instrument front panel usage can be monitored using `:SYSTem:METRics:FPANel?`. The monitoring occurs for front panel hardkey or softkey operation (including mouse or touch operation on instruments with Multi-Touch User Interface). The information of the usage pertains to the activity since the instrument application was started; the information does not persist after the application is terminated, or the instrument has been rebooted.

To prevent the front panel from being placed into Remote the monitoring must occur via an I/O protocol such as LAN Socket, or the remote program performing the monitoring must explicitly place the instrument into Local after the query has been performed.

Remote Command	`:SYSTem:METRics:FPANel?`
Example	`:SYST:METR:FPAN?`
Notes	The return value is a string with the format `“YYYY-MM-DD<space>HH:MM:SS”`, in instrument local time If no front panel activity has occurred since the instrument was booted (instrument application started), the return value will be the time the instrument application started. The instrument application start time can be obtained with the query `:SYSTem:METRics:STIMe?`

4.12.6 SCPI activity history (Remote Query only)

Instrument remote operation usage via SCPI can be monitored using `:SYSTem:METRics:SCPI?`. The monitoring occurs for SCPI control from any I/O channel (GPIB, USB, or LAN). The information of the usage pertains to the activity since the instrument application was started; the information does not persist after the application is terminated, or the instrument has been rebooted.

Remote Command	`:SYSTem:METRics:SCPI?`
Example	`:SYST:METR:SCPI?`
Notes	The return value is a string with the format “`YYYY-MM-DD<space>HH:MM:SS`”, in instrument local time The following commands are excluded from the history accounting: – `*IDN?` – `*OPT?` – `:SYSTem:DATE?` – `:SYSTem:TIME?` – `:SYSTem:PON:TIME?` – Queries in the `:SYSTem:ERRor` subsystem – Queries in the `:SYSTem:LKEY` subsystem – Queries in the `:SYSTem:METRics` subsystem – Queries in the `:SYSTem:MODule` subsystem If no SCPI activity has occurred since the instrument was booted (instrument application started), the return value will be the time the instrument application started. The instrument application start time can be obtained with `:SYSTem:METRics:STIMe?`

4.12.7 Instrument start time (Remote Query only)

To determine if instrument activity has occurred, `:SYSTem:METRics:STIMe?` can be used to determine the instrument application start time.

Remote Command	`:SYSTem:METRics:STIMe?`
Example	`:SYST:METR:STIM?`
Notes	The return value is a string with the format “`YYYY-MM-DD<space>HH:MM:SS`”, in instrument local time

4.12.8 SCPI Version Query (Remote Query Only)

Returns the SCPI version number with which the instrument complies. The SCPI industry standard changes regularly. This command indicates the version used when the instrument SCPI commands were defined.

Remote Command	`:SYSTem:VERSion?`
Example	`:SYST:VERS?`

4.12.9 Date (Remote Command Only)

The recommended access to the Date, Time, and Time zone of the instrument is through the Windows native control (Control Panel, or accessing the Task Bar). You may also access this information remotely, as shown in here and in "Time (Remote Command Only)" on page 2444.

Sets or queries the date in the instrument.

Remote Command	`:SYSTem:DATE "<year>,<month>,<day>"` `:SYSTem:DATE?`
Example	`:SYST:DATE "2006,05,26"`
Notes	`<year>` is the four-digit representation of year (for example, 2006) `<month>` is the two-digit representation of year (01 to 12) `<day>` is the two-digit representation of day (01 to 28, 29, 30, or 31, depending on the month and year) Unless the current account has Power User or Administrator privileges, sending this command generates an error, and no action is taken

4.12.10 Time (Remote Command Only)

Sets or queries the time in the instrument.

Remote Command	`:SYSTem:TIME "<hour>,<minute>,<second>"` `:SYSTem:TIME?`
Example	`:SYST:TIME "13,05,26"`
Notes	`<hour>` is the two-digit representation of the hour in 24-hour format `<minute>` is the two-digit representation of minute `<second>` is the two-digit representation of second Unless the current account has Power User or Administrator privileges, sending this command generates an error, and no action is taken

4.12.11 Input Overload Enable (Remote Command Only)

Input Overload errors are reported using the Input Overload status bit (bit 12 in the Measurement Integrity Status Register). Input Overloads (for example, ADC Overload errors) can come and go with great frequency, generating many error events (for example, for signals just on the verge of overload), and so are not put into the SCPI error queue by default. Normally the status bit is the only way for detecting these errors remotely.

Use this command to enable or disable Input Overload reporting to the SCPI queue. By default, reporting is disabled. Send `:SYSTem:ERRor:OVERload ON`. to enable, or `:SYSTem:ERRor:OVERload OFF` to disable. In either case, Input Overloads *always* set the status bit.

NOTE

For versions of firmware before A.10.01, Input Overload was only a Warning and so was never available in the SCPI queue, although it did set the status bit. For A.10.01 and later, Input Overload is an error, which can be enabled to the SCPI queue using this command.

Remote Command	`:SYSTem:ERRor:OVERload[:STATe] 0 | 1 | OFF | ON`
Example	Enable overload errors: `:SYST:ERR:OVER 1`
Preset	Set to `OFF` by **Restore Misc Defaults** (no Overload errors go to SCPI)
State Saved	Saved in instrument state

4.12.12 Power Up (Remote Query Only)

Returns a list of errors encountered during the application boot-up, such as: mismatch FW-FPGA, missing Calibration data, missing hardware, and construction errors.

Remote Command	`:SYSTem:ERRor:PUP?`
Notes	If no error occurs, the return value is: “No Power Up Errors” Return Value: `<List of error strings>` in <IEEE488 Block> format Return Value Example: “Power up errors, see details in Windows Event Log” "Unmatched FPGA Version(s), See details in Windows Event Log”

5 Preset

The Preset functions can be accessed in two ways:

- By pressing the **Mode Preset** or **User Preset** front panel keys:

- From the menu "Preset Dropdown" on page 2449, which appears when you press the green **Preset** icon (in the upper right corner of the display):

Types of Preset

The table below shows all possible presets, their corresponding SCPI commands and front-panel access methods.

Instrument settings are tiered in scope from those local to the current measurement to those global to all measurements and Modes. There are presets tailored to each scope. The table identifies the scope of each preset type.

NOTE

To get a Mode back to a fully predefined state, you should execute "Restore Mode Defaults" on page 2452 and "Input/Output Preset" on page 2453, but since **Input/Output Preset** is a global function, it affects *all* Modes.

Type Of Preset	SCPI Command	Scope of Preset	Front Panel Access
"Auto Couple" on page 2242	`:COUPle ALL`	Local to the current measurement, only affects Auto/Man variables	Meas Setup menu
Meas Preset	`:CONFigure:<meas>`	Local to the current measurement Does not preset the RF Source	Meas Setup menu
"Mode Preset" on page 2450	`:SYSTem:PRESet`	Local to the current Mode, global to all measurements in the Mode, affects most but not all parameters in the Mode Does not affect **Input/Output** or **System** variables Presets the RF Source	**Mode Preset** key "Preset Dropdown" on page 2449
"Restore Mode	`:INSTrument:DEFault`	Local to the current Mode, global to	"Preset

Type Of Preset	SCPI Command	Scope of Preset	Front Panel Access
Defaults" on page 2452		all measurements in the Mode, affects all parameters in the Mode, but does not affect **Input/Output** or **System** variables Does not preset the RF Source.	Dropdown" on page 2449
"Restore Defaults All Modes" on page 2459	`:SYSTem:DEFault MODes`	Affects all parameters in *all* Modes, but does not affect **Input/Output** or **System** variables Presets the RF Source	"Preset Dropdown" on page 2449
"Restore Screen Defaults" on page 2462	`:SYSTem:DEFault SCReen`	Deletes all Screens but one, restores that screen to its default mode and performs Mode Preset for that mode Does not affect **Input/Output** or **System** variables Presets the RF Source	"Preset Dropdown" on page 2449
"User Preset" on page 2455	`:SYSTem:PRESet:USER`	Local to the current Mode, global to all measurements in the Mode, affects all parameters in the Mode, as well as **Input/Output** variables Does not affect **System** variables	User Preset key "Preset Dropdown" on page 2449
"User Preset All Modes" on page 2458	`:SYSTem:PRESet:USER:ALL`	Same as **User Preset**, but affects all Modes in the current Screen	"Preset Dropdown" on page 2449
"User Preset All Screens" on page 2460		Affects the entire Screen Configuration; global to all Modes and Screens	"Preset Dropdown" on page 2449
`*RST`	`*RST`	Same as **Mode Preset**. Additionally always sets **Single/Cont** to **Single**	Not available from front panel
"Input/Output Preset" on page 2453	`:SYSTem:DEFault INPut`	Affects all **Input/Output** variables Does not preset the RF Source	Input/Output menu "Preset Dropdown" on page 2449 System > Restore Defaults
"Full Mode Preset" on page 2454	`:SYSTem:PRESet:FULL`	Same as **Mode Preset** + **Restore Mode Defaults** + **Input/Output Preset.** Essentially a factory preset of the current Mode Presets the RF Source	"Preset Dropdown" on page 2449
"Restore User	`:SYSTem:DEFault UINTerface`	Affects all variables in the "User	System > Restore

Type Of Preset	SCPI Command	Scope of Preset	Front Panel Access
Interface Defaults" on page 2326		Interface" group Does not preset the RF Source	Defaults User Interface tabs
"Restore Power On Defaults" on page 2335	`:SYSTem:DEFault PON`	Affects all variables in the "Power On" group Presets the RF Source	System > Restore Defaults Power On tabs
