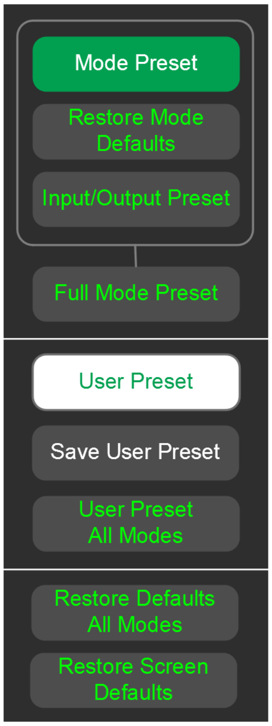
"Restore Alignment Defaults" on page 2412	`:SYSTem:DEFault ALIGn`	Affects all variables in the "Alignments" group Presets the RF Source	System > Restore Defaults Alignments tabs
"Restore Defaults" on page 2341 (Misc)	`:SYSTem:DEFault MISC`	Affects various variables not reset by other commands Presets the RF Source	System > Restore Defaults
"Restore Defaults" on page 2341 (All)	`:SYSTem:DEFault [ALL]` `:SYSTem:PRESet:PERSistent`	Affects all variables Presets the RF Source	System > Restore Defaults

5.1 Preset Dropdown

The Preset dropdown contains the following controls. In the image below, click a control for details of that control.



5.2 Mode Preset

Returns the current Mode to a known state. **Mode Preset***only* presets the current Screen; it does not affect any other Screens.

Mode Preset also presets the RF Source. In this sense, it is equivalent to pressing **Source Preset** on the **Input/Output, RF Source** menu panel.

Mode Preset can be executed from the "Preset Dropdown" on page 2449, or by pressing the **Mode Preset** front panel key:

It does the following for the currently active Mode:

- Aborts the currently running measurement
- Switches to the default measurement and displays the default menu for that measurement
- Sets most parameters for the Mode and all its Measurements to a preset state
- Clears the input and output buffers
- Sets Status Byte to 0

Mode Preset does *not* cause a Mode switch, nor affect any **Input/Output** or **System** settings (those set in the **System Settings** dialog).

Furthermore, some Mode settings are unaffected by **Mode Preset** (for example, Noise Floor Extensions, Limit Line data, reference marker numbers, etc.) These are only reset by "Restore Mode Defaults" on page 2452. In each parameter's definition table there is a note that indicates whether it is reset by **Mode Preset** or by **Restore Mode Defaults**.

See "Preset" on page 2446 for more details.

Remote Command	`:SYSTem:PRESet`
Example	`:SYST:PRES`
Notes	`*RST` is preferred over :`SYST:PRES` for remote operation. `*RST` performs **Mode Preset**, as done by the `:SYST:PRES` command, and sets the measurement mode to **Single** measurement rather than **Continuous**, for optimal remote control throughput See also "*RST - Reset" on page 2992
Status Bits/OPC dependencies	Clears all pending OPC bits. The Status Byte is set to 0

Backwards Compatibility Notes	In X-Series, the legacy “Factory Preset” has been replaced by **Mode Preset**, which only presets the currently active Mode, not the entire instrument. In X-Series, you preset the entire instrument by using **System**, **Restore System Defaults All**, which behaves essentially the same way as restore System Defaults did in ESA and PSA There is also no “Preset Type” as there was in PSA. The green **Mode Preset** front-panel key does a Mode Preset, and the **User Preset** front-panel key does a User Preset. The old `PRESet:TYPE` command is ignored (without generating an error), and `SYST:PRES` without a parameter does **Mode Preset** The settings and correction data under the **Input/Output** front-panel key (examples: Input Z Corr, Ext Amp Gain, etc.) are no longer part of any Mode, so they are not preset by **Mode Preset**. They are preset by **Restore Input/Output Defaults**, **Restore System Defaults All**. Note that because "User Preset" on page 2455 performs Recall State, and all these settings are saved in State, they *are* recalled when using **User Preset**

5.3 Restore Mode Defaults

Most settings within a Mode are affected by "Mode Preset" on page 2450, but some Mode settings are unaffected (for example, Noise Floor Extensions, Limit Line data, reference marker numbers, etc.) **Restore Mode Defaults** resets all these additional settings, as well as all the **Mode Preset** settings, *except* the RF Source.

In each parameter's definition table, there is a note that indicates whether that parameter is reset by **Mode Preset** or by **Restore Mode Defaults**.

Note that a Recall State affects all a Mode's settings, both the **Mode Preset** settings and the ones additionally affected by **Restore Mode Defaults**.

Restore Mode Defaults can be executed from the "Preset Dropdown" on page 2449.

When **Restore Mode Defaults** is selected, a message appears saying

```
This will reset all of the current Mode’s variables to their default state.
This action cannot be undone. Do you want to proceed?
```

The message provides **OK** and **Cancel** buttons, to let you confirm or cancel the reset operation.

Remote Command	`:INSTrument:DEFault`
Example	`:INST:DEF`
Notes	Clears all pending OPC bits. The Status Byte is set to 0
Couplings	Causes the currently running measurement to be aborted, and causes the default measurement to be active. Sets the Mode to a consistent state, with all default couplings set

5.4 Input/Output Preset

Resets the group of settings and data associated with the **Input/Output** front-panel key to their default values. These settings are not affected by "Mode Preset" on page 2450, because they are generally associated with connections to the instrument, which generally should remain unaltered.

All the variables set under the **Input/Output** front panel key are reset by **Input/Output Preset**, including Amplitude Corrections and Data (described in the **Corrections** section), with the exception of **RF Source** settings, which are unaffected.

By using **Input/Output Preset** and "Restore Mode Defaults" on page 2452, a full preset of the current Mode can be performed, with the caveat that, since **Input/Output Preset** is a global function, it affects *all* Modes.

Input/Output Preset can be executed from the **Input/Output** menu, from the "Preset Dropdown" on page 2449, or from the **Restore Defaults** menu under the **System** key.

When **Input/Output Preset** is selected, a message appears saying:

```
“This will reset all of the Input/Output variables to their default state,
including which input is selected, all Amplitude Correction settings and data,
all External Mixing settings, all Frequency Reference settings and all Output
settings.

It will not affect Alignment data or settings.

It will not affect RF Source settings.

This action cannot be undone. Do you want to proceed?”
```

The message provides **OK** and **Cancel** buttons, to let you confirm or cancel the operation.

Example	`:SYST:DEF INP` Presets all **Input/Output** variables to their factory default values

5.5 Full Mode Preset

Same as performing "Mode Preset" on page 2450, "Restore Mode Defaults" on page 2452, and "Input/Output Preset" on page 2453. Essentially a factory preset of the current Mode.

When **Full Mode Preset** is selected, a message appears saying:

```
This will reset all of the current Mode’s variables and all of the Input/Output
variables to their default state, including Input and Output selection and
settings, Amplitude Correction, Frequency Reference and RF Source settings.
```

```
It will not affect Alignment data or settings.
```

```
This action cannot be undone. Do you want to proceed?
```

The message provides **OK** and **Cancel** buttons, to let you confirm or cancel the operation.

Remote Command	`:SYSTem:PRESet:FULL`
Example	`:SYST:PRES:FULL`
Status Bits/OPC dependencies	Clears all pending OPC bits. The Status Byte is set to 0

5.6 User Preset

Recalls a state previously saved using "Save User Preset" on page 2457. You can save a **User Preset** state for each Mode, allowing you to define your own favorite state for each Mode and recall it at the touch of a single button.

User Preset can be executed by pressing the **User Preset** front panel key, or from the "Preset Dropdown" on page 2449.

Because **User Preset** is actually a Recall State, rather than a predefined Preset, it works a little differently from "Mode Preset" on page 2450, in that it affects all the variables that normally only reset on "Restore Mode Defaults" on page 2452, and it affects the **Input/Output** variables, because both of these are included in State files.

A default **User Preset** file is provided for each Mode, which simply matches the current Mode's state after **Restore Mode Defaults** and "Input/Output Preset" on page 2453 has been performed.

NOTE

In products that run multiple instances of the X-Series Application, all instances use the same location to save User Preset state. So, saving User Preset of one instance will overwrite the Save User Preset of another instance.

Remote Command	`:SYSTem:PRESet:USER`

Example	Save the User Preset:
	`:SYST:PRES:USER:SAVE`
	Recall the User Preset:
	`:SYST:PRES:USER`

Notes	`:SYST:PRES:USER:SAVE` is used to save the current state as the user preset state If loading a User Preset file from a different instrument, some settings may be limited and/or coupled differently, since the capabilities of the mode may have changed from when the User Preset file was saved
Status Bits/OPC dependencies	Clears all pending OPC bits. The Status Byte is set to 0
Backwards Compatibility Notes	In X-Series A-models, the **User Preset** key opened a menu that let you select from User Preset, Save User Preset, or User Preset All Modes. In B-models, the **User Preset** key immediately performs a **User Preset**, and the menu items are found under the **Preset** dropdown **User Preset** actually loads a state, and in legacy analyzers, it was possible to load a state without affecting the trace data, limit lines or correction data. Similarly, it was possible to do a User Preset without affecting the trace data, limit lines or correction data

In X-Series, “state” always includes all of this data; so whenever state is loaded, or **User Preset** is executed, all the traces, limit lines and corrections are affected

In ESA and PSA, **User Preset** affected the entire instrument’s state. In X-Series, **User Preset** only recalls the state for the active Mode. There is a User Preset file for each Mode. **User Preset** can never cause a Mode switch as it could in legacy analyzers. If you want to recall all Modes to their user preset file state, perform User Preset *after* switching into each Mode

User Preset recalls Mode state, which can now include data, such as traces, whereas in ESA and PSA, User Preset did not affect data

5.7 Save User Preset

Saves the state of the currently active Mode in a unique location, for recall by the key "User Preset" on page 2455. Each Mode has one such location, so, for each Mode, one User Preset can be defined.

Save User Preset can be executed from the "Preset Dropdown" on page 2449.

All the Mode variables are saved, including those reset by "Mode Preset" on page 2450, those only reset by "Restore Mode Defaults" on page 2452, and all **Input/Output** variables, so when you subsequently press **User Preset**, the instrument returns to the exact same setup that existed when you pressed **Save User Preset**. Thus, **User Preset** has wider scope than **Mode Preset**.

Remote Command	`:SYSTem:PRESet:USER:SAVE`
Example	`:SYST:PRES:USER:SAVE`
Notes	`:SYST:PRES:SAVE` creates the same file as if you requested `*SAV` or `:MMEM: STOR:STAT`, except that **Save User Preset** does not allow you to specify the file name or location

5.8 User Preset All Modes

Recalls all the User Preset files for each Mode, switches to the Power-on Mode, and activates the saved measurement from the Power-on Mode **User Preset** file.

User Preset All Modes can be executed from the "Preset Dropdown" on page 2449

See also "User Preset" on page 2455.

Remote Command	`:SYSTem:PRESet:USER:ALL`
Example	`:SYST:PRES:USER:SAVE` `:SYST:PRES:USER:ALL`
Notes	`:SYST:PRES:USER:SAVE` is used to save the current state as the user preset state
Status Bits/OPC dependencies	Clears all pending OPC bits. The Status Byte is set to 0

5.9 Restore Defaults All Modes

Resets all Modes in the current Screen back to their default states, just as **Restore Mode Defaults** does, switches the current Screen to the Power-on Mode, and causes the default measurement for the **Power On Mode** to be active in the current Screen. Only the current Screen is affected.

Restore Defaults All Modes can be executed from the "Preset Dropdown" on page 2449.

When **Restore Defaults All Modes** is selected, a message appears saying:

`This will reset all of the variables for all of the Modes in the current Screen to their default state. This action cannot be undone. Do you want to proceed?`

The message provides **OK** and **Cancel** buttons.

Example	`:SYST:DEF MOD`
Couplings	Causes the currently running measurement to be aborted, a switch to the Power-on Mode, and activates the default measurement for the Power-on Mode

5.10 User Preset All Screens

Recalls a screen configuration previously saved using "Save User Preset All Screens" on page 2461. The complete configuration of all Screens is loaded, including the state of each Screen.

Because **User Preset All Screens** performs a Recall State as part of its function, it affects all variables that are normally only reset by "Restore Mode Defaults" on page 2452, and affects **Input/Output** variables, because both are included in State files.

Note that recalling a screen configuration in this manner wipes out your current screen configuration, and all states of all Screens.

Notes	"Save User Preset All Screens" on page 2461 is used to save the current screen configuration as the "user preset all screens" configuration If loading a **User Preset All Screens** file from a different instrument, some settings may be limited and/or coupled differently, since the capabilities of the Mode may have changed from when the **User Preset All Screens** file was saved
Status Bits/OPC dependencies	Clears all pending OPC bits The Status Byte is set to 0

5.11 Save User Preset All Screens

Saves the current Screen Configuration in a unique location, for recall by "User Preset All Screens" on page 2460.

Save User Preset All Screens can be executed from the "Preset Dropdown" on page 2449.

Besides the screen configuration, *all* Mode variables of all Screens are saved, including those reset by "Mode Preset" on page 2450, and those only reset by "Restore Mode Defaults" on page 2452, as well as all **Input/Output** variables, so when you subsequently press **User Preset All Screens**, the instrument returns to the exact Screen setup that existed when you pressed **Save User Preset All Screens**.

Notes	Creates the same file as if you requested **Screen Config + State** save, except that **Save User Preset All Screens** does not allow you to specify the file name or location

5.12 Restore Screen Defaults

Resets the Screen configuration to the factory default; deleting all screens, all screen names, all screen states, and setting "Multiscreen" on page 193 to Off. A single screen will remain, set to the Power-on Mode, in a preset state with the default screen name.

Restore Screen Defaults can be executed from the "Preset Dropdown" on page 2449.

When **Restore Screen Defaults** is selected, a message appears saying:

`This function will delete all defined screens and their settings. This action cannot be undone.`

`Do you want to proceed?`

The message provides **OK** and **Cancel** buttons.

Example	`:SYST:DEF SCReen`

5.13 Preset Type (Remote Command Only)

Remote Command	`:SYSTem:PRESet:TYPE FACTory | MODE | USER` `:SYSTem:PRESet:TYPE?`
Example	`:SYST:PRES:TYPE FACT`
Notes	Supported for backwards compatibility only. It is a no-op, which does not change the behavior of any preset operation
Preset	Unaffected by Preset, but set to `MODE` by **Restore System Defaults->All**
State Saved	No

5.14 Restart Instrument (Shutdown)

Shuts down the instrument, then reboots it.

Remote Command	`:SYSTem:PUP`
Example	`:SYST:PUP`

5.15 Restart Application (Application Shutdown)

Restarts the instrument application without rebooting the instrument. Before you send this command, make sure you have saved any trace or measurement data that you want to preserve.

Remote Command	`:SYSTem:PUP:PROCess`
Example	`:SYST:PUP:PROC` After sending this command, you must wait for the instrument software to restart
Notes	You cannot use `*WAI` or `*OPC?` to synchronize operation after a restart. This command stops and restarts the instrument application, so the SCPI operation is terminated and restarted A remote program must wait a fixed time before resuming sending commands to the instrument. The appropriate wait time depends on which applications are pre-loaded

5.16 System Log Off (Remote Command Only)

Provides a means to terminate all open Windows applications, and log off the current user. This is equivalent to performing the Windows command:

```
shutdown -l -f -t0
```

Remote Command	`:SYSTem:LOFF`
Example	`:SYST:LOFF`
Notes	Initiates an immediate log off of the current user. Exits the instrument application, so any unsaved measurement results will be lost. You cannot use `*WAI` or `*OPC?` to synchronize operation. In addition to the instrument application, all other Windows programs will be terminated, without the opportunity to save any work in progress. To perform a subsequent login, and regain instrument operation, human intervention will be required

5.17 Power Standby (Instrument Shutdown)

Pressing the power switch powers down the instrument. You are warned that shutting down will cause the application to lose unsaved data, and the instrument lets you respond to this warning before shutting down.

The command below has the same effect, except that you can specify Normal mode (`NORMal`) or Forced mode(`FORCe`):

– In `NORMal` mode, the system waits until you respond to the warning prompt

– In `FORCe` mode, the system shuts down after 20 seconds, and all data will be lost

If the instrument is not properly shut down prior to removal of line power, the system will validate the Journaling File System and the Power-On Last State (if the instrument is in Power-On Last State) during the following power-on. If a problem is detected, a message appears indicating that the system ‘recovered’ from an inappropriate shutdown. This is only an issue if **Power-On Type** is Last State. If the Last State is not valid, the instrument will power up in the last active Mode, but will perform "Mode Preset" on page 2450.

Remote Command	`:SYSTem:PDOWn [NORMal | FORCe]`
Example	`:SYST:PDOW` Executes a normal shutdown
Notes	If no parameter is sent, `NORMal` is assumed

6 Input/Output

Accesses menus that let you control the Input/Output parameters of the instrument. In general, these are functions associated with external connections to the instrument, either to the inputs or the outputs.

Input/output connections tend to be based on situation-specific hardware set up. For that reason, input/output settings do *not*, in general, change when you perform a Mode Preset. You can revert to the default values in one of three ways:

- Use **Restore Input/Output Defaults**, in the **Input/Output** menu
- Use **System->Restore System Defaults->Input/Output Settings**
- Use **System -> Restore System Defaults->All**

The settings survive a Preset and a Power cycle.

A few Input/Output settings *do* respond to Mode Preset. For example, if the Calibrator is on, **Preset** turns it off, and if DC coupling is in effect, **Preset** switches it to AC. These exceptions are noted in the SCPI tables for the excepted functions.

Input/Output features are common across multiple Modes and Measurements. In general, they do not change when you change Mode or Measurement, although some controls appear only in certain measurements.

6.1 RF Source

Lets you control and configure the internal RF Source. This tab only appears in models that support a built-in independent RF Source, which include E7760B, and modular products such as EXM and VXT.

External Source Control and built-in Tracking Sources are controlled using the **Source** tab in **Meas Setup**.

Dependencies	Only appears in models that support a built-in independent RF Source, such as E7760B, EXM and VXT

6.1.1 RF Output

Sets the source RF power output state.

Remote Command	`:OUTPut[:EXTernal][:STATe] ON | OFF | 1 | 0` `:OUTPut[:EXTernal][:STATe]?`
Example	`:OUTP OFF` `:OUTP?`
Notes	This setting is for the independent mode and has no effect on the "List Sequencer" on page 2479. If **Sequencer** is ON, the List Sequencer controls the source output, and this key is grayed-out When **Sequencer** is `OFF`, makes source leave List Sequencer and this setting is blanked out, taking effect immediately
Dependencies	For E7760B, the RF Output cannot be set to ON if the RF Output port is set to NONE. If you attempt to set RF Output to ON in this situation, the error message -221, “Settings conflict; Source Output is not available while Output Port is None” is displayed `:OUTPut:EXTernal[:STATe]` is supported only when Option ESC is installed. Otherwise, only `:OUTPut[:STATe]` is supported
Preset	`OFF`
Range	`ON|OFF`

6.1.2 RF Output Port

Specifies the RF Output Port used by the internal source.

Switching from the RF Output port to one of the RFIO ports changes the transmitter performance of the instrument.

The NONE selection is available to allow setting a half-duplex port to an Input, if it was previously assigned as an Output. Set the Output to NONE first, then any port can be assigned as an Input.

When using VXT M9410A/11A/15A/16A with Remote Radio Heads (such as the Keysight M1740A mmWave Transceiver for 5G), the choices in the dropdown menu appear as:

Head h RFHD p

For example, if you have two Radio Heads (numbered 1 and 2), each of which have two RF half-duplex ports, the choices for these ports will appear as below:

Head and Port	Choice in dropdown	SCPI parameter
Head 1, port RF Tx/Rx 1	Head 1 RFHD 1	RRH1RFHD1
Head 1, port RF Tx/Rx 2	Head 1 RFHD 2	RRH1RFHD2
Head 2, port RF Tx/Rx 1	Head 2 RFHD 1	RRH2RFHD1
Head 2, port RF Tx/Rx 2	Head 2 RFHD 2	RRH2RFHD2

When using the E7770A Common Interface Unit, outputs may come from the DUT IF OUT ports on the rear of the CIU or the half-duplex ports on the front of the CIU labeled DUT IF In/Out. You would select GUI parameter IF Out n or SCPI parameter IFOutn for the DUT IF OUT ports or GUI parameter IFHD n or SCPI parameter IFHDn for the DUT IF In/Out ports. See "RF Input Port" on page 2583 “Parameters for VXT M9410A/11A/15A/16A and EXM when used with Radio Heads/CIU” for more details.

Remote Command

`[:SENSe]:FEED:RF:PORT:OUTPut RFOut | RFIO1 | RFIO2 | RFIO3 | RFIO4 | RFHD | RFFD | A1 | A2 | A3 | B1 | B2 | B3 | IFIO1 | IFIO2 | GEN | TR | RRHhRFHDp | IFOutn | IFHDn | NONE`

For details of each option, see "Port Options" on page 2471

`[:SENSe]:FEED:RF:PORT:OUTPut?`

Example

Set output to RF Output:

`:FEED:RF:PORT:OUTP RFO`

Set output to Radio Head 1, RF Tx/Rx Port 2:

`:FEED:RF:PORT:OUTP RRH1RFHD2`

Dependencies

Only appears in models that support multiple output ports. If the SCPI command is sent with unsupported parameters in any other model, an error is generated, -221, “Settings conflict; option not installed”

`RFHD` and `RFFD` are only available on VXT. Option HDX is required to enable RFHD port. Option FDX is required to enable RFFD port

For E7760B: Ports IFIO1 and IFIO2 are available if Option RF2 is installed. Ports A1, A2, A3, B1, B2, B3 are available if Option RF3 is installed. Attempting to select a port for which the option is not present generates the error, -241, “Hardware missing; Output not available”

A port cannot be selected as an Output while it is occupied as an Input. If the SCPI command is sent while the port is occupied, an error is generated, -221, “Settings conflict; Output Port is not available while occupied by Input”

Additionally, the mmWave ports are divided into two banks: the A Bank and the B Bank. A port cannot be selected as an Output if any port on the *same* bank is occupied as an Input. If the SCPI command is sent for this situation, an error is generated, -221 “Settings conflict; Output Port is not available while

	port bank is occupied by Input” Lastly, if RF3 is present, and RF4 is absent, a mmWave port cannot be selected as an Output if the Input Port is occupied by wwWave Transceiver with a different frequency range. If the SCPI command is sent for this situation an error is generated, -221 “Settings conflict; Output Port is not available while occupied by Input of incompatible frequency” Ports `GEN` and `TR` are only available.in modular analyzers, and only when the M9470A module is installed, such as in M8920A. Option HDX is required to enable the T/R port When any output is selected in a measurement that does not support it, the "No result; Meas invalid with this output" error condition occurs, and the measurement returns invalid data when queried
Preset	Unaffected by **Mode Preset**, but set to default by **Source Preset** or **Restore System Defaults -> All**
State Saved	Saved in State
Backwards Compatibility SCPI	`:FEED:RF:PORT:OUTPut IFIO1` `IFIO1` is treated as `IFO1` and sets the IF output to be the port labeled **DUT IF Out** on the CIU rear panel. This is for compatibility with earlier implementations on EXM and VXT when using the E7770A Common Interface Unit

Port Options

Value	Notes
RF Output `RFOut`	On EXM with hardware M9430A, if RF Output is selected as RF Output Port, use the settings in the **Half Duplex Config** menu to determine which port (`RFIO3` or `RFIO4`) will be used On EXM with hardware M9431A, this setting is not supported. If the SCPI command is sent with this setting, an error is generated, -221, “Settings conflict; option not installed”
`RFHD`	RFHD port is exclusive for RF Input and RF Output. If HD Port is chosen as RF Input port, pressing this key, or sending SCPI to set it, generates error message: “-221, Settings conflict; RFHD is being used as RF Input Port” Option HDX is required to enable RFHD port
`RFFD`	Option FDX is required to enable RFFD port
`GEN`	Selects the Gen port on M8920A/20B
T/R `TR`	Selects the T/R port on M8920A/20B
`RRHhRFHDp`	Used to select a port on a Radio Head (such as the Keysight M1740A mmWave Transceiver) as an output `RRHhRFHDp` corresponds to **Head h**, port **RF Tx/Rx p**. For example, `RRH1RFHD2` = the port labeled **RF Tx/Rx 2** on **Head 1**

6.1.3 Half Duplex Output Port

Specifies whether `RFIO3` or `RFIO4` is the Half Duplex Output port.

Remote Command	`[:SENSe]:HDUPlex:PORT:OUTPut RFIO3 | RFIO4`

Example	`:HDUPlex:PORT:OUTPut RFIO3` `:HDUPlex:PORT:OUTPut?`
Dependencies	Only appears in EXM If `RFIO3` is selected as “Half Duplex Input Port”, then “Half Duplex Output Port” will be set to `RFIO4` automatically If `RFIO4` is selected as “Half Duplex Input Port”, then “Half Duplex Output Port” will be set to `RFIO3` automatically
Preset	`RFIO4`
State Saved	Saved in State

6.1.4 RF Power

Lets you control the amplitude of the Source output. Same as "RF Power" on page 2472 in **Amplitude Setup**.

Example	`:SOUR:POW -100 dBm`

6.1.5 T/R Port High Power Attenuator

Controls whether additional attenuation is added at the T/R Port. The T/R port has two output paths, one that provides a 16 dB attenuator, another that bypasses this attenuator. When this control is `ON`, the path includes the 16 dB attenuator, so the maximum output level for this path is 0 dBm. When this control is `OFF`, the 16 dB attenuator is bypassed, so the maximum output level for this path is +5 dBm.

Example	`:FEED:RF:PORT:TR:HPOW:ATT ON`

6.1.6 Amplitude Setup

Lets you access the **Amplitude Setup** panel.

Notes	This menu under this control is for independent mode, and has no effect on "List Sequencer" on page 2479. If "Sequencer" on page 2480 is `ON`, the List Sequencer controls the source output, and this control is grayed-out on the front panel, to indicate out-of-scope. When you set "Sequencer" on page 2480 to `OFF`, makes source leave List Sequencer and this control is blanked out

6.1.6.1 RF Power

Lets you adjust the power level of the source using the numeric keypad, step keys, or RPG. Pressing any digit, 0 through 9 on the numeric keypad displays the unit terminator.

Please refer to the "RF Power Range" on page 2473 table below for the valid ranges.

Remote Command	`:SOURce:POWer[:LEVel][:IMMediate][:AMPLitude] <ampl>` `:SOURce:POWer[:LEVel][:IMMediate][:AMPLitude]?`
Example	`:SOUR:POW -100 dBm`
Notes	Amplitude corrections can be specified for use with the source. In the event of amplitude corrections being applied, the valid ranges for the RF power do not change dependent on the current amplitude correction setting. If the combination of RF power + amplitude correction is higher or lower than the source output range, the Source Unleveled bit is set, and the “Source Unleveled” indicator will appear on status panel to indicate that the source cannot maintain the output power that has been requested When signal generator is unable to maintain the requested output level, the “Source Unleveled” indicator will appear on status panel. When the source output setting is restored to the normal range, the “Source Unleveled” is removed from status panel Internal source has list sequence mode, which comprises of several steps which contain separate output power, frequency and waveform etc. When the source list sequence playing is complete, the last step keeps playing, and user can use this command to change the list sequence last step’s output power For EXT, The multiport adapter RFIO TX ports and GPS ports cannot ensure power accuracy when power setting is lower than -130dBm, this power setting value is defined by the sum of RF Power setting and related amplitude correction value. But user settable value could be lower than this limit. When application detected there exists power setting lower than -130dBm on MPA RFIO TX ports, then popup warning message . When application detected there exists power setting lower than -130dBm on MPA GPS ports, then popup warning message . This is only warning message, and check is performed when RF is ON
Dependencies	The RF power is dependent on the RF output port and frequency, such that the current frequency and selected output port determine the valid range of power values
Couplings	For if AWGN State is ON and ARB State is ON, this setting is adjusted to the value to maintain the AWGN power relationship defined by Power Control Mode and other noise settings
Preset	-100 dBm
Min	The range of values depends on the current frequency and selected RF output port. See "RF Power Range" on page 2473 below for the valid ranges
Max	The range of values depends on the current frequency and selected RF output port. Refer to "RF Power Range" on page 2473 below for the valid ranges

RF Power Range

RF Output Port	Frequency Range	Min Output Power	Max Output Power
High Power RF Out	10 MHz ≤ f ≤ 6 GHz	–150 dBm	20 dBm
RFIO 1 & RFIO 2	10 MHz ≤ f ≤ 6 GHz	–150 dBm	0 dBm

Note: This is the UI power range, which is larger than the actual specification.

VXT model M9420A

RF Output Port	Frequency Range	Min Output Power	Max Output Power without Option "1EA"	Max Output Power with Option "1EA"
RF Output	60 MHz ≤ f ≤ 6 GHz	–150 dBm	10 dBm	25 dBm
RFHD	60 MHz ≤ f ≤ 6 GHz	–150 dBm	10 dBm	15 dBm
RFFD	60 MHz ≤ f ≤ 6 GHz	–150 dBm	0 dBm	0 dBm

Note 1: This is the UI power range, which is larger than the actual specification.

Note 2: Max output power with Option 1EA can be set to 25 dBm, but Meas Uncal (measurement uncalibrated) warning is given in the Status Bar in the lower right corner of the screen when output power set higher than 20 dBm.

VXT models M9410A/11A

Ports	Option LFE	Frequency Range	Min Output Power	Max Output Power without option "1EA"	Max Output Power with "1EA"
RF Output	With Option LFE	1 MHz ≤ f ≤ 60 MHz	–150 dBm	5 dBm	5 dBm
		60 MHz ≤ f ≤ 380MHz	–150 dBm	5 dBm	25 dBm
	Without Option LFE	380 MHz ≤ f ≤ 6 GHz	–150 dBm	5 dBm	25 dBm
RFHD		1 MHz ≤ f ≤ 6 GHz	–150 dBm	5 dBm	5 dBm

Note 1: Min Output Power is the UI power range, which is smaller than the actual specification.

Note 2: Max output power with Option 1EA can be set to 25 dBm for RF Output Port, but Meas Uncal (measurement uncalibrated) warning is given in the Status Bar in the lower right corner of the screen when the output power is set higher than 20 dBm.

Note 3: Option LFE provides Low Frequency Extension, which covers frequency from 1 MHz to 380 MHz.

VXT models M9415A/16A

RF Output Port	Frequency Range	Min Output Power	Max Output Power without Option “1EA”	Max Output Power with Option “1EA”
RF Output	380 MHz ≤ f ≤ 12.3 GHz	–150 dBm	5 dBm	25 dBm
RFHD	380 MHz ≤ f ≤ 12.3 GHz	–150 dBm	5 dBm	18 dBm

Note 1: For RF output port, the Max output power with Option 1EA can be set to 25 dBm for RF Output Port, but Meas Uncal (measurement uncalibrated) warning is given in the Status Bar in the lower right corner of the screen when the output power is set higher than 20 dBm.

Note 2: For RFHD port, the Max output power with Option 1EA can be set to 18 dBm for RF Output Port, but Meas Uncal (measurement uncalibrated) warning is given in the Status Bar in the lower right corner of the screen when the output power is set higher than 15 dBm.

M9410E/11E/15E/16E

Ports	Option LFE	Frequency Range	Min Output Power	Max Output Power
RF Output	With Option LFE	1 MHz ≤ f ≤ 380 MHz	-150 dBm	13 dBm
		380 MHz ≤ f ≤ 25.9 GHz	-150 dBm	25 dBm
	Without Option LFE	380 MHz ≤ f ≤ 25.9 GHz	-150 dBm	25 dBm
RFHD		1 MHz ≤ f ≤ 25.9 GHz	-150 dBm	5 dBm

VXT Models with Remote Radio Heads/CIU

RRH	Port	Frequency Range	Min Output Power	Max Output Power
M1742A	Head h RFHD p	10 GHz ≤ f ≤ 32 GHz	–150 dBm	10 dBm

M8920A/20B

RF Output Port	Frequency Range	Min Output Power	Max Output Power
Gen	100 kHz ≤ f ≤ 6 GHz	–150 dBm	without option 1EA: 3 dBm with option 1EA: 15 dBm
T/R	100 kHz ≤ f ≤ 6 GHz	–150 dBm	T/R port high power attenuator On: -15 dBm T/R port high power attenuator Off: 3 dBm

Note: This is the UI power range, which is larger than the actual specification.

6.1.6.2 Set Reference Power

Turns the power reference state to ON, sets the reference power value to the current RF output power, maintains this power at the RF output, and sets the displayed power to 0.00 dB. All subsequent RF power values entered under **Source**, **Amplitude**, **RF Power** are interpreted as being relative to this reference power.

When you use a power reference, the signal generator outputs an RF power that is set relative to the reference power by the value entered under **Source**, **Amplitude**, **RF Power** as follows:

Output power = reference power – entered power

Where:

- reference power equals the original RF Power entered under **Source>Amplitude>RF Power** and set as the reference power
- entered power equals a new value entered under **Source>Amplitude>Amptd Offset**

In addition, the displayed power value is the same as a new value entered under **Source**, **Amplitude**, **RF Power**.

NOTE

If Power Ref is ON with a reference value set, entering a value under **Source**, **Amplitude**, **RF Power** and pressing **Set Reference Power** adds that value to the existing Power Ref value.

If you wish to change the reference power value to a new value entered under **Source**, **Amplitude**, **RF Power**, first set Power Ref to `OFF`, then press **Set Reference Power**.

Dependencies	Unavailable, and grayed-out, when "List Sequencer" on page 2479 is ON

6.1.6.3 Power Ref

Lets you toggle the state of the power reference. When you use a power reference, the signal generator outputs an RF power that is set relative to the reference power by the value entered under **Source>Amplitude>RF Power** as follows:

Output power = reference power + entered power

Where:

- reference power equals the original RF Power entered under **Source>Amplitude>RF Power** and set as the reference power
- entered power equals a new value entered under **Source>Amplitude>Amptd Offset**

For more information on Reference Frequency, see "Set Reference Power" on page 2476.

Remote Command	`:SOURce:POWer:REFerence <ampl>` `:SOURce:POWer:REFerence?`
Example	`:SOUR:POW:REF 0.00 dBm`
Dependencies	Unavailable and grayed-out when "List Sequencer" on page 2479 is ON
Couplings	Coupled to "Set Reference Power" on page 2476, such that pressing **Set Reference Power** updates the reference power with the current output power
Preset	0.00 dBm
Min	-125.00 dBm
Max	10.00 dBm

Auto Function

Remote Command	`:SOURce:POWer:REFerence:STATe OFF | ON | 0 | 1` `:SOURce:POWer:REFerence:STATe?`
Example	`:SOUR:POW:REF:STATe ON`
Preset	`OFF`

6.1.6.4 Power Unit

Modifies the units for RF Power and Power Ref. The change is immediate and does not force a restart.

Remote Command	`:SOURce:POWer[:LEVel][:IMMediate][:AMPLitude]:UNIT DBM | W | V | DBUV` `:SOURce:POWer[:LEVel][:IMMediate][:AMPLitude]:UNIT?`
Example	Set the RF Power units to volts:

	`:SOUR:POW:UNIT V`
Couplings	RF Power and Power Ref units are modified by Power Unit
Preset	dBm
State Saved	Saved in Instrument State

6.1.6.5 Amptd Offset

Lets you specify the RF output power offset value.

When the amplitude offset is set to zero (0) and you set a new offset value (positive or negative), the displayed amplitude value changes as follows, and the RF output power does not change:

Displayed value = output power + offset value

Where:

- output power equals the original RF Power entered under **Source, Amplitude, RF Power**
- offset value equals the value entered under **Source, Amplitude, Amptd Offset**

When the amplitude offset is set to a value other than zero (0) and you enter a new RF power value under **Source, Amplitude, RF Power**, the displayed power will be the same as the value entered and the RF output power will be equal to the value entered minus the offset value as follows:

Output power = entered power – offset power

Displayed Power = output power + offset power

Displayed power = entered power

Where:

- entered power equals the amplitude entered under **Source, Amplitude, RF Power**
- offset power equals the value previously entered and set under **Source, Amplitude, Amptd Offset**

Remote Command	`:SOURce:POWer[:LEVel][:IMMediate]:OFFSet <rel_ampl>` `:SOURce:POWer[:LEVel][:IMMediate]:OFFSet?`
Example	`:SOUR:POW:OFFS 0.00 dB`
Notes	The amplitude Offset unit follows the units set in Power Unit
Dependencies	Unavailable, and grayed-out, when List Sequencer is ON
Preset	0.00 dB

Min	-200.00 dB
Max	200.00 dB

6.1.6.6 Amplitude Increment

Changes the step size for the RF Power function. Once an increment size has been selected and the RF Amplitude function is active, the step keys (and the `UP|DOWN` parameters for RF Power from remote commands) change the RF Power by the set value. This feature exists in EXG and MXG.

Remote Command	`:SOURce:POWer:STEP[:INCRement] <ampl>` `:SOURce:POWer:STEP[:INCRement]?`
Example	`:SOUR:POW:STEP 1`
Notes	The Amplitude Increment unit follows the units set in Power Unit
Couplings	Coupled to the Step size of the RF Power function
Preset	1 dB
Min	0.1 dB
Max	10 dB

6.1.7 Frequency

Lets you control the frequency of the Source. Same as "Frequency" on page 2504 under "Frequency Setup" on page 2504.

Example	`:SOUR:FREQ 1.00 GHz`

6.1.8 List Sequencer

Accesses sub-menus for configuring the **List Sequencer**.

List sequences allow you to enter frequencies and amplitudes at unequal intervals in nonlinear ascending, descending or random order. Each step within the list can also include its own waveform file for playback, step duration, trigger event and trigger output.

The complexities involved in configuring the **List Sequencer** do not lend themselves to manual configuration; hence the manual configuration for this feature is limited. For easier configuration of the List Sequencer, it is recommended that you use either SCPI, or load a tab-delimited file containing the setup parameters in a tabular form. The details of the SCPI for configuring the List Sequencer can be found in "Step Configuration (Remote Command Only)" on page 2495.

Once the **List Sequencer** has been configured using the front panel, SCPI, or by loading a tab-delimited file, the sequence must be initiated using the front panel **Initiate Sequence** key, or the corresponding SCPI command.

Dependencies	Not available in E7760B

6.1.8.1 Sequencer

Sets the state of "List Sequencer" on page 2479

- When **List Sequencer** is `ON`, the source outputs the sequence defined by the sequencer
- When **List Sequencer** is `OFF`, the source outputs a single waveform segment or sequence (independent mode) at a single frequency and amplitude

Remote Command	`:SOURce:LIST[:STATe] ON | OFF | 1 | 0` `:SOURce:LIST[:STATe]?`
Example	`:SOUR:LIST OFF`
Notes	When the sequencer is `ON`, the List Sequencer controls the output of the source
Dependencies	Not available in E7760B
Couplings	When in Sequence Analyzer Mode, and the List Sequencer state is `OFF`, **Include Source** is forced to `NO`, and the **Include Source** key is grayed-out When in Sequence Analyzer Mode, and the List Sequencer state is `ON`, **Include Source** is available to set, and an ARB memory related operation such as load or delete will be rejected
Preset	`OFF`
Range	`ON | OFF`

6.1.8.2 Initiate Sequence

Arms the sequence for single execution. Once the sequence is armed, the source begins the sequence as soon as the trigger is received. If trigger is set to **Free Run**, the sequence starts immediately.

Remote Command	`:SOURce:LIST:TRIGger[:IMMediate]`
Example	`:SOUR:LIST:TRIG`
Notes	When in Sequence Analyzer Mode, and **Include Source** is `ON`, the Initiate List Sequencer operation is rejected, and the key is grayed-outIf the file needed by the sequencer is not already in ARB memory, the sequence cannot be initiated, and an error is generated There is a blocking SCPI query that can be used to check whether source list sequence was initiated successfully (see "Remote Software Trigger (Remote command Only)" on page 2504)
Dependencies	In Sequence Analyzer Mode, if **Meas Setup, Include Source** is set to `YES`, **Source, List Sequencer, Initiate Sequence** is disabled Not available in E7760B

6.1.8.3 Repetition

Accesses a sub-menu to select the repetition type for the List Sequencer globally. It cannot be changed between different sequence steps.

In **Single**, the Source list plays one time after initiation. In **Continuous**, the Source list plays continuously after initiation.

This setting is available on EXM.

Remote Command	`:SOURce:LIST:REPetition:TYPE SINGle | CONTinuous`
Example	`:SOUR:LIST:REP:TYPE SING` `:SOUR:LIST:REP:TYPE?`
Dependencies	Available on EXM Not available in E7760B
Preset	`SINGle`
Range	`SINGle | CONTinuous`

6.1.8.4 Trig Out Type

Accesses a sub-menu to select the output trigger type for the List Sequencer globally. It cannot be changed between different sequence steps. It sets the output trigger type for the whole source sequence.

Remote Command	`:SOURce:LIST:TRIGger:OUTPut:TYPE STEP | MARKer` `:SOURce:LIST:TRIGger:OUTPut:TYPE?`
Notes	`STEP` = Start of Step `MARKer` = Data Marker
Dependencies	Available on EXM Not available in E7760B
Preset	`STEP`
Backwards Compatibility SCPI	`:SOURce:LIST:TRIGgerout:TYPe BEGinningofstep | DATamarker`

6.1.8.5 Select Data Marker

When "Trig Out Type" on page 2481 is set to Data `MARKer`, specifies which marker to route.

Remote Command	`:SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M1 | … | M4` `:SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer?`

Backwards Compatibility SCPI	`:SOURce:LIST:TRIGgerout:TYPe:Marker`

6.1.8.6 Manual Trigger Now

Provides a software trigger event to the List Sequencer. During execution of a sequence, if the sequencer is halted on any step that has been configured with a "Manual" step trigger, then this keypress causes the sequencer to continue and execute the step.

Notes	No remote command, front panel only

6.1.8.7 List Sequencer Setup

Accesses the List Sequencer setup menus.

Number of Steps

Lets you specify the number of steps within the list sequence.

Remote Command	`:SOURce:LIST:NUMBer:STEPs <integer>` `:SOURce:LIST:NUMBer:STEPs?`
Example	`:SOUR:LIST:NUMB:STEP 1`
Notes	Increasing the number of steps creates additional steps at the end of the list, with all the settings within the steps set to their default values Decreasing the number of steps removes steps from the end of the list. The settings within the removed steps are not reset. This means that increasing the number of steps again would allow you to retrieve these steps
Dependencies	The Step Count parameter is increased or decreased when you insert or delete a point from within the GUI interface to the sequencer Not available in E7760B
Preset	1
Min	1
Max	1000

Go To Step

Lets you select the step number you wish to view or edit.

Preset	1

Min	1
Max	Step Count

Insert Step Before

Inserts a new step, with default values, before the currently selected step. Inserting a step automatically increases the Step Count parameter by 1. If a sequence has already reached the upper limit of 1000 steps, then this operation is rejected, and error -221, “Setting Conflict; Cannot insert more steps, maximum number of steps reached” is displayed.

Notes	If the list already contains the maximum limit (1000 steps), pressing this control has no effect

Delete Step

Deletes the current step. Deleting a step automatically decreases the Step Count parameter by 1. If the sequence only has one step left, then this operation is rejected, and error -221, “Setting conflict; Cannot delete current step, minimum number of steps reached” is displayed

Notes	If the list already contains the minimum limit of 1 step, pressing this control has no effect

Clear List

Clears the list. Clearing the list sets the number of steps to the default value (1) and sets the parameters for the only step to their default values.

Step Trigger

Lets you select the trigger input for the current step.

Remote Command	`:SOURce:LIST:STEP[1]|2|…|1000:SETup:INPut:TRIGger IMMediate | INTernal | EXTernal2 | KEY | BUS | EXTernal4`
	For details of options, see "More Information" on page 2484
	`:SOURce:LIST:STEP[1]|2|…|1000:SETup:INPut:TRIGger?`

Example	`:SOUR:LIST:STEP2:SET:INP:TRIG BUS` `:SOUR:LIST:STEP2:SET:INP:TRIG?`
Notes	SCPI is supported after A.09.40
Dependencies	Not available in E7760B
Preset	`IMMediate`
Range	`IMMediate|INTernal|EXTernal2|KEY|BUS|EXTernal4`

More Information

Parameter	SCPI	Notes
Free Run	`IMM`	Sets the trigger input for the current step to Free Run
Internal	`INT`	Sets the trigger input for the current step to Internal
Manual (Trigger Key)	`KEY`	Sets the trigger input for the current step to Manual (Trigger Key). Any step in the sequence set to Manual will cause the sequence execution to stop until the manual trigger key is pressed. Sending the Bus Trigger SCPI command will have no effect. At any point in the sequence where the List Sequencer is paused waiting for a software trigger, a pop-up dialog is displayed until the trigger event occurs
Bus	`BUS`	Sets the trigger input for the current step to Bus. Any step in the sequence set to Bus will cause the sequence execution to stop until the Bus Trigger command is sent. Pressing the manual trigger key has no effect. At any point in the sequence where the List Sequencer is paused waiting for a software trigger, a pop-up dialog is displayed until the trigger event occurs
External 2	`EXT2`	Sets the trigger input for the current step to External 2 Note: When on EXM, trigger 2 is a bi-directional trigger port. So, when trigger 2 has been configured as OUTPUT type, choosing External 2 as the input trigger for the current step will generate error

Transition Time

Lets you specify the transition time for the current step.

The following table lists recommended values for appropriate settling times to allow for changes within the source.

Value Changed	Recommended Transition Time
Frequency	500 µs
Amplitude	100 µs to within 0.1 dB 20 µs to within 1.0 dB

If the Transition Time value is shorter than the time necessary for the hardware to settle and a List Sequence is initiated, a **warning** is generated.If the Transition Time value is longer than the Step Duration, an error is generated when initiating a source list sequence. For source list sequence, transition time is included in the step duration length. If the Transition Time value is longer than the Step Duration Time, the real step duration length is extended to equal the transition time and cause a timing shift.

Remote Command	`:SOURce:LIST:STEP[1]|2|…|1000:SETup:TRANsition:TIME <time>` `:SOURce:LIST:STEP[1]|2|…|1000:SETup:TRANsition:TIME?`
Example	`:SOUR:LIST:STEP2:SET:TRAN:TIME 1ms`

	`:SOUR:LIST:STEP2:SET:TRAN:TIME?`
Notes	SCPI is supported after A.09.40
Dependencies	Not available in E7760B
Preset	1.0 ms
Min	0.0 ms
Max	4.0 ks

Band

Lets you select the radio band for use in the current step.

<table>
<tr><td>Remote Command</td><td><code>:SOURce:LIST:STEP[1]|2|…|1000:SETup:RADio:BAND <band></code>

N 260	5G NR	`:SOUR:LIST:STEP2:SET:RAD:BAND N260`
N 261	5G NR	`:SOUR:LIST:STEP2:SET:RAD:BAND N261`

Device

Lets you specify the radio band link direction for the steps within the list sequence. The link is used in conjunction with the channel band and channel number to determine the output frequency.

Setting	Option	Description
Uplink	`UP`	The source calculates the uplink frequency according to an uplink formula together with selected channel band and channel number
Downlink	`DOWN`	The source calculates the downlink frequency according to a downlink formula together with selected channel band and channel number

Remote Command	`:SOURce:LIST:STEP[1]|2|…|1000:SETup:RADio:BAND:LINK DOWN | UP` `:SOURce:LIST:STEP[1]|2|…|1000:SETup:RADio:BAND:LINK?`
Example	`:SOUR:LIST:STEP2:SET:RAD:BAND:LINK UP` `:SOUR:LIST:STEP2:SET:RAD:BAND:LINK?`
Notes	SCPI is supported after A.09.40

Dependencies	Not available in E7760B
Preset	`DOWN`
Range	`DOWN | UP`

Freq/Chan

Lets you select the frequency or channel value for the current step. If the Band selection for the current row is `NONE`, you enter a frequency. Otherwise, enter a channel, which causes the frequency to be automatically selected, based on the Band selection.

Entering a Frequency

If the Band selection for the current row is `NONE`, enter a Frequency. This field in the table allows you to select the frequency value for the current step.

Remote Command	`:SOURce:LIST:STEP[1]|2|…|1000:SETup:CNFRequency <double>` `:SOURce:LIST:STEP[1]|2|…|1000:SETup:CNFRequency?`
Example	`:SOUR:LIST:STEP2:SET:CNFR 1GHz` `:SOUR:LIST:STEP2:SET:CNFR?`
Notes	SCPI is supported after A.09.40 Used to setup channel number or frequency setting, according to the current Radio Band setting. If Radio Band is `NONE`, then the value is frequency. If Radio Band is not `NONE`, then the value is channel number
Dependencies	Not available in E7760B
Couplings	The frequency value is coupled to the channel band and number for the step, such that updates to the radio band and channel number will update the frequency value to the corresponding absolute frequency. The reverse is also true, changing the frequency value causes the value of the channel number to be updated
Preset	1.00 GHz
Min	10.00 MHz
Max	Hardware Dependent: Option 503 — 3.6 GHz Option 504 — 3.9 GHz Option 506 — 6.00 GHz Option F06 — 6.08 GHz Option F06 & EP6 — 6.60 GHz

Entering a Channel

If the Band selection for the current row is not `NONE`, enter a Channel Number. This field in the table allows you to select the channel value for the current step. The frequency is selected automatically, based on the Band.

Example	`:SOUR:LIST:STEP2:SET:CNFR 124` `:SOUR:LIST:STEP2:SET:CNFR?`
Notes	SCPI is supported after A.09.40 Used to setup channel number or frequency setting, according to current Radio Band setting. If Radio Band is `NONE`, then the value is a frequency. If Radio Band is not `NONE`, then the value is a channel number
Dependencies	Not available in E7760B
Couplings	The channel number is coupled to the step frequency value. When the step frequency value is changed, the channel number increases or decreases to match the new step frequency. If the step frequency is not at an exact match for a channel number, the nearest channel number is displayed, along with a greater-than or less-than sign, to indicate the frequency is above or below the channel number
Preset	1
Min/Max	0/10838 (See "Channel" on page 2507 for valid ranges)

Power

Lets you specify the power value for the current step.

Remote Command	`:SOURce:LIST:STEP[1]|2|…|1000:SETup:AMPLitude <double>` `:SOURce:LIST:STEP[1]|2|…|1000:SETup:AMPLitude?`
Example	`:SOUR:LIST:STEP2:SET:AMPL -50dBm` `:SOUR:LIST:STEP2:SET:AMPL?`
Dependencies	The RF power is dependent on the RF output port and frequency, such that the current frequency and selected output port determine the valid range of power values Not available in E7760B
Preset	-100 dBm
Min/Max	The range of values depends on the current frequency and selected RF output port See "RF Power" on page 2472 and the RF Power Range table for valid ranges

Waveform

Lets you select the waveform to be played back during the current step. Options are: CW, a Waveform file, Continue the previous step’s waveform, or Off.

Remote Command	`:SOURce:LIST:STEP[1]|2|…|1000:SETup:WAVeform <string>`

	where `<string>` is one of: "CW", "waveform name", "Cont", "Off" For full details of options, see "More Information" on page 2492 `:SOURce:LIST:STEP[1]|2|…|1000:SETup:WAVeform?`
Example	`:SOUR:LIST:STEP2:SET:WAV "CW"` `:SOUR:LIST:STEP2:SET:WAV?`
Notes	SCPI is supported after A.09.40
Dependencies	Not available in E7760B For VXT models M9410A/11A/16A, if the Waveform is not Continue Previous, there is always a time gap between the current step and the previous step
Preset	`CW`
Range	`"CW", "waveform name", "Cont", "Off"`

More Information

Parameter	SCPI	Notes
CW	`"CW"`	Sets the current step to output a CW tone
Selected Waveform	`"waveform name"`	Inserts a waveform from the Select Waveform dialog as the waveform for playback during the current step If the selected waveform contains header (which contains ARB play parameters), source list sequence will automatically apply header settings of the selected waveform in that step
Continue Previous	`"Cont"`	Sets the current step to continue with playback of the waveform from the previous step. When continuing the previous waveform, the ARB playback will not pause while the source retunes to the new frequency or amplitude that may be defined for the new step
Off	`"Off"`	Disable RF output of the current step

Waveform File

Pressing the slide-aside field of this column (>) opens the "Select Waveform" on page 2548 screen, which lets you select a waveform in ARB memory to playback during the current step. When you select a waveform, and press **OK**, it returns to the List Sequencer Setup screen with that file name in the table.

Step Duration

Lets you select the duration of play for the current step.

The duration can be set to be either the number of times for the ARB file associated with the sequence to play, or a specific time value, or continuous. If the step is set to play a CW tone, the step duration cannot be set to a play count.

Remote Command	`:SOURce:LIST:STEP[1]|2|…|1000:SETup:DURation:TYPE TIME | COUNt | CONTinuous | CABort`
	See "Option Details" on page 2493
	`:SOURce:LIST:STEP[1]|2|…|1000:SETup:DURation:TYPE?`

Example	`:SOUR:LIST:STEP2:SET:DUR:TYPE TIME` `:SOUR:LIST:STEP2:SET:DUR:TYPE?`
Dependencies	Not available in E7760B If in VXT models M9410A/11A/16A, **Step Duration** is `TIME` or Play `COUNt`, only **Free Run** is available for the next step. Otherwise, an error message is generated: “Parameter error; only Free Run is available as step trigger on step<n>”
Range	`TIME|COUNt|CONTinuous|CABort`

Option Details

Parameter	SCPI	Notes
Time	`TIME`	Sets the duration of the current step to be a time value for the length of time the step will play When `TIME` is selected, the Time may be set using the second field under **Step Duration** and/or by the "Duration Time" on page 2493 command
Count	`COUNt`	Sets the duration of the current step to be an integer value for the number of times (play count) the ARB file is selected for playback during this step. For example, a 5 second ARB will be set to play 5 times during the step When `COUNt` is selected, the Count may be set using the second field under **Step Duration** and/or by the "Play Count" on page 2494 command
Continuous	`CONTinuous`	Sets the current step to be played continuously until the next step starts. The waveform will always play completely before transitioning to the next step
Continuous Abort	`CABort`	Sets the current step to be played continuously or until the trigger event of the next step is detected. When a trigger event is received, the waveform play will be aborted after the interval specified by the Duration Time parameter and it will then transition to the next step When Continuous Abort is selected, the Duration Time may be set using the second field under Step Duration and/or by the "Duration Time" on page 2493 command

Duration Time

Lets you specify the length of time the current step will play when "Step Duration" on page 2492 is Time.

When "Step Duration" on page 2492 is Continuous Abort, this parameter specifies the maximum duration that the waveform will continue to play after a step trigger is received before the transition to the next waveform will occur. Duration is limited to a maximum of 20 seconds.

If the Transition Time value is longer than the Step Duration Time, an error is generated when initiating a source list sequence. For source list sequence, transition time is included in the step duration length (not occupy additional time). If the Transition Time value is longer than the Step Duration Time, the real step duration length is extended to equal the transition time and cause a timing shift.

Remote Command	`:SOURce:LIST:STEP[1]|2|…|1000:SETup:DURation:TCOunt <double>` `:SOURce:LIST:STEP[1]|2|…|1000:SETup:DURation:TCOunt?`
Example	`:SOUR:LIST:STEP2:SET:DUR:TCO 1s` `:SOUR:LIST:STEP2:SET:DUR:TCO?`
Notes	When Repetition is **Single**, the last step continues playing after the sequence is completed. In this extended playing time, `:STAT:OPER:COND?` returns 0 for the Source Sweeping Status Bit (bit 9) SCPI is supported after A.09.40 If current **Duration Type** is **Continuous**, then error -221, "Settings conflict; Cannot accept time or count input when step duration type is Continuous on step #" is displayed
Dependencies	Not available in E7760B
Preset	VXT models M9410A/11A/16A: 2.0 ms All others: 1.00 ms
Min	For VXT models M9410A/11A/16A, the minimum duration time for first step is 1.2 ms. If the Waveform is “waveform name”, the minimum duration time is 1.2 ms All others: 100 µs
Max	1800 s

Play Count

Lets you specify the number of times the current ARB waveform file will play during a step when "Step Duration" on page 2492 is Count.

"Duration Time" on page 2493

Remote Command	`:SOURce:LIST:STEP[1]|2|…|1000:SETup:DURation:TCOunt <double>` `:SOURce:LIST:STEP[1]|2|…|1000:SETup:DURation:TCOunt?`
Example	`:SOUR:LIST:STEP2:SET:DUR:TCO 10` `:SOUR:LIST:STEP2:SET:DUR:TCO?`
Notes	SCPI is supported after A.09.40 This command is reused by **Play Count** and **Duration Time** if **Duration Type** is set to **Play Count** or **Duration Time** If **Duration Type** is **Continuous**, then error -221, "Settings conflict; Cannot accept time or count input

	when step duration type is Continuous on step #" is displayed If **Play Count** is set for the last step, the last step of ARB keeps playing as if set to **Continuous** after play count setting is reached
Dependencies	Not available in E7760B
Preset	1
Min	1
Max	65536

Trig Out

Lets you specify the trigger output for the current step. The trigger output signal is sent at the start of the step.

When this is `ON`, a trigger event occurs on both Internal and External2 paths. Selecting `OFF` turns off trigger output.

Remote Command	`:SOURce:LIST:STEP[1]|2|…|1000:SETup:OUTPut:TRIGger ON | OFF | 1 | 0` `:SOURce:LIST:STEP[1]|2|…|1000:SETup:OUTPut:TRIGger?`
Example	`:SOUR:LIST:STEP2:SET:OUTP:TRIG ON` `:SOUR:LIST:STEP2:SET:OUTP:TRIG?`
Notes	SCPI is supported after A.09.40
Dependencies	Not available in E7760B
Preset	`OFF`
Range	`ON|OFF`

Step Configuration (Remote Command Only)

Used to configure the List Sequencer, as detailed in the table below. The command is defined such that you send one command per step, with the step number being specified as a subopcode of the SCPI command. Each command includes all the parameter settings for the step. As a step is set up, the values entered are run through several levels of validation.

Remote Command	`:SOURce:LIST:STEP[1]|2|…|1000:SETup <step_trigger>, <trans_time>, <band>, <link_type>, <freq_chan>, <power>, <waveform>, <duration>, <time_count>, <trig_state>`
	For details of each option, see "Step Configuration Parameters" on page 2496 below
	`:SOURce:LIST:STEP[1]|2|…|1000:SETup?`

Example	`:SOUR:LIST:STEP1:SET INT, 1ms, PGSM, DOWN, 10, -25 dBm, "GSM_Test1.bin", TIME, 10ms, OFF`
Dependencies	The range of subopcode values is 1 to 1000, and the value you enter is determined by the number of

steps you have configured. For details see "Number of Steps" on page 2482

If you attempt to remotely set or query a subopcode that is out of range, an error is generated

Step Configuration Parameters

There are 10 parameters for each step, which must be in the following order in the command:

1 Step Trigger

`<step_trigger>`

Data Type: enum

Specifies the input trigger for the step. For further details, see "Step Trigger" on page 2483

2 Transition Time

`<trans_time>`

Data Type: enum

Specifies the transition time for the step, in seconds. For further details, see "Transition Time" on page 2484

3 Radio Band

`<band>`

Data Type: enum

Specifies the radio band for the step, as any one of:

`NONE | PGSM | EGSM | RGSM | DCS1800 | PCS1900 | TGSM810 | GSM450 | GSM480 | GSM700 | GSM850 | BANDI | BANDII | BANDIII | BANDIV | BANDV | BANDVI | BANDVII | BANDVIII | BANDIX | BANDX | BANDXI | BANDXII | BANDXIII | BANDXIV | BANDXIX | USCELL | USPCS | JAPAN | KOREAN | NMT | IMT2K | UPPER | SECOND | PAMR400 | PAMR800 | IMTEXT | PCS1DOT9G | AWS | US2DOT5G | PUBLIC | LOWER | NONE | BAND1 | BAND2 | BAND3 | BAND4 | BAND5 | BAND6 | BAND7 | BAND8 | BAND10 | BAND11 | BAND12 | BAND13 | BAND14 | BAND17 | BAND18 | BAND19 | BAND20 | BAND21 | BAND24 | BAND25 | BAND26 | BAND33 | BAND34 | BAND35 | BAND36 | BAND37 | BAND38 | BAND39 | BAND40 | BAND41 | BAND42 | BAND43 | BANDA | BANDB | BANDC | BANDD | BANDE | BANDF | N1 | N2 | N3 | N5 | N7 | N8 | N12 | N20 | N25 | N28 | N34 | N38 | N39 | N40 | N41 | N50 | N51 | N66 | N70 | N71 | N74 | N75 | N76 | N77 | N78 | N79 | N80 | N81 | N82 | N83 | N84 | N86 | N257 | N258 | N260 | N261`

For further details, see "Band" on page 2485

4 Radio Band Link

`<link_type>`

Data Type: enum

Specifies the radio band link direction for the step, as either of:

`DOWN|UP`

For further details, see "Device" on page 2489

The old **Device** BTS|MS is obsolete, but is still supported, acting as an alias for the **Link** parameter

5 Frequency/Channel Number

`<freq_chan>`

Data Type: freq/chan num

Specifies the frequency in Hz or the channel number for the step. The channel number and frequency are combined as one parameter that represents the frequency or channel number depending on the radio band setting. If the radio band is set to `NONE`, this value is interpreted as a frequency value in Hz. If the radio band is set to a valid band, this value is interpreted as a channel number

For further details, see "Freq/Chan" on page 2490

6	Power `<power>`	Data Type: ampl Specifies the output power for the step in dBm. For details of the valid ranges see "Power" on page 2491
7	Waveform `<waveform>`	Data Type: string Specifies the waveform for playback during the step. The step can output either a new ARB waveform, continue playback of the previous waveform, or output a CW tone. The options for specifying these are: `<filename>` Plays the specified waveform from the start. The filename value is the name of the file within ARB playback memory, it is does not include the windows path to the file on the HDD. If you enter a filename for a waveform that does not reside within ARB playback memory, an error is generated `CONT` Continues playback of the ARB file from the previous step `CW` Outputs a CW tone `OFF` Disables RF output For further details, see "Waveform" on page 2491 and "Waveform File" on page 2492
8	Step Duration `<duration>`	Data Type: enum Specifies the duration of the step, as one of: `TIME|COUNt|CONTinuous` The duration can be specified to be either time, or play count of the ARB file associated with the step, or continuous. If Waveform is set to `CW`, this value cannot be set to Play Count and an error will be generated. If `CONTinuous` is selected, the following Time or Count value is ignored. For further details, see "Step Duration" on page 2492
9	Time or Count `<time_count>`	Data Type: time/int Specifies time duration in seconds, or play count of the ARB file associated with the step For further details, see "Play Count" on page 2494
10	Output Trigger `<trig_state>`	Data Type: boolean Specifies the output trigger state for the step, as one of: `ON|OFF|1|0` For further details, see "Trig Out" on page 2495

–

Step Configuration of Step Trigger parameter list (Remote Command Only)

Configures the “Step Trigger” parameter array of the whole List Sequencer at one time. The number of arrays is the same as the step number defined in "Number of

Steps" on page 2482. As a step is setup, the value entered runs through several levels of validation.

Remote Command	`:SOURce:LIST:SETup:INPut:TRIGger <enum>, <enum>, <enum>, …` `:SOURce:LIST:SETup:INPut:TRIGger?`
Example	`:SOUR:LIST:SET:INP:TRIG IMM,INT,EXT2` `:SOUR:LIST:SET:INP:TRIG?`
Notes	The command is to setup below parameter array of whole list sequence Step Trigger <**enum**> - specifies the input trigger for the step. For details of the valid types of step trigger see "Step Trigger" on page 2483 If input parameter number exceeds the step number defined by "Number of Steps" on page 2482, then error -221 "Settings conflict; The number of input parameters is too large and is truncated to current list step number" is generated, and only those parameters whose index number falls in number of steps will be updated
Dependencies	The range is 1 to 1000, which is determined by the number of steps you have configured. For details see "Number of Steps" on page 2482

Step Configuration of Transition Time parameter list (Remote Command Only)

Configures the “Transition Time” parameter array of the whole List Sequencer at once. The array size is the same as step number defined in "Number of Steps" on page 2482. As a step is setup, the value entered runs through several levels of validation.

Remote Command	`:SOURce:LIST:SETup:TRANsition:TIME <time>, <time>, <time>, …` `:SOURce:LIST:SETup:TRANsition:TIME?`
Example	`:SOUR:LIST:SET:TRAN:TIME 1ms,1ms,1ms` `:SOUR:LIST:SET:TRAN:TIME?`
Notes	The command is to setup below parameter array of whole list sequence Transition Time <**time**> - specifies the transition time for the step in seconds. For details of the valid ranges for the transition time see "Transition Time" on page 2484 If input parameter number exceeds the step number defined by "Number of Steps" on page 2482, then the error -221, "Settings conflict; The number of input parameters is too large and is truncated to current list step number" is generated, and only those parameters whose index number falls in number of steps will be updated
Dependencies	The range is 1 to 1000 which is determined by the number of steps you have configured. For details see "Number of Steps" on page 2482

Step Configuration of Radio Band parameter list (Remote Command Only)

Configures the **Radio Band** parameter array of the whole List Sequencer at once. The size of the array is the same as the step number defined in "Number of Steps" on page 2482. As a step is set up, the value entered runs through several levels of validation.

Remote Command	`:SOURce:LIST:SETup:RADio:BAND <enum>, <enum>, <enum>, …` `:SOURce:LIST:SETup:RADio:BAND?`
Example	`:SOUR:LIST:SET:RAD:BAND PGSM, EGSM, RGSM` `:SOUR:LIST:SET:RAD:BAND?`
Notes	The command sets up the parameter array of whole list sequence Radio Band <**enum**> - specifies the radio band for the step. For available options, see "Band" on page 2485 If the input parameter number exceeds the step number defined by "Number of Steps" on page 2482, then error -221, "Settings conflict; The number of input parameters is too large and is truncated to current list step number" is generated, and only those parameters whose index number falls within the number of steps will be updated
Dependencies	The range is 1 to 1000, which is determined by the number of steps you have configured. For details see "Number of Steps" on page 2482

Step Configuration of Radio Band Link parameter list (Remote Command Only)

Configures the **Radio Band Link** parameter array of the whole List Sequencer at one time. The number of arrays is same as step number defined in "Number of Steps" on page 2482. As a step is set up, the value entered runs through several levels of validation.

Remote Command	`:SOURce:LIST:SETup:RADio:BAND:LINK <enum>, <enum>, <enum>, …` `:SOURce:LIST:SETup:RADio:BAND:LINK?`
Example	`:SOUR:LIST:SET:RAD:BAND:LINK DOWN,UP,UP` `:SOUR:LIST:SET:RAD:BAND:LINK?`
Notes	The command sets up the parameter array of whole list sequence Radio Band Link <**enum**> - specifies the radio band link direction for the step. Options are: DOWN|UP If input parameter number exceeds the step number defined by "Number of Steps" on page 2482, then error -221, "Settings conflict; The number of input parameters is too large and is truncated to current list step number" is generated, and only those parameters whose index number falls within the number of steps will be updated
Dependencies	The range is 1 to 1000, which is determined by the number of steps you have configured. For details see "Number of Steps" on page 2482

Step Configuration of Frequency/Channel Number parameter list (Remote Command Only)

Configures the **Frequency** or **Channel Number** parameter array of the whole List Sequencer at one time. The number of arrays is same as step number defined in "Number of Steps" on page 2482. As a step is set up, the value entered runs through several levels of validation.

Remote Command	`:SOURce:LIST:SETup:CNFRequency <double>, <double>, <double>, …` `:SOURce:LIST:SETup:CNFRequency?`

Example	`:SOUR:LIST:SET:CNFR 1GHz,100MHz,100MHz`
	`:SOUR:LIST:SET:CNFR?`
	`:SOUR:LIST:SET:CNFR 124,124,124`
	`:SOUR:LIST:SET:CNFR?`

Notes	The command sets up the parameter array of whole list sequence Frequency/Channel Number <freq>/<chan num> - specifies the frequency in Hz or the channel number for the step. The channel number and frequency are combined as one parameter that represents the frequency or channel number depending on the radio band setting. If the radio band is set to NONE, this value is interpreted as a frequency value in Hz. If the radio band is set to a valid band, this value is interpreted as a channel number. For details of the valid ranges for frequency and channel numbers, see "Freq/Chan" on page 2490 and "Freq/Chan" on page 2490 This command is used to setup/query channel number or frequency setting, according to current Radio Band setting of that step. If Radio Band is NONE, then it is frequency. If Radio Band is not NONE, then it is channel number If input parameter number exceeds the step number defined by "Number of Steps" on page 2482, then generate error -221, "Settings conflict; The number of input parameters is too large and is truncated to current list step number", and only those parameters whose index number falls in legal step number will be updated
Dependencies	The range is 1 to 1000, which is determined by the number of steps you have configured. For details see "Number of Steps" on page 2482

Step Configuration of Power parameter list (Remote Command Only)

Configures the **Power** parameter array of the whole List Sequencer at one time. The number of arrays is the same as step number defined in "Number of Steps" on page 2482. As a step is set up, the value entered runs through several levels of validation.

Remote Command	`:SOURce:LIST:SETup:AMPLitude <ampl>, <ampl>, <ampl>, …` `:SOURce:LIST:SETup:AMPLitude?`
Example	`:SOUR:LIST:SET:AMPL -50dBm,-40dBm,-30dBm` `:SOUR:LIST:SET:AMPL?`
Notes	The command sets up the parameter array of whole list sequence

	Power <**ampl**> - specifies the output power for the step in dBm. For details of the valid ranges, see "Power" on page 2491 If input parameter number exceeds the step number defined by "Number of Steps" on page 2482, then error -221, "Settings conflict; The number of input parameters is too large and is truncated to current list step number" is generated, and only those parameters whose index number falls within legal step number will be updated
Dependencies	The range is 1 to 1000, which is determined by the number of steps you have configured. For details see "Number of Steps" on page 2482

Step Configuration of Waveform parameter list (Remote Command Only)

Configures the **Waveform** parameter array of the whole List Sequencer at one time. The number of arrays is same as step number defined in "Number of Steps" on page 2482. As a step is set up, the value entered runs through several levels of validation.

Remote Command	`:SOURce:LIST:SETup:WAVeform <string>, <string>, <string>, …` `:SOURce:LIST:SETup:WAVeform?`
Example	`:SOUR:LIST:SET:WAV "CW","Off","CONT"` `:SOUR:LIST:SET:WAV?`
Notes	Sets up or queries the parameter array of whole list sequence Waveform <**string**> - specifies the waveform for playback during the step. The step can output either a new ARB waveform, continue playback of the previous waveform, or output a CW tone. The options for specifying these are:

`<filename>`	Plays the specified waveform from the start. The filename value is the name of the file within ARB playback memory, it is does not include the windows path to the file on the HDD. If you enter a filename for a waveform that does not reside within ARB playback memory, an error is generated
`CONT`	Continues playback of the ARB file from the previous step
`CW`	Outputs a CW tone
`OFF`	Disables the RF output

If input parameter number exceeds the step number defined by "Number of Steps" on page 2482, then error -221, "Settings conflict; The number of input parameters is too large and is truncated to current list step number" is generated, and only those parameters whose index number falls within number of steps will be updated

Dependencies	The range is 1 to 1000 which is determined by the number of steps you have configured. For details see "Number of Steps" on page 2482
Range	`"filename" | "CW" | "Off" | "CONT"`

Step Configuration of Step Duration parameter list (Remote Command Only)

Configures the **Step Duration** parameter array of the whole List Sequencer at one time. The number of arrays is same as step number defined in "Number of Steps" on page 2482. As a step is set up, the value entered runs through several levels of validation.

Remote Command	`:SOURce:LIST:SETup:DURation:TYPE <enum>, <enum>, <enum>, …` `:SOURce:LIST:SETup:DURation:TYPE?`
Example	`:SOUR:LIST:SET:DUR:TYPE COUN,TIME,CONT` `:SOUR:LIST:SET:DUR:TYPE?`
Notes	Sets up or queries the parameter array of whole list sequence Step Duration <**enum**> - specifies the duration of the step. The duration can be specified to be either time, or play count of the ARB file associated with the step, or continuous. If Waveform is set to “CW”, this value cannot be set to Play Count and an error will be generated. If continuous is selected, the following Time or Count value is ignored. For further details of this setting, see "Step Duration" on page 2492 Options are: `TIME | COUNt | CONTinuous` If input parameter number exceeds the step number defined by "Number of Steps" on page 2482, then error -221, "Settings conflict; The number of input parameters is too large and is truncated to current list step number" is generated, and only those parameters whose index number falls within number of steps will be updated
Dependencies	The range is 1 to 1000, which is determined by the number of steps you have configured. For details see "Number of Steps" on page 2482

Step Configuration of Duration Time or Play Count parameter list (Remote Command Only)

Configures the **Duration Time** or **Play Count** parameter array of the whole List Sequencer at one time. The number of arrays is same as step number defined in "Number of Steps" on page 2482. As a step is set up, the value entered runs through several levels of validation.

Remote Command	`:SOURce:LIST:SETup:TOCount <time/int>, <time/int>, <time/int>, …` `:SOURce:LIST:SETup:TOCount?`

Example	`:SOUR:LIST:SET:TOC 1s,2s,3s`
	`:SOUR:LIST:SET:TOC?`
	`:SOUR:LIST:SET:TOC 5,6,7`
	`:SOUR:LIST:SET:TOC?`

Notes	Sets up or queries the parameter array of whole list sequence

	Time or Count <time/int> - specifies time duration in seconds or play count of the ARB file associated with the step If input parameter number exceeds the step number defined by "Number of Steps" on page 2482, then an error is generated, and only those parameters whose index number falls within number of steps will be updated If current "Step Duration" on page 2492 is “Continuous”, then error -221, "Settings conflict; Cannot accept time or count input when step duration type is Continuous on step #" is generated
Dependencies	The range is 1 to 1000, which is determined by the number of steps you have configured. For details see "Number of Steps" on page 2482

Step Configuration of Output Trigger parameter list (Remote Command Only)

Configures the **Output Trigger** parameter array of the whole List Sequencer at one time. The number of arrays is same as step number defined in "Number of Steps" on page 2482. As a step is set up, the value entered runs through several levels of validation.

Remote Command	`:SOURce:LIST:SETup:OUTPut:TRIGger <bool>, <bool>, <bool>, …` `:SOURce:LIST:SETup:OUTPut:TRIGger?`
Example	`:SOUR:LIST:SET:OUTP:TRIG ON,OFF,ON` `:SOUR:LIST:SET:OUTP:TRIG?`
Notes	Sets up or queries the parameter array of whole list sequence Output Trigger <Boolean> - specifies the output trigger for the step. Options are: `ON|OFF|1|0` If input parameter number exceeds the step number defined by "Number of Steps" on page 2482, then error -221,"Settings conflict; The number of input parameters is too large and is truncated to current list step number" is generated, and only those parameters whose index number falls within legal step number are updated
Dependencies	The range is 1 to 1000, which is determined by the number of steps you have configured. For details see "Number of Steps" on page 2482

Clear List (Remote Command Only)

The SCPI equivalent of the Clear List UI feature described in "Clear List" on page 2483.

Remote Command	`:SOURce:LIST:SETup:CLEar`
Example	`:SOUR:LIST:SETup:CLE`
Dependencies	Not available in E7760B

6.1.8.8 Remote Software Trigger (Remote command Only)

During execution of a list sequence, the sequence halts and waits at any step that has Step Trigger set to “Bus”. Sending this command triggers the step and continues the sequence.

Remote Command	`:SOURce:LIST:TRIGger:INITiate[:IMMediate]`
Example	`:SOUR:LIST:TRIG:INIT`
Dependencies	Not available in E7760B

6.1.8.9 Query List Sequence Initiation Armed Status (Remote Query Only)

This is a blocking SCPI query to determine whether a source list sequence has been initiated successfully.

Remote Command	`:SOURce:LIST:INITiation:ARMed?`
Example	`:SOUR:LIST:INIT:ARMed?`
Notes	Returns “1” if list sequence has been initiated successfully, or “0” if not. If the response is “0”, use `:SYST:ERR?` to query the actual error Like `*OPC?`, this command can be blocked until event/status “IsSourceSweeping” occurs, and then returns. Doing so can help a script query the armed status only once during the time interval of the initiation. As an ancillary to the existing `:SOUR:LIST:TRIGger[:IMMediate]` (see "Initiate Sequence" on page 2480), send this query after `:SOUR:LIST:TRIG`. Otherwise, this query will return “1” immediately The return data is in the following format: Integer There is an alias: `:SOURce:LIST:TRIGger:INITiation:ARMed?`
Dependencies	Not available in E7760B

6.1.9 Frequency Setup

Lets you access the Frequency Setup sub-menu panel.

Notes	The menu under this control is for independent mode and has no effect on the "List Sequencer" on page 2479. If "Sequencer" on page 2480 is `ON`, the List Sequencer controls the source output and this key is grayed-out, to indicate out-of-scope. When "Sequencer" on page 2480 is `OFF`, source leaves List Sequencer and this button is blanked out

6.1.9.1 Frequency

Lets you set the RF Output Frequency. You can adjust the frequency of the source using the numeric keypad, step keys, or RPG. Pressing any digit (0 through 9) on the numeric keypad displays the unit terminator.

Remote Command	`:SOURce:FREQuency[:CW] <freq>` `:SOURce:FREQuency[:CW]?`	
Example	`:SOUR:FREQ 1.00 GHz`	
Notes	Internal source has list sequence mode, which comprises of several steps that contain separate output power, frequency and waveform etc. When the source list sequence playing is complete, the last step keeps playing, and you can use this command to change the list sequence last step's output frequency	
Couplings	The frequency value is coupled to the current channel band and number, such that updates to the band and number will update the frequency value to the corresponding absolute frequency	
Preset	E7760B	Depends on port selected
	EXM, with license F1A or 5WC	2.412 GHz
	VXT Models with Radio Heads/CIU	See "VXT Models with Remote Radio Heads/CIU" on page 2506
	M941xE(VXT Models with M9471A)	See "M941xE(VXT Models with M9471A)" on page 2506
	All other models	1.00 GHz
Min	E7760B	Depends on port selected
	VXT model M9420A	60 MHz
	VXT models M9410A/11A/15A/16A	380 MHz
	VXT model M9411A with Option LFE	1 MHz
	VXT Models with Radio Heads/CIU	See "VXT Models with Remote Radio Heads/CIU" on page 2506
	M941xE(VXT Models with M9471A)	See "M941xE(VXT Models with M9471A)" on page 2506
	All other models	10.00 MHz
Max	Hardware Dependent:	
	Option 503	3.6 GHz
	Option 504	3.8 GHz
	Option 506	6.00 GHz
	Option F06	6.00 GHz
	Parameters for "VXT models M9415A/16A" on page 2506 Parameters for "VXT Models with Remote Radio Heads/CIU" on page 2506 Parameters for "M941xE(VXT Models with M9471A)" on page 2506 For E7760B: Depends on port selected For EXM, if license 5WC is present, the frequency range should be limited to: 1.1GHz-1.7GHz, 2.4GHz-2.5GHz, 4.8GHz-6.0GHz. If the user-defined frequency is outside of range, reports error message "Settings conflict; Frequency is outside available range"	

VXT models M9410A/11A

RF Output Port	Preset	Min Without Option "LFE"	Min With Option "LFE"	Max
RF Output	1 GHz	380 MHz	1 MHz	6 GHz
RFHD	1 GHz	380 MHz	1 MHz	6 GHz

VXT models M9415A/16A

Freq Option	Preset	Min	Max
F06	1 GHz	380 MHz	6.0 GHz
F08	1 GHz	380 MHz	8.0 GHz
F12	1 GHz	380 MHz	12.3 GHz

E7760B

RF Output Port	Preset	Min	Max
IFIO	16 GHz	2 GHz	18 GHz
M1650A	58.32 GHz	55 GHz	69 GHz
M1720A	28 GHz	25 GHz	29 GHz

VXT Models with Remote Radio Heads/CIU

Products with Radio Heads/CIU	Preset	Min frequency	Max frequency
VXT + CIU	6 GHz	5.9 GHz	12 GHz
VXT + CIU + RRH	28 GHz	24.25 GHz	43.5 GHz
VXT + M1742A RRH	28 GHz	10 GHz	32 GHz

M941xE(VXT Models with M9471A)

Products with M9471A	Preset	Minimum settable frequency	Minimum frequency with Spec	Maximum settable frequency
M941xE without LFE option	1 GHz	330 MHz	380MHz	26.5GHz
M941xE with LFE option (LFE option in M9411A or M9471A)	1 GHz	750 kHz	1MHz	26.5GHz

NOTE

The minimum spec frequency is 380 MHz, minimum settable center frequency is 330 MHz.

With Option LFE in M9411A or in M9471A, the minimum settable frequency is 750 kHz, but Spec to customer only ensure down to 1 MHz.

6.1.9.2 Channel

The frequency of the source can be specified by a channel number of a given frequency band. This control allows you to specify the current channel number. For the appropriate range of channel numbers for a given frequency band, see the following tables: "GSM/EDGE Channel Number Ranges" on page 2507, "W-CDMA Channel Number Ranges" on page 2508, "LTE FDD Channel Number Ranges" on page 2509, and "LTE TDD Channel Number Ranges" on page 2511.

Channel is not available on E7760B.

Remote Command	`:SOURce:FREQuency:CHANnels:NUMBer <int>` `:SOURce:FREQuency:CHANnels:NUMBer?`
Example	`:SOUR:LIST:STEP2:SET:RAD:NUMB 1`
Notes	Grayed-out when the "Radio Standard/Radio Band" on page 2512 is set to NONE
Couplings	The channel number is coupled to the frequency value when "Radio Standard/Radio Band" on page 2512 is not set to NONE When the frequency value is changed, the channel number increases or decreases to match the new frequency. If the frequency is not at an exact match for a channel number, the nearest channel number is displayed, with > or < indicating whether the frequency is above or below the channel number
Preset	1
Min/Max	See "GSM/EDGE Channel Number Ranges" on page 2507, "W-CDMA Channel Number Ranges" on page 2508, "LTE FDD Channel Number Ranges" on page 2509, and "LTE TDD Channel Number Ranges" on page 2511

GSM/EDGE Channel Number Ranges

Band	Link (Device)	Range	Frequency (MHz)
P-GSM	Uplink (MS)	1 £ n £ 124	890.0 + 0.2*n
	Downlink (BS)	1 £ n £ 124	935.0 + 0.2*n

	Uplink	312 £ n £ 363	n÷5 + 770
		387 £ n £ 437	n÷5 + 755.1

LTE FDD Channel Number Ranges

The carrier frequency in the uplink and downlink is designated by the E-UTRA Absolute Radio Frequency Channel Number (EARFCN) in the range 0 - 65535. The relation between EARFCN and the carrier frequency in MHz for the downlink is given by the following equation, where F_{DL_low} and $N_{Offs\text{-}DL}$ are given in table 5.4.4-1 and N_{DL} is the downlink EARFCN.

$$F_{DL} = F_{DL\_low} + 0.1(N_{DL} – N_{Offs\text{-}DL})$$

The relation between EARFCN and the carrier frequency in MHz for the uplink is given by the following equation where F_{UL_low} and $N_{Offs\text{-}UL}$ are given in table 5.4.4-1 and N_{UL} is the uplink EARFCN.

$$F_{UL} = F_{UL\_low} + 0.1(N_{UL} – N_{Offs\text{-}UL})$$

Band	**Downlink**			**Uplink**		
	F_{DL_low} (MHz)	$N_{Offs\text{-}DL}$	Range of N_{DL}	F_{UL_low} (MHz)	$N_{Offs\text{-}UL}$	Range of N_{UL}
1	2110	0	0 – 599	1920	18000	18000 – 18599
2	1930	600	600 – 1199	1850	18600	18600 – 19199
3	1805	1200	1200 – 1949	1710	19200	19200 – 19949
4	2110	1950	1950 – 2399	1710	19950	19950 – 20399

25	1930	8040	8040 - 8689	1850	26040	26040 - 26689
26	859	8690	8690 - 9039	814	26690	26690 - 27039
…						

Note: The channel numbers that designate carrier frequencies so close to the operating band edges that the carrier extends beyond the operating band edge shall not be used. This implies that the first 7, 15, 25, 50, 75 and 100 channel numbers at the lower operating band edge and the last 6, 14, 24, 49, 74 and 99 channel numbers at the upper operating band edge shall not be used for channel bandwidths of 1.4, 3, 5, 10, 15 and 20 MHz respectively.

LTE TDD Channel Number Ranges

The carrier frequency in the uplink and downlink is designated by the E-UTRA Absolute Radio Frequency Channel Number (EARFCN) in the range 0 - 65535. The relation between EARFCN and the carrier frequency in MHz for the downlink is given by the following equation, where F_{DL_low} and $N_{Offs\text{-}DL}$ are given in table 5.4.4-1 and N_{DL} is the downlink EARFCN.

$F_{DL} = F_{DL\_low} + 0.1(N_{DL} – N_{Offs\text{-}DL})$

The relation between EARFCN and the carrier frequency in MHz for the uplink is given by the following equation where F_{UL_low} and $N_{Offs\text{-}UL}$ are given in table 5.4.4-1 and N_{UL} is the uplink EARFCN.

$F_{UL} = F_{UL\_low} + 0.1(N_{UL} – N_{Offs\text{-}UL})$

Band	Downlink			Uplink		
	F_{DL_low} (MHz)	$N_{Offs\text{-}DL}$	Range of N_{DL}	F_{UL_low} (MHz)	$N_{Offs\text{-}UL}$	Range of N_{UL}
33	1900	36000	36000 –36199	1900	36000	36000 – 36199
34	2010	36200	36200 –36349	2010	36200	36200 – 36349
35	1850	36350	36350 –36949	1850	36350	36350 – 36949
36	1930	36950	36950 –37549	1930	36950	36950 – 37549
37	1910	37550	37550 –37749	1910	37550	37550 – 37749
38	2570	37750	37750 –38249	2570	37750	37750 – 38249
39	1880	38250	38250 –38649	1880	38250	38250 – 38649
40	2300	38650	38650 –39649	2300	38650	38650 – 39649
41	2496	39650	39650 - 41589	2496	39650	39650 - 41589
42	3400	41590	41590 – 43589	3400	41590	41590 – 43589
43	3600	43590	43590 – 45589	3600	43590	43590 – 45589

Note: The channel numbers that designate carrier frequencies so close to the operating band edges that the carrier extends beyond the operating band edge shall not be used. This implies that the first 7, 15, 25, 50, 75 and 100 channel numbers at the lower operating band edge and the last 6, 14, 24, 49, 74 and 99 channel numbers at the upper operating band edge shall not be used for channel bandwidths of 1.4, 3, 5, 10, 15 and 20 MHz respectively.

6.1.9.3 Radio Setup

Lets you select the radio standard and associated radio band. You can also set the Radio Band Link to Uplink or Downlink.

Radio Standard/Radio Band

Lets you select the radio standard and associated radio band. The first column in the dialog lets you set the Radio Standard; for each standard, and the second column in the dialog changes to show you the available bands.

Once you have selected the radio standard, you can then set an active channel band. The radio standard and the active channel band allow you to use the "Channel" on page 2507 control to set Channel numbers, thus setting "Frequency" on page 2504 automatically.

Remote Command

`:SOURce:FREQuency:CHANnels:BAND <band>`

where `<band>` is one of:

```
NONE | PGSM | EGSM | RGSM | DCS1800 | PCS1900 | GSM450 | GSM480 | GSM700 |

`:SOURce:FREQuency:CHANnels:BAND?`

Example

`:SOUR:LIST:STEP2:SET:RAD:BAND PGSM`

Notes

Setting this to NONE grays-out "Channel" on page 2507 under **Frequency Setup**

Here are the members of each group in Radio Standard and a SCPI example for each:

None – no Radio Standard

None	`:SOUR:FREQ:CHAN:BAND NONE`

GSM

Sets GSM/EDGE as the radio standard for use and accesses the GSM/EDGE specific channel band sub-menus.

P-GSM	`:SOUR:FREQ:CHAN:BAND PGSM`
E-GSM	`:SOUR:FREQ:CHAN:BAND EGSM`
R-GSM	`:SOUR:FREQ:CHAN:BAND RGSM`
DCS 1800	`:SOUR:FREQ:CHAN:BAND DCS1800`

PCS 1900	`:SOUR:FREQ:CHAN:BAND PCS1900`
GSM 450	`:SOUR:FREQ:CHAN:BAND GSM450`
GSM 480	`:SOUR:FREQ:CHAN:BAND GSM480`
GSM 700	`:SOUR:FREQ:CHAN:BAND GSM700`
GSM 850	`:SOUR:FREQ:CHAN:BAND GSM850`
T-GSM 810	`:SOUR:FREQ:CHAN:BAND T-GSM810`

W-CDMA

Sets WCDMA as the radio standard for use and accesses the W-CDMA specific channel band sub-menus.

Band I	`:SOUR:FREQ:CHAN:BAND BANDI`
Band II	`:SOUR:FREQ:CHAN:BAND BANDII`
Band III	`:SOUR:FREQ:CHAN:BAND BANDIII`
Band IV	`:SOUR:FREQ:CHAN:BAND BANDIV`
Band V	`:SOUR:FREQ:CHAN:BAND BANDV`
Band VI	`:SOUR:FREQ:CHAN:BAND BANDVI`
Band VII	`:SOUR:FREQ:CHAN:BAND BANDVII`
Band VIII	`:SOUR:FREQ:CHAN:BAND BANDVIII`
Band IX	`:SOUR:FREQ:CHAN:BAND BANDIX`
Band X	`:SOUR:FREQ:CHAN:BAND BANDX`
Band XI	`:SOUR:FREQ:CHAN:BAND BANDXI`
Band XII	`:SOUR:FREQ:CHAN:BAND BANDXII`
Band XIII	`:SOUR:FREQ:CHAN:BAND BANDXIII`
Band XIV	`:SOUR:FREQ:CHAN:BAND BANDXIV`
Band XIX	`:SOUR:FREQ:CHAN:BAND BANDXIX`

LTE

Sets LTE FDD as the radio standard for use and accesses the LTE FDD specific channel band sub-menus.

Band 1	`:SOUR:FREQ:CHAN:BAND BAND1`
Band 2	`:SOUR:FREQ:CHAN:BAND BAND2`
Band 3	`:SOUR:FREQ:CHAN:BAND BAND3`
Band 4	`:SOUR:FREQ:CHAN:BAND BAND4`
Band 5	`:SOUR:FREQ:CHAN:BAND BAND5`
Band 6	`:SOUR:FREQ:CHAN:BAND BAND6`
Band 7	`:SOUR:FREQ:CHAN:BAND BAND7`
Band 8	`:SOUR:FREQ:CHAN:BAND BAND8`

Band 9	`:SOUR:FREQ:CHAN:BAND BAND9`
Band 10	`:SOUR:FREQ:CHAN:BAND BAND10`
Band 11	`:SOUR:FREQ:CHAN:BAND BAND11`
Band 12	`:SOUR:FREQ:CHAN:BAND BAND12`
Band 13	`:SOUR:FREQ:CHAN:BAND BAND13`
Band 14	`:SOUR:FREQ:CHAN:BAND BAND14`
Band 17	`:SOUR:FREQ:CHAN:BAND BAND17`
Band 18	`:SOUR:FREQ:CHAN:BAND BAND18`
Band 19	`:SOUR:FREQ:CHAN:BAND BAND19`
Band 20	`:SOUR:FREQ:CHAN:BAND BAND20`
Band 21	`:SOUR:FREQ:CHAN:BAND BAND21`
Band 24	`:SOUR:FREQ:CHAN:BAND BAND24`
Band 25	`:SOUR:FREQ:CHAN:BAND BAND25`
Band 26	`:SOUR:FREQ:CHAN:BAND BAND26`
Band 27	`:SOUR:FREQ:CHAN:BAND BAND27`
Band 28	`:SOUR:FREQ:CHAN:BAND BAND28`
Band 29	`:SOUR:FREQ:CHAN:BAND BAND29`
Band 30	`:SOUR:FREQ:CHAN:BAND BAND30`
Band 31	`:SOUR:FREQ:CHAN:BAND BAND31`
Band 65	`:SOUR:FREQ:CHAN:BAND BAND65`
Band 66	`:SOUR:FREQ:CHAN:BAND BAND66`
Band 67	`:SOUR:FREQ:CHAN:BAND BAND67`
Band 68	`:SOUR:FREQ:CHAN:BAND BAND68`
Band 71	`:SOUR:FREQ:CHAN:BAND BAND71`
Band 252	`:SOUR:FREQ:CHAN:BAND BAND252`
Band 255	`:SOUR:FREQ:CHAN:BAND BAND255`

LTE TDD

Sets LTE TDD as the radio standard for use and accesses the LTE TDD specific channel band sub-menus.

Band 33	`:SOUR:FREQ:CHAN:BAND BAND33`
Band 34	`:SOUR:FREQ:CHAN:BAND BAND34`
Band 35	`:SOUR:FREQ:CHAN:BAND BAND35`
Band 36	`:SOUR:FREQ:CHAN:BAND BAND36`
Band 37	`:SOUR:FREQ:CHAN:BAND BAND37`
Band 38	`:SOUR:FREQ:CHAN:BAND BAND38`
Band 39	`:SOUR:FREQ:CHAN:BAND BAND39`

Band 40	`:SOUR:FREQ:CHAN:BAND BAND40`
Band 41	`:SOUR:FREQ:CHAN:BAND BAND41`
Band 42	`:SOUR:FREQ:CHAN:BAND BAND42`
Band 43	`:SOUR:FREQ:CHAN:BAND BAND43`
Band 44	`:SOUR:FREQ:CHAN:BAND BAND44`
Band 45	`:SOUR:FREQ:CHAN:BAND BAND45`
Band 46	`:SOUR:FREQ:CHAN:BAND BAND46`

5GNR

Sets 5G NR as the radio standard for use and accesses the 5G NR specific channel band sub-menus.

N 1	`:SOUR:FREQ:CHAN:BAND N1`
N 2	`:SOUR:FREQ:CHAN:BAND N2`
N 3	`:SOUR:FREQ:CHAN:BAND N3`
N 5	`:SOUR:FREQ:CHAN:BAND N5`
N 7	`:SOUR:FREQ:CHAN:BAND N7`
N 8	`:SOUR:FREQ:CHAN:BAND N8`
N 12	`:SOUR:FREQ:CHAN:BAND N12`
N 20	`:SOUR:FREQ:CHAN:BAND N20`
N 25	`:SOUR:FREQ:CHAN:BAND N25`
N 28	`:SOUR:FREQ:CHAN:BAND N28`
N 34	`:SOUR:FREQ:CHAN:BAND N34`
N 38	`:SOUR:FREQ:CHAN:BAND N38`
N 39	`:SOUR:FREQ:CHAN:BAND N39`
N 40	`:SOUR:FREQ:CHAN:BAND N40`
N 41	`:SOUR:FREQ:CHAN:BAND N41`
N 50	`:SOUR:FREQ:CHAN:BAND N50`
N 51	`:SOUR:FREQ:CHAN:BAND N51`

N 83	`:SOUR:FREQ:CHAN:BAND N83`
N 84	`:SOUR:FREQ:CHAN:BAND N84`
N 86	`:SOUR:FREQ:CHAN:BAND N86`
N 257	`:SOUR:FREQ:CHAN:BAND N257`
N 258	`:SOUR:FREQ:CHAN:BAND N258`
N 260	`:SOUR:FREQ:CHAN:BAND N260`
N 261	`:SOUR:FREQ:CHAN:BAND N261`

Radio Band Link

Lets you specify the channel band type as either uplink or downlink link direction. This value is used in conjunction with the channel band and channel number to determine the absolute frequency output by the source.

- When set to **Uplink** (`UP`), the source calculates the uplink frequency using an uplink formula together with the selected channel band and channel number
- When set to **Downlink** (`DOWN`) the source calculates the downlink frequency using a downlink formula together with the selected channel band and channel number

Remote Command	`:SOURce:RADio:BAND:LINK DOWN | UP` `:SOURce:RADio:BAND:LINK?`
Example	`:SOUR:RAD:BAND:LINK UP`
Preset	`DOWN`
Range	`DOWN | UP`
Backwards Compatibility SCPI	`:SOURce:RADio:DEVice BTS | MS` `:SOURce:RADio:DEVice?`
Backwards Compatibility Notes	`DOWN` = `BTS` `UP` = `MS`

6.1.9.4 Set Reference Frequency

Lets you set the frequency reference. Pressing this control turns the frequency reference state to `ON`, sets the reference frequency value to the current frequency, maintains this frequency at the RF output, and sets the displayed frequency to 0.00 Hz. All subsequent frequencies entered under Source>Frequency>Frequency are interpreted as being relative to this reference frequency.

When you use a frequency reference, the signal generator outputs a frequency that is set relative to the reference frequency by the value entered under **Source**, **Frequency**, **Frequency** as follows:

Output frequency = reference frequency - entered frequency

Where:

- reference frequency equals the original RF frequency entered under Source>Frequency>Frequency and set as the reference frequency
- entered frequency equals a new value entered under **Source**, **Frequency**, **Frequency**

In addition, the displayed frequency value will be the same as the value entered under Source>Frequency>Frequency.

NOTE

If Freq Reference is `ON` with a reference value set, entering a value under **Source**, **Frequency**, **Frequency** and pressing **Set Frequency Reference** adds that value to the existing Freq Reference value.

If you wish to change the reference frequency value to the new value entered under **Source**, **Frequency**, **Frequency**, first set Freq Reference `OFF` then press **Set Frequency Reference**.

Remote Command	`:SOURce:FREQuency:REFerence:SET`
Example	`:SOUR:FREQ:REF:SET`
Dependencies	Unavailable, and grayed-out, when List Sequencer is `ON`

6.1.9.5 Freq Reference

Lets you toggle the state of the frequency reference. When the frequency reference state is `ON`, an annunciator is displayed on the main source view to indicate this state to the user.

When you use a frequency reference, the signal generator outputs a frequency that is set relative to the reference frequency by the value entered under **Source**, **Frequency**, **Frequency** as follows:

Output frequency = reference frequency + entered frequency

Where:

- reference frequency equals the original RF frequency entered under **Source**, **Frequency**, **Frequency** and set as the reference frequency
- entered frequency equals a new value entered under **Source**, **Frequency**, **Frequency**

For more information on Reference Frequency, see "Set Reference Frequency" on page 2516.

Remote Command	`:SOURce:FREQuency:REFerence <freq>` `:SOURce:FREQuency:REFerence?`
Example	`:SOUR:FREQ:REF 0.00 Hz`
Dependencies	Unavailable, and grayed-out, when List Sequencer is ON
Couplings	The frequency reference state is coupled to the frequency reference set immediate action. When the reference set immediate action key is pressed, or the SCPI command issued, it turns the frequency reference state ON
Preset	0.00 Hz
Min	0.00 Hz
Max	Hardware Dependent: Option 503 — 3.6 GHz Option 504 — 3.8 GHz Option 506 — 6.00 GHz For E7760B: Dependent on port selected

Auto Function

Remote Command	`:SOURce:FREQuency:REFerence:STATe OFF | ON | 0 | 1` `:SOURce:FREQuency:REFerence:STATe?`
Example	`:SOUR:FREQ:REF:STATe ON`
Preset	OFF

6.1.9.6 Freq Offset

Lets you specify the frequency offset value. When the frequency offset state is ON, an annunciator is displayed on the main source view to indicate this state.

When the frequency offset is set to zero (0) and you set a new offset value, the displayed frequency value changes as follows, and the RF output frequency does not change:

Displayed value = output frequency + offset value

Where:

- output frequency equals the original frequency entered under **Source**, **Frequency**, **Frequency**
- offset value equals the value entered under **Source**, **Frequency**, **Freq Offset**

When the frequency offset is set to a value other than zero (0) and you enter a new frequency value under **Source**, **Frequency**, **Frequency**, the displayed frequency will be the same as the value entered and the RF output frequency will be equal to the value entered minus the offset value as follows:

Output frequency = entered frequency – offset frequency

Displayed frequency = output frequency + offset frequency

Displayed frequency = entered frequency

Where:

- entered frequency equals the frequency entered under **Source**, **Frequency**, **Frequency**
- offset frequency equals the value previously entered and set under **Source**, **Frequency**, **Freq Offset**

Remote Command	`:SOURce:FREQuency:OFFSet <freq>` `:SOURce:FREQuency:OFFSet?`
Example	`:SOUR:FREQ:OFFS 0 Hz`
Dependencies	Unavailable, and grayed-out, when List Sequencer is `ON`
Preset	0 Hz
Min/Max	–/+100.00 GHz

6.1.9.7 Freq Increment

Changes the step size for the RF Output Frequency function. Once an increment size has been selected and the RF Output Frequency function is active, the step keys (and the `UP|DOWN` parameters for RF Frequency from remote commands) change the RF Output Frequency by the increment set value.

This feature exists in EXG and MXG.

Remote Command	`:SOURce:FREQuency:STEP[:INCRement] <freq>` `:SOURce:FREQuency:STEP[:INCRement]?`
Example	`:SOUR:FREQ:STEP 1.0 kHz`
Couplings	Coupled to the Step size of the RF Frequency function
Preset	Hardware Dependent. 10% of the span preset value
Min	1 Hz
Max	Hardware Dependent: Option 503: 3.6 GHz Option 504: 3.8 GHz

Option 506	6.00 GHz

For E7760B: Dependent on port selected

For EXM, if license 5WC is present, the frequency range should be limited to: 1.1GHz-1.7GHz, 2.4GHz-2.5GHz, 4.8GHz-6.0GHz. If the user-defined frequency is outside of range, reports error message "Settings conflict; Frequency is outside available range"

6.1.9.8 Rx/Tx Coupling

Allows coupling between the frequency of the Internal Source, RF Output Frequency, and the instrument Center Frequency. For all settings except `NONE`, this parameter couples the **Center Frequency** of the instrument to the RF Output Frequency of the source. Valid setting changes result in the Analyzer CF and RF Output Frequency parameters being set to the same value, plus the "Rx/Tx Offset" on page 2521.

The four states for coupling are:

`SOURce`	Source follows Analyzer Coupling is in one direction only. Changes to the Center Frequency will result in the RF Output Frequency being set to the same value, with any Rx/Tx Frequency Offset applied. Changes to the RF Output Frequency will not change the Center Frequency and will change Rx/Tx Frequency Coupling to None
`ANALyzer`	Analyzer follows Source Coupling is in one direction only. Changes to the RF Output Frequency will result in the Center Frequency being set to the same value, with any Rx/Tx Frequency Offset applied. Changes to the Center Frequency will not change the RF Output Frequency and will change Rx/Tx Frequency Coupling to None
`BOTH`	Analyzer/Source Coupled Coupling is bi-directional. Changes to the Center Frequency will result in the RF Output Frequency being set to the same value, with any Rx/Tx Frequency Offset applied. Changes to the RF Output Frequency will result in the Center Frequency being set to the same value, with any Rx/Tx Frequency Offset applied
`NONE`	None RF Output Frequency and CF Frequency are independently controlled

Remote Command	`:SOURce:FREQuency:COUPling NONE | BOTH | SOURce | ANALyzer` `:SOURce:FREQuency:COUPling?`
Example	`:SOUR:FREQ:COUP BOTH`
Dependencies	Only appears in Radio Test Mode
Preset	`NONE` Input/Output Preset
State Saved	Yes

6.1.9.9 Rx/Tx Offset

Lets you offset the RF Output Frequency of the source from the **Center Frequency** of the instrument. See "Rx/Tx Coupling" on page 2520 for coupling behavior.

Remote Command	`:SOURce:FREQuency:COUPling:OFFSet <freq>` `:SOURce:FREQuency:COUPling:OFFSet?`
Example	`:SOUR:FREQ:COUP:OFF 100 kHz`
Dependencies	Grayed-out when "Rx/Tx Coupling" on page 2520 is set to `NONE`. If the grayed-out control is selected, the following message appears: "The parameter cannot be changed when Rx/Tx Coupling is Off" Only appears in Radio Test Mode
Preset	0 Hz (Input/Output Preset)
Min	-6 GHz
Max	Hardware Dependent:

Option 503	3.6 GHz
Option 504	3.8 GHz
Option 506	6.00 GHz

For E7760B: Dependent on port selected

For E6640A, if license 5WC is present, the frequency range should be limited to: 1.1GHz-1.7GHz, 2.4GHz-2.5GHz, 4.8GHz-6.0GHz. If the user-defined frequency is outside of range, UI reports an error message: "Settings conflict; Frequency is outside available range"

6.1.10 Modulation

Lets you toggle the state of modulation.

Remote Command	`:OUTPut:MODulation[:STATe] ON | OFF | 1 | 0` `:OUTPut:MODulation[:STATe]?`
Example	`:OUTP:MOD OFF`
Notes	This setting is for independent mode and has no effect on the "List Sequencer" on page 2479. If **Sequencer** is ON, the List Sequencer controls the source output, and this key is grayed-out When **Sequencer** is `OFF`, source leaves List Sequencer, and this setting is blanked out, taking effect immediately When Modulation is ON, the "MOD" annunciator is displayed in the system settings panel. When Modulation is `OFF`, the "MOD" annunciator is cleared If **Sequencer** is ON, the "MOD" annunciator will be replaced by "SEQ" in the system settings panel, indicating that the output is controlled by List Sequencer

Preset	`OFF`
Range	`ON|OFF`

6.1.11 Modulation Setup

Allows access to the menus for setting up the available modulation types.

Not available in E7760B.

AM/FM/PM are not available for VXT models M9415A/16A and M9415E/16E .

6.1.11.1 AM

Enables or disables amplitude modulation.

Turning **AMON** when another modulation format is already on results in the previous modulation format being turned off, and generates an error.

Remote Command	`:SOURce:AM:STATe ON | OFF | 1 | 0` `:SOURce:AM:STATe?`
Example	`:SOUR:AM:STAT OFF`
Dependencies	Not available in E7760B
Preset	`OFF`
Range	`ON|OFF`

6.1.11.2 AM Mod Depth

Lets you set the amplitude modulation depth in percent.

Remote Command	`:SOURce:AM[:DEPTh][:LINear] <real>` `:SOURce:AM[:DEPTh][:LINear]?`
Example	`:SOUR:AM 0.1`
Dependencies	Not available in E7760B
Preset	0.1 %
Min	0.1 %
Max	95.0 %

6.1.11.3 AM Rate

Lets you set the internal amplitude modulation rate.

Remote Command	`:SOURce:AM:INTernal:FREQuency <freq>` `:SOURce:AM:INTernal:FREQuency?`
Example	`:SOUR:AM:INT:FREQ 40.0 Hz`
Dependencies	Not available in E7760B
Preset	400.0 Hz
Min	10 Hz
Max	40 kHz

6.1.11.4 AM Rate Increment

Changes the step size for "AM Rate" on page 2522. Once an increment size has been selected and **AM Rate** is active, the step keys (and the `UP|DOWN` parameters for **AM Rate** from remote commands) change **AM Rate** by the increment value.

Remote Command	`:SOURce:AM:INTernal:FREQuency:STEP[:INCRement] <freq>` `:SOURce:AM:INTernal:FREQuency:STEP[:INCRement]?`
Example	`:SOUR:AM:INT:FREQ:STEP 100 Hz` `:SOUR:AM:INT:FREQ:STEP?`
Couplings	Coupled to the increment size of **AM Rate**
Preset	10 Hz
State Saved	Yes
Min	1 Hz
Max	40 kHz

6.1.11.5 FM

Enables or disables frequency modulation.

Turning `FMON` when another modulation format is already on results in the previous modulation format being turned off and the generation of an error.

Remote Command	`:SOURce:FM:STATe ON | OFF | 1 | 0` `:SOURce:FM:STATe?`
Example	`:SOUR:FM:STAT OFF`
Dependencies	Not available in E7760B
Preset	`OFF`
Range	`ON|OFF`

6.1.11.6 FM Deviation

Lets you set the frequency modulation deviation.

Remote Command	`:SOURce:FM[:DEViation] <freq>` `:SOURce:FM[:DEViation]?`
Example	`:SOUR:FM 1.00 kHz`
Dependencies	Not available in E7760B
Preset	1.00 Hz
Min	1.00 Hz
Max	100.00 kHz

6.1.11.7 FM Rate

Lets you set the internal frequency modulation rate.

Remote Command	`:SOURce:FM:INTernal:FREQuency <freq>` `:SOURce:FM:INTernal:FREQuency?`
Example	`:SOUR:FM:INT:FREQ 40.0 Hz`
Dependencies	Not available in E7760B
Preset	400.0 Hz
Min	10 Hz
Max	40 kHz

6.1.11.8 FM Rate Increment

Changes the step size for "FM Rate" on page 2524. Once an increment size has been selected and **FM Rate** is active, the step keys (and the UP|DOWN parameters for **FM Rate** from remote commands) change **FM Rate** by the increment value.

Remote Command	`:SOURce:FM:INTernal:FREQuency:STEP[:INCRement] <freq>` `:SOURce:FM:INTernal:FREQuency:STEP[:INCRement]?`
Example	`:SOUR:FM:INT:FREQ:STEP 100 Hz` `:SOUR:FM:INT:FREQ:STEP?`
Couplings	Coupled to the increment size of **FM Rate**
Preset	10 Hz
State Saved	Yes
Min	1 Hz
Max	40 kHz

6.1.11.9 PM

Enables or disables phase modulation.

Turning `PMON` when another modulation format is already on results in the previous modulation format being turned `OFF` and the generation of an error.

Remote Command	`:SOURce:PM:STATe ON | OFF | 1 | 0` `:SOURce:PM:STATe?`
Example	`:SOUR:PM:STAT OFF`
Dependencies	Not available in E7760B
Preset	`OFF`
Range	`ON|OFF`

6.1.11.10 PM Deviation

Lets you set the phase modulation deviation in radian.

Remote Command	`:SOURce:PM[:DEViation] <real>` `:SOURce:PM[:DEViation]?`
Example	`:SOUR:PM 1.00`
Dependencies	Not available in E7760B
Preset	0.1 rad
Min	0.1 rad
Max	

Instrument Type	Value
M9410A/11A	10.0 rad
All Others	20.0 rad

6.1.11.11 PM Rate

Lets you set the internal phase modulation rate.

Remote Command	`:SOURce:PM:INTernal:FREQuency <freq>` `:SOURce:PM:INTernal:FREQuency?`
Example	`:SOUR:PM:INT:FREQ 40.0 Hz`
Dependencies	Not available in E7760B
Preset	400.0 Hz

Min	10 Hz
Max	40 kHz

6.1.11.12 PM Rate Increment

Changes the step size for "PM Rate" on page 2525. Once an increment size has been selected and **PM Rate** is active, the step keys (and the `UP|DOWN` parameters for **PM Rate** from remote commands) change **PM Rate** by the increment value.

Remote Command	`:SOURce:PM:INTernal:FREQuency:STEP[:INCRement] <freq>` `:SOURce:PM:INTernal:FREQuency:STEP[:INCRement]?`
Example	`:SOUR:PM:INT:FREQ:STEP 100 Hz` `:SOUR:PM:INT:FREQ:STEP?`
Couplings	Coupled to the increment size of PM Rate
Preset	10 Hz
State Saved	Yes
Min	1 Hz
Max	40 kHz

6.1.11.13 ARB Setup

Accesses menus for setting up the Arbitrary Waveform Generator.

Basic Control

Lets you set up the basic ARB parameters and select a waveform to play.

ARB State

Lets you toggle the state of the ARB function. When the ARB is `ON`, a “MOD” annunciator is displayed in the system settings panel. When the ARB is `OFF`, the MOD annunciator is cleared

Remote Command	`:SOURce:RADio:ARB[:STATe] ON | OFF | 1 | 0` `:SOURce:RADio:ARB[:STATe]?`
Example	`:SOUR:RAD:ARB OFF` `:SOUR:RAD:ARB?`
Notes	If ARB is `ON`, and you then load or delete another file to ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished

Dependencies	This setting is for the independent mode, and has no effect on "List Sequencer" on page 2479. If **Sequencer** is `ON`, this will make the source enter List Sequencer mode, and even if ARB state is `ON`, the ARB file will not be played. When **Sequencer** is `OFF`, source leaves List Sequencer and this setting takes effect immediately The ARB can only be turned on when there is a waveform file selected for playback. On the GUI, If no waveform is selected, this key is grayed out. If you send the SCPI command to turn the ARB on with no waveform selected for playback, the ARB state remains `OFF` and an error is generated -If you try to recall a certain set of states in which the selected waveform is not in ARB memory and the ARB state is `ON`, errors are reported
Preset	`OFF`
Range	`ON|OFF`

Sample Rate

Lets you set the ARB waveform playback sample rate.

See "More Information" on page 2528

Remote Command	`:SOURce:RADio:ARB:SCLock:RATE <freq>` `:SOURce:RADio:ARB:SCLock:RATE?`
Example	`:SOUR:RAD:ARB:SCL:RATE 48.00 MHz`
Notes	If there is a sample rate specified in the header of the waveform file, changing that sample rate is not recommended, as it may cause problems with burst timing For E7760B, the Sample Rate is fixed. If this control is attempted to be set the error -221, "Settings conflict; Sample Rate is fixed" is generated
Dependencies	When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The sample rate is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the sample rate is updated with the value from the header file. The sample rate will remain unchanged if the newly selected waveform does not have an associated header file
Preset	E7760B: 2.64 GHz Option B40: 50 MHz Option B85: 100 MHz Option B1X: 200 MHz Option B3X: 375 MHz Option B6X: 750 MHz Option B4X: 500 MHz Option B8X: 1.0 GHz Option B12: 1.5 GHz

Min	E7760B: 2.64 GHz All Others: 1.00 kHz
Max	Hardware Dependent:

E7760B		2.64 GHz
VXT model M9420A	Option B40	50 MHz
	Option B85	100 MHz
	Option B1X	200 MHz
VXT models M9410A/11A and M9410E/11E	Option B40	50 MHz
	Option B3X	375 MHz
	Option B6X	750 MHz
	Option B12	1.5 GHz
VXT models M9415A/16A and M9415E/16E	Option B4X	500 MHz
	Option B8X	1.0 GHz
	Option B12	1.5 GHz

For VXT models M9410A/11A/15A/16A, M9410E/11E/15E/16E and E6680A/81A, the sample rate is only limited by the option, but the IF BW is limited by center frequency in addition to options. See "More Information" on page 2528. Performance is guaranteed only when the bandwidth of the selected waveform is smaller than the Max IF BW

More Information

Although the range of Sample Rate only depends on the installed option, the Maximum IF BW depends on options as well as the Center Frequency.

VXT models M9410A/11A, E6680A and E6681A

Option Limitation:

Option	Maximum IF BW
B40	40 MHz
B3X	300 MHz
B6X	600 MHz
B12	1200 MHz

Center Frequency Limitation:

Center Frequency	Maximum IF BW
6.5 kHz ~ 9 kHz (Option LFE)	(CF – 6.5 kHz) * 2
9 kHz ~ 100 kHz (Option LFE)	5 kHz

Center Frequency	Maximum IF BW
100 kHz ~ 1 MHz (Option LFE)	50 kHz
1 MHz ~ 10 MHz (Option LFE)	500 kHz
10 MHz ~ 20 MHz (Option LFE)	5 MHz
20 MHz ~ 60 MHz (Option LFE)	10 MHz
60 MHz ~ 80 MHz (Option LFE)	20 MHz
80 MHz ~ 380 MHz (Option LFE)	40 MHz
330 MHz ~ 380 MHz (without Option LFE)	(CF – 330 MHz) * 2
380 MHz ~ 550 MHz	100 MHz
550 MHz ~ 1310 MHz	200 MHz
1310 MHz ~ 2000 MHz (without Option EP6)	600 MHz
2000 MHz ~ 5480 MHz (without Option EP6)	1200 MHz
5480 MHz ~ 6080 MHz (without Option EP6)	(6080 MHz – CF) * 2
1310 MHz ~ 1900 MHz (Option EP6)	600 MHz
1900 MHz ~ 6000 MHz (Option EP6)	1200 MHz
6000 MHz ~ 6600 MHz (Option EP6)	(6600 MHz – CF) * 2

VXT models M9415A/16A

Option Limitation:

Option	Maximum IF BW
B4X	400 MHz
B8X	800 MHz
B12	1200 MHz

Center Frequency Limitation:

Center Frequency	Maximum IF BW
330 MHz ~ 380 MHz	(CF – 330 MHz) * 2
380 MHz ~ 550 MHz	100 MHz
550 MHz ~ 1310 MHz	200 MHz
1310 MHz ~ 2000 MHz	600 MHz
2000 MHz ~ 12300 MHz	1200 MHz
12300 MHz ~ 12900 MHz	(12900 MHz – CF) * 2

M9410E/11E

Option Limitation:

Option	Maximum IF BW
B40	40 MHz
B3X	300 MHz
B6X	600 MHz
B12	1200 MHz

Center Frequency Limitation:

Center Frequency	Maximum IF BW
1 MHz ~ 10 MHz (Option LFE)	500 kHz
10 MHz ~ 20 MHz (Option LFE)	5 MHz
20 MHz ~ 60 MHz (Option LFE)	10 MHz
60 MHz ~ 80 MHz (Option LFE)	20 MHz
80 MHz ~ 380 MHz (Option LFE)	40 MHz
330 MHz ~ 380 MHz (without Option LFE)	(CF – 330 MHz) * 2
380 MHz ~ 550 MHz	100 MHz
550 MHz ~ 1310 MHz	200 MHz
1310 MHz ~ 2000 MHz (without Option EP6)	600 MHz
2000 MHz ~ 25.9 GHz (without Option EP6)	1200 MHz
1310 MHz ~ 1900 MHz (Option EP6)	600 MHz
1900 MHz ~ 25.9 GHz (Option EP6)	1200 MHz
25.9 GHz ~ 26.5 GHz	Min(Max BW by option, 2*(26.5 GHz-Center Freq))

M9415E/16E

Option Limitation:

Option	Maximum IF BW
B4X	400 MHz
B8X	800 MHz
B12	1200 MHz

Center Frequency Limitation:

Center Frequency	Maximum IF BW
1 MHz ~ 10 MHz (Option LFE)	500 kHz
10 MHz ~ 20 MHz (Option LFE)	5 MHz
20 MHz ~ 60 MHz (Option LFE)	10 MHz
60 MHz ~ 80 MHz (Option LFE)	20 MHz
80 MHz ~ 380 MHz (Option LFE)	40 MHz

Center Frequency	Maximum IF BW
330 MHz ~ 380 MHz (without Option LFE)	(CF – 330 MHz) * 2
380 MHz ~ 550 MHz	100 MHz
550 MHz ~ 1310 MHz	200 MHz
1310 MHz ~ 2000 MHz	600 MHz
2000 MHz ~ 25.9 GHz	1200 MHz
25.9 GHz ~ 26.5 GHz	Min(Max BW by option, 2*(26.5 GHz-Center Freq))

Run-Time Scaling

Lets you adjust the run-time scaling value. The run-time scaling value is applied in real-time while the waveform is playing.

Remote Command	`:SOURce:RADio:ARB:RSCaling <real>` `:SOURce:RADio:ARB:RSCaling?`
Example	`:SOUR:RAD:ARB:RSC 100.00`
Notes	Cannot be set in EXM and VXT. Grayed-out in menu, and the value is fixed at 70.00%
Dependencies	When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The run-time scaling is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the run-time scaling is updated with the value from the header file. The run-time scaling will remain unchanged if the newly selected waveform does not have an associated header file
Preset	70.00 %
Min	1.00 %
Max	100.00 %

Baseband Freq Offs

Lets you adjust the value by which the baseband frequency is offset relative to the carrier.

Remote Command	`:SOURce:RADio:ARB:BASeband:FREQuency:OFFSet <freq>` `:SOURce:RADio:ARB:BASeband:FREQuency:OFFSet?`
Example	`:SOUR:RAD:ARB:BAS:FREQ:OFFS 0.00 Hz`
Dependencies	When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The baseband frequency offset is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the baseband frequency offset is updated with the value from the header file. The baseband frequency offset will remain unchanged if the newly selected waveform does not have an associated header file Not available in E7760B

Preset	0.00 Hz
Min	-50.00 MHz
Max	50.00 MHz

Baseband Power

Lets you quickly control the power of the modulator prior to up-conversion to the RF carrier.

Remote Command	`:SOURce:RADio:ARB:BASeband:POWer <ampl>` `:SOURce:RADio:ARB:BASeband:POWer?`
Example	`:SOUR:RAD:ARB:BAS:POW -10 dB`
Notes	The Source Power level equals RF Power plus Baseband Power. For example, if the RF Power is set to -10 dBm and the Baseband Power is set to -4 dB, the actual Source Power level is -14 dBm Can be used to change the output level very quickly compared to the RF Power
Dependencies	Only appears in VXT models M9410A/11A/15A/16A and M9410E/11E/15E/16E
Preset	0 dB
Min	-50 dB
Max	20 dB

Mkr 1-4 Polarity

Lets you set the polarity of markers 1 through 4 respectively.

Remote Command	`:SOURce:RADio:ARB:MPOLarity:MARKer1|…|4 POSitive | NEGative` `:SOURce:RADio:ARB:MPOLarity:MARKer1|…|4?`
Example	`:SOUR:RAD:ARB:MPOL:MARK1 NEG`
Dependencies	When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The marker polarity is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the marker polarity is updated with the value from the header file. The marker polarity will remain unchanged if the newly selected waveform does not have an associated header file Not available in E7760B
Preset	`POSitive`
Range	`POSitive|NEGative`

Pulse/RF Blank

Lets you select which marker is used for **Pulse/RF Blank** . This function blanks the RF when the marker signal goes low. The marker polarity determines when the marker signal is high. For a positive polarity, this is during the marker points. For a negative polarity, this is when there are no marker points.

Marker points should be set before using this function. Enabling this function without setting maker points may create a continuous low or high signal, dependent on the marker polarity. This causes either no RF output, or a continuous RF output.

Remote Command	`:SOURce:RADio:ARB:MDEStination:PULSe NONE | M1 | M2 | M3 | M4`
	For option details, see "More Information" on page 2533
	`:SOURce:RADio:ARB:MDEStination:PULSe?`

Example	`:SOUR:RAD:ARB:MDES:PULS NONE`
Dependencies	When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The **Pulse/RF Blank** setting is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the **Pulse/RF Blank** setting is updated with the value from the header file. The **Pulse/RF Blank** setting remains unchanged if the newly selected waveform does not have an associated header file
Range	`NONE | M1 | M2 | M3 | M4`

More Information

Parameter	SCPI	Notes
None	`NONE`	Sets no marker to be used for **Pulse/RF Blank** function, essentially turning the RF blanking function off
Marker 1	`M1`	Sets marker 1 to be used for **Pulse/RF Blank**
Marker 2	`M2`	Sets marker 2 to be used for **Pulse/RF Blank**
Marker 3	`M3`	Sets marker 3 to be used for **Pulse/RF Blank**
Marker 4	`M4`	Sets marker 4 to be used for **Pulse/RF Blank**

ALC Hold

Lets you specify which marker is routed for use within **ALC Hold**. This function holds the ALC circuitry at the average value of the sample points set by the marker.

ALC Hold operates during the low periods of the marker signal. The marker polarity determines when the marker signal is high. For positive polarity, this is during the marker points. For a negative polarity, this is when there are no maker points.

Remote Command	`:SOURce:RADio:ARB:MDEStination:ALCHold NONE | M1 | M2 | M3 | M4`
	For option details, see "Option Details" on page 2534
	`:SOURce:RADio:ARB:MDEStination:ALCHold?`

Example	`:SOUR:RAD:ARB:MDES:ALCH NONE`
Dependencies	When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The **ALC Hold** setting is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the **ALC Hold** setting is updated

	with the value from the header file. The **ALC Hold** setting remains unchanged if the newly selected waveform does not have an associated header file Not available in E7760B, and VXT models M9410A/11A/15A/16A and M9410E/11E/15E/16E
Range	`NONE | M1 | M2 | M3 | M4`

Option Details

Parameter	SCPI	Notes
None	`NONE`	Use no marker for **ALC Hold**, essentially turning **ALC Hold** off
Marker 1	`M1`	Use marker 1 for **ALC Hold**
Marker 2	`M2`	Use marker 2 for **ALC Hold**
Marker 3	`M3`	Use marker 3 for **ALC Hold**
Marker 4	`M4`	Use marker 4 for **ALC Hold**

Trigger Type

Determines the behavior of the waveform when it plays.

Remote Command	`:SOURce:RADio:ARB:TRIGger:TYPE CONTinuous | SINGle | SADVance` `:SOURce:RADio:ARB:TRIGger:TYPE?`
Example	`:SOUR:RAD:ARB:TRIG:TYPE CONT` `:SOUR:RAD:ARB:TRIG:TYPE?`
Preset	`CONTinuous`
Range	Continuous | Single | Seg Adv

Continuous trigger

Sets the active trigger type to **Continuous**. If **Continuous** is already selected as the active trigger type, pressing this control allows access to the **Continuous trigger** type setup menu. In **Continuous** trigger mode, the waveform repeats continuously.

Remote Command	`:SOURce:RADio:ARB:TRIGger:TYPE:CONTinuous[:TYPE] FREE | TRIGger | RESet`
	See "Option Details" on page 2535
	`:SOURce:RADio:ARB:TRIGger:TYPE:CONTinuous[:TYPE]?`

Example	`:SOUR:RAD:ARB:TRIG:TYPE:CONT FREE`
Preset	`FREE`
Range	Free Run | Trigger + Run | Reset + Run

Option Details

Parameter	SCPI	Notes
Free Run	`FREE`	Sets the waveform generator to play a waveform sequence or segment continuously, without waiting for a trigger. In this mode, the waveform generator does not respond to triggers
Trigger + Run	`TRIGger`	Sets the waveform generator to play a waveform sequence or segment continuously when the first trigger is received, and to ignore any subsequent triggers
Reset + Run	`RESet`	Sets the waveform generator to play a waveform sequence or segment continuously when the first trigger is received. Subsequent triggers reset the waveform sequence or segment to the start, and then play it continuously

Single trigger

Sets the active trigger type to **Single**. If **Single** is already selected as the active trigger type, pressing this control allows access to the single trigger type setup menu. In **Single** trigger mode, the waveform plays once.

Remote Command	`:SOURce:RADio:ARB:RETRigger ON | OFF | IMMediate`
	See "Option Details" on page 2535
	`:SOURce:RADio:ARB:RETRigger?`

Example	`:SOUR:RAD:ARB:RETR OFF`
Notes	`ON`: Buffered Trigger `OFF`: No Retrigger `IMMediate`: Restart on Trigger This is defined as an enumerated SCPI command, with `ON|OFF` being considered as enumerated types rather than Boolean. This means the query returns `OFF` instead of 0, and `ON` instead of 1
Preset	`ON`

Option Details

Parameter	SCPI	Notes
No Retrigger	`OFF`	Sets the waveform generator to play a waveform sequence or segment once when a trigger is received. Any triggers then received during playback are ignored
Buffered Trigger	`ON`	Sets the waveform generator to play a waveform sequence or segment once when a trigger is received. If a trigger is received during playback, the waveform generator plays the sequence or segment to the end, then plays the sequence or segment once more
Restart on Trigger	`IMMediate`	Sets the waveform generator to play a waveform sequence or segment once when a trigger is received. If a trigger is received during playback, the waveform generator resets and plays the sequence or segment from the start

Segment Advance trigger

Sets the active trigger type to **Segment Advance**. If **Segment Advance** is already selected as the active trigger type, pressing this control allows access to the segment advance trigger type setup menu.

Segment Advance triggering allows you to control the playback of waveform segments within a waveform sequence. When a trigger is received the ARB advances to the next waveform segment within the waveform sequence. This type of triggering ignores the repetition count for the waveform segment within the waveform sequence. For example, if a waveform segment has a repetition count of 10 and you select single segment advance triggering mode, the waveform segment will only play once.

Segment Advance triggering can also be used for waveform segments only. In this situation, the same waveform segment is played again when a trigger is received.

Remote Command	`:SOURce:RADio:ARB:TRIGger:TYPE:SADVance[:TYPE] SINGle | CONTinuous`
	See "Option Details" on page 2536
	`:SOURce:RADio:ARB:TRIGger:TYPE:SADVance[:TYPE]?`

Example	`:SOUR:RAD:ARB:TRIG:TYPE:SADV SING`
Dependencies	Not available in E7760B
Preset	`CONTinuous`
Range	`SINGle|CONTinuous`

Option Details

Parameter	SCPI	Notes
Single	`SINGle`	Once a trigger is received a segment is played once. If a trigger is received during playback of a segment, the segment plays to completion and the next segment is played once
Continuous	`CONTinuous`	Once a trigger is received a segment is played continuously. When subsequent triggers are received, the currently playing segment plays to completion and then the next segment is played continuously
Trigger Initiate	Front panel only	If "Trigger Source" on page 2536 is set to `KEY`, initiates an immediate trigger event

Trigger Source

Determines how the source receives the trigger that starts the waveform playing. Grayed-out if "Trigger Type" on page 2534 is free run, since free run triggers immediately with no trigger source required.

Remote Command	`:SOURce:RADio:ARB:TRIGger[:SOURce] KEY | BUS | EXTernal1 | EXTernal2 | PXI`
	See "Option Details" on page 2537
	`:SOURce:RADio:ARB:TRIGger[:SOURce]?`

Example	`:SOUR:RAD:ARB:TRIG KEY`
Notes	For E7760B, the available selections are `KEY|BUS`
Dependencies	Grayed-out if **Trigger Type** is Continuous, Free Run
Preset	`EXTernal2` For E7760B: `BUS`
Range	`Key | Bus | External1 | External 2 | PXI`

Option Details

Parameter	SCPI	Notes
Key	`KEY`	The waveform is triggered when you press the front panel **Trigger** key
Bus	`BUS`	Enables triggering over GPIB, LAN, or USB using: `:SOURce:RADio:ARB:TRIGger:INITiate`
External 1	`EXTernal1`	Enables triggering a waveform by an externally-applied signal
External 2	`EXTernal2`	Enables triggering a waveform by an externally-applied signal Note: in EXM, trigger 2 is a bi-directional trigger port, so when trigger 2 has been configured as OUTPUT type, selecting External 2 as the input trigger for the current step generates an error Note 2: in VXT model M9420A, triggers on an externally connected trigger source marked **Trigger 1** on the front panel
PXI	`PXI`	Enables triggering a waveform by a PXI backplane Line applied signal

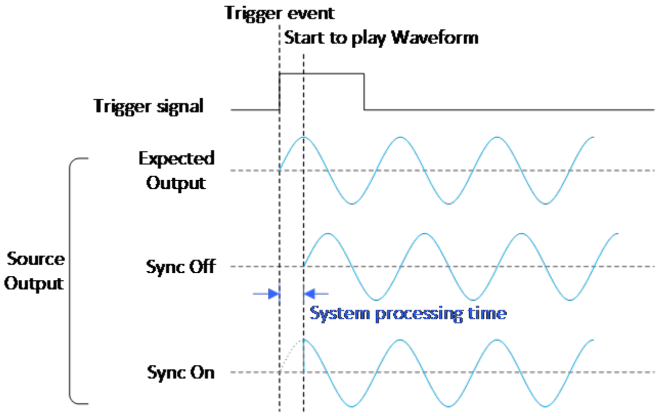
Bus Trigger Command (Remote Command Only)

Used to initiate an immediate trigger event if "Trigger Source" on page 2536 is set to `BUS`.

Remote Command	`:SOURce:RADio:ARB:TRIGger:INITiate`
Example	`:SOUR:RAD:ARB:TRIG:INIT`

Sync to Trigger Source

There is a time interval (system processing time) between the trigger event and the beginning of playing waveform. Turn on this control to compensate the system latency at the cost of cutting off the beginning of the ARB. The figure below shows the turn-on and turn-off behavior of the control.



Remote Command	`:SOURce:RADio:ARB:TRIGger:SYNC[:STATe] ON | OFF | 1 | 0` `:SOURce:RADio:ARB:TRIGger:SYNC[:STATe]?`
Example	`:SOUR:RAD:ARB:TRIG:SYNC ON` `:SOUR:RAD:ARB:TRIG:SYNC?`
Notes	Compensates for the instrument internal latency. The negative trigger delay compensates the external latency (that is, heads and cables). See "External Trigger Delay" on page 2538 and "PXI Trigger Delay" on page 2541 The first PerARB trigger is cut off if **Sync to Trigger Source** is ON
Dependencies	Only available when "Trigger Source" on page 2536 is `EXTernal1`, `EXTernal2`, or `PXI`
Preset	`OFF`
Range	`ON|OFF`

External Trigger Delay

Lets you toggle the state and value of external trigger delay. The value you enter sets a delay time between when an external trigger is received and when it is applied to the waveform. Only active if "Trigger Source" on page 2536 is `EXTernal1` or `EXTernal2`.

Negative trigger delay is only supported by VXT models M9410A/11A/15A/16A and M9410E/11E/15E/16E (see "More Information" on page 2539).

Remote Command	`:SOURce:RADio:ARB:TRIGger[:SOURce]:EXTernal:DELay <time>` `:SOURce:RADio:ARB:TRIGger[:SOURce]:EXTernal:DELay?`

Example	`:SOUR:RAD:ARB:TRIG:EXT:DEL 100ns` `:SOUR:RAD:ARB:TRIG:EXT:DEL?`
Notes	External trigger delay time set by users will be rounded to the nearest integer multiple of the resolution
Dependencies	Unavailable and grayed-out when **Trigger Source** is not set to `EXTernal1` or `EXTernal2` Not available in E7760B
Preset	1 ms
Min	VXT models M9410A/11A/15A/16A and M9410E/11E/15E/16E: -10 s All others: 0 s
Max	See table below

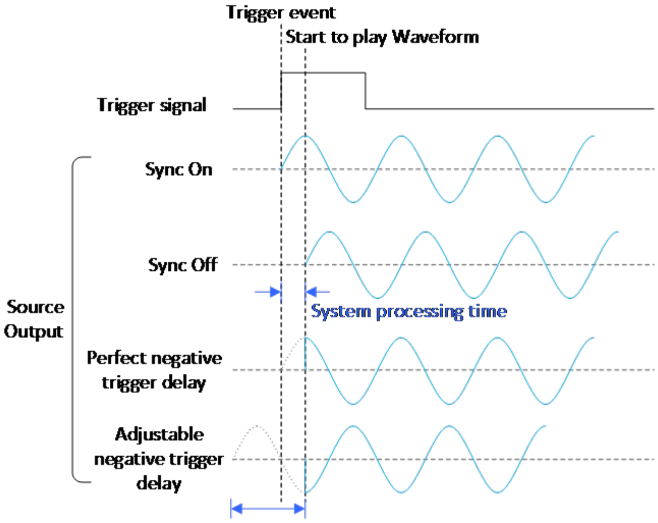
Instrument/Condition	Value	Derivation
VXT models M9410A/11A/15A/16A	11.45324612 s	2.666667ns *(2^32-1)
M9410E/11E/15E/16E	11.45324612 s	2.666667ns *(2^32-1)
Continuous – Trigger + Run	11.45324612 s	2.666667ns *(2^32-1)
Other trigger conditions	17.17986918 s	4 ns *(2^32-1)
All others	8.589934588 s	4ns * (2^31 – 1) = 8589934588 ns

Auto Function

Remote Command	`:SOURce:RADio:ARB:TRIGger[:SOURce]:EXTernal:DELay:STATe OFF | ON | 0 | 1` `:SOURce:RADio:ARB:TRIGger[:SOURce]:EXTernal:DELay:STATe?`
Example	`:SOUR:RAD:ARB:TRIG:EXT:DEL:STAT ON` `:SOUR:RAD:ARB:TRIG:EXT:DEL:STAT?`
Preset	`OFF`

More Information

There is a time interval (system processing time) between the trigger event and the beginning of playing waveform. The figure below shows you the behavior. The negative trigger delay allows you to specify the beginning of a waveform.



Note: the first PerArb trigger signal will be missed when the trigger delay is negative.

External Trigger Polarity

Sets the polarity of the external trigger. When `POSitive` is selected, trigger event happens on a rising edge of the external trigger in signal. When `NEGative` is selected, trigger event happens on a falling edge of the external trigger in signal.

Active only if "Trigger Source" on page 2536 is `EXTernal1` or `EXTernal2`.

Remote Command	`:SOURce:RADio:ARB:TRIGger[:SOURce]:EXTernal:SLOPe POSitive | NEGative` `:SOURce:RADio:ARB:TRIGger[:SOURce]:EXTernal:SLOPe?`
Example	`:SOUR:RAD:ARB:TRIG:EXT:SLOP POS` `:SOUR:RAD:ARB:TRIG:EXT:SLOP?`
Dependencies	Unavailable and grayed-out when "Trigger Source" on page 2536 is not `EXTernal1` or `EXTernal2` Not available in E7760B
Preset	`POSitive`
Range	`POSitive|NEGative`

Select PXI Line

Controls which `PXI_TRIG[0..7]` backplane line is used for the trigger source.

Only appears in modular analyzer products.

Remote Command	`:SOURce:RADio:ARB:TRIGger[:SOURce]:PXI:LINE <line>` `:SOURce:RADio:ARB:TRIGger[:SOURce]:PXI:LINE?`
Example	`:SOUR:RAD:ARB:TRIG:PXI:LINE 2`
Dependencies	Unavailable and grayed-out when "Trigger Source" on page 2536 is not set to `PXI` Not available in E7760B
Preset	0
State Saved	Saved in instrument state
Range	[0,7]

PXI Trigger Delay

Lets you toggle the state and value of PXI trigger delay. The value you enter sets a delay time between when an PXI trigger is received and when it is applied to the waveform.

Only active if "Trigger Source" on page 2536 is `PXI`.

<table>
<tr><td>Remote Command</td><td><code>:SOURce:RADio:ARB:TRIGger[:SOURce]:PXI:DELay <time></code>
<code>:SOURce:RADio:ARB:TRIGger[:SOURce]:PXI:DELay?</code></td></tr>
<tr><td>Example</td><td><code>:SOUR:RAD:ARB:TRIG:PXI:DEL 100ns</code>
<code>:SOUR:RAD:ARB:TRIG:PXI:DEL?</code></td></tr>
<tr><td>Notes</td><td>PXI trigger delay time set by users will be rounded to the nearest integer multiple of the resolution</td></tr>
<tr><td>Dependencies</td><td>Unavailable and grayed-out when "Trigger Source" on page 2536 is not <code>PXI</code>
Not available in E7760B</td></tr>
<tr><td>Preset</td><td>1 ms</td></tr>
<tr><td>Min</td><td>VXT models M9410A/11A/15A/16A and M9410E/11E/15E/16E: -10 s</td></tr>
<tr><td>Max</td><td>
<table>
<tr><th>Instrument/Condition</th><th>Value</th><th>Derivation</th></tr>
<tr><td>VXT models M9410A/11A/15A/16A</td><td>11.45324612 s</td><td>2.666667ns * (2^32-1)</td></tr>
<tr><td>M9410E/11E/15E/16E</td><td>11.45324612 s</td><td>2.666667ns * (2^32-1)</td></tr>
<tr><td>Continuous – Trigger + Run” trigger</td><td>11.45324612 s</td><td>2.666667ns * (2^32-1)</td></tr>
<tr><td>Other trigger conditions</td><td>17.17986918 s</td><td>4 ns *(2^32-1)</td></tr>
<tr><td>All Others</td><td>8.589934588 s</td><td>4ns * (2^31 – 1)</td></tr>
</table>
</td></tr>
</table>

Auto Function

Remote Command	`:SOURce:RADio:ARB:TRIGger[:SOURce]:PXI:DELay:STATe OFF | ON | 0 | 1` `:SOURce:RADio:ARB:TRIGger[:SOURce]:PXI:DELay:STATe?`
Example	`:SOUR:RAD:ARB:TRIG:PXI:DEL:STAT ON` `:SOUR:RAD:ARB:TRIG:PXI:DEL:STAT?`
Preset	`OFF`

PXI Trigger Polarity

Sets the polarity of the PXI trigger:

- When `POSitive` is selected, trigger event happens on a rising edge of the PXI trigger in signal
- When `NEGative` is selected, trigger event happens on a falling edge of the PXI trigger in signal

Active only if "Trigger Source" on page 2536 is `PXI`.

Remote Command	`:SOURce:RADio:ARB:TRIGger[:SOURce]:PXI:SLOPe POSitive | NEGative` `:SOURce:RADio:ARB:TRIGger[:SOURce]:PXI:SLOPe?`
Example	`:SOUR:RAD:ARB:TRIG:PXI:SLOP POS` `:SOUR:RAD:ARB:TRIG:PXI:SLOP?`
Dependencies	Unavailable and grayed-out when "Trigger Source" on page 2536 is `PXI` Not available in E7760B
Preset	`POSitive`
Range	`POSitive|NEGative`

I/Q Adjustments

Enables or disables the I/Q adjustments.

Remote Command	`:SOURce:RADio:ARB:IQADjustment:[STATe] OFF | ON | 0 | 1` `:SOURce:RADio:ARB:IQADjustment:[STATe]?`
Example	`:SOUR:RAD:ARB:IQAD ON` `:SOUR:RAD:ARB:IQAD?`
Dependencies	Not available in E7760B
Preset	`OFF`

I/Q Gain

Lets you adjust the ratio of I to Q while preserving the composite, vector magnitude. Adding Gain (+x dB) to the signal increases the I component and decreases the Q component proportionally. Reducing Gain (-x dB) decreases the I component and increases the Q component proportionally.

Remote Command	`:SOURce:RADio:ARB:IQADjustment:GAIN <value><unit>` `:SOURce:RADio:ARB:IQADjustment:GAIN?`
Example	`:SOUR:RAD:ARB:IQAD:GAIN 0.5` `:SOUR:RAD:ARB:IQAD:GAIN?`
Notes	Effective only if the I/Q adjustment function is ON
Dependencies	Unavailable and grayed-out when the ARB state is OFF Not available in E7760B
Preset	+0.00000000E+000
Min	-1 dB
Max	1 dB

I/Q Delay

Lets you change the absolute phase of both I and Q with respect to triggers and markers. A positive value delays I and Q. This value affects both the external I/Q out signals and the baseband signal modulated on the RF output. This adjustment does not affect external I/Q inputs.

Remote Command	`:SOURce:RADio:ARB:IQADjustment:DELay <value><unit>` `:SOURce:RADio:ARB:IQADjustment:DELay?`
Example	`:SOUR:RAD:ARB:IQAD:DEL 10ps` `:SOUR:RAD:ARB:IQAD:DEL?`
Notes	User-set IQ delay time values are rounded to the nearest integer multiple of the resolution
Dependencies	Unavailable and grayed-out when the ARB state is off Not available in E7760B
Preset	+0.00000000E+000
Min/Max	see table below

Min/Max

Instrument Type	Min	Max
M9410A/11A/15A/16A	-80ns	80ns
All Others	-250ns	250ns

RMS

Lets you directly specify current RMS value used to playback currently selected waveform.

For EXM, note that an incorrect RMS value may cause inaccurate power output that is sensitive to RMS value.

This setting is also updated by RMS in waveform header or updated when invoking RMS calculation operation.

This setting can be saved to the header of currently selected waveform by "Save Header" on page 2564.

Remote Command	`:SOURce:RADio:ARB:RMS <float>` `:SOURce:RADio:ARB:RMS?`
Example	`:SOUR:RAD:ARB:HEAD:RMS 0.7` `:SOUR:RAD:ARB:HEAD:RMS?`
Notes	The valid range for this setting is 0 to 1.414 (linear). Values outside the range are clipped to the closest boundary This value does not affect Source List Sequencer, which always uses the RMS value included in each ARB header. If this setting is to take effect in List Sequencer, use "Save Header" on page 2564 to save the current RMS value to the header, then play the ARB in Source List Sequencer
Dependencies	When a new waveform is selected for playback this setting is updated by the RMS value included in the associated waveform header file. If the selected waveform has no associated header file or the header file does not include the RMS value then the instrument will try to calculate the value automatically based on the RMS Calculation Mode setting Pressing **Calculate** also updates this setting
Preset	0
Range	0 ~ 1.414

RMS Calculation Mode

Lets you specify the mode to calculate the current RMS.

Remote Command	`:SOURce:RADio:ARB:RMS:CALCulation:MODE AUTO | M1 | M2 | M3 | M4`
	See "Option Details" on page 2545
	`:SOURce:RADio:ARB:RMS:CALCulation:MODE?`

Example	`:SOUR:RAD:ARB:RMS:CALC:MODE AUTO`
Notes	If no waveform is selected, or selected waveform is waveform sequence, the key is grayed-out
Preset	`AUTO`
Range	`AUTO | M1 | M2 | M3 | M4`

Option Details

Parameter	SCPI	Notes
Auto	`AUTO`	In Auto, RMS is calculated based on the whole sample range of the currently selected waveform
Marker 1	`M1`	Marker 1 designates the sample range for RMS calculation
Marker 2	`M2`	Marker 2 designates the sample range for RMS calculation
Marker 3	`M3`	Marker 3 designates the sample range for RMS calculation
Marker 4	`M4`	Marker 4 designates the sample range for RMS calculation

Calculate

Lets you calculate current RMS based on mode selected. Updates the setting in the "RMS" on page 2544 control.

Remote Command	`:SOURce:RADio:ARB:RMS:CALCulate`
Example	`:SOUR:RAD:ARB:RMS:CALC`
Notes	If no waveform is selected, invoking this operation generates error “-221 Setting conflict; No waveform is selected for RMS operation” Grayed-out if no waveform is selected, or selected waveform is waveform sequence If selected waveform does not contain marker data, but "RMS Calculation Mode" on page 2544 is set to marker, invoking a calculation operation generates error “-221 Setting conflict; There is no marker for currently selected waveform, auto RMS calculation mode is used instead”, and "RMS Calculation Mode" on page 2544 is coupled to **Auto** mode automatically RMS calculation is not suitable for waveform sequence. If selected waveform is waveform sequence file, invoking this operation generates error “-221 Setting conflict; RMS calculation does not apply to waveform sequence” You can still edit current RMS as play parameter, and save current RMS to waveform sequence header for later use

Use Header RMS

Lets you quickly set RMS to value in ARB header. Updates the setting in the "RMS" on page 2544 control.

Notes	Grayed-out if no waveform is selected If no waveform is selected, invoking this operation generates error “-221 Setting conflict; No waveform is selected for RMS operation”

Real-Time 5G NR Compensation

Phase compensation is a new concept introduced into 5G NR baseband signal generation in TS38.211 as below, to address a typical 5G scenario that Tx and Rx frequencies may not be the same. In that case, without properly compensating the phase, receiver would not be able to correctly demodulate the received signal.

Modulation and up-conversion to the carrier frequency f_0 of the complex-valued OFDM baseband signal for antenna port p, subcarrier spacing configuration μ, and OFDM symbol l in a subframe assumed to start at t = 0 is given by the following equation for all channels and signals except PRACH:

$$Re\left\{s_l^{(p,\mu)}(t)\cdot e^{j2\pi f_0\left(t-t_{start,l}^{\mu}-N_{CP,l}^{\mu}T_C\right)}\right\}$$

$$Re\left\{s_l^{(p,\mu)}(t)\cdot e^{j2\pi f_0\left(t-t_{start,l}^{\mu}-N_{CP,l}^{\mu}T_C\right)}\right\}$$

From the 3GPP specification equation above, it can be observed that phase compensation is performed for a specific transmission frequency f_0. So that means, even if a same signal configuration needs to be transmitted at multiple frequencies, we'll have to generate a different waveform for each frequency point. As a result, the number of test waveforms will increase significantly along with the frequency number. This would be a big challenge for test engineers, considering the complexity of 5G NR signal configurations - they have to maintain a large waveform library and identify each waveform carefully with its “frequency tag”.

Real-Time 5G NR Phase Compensation allows you to play the same 5G NR waveform while performing phase compensation along with transmission frequency change automatically. This control allows you to turn on or off the real-time phase compensation for 5G NR waveform.

Remote Command	`:SOURce:RADio:ARB:NR5G:PHASe[:STATe] ON | OFF | 1 | 0` `:SOURce:RADio:ARB:NR5G:PHASe[:STATe]?`
Example	`:SOUR:RAD:ARB:NR5G:PHAS ON` `:SOUR:RAD:ARB:NR5G:PHAS?`
Dependencies	Only appears when Option RPC is present If the waveform is not for 5G NR, there may be error message and the output signal may be incorrect To ensure that you do *not* compensate for phase twice, once at waveform generation and again during playback, turn off this control if you had turned on phase compensation while generating the waveform
Preset	`OFF`
Range	`ON|OFF`

SCS

Sets the SCS for real-time 5G NR phase compensation.

Remote Command	`:SOURce:RADio:ARB:NR5G:PHASe:SCS SCS15K | SCS30K | SCS60K | SCS60KECP | SCS120K | SCS240K | SCS480K` `:SOURce:RADio:ARB:NR5G:PHASe:SCS?`
Example	`:SOUR:RAD:ARB:NR5G:PHAS:SCS SCS15K` `:SOUR:RAD:ARB:NR5G:PHAS:SCS?`
Preset	`SCS30K`
Range	

μ	CP	Value
0		15 kHz
1		30 kHz
2	Normal	60 kHz
	Extended	60 kHz
3		120 kHz
4		240 kHz
5		480 kHz

Filter

Sets the state of Filter usage after real-time 5G NR phase compensation.

Remote Command	`:SOURce:RADio:ARB:NR5G:PHASe:FILTer[:STATe] ON | OFF | 1 | 0` `:SOURce:RADio:ARB:NR5G:PHASe:FILTer[:STATe]?`
Example	`:SOUR:RAD:ARB:NR5G:PHAS:FILT ON` `:SOUR:RAD:ARB:NR5G:PHAS:FILT?`
Preset	`OFF`
Range	`ON|OFF`

Filter Bandwidth

Sets the Filter Bandwidth if Filter is used.

By searching <FilterBandwidth> node in the *.scp file, you can get the correct filter bandwidth value for phase compensation.

Remote	`:SOURce:RADio:ARB:NR5G:PHASe:FILTer:BANDwidth <freq>`

Command	`:SOURce:RADio:ARB:NR5G:PHASe:FILTer:BANDwidth?`
Example	`:SOUR:RAD:ARB:NR5G:PHAS:FILT:BAND 99MHz` `:SOUR:RAD:ARB:NR5G:PHAS:FILT:BAND?`
Preset	100 MHz
Min	10 Hz
Max	1200 MHz

Select Waveform

Lets you select a waveform segment or sequence to be played by the ARB player. Presents you with a list of waveform segments files and waveform sequence files. The list of waveform segment files and waveform sequence files contains the names of all the waveform segments and waveform sequence files currently loaded into ARB playback memory.

Waveform sequences are not available in E7760B.

Waveforms formatted as `*.mat`, `*.csv` and `*.txt` are supported by models with a built-in source, such as VXT and EXM.

NOTE **To load a file from the hard drive into ARB memory, go to the Recall, Waveform dialog**

NOTE **Selecting a waveform file does not result in automatic adjustments to burst timing; that adjustment occurs only when a waveform is loaded to ARB memory.**

Remote Command	`:SOURce:RADio:ARB:WAVeform <string>` `:SOURce:RADio:ARB:WAVeform?`
Example	`:SOUR:RAD:ARB:WAV "test_waveform.bin"`
Notes	If the intended waveform is not in the memory yet, then issuing this command invokes ARB loading operation first, which involves a delay of unpredictable length, so this command should be followed by `*OPC?`, which holds off subsequent commands until the loading operation is complete `<string>` - specifies the name of the waveform segment or waveform sequence to be played by the ARB Sequence Analyzer Mode only: – If Include Source is Yes, and you attempt to play a waveform sequence but not all the required waveform segments are in the ARB playback memory, the application rejects the loading operation and an error is generated – If Include Source is No, and you attempt to play a waveform sequence but not all the required waveform segments are contained in the ARB playback memory, the application attempts to load the required segments from either the default directory or the current directory. If the ARB memory

does not have enough space for all the waveform segments to be loaded, an error is generated and none of the waveform segments is loaded

If ARB is ON, and you attempt to play a waveform sequence but not all the waveform segments within the sequence could be found to be loaded into ARB memory, an error is generated. The selected waveform keeps the previous value and ARB state remains On

If you specify a waveform segment via SCPI but the waveform segment is not present within ARB playback memory, and cannot be found for auto loading within the current directory or the default directory, an error is generatedand the file selection remains unchanged

If you select a waveform for playback and the waveform requires a license that is not installed on the instrument, an error is generated

.

If ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished

Segments in ARB Memory

Shows you which files are loaded into the ARB memory and lets you select a file for playback.

Recall Waveform

This is the same as **Recall From File** in the **Recall**, **Waveform** dialog.

Delete Segment From ARB Mem

This is the same as **Delete Segment From ARB Mem** in the **Recall**, **Waveform** dialog.

Delete All From ARB Memory

This is the same as **Delete All From ARB Memory** in the **Recall**, **Waveform** dialog.

Query ARB Memory File List (Remote Query Only)

Queries the test set for the list of waveform segments in the ARB memory.

NOTE

Returns a string for waveform segment names in ARB memory. If you require a string list of waveform segments in the ARB memory, use "Query ARB Memory Full File List (Remote Query Only)" on page 2550

Remote Command	`:SOURce:RADio:ARB:CATalog?`
Example	`:SOUR:RAD:ARB:CAT?`
Notes	The return data is in the following format: `<integer>` — Memory used, in kB `<integer>` — Memory free, in kB `<string> …` — Comma-separated list of waveform segments within ARB memory

Query ARB Memory Full File List (Remote Query Only)

Queries the test set for the string list of waveform segments in the ARB memory. Returns a string list for waveform segment names in the ARB memory.

Remote Command	`:SOURce:RADio:ARB:FCATalog?`
Example	`:SOUR:RAD:ARB:FCAT?`
Notes	The return data is in the following format: `<integer>` — Memory used, in kB `<integer>` — Memory free, in kB `<integer>` — File count in ARB memory `<string>,<string>, … <string>` — Comma-separated string list of waveform segments within ARB memory EXT returns: 27499,2069653,3,"c2k.wfm","gsm.wfm","wcdma.wfm"

Waveform Sequences

Not available in E7760B.

Lets you build new sequences or edit existing sequences. The Sequences table displayed in this dialog shows you the sequences in the current directory. You may build a new sequence or select one of the sequences in the table and tap **Edit Selected Sequence**. The default current directory is `C:\NVARB`. Tapping any element of this path lets you select an alternate route. Tapping the **Computer** arrow lets you select a different drive. Tapping the **Back** arrow navigates to the previously selected directory.

Build New Sequence

Lets you build a new sequence of waveform segments. When you build a sequence you are building the "current sequence", and the next time you press "Build New

Sequence" the sequence you have been building will still be there, allowing you to add or remove segments from it.

Segment

Shows the segment number assigned to this row.

Waveform

Shows the file name for the waveform inserted into this row. Use "Insert Waveform" on page 2552 to insert a waveform.

Repetitions

Lets you specify the number of times the currently selected waveform is played within the sequence.

Preset	1
Min	1
Max	65535

Marker 1 – Marker 4

Lets you enable or disable Marker 1, 2, 3, or 4 for the currently selected waveform. For a waveform sequence, you can enable and disable markers on a per-segment basis, allowing you to output markers from some waveform segments within the sequence, but not for others.

Preset	Enabled
Range	Enabled | Disabled

Sync Seq File

Enables or disables the saving of secondary modules' waveform sequence files based on the current primary module segment's waveform settings.

Remote Command	`:SOURce:RADio:ARB:SEQuence:SYNC ON | OFF` `:SOURce:RADio:ARB:SEQuence:SYNC?`
Example	`:SOUR:RAD:ARB:SEQ:SYNC OFF`
Notes	Available only on primary modules If this setting is ON, when Sync Config is not NONE, the responding secondary module's waveform

	sequence file will be saved accordingly when save sequence… on the primary module, and the primary sequence file name should end with `xxx0.seq`, so the secondary module will be named according to the "Naming Rule" on page 2552 Waveform names in sequence files should also follow the **Naming Rule**
Dependencies	Not available in E7760B
Preset	`OFF`
Range	`ON|OFF`

Naming Rule

If Sync Config is not 2x2 +2x2 or 1x1+1x1, the waveform files to be used should follow this naming convention: the waveform file for the primary source should end in 0; the waveform files for the controlled sources should end in 1, 2, or 3 (reflecting the order of the TRXs). For example, for DL 11AC80 3X3 MIMO, sequence file names for TRX1,TRX2 and TRX3 should be xxx0.xx, xxx1.xx and xxx2.xx

If Sync Config is 2x2+2x2, the waveform files to be used should follow this naming convention: the waveform file for the primary source of first 2x2 should end in 0_0; the waveform files for the secondary source of first 2x2 should end in 0_1; the waveform files for the primary source of second 2x2 should end in 1_0; the waveform files for the secondary source of second 2x2 should end in 1_1. For example, for DL 11AC80 2x2 + 2x2 MIMO, waveform file names for TRX1,TRX2,TRX3 and TRX4 should be xxx0_0.xx, xxx0_1.xx, xxx1_0.xx and xxx1_1.xx

If Sync Config is 1x1+1x1, the waveform files to be used should follow this naming convention: the waveform file for the first source should end in 0_0; the waveform files for the second source should end in 1_0. For example, for DL 11AC80 1x1 + 1x1 MIMO, waveform file names for TRX1 and TRX2 should be xxx0_0.xx and xxx1_0.xx

Insert Waveform

Lets you select a waveform segment to be added to the sequence.

NOTE **To load a file from the hard drive into ARB memory, go to the Recall, Waveform dialog**

Segments in ARB Memory

Shows you which files are loaded into the ARB memory and lets you select a file for inclusion in the sequence.

Delete Segment From ARB Mem

This is the same as **Delete Segment From ARB Mem** in the **Recall**, **Waveform** dialog.

Delete All From ARB Memory

This is the same as **Delete All From ARB Memory** in the **Recall**, **Waveform** dialog.

Delete Segment

Lets you delete the selected segment from the waveform sequence.

Save Sequence

Lets you save the newly built Waveform Sequence to the disk drive.

Sequence files have the extension `.seq`. The default filename is `WfmSequence_0000.seq`, where the 4-digit number is the lowest number that does not conflict with any filename in the current directory. Use “File Name” and “File Type’ to specify your waveform sequence. The newly build sequence will be stored in the current directory.

Build New Sequence (Remote Command Only)

This is the SCPI equivalent of the waveform sequence creation features described in "Build New Sequence" on page 2550.

Writes a waveform sequence file to the hard disk. You must specify the waveform sequence file path and filename which will be saved on the hard disk, and the waveform segment file path and name which will be nested into the waveform sequence file. You can utilize mass storage unit specifier (MSUS) “NVWFM” or use a real full path representation. See the example below. MSUS “NVWFM” is mapped to D:\NVARB directory on test set hard disk.

Any number of segments, up to a segment count limit of 64, can be used to create a sequence. Repeated segments are included in the count limit.

Each waveform segment name string length upper limit is 128 chars. Do not attempt to insert a waveform with a name string that exceeds 128 chars.

The internal source does not support nesting one waveform sequence file into another waveform sequence file.

Remote	`:SOURce:RADio:ARB:SEQuence[:MWAVeform] <filename>, <waveform1>, <reps>, NONE`

<table>
<tr><td>Command</td><td><code>| M1 | M2 | M3 | M4 | M1M2 | M1M3 | M1M4 | M2M3 | M2M4 | M3M4 | M1M2M3 | M1M2M4 | M1M3M4 | M2M3M4 | M1M2M3M4 | ALL, \{<waveform2>, <reps>, NONE | M1 | M2 | M3 | M4 | M1M2 | M1M3 | M1M4 | M2M3 | M2M4 | M3M4 | M1M2M3 | M1M2M4 | M1M3M4 | M2M3M4 | M1M2M3M4 | ALL,\} …</code>
For additional description of each item, see "For Setup SCPI" on page 2554 below
<code>:SOURce:RADio:ARB:SEQuence[:MWAVeform]? <filename></code>
For additional description of each item, see "For Query SCPI" on page 2555 below</td></tr>
<tr><td>Example</td><td>For setup:
<code>:SOUR:RAD:ARB:SEQ "NVWFM:testSeq1.seq", "NVWFM:wfmSegment1.wfm",10, M2M3M4, "NVWFM:wfmSegment2.wfm", 20, M1M3</code>
Or
<code>:SOUR:RAD:ARB:SEQ "D:\NVARB\testSeq1.seq", "D:\NVARB\wfmSegment1.wfm",10, M2M3M4, "D:\NVARB\wfmSegment2.wfm", 20, M1M3</code>
For query, must specify which waveform sequence file to query
<code>:SOUR:RAD:ARB:SEQ? "NVWFM:testSeq1.seq"</code>
Or
<code>:SOUR:RAD:ARB:SEQ? "D:\NVARB\testSeq1.seq"</code></td></tr>
</table>

For Setup SCPI

For the Setup SCPI command, the parameters are:

`<filename>` - String Type

This variable specifies the path and name for the waveform sequence file. The path supports MSUS (NVWFM) or a real full path representation. See example.

`<waveform1>` - String Type

This variable specifies the path and name of the first existing waveform segment. The path supports MSUS (NVWFM) or a real full path representation. See example.

The segment file must reside within ARB playback memory before it can be played by the ARB player.

`<reps>` - Integer Type

This variable specifies the number of times a segment or sequence plays before moving on to the next segment or sequence.

`<marker>` - Enum Type

NONE – This choice disables all four markers for the waveform. Disabling markers means that the waveform sequence ignores the segments or sequence marker settings.

`M1, M2, M3, M4` – these choices, either individually or a combination of them, enable the markers for the waveform segment or sequence. Markers not specified are ignored for that segment or sequence.

`ALL` – This choice enables all four markers in the waveform segment or sequence.

`<waveform2>` - String type.

This variable specifies the name of a second existing waveform segment. The path supports MSUS (NVWFM) and real full path representation both. See example.

The segment file must reside within ARB playback memory before it can be played by the ARB player.

`<reps>` same as above, for the 2nd waveform segment.

`<marker>` same as above, for the 2nd waveform segment.

You can insert several waveform segments into a waveform sequence file. Just repeat inserting waveform segments as described above.

Error Checks for Setup SCPI command:

If you do not specify a filename, or you use an unsupported MSUS (that is, not NVWFM), or have an error in the waveform sequence file path, an error is generated. If the specified waveform sequence file name suffix is not ".seq", error is generated.

If you use an unsupported MSUS (that is, not NVWFM), or have an error in the waveform segment file path, an error is generated.

If the first specified waveform file cannot be found, an error is generated.

If you nest one waveform sequence file into another waveform sequence file, an error is generated.

If the specified repetition value is larger than 65535 or smaller than 1, an error is generated.

If the specified marker type is unrecognized, an error is generated.

For Query SCPI

For the Query the parameters are:

`<filename>` - String type.

This variable specifies the path and name of the waveform sequence file being queried. The path supports MSUS (NVWFM) or a real full path representation. See example.

The return value is a `<string>`, which includes each waveform segment file name, repetitions, and marker type. For example:

```
>:SOUR:RAD:ARB:SEQ? “NVWFM:testSeq1.seq”,
```

```
<“wfmSegment1. wfm, 10, ALL, wfmSegment2.wfm, 20, M1M3”,
```

Error Checks for Query SCPI command:

If you do not specify a filename, an error is generated.

If the waveform sequence file name is empty, an error is generated.If the specified waveform sequence file cannot be found, an error is generated.

Edit Selected Sequence

This dialog lets you edit an existing sequence of waveform segments. A table of the segments in the currently selected sequence displays, allowing you to insert waveform segments or edit the characteristics of each segment.

Segment

This field in the table shows the segment number assigned to this row.

Waveform

This field in the table shows the file name for the waveform inserted into this row. Use "Insert Waveform" on page 2552 to insert a waveform.

Repetitions

Lets you specify the number of times the currently selected waveform is played within the sequence.

Preset	1
Min	1

Marker 1 – Marker 4

Lets you enable or disable Marker 1, 2, 3, or 4 for the currently selected waveform. For a waveform sequence, you can enable and disable markers on a per-segment basis, allowing you to output markers from some waveform segments within the sequence, but not for others.

Notes	No remote command, front panel only
Preset	Enabled
Range	Enabled | Disabled

Sync Seq File

Change this setting to enable/disable the function of saving secondary modules' waveform sequence files based on the current primary segment's waveform settings.

Remote Command	See "Sync Seq File" on page 2551
Notes	Available only on primary modules If this setting is `ON`, when Sync Config is not `NONE`, the responding secondary module's waveform sequence file will be saved accordingly when save sequence... on the primary module, and the primary sequence file name should end with `xxx0.seq`, so the secondary module will be named according to the "Naming Rule" on page 2557 Waveform names in sequence files should also follow the Naming Rule
Dependencies	Not available in E7760B
Preset	`OFF`
Range	`ON|OFF`

Naming Rule

If Sync Config is not 2x2 +2x2 or 1x1+1x1, the waveform files to be used should follow this naming convention: the waveform file for the primary source should end in 0; the waveform files for the controlled sources should end in 1, 2, or 3 (reflecting the order of the TRXs). For example, for DL 11AC80 3X3 MIMO, sequence file names for TRX1,TRX2 and TRX3 should be xxx0.xx, xxx1.xx and xxx2.xx

If Sync Config is 2x2+2x2, the waveform files to be used should follow this naming convention: the waveform file for the primary source of first 2x2 should end in 0_0; the waveform files for the secondary source of first 2x2 should end in 0_1; the waveform files for the primary source of second 2x2 should end in 1_0; the waveform files for the secondary source of second 2x2 should end in 1_1. For example, for DL 11AC80 2x2 + 2x2 MIMO, waveform file names for TRX1,TRX2,TRX3 and TRX4 should be xxx0_0.xx, xxx0_1.xx, xxx1_0.xx and xxx1_1.xx

If Sync Config is 1x1+1x1, the waveform files to be used should follow this naming convention: the waveform file for the first source should end in 0_0; the waveform files for the second source should end in 1_0. For example, for DL 11AC80 1x1 + 1x1 MIMO, waveform file names for TRX1 and TRX2 should be xxx0_0.xx and xxx1_0.xx

Insert Waveform

This dialog p select a waveform segment to be added to the sequence.

NOTE To load a file from the hard drive into ARB memory, go to the Recall, Waveform dialog

---

Segments in ARB Memory

This table shows you which files are loaded into the ARB memory and lets you select a file for inclusion in the sequence.

Delete Segment From ARB Mem

Deletes a segment from ARB memory. This is the same as **Delete Segment From ARB Mem** in the **Recall**, **Waveform** dialog.

Delete All From ARB Memory

Removes all segments from ARB memory. This is the same as **Delete All From ARB Memory** in the **Recall**, **Waveform** dialog.

Delete Segment

Lets you delete the current segment from the waveform sequence.

Notes	No remote command, front panel only

Waveform Utilities

Not available in E7760B.

Only appears if there is at least one Multi-pack license installed in the instrument.

On modular instruments, such as EXM , multi-pack license operations are only allowed on the default module, that is, “TRX1” module for EXM.

For EXM, if access multi-pack license sub-menu from modules other than “TRX1”, an advisory message like “Please go to “TRX1” to operate multi-pack license” will display.

Add Waveform

Use this dialog to select and add waveforms. Pressing **OK** in this dialog adds the currently highlighted waveform to the next available slot, and returns you to the "Waveform Utilities" on page 2558 dialog.

Remote Command	`:SYSTem:LKEY:WAVeform:ADD <string>`
	or
	`:SYSTem:LICense[:FPACk]:WAVeform:ADD <string>`

Example	`:SYST:LKEY:WAV:ADD "mywaveform.wfm"`
	or
	`:SYST:LIC:WAV:ADD "mywaveform.wfm"`

Notes	The second form, `:SYSTem:LICense[:FPACk]:WAVeform:ADD`, is provided for consistency with Keysight signal sources. You can use either form Since adding a waveform segment to a Multi-Pack license causes the license slot to enter the trial period of only 48 hours, pressing this key causes a confirmation dialog to be displayed to ensure you do want to add the waveform segment to the Multi-Pack If you attempt to license a waveform that is already licensed using another slot an error is generated For EXM, if current module is not “TRX1” module, the key is grayed-out, and error message is generated “-221 Setting conflict; Not allowed on current module. Go to “TRX1” to operate multi-pack license” when invoking SCPI
Dependencies	Only available if the currently selected file is a secure waveform requiring a license, and there is at least one slot available within at least one multi-pack license. Unavailable if the waveform highlighted is a secure waveform, but is already licensed

Replace Selected Waveform

Lets you replace the waveform in the currently selected slot with the waveform currently selected in the Multi-Pack License Waveform Add view. Pressing **OK** in this dialog replaces the waveform in the currently selected slot with that currently highlighted, and returns you to the "Waveform Utilities" on page 2558 dialog.

Remote Command	`:SYSTem:LKEY:WAVeform:REPLace <int>, <string>`
	or
	`:SYSTem:LICense[:FPACk]:WAVeform:REPLace <int>, <string>`

Example	`:SYST:LKEY:WAV:REPL 1, "myotherwaveform.wfm"`
	or
	`:SYST:LIC:WAV:REPL 1, "myotherwaveform.wfm"`

Notes	The second command form, `:SYSTem:LICense[:FPACk]:WAVeform:REPLace` is provided for consistency with Keysight signal sources. You can use either form If you attempt to license a waveform that is already licensed using another slot an error is generated Waveform slot number <int> is positive. If you attempt to input a slot number less than or equals 0, an error is generated For EXM, if current module is not “TRX1” module, the key is grayed-out, and error message is generated “-221 Setting conflict; Not allowed on current module. Go to “TRX1” to operate multi-pack license” when invoking SCPI

Clear Waveform from Slot

Lets you clear the waveform from the selected slot.

Remote Command	`:SYSTem:LKEY:WAVeform:CLEar <int>`
	or
	`:SYSTem:LICense[:FPACk]:WAVeform:CLEar <int>`

Example	`:SYST:LKEY:WAV:CLE 1`
	or
	`:SYST:LIC:WAV:CLE 1`

Notes	The second form: `:SYSTem:LICense[:FPACk]:WAVeform:CLEar` is provided for consistency with the style of Keysight signal sources. You can use either form Waveform slot number `<int>` is positive. If you attempt to input a slot number less than or equal to 0, an error is generated For EXM, if current module is not "TRX1" module, the key is grayed-out, and error message is generated "-221 Setting conflict; Not allowed on current module. Go to "TRX1" to operate multi-pack license" when invoking SCPI
Dependencies	Only available if the currently selected slot is in the trial state

Lock Waveform in Slot

If the selected slot is in the trial state or the lock required state, the waveform that occupies the slot is locked and permanently licensed.

Remote Command	`:SYSTem:LKEY:WAVeform:LOCK <int>`
	or
	`:SYSTem:LICense[:FPACk]:WAVeform:LOCK <int>`

Example	`:SYST:LKEY:WAV:LOCK 1`
	or
	`:SYST:LIC:WAV:LOCK 1`

Notes	The command form `:SYSTem:LICense[:FPACk]:WAVeform:LOCK` is provided for consistency with Keysight signal sources. You can use either form Waveform slot number `<int>` is positive. If you attempt to input a slot number less than or equal to 0, an error is generated For EXM, if current module is not "TRX1" module, the key is grayed-out, and error message is generated "-221 Setting conflict; Not allowed on current module. Go to "TRX1" to operate multi-pack license" when invoking SCPI
Dependencies	Only available if the currently selected slot is in the trial state, or the lock required state

Slot Status Query (Remote Command Only)

Returns the status of the specified slot.

Remote Command	`:SYSTem:LKEY:WAVeform:STATus? <int>`
	or
	`:SYSTem:LICense[:FPACk]:WAVeform:STATus? <int>`

Example	`:SYST:LKEY:WAV:STAT? 1`
	<"Locked"
	or
	`:SYST:LIC:WAV:STAT? 1`
	<"Locked"

Notes	The command form `:SYSTem:LICense[:FPACk]:WAVeform:STATus` is provided for consistency with Keysight signal sources. You can use either form Waveform slot number `<int>` is positive. If you attempt to input a slot number less than or equal to 0, an error is generated Result type is string. If input slot number exceeds total available slot numbers, “Nonexistent” is returned
Range	"Locked" | "Available" | “Trail” | “LockRequired” | “Nonexistent”

Slots Free Query (Remote Query Only)

Returns the number of license slots free.

Remote Command	`:SYSTem:LKEY:WAVeform:FREE?`
	or
	`:SYSTem:LICense[:FPACk]:WAVeform:FREE?`

Example	`:SYST:LKEY:WAV:FREE?`
	or
	`:SYST:LIC:WAV:FREE?`

Notes	The second form: `:SYSTem:LICense[:FPACk]:WAVeform:FREE` is provided for consistency with the style of Keysight signal sources. You can use either one

Slots Used Query (Remote Query Only)

Returns the number of license slots used.

Remote Command	`:SYSTem:LKEY:WAVeform:USED?`
	or
	`:SYSTem:LICense[:FPACk]:WAVeform:USED?`

Example	`:SYST:LKEY:WAV:USED?`
	or
	`:SYST:LIC:WAV:USED?`

Notes	The second form: SCPI `:SYSTem:LICense[:FPACk]:WAVeform:USED` is provided for consistency with the style of Keysight signal sources. You can use either form

Slot Waveform Name Query (Remote Command Only)

Returns the waveform name of the specified slot.

Remote Command	`:SYSTem:LKEY:WAVeform:NAME? <int>`
	or
	`:SYSTem:LICense[:FPACk]:WAVeform:NAME? <int>`

Example	`:SYST:LKEY:WAV:NAME? 1`
	<"CDMA2K_22.wfm"
	or
	`:SYST:LIC:WAV:NAME? 1`
	<"CDMA2K_22.wfm"

Notes	Waveform slot number `<int>` is positive. If you attempt to input a slot number less than or equal to 0, an error is generated Result type is string. If input slot number exceeds total available slot numbers, “Nonexistent” is returned If no waveform stored in the specified slot, then empty string is returned

Slot Waveform Unique ID Query (Remote Command Only)

Returns the waveform unique ID of the specified slot.

Remote Command	`:SYSTem:LKEY:WAVeform:UID? <int>`
	or
	`:SYSTem:LICense[:FPACk]:WAVeform:UID? <int>`

Example	`:SYST:LKEY:WAV:UID? 2`
	<"1346752140"
	or
	`:SYST:LIC:WAV:UID? 2`
	<"1346752140"

Notes	Waveform slot number `<int>` is positive. If you attempt to input a slot number less than or equal to 0, an error is generated Result type is string. If input slot number exceeds total available slot numbers, “Nonexistent” is returned

	Only Signal Studio waveform has a unique ID, which is a positive number. User-generated waveforms have no unique ID. If no waveform is stored in the specified slot, returns “0”

Locked Waveform Name List Query (Remote Query Only)

Returns the waveform name list of locked.

Remote Command	`:SOURce:RADio:ARB:MPLicensed:NAME:LOCKed?`
Example	`:SOUR:RAD:ARB:MPL:NAME:LOCKed?` < "CDMA2K_27.wfm","GSM_MCS1.WFM","c2kWfm.wfm"

Locked Waveform Unique ID List Query (Remote Query Only)

Returns the waveform unique id list of locked.

Remote Command	`:SOURce:RADio:ARB:MPLicensed:UID:LOCKed?`
Example	`:SOUR:RAD:ARB:MPL:UID:LOCKed?` < "2996927136","3812603511","3710986266"
Notes	Each Signal Studio waveform has a unique id recorded in header. If the unique ids are same, that means they are the same waveform. For this reason, in addition to the locked waveform name list query , there is also a locked waveform unique id list query

Multi-Pack License multi-module control state (Remote Command Only)

When `ON`, multi-pack license operations (such as adding/locking/replacinwaveform etc.) from TRXs other than TRX1 are allowed. If `OFF`, only TRX1 is allowed to operate multi-pack license, while other TRXs are only able to show the related multi-pack license information.

Remote Command	`:SERVice[:PRODuction]:SOURce:MCONtrol:MPLicense[:STATe] ON | OFF | 1 | 0` `:SERVice[:PRODuction]:SOURce:MCONtrol:MPLicense[:STATe]?`
Example	`:SERV:SOUR:MCON:MPL OFF`
Notes	Only effective in modular-based OBTs, such as EXM
Preset	`OFF`
Range	`ON|OFF`

Header Utilities

If there is currently a waveform selected for playback, this table shows you the header information for the file. You can clear the header information out or edit it and save it.

Dependencies	Only available if there is currently a waveform selected for playback. Grayed-out if no waveform is selected

Clear Header

Lets you clear the header information from the file header associated with the currently selected waveform.

Remote Command	`:SOURce:RADio:ARB:HEADer:CLEar`
Example	`:SOUR:RAD:ARB:HEAD:CLE`
Notes	Attempting to clear the header details via SCPI when no waveform was selected for playback generates an error

Save Header

Lets you save new file header information details to the file.

Remote Command	`:SOURce:RADio:ARB:HEADer:SAVE`
Example	`:SOUR:RAD:ARB:HEAD:SAVE`
Notes	Attempting to save the header details via SCPI when no waveform was selected for playback generates an error

Query Waveform Unique ID (Remote Query Only)

Each Signal Studio waveform contains a unique waveform ID, which recorded in the header. This command allows you to query the unique waveform ID from the header.

Remote Command	`:MMEMory:HEADer:ID? "<file name>"`

Example	Query the waveform already loaded into the ARB memory:
	`:MMEM:HEAD:ID? "test.wfm"`
	Query the waveform on the hard disk by absolute path:
	`:MMEM:HEAD:ID? "D:\NVARB\test.wfm"`

	Query the waveform on the hard disk by MSUS: `:MMEM:HEAD:ID? "NVWFM:test.wfm"`
Notes	The queried waveform file can be in ARB memory, or on hard disk. If want to query ARB in ARB memory, then give out the file name directly. If want to query ARB on the hard disk, then absolute file path or MSUS should be given along with the file name. The valid MSUS is `NVWFM`, which is mapped to `D:\NVARB` on the hard disk If the file cannot be found in ARB memory or on hard disk, an error is generated and value -1 is returned

Query Selected Waveform Header info (Remote Query Only)

Returns a listing of the current selected ARB header info. If no ARB selected, then empty string is returned.

Remote Command	`:SOURce:RADio:ARB:HEADer:INFormation?`
Example	`:SOUR:RAD:ARB:HEAD:INF?`
Notes	After each colon of field title string, related header info string is appended The field title string in “Range” part cannot change, for Sequence Studio needs to accurately match those string character to know which header info field it is Below are the abbreviation descriptions:

`DESC`	Description
`SR`	Sample Rate
`RTS`	Run Time Scaling
`RMS`	Root Mean Square
`M1P`	Marker 1 Polarity
`M2P`	Marker 2 Polarity
`M3P`	Marker 3 Polarity
`M4P`	Marker 4 Polarity
`ALCHR`	ALC Hold Routing
`RFBR`	RF Blank Routing
`FOFF`	Frequency Offset
`AWGNST`	AWGN State
`AWGNCN`	AWGN C/N Ratio
`AWGNCBW`	AWGN Carrier Bandwidth
`AWGNNBW`	AWGN Noise Bandwidth
`AWGNCRMS`	AWGN Carrier RMS
`ORP`	DAC Over Range Protection

	`UID`	Unique ID
	`LICSTS`	License Status
Range	`"DESC:", "SR:", "RTS:", "RMS:", "M1P:", "M2P:", "M3P:", "M4P:", "ALCHR:", "RFBR:", "FOFF:", "AWGNST:", "AWGNCN:", "AWGNCBW:", "AWGNNBW:", "AWGNCRMS:", "ORP:", "UID:", "LICSTS"`	

6.1.12 Trigger Initiate

Initiates an immediate trigger event if the trigger source (under ARB Setup) is set to `KEY`.

Dependencies	Grayed-out unless Trigger Source is set to `KEY` and an ARB waveform is configured

6.1.13 Source Sync

Accesses a menu for setting up Source Synchronization for multiple models.

Only appears in modular products such as VXT, and only when the instrument is configured for MIMO analysis.

6.1.13.1 Sync Config

Lets you config MIMO type for source.

Grayed-out when Primary and Secondary modules are in Sync State.

Remote Command	`:SOURce:SYNC:CONFig NONE | TWO | THRee | FOUR | SIX | EIGHt | DONE | DTWO | DTHR | DFOU`
	See "Option Details" on page 2567
	`:SOURce:SYNC:CONFig?`	

Example	`:SOUR:SYNC:CONF TWO`	
Dependencies	EXM	2x2 and 1x1+1x1 MIMO are supported when license E6640A-M22 is enabled
		2x2 and 3x3 MIMO are supported when license E6640A-M33 is enabled
		2x2, 3x3, 4x4 and 2x2+2x2 MIMO are supported when license E6640A-M44 is enabled
	VXT models M9410A/11A	No-Across chassis MIMO is supported when license M941xA-MMO is enabled
		Across chassis MIMO is supported when license M941xA-MTS is enabled

	VXT models M9415A/16A	No-Across chassis MIMO is supported when license M941xA-MMO is enabled
Range	`NONE|TWO|THRee|FOUR|SIX|EIGHt|DONE|DTWO|DTHR|DFOU`	

Option Details

Parameter	SCPI	Notes
None	`NONE`	Sets MIMO Config type as None
2x2	`TWO`	Sets 2x2 as MIMO Config Type. 2 models are configured to Sync
3x3	`THRee`	Sets 3x3 as MIMO Config Type. 3 models are configured to Sync
4x4	`FOUR`	Sets 4x4 as MIMO Config Type. 4 models are configured to Sync
6x6	`SIX`	Sets 6x6 as MIMO Config Type. 6 models are configured to Sync
8x8	`EIGHt`	Sets 8x8 as MIMO Config Type. 8 models are configured to Sync
1x1+1x1	`DONE`	Sets 1x1+1x1 as MIMO Config Type. 2 models are configured to Sync with different center frequency. Use Segment 2 Setup to config the second model
2x2+2x2	`DTWO`	Sets 2x2+2x2 as MIMO Config Type. 2 groups of 2x2 MIMO. First group consists of Primary and TRX1. Second group consists of TRX2 and TRX3. Segment 2 Setup allows you to config the second group
3x3+3x3	`DTHR`	Sets 3x3+3x3 as MIMO Config Type. 2 groups of 3x3 MIMO. First group consists of Primary, TRX1 and TRX2. Second group consists of TRX3, TRX4 and TRX5. Segment 2 Setup allows you to config the second group
4x4+4x4	`DFOU`	Sets 4x4+4x4 as MIMO Config Type. 2 groups of 4x4 MIMO. First group consists of Primary, TRX1, TRX2 and TRX3. Second group consists of TRX4, TRX5, TRX6 and TRX7. Segment 2 Setup allows you to config the second group

6.1.13.2 Sync Type

Grayed-out when models are in Sync State.

Remote Command	`:SOURce:SYNC:TYPE PRIMary	SECondary	OFF` For details of parameter options, see "Options" on page 2568 `:SOURce:SYNC:TYPE?`
Example	`:SOUR:SYNC:TYPE PRIM`
Preset	`OFF`
Range	`PRIMary|SECondary|OFF`

Options

Parameter	Notes
`OFF`	This model is not listed in the Secondary module List
`SECondary`	Use `:SOURce:SYNC:CONNected:NAME?` to obtain the Primary’s name in Sync State
`PRIMary`	Sync Setup is only available for Primary

6.1.13.3 Sync Settings

Grayed-out when Primary and Secondary are in Sync State.

Dependencies	Grayed-out when Sync Type is set to `OFF` or Secondary

Secondary Module List

Lists the parameters of Secondary modules. The Selected checkbox in each row allows you to select the Secondary module when the Sync Type is set to Primary.

- When Sync Config is set to NxN, use this control to enable N-1 Secondary modules
- When Sync Config is set to NxN+NxN, use this control to enable 2N-1 Secondary modules

See "More Information" on page 2568

Remote Command	`:SOURce:SYNC:REMote:SECondary<integer> ON | OFF | 1 | 0` `:SOURce:SYNC:REMote:SEC<integer>?`
Example	`:SOUR:SYNC:REM:SEC1 ON` `:SOUR:SYNC:REM:SEC2 OFF`
Notes	`<integer>` Secondary module number in Available Models
Preset	`OFF`

More Information

Parameter	SCPI Example	Notes
Available Secondary modules	:SOUR:SYNC:REM:SEC:List?	All the available Secondary models are listed
IP Address	:SOUR:SYNC:REM:SEC1:ADDR?	Refer to Remote Chassis to add the IP Address for remote chassis

Parameter	SCPI Example	Notes
		“Local Host” indicates that the Primary and Secondary modules share the same chassis
Slot Number	:SOUR:SYNC:REM:SEC2:SLOT?	Indicates the slot number of available models
Socket Port	:SOUR:SYNC:REM:SEC2:SPOR?	Indicates the socket port of available models
Secondary module Order		Shows you the models to be Secondary devices Use Selected to choose from available Secondary models

Sync Settings

Lets you apply the source settings of the Primary module to its Secondary modules.

Remote Command	`:SOURce:SYNC:SETTings:ENABle ON | OFF | 1 | 0` `:SOURce:SYNC:SETTings:ENABle?`
Example	`:SOUR:SYNC:SETT:ENAB ON` `:SOUR:SYNC:SETT:ENAB?`
Notes	When Sync Settings is ON, the source settings of Primary are applied to Secondary modules. The supported settings are Amplitude, Frequency, Trigger Source, Trigger Type, RF Output and waveform related information When Sync Segment 2 is switched ON, this Toggle is set ON simultaneously
Dependencies	Waveform files naming convention: For NxN MIMO: – xxx0.wfm for Primary – xxx[n].wfm for TRX[n] For example, in 3x3 MIMO: – xxx0.wfm for Primary – xxx1.wfm for TRX1 – xxx2.wfm for TRX2 For NxN+NxN MIMO, in the first group: – xxx0_0.wfm for Primary – xxx0_n.wfm for TRX[n] in the second group: – xxx1_n.wfm for TRX[n+N] For example, in 3x3+3x3 MIMO: – xxx0_0 for Primary

	– xxx0_1.wfm for TRX1 – xxx0_2.wfm for TRX2 – xxx1_0.wfm for TRX3 – xxx1_1.wfm for TRX4 xxx1_2.wfm for TRX5
Preset	OFF
Range	ON|OFF

Sync Segment 2

Lets you config the models in the second group of NxN+NxN MIMO.

Remote Command	`:SOURce:SYNC:SETTings:SEGMent2:ENABle ON | OFF | 1 | 0` `:SOURce:SYNC:SETTings:SEGMent2:ENABle?`
Example	`:SOUR:SYNC:SETT:SEGM2:ENAB ON` `:SOUR:SYNC:SETT:SEGM2:ENAB?`
Notes	Only Frequency in settings is supported
Dependencies	When this setting is ON, Sync Settings will be turned on accordingly
Preset	OFF
Range	ON|OFF

Segment 2 Frequency

When Sync Segment 2 is ON, allows you to set the frequency of models in the second group of NxN+NxN MIMO.

Remote Command	`:SOURce:SYNC:SETTings:SEGMent2:FREQuency <freq>` `:SOURce:SYNC:SETTings:SEGMent2:FREQuency?`
Example	`:SOUR:SYNC:SETT:SEGM2:FREQ 1.00 GHz` `:SOUR:SYNC:SETT:SEGM2:FREQ?`
Preset	1.00 GHz
Min	VXT models M9410A/11A/15A/16A: 380 MHz
Max	Hardware Dependent VXT models M9410A/11A/15A/16A: – Option F06 = 6.0 GHz

IP Address

Sets up the controller’s IP address of Remote Secondary models.

Remote Command	`:SOURce:SYNC:REMote:ADDRess <string>`
Example	`:SOUR:SYNC:REM:ADDR "192.168.1.2"`
Notes	`<string>` - IP Address

SCPI Socket Port

Sets up the controller’s SCPI socket port of Remote Secondary models.

Remote Command	`:SOURce:SYNC:REMote:IPPort <integer>`
Example	`:SOUR:SYNC:REM:IPP 5025`
Notes	`<integer>` - Port

Add Secondary Module

Lets you connect the remote chassis specified by IP Address and Socket Port.

Remote Command	`:SOURce:SYNC:REMote:ADDRess:ADD`
Example	`:SOUR:SYNC:REM:ADDR:ADD`

Notes	Example of how to add a remote chassis:
	`:SOUR:SYNC:REM:ADDR "192.168.1.2"`
	`:SOUR:SYNC:REM:IPP 5025`
	`:SOUR:SYNC:REM:ADDR:ADD`
	Once a remote chassis is connected, the "Secondary Module List" on page 2568 shows you the available Secondary modules

Delete Secondary Module

Lets you delete a selected remote chassis IP Address from the "Secondary Module List" on page 2568 .

Remote Command	`:SOURce:SYNC:REMote:ADDRess:DELete`
Example	`:SOUR:SYNC:REM:ADDR:DEL`
Notes	Example of how to delete a remote chassis: `:SOUR:SYNC:REM:ADDR "192.168.1.2"`

	`:SOUR:SYNC:REM:ADDR:DEL`

Sync Runtime Settings (Remote Command Only)

Lets you Sync runtime settings to the Secondary modules without restarting Sync.

Remote Command	`:SOURce:SYNC:RTSetting:STATe ON | OFF | 1 | 0` `:SOURce:SYNC:RTSetting:STATe?`
Example	`:SOUR:SYNC:RTS:STAT ON` `:SOUR:SYNC:RTS:STAT?`
Notes	When `OFF`, Sync is interrupted when changing frequency or power settings on the Primary module. After applying the new settings to the Secondary modules, Sync will restart When `ON`, setting changes on the Primary module are applied to the Secondary modules immediately without interrupting Sync status. This is the default behavior. The supported settings are **Amplitude** and **Frequency**
Preset	`ON`
Range	`ON|OFF`

6.1.13.4 Sync Start

Lets you start synchronizing Primary and Secondary modules to play Arb synchronously.

When the Sync connection is built successfully, Primary and Secondary modules are in the Sync State.

Sync Start and Sync Config menu are grayed-out when Primary and Secondary modules are in Sync State.

Remote Command	`:SOURce:SYNC:STARt`
Example	`:SOUR:SYNC:STAR`
Notes	If you change the source settings during Sync State, an error message appears in the status bar: "Settings conflict; Sync connection is already established" and the change will not be applied until Sync Stop

6.1.13.5 Sync Stop

Stops the synchronization.

When Sync Stops, Sync Config menu and Sync Start will be available.

Remote Command	`:SOURce:SYNC:STOP`
Example	`:SOUR:SYNC:STOP`

6.1.13.6 Sync Connected (Remote Query Only)

Lets you query the state of synchronization.

Remote Command	`:SOURce:SYNC:CONNected?`
Example	`:SOUR:SYNC:CONN?` Returns: 1 when synchronization is established, 0 when synchronization is stopped

6.1.14 Source Preset

Lets you preset the source settings to their default values.

Remote Command	`:SOURce:PRESet`
Example	`:SOUR:PRES`

6.2 Input

The controls on this tab let you select and configure the instrument’s inputs.

6.2.1 Select Input

Lets you choose which signal input you want to analyze:

- "RF Input" on page 2576
- "External Mixer" on page 2576
- "I/Q" on page 2579

See also:

- "External Mixer Setup" on page 2601
- "I/Q Setup" on page 2621

Remote Command	`[:SENSe]:FEED RF | AIQ | EMIXer` `[:SENSe]:FEED?`

Example	Select the RF Input:
	`:FEED RF`
	Select External Mixing:
	`:FEED EMIX`
	Select BBIQ:
	`:FEED AIQ`

Dependencies	I/Q only appears when Option BBA present Ext Mix only appears when Option EXM present
Couplings	Connecting a U7227A USB Preamplifier to one of the instrument’s USB ports causes the Input to automatically switch to the RF Input. If the RF Calibrator is on, it is turned off. Subsequently disconnecting the USB Preamp from USB does not change the Input selection, nor restore the previous selection `[:SENSe]:FEED RF` turns the calibrator `OFF`
Preset	Unaffected by Preset or power cycle. Survives a Mode Preset and mode changes Set to `RF` by **Restore Input/Output Defaults** or **Restore System Defaults->All**
State Saved	Saved in instrument state
Annotation	Displayed in the Meas Bar as "Input::" followed by: RF or Ext Mix or I/Q depending on which input is selected

Backwards Compatibility SCPI	`[:SENSe]:FEED AREFerence`
	In the PSA the calibrator was one of the inputs and selected using the AREF parameter to the same :FEED command that switched the inputs. In the X-Series, it is controlled in a separate menu and overrides the input selection. For code compatibility, `[:SENSe]:FEED AREFerence` is provided, and is aliased to `[SENSe]:FEED:AREF REF50`, which causes the input to be switched to the 50 MHz calibrator. `[:SENSe]:FEED RF` switches the input back to the RF port and turns the calibrator `OFF`, thus providing full compatibility with the PSA calibrator function
	Note that after sending this, `[:SENSe]:FEED?` does *not* return "AREF" but instead the currently selected input:
	`[:SENSe]:FEED IQ | IONLy | QONLy`
	`[:SENSe]:FEED?`
	The parameters `IQ | IONLy | QONLy` are supported for backwards compatibility with the E44406A
	`[:SENSe]:FEED IQ aliases to [:SENSe]:FEED: IQ:TYPE IQ`
	`[:SENSe]:FEED IONLy aliases to [:SENSe]:FEED:IQ:TYPE IONLy`
	`[:SENSe]:FEED QONLy aliases to [:SENSe]:FEED:IQ:TYPE QONLy`
	`[:SENSe]:FEED? always returns AIQ, whatever type of legacy parameter IQ | IONLy | QONLy has been used`

Backwards Compatibility Notes	Most of the settings in the X-Series Input/Output system, including External Gain, Amplitude Corrections settings and data, etc., are shared by all modes and are not changed by a mode switch. Furthermore, most variables under the **Input/Output** menu are not affected by Mode Preset. Both of these behaviors represent a departure from legacy behavior In X-Series. Input/Output settings are reset by using **Restore Input/Output Defaults**. They can also be reset to their default values by **System**->**Restore System Defaults**-> **In/Out Config**, or by **System** ->**Restore System Defaults** -> **All** (and corresponding SCPI) While this matches most use cases better, it does create some code compatibility issues. For example, Amplitude Corrections are no longer turned off by Mode Preset, but instead by **Restore Input/Output Defaults** Although Input/Output settings are not part of each Mode's State, they are saved in Save State files, so that all of the instrument settings can be recalled with **Recall**, **State**, as in legacy instruments
Notes	In legacy analyzers you choose between the Internal mixer or an External Mixer. In X-Series, the External Mixer is one of the choices for the Input and is selected using the `FEED` command (`:SENSe:FEED EXTMixer`) For compatibility, the `:INPut:MIXer EXTernal|INTernal` legacy command is mapped as follows: 1. When `:INPut:MIXer EXTernal` is received, `:SENSe:FEED EMIXer` is executed 2. When `:INPut:MIXer INTernal` is received, `:SENSe:FEED RF` is executed 3. When `:INPut:MIXer?` is received, the response is `INT` if any input other than the external mixer is selected, and `EXT` if the external mixer is selected
Preset	`INT`

Backwards Compatibility SCPI	`:INPut:MIXer EXTernal | INTernal` `:INPut:MIXer?`

Backwards Compatibility Notes	PSA supports the following SCPI Command :
	`:INPut:MIXer:TYPE PRESelected | UNPReselect`
	`:INPut:MIXer:TYPE?`
	PXA does not support the `:INPut:MIXer:TYPE` command

RF Input

Selects the front-panel RF input port to be the instrument signal input. If RF is already selected, pressing this key accesses the RF input setup functions.

External Mixer

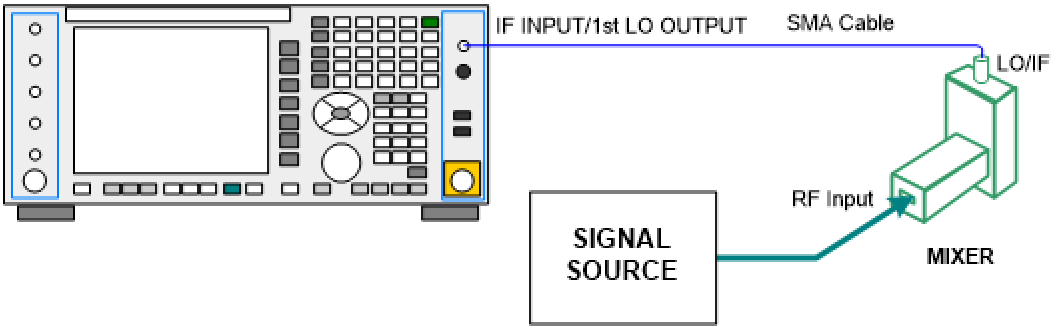
Lets you select an External Mixer through which to apply signal input to the instrument. When selected, the LO/IF port becomes the input to the instrument.

External Mixing requires option EXM. The External Mixer key will not appear unless option EXM is installed. The presence of the LO/IF connector alone does not indicate that you have Option EXM licensed. To verify that option EXM is installed, press **System, Show, System.**

When External Mixer is selected, the **Center Freq** key controls the setting of the Center Freq in external mixing, which is separate from the settings of Center Freq for the RF Input or BBIQ. Each input retains its unique settings for Center Freq. A unique SCPI command is provided solely for the external mixing Center Freq (see the **Center Freq** key description), which only affects the External Mixer CF, although sending the generic Center Freq command while External Mixer is selected also controls the External Mixer CF.

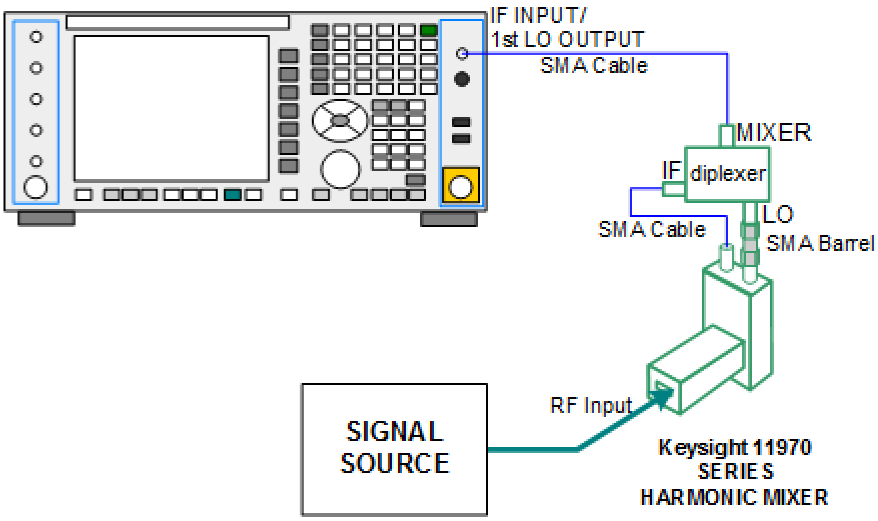
Unless option EXM is present, the External Mixer key is blanked, and all SCPI commands associated with menus accessed by this key return an error
Manual FFT mode is available with external mixing, but not with Signal ID. All settings under this key, and all Frequency settings, are remembered when you go out of External Mixer, so that when **External Mixer** is chosen again, all the external mixer functions will retain their previous settings, with the exception of Signal ID which is set to OFF (Signal ID is also set to Off unless External Mixer is the selected Input). Note that this differs from ESA and PSA, in which all external mixer settings including Center Frequency are lost when you turn off External Mixing or Preset the instrument.

X-series instruments have a combined LO Out/IF In connection, whereas earlier instruments used separate ports for the LO Out and the IF in. Internal diplexers in the instrument and the mixer simplify the connection for users – only a single SMA cable is required.



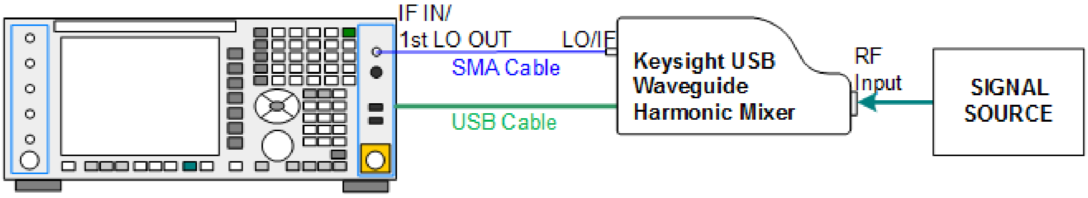
Legacy HP/Agilent and some third-party mixers have separate LO In and IF out connections. This requires you to use an external diplexer to connect these mixers. A diplexer can easily be purchased for this purpose (for example, Diplexer Model # DPL.26 or # DPL.313B from OML Inc., Morgan Hill, California, USA).

The connection diagram for such a legacy mixer is:



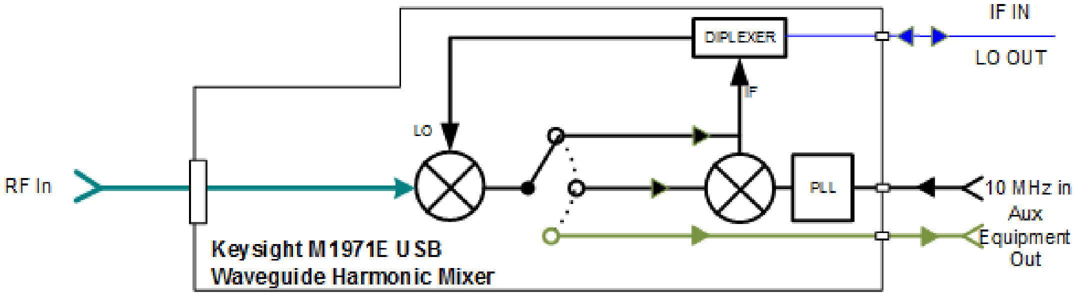
In addition, External Mixing in the X-Series supports the new Keysight M1970 series of Harmonic Mixers, which provide a USB connection for download of calibration data and additional control.

The connection diagram for one of the Keysight USB mixers is:

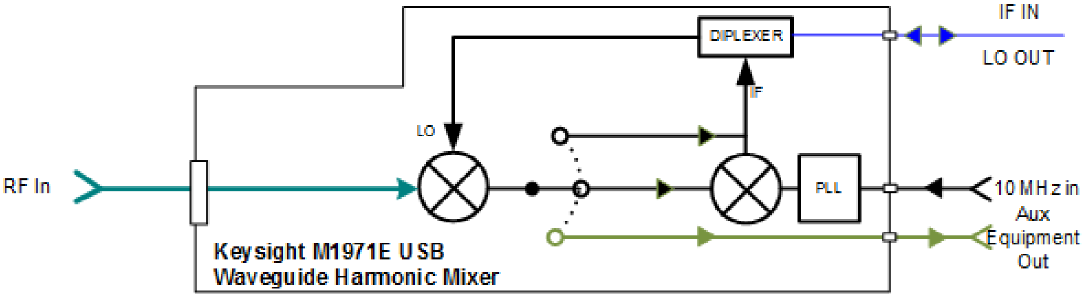


Also available in the M197x series are the M1971 series USB Mixers, which provide additional inputs and outputs for special functionality as described below. These mixers have multiple signal paths which allow them to function in three different states:

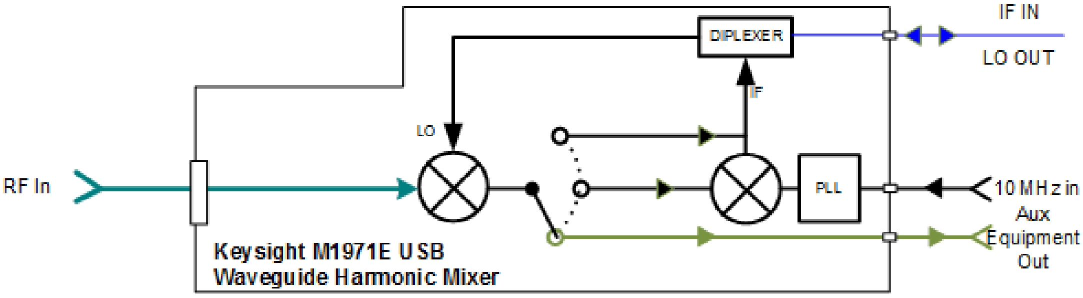
- Normal, in which the mixer functions as a classic external mixer with a single conversion:



- Dual Conversion, which gives you a wider image-free range. In Dual Conversion, the first conversion is to a higher IF frequency and you provide a 10 MHz signal to which an internal PLL is locked, to effect a second downconversion:



- Aux Equipment, wherein the first mixer output drives an output connector on the mixer and the instrument is out of the circuit:



External Mixing is only supported in certain Modes and Measurements in the X-Series, as shown in the table below. When External Mixer is selected in a measurement that does not support it, the "No result; Meas invalid with Ext Mixing" error condition occurs:

Mode	Measurements	Sig ID (Image Suppress only)
Spectrum Analyzer	Swept SA	Y*
	TOI	Y
	Harmonics	N
	Spurious Emissions	Y
	Channel Power	Y
	Occupied BW	Y
	ACP	Y
	Spectrum Emissions Mask	Y
	CCDF	N
	Burst Power	N
	List Sweep	N
Phase Noise	Monitor Spectrum	Y
	Log Plot	Y
	Spot Frequency	N
	Waveform	N
I/Q Analyzer	Complex Spectrum	N
	Waveform	N
Vector Signal Analyzer	Vector Analysis	N
	Analog Demod	N
	Digital Demod	N
Analog Demod	AM	N
	FM	N
	PM	N
	FM Stereo	N

* the Swept SA measurement also supports Image Shift

I/Q

Selects the front-panel I/Q input ports to be the instrument signal input. If I/Q is already selected, pressing this key accesses the I/Q setup menu.

The Baseband I/Q functionality is a hardware option. It is option BBA. If the option is not installed, none of the I/Q functionality is enabled.

The Baseband I/Q has four input ports and one output port. The input ports are I, I-bar, Q, and Q-bar. The I and I-bar together compose the I channel, and the Q and Q-bar together compose the Q channel. Each channel has two modes of operation, Single-Ended (also called "unbalanced") and Differential Input (also called "balanced"). When in Single-Ended operation, only the main port (I or Q) is used, and the complementary port (I-bar or Q-bar) is ignored. When in Differential Input mode, both main and complementary ports are used.

The input settings (range, attenuation, skew, impedance, external gain) apply to the channels, not the individual ports.

The system supports a variety of 1 MΩ input passive probes as well as the Keysight 113x Series active differential probes using the Infinimax probe interface.

The Keysight 113x Series active probes can be used for both single ended and differential measurements. In either case a single connection is made for each channel (on either the I or Q input). The input is automatically configured to 50 Ω single ended and the probe power is supplied through the Infinimax interface. The probe can be configured for a variety of input coupling and low frequency rejection modes. In addition, a wide range of offset voltages and probe attenuation accessories are supported at the probe interface. The active probe has the advantage that it does not significantly load the circuit under test, even with unity gain probing.

With passive 1 MΩ probes, the probe will introduce a capacitive load on the circuit, unless higher attenuation is used at the probe interface. Higher attenuation reduces the signal level and degrades the signal-to-noise-ratio of the measurement. Passive probes are available with a variety of attenuation values for a moderate cost. Most Keysight passive probes can be automatically identified by the system, setting the input impedance setting required as well as the nominal attenuation. For single ended measurements a single probe is used for each channel. Other passive probes can be used, with the attenuation and impedance settings configured manually.

For full differential measurements, the system supports probes on each of the four inputs. The attenuation of the probes should be the same for good common mode rejection and channel match.

Both active and passive probes in single ended and differential configurations can be calibrated. This calibration uses the Cal Out BNC connection and a probe connection accessory. The calibration achieves excellent absolute gain flatness in a probed measurement. It matches both the gain and frequency response of the I and Q channels as well as any delay skew, resulting in high accuracy in derived measurements such as Error Vector Magnitude (EVM).

When a probe is connected a status message will be displayed. The message will indicate if calibration data is available or not. Calibration data is saved for each type of probe (including "none") for each port and will be reapplied whenever that type of probe is re-connected to the same port. For probes with EEPROM identification, the calibration data will be stored based on the unique probe identifier and will reapply data for that particular probe if it is available. The data will not follow a probe from one port to another. For probes without EEPROM identification, the instrument cannot distinguish between different probes of the same type, and it will use the data from the last calibration for that probe type on that port.

When in differential mode, both the main and complementary probes are expected to be of the same type.

In some situations, the I and Q channels should be configured identically. In other situations, it is convenient to control them independently. Some menus have a "Q Same as I" setting that will cause the Q channel configuration to mirror the I channel configuration, avoiding the overhead of double data entry when the channels should be the same.

The output port is for calibrating the I/Q input ports, although it can also be manually controlled.

There are two types of calibrations available: cable calibration and probe calibration. The cable calibration will guide the user through connecting each input port in turn. All ports must be calibrated together. The probe calibration is done for a specific channel (I or Q). If in Single-Ended mode, only the main port is calibrated. When in Differential Input mode, the user is guided through calibrating both main and complementary ports.

The front panel I/Q port LEDs indicate the current state of that port. On (green) indicates it is active, and off (dark) indicates it is not in use. For example, the Cal Out port LED is on if and only if there is signal coming out of that port.

The input is a context, and some parameters have separate values for each context. The SCPI for these parameters has an optional "[:RF|IQ]" node. If the specific context is omitted, the command acts on the current input context's value. Here are the parameters that are input context sensitive:

- Center Frequency
- Trigger Source

It is important to distinguish between the I and Q input ports and the displayed I and Q data values. The I and Q input ports feed into a digital receiver that does digital tuning and filtering. The I and Q data seen by the user (either on the display or through SCPI) corresponds to the real ("I") and the imaginary ("Q") output from the digital receiver. When the input path is I+jQ or I Only and the center frequency is 0 Hz the I input ends up in as the real output from the receiver and appears as "I" data. Likewise, when the input path is I+jQ and the center frequency is 0 Hz, the Q input ends up as the imaginary output from the receiver and appears as "Q" data. However, when the input path is Q Only, the Q input is sent to the receiver as Q+j0, so the receiver output has the Q input coming out on the real output, and so in Q Only, the signal from the Q input port appears as the "I" data. Another situation where the I and Q data do not necessarily correspond directly to the I and Q inputs is when the center frequency is non-zero. The digital processing involved in the tuning is a complex operation. This will result in I Only data appearing as both "I" and "Q" data, the same as that signal would appear if seen through the RF input port.

BBIQ is only supported in certain Modes and Measurements in the X-Series. When I/Q is selected in a measurement that does not support it, the “No Result; Meas invalid with I/Q inputs” message appears. This is error 135

Baseband I/Q Remote Language Compatibility

For the Agilent E4406A VSA Series Transmitter Tester, Option B7C provided baseband I/Q inputs. Code compatibility has been provided to allow many of the commands for Option B7C to function properly with X-Series. X-Series has hardware differences and additional capabilities (for example, E4406A does not have independent settings of I & Q, nor does it provide for probe calibrations), which make 100% compatibility impossible.

The following commands are supported:

`:CALibration:IQ:FLATness`

`:INPut:IMPedance:IQ U50 | B50 | U1M | B1M`

`:INPut:IMPedance:REFerence <integer>`

`[:SENSe]:FEED RF|IQ|IONLy|QONLy|AREFerence|IFALign` supports all parameters except `IFALign`. The `FEED?` query returns only `RF|AIQ|AREF`.

The following commands are not supported:

`:CALibration:GIQ`

`:CALibration:IQ:CMR`

`:INPut:IQ:ALIGn OFF | ON | 0 | 1`

The Rohde & Schwarz FSQ-B71 also provides baseband I/Q inputs. A certain amount of code compatibility is provided in X-Series, but hardware differences make this a somewhat limited set.

Supported:

The "<1|2>" is supported as "[1]".

`INPut<1|2>:IQ:BALanced[:STATe] ON | OFF`

`INPut<1|2>:IQ:TYPE I | Q | IQ`

`INPut<1|2>:IQ:IMPedance LOW | HIGH`

Not Supported:

`DIAGnostic<1|2>:SERVice:IQ:CALibration:DC 0 | 0.1 | 0.178 | 0.316 | 0.562 | 1.0`

`DIAGnostic<1|2>:SERVice:IQ:CALibration:DESTination IHIGh | ILOW | QHIGh | QLOW`

`DIAGnostic<1|2>:SERVice:IQ:CALibration:PULSe: PRATe 10 kHz | … | 4 MHz`

`DIAGnostic<1|2>:SERVice:IQ:INPut IQ | GND | CALDc | CALPulse`

`INPut<1|2>:SELect AIQ | RF`

`TRACe<1|2>:IQ:DATA:FORMat COMPatible | IQBLock | IQPair>`

`TRACe<1|2>:IQ:DATA:MEMory? <offset samples>,<# of samples>`

`TRACe<1|2>:IQ:DATA?`

`TRACe<1|2>:IQ:SET <filter type>,<rbw>,<sample rate>,<trigger source>,<trigger slope>, <pretrigger samples>, <# of samples>`

`TRACe<1|2>:IQ:SRATe 10.0kHz to 81.6MHz`

`TRACe<1|2>:IQ[:STATe] ON | OFF`

The Rohde & Schwarz FMU has the following SCPI, which is *not* supported (these commands start/abort the probe calibration procedure, which is manually interactive from the front panel):

`CALibration:ABORt`

`CALibration:PROBe[:STARt]`

6.2.2 RF Input Port

Specifies the RF input port used. Only appears on units with multiple RF inputs, and lets you switch between the inputs.

Instruments that include multiple RF Input ports include:

- N9041B
- N9000B (CXA)
- N9048B (PXE)
- VXT, M941xE and EXM
- M8920A/20B
- E7760B

NOTE Switching input ports may change the receiver performance of the instrument.

See "Instruments with 2 Inputs" on page 2585

Remote Command	`[:SENSe]:FEED[:RF]:PORT[:INPut] <port>` For instrument-specific definitions of `<port>`, see: "Parameters for UXA/PXA/MXA/EXA/CXA/MXE/PXE/NFA" on page 2585 "Parameters for EXT, EXF and EXM Wireless Test Sets" on page 2586

	"Parameters for VXT M9410A/11A/15A16A, M9410E/11E/15E/16E and M9420A Vector Transceivers" on page 2586 "Parameters for VXT M9410A/11A/15A/16A and EXM when used with Radio Heads/CIU" on page 2588 "Parameters for E7760B Wideband Transceiver" on page 2591 "Parameters for M8920A/20B Radio Test Set" on page 2592 "Parameters for UXM Wireless Test Set" on page 2592 `[:SENSe]:FEED[:RF]:PORT[:INPut]?`

Example	Use the port labeled RF Input when the selected input is RF:
	`:FEED:RF:PORT RFIN`
	Use the port labeled RF Input 2 when the selected input is RF:
	`:FEED:RF:PORT RFIN2`

Dependencies	Only appears when RF Input is selected as the Input Only appears in models that support multiple inputs. If the SCPI command is sent with unsupported parameters in any other model, an error is generated, -221, “Settings conflict; option not installed” When any input is selected in a measurement that does not support it, the "No result; Meas invalid with this input" error condition occurs, and the measurement returns invalid data when queried
Couplings	When switching between inputs, you may find the new input has a different frequency range than the current input. This means the frequency at the new input may be limited, depending on where you were tuned When you switch from an input whose maximum frequency is greater than the input to which you are switching: 1. If the current Stop Freq is below the Max Freq for the new input, then neither Stop Freq or Start Freq needs to change 2. But if the current Stop Freq is above the Max Freq for the new input, Stop Freq must change; so, it is set to the Max Freq for the new input 3. If the Stop Freq is forced to change then, if possible, the Span is preserved with the new Stop Freq; however, the Start Freq can’t go below zero Example: Input 2 has a Max Freq of 110 GHz and Input 1 has a Max Freq of 52 GHz Case 1: Input 2 is selected and Start Freq=40 GHz, Stop Freq=60 GHz. Change to Input 1. Stop Freq changes to 52 GHz so, to preserve Span, Start Freq is set to 32 GHz Case 2: Input 2 is selected and Start Freq=40 GHz, Stop Freq=110 GHz. Change to Input 1. Stop Freq changes to 52 GHz. Span was 70 GHz, but new Span maximum is 52 GHz so Start Freq is set to 0 Hz Case 3: Input 2 is selected and Start Freq=10 GHz, Stop Freq=20 GHz. Change to Input 1. No change is necessary, Start Freq and Stop Freq don’t change
Preset	Unaffected by Mode Preset, but set to `RFIN` on **Restore Input/Output Defaults** or **Restore System Defaults -> All**, unless noted in the platform-specific sections below
State Saved	Saved in instrument state
Annotation	Annotation in the Meas Bar reads as follows: When input is RF In: Input: RF

	When input is RF In 2: Input: RF2

Backwards Compatibility SCPI	`:INPut<1|2>:TYPE INPUT1 | INPUT2`
	`:INPut<1|2>:TYPE?`
	Included for R&S ESU compatibility. In MXE, the INPUT1 parameter is aliased to RFIN and the INPUT2 parameter is aliased to RFIN2

Instruments with 2 Inputs

In models with two inputs, the second input usually has a different maximum frequency than the first input. For your convenience, the actual "Max Freq" value is allowed to go slightly higher than the nominal Max Freq for the second input, just as is the case with the first input.

Model	Nominal Input 2 Max Freq	Absolute Input 2 Max Freq	Transition rule for switching from Input 1 to Input 2
N9038A	1 GHz	1.000025 GHz	If Stop Freq is above 1.000025 GHz, it is set to 1.000025 GHz, otherwise it does not change If Start Freq is above 1.000024990 Hz, Start Freq is set to 1.000024990 Hz and Span to 10 Hz, otherwise nothing changes
N9000A with option C75	1.5 GHz	1.58 GHz	If Stop Freq is above 1.58 GHz, it is set to 1.58 GHz, otherwise it does not change If Start Freq is above 1.579999990 GHz, Start Freq is set to 1.579999990 GHz and Span to 10 Hz, otherwise nothing changes

Parameters for UXA/PXA/MXA/EXA/CXA/MXE/PXE/NFA

<port>	Input
`RFIN`	RF Input
`RFIN2`	RF Input 2
`ERFIN`	External RF

Example	Set the RF input to be RF Input:
	`:FEED:RF:PORT RFIN`
	Set the RF input to be RF Input 2 if that port exists:
	`:FEED:RF:PORT RFIN2`
	Set the RF input to be External RF if the V3050A unit is connected:
	`:FEED:RF:PORT ERFIN`

Dependencies	If the command is sent with `RFIN2` or `ERFIN` and that port does not exist, an error is generated, -221, "Settings conflict; option not installed" `ERFIN` requires option "EXW"

Couplings	Connecting a V3050A changes the Preset to `ERFIN` and automatically switches the input to `ERFIN`. Disconnecting the V3050A changes the Preset back to `RFIN` and automatically switches the input to `RFIN`
Preset	`ERFIN` when V3050A is connected, otherwise `RFIN`
Annotation	Annotation in the Meas Bar reads as follows: – When input is RFIN: Input: RF – When input is RFIN2: Input: RF2 – When input is ERFIN: Input: Ext RF

Parameters for EXT, EXF and EXM Wireless Test Sets

<port>	Input
`RFIO1`	RFIO 1
`RFIO2`	RFIO 2
`RFIO3`	RF3 I|O
`RFIO4`	RF4 I|O

See also "Parameters for VXT M9410A/11A/15A/16A and EXM when used with Radio Heads/CIU" on page 2588

Example	Set the RF input to RFIO 1: `:FEED:RF:PORT RFIO1`
Dependencies	In EXF, or in EXM with hardware M9430A, if RF Input is selected as RF Input Port, you need to choose the settings in the Half Duplex Config menu to determine which port (RFIO3 or RFIO4) will be used In EXM with hardware M9431A, this setting is not supported. If the SCPI command is sent with this setting, an error is generated, -221, “Settings conflict; option not installed”
Preset	`RFIO1`
Annotation	Annotation in the Meas Bar reads as follows: – When input is RFIO1: Input: RFIO1 – When input is RFIO2: Input: RFIO2 – When input is RFIO3: Input: RFIO3 – When input is RFIO4: Input: RFIO4

Parameters for VXT M9410A/11A/15A16A, M9410E/11E/15E/16E and M9420A Vector Transceivers

<port>	Input
`RFIN`	RF Input

<port>	**Input**
`RFFD`	RFIO FD
`RFHD`	RFIO HD, Half Duplex

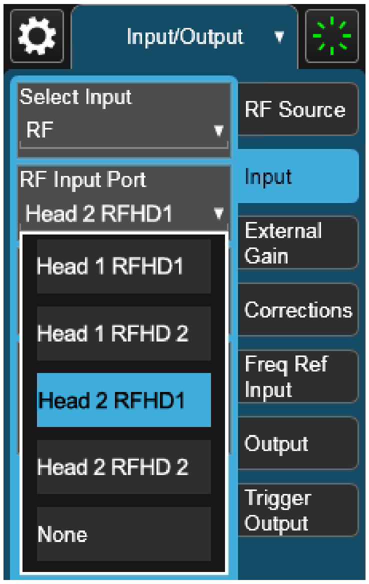
Example	`:FEED:RF:PORT RFIN`
	`:FEED:RF:PORT RFFD`
	`:FEED:RF:PORT RFHD`
	`:FEED:RF:PORT NONE`

Notes	`RFIN` sets the RF input to be the RF Input port, labeled RF Input `RFFD` sets the RF input to be the full duplex port, labeled RFIO FD. Note that Option "FDX" is required to enable this port `RFHD` sets the RF input to be the half duplex port, labeled Half Duplex (M9410A/11A/15A/16A) or RFIO HD (M9420A) M9410E/11E/15E/16E also has HD port, which is the HD port on M9471A module `NONE` sets the RF In port and Half Duplex port (if HD Port is not set to RF Output) to connect to 50Ω load, as shown below:  When using Source only, set RF Input to `NONE` to provide better isolation. When the input port is set to `NONE`, an error appears in the status area:  No Result;Meas invalid with input port none selected
Dependencies	Option HDX is required to enable the Half Duplex (RFIO HD) port You cannot set this port to be the input if it is already set to be the output. Attempting to do so generates error message: "-221, Settings conflict; RF Input cannot be set to RFIO HD when RF Output is RFIO HD" `NONE` is not available in VXT model M9420A
Preset	`RFIN`
Annotation	Annotation in the Meas Bar reads as follows: When input is RF Input: Input: RF When input is RFIO FD: Input: RFFD When input is RFIO HD or Half Duplex: Input: RFHD When input is None: Input: NONE

Parameters for VXT M9410A/11A/15A/16A and EXM when used with Radio Heads/CIU

<port>	Input
RRH*h*RFHD*p*	Head *h*, RF Tx/Rx *p*, for example `RRH1RFHD2` = Head 1, RF Tx/Rx 2
IFIN*n*	DUT IF IN for Channel *n*, for example `IFIN1` = DUT IF IN for Channel 1
IFHD*n*	DUT IF In/Out for Channel *n*, for example `IFHD1` = DUT IF In/Out for Channel 1

When using a Remote Radio Head (RRH), such as the Keysight M1740A mmWave Transceiver for 5G, with the VXT or EXM, the choices in the dropdown are dependent on which heads are installed. For example, in the case where two M1740As are present, each with two ports, the dropdown will look like this:

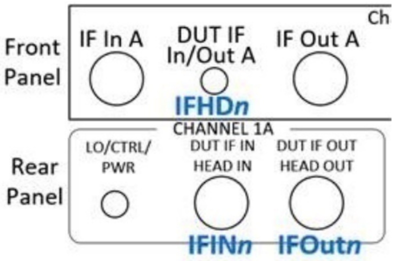


Note the inclusion of the **None** choice, which allows the input port to become unassigned, and thus allows any Output port to be assigned without concern about an Input port conflict. When the input port is unassigned, an error appears in the status area:

No Result;Meas invalid with input port none selected

The user interface parameter RFHD p corresponds to the port labeled RF Tx/Rx p; for example, RFHD 2 means the port labeled RF Tx/Rx 2 on the M1740A.

When using a E7770A Common Interface Unit, you may make connections to the half-duplex port on the front of the CIU labeled DUT IF In/Out, and/or to ports on the rear of the CIU labeled DUT IF IN and DUT IF OUT. For example, if your DUT has an IF Output you will usually connect it to one of the DUT IF IN ports on the rear panel of the CIU. The user interface parameter IFIN n corresponds to the DUT IF IN port for Channel n on the CIU, so you would choose IFIN 1 in the dropdown to connect to the DUT IF IN port for Channel 1, and the corresponding SCPI parameter would be IFIN1. See the figure below:



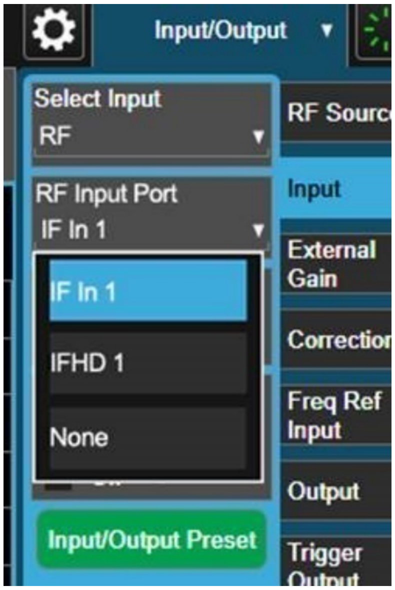
The following table lists the GUI parameter for each input or output on the CIU, and the SCPI parameter for the RF Input Port command (`[:SENSe]:FEED[:RF]:PORT[:INPut]`) and the RF Output Port command (`[:SENSe]:FEED:RF:PORT:OUTPut`):

Port	Port name on CIU	Name displayed in GUI	SCPI parameter for RF Input Port and Output Port commands
IF input port	DUT IF IN	IF In n	`IFINn`, for example `IFIN1`
IF output port	DUT IF OUT	IF Out n	`IFOutn`, for example `IFO1`
IF port, half duplex	DUT IF In/Out	IFHD n	`IFHDn`, for example, `IFHD1`

NOTE

The value of n for each port, in the multiple-port use case, may vary according to your system configuration. For the value of n for your use case, consult the Startup Guide for your particular system (for example S9100A).

An example of the GUI for the CIU ports appears below:



Example	Set the RF input to be the port labeled RF Tx/Rx 2 on Head 1:
	`:FEED:RF:PORT RRH1RFHD2`
	Set the RF input to be the Channel 1 port labeled DUT IF IN on the CIU:
	`:FEED:RF:PORT IFIN1`

Notes	Parameter `RRHhRFHDp` corresponds to **Head h**, port **RF Tx/Rx p**; for example, `RRH1RFHD2` = the port labeled **RF Tx/Rx 2** on **Head 1** For the CIU, the parameter `IFINc` corresponds to the **DUT IF IN** for channel c. For example, IFIN1 would connect to the **DUT IF IN** port for Channel 1
Dependencies	The Radio Head and CIU parameters only appear when a Remote Radio Head or CIU is connected to the instrument. If these parameters are sent at any other time, an error is generated, “-221, Settings conflict; option not installed”
Preset	`RRH1RFHD1`
Annotation	Annotation in the Meas Bar reads as follows: Input:Hd *h* RFHD *p* For example, in the case above, with RFHD 2 on Head 1 selected: Input:Hd 1 RFHD 1 When using the CIU: – When input is IFIN1: Input: IFIN 1 – When input is IFIN2: Input: IFIN 2 – When input is IFIN3: Input: IFIN 3 – When input is IFIN4: Input: IFIN 4
Backwards	`:FEED:RF:PORT A1`

Compatibility SCPI

A1 is treated as RRH1RFHD1 and sets the RF input to be the port labeled RF Tx/Rx 1 on Head 1

`:FEED:RF:PORT B1`

B1 is treated as RRH1RFHD2 and sets the RF input to be the port labeled RF Tx/Rx 2 on Head 1

`:FEED:RF:PORT IFIO2`

IFIO2 is treated as IFIN1, and sets the IF input to be the port labeled “DUT IF In/Out” on the CIU rear panel

Parameters for E7760B Wideband Transceiver

<port>	**Input**
`A`*n*	Bank A, Channel *n*, for example `A1`
`B`*n*	Bank B, Channel *n*, for example `B1`
`IFIO`*n*	IF In/Out for Channel *n*, for example `IFIO1`

Example

Set the RF input to `A1`:

`:FEED:RF:PORT A1`

Set the RF input to `B3`:

`:FEED:RF:PORT B3`

Set the RF input to `IFIO1`:

`:FEED:RF:PORT IFIO1`

Dependencies

Ports `A1`, `A2`, `A3`, `B1`, `B2`, and `B3` are available if Option RF3 is installed. Ports `IFIO1` and `IFIO2` are available if option RF2 is installed

Note that for E7760B:

- Attempting to select a port for which the option is not present will generate the error, -241, “Hardware missing; Input not available”
- A port cannot be selected as an Input while it is occupied as an Output. Sending such a command while the port is occupied generates error: -221, “Settings conflict; Input Port is not available while occupied by Output”
- The mmWave ports are divided into two banks; the A Bank and the B Bank. A port cannot be selected as an Input if any port on the same bank is occupied as an Output. Sending a command for this situation generates error: -221 “Settings conflict; Input Port is not available while port bank is occupied by Output”

If RF3 is present and RF4 is absent, a mmWave port cannot be selected as an Input if the Output Port is occupied by wwWave Transceiver with a different frequency range. Sending a command for this situation generates error: -221 “Settings conflict; Input Port is not available while occupied by Output of incompatible frequency”

Preset

E7760B with Option RF2: `IFIO1`

E7760B without Option RF2: the first port with mmWave Transceiver attached. If no mmWave Transceiver attached: `NONE`

Annotation

Annotation in the Meas Bar reads as follows:

- When input is A1: Input: A1
- When input is A2: Input: A2
- When input is A3: Input: A3
- When input is B1: Input: B2
- When input is B2: Input: B2
- When input is B3: Input: B3
- When input is IFIO1: Input: IFIO1
- When input is IFIO2: Input: IFIO2

Parameters for M8920A/20B Radio Test Set

<port>	Input
`ANT`	Ant
`TR`	T/R

Example

Set the RF input to be the Antenna port on M9470A, labeled **Ant**:

`:FEED:RF:PORT ANT`

Set the RF input to be the T/R port on M9470A and M8920A/20B, labeled **T/R**. Note that Option HDX is required to enable the T/R port:

`:FEED:RF:PORT TR`

Dependencies

`ANT` and `TR` are only available in modular analyzers, and only when the M9470A module is installed, such as in M8920A. Option HDX is required to enable the T/R port

Preset

`ANT`

Annotation

Annotation in the Meas Bar reads as follows:

- When input is Ant: Input: Ant
- When input is T/R: Input: T/R

Parameters for UXM Wireless Test Set

<port>	Input
`RFIN`	RF Input
`RFIO1`	RFIO 1
`RFIO2`	RFIO 2

Example

Set the RF input to RFIO 2:

`:FEED:RF:PORT RFIO2`

Preset

`RFIN`

6.2.3 SA Frequency Extender Firmware Update (Front Panel Only)

When a Frequency Extender device (for example, V3050A) is connected and selected, if a firmware update is available for that device, this control will be visible. Because the measurement will be stopped for the duration of the firmware update, and because the update cannot be un-done, a confirmation dialog will be presented before proceeding with the firmware update. The update can take some time, so while in process, a modal dialog will be shown indicating that the update is in process and warning not to disconnect the device or turn off power. Typically, the update will take about a minute, but time can vary with the model of the Frequency Extender. When complete, the modal dialog will be dismissed, and a pop-up message will be shown for a few seconds indicating the success or failure of the update.

See "Error Messages" on page 2593

Notes	Measurement is stopped while the update is in process
Dependencies	Not available unless an External RF device is connected, External RF is the selected RF Input Port, and there is a firmware update available for the device

Error Messages

Update Already in Process Error

If a firmware update is already in process, the following message is displayed:

```
Another external device FW update is already in process. Only one update is
allowed at a time
```

If received, wait until the current FW update is complete and then try again if still needed.

Unknown Assembly Error

When updating the firmware, the target hardware assembly needs to be identified. If for some reason the assembly cannot be identified, the firmware will not be able to initiate the update, and this error message will be displayed:

```
Error updating FW for external device model <model number>' serial number
<serial number>
```

```
Could not find HW assembly, cannot perform FW update
```

The `<model number>` and `<serial number>` contain the actual numbers for the device.

This is a failure that warrants investigation, so you should contact Keysight Customer Support for service.

Error During Firmware Update Process

If there is an execution problem during the FW update, the specific error message(s) is written to the SA Event Log and this error message is displayed:

`Error updating FW for external device model <model number>' serial number <serial number>`

`Error during FW update. See windows event log for more details`

The `<model number>` and `<serial number>` contain the actual numbers for the device.

6.2.4 SA Frequency Extender Cable Correction

An SA Frequency Extender, such as V3050A, is attached to the instrument with several cables. Keysight provides several cables for purchase with the frequency extender. Typically, these are 1-, 2-, or 3-meter cables for the RF and IF connections. Keysight has characterized these cables and can correct for their loss. This control allows you to specify which cable is being used.

If you are using another type of cable, the instrument *cannot* automatically correct for it, so this function must be set to `OFF`. In this case, you can use RCal to characterize the corrections.

Remote Command	`:INPut:FEXTender:CABLe:CORRection OFF | V3050A1M | V3050A2M | V3050A3M`
Example	`:INP:FEXT:CABL:CORR V3050A1M`
Notes	The RF Input Port selections that support an SA Frequency Extender (such as V3050A) are: N9042B: External RF No other instruments support an SA Frequency Extender
Dependencies	An SA Frequency Extender must be attached, and the frequency extender’s port must be the selected input for this control to be visible – If the instrument does not support frequency extenders, the SCPI command returns error -241, “Hardware missing; option not available” – If the instrument does support frequency extenders, but a frequency extender is not attached, the SCPI command returns error -241, “Hardware missing; Cable selection only available when supporting frequency extender attached” When a frequency extender is attached, the control is not visible unless the frequency extender’s port is the selected RF input, but the command will still be available. Setting the cable selection when the frequency extender’s port is not active has no effect until the port is selected
Preset	Unaffected by **Mode Preset** but set to preset value by **Restore Input/Output Defaults** or **Restore System Defaults -> All**
State Saved	Saved in instrument state

6.2.5 Half Duplex Input Port

Specify whether `RFIO3` or `RFIO4` is the Half Duplex Input port.

Remote Command	`[:SENSe]:HDUPlex:PORT:INPut RFIO3 | RFIO4`
Example	`:HDUPlex:PORT:INPut RFIO3` `:HDUPlex:PORT:INPut?`
Dependencies	Only appears in EXM If `RFIO3` is selected as "Half Duplex Output Port", then "Half Duplex Input Port" will be set to `RFIO4` automatically. If `RFIO4` is selected as "Half Duplex Output Port", then "Half Duplex Input Port" will be set to `RFIO3` automatically
Preset	`RFIO3`
State Saved	Saved in State

6.2.6 Port Information (Remote Command Only)

Provides information about an instrument port. The return information consists of two comma-separated fields:

- Field 1: the connection status (0 or 1)
- Field 2: a string of port information

The return information is device-dependent.

Remote Command	`[:SENSe]:FEED[:RF]:PORT:INFormation? RFIN | RFIN2 | RFFD | RFHD | A1 | A2 | A3 | B1 | B2 | B3 | IFIO1 | IFIO2 | ANT | TR`
Example	`:FEED:PORT:INF? A1` example = `1,"US56160060"` where `1` is the connection status and `"US56160060"` is the port information
Notes	For E7760B: The connection status (first field in the return value) indicates: 0 – the port is either not licensed for use or is not connected to a mmWave Transceiver 1 – the port is licensed; and for the case of mmWave ports, the port is connected to a mmWave Transceiver The port information (second field in the return value) contains: "" (empty string) – no applicable information Serial Number – the serial number of the connected mmWave Transceiver If you send an incompatible parameter, the return values are: 0,""
Dependencies	Only valid for E7760B

6.2.7 RF Preselector

In models that support the RF Preselector, such as PXE (N9048B), allows you to turn the preselector on or off.

NOTE When using the RF Preselector, if your measurement starts below 3.6 GHz and finishes above 3.6 GHz, the preselector bypass switch will have to switch in and out for every measurement. When this is the case, you will hear a clicking sound from the instrument and a warning message will be displayed: “Settings Alert: Mechanical switch cycling”. You are advised to *avoid* such setups as much as possible, to minimize switch wear. Pressing **Mode Preset** resets Stop Freq to 3.6 GHz, to exit this state, or you can manually set Stop Freq to be below 3.6 GHz.

Remote Command	`[:SENSe]:POWer[:RF]:RFPSelector[:STATe] 1 | 0 | ON | OFF` `[:SENSe]:POWer[:RF]:RFPSelector[:STATe]?`
Example	`:POW:RFPS 1` `:INP:PRES:STAT ON`

Notes	Set full compliance measurement:
	`[:SENSe]:POWer[:RF]:RFPSelector[:STATe] 1 | ON`
	Set pre-compliance measurement:
	`[:SENSe]:POWer[:RF]:RFPSelector[:STATe] 0 | OFF`

Dependencies	Only appears when RF Input is selected as the Input Only appears in MXE and PXE The RF Preselector is not available in all measurements. The key is grayed out in measurements that do not support it, unless you are in a Mode in which no measurements support it, in which case the key does not appear at all. If the preselector is unavailable, it is forced to Off. Attempting to turn it on or off in measurements that do not support it generates the error message: -221, Settings conflict; Feature not supported for this measurement The RF Preselector is not available when FFT Sweep Type is manually selected. Attempting to turn it on or off when this is the case generates an error message: -221, Settings conflict; RF Presel unavailable when Sweep Type=Manual FFT Only appears in Modes that support the RF Preselector, in other Modes, sending the SCPI command or query generates an error In Frequency Scan measurement, this key is grayed-out when final measurement is running. Warning message “Function not available while measurement is running” appears if the grayed-out key is pressed
Preset	`ON`
Annotation	When RF Preselector=On, “RF PRESEL” is displayed on the Settings Panel

Backwards Compatibility SCPI	`:INPut<1|2>:PRESelection[:STATe] ON | OFF`
	`:INPut<1|2>:PRESelection[:STATe]?`
	Included for R&S ESU compatibility

6.2.8 Notch Filter

In some models that support the RF Preselector, such as PXE, there is also a notch filter to suppress signals in the frequency band from 2.4 GHz to 2.5 GHz. This control allows you to turn the notch filter on or off.

Remote Command	`[:SENSe]:POWer[:RF]:RFPSelector:NFILter[:STATe] OFF | ON | 0 | 1` `[:SENSe]:POWer[:RF]:RFPSelector:NFILter[:STATe]?`
Example	`:POW:RFPS:NFIL 1` `:POW:RFPS:NFIL?`
Dependencies	Only appears when RF Input is selected as the Input Only appears in models that support the notch filter, such as PXE. Attempting to turn it on or off via SCPI in models that do not support it generates error message: -241 Hardware missing; Not available for this model number Only appears in measurements that support the Notch Filter, such as EMI Receiver measurements. Attempting to turn it on or off via SCPI in measurements that do not support it generates error message: -221, Settings conflict; Feature not supported for this measurement In Frequency Scan measurement, this control is grayed-out when final measurement is running, aligned with the **RF Preselector** key. The warning message “Function not available while measurement is running” appears if the grayed-out control is pressed
Preset	`OFF`
State Saved	Saved in instrument state
Range	`OFF|ON`
Annotation	Due to limited space in the Measurement Bar, Notch Filter annotation is shown as part of the RF Presel state – `RF Presel: On, NF`, when both RF Presel and Notch Filter are turned on – `RF Presel: On`, when RF Presel = on and Notch Filter= off – `RF Presel: Off`, when RF Presel = off
Backwards Compatibility SCPI	`:INPut<1|2>:PRESelection:FILTer:NOTCh[:STATe] ON | OFF` `:INPut<1|2>:PRESelection:FILTer:NOTCh[:STATe]?`

6.2.9 RF Calibrator

Lets you choose a calibrator signal to look at or turns the calibrator off.

Remote Command	`[:SENSe]:FEED:AREFerence REF50 | REF4800 | OFF` `[:SENSe]:FEED:AREFerence?`
Example	Select the 50 MHz amplitude reference as the signal input: `:FEED:AREF REF50`

	Select the 4.8 GHz amplitude reference as the signal input:
	`:FEED:AREF REF4800`
	Turn the calibrator "off" (switches back to the selected input - RF or I/Q):
	`:FEED:AREF OFF`

Dependencies	Only appears when RF Input is selected as the Input Selecting an input (RF, Ext Mix or I/Q) turns the Calibrator `OFF`. This is true whether the input is selected using the menu panel or `[:SENSe]:FEED` The 4.8 GHz internal reference is only available in some models and frequency range options. If the 4.8 GHz reference is not present, the **4.8 GHz** choice does not show, and if the REF4800 parameter is sent, the instrument generates an error
Couplings	When one of the calibrator signals is selected, the instrument routes that signal (an internal amplitude reference) to the instrument, and changes the main input selection to RF so the calibrator signal can be seen. When you turn the calibrator off it does not switch back to the previously selected input
Preset	`OFF`
State Saved	Saved in instrument state
Annunciation	An advisory message is sent, indicating that the input is set to internal

Backwards Compatibility SCPI

Notes	For ESA backwards compatibility In the ESA the calibrator was a separate output which you connected to the input and switched on with this command In X-Series, the `ON` parameter is aliased to `[:SENSe]:FEED:AREF REF50` and the `OFF` parameter is aliased to `[:SENSe]:FEED:AREF OFF` When `:CALibration:SOURce:STATe?` is received, 1 is returned if any of the references is selected, or 0 if the Calibrator is `OFF`
Preset	`OFF`
Backwards Compatibility SCPI	`:CALibration:SOURce:STATe OFF | ON | 0 | 1` `:CALibration:SOURce:STATe?`

6.2.10 RF Coupling

Specifies alternating current (AC) or direct current (DC) coupling at the instrument RF input port. Selecting AC coupling switches in a blocking capacitor that blocks any DC voltage present at the instrument input. This decreases the input frequency range of the instrument, but prevents damage to the input circuitry of the instrument if there is a DC voltage present at the RF input.

NOTE **When operating in DC coupled mode, ensure protection of the instrument input circuitry by limiting the DC part of the input level to within 200 mV of 0 Vdc. In AC or DC coupling, limit the input RF power to +30 dBm (1 Watt).**

Remote Command	`:INPut:COUPling AC | DC` `:INPut:COUPling?`
Example	`:INP:COUP DC`
Dependencies	Only appears when RF Input is selected as the Input Does not appear in models that are always AC coupled. When the SCPI command to set DC coupling is sent to these models, it generates the error “Illegal parameter value; This model is always AC coupled” In these models, `:INP:COUP?` always returns `AC` Does not appear in models that are always DC coupled. When the SCPI command to set AC coupling is sent to these models, it generates the error “Illegal parameter value; This instrument is always DC coupled” In these models, `:INP:COUP?` always returns `DC`
Preset	`AC` on models that support AC coupling On models that are always DC coupled, such as millimeter wave models (frequency ranges 30 GHz and above), the preset is `DC`
State Saved	Saved in instrument state
Annunciation	When the RF Input is selected, and AC coupling is selected, annunciators appear in the Meas Bar to that effect:  Input: RF Coupling: AC appears in the settings panel (the row of annunciators across the top of the display) to that effect, as shown below: When the RF Input is selected, and DC coupling is in effect, the annunciator changes as shown below:  Input: RF Coupling: DC Note the amber color, which indicates that you should exercise caution when applying a signal to any DC coupled input (see note above this table for the specific cautions) On models that support both AC and DC coupling: when DC coupling is selected, a warning condition message appears in the status line "DC coupled" as shown below:  1 DC Coupled On models that support both AC and DC coupling: when AC coupling is selected, and any part of the displayed frequency range is below 10 MHz, a warning condition message appears in the status line: "AC: Accy unspec’d below 10 MHz"

In AC coupling mode, you can view signals below the corner frequency of the DC block, but below a certain frequency the amplitude accuracy is not specified.

The lowest frequency for which specifications apply is:

X-Series Model	Lowest Freq for meeting specs when AC coupled	Lowest Freq for meeting specs when DC coupled
CXA-503/507	100 kHz	n/a

X-Series Model	Lowest Freq for meeting specs when AC coupled	Lowest Freq for meeting specs when DC coupled
CXA-C75 Input 2	1 MHz	n/a
CXA-513/526	10 MHz	9 kHz
CXA-m	10 MHz	9 kHz
EXA	10 MHz	9 kHz
MXA	10 MHz	20 Hz
PXA	10 MHz	3 Hz
UXA	10 MHz	3 Hz

Some amplitude specifications apply only when coupling is set to DC. Refer to the appropriate amplitude specifications and characteristics for your instrument.

6.2.11 Input Z Correction

Sets the input impedance for unit conversions. This affects the results when the y-axis unit is voltage or current units (dBmV, dBµV, dBµA, V, A), but not when it is power units (dBm, W). The impedance you select is for computational purposes only, since the actual impedance is set by internal hardware to 50 ohms. Setting the computational input impedance to 75 ohms is useful when using a 75 ohm to 50-ohm adapter to measure a 75-ohm device on an instrument with a 50-ohm input impedance.

There are a variety way to make 50-to-75-ohm transitions, such as impedance transformers or minimum loss pads. The choice of the solution that is best for your measurement situation requires balancing the amount of loss that you can tolerate with the amount of measurement frequency range that you need. If you are using one of these pads/adaptors with the **Input Z Corr** function, you might also want to use the **Ext Gain** key. This function is used to set a correction value to compensate for the gain (loss) through your pad. This correction factor is applied to the displayed measurement values.

Remote Command	`[:SENSe]:CORRection:IMPedance[:INPut][:MAGNitude] 50 | 75` `[:SENSe]:CORRection:IMPedance[:INPut][:MAGNitude]?`
Example	Set the input impedance correction to 75 ohms: `:CORR:IMP 75`
Couplings	In CXA option C75, when RF Input 2 is selected, the Input Z Correction automatically changes to 75 ohms. You may then change it to whatever is desired. When the main RF Input is selected, the Input Z Correction automatically changes to 50 ohms. You may then change it to whatever is desired
Preset	Unaffected by Preset, but set to 50 ohms by **Restore Input/Output Defaults** or **Restore System Defaults->All** Some instruments/options may have 75 ohms available
State Saved	Saved in instrument state

6.2.12 All Screens Use Same Input

If `ON`, then all Screens share the same Input settings. This is the default state.

If `OFF`, then certain settings are allowed to be local to each Screen, meaning one Screen can have them set one way and another can have them set another way.

The Input settings that become local to each Screen when **All Screens Use Same Input** is `OFF` are:

Input Tab:

- Selected Input (RF, Ext Mix, BBIQ)
- RF Input Port (only appears in instruments with multiple RF ports, such as N9041B, MXE, and CXA)
- RF Coupling (AC/DC)
- Input Z Correction

External Gain Tab:

- External Preamp
- MS
- BTS

Corrections Tab:

- For each Correction, whether it is on or off

Note that if **All Screens Use Same Input** is `OFF` and you press the **+** control to create a new Screen, the new Screen contains a copy of the old Screen's state, including all its Input/Output variables.

Remote Command	`:INSTrument:COUPle:SCReen:INPut ON | OFF | 1 | 0` `:INSTrument:COUPle:SCReen:INPut?`
Example	`:INST:COUP:SCR:INP OFF`
Preset	`ON` Not affected by **Input/Output Preset**, but set to `ON` by **Restore Input/Output Defaults**

6.2.13 External Mixer Setup

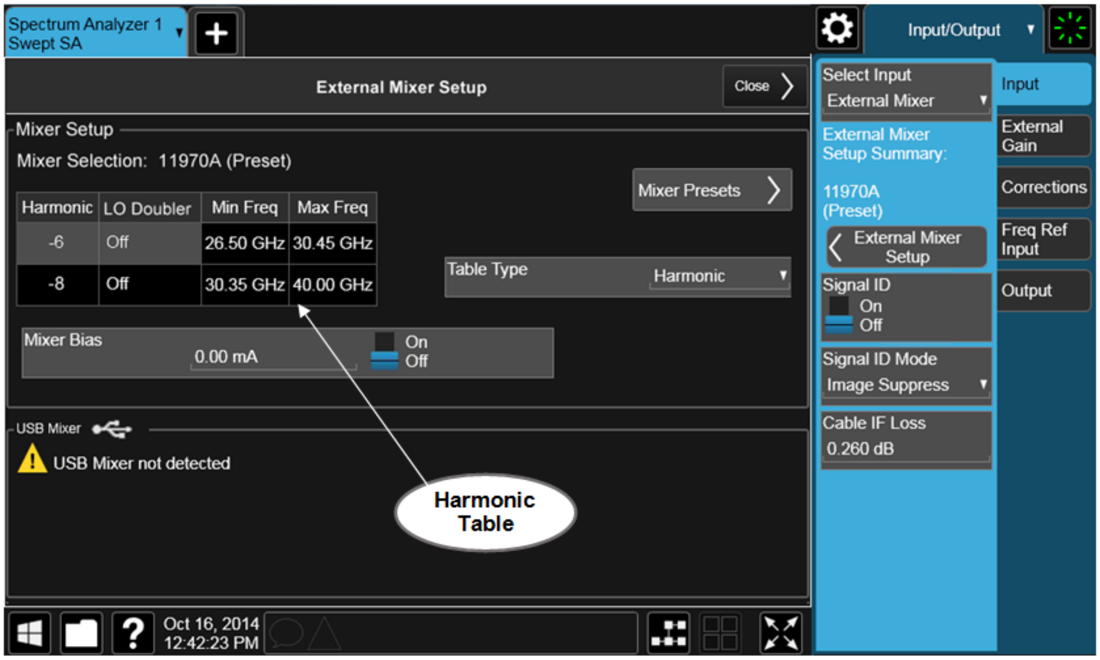
Lets you select the mixer type, and lets you configure your mixer (if necessary). The first page of the dialog shows you the current settings for the selected mixer. These settings may be dependent on which IF path is currently in use, whether a + or – harmonic is currently selected, etc.

To apply any amplitude correction factors needed to correct mixer flatness, you enter values into one of the Correction tables (under **Input/Output**, **Corrections**). The correction conversion loss values can be extracted from data supplied with the mixer or from manual measurements you make to determine the conversion loss. Note that the correction applied by the Correction tables is global to the instrument; therefore, you should make sure to turn off the External Mixer corrections when you are not using the External Mixer input.

NOTE Keysight USB Mixers automatically supply their flatness data to the instrument, and the correction is applied internally. No correction needs be entered, and the correction does not appear in the user-accessible Corrections tables. You are free to enter additional corrections into the Correction tables under **Input/Output**, **Corrections**.

Notes	The setup summary on the menu panel appears just above this control, showing the current external mixer setup
Dependencies	Only appears when External Mixer is selected as the Input
State Saved	All settings in the External Mixer Setup dialog are part of the Input/Output system, and hence are saved whenever State is saved

The **External Mixer Setup** screen looks like this:



Mixer Setup

Mixer Selection: 11970A (Preset)

Harmonic	LO Doubler	Min Freq	Max Freq
-6	Off	26.50 GHz	30.45 GHz
-8	Off	30.35 GHz	40.00 GHz

Table Type: Harmonic

Mixer Bias: 0.00 mA, On / Off (Off)

USB Mixer

USB Mixer not detected

Select Input: External Mixer

External Mixer Setup Summary: 11970A (Preset)

Signal ID: On / Off (Off)

Signal ID Mode: Image Suppress

Cable IF Loss: 0.260 dB

Oct 16, 2014 12:42:23 PM

The current Mixer selection (the current or most recently connected USB Mixer, or the most recent Mixer Preset, or **Custom** if you have modified the setup) reads out at the top of this screen as **Mixer Selection**

The Harmonic Table currently being used reads out below the Mixer Selection. It shows each range being used for the current mixer. Note that a band may be made up of up to 3 ranges. Each range represents a choice of mixer harmonic and doubler state. When you select a Mixer Preset, it sets the instrument Start and Stop frequency to the values shown in the Harmonic Table; Start Freq is set to the Min Freq for the bottom range, and Stop Freq is set to the Max Freq for the top range. In many cases you can exceed these nominal values; the absolute maximum and minimum frequency for each preset are shown in the tables that accompany the control descriptions for the Mixer Presets.

NOTE

If the current measurement has a limited Span available to it and cannot achieve the Span shown in the table (Span = Stop Freq - Start Freq), the instrument uses the maximum Span the measurement allows, and sets **Center Frequency** to the midpoint of the Start and Stop Freq values in the Harmonic Table.

You may edit some of the Harmonic and LO Doubler fields in the Harmonic Table, as shown by the gray backgrounds of these fields. When you edit the Harmonic Table, the Mixer Selection changes to **Custom**. To change it back you must go back into the Mixer Presets menu and select a Preset.

When you edit the Harmonic Table, the nominal Min Freq and Max Freq that are available will usually be different than the Preset you were using; and the absolute frequency limits will change as well. This may result in a change to your Start and/or Stop Freq, if the current values fall outside the new range, requiring you to retune your Center Freq to get your signal back in the center.

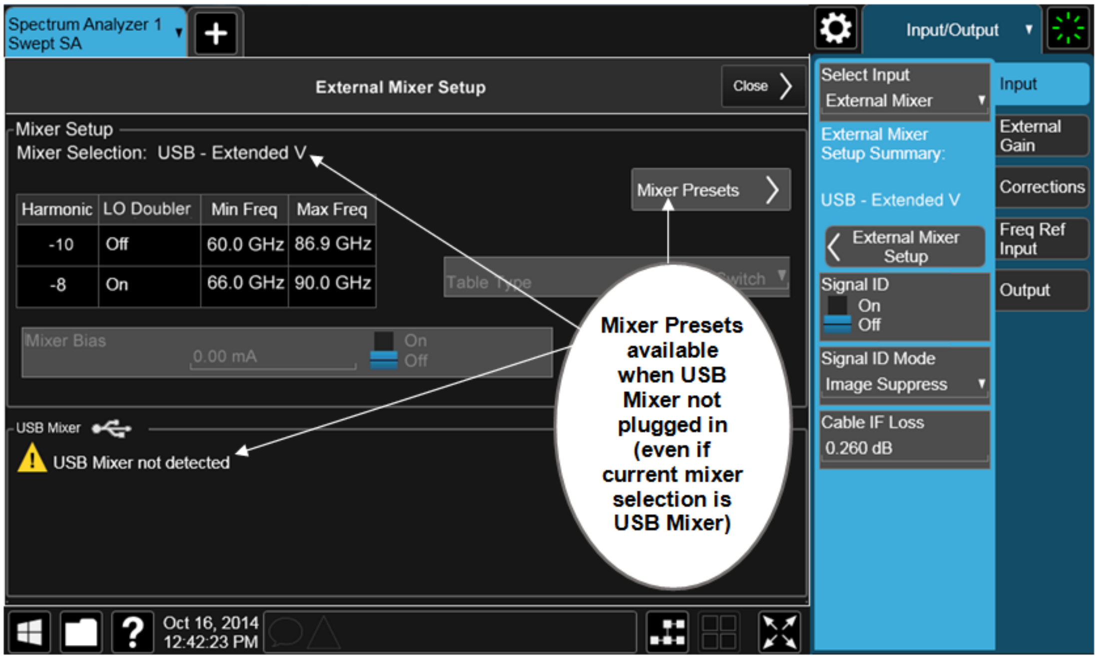
The instrument supports the Keysight M1970 Series Harmonic Mixers with USB connection. While in External Mixing, if one of these mixers is plugged in to a USB port, it is automatically detected and displayed in the “USB Mixer” area of the setup screen, including its model number and serial number.

The instrument assumes that if you plug a mixer into the USB you want to use that mixer, so:

1. If a USB mixer is connected to the USB port, the Mixer Presets button is grayed-out, as none of the presets make sense with a USB Mixer connected. Note that once the instrument has acquired the USB Mixer, the mixer selection will remain if it is subsequently unplugged from the USB, allowing you to plug it back in with no change to your settings. However, once you unplug it, the Mixer Presets control ceases to be grayed-out, allowing you to preset to a different mixer
2. When Restore Input/Output Defaults is performed, if a Keysight USB Mixer is plugged into the instrument’s USB port, the Mixer Selection remains unchanged

3. When recalling an instrument state, if a Keysight USB Mixer is plugged into the instrument’s USB port, and the Mixer Selection in the recalled state is for a USB Mixer that does not match the mixer currently plugged in, you will have to unplug your mixer and then plug it back in to get the instrument to recognize your mixer

As long as the selection in Ext Mixer Setup shows one of the USB mixers, the **Mixer Bias** control is grayed-out and the Harmonic Table is no longer editable, as shown by the fact that the fields in the Harmonic Table are now black and the **Table Type** control is grayed-out.



Mixer Setup
Mixer Selection: USB - Extended V

Harmonic	LO Doubler	Min Freq	Max Freq
-10	Off	60.0 GHz	86.9 GHz
-8	On	66.0 GHz	90.0 GHz

Mixer Bias 0.00 mA On Off

USB Mixer not detected

Mixer Presets available when USB Mixer not plugged in (even if current mixer selection is USB Mixer)

Only one USB Mixer is supported at a time. To switch to a different USB Mixer, disconnect the one that is no longer being used prior to connecting a new one.

The **Mixer Selection** displayed and menu panel readback for the Keysight M1970 series mixers is:

Mixer Model	Mixer Selection display on Setup Screen	Readback
Keysight M1970E: Option 001: 60 to 90 GHz Waveguide Harmonic Mixer	**USB - M1970E-001 E-Band**	USB Mixer E-Band
Keysight M1971E: Option 001: 60 to 90 GHz Waveguide Harmonic Mixer	**USB - M1971E-001 E-Band**	USB Mixer E-Band
Keysight M1971E: Option 003: 55 to 90	**USB - M1971E-003 Extended E-Band**	USB Mixer

Mixer Model	Mixer Selection display on Setup Screen	Readback
GHz Waveguide Harmonic Mixer		Extended E
Keysight M1971V: Option 001: 50 to 75 GHz Waveguide Harmonic Mixer	**USB - M1971E-001 V-Band**	USB Mixer V-Band
Keysight M1971W: Option 001:75 to 110 GHz Waveguide Harmonic Mixer	**USB - M1971E-001 W-Band**	USB Mixer W-Band
Keysight M1970V Option 001: 50 to 75 GHz Waveguide Harmonic Mixer	**USB - M1970V-001 V-Band**	USB Mixer V-Band
Keysight M1970V Option 002: 50 to 80 GHz Waveguide Harmonic Mixer	**USB - M1970V-002 Extended V-Band**	USB Mixer Extended V
Keysight M1970W Option 001: 75 to 110 GHz Waveguide Harmonic Mixer	**USB - M1970W-001 W-Band**	USB Mixer W-Band

The Keysight USB mixer essentially acts as a “remote front end” and is fully calibrated over the specified frequency range, without requiring any user interaction. This is particularly useful at high mm-wave frequencies, where cable loss is typically quite large, and it is desirable to bring the front end right up to the device under test, rather than bringing the mm-wave signal to the instrument using a lossy and uncalibrated cable or waveguide connection.

Connecting the mixer to the USB port on the instrument switches you to External Mixing, aborts the current measurement, and initiates an alignment of the mixer. A popup message, “USB Mixer connected” appears on the display. When a USB mixer and the LO/IF cable are connected the alignment is performed. When the alignment begins, an “Aligning” popup replaces the previous message on the display. When the alignment completes, the current measurement restarts.

6.2.13.1 Mixer Presets

Presets the mixer setup for the particular type of mixer that you are using.

These presets are divided into four groups:

- One for legacy HP/Agilent/Keysight mixers (11970)
- Three for general purpose mixers:

- presets that use a single harmonic and no doubling
- presets that use a single harmonic but double the LO
- presets that use multiple harmonics

Note that the IF/LO port provides a 3.8-14 GHz LO in two bands: 3.8-8.7 (LO fundamental), and 8.6-14 GHz (doubled LO).

In most cases, once you have executed the preset, you will not need to adjust any further settings.

Remote Command	`[:SENSe]:MIXer:BAND A | Q | U | V | W | NA | ND | NE | NF | NG | NJ | NK | NQ | NU | NV | NW | NY | NEXT | DD | DF | DG | DJ | DK | DQ | DV | DW | DY | DEXT | MA | ME | MU | MCOAX | USB | VDIWR6PT5M4` `[:SENSe]:MIXer:BAND?`
Example	`:MIX:BAND A` `:MIX:BAND?`
Notes	`A|Q|U|V|W` select HP/Agilent/Keysight 11970 mixer presets `NA|ND|NE|NF|NG|NJ|NK|NQ|NU|NV|NW|NY|NEXT` select single harmonic, non-doubled LO presets `DD|DF|DG|DJ|DK|DQ|DV|DW|DY|DEXT` select single harmonic, doubled LO presets `MA|ME|MU|MCOAX` select multiple harmonic presets VDIWR6PT5M4 selects presets for the VDI WR6.5CCD-M4 external mixer (a Compact Down-Converter in the Keysight N9029ACST Series) `VDIWR6PT5M4` requires Model N9042B with the EXW option. To use this selection, you must connect cables from the external mixer to the High LO Out and High IF In ports (not the Ext Mixer port) of the N9042B All these presets are detailed in their respective control descriptions The query returns the most recent preset, *unless* the harmonic table has been edited after the preset was executed. If the harmonic table has been edited, returns `CUSTOM` The command `USB` refreshes the USB mixer connection and automatically detects the mixer band. The query returns the following if a Keysight USB Mixer is plugged into the instrument's USB port:

`USBE`	Keysight E-Band USB Mixer
`USBV`	Keysight V-Band USB Mixer
`USBVEXT`	Keysight Extended V-Band USB Mixer
`USBW`	Keysight W-Band USB Mixer

Note that the parameters `CUSTOM`, `USBV`, `USBVEXT`, and `USBW` are query responses only, and cannot be sent *to* the instrument

The following cross-reference matches the mixer band designators used by Keysight to the EIA waveguide designations:

EIA	Keysight	Freq Range
WR-28	A	26.5 - 40 GHz
WR-22	Q	33 - 50 GHz
WR-19	U	40 - 60 GHz
WR-15	V	50 - 75 GHz
WR-12	E	60 - 90 GHz
WR-10	W	75 - 110 GHz
WR-8	F	90 - 140 GHz
WR-6	D	110 - 170 GHz
WR-5	G	140 - 220 GHz
WR-3	J	220 - 325 GHz

Preset	When **Restore Input/Output Defaults** is performed, an "A" mixer preset is also issued (11970A band), unless a Keysight USB Mixer is plugged into the instrument's USB port, in which case the Mixer Selection remains unchanged When using Keysight USB Mixers, if **Restore All Defaults** (`:SYSTem:DEFault`) has been performed, either remove and reinsert the USB cable or press the **Refresh USB Mixer Connection** control

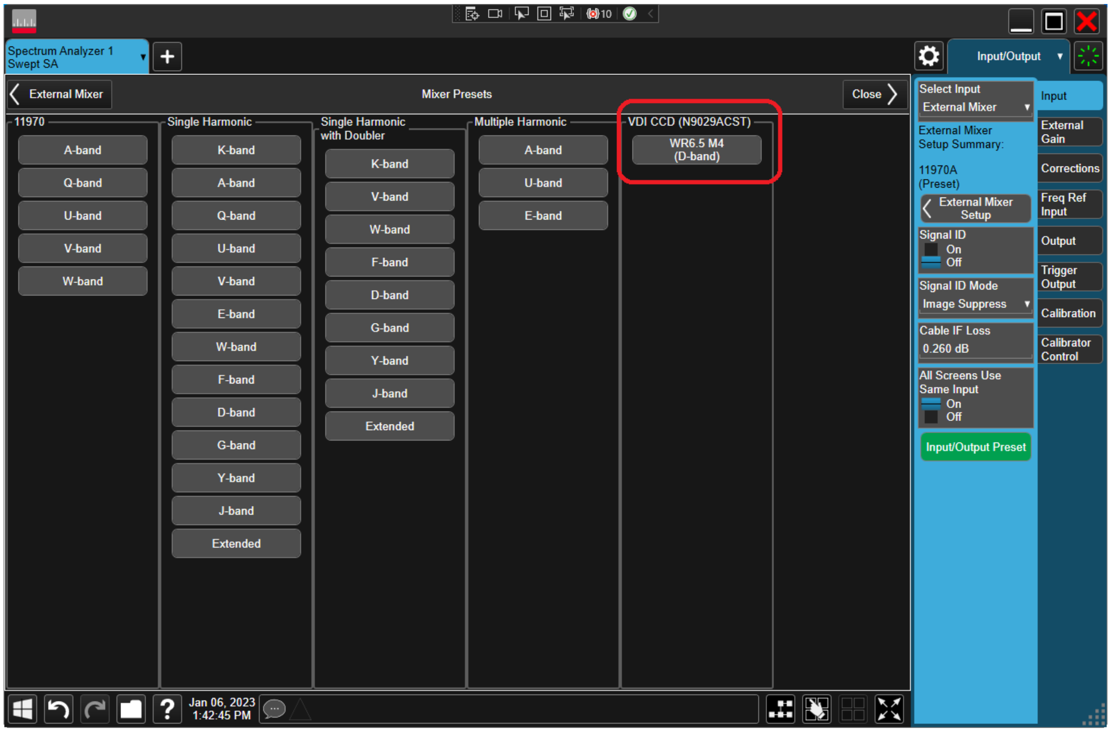
VDI CCD (N9029)

These presets select a setup that uses a single harmonic and no LO doubling.

This setup is used with an external mixer in the series VDI CCD (N9029ACST). The currently supported example is the D-band mixer VDI WR6.5CCD-M4.

Mixer	Readout on setup dialog and menu panel	Harm #	RF start	RF stop	RF center
WR6.5 M4 (D-band)	**VDI WR6.5CCD-M4**	-4	110	170	140

This mixer setup is enabled only for model N9042B with the EXW option You must connect cables from this external mixer to the High LO Out and High IF In ports (not the Ext Mixer port) of the N9042B, as illustrated below:



Select Input: External Mixer

External Mixer Setup Summary: 11970A (Preset)

Signal ID: On [✓ Off]

Signal ID Mode: Image Suppress

Cable IF Loss: 0.260 dB

All Screens Use Same Input: [✓ On] Off

11970

Lets you preset for a model in the HP/Agilent/Keysight 11970 series.

Because the X-Series has an LO range of 3.8 - 14 GHz, and older analyzers had an LO range of 3.0 - 6.8 GHz, the harmonic numbers used in the X-Series may differ from those used on older analyzers for the same mixers. Additionally, some of the 11970 mixers cannot be operated over their full range with the X-Series without switching harmonics. Consequently, you will find that some of the bands (A-Band, for example) are broken into two ranges for use with the X-Series.

Below are the 11970A presets. The 11970U and the 11970W use a single harmonic. The other three switch harmonics mid-band. Both harmonic ranges are shown in the table. None of these mixers use LO doubling.

The 11970 K-band mixer and the 11974 preselected mixer series are not supported.

Preset	Readout on setup dialog and menu panel	Range	Harm #	RF start	RF stop	RF center
A-band	11970A	1	-6	26.5	30.45	28.475
		2	-8	30.35	40	35.175
Q-band	11970Q	1	-8	33	40.8	36.9
		2	-10	39.8	50	44.9
U-band	11970U	..	-10	40	60	50
V-band	11970V	1	-12	50	66	58
		2	-14	53	75	64
W-band	11970W	..	-18	75	110	92.5

Single Harmonic

These presets select a setup that uses a single harmonic and no doubling for the LO.

Mixer	Readout on setup dialog and menu panel	Harm #	RF start	RF stop	RF center
K-band	K-band Single Harmonic, no doubler	-4	18	26.5	22.25
A-band	A-band Single Harmonic, no doubler	-6	26.5	40	33.25
D-band	D-band Single Harmonic, no doubler	-20	110	170	140
E-band	E-band Single Harmonic, no doubler	-12	60	90	75
F-band	F-band Single Harmonic, no doubler	-18	90	140	115
Q-band	Q-band Single Harmonic, no doubler	-6	33	50	41.5
U-band	U-band Single Harmonic, no doubler	-8	40	60	50
V-band	V-band Single Harmonic, no doubler	-10	50	75	62.5
W-band	W-band Single Harmonic, no doubler	-14	75	110	92.5
G-band	G-band Single Harmonic, no doubler	-26	140	220	180
Y-band	Y-band Single Harmonic, no doubler	-30	170	260	215
J -band	J-band Single Harmonic, no doubler	-38	220	325	272.5
Extended	Extended Single Harmonic, no doubler	-40	155	345	250

Single Harmonic with doubler

These presets select a setup that uses a single harmonic and doubling for the LO.

Mixer	Readout on setup dialog and menu panel	Harm #	RF start	RF stop	RF center
D-band	D-band Single Harmonic w/doubler	-14	110	170	140
F-band	F-band Single Harmonic w/doubler	-10	90	140	115
G-band	G-band Single Harmonic w/doubler	-16	140	220	180
J-band	J-band Single Harmonic w/doubler	-24	220	325	272.5
K-band	K-band Single Harmonic w/doubler	-2	18	26.5	22.25
Q-band	Q-band Single Harmonic w/doubler	-4	33	50	41.5
V-band	V-band Single Harmonic w/doubler	-6	50	75	62.5
W-band	W-band Single Harmonic w/doubler	-8	75	110	92.5
Y-band	Y-band Single Harmonic w/doubler	-20	170	260	215
Extended	Extended Single Harmonic w/doubler	-28	245	390	317.5

Multiple Harmonics

These presets select a setup that uses multiple harmonics and may or may not use doubling for the LO.

Mixer	Readout on setup dialog and menu panel	Range	Harm #	Dblr?	RF start	RF stop	RF Center
A-band	A-band Multiple Harmonic	1	-4	N	26.5	34.1	30.3
		2	-4	Y	33.1	40	36.55
E-band	E-band Multiple Harmonic	1	-6	Y	60	83	71.5
		2	-8	Y	65	90	77.5
U-band	U-band Multiple Harmonic	1	-6	N	40	51.5	45.75
		2	-6	Y	49.5	60	54.75
Coaxial	Coaxial Multiple Harmonic	1	-4	N	26.5	34	30.25
		2	-4	Y	32.5	55	43.75
		3	-6	Y	50	70	60

6.2.13.2 Mixer Bias

Adjusts an internal bias source for use with external mixers. The bias signal is present on the center conductor of the IF input connector on the front panel. The shunt current range is from -10 mA to 10 mA, and it can be set whether Mixer Bias state is On or Off, but it will only be applied if it is On.

The bias remains as set if you switch to another input (for example, the RF Input).

Remote Command	`[:SENSe]:MIXer:BIAS <real>` `[:SENSe]:MIXer:BIAS?`

Example	`:MIX:BIAS 0` `:MIX:BIAS?`
Preset	Unaffected by Preset, but set to `OFF` (0) by **Restore Input/Output Defaults**
State Saved	Saved in instrument state
Min	-10 mA
Max	10 mA
Annunciation	When the bias is turned on this (together with the bias polarity) is indicated in the Meas Bar with a plus or minus sign:  Mixer Bias + otherwise, it reads “Off”

Auto Function

Remote Command	`[:SENSe]:MIXer:BIAS:STATe OFF | ON | 0 | 1` `[:SENSe]:MIXer:BIAS:STATe?`
Example	`:MIX:BIAS:STAT 0` `:MIX:BIAS:STAT?`
Preset	`OFF`

6.2.13.3 Table Type

Determines the Custom Mixer configuration type. You can choose: Single Row, Harmonic Switching, or Doubler Switching. For details, see "Available Types" on page 2611.

The Harmonic Table can be configured as:

- A single row (meaning only one harmonic number is used and the LO Doubler is either on or off)
- Two rows where the harmonic number switches between the first row and the second
- Two rows where the LO Doubler state switches between the first row and the second

Available Types

Table Type	Behavior
Single Row	The External Mixer always stays in the same Harmonic Number and the LO Doubler is either on or off and does not change state during a sweep. You may change the Harmonic Number and you may change the state of the Doubler
Harmonic	The External Mixer switches the Harmonic Number in the middle of the sweep. The LO Doubler may be on

Table Type	Behavior
Switching	or off, but it is the same for both Harmonic Numbers. You can set the initial Harmonic Number, and when it switches it decrements by two when the harmonic is negative and increments by two when the harmonic is positive For example, if you set the initial number to -6, when it switches it will go to -8. If you set the harmonic number to 8, when it switches it will go to 10
Doubler Switching	The External Mixer switches the doubler from Off to On in the middle of the sweep. You can set the Harmonic Number, but it stays the same for the Doubler Off state as for the Doubler On state. The LO Doubler control is grayed-out in this table type

Editable Fields

Table Type	Fields you can edit
Single Row	Harmonic and LO Doubler cells
Harmonic Switching	Harmonic and LO Doubler cells (only the first row)
Doubler Switching	Harmonics cell (only the first row)

Note that you cannot add or delete rows from the table; you can only modify the rows that are already there.

Remote Command	`[:SENSe]:MIXer:TTYPe SINGle | HARMonic | DOUBler` `[:SENSe]:MIXer:TTYPE?`
Example	`:MIX:TTYP SING`
Couplings	When you change the Table Type, the Mixer Selection changes to **Custom**
Preset	Depends on the current Mixer Preset. Unaffected by **Mode Preset**, but **Restore Input/Output Defaults** presets the Mixer to 11970A, for which the Table Type is Harmonic Switching
State Saved	Saved in instrument state

6.2.13.4 Select VDI CCD Correction

Selects the appropriate VDI CCD Correction data by mixer Serial Number.

Remote Command	`[:SENSe]:VCORrection:SELect NONE | <serialNumber>` `[:SENSe]:VCORrection:SELect?`
Example	`:VCOR:SEL NONE` `:VCOR:SEL 123123`
Dependencies	Requires EXW (External Mixing Wide Bandwidth) and Ampcor (Amplitude Correction) licenses
Couplings	When the External Mixer Model or VDI CCD Corrections data changes, this field checks whether VDI CCD corrections are stored for the currently-selected External Mixer Model, and automatically selects the first serial number found, or `NONE` if no matching corrections are found When setting this parameter via SCPI, if no match is found for the given serial number, the parameter

	is set to `NONE`. If the correction should be automatically selected, this can be done by setting the value via SCPI to **Any** (see "External Mixer Setup" on page 2601)
State Saved	Saved in instrument state

6.2.13.5 Delete All VDI CCD Corrections

Erases all stored VDI CCD corrections.

Remote Command	`[:SENSe]:VCORrection:DELete`
Example	`:VCOR:DEL`
Dependencies	Requires EXW (External Mixing Wide Bandwidth) and Ampcor (Amplitude Correction) licenses
Couplings	When the VDI CCD corrections are deleted from memory, "Select VDI CCD Correction" on page 2612 is set to `NONE`

6.2.13.6 Harmonic

Lets you enter the **Harmonic** value with its associated sign (mixing mode). Only the first row of the table is editable. When you edit a value or change "Table Type" on page 2611, the Mixer Selection changes to **Custom**.

In **Custom** mode, the maximum start and stop frequencies are strictly set by the LO range and the harmonic number you have chosen. The undoubled LO range is approximately 3.8 - 8.7 GHz , and (for LOs that support doubling) the doubled range is approximately 8.0 – 14.0 GHz. That range times the harmonic you have selected determines the tuning range. If your frequency is currently outside that range when you edit the Harmonic Table, the frequency will be changed to fall at the edge of the range. To change it back, go to the **Mixer Presets** menu and select a Preset.

The harmonic number is a signed integer, where the sign distinguishes between positive and negative mixing products. Desired mixing products occur at an IF frequency that equals the difference between the RF frequency (f_{RF}) and the LO frequency (Nf_{LO}). When this difference is positive, we can say $f_{IF} = f_{RF} - Nf_{LO}$. When this difference is negative, we can say $f_{IF} = Nf_{LO} - f_{RF}$. Thus, a negative harmonic means the instrument will be tuned such that the harmonic of the LO is higher than the indicated frequency by the frequency of the first IF. A positive harmonic means the instrument will be tuned such that the harmonic of the LO is lower than the indicated frequency by the frequency of the first IF.

Remote Command	`[:SENSe]:MIXer:HARMonic <integer>` `[:SENSe]:MIXer:HARMonic?`
Example	`:MIX:HARM -28` `:MIX:HARM?`
Notes	The query returns the harmonic value of the first row of the harmonic table

Couplings	When you set a value for **Harmonic** via SCPI, the Mixer Selection changes to **Custom**
Preset	Unaffected by **Mode Prese**t, but **Restore Input/Output Defaults** turns editing off, the Harmonic Table returns to normal, and the Mixer is preset to 11970A, which has -6 in the first row of its Harmonic Table
State Saved	Saved in instrument state
Min	-400
Max	400

6.2.13.7 LO Doubler

Lets you specify whether the Doubler is on or off. Only the first row of the table is editable, and the LO Doubler field is only editable in Single Row and Harmonic Switching table types. When you edit a value or change the Table Type, the Mixer Selection changes to **Custom**.

The LO Doubler setting controls the choice of the LO doubler state for LO's that support doubled operation. In Single Row mode it is either on or off for the one row in the table. In Harmonic Switching mode it is on for both rows or off for both rows. In Doubler switching it is off for row 1 and on for row 2, so it is not editable.

In LOs that support doubling, the fundamental band is approximately 3.8 – 8.7 GHz, and the doubled band is approximately 8.0 – 14 GHz. The higher LO frequency can result in a lower mixer harmonic and reduced mixer conversion loss.

Remote Command	`[:SENSe]:MIXer:LODoubler ON | OFF | 0 | 1` `[:SENSe]:MIXer:LODoubler?`
Example	`:MIX:LOD 0` `:MIX:LOD?`
Notes	The query returns the doubler value of the first row of the harmonic table
Dependencies	Grayed-out and set to `OFF` when "Table Type" on page 2611 is set to Doubler Switching Grayout message: "-221 Settings conflict; Function unavailable while Table Type=Doubler Switching"
Couplings	When you set a value via SCPI, the Mixer Selection changes to **Custom**
Preset	Unaffected by **Mode Preset**, but **Restore Input/Output Defaults** turns off editing, the Harmonic Table returns to normal, and the Mixer is preset to 11970A, which has the doubler Off in the first row of its Harmonic Table
State Saved	Saved in instrument state

6.2.13.8 Refresh USB Mixer Connection

Re-reads the USB devices and refreshes connection to Keysight USB mixers. This operation is the same as physically removing and reinserting the mixer's USB connection.

Example	`:MIX:BAND USB`
Notes	When using Keysight USB Mixers, if **Restore All Defaults** (`:SYSTem:DEFault`) has been performed, either remove and reinsert the USB cable or press **Refresh USB Mixer Connection**

6.2.14 Mixer Path

Determines which path you wish to use when using M1971 series USB mixers:

- `NORMal`, in which they function as a classic external mixer with a single conversion
- `DUAL` Conversion, in which the first conversion is to a higher IF frequency (nominally 1.5 GHz) and you provide a 10 MHz signal to which an internal PLL is locked, to effect a second downconversion. The higher IF frequency used in Dual Conversion increases the image frequency offset, giving you a wider image-free conversion range. This reduces aliasing effects and improves the image suppress functionality for wideband signals
- `AUX` Equipment, wherein the first mixer output drives an output connector on the mixer and the instrument is out of the circuit. When you connect an M1971 Mixer to USB, the instrument will pull the IF and RF flatness data from the USB mixer and write this data to a user-accessible file in CSV format for your use when Aux Equipment is selected

Remote Command	`[:SENSe]:MIXer:MPATh NORMal | DUAL | AUX` `[:SENSe]:MIXer:MPATh?`
Example	`:MIX:MPAT NORM`
Dependencies	Only appears when an M1971 series Mixer is connected to the USB port of the instrument When `AUX` Equipment is the selection, Sig Id is turned off to avoid shifting the LO. It is *not* turned back on when a different path is selected When `AUX` Equipment is the selection, there is no valid result, so the instrument displays a “No Result; Meas invalid with Aux Equip” error condition message (error 135) `DUAL` Conversion is grayed-out unless in the Swept SA measurement. If grayed-out and the command is sent, generates error:”-221, Settings Conflict; Dual Conversion mixer path is only available in Swept SA" If in `DUAL` Conversion and you exit Swept SA, reverts to `NORMal` setting. If you subsequently return to Swept SA, does *not* automatically return to `DUAL` Conversion When `DUAL` Conversion is selected, if no signal is sensed at the 10 MHz input port, an error condition is generated, “Ref missing or out of range; M1971” (error 521). This also lights the Error LED on the mixer itself
Couplings	When `AUX` path is selected, the instrument switches to Zero Span
Preset	`NORMal`
State Saved	Saved in instrument state

Annotation	In the Meas Bar, if an M1971 series Mixer is connected to the USB port of the instrument, the field Mixer Path appears and says: – Normal for Normal – 2xConv for Dual Conversion – Aux for Aux Equipment

6.2.15 User IF Freq

Specifies the desired IF frequency when using the Aux Equipment path. This setting determines the LO frequency that the instrument will drive into the mixer to correspond to the specified center frequency. Note that the Aux Equipment path always uses “Negative Mixing”, that is, the LO frequency is always higher than the RF frequency.

Remote Command	`[:SENSe]:MIXer:UIFFreq <real>` `[:SENSe]:MIXer:UIFFreq?`
Example	`:MIX:UIFF 300 MHz`
Dependencies	Only appears if an M1971 mixer is connected to USB and the Mixer Path is Aux Equipment
Preset	1.2 GHz
State Saved	Saved in Input/Output state
Min	0 GHz
Max	4 GHz

6.2.16 Signal ID On/Off

Toggles the Signal ID (signal identification) function On or Off. This function lets you identify multiple responses of a single input signal that are generated when using un-preselected external mixers. The use of mixers without pre-selecting filters offers the advantage of improved receiver sensitivity because of the absence of the filter insertion loss, but results in multiple responses due to images and undesired harmonic mixing products.

While in **Signal ID**, basic spectrum analyzer functions work normally (for example, you can change Span normally), but some functions are disabled (for example, some traces are unavailable).

There are two forms of **Signal ID**, Image Suppress and Image Shift. Choose the one most appropriate for your application. For Image Shift, an LO-shifted and an unshifted trace are taken in Trace 1 and Trace 2 and displayed together. Any peaks that are not the same in both traces are images. For Image Suppress, image cancellation is performed in the background using two hidden traces, and the result displayed in Trace 1, which shows only the valid signals.

When **Signal ID** is `ON`, this is indicated in the Meas Bar as Signal ID: On. The annotation is displayed in amber to alert you, because it can cause unexpected behavior if you are not aware that it is on.

Remote Command	`[:SENSe]:SIDentify[:STATe] OFF | ON | 0 | 1` `[:SENSe]:SIDentify[:STATe]?`
Example	`:SID 0` `:SID?`
Notes	**Signal ID** uses data from two successive sweeps. Therefore, if the instrument is in single sweep mode, two sweep triggers are used to generate the data needed for signal identification For the Log Plot measurement in the Phase Noise Mode, **Signal ID** works only in the segment of LO sweeping where the offsets are greater than the Rejection Offset setting. When turning it on, you may notice a discontinuity in the Phase Noise trace at the Rejection Offset setting frequency by a few dB due to the under response inherent to **Signal ID**
Dependencies	Only appears when External Mixer is selected as the Input Not available in some measurements. If **Signal ID** does not appear or is grayed-out while in your measurement, then it is not available Because **Signal ID** uses data from two successive sweeps, several trace and sweep functions are grayed-out in **Signal ID**. See the documentation for your measurement for details on which trace functions are grayed-out Not available with Signal Track, in which case **Signal ID** is grayed-out Turned off when External Mixer is turned off. **Signal ID** cannot be turned on when using internal mixing Rules for auto coupling of the Sweep and FFT controls are changed with **Signal ID**`ON`. For both the dynamic range case and the speed case, swept is chosen whenever any form of **Signal ID** is on. If Manual FFT is selected, **Signal ID** is grayed-out If **Signal ID** is selected in a measurement that does not support it, a warning message is generated
Couplings	The Auto Rules for detector selection select Normal for all active traces when **Signal ID** is turned `ON`
Preset	Unaffected by Preset, but set to `OFF` by **Restore Input/Output Defaults**
Annunciation	When Signal ID is on this is indicated in the Meas Bar as Signal ID: On. The annotation is displayed in amber color to alert you to the fact that Signal ID is on, as it can cause unexpected behavior if you are not aware that it is on

6.2.17 Signal ID Mode

Determines the **Signal ID** mode to use, either Image Suppress or Image Shift.

Image Suppress

Mathematically removes all image and multiple responses of signals present at the mixer input. Two hidden sweeps are taken in succession. The second sweep is offset in LO frequency by 2 * IF / N. For each point in each trace, the smaller amplitude from the two traces is taken and placed in that point in the selected trace. The Peak detector is auto-selected to improve the image suppression effectiveness. Responses of each trace that lie on top of one another will remain and are valid signals, others are images and are suppressed. The action of taking the smaller of the two traces will make the average noise level lower in all points that do not have an image, thus reducing the accuracy of the measurement of noise and noise-like signals.

NOTE **When changing from Image Shift to Image Suppress mode, Trace 2 is blanked, as it was used for Image Shift and contains data that you will probably not want to see in Image Suppress**

Image Shift

Like the Image Suppress mode, Image Shift is a two-sweep sequence. The data from the first sweep is placed in Trace 1 and the data from the second (LO frequency shifted by 2 * IF / N) sweep is placed in Trace 2. On alternate sweeps, the alternate trace (trace 2) is placed in front of trace 1. This way, you can see a signal at the same place on alternate sweeps, showing in yellow (trace1) and blue (trace2). Signal responses of Trace 1 and Trace 2 that have the same horizontal position are considered to be in the current band and therefore can be analyzed with the amplitude and frequency measurement systems of the SA. All other responses are invalid and should be ignored.

NOTE **This function takes control of and uses Trace 1 and Trace 2. Any data in these traces prior to activating Image Shift will be lost.**

Remote Command	`[:SENSe]:SIDentify:MODE ISUPpress | ISHift` `[:SENSe]:SIDentify:MODE?`

Example	`:SID:MODE ISUP`
	`:SID:MODE ISH`
	`:SID:MODE?`

Dependencies	Only appears when External Mixer is selected as the Input
Preset	Unaffected by Preset, but set to `ISUPpress` by **Restore Input/Output Defaults**
State Saved	Saved in instrument state

6.2.18 Cable IF Loss

The loss at the IF in the IF/LO cable can be compensated for with this function, by entering the loss in dB for your cable.

The cable loss will depend on the IF frequency. The IF frequency varies depending on which IF path your measurement is using. For best accuracy, characterize your cable's loss for the IF frequency or frequencies you will be using.

IF Frequencies

10 MHz path	322.5 MHz
25 MHz path	322.5 MHz
40 MHz path	250 MHz
140 MHz path	300 MHz

Remote Command	`[:SENSe]:MIXer:CIFLoss <rel_ampl>` `[:SENSe]:MIXer:CIFLoss?`
Example	`:MIX:CIFL 0.23 DB` `:MIX:CIFL?`
Dependencies	Only appears when External Mixer is selected as the Input
Preset	0.26 dB
State Saved	Saved in instrument state
Min	-100
Max	100

6.2.19 I/Q Path

Selects which I/Q input channels are active. The LED next to each I/Q input port will be on when that port is active.

The analysis bandwidth for each channel is the same as that of the instrument. For example, the base N9020A has a bandwidth of 10 MHz. With I/Q input the I and Q channels would each have an analysis bandwidth of 10 MHz, giving 20 MHz of bandwidth when the I/Q Path is I+jQ. With option B25, the available bandwidth becomes 25 MHz, giving 25 MHz each to I and Q and 50 MHz to I+jQ.

I/Q voltage to power conversion processing is dependent on the I/Q Path selected:

- With I+jQ input, we know that the input signal may not be symmetrical about 0 Hz, because it has a complex component. Therefore, above 0 Hz only the positive frequency information is displayed, and below 0 Hz only the negative frequency information is displayed
- With all other Input Path selections, the input signal has no complex component and therefore is always symmetrical about 0 Hz. In this case, by convention, the power conversion shows the combined voltage for both the positive and negative frequencies. The information displayed below 0 Hz is the mirror of the

information displayed above 0 Hz. This results in a power reading 6.02 dB higher (for both) than would be seen with only the positive frequency voltage. Note also that, in this case the real signal may have complex modulation embedded in it, but that must be recovered by further signal processing

Remote Command	`[:SENSe]:FEED:IQ:TYPE IQ | IONLy | QONLyFor option details, see More Information` `[:SENSe]:FEED:IQ:TYPE?`

Example	Set the input to be both the I and Q channels, combined as I + j * Q:
	`:FEED:IQ:TYPE IQ`
	Set the input to be only the I channel:
	`:FEED:IQ:TYPE IONL`
	Set the input to be only the Q channel:
	`:FEED:IQ:TYPE QONL`
	Turn on both I and Q channels and treat I as channel 1 and Q as channel 2:
	`:FEED:IQ:TYPE IND`

Dependencies	Only appears when I/Q is the selected input
Preset	`IQ`
State Saved	Yes Unaffected by Preset, but set to the default value by **Restore Input/Output Defaults** or **Restore System Defaults->All**

Backwards Compatibility SCPI

Notes	For R&S FSQ-B71 compatibility
Preset	`IQ`
Backwards Compatibility SCPI	`:INPut[1]:IQ:TYPE IQ | I | Q` `:INPut[1]:IQ:TYPE?`

More Information

I+jQ

Sets the signal input to be both the I and Q channels. The I and Q channel data will be combined as I + j * Q.

I Only

Sets the signal input to be only the I channel. The Q channel will be ignored. The data collected is still complex. When the center frequency is 0 the imaginary part will always be zero, but for any other center frequency both the real and imaginary parts will be significant.

Q Only

Sets the signal input to be only the Q channel. The I channel will be ignored. The Q channel will be sent to the digital receiver block as Q+j0. The receiver's output is still complex. When the center frequency is 0 the imaginary part will always be zero, but for any other center frequency both the real and imaginary parts will be significant. Note that since the receiver's real output is displayed as the "I" data, when the center frequency is 0, the Q Only input appears as the "I" data.

6.2.20 Reference Z

Sets the value of the impedance to be used in converting voltage to power for the I and Q channels. This does not change the hardware's path impedance (see "Input Z" on page 2622).

Remote Command	`:INPut:IMPedance:REFerence <integer>` `:INPut:IMPedance:REFerence?`
Example	Set the I/Q reference impedance to 50 Ω `:INP:IMP:REF 50`
Dependencies	Only appears when I/Q is the selected input
Preset	50 Ω
State Saved	Yes Unaffected by a Preset, but set to the default value by **Restore Input/Output Defaults** or **Restore System Defaults->All**
Min/Max	1 Ω - 1 MΩ

6.2.21 I/Q Setup

Lets you set up and calibrate various parameters for the I/Q inputs.

Dependencies	Only appears when I/Q is the selected input

6.2.21.1 I Setup

Accesses the channel setup parameters for the I channel.

Differential

Selects differential input on or off for the I channel. For differential input (also called balanced input), the instrument uses both main and complementary ports. When differential input is off (also called single-ended or unbalanced input), the instrument uses only the main port.

Remote Command	`:INPut:IQ[:I]:DIFFerential OFF | ON | 0 | 1` `:INPut:IQ[:I]:DIFFerential?`

Example	Put the I channel in Differential mode:
	`:INP:IQ:DIFF ON`
	Put the I channel in Single Ended mode:
	`:INP:IQ:DIFF OFF`

Notes	When I Differential Input = On, the instrument checks for attenuation mismatches between the I and I-bar ports. If the difference in attenuation values exceeds 0.5 dB, a Settings Alert error condition, error 159 is set When I Differential Input = On, and IQ Path is I+jQ, the Q Differential input must also be On. Similarly, when I Differential Input = Off, and IQ Path is I+jQ, the Q Differential input must also be Off. If the states of the two inputs do not match, an error condition message is generated, 159, Settings Alert; I/Q mismatch: Differential
Couplings	Some active probes include built-in differential capability. When one of these probes is sensed, this key is disabled. Since the differential capability is handled in the probe, the Instrument will use only the main port and the key will show that the Instrument's Differential Input mode is Off (indicating that the complementary port is not in use) When Q Same as I is On, the value set for I will also be copied to Q
Preset	`OFF` (Single Ended) Unaffected by Mode Preset, but set to the default value by **Restore Input/Output Defaults** or **Restore System Defaults->All**
State Saved	Yes
Annotation	The LED on the I-bar port indicates the Differential Input setting

Backwards Compatibility Command

Notes	For R&S FSQ-B71 compatibility, with no independent settings for the I and Q channels. Therefore, it is tied only to the I channel and does not provide an equivalent for the Q channel. For proper operation of the backwards compatibility command, Q Same as I should be ON
Preset	`OFF`
Backwards Compatibility SCPI	`:INPut[1]:IQ:BALanced[:STATe] OFF | ON | 0 | 1` `:INPut[1]:IQ:BALanced[:STATe]?`

Input Z

Selects the input impedance for the I channel. The impedance applies to both the I and I-bar ports.

The input impedance controls the hardware signal path impedance match. It is not used for converting voltage to power. The voltage to power conversion always uses the Reference Z parameter. The Reference Z parameter applies to both I and Q channels.

Remote Command	`:INPut[1]:IQ[:I]:IMPedance LOW | HIGH` `:INPut[1]:IQ[:I]:IMPedance?`

Example	Set the I channel input impedance to 1 MΩ :
	`:INP:IQ:IMP HIGH`
	Set the I channel input impedance to 50 Ω :
	`:INP:IQ:IMP LOW`

Notes	`LOW` = 50 Ω, `HIGH` = 1 MΩ When IQ Path is I+jQ, the I Input Z setting must be the same as the Q Input Z setting. If the settings of the two inputs do not match, an error condition message is generated, 159; Settings Alert; I/Q mismatch: Input Z
Couplings	Input impedance is a built-in characteristic of a probe. Therefore, whenever a probe is sensed, this key is disabled, and the value is set to match the probe When no probe is sensed on Q and Q Same as I is On, the value set for I will also be copied to Q
Preset	`LOW` Unaffected by Mode Preset, but set to the default value by **Restore Input/Output Defaults** or **Restore System Defaults->All**
State Saved	Yes
Annotation	"I:<I Input Z>" (examples, "I:50Ω " or "I:1MΩ ") in the Measurement Bar. The annotation shows both the I and Q Input Z values

Skew

Sets the skew factor for the I channel. The skew will shift the channel's data in time. Use this to compensate for differences in the electrical lengths of the input paths due to cabling.

Remote Command	`[:SENSe]:CORRection:IQ[:I]:SKEW <seconds>` `[:SENSe]:CORRection:IQ[:I]:SKEW?`
Example	Delay the data for the I channel by 10 ns: `:CORR:IQ:SKEW 10 ns`
Preset	0
State Saved	Yes Unaffected by Mode Preset, but set to the default value by **Restore Input/Output Defaults** or **Restore System Defaults->All**
Range	0 s to 100 ns
Min	0 s
Max	+100 ns

Combined Differential/Input Z (Remote Command Only)

For backwards compatibility only. It combines the Differential Input and Input Z selections into a single command.

Notes	Provided for E4406A code compatibility The enum values translate as follows: `U50` — Differential Input = Off, Input Z = 50 Ω `B50` — Differential Input = On, Input Z = 50 Ω `U1M` — Differential Input = Off, Input Z = 1 MΩ `B1M` — Differential Input = On, Input Z = 1 MΩ Combines the Input Z (50 Ω or 1 M Ω) parameter with the Differential Input (Off = "Unbalanced", On = "Balanced") parameter into a single enumeration This backwards-compatibility command was for an instrument without independent settings for the I and Q channels. Therefore, it is tied only to the I channel and does not provide an equivalent for the Q channel. For proper operation of the backwards-compatibility command, Q Same as I should be set to `ON` Note also the subtle difference between this command and the backwards-compatibility command for Input Z. The Input Z SCPI has "`IQ`" before "`IMP`", while this command has that order reversed
Couplings	Does not have an independent parameter, but instead is tied to the Differential Input and Input Z parameters. The coupling for those parameters apply to this command too
Preset	`U50`
Backwards Compatibility SCPI	`:INPut:IMPedance:IQ U50 | B50 | U1M | B1M` `:INPut:IMPedance:IQ?`

6.2.21.2 I Probe

Access the probe setup parameters for the I channel.

Dependencies	Only appears when I/Q is the selected input

The set of I/Q probe setup parameters will change based on the type of probe that is sensed. All probe types have the Attenuation parameter, and all probe types can be calibrated. The remaining parameters are only available for some probe types and will not be shown when not available. The probe type is determined by and reported for only for the I and Q ports, never the I-bar or Q-bar ports. The menu title will be "<ch>: <probe id>", where "<ch>" is either "I" or "Q" and "<probe id>" is the type of probe. For example, for the I Probe setup with an Keysight 1130A probe connected to the I port, the title will be "I: 1130A".

Probe calibration data is stored for each probe type for each channel. When no probe is sensed, the probe type "Unknown" is used, and this is also treated like a probe type with its own calibration data. When a probe is changed, the calibration data for that probe type for that port is restored. An advisory message will be displayed showing the new probe type and the calibration status. The calibration data is stored permanently (survives a power cycle) and is not affected by a Preset or any of the Restore commands. When the probe has EEPROM identification (most newer Keysight probes have this), the calibration data is stored by probe serial number and port, so if you have two probes of the same type, the correct calibration data will be used for each. For probes that do not have EEPROM identification, the calibration data is stored by probe type and port and the instrument cannot distinguish between different probes of the same type. In all cases (with or without EEPROM identification), the calibration data is port specific, so it will not follow a specific probe from port to port if the probe is moved.

The "Unknown" probe type is used whenever no probe is sensed. When no calibration data exists for "Unknown" the latest cable calibration data is used.

Attenuation

The attenuation is part of the calibration data stored with the probe type and is initially the value that was returned by the last calibration. You can modify this value and any changes will be stored with the calibration data and will survive power cycles and presets. When a probe calibration is performed the attenuation value will be overwritten by the calibration.

Remote Command	`[:SENSe]:CORRection:IQ:I:ATTenuation:RATio <real>` `[:SENSe]:CORRection:IQ:I:ATTenuation:RATio?`
Example	Set the attenuation for the current I probe to 100.00:1: `:CORR:IQ:I:ATT:RAT 100`
Notes	Each probe type has its own attenuation setting. As probes are changed the attenuation value will reflect the new probe's setting. Changing the attenuation affects only the current probe type's setting and leaves all others unchanged When the IQ Path is I+jQ, the Q probe attenuation setting must match the I Probe attenuation setting within 1 dB. If this is not the case, an error condition message is generated, 159; Settings Alert; I/Q mismatch: Attenuation
Preset	1
State Saved	Saved with probe calibration data. Survives a power cycle and is not affected by Preset or Restore
Min/Max	0.001/10000

This is an alternate form of the SCPI command that allows input as a power instead of a ratio.

Remote Command	`[:SENSe]:CORRection:IQ:I:ATTenuation <rel_ampl>` `[:SENSe]:CORRection:IQ:I:ATTenuation?`

Example	Set the attenuation for the current I probe type to 100.00:1: `:CORR:IQ:I:ATT 20 dB`
Min/Max	-60 dB /+80 dB

Offset

Some active probes have DC offset capability. When one of these probes is connected, this control will be visible. The signal is adjusted for the DC offset before entering the instrument's port. This allows for removal of a DC offset before reaching the instrument's input port voltage limits. For example, a signal that varies 1 V peak-to-peak with a DC offset equal to the instrument's max input voltage would exceed the input limits of the instrument for half its cycle. Removing the DC offset allows the instrument to correctly process the entire signal.

Remote Command	`:INPut:OFFSet:I <voltage>` `:INPut:OFFSet:I?`
Example	Remove a DC offset of -0.5 V from the I channel input: `:INP:OFFS:I -0.5`
Notes	Only some probe types support **Offset**. For those that do, each probe type has its own **Offset** setting. As probes are changed, the **Offset** value will reflect the new probe's setting. Changing **Offset** affects only the current probe type's setting and leaves all others unchanged
Preset	0 V
State Saved	Saved with probe calibration data. Survives power cycle and is not affected by Preset or Restore
Min/Max	-18 V/+18 V

Coupling

Some probe types allow coupling to reject low frequencies. This filters out the DC component of a signal that is composed of a DC bias plus some AC signal. This control is visible only for probe types that have this capability.

Remote Command	`:INPut:COUPling:I DC | LFR1 | LFR2` `:INPut:COUPling:I?`

Example	Turn off low frequency rejection on the I channel, allowing signals down to DC:
	`:INP:COUP:I DC`
	Turn on low frequency rejection on the I channel for frequencies lower than 1.7 Hz:
	`:INP:COUP:I LFR1`
	Turn on low frequency rejection on the I channel for frequencies lower than 0.14 Hz:
	`:INP:COUP:I LFR2`

Notes	Only some probe types support **Coupling**. For those that do, each probe type has its own **Coupling** setting. As probes are changed, the **Coupling** value will reflect the new probe's setting. Changing

	Coupling affects only the current probe type's setting and leaves all others unchanged
Preset	DC
State Saved	Saved with probe calibration data. Survives a power cycle and is not affected by a Preset or Restore
Range	DC | AC 1.7 Hz LFR1 | AC 0.14 Hz LFR2

Clear Calibration

Clears the calibration data for the current port and probe. It does not clear the data for other probe types or other ports. If the sensed probe has EEPROM identification, only the data for that specific probe is cleared. After this command has completed, the probe calibration state will be the same as if no probe calibration had ever been performed for the specified channel and probe. The probe attenuation will be the default value for that probe type and the Cable Calibration frequency response corrections will be used. This command is dependent on the Differential Input state. When Differential Input is on, both the data for the probe attached to the main port and the data for the probe attached to the complementary port are cleared. When Differential Input is off, only data for the probe attached to the main port is cleared.

Remote Command	`:CALibration:IQ:PROBe:I:CLEar`
Example	Clear the calibration data for the I channel and the current probe (with EEPROM identification) or probe type (without EEPROM identification): `:CAL:IQ:PROBe:I:CLE`

6.2.21.3 Calibrate

Invokes the guided probe calibration. The guided probe calibration is context sensitive and depends on the channel (I or Q) and the Differential Input state. The calibration is only performed on the selected channel. When the Differential control is switched to Differential, both the probe attached to the main port and the probe attached to the complementary port are calibrated. When the Differential control is switched to Single Ended, only the probe attached to the main port is calibrated.

Calibrating the Baseband I/Q ports requires several steps and manual connections. The Guided Calibration will interactively step you through the required steps, displaying diagrams to help with the connections. The steps will vary depending on the setup.

In the Guided Calibration windows, the date and time of the last calibration are displayed. If any of the items listed are displayed in yellow, this indicates that the calibration for that item is inconsistent with the latest calibration, and you should complete the entire calibration process before you exit the calibration. For passive probes with Differential On, any calibration that is more than a day older than the most recent calibration will be displayed with the color amber.

The I/Q probe calibration creates correction data for one of the front panel I/Q channels. When the probe has EEPROM identification, the data is unique to that specific probe. When the probe does not have EEPROM identification, the data will be used for all probes of the same type. The data is also unique to the channel, so calibration data for the I channel will not be used for the Q channel and vice versa.

The guided calibration (front panel only) will show connection diagrams and guide you through the I/Q Isolation Calibration and through calibrating each port. The calibration data for each port is stored separately, so as soon as a port is calibrated that data is saved and will be used. If a user presses "Exit" to exit the calibration process, the data for the port already completed will still be used. It is recommended that a calibration be completed once started, or if exited, that it be properly done before the next use of the probe. The "Next" button will perform the calibration for the current port and then proceed to the next step in the calibration procedure. The "Back" button will return to the prior port in the procedure. Both softkeys and dialog buttons are supplied for ease of use. The dialog buttons are for mouse use and the softkeys for front panel use.

The calibration can also be done via SCPI, but no connection diagrams will be shown. You will need to make the correct connections before issuing each port calibration command. Again, it is recommended that all ports be calibrated at the same time.

For Active probes or when Differential is Off, only the main port is calibrated, otherwise both the main and complementary ports are calibrated.

The instrument state remains as it was prior to entering the calibration procedure except while a port is actually being calibrated. Once a port is calibrated it returns to the prior state. A port calibration is in process only from the time the "Next" button is pressed until the next screen is shown. For SCPI, this corresponds to the time from issuing the CAL:IQ:PROB:I|IB|Q|QB command until the operation is complete.

For example, if the prior instrument state is Cal Out = Off, Input = I+jQ, and Differential = Off, then up until the time the "Next" button is pressed the I Input and Q Input LEDs are on and the Cal Out, I-bar Input and Q-bar Input LEDs are off. Once the "Next" button is pressed for the I port calibration, only the Cal Out and I Input LEDs will be on, and the others will be off. When the screen progresses to the next step ("Next" button again enabled), the prior state is restored and only the I Input and Q Input LEDs are on (Cal Out is off again).

I/Q Isolation Calibration

I/Q Isolation Calibration must be run before calibrating any port with either the I/Q Cable Calibration or I/Q Probe Calibration. This calibration is performed with nothing connected to any of the front panel I/Q ports. This is the first step in both the I/Q Cable Calibration and the I/Q Probe Calibration. This dialog appears if the Calibration is being run for the first time. It can also be accessed by pressing Back from the I Input Cal, the Q Input Cal, or the I/Q Cable Cal. Pressing Next from this dialog runs the calibration

Remote Command	`:CALibration:IQ:ISOLation`
Example	`:CAL:IQ:ISOL`
Notes	All front panel I/Q ports must be unconnected
State Saved	No

I/Q Isolation Calibration Time (Remote Query Only)

Returns the last date and time that the I/Q Isolation Calibration was performed.

Remote Command	`:CALibration:IQ:ISOLation:TIME?`
Example	`:CAL:IQ:ISOL:TIME?`
Notes	Returns 6 integer values: year, month, day, hour, minute, second. When no calibration has been performed, all values are 0
Annunciation	Guided Calibration, Isolation Calibration, Last Calibration

I Port

The I port calibration is performed with the probe body attached to the front panel's I port, and the probe tip connected via an adapter to the Cal Out port. The guided calibration will show a diagram of the required connections.

Remote Command	`:CALibration:IQ:PROBe:I`
Example	`:CAL:IQ:PROB:I`
Notes	The I port must be connected to the Cal Out port before issuing the command The calibration data is saved as soon as the port is calibrated and will survive power cycles. It is not reset by any preset or restore data commands
State Saved	No

I Port Probe Calibration Time (Remote Query Only)

Return the last date and time that the I/Q Probe Calibration was performed for a specific port.

Remote Command	`:CALibration:IQ:PROBe:I|:TIME?`
Example	`:CAL:IQ:PROB:I:TIME?`

Notes	This returns 6 integer values: year, month, day, hour, minute, second. When no calibration has been performed, all values are 0. The value is specific to both the port and probe, so the value will change as probes are connected or disconnected

I-bar Port

The I-bar port calibration is performed with the probe body attached to the front panel's I-bar port and the probe tip connected via an adapter to the Cal Out port. The I-bar probe calibration is only available for passive probes with Differential On. The guided calibration will show a diagram of the required connections.

Remote Command	`:CALibration:IQ:PROBe:IBar`
Example	`:CAL:IQ:PROB:IB`
Notes	The I-bar port must be connected to the Cal Out port before issuing the command The calibration data is saved as soon as the port is calibrated and will survive power cycles. It is not reset by any preset or restore data commands
State Saved	No

I-bar Port Probe Calibration Time (Remote Query Only)

Return the last date and time that the I/Q Probe Calibration was performed for a specific port.

Remote Command	`:CALibration:IQ:PROBe:IBAR:TIME?`
Example	`:CAL:IQ:PROB:IBAR:TIME?`
Notes	Returns 6 integer values: year, month, day, hour, minute, second. When no calibration has been performed, all values are 0. The value is specific to both the port and probe, so the value will change as probes are connected or disconnected
Annunciation	Guided Calibration, Probe Calibration, Last Calibration

6.2.21.4 Q Setup

Access the channel setup parameters for the Q channel.

Dependencies	Only appears when I/Q is the selected input

Q Same as I

Many, but not all, usages require the I and Q channels have an identical setup. To simplify channel setup, the Q Same as I will cause the Q channel parameters to be mirrored from the I channel. That way you only need to set up one channel (the I channel). The I channel values are copied to the Q channel, so at the time Q Same as I is turned off the I and Q channel setups will be identical. This does not apply to Probe settings or to parameters that are determined by the probe.

Remote Command	`:INPut:IQ:MIRRored OFF | ON | 0 | 1` `:INPut:IQ:MIRRored?`
Example	Turn off the mirroring of parameters from I to Q: `:INP:IQ:MIRR OFF`
Couplings	Only displayed for the Q channel. When Yes, the I channel values for some parameters are mirrored (copied) to the Q channel. However, when a parameter is determined by the type of probe and a probe is sensed, the probe setting is always used and the I channel setting is ignored. The following parameters are mirrored: Differential Input (when not determined by probe) Input Z (when not determined by probe)
Preset	Unaffected by Preset, but set to the default value (Q Same as I set to ON) by **Restore Input/Output Defaults** or **Restore System Defaults->All**
State Saved	Saved in instrument state
Range	`OFF | ON`

Differential

Selects differential input on or off for the Q channel. For differential input (also called balanced input), the instrument uses both the Q and Q-bar ports. When differential input is off (also called single-ended or unbalanced input), the instrument uses only the Q port.

Remote Command	`:INPut:IQ:Q:DIFFerential OFF | ON | 0 | 1` `:INPut:IQ:Q:DIFFerential?`

Example	Put the Q channel in Differential mode:
	`:INP:IQ:Q:DIFF ON`
	Put the Q channel in Single Ended mode:
	`:INP:IQ:Q:DIFF OFF`

Notes	When Differential Input = ON, the instrument checks for attenuation mismatches between the Q and Q-bar ports. If the difference in attenuation values exceeds 0.5 dB a Settings Alert error condition, error 159 will be set When Q Differential Input = ON, and IQ Path is I+jQ, the I Differential input must also be ON. Similarly, when Q Differential Input = OFF, and IQ Path is I+jQ, the I Differential input must also be OFF. If the states of the two inputs do not match, an error condition message is generated, 159; Settings Alert; I/Q mismatch: Differential
Couplings	Some active probes include built-in differential capability. When one of these probes is sensed, this key is disabled. Since the differential capability is handled in the probe, the Instrument will use only the main port and the key will show that the Instrument's Differential Input mode is Off (indicating that the

	complementary port not in use) When a differential probe is not sensed and Q Same as I is On, the value set for I will be copied to Q. This key is disabled when Q Same as I is On
Preset	`OFF`
State Saved	Yes Unaffected by a Preset, but set to the default value by **Restore Input/Output Defaults** or **Restore System Defaults->All**
Range	`OFF | ON`
Annotation	The LED on the Q-bar port indicates the Differential Input setting

Input Z

Selects the input impedance for the Q channel. The impedance applies to both the Q and Q-bar ports.

The input impedance controls the hardware signal path impedance match. It is not used for converting voltage to power. The voltage to power conversion always uses the Reference Z parameter. The Reference Z parameter applies to both I and Q channels.

Remote Command	`:INPut[1]:IQ:Q:IMPedance LOW | HIGH` `:INPut[1]:IQ:Q:IMPedance?`

Example	Set the Q channel input impedance to 1 MΩ :
	`:INP:IQ:Q:IMP HIGH`
	Set the Q channel input impedance to 50 Ω :
	`:INP:IQ:Q:IMP LOW`

Notes	`LOW` = 50 Ω , `HIGH` = 1 MΩ When IQ Path is I+jQ, the I Input Z setting must be the same as the Q Input Z setting. If the settings of the two inputs do not match, an error condition message is generated, 159; Settings Alert; I/Q mismatch: Input Z
Couplings	Input impedance is a built-in characteristic of a probe. Therefore, whenever a probe is sensed, this key is disabled, and the value is set to match the probe When no probe is sensed and Q Same as I is On, the value set for I will also be copied to Q. This key is disabled when Q Same as I is On
Preset	`LOW`
State Saved	Yes Unaffected by a Preset, but set to the default value by **Restore Input/Output Defaults** or **Restore System Defaults->All**
Range	50 Ω |1 MΩ
Annotation	"Q:<Q Input Z>" (examples, "Q:50Ω " or "Q:1MΩ ") in the Measurement Bar. The annotation shows both the I and Q Input Z values

Skew

Sets the skew factor for the Q channel. The skew will shift the channel's data in time. Use this to compensate for differences in the electrical lengths of the input paths due to cabling and probes.

Remote Command	`[:SENSe]:CORRection:IQ:Q:SKEW <seconds>` `[:SENSe]:CORRection:IQ:Q:SKEW?`
Example	Delay the data for the Q channel by 10 ns `:CORR:IQ:Q:SKEW 10 ns`
Preset	0
State Saved	Yes Unaffected by a Preset, but set to the default value by **Restore Input/Output Defaults** or **Restore System Defaults->All**
Min/Max	0 s/ 100 ns

6.2.21.5 Q Probe

Accesses the probe setup parameters for the Q channel. See "Combined Differential/Input Z (Remote Command Only)" on page 2624.

Dependencies	Only appears when I/Q is the selected input

Attenuation

The attenuation is part of the calibration data stored with the probe type and is initially the value that was returned by the last calibration. You can modify this value and any changes will be stored with the calibration data and will survive power cycles and presets. When a probe calibration is performed the attenuation value will be overwritten by the calibration.

Remote Command	`[:SENSe]:CORRection:IQ:Q:ATTenuation:RATio <real>` `[:SENSe]:CORRection:IQ:Q:ATTenuation:RATio?`
Example	Set the attenuation for the current Q probe to 100.00:1: `:CORR:IQ:Q:ATT:RAT 100`
Notes	Each probe type has its own attenuation setting. As probes are changed the attenuation value will reflect the new probe's setting. Changing the attenuation affects only the current probe type's setting and leaves all others unchanged When the IQ Path is I+jQ, the Q probe attenuation setting must match the I Probe attenuation setting within 1 dB. If this is not the case, an error condition message is generated, 159; Settings Alert; I/Q mismatch: Attenuation

Preset	Each probe type has its own default. The default for the "Unknown" probe type is 1:1
State Saved	Saved with probe calibration data. Survives a power cycle and is not affected by Preset or Restore
Min/Max	0.001/10000

This is an alternate form of the SCPI command that allows input as a power instead of a ratio.

Remote Command	`[:SENSe]:CORRection:IQ:Q:ATTenuation <rel_ampl>` `[:SENSe]:CORRection:IQ:Q:ATTenuation?`
Example	Set the attenuation for the current Q probe type to 100.00:1: `:CORR:IQ:Q:ATT 20 dB`
Min/Max	-60 dB /+80 dB

Offset

Some active probes have DC offset capability. When one of these probes is connected this control will be visible. The signal is adjusted for the DC offset before entering the instrument's port. This allows for removal of a DC offset before reaching the instrument's input port voltage limits. For example, a signal that varies 1 V peak-to-peak with a DC offset equal to the instrument's max input voltage would exceed the input limits of the instrument for half its cycle. Removing the DC offset allows the instrument to correctly process the entire signal.

Remote Command	`:INPut:OFFSet:Q <voltage>` `:INPut:OFFSet:Q?`
Example	Remove a DC offset of -0.5 V from the Q channel input: `:INP:OFFS:Q -0.5`
Notes	Only some probe types support **Offset**. For those that do, each probe type has its own **Offset** setting. As probes are changed, the **Offset** value will reflect the new probe's setting. Changing **Offset** affects only the current probe type's setting and leaves all others unchanged
Preset	0 V
State Saved	Saved with probe calibration data. Survives power cycle and is not affected by Preset or Restore
Min/Max	-18 V/+18 V

Coupling

Some probe types allow coupling to reject low frequencies. This filters out the DC component of a signal that is composed of a DC bias plus some AC signal. This control is visible only for probe types that have this capability.

Remote Command	`:INPut:COUPling:Q DC | LFR1 | LFR2` `:INPut:COUPling:Q?`

Example	Turn off low frequency rejection on the Q channel, allowing signals down to DC:
	`:INP:COUP:Q DC`
	Turn on low frequency rejection on the Q channel for frequencies lower than 1.7 Hz:
	`:INP:COUP:Q LFR1`
	Turn on low frequency rejection on the Q channel for frequencies lower than 0.14 Hz:
	`:INP:COUP:Q LFR2`

Notes	Only some probe types support **Coupling**. For those that do, each probe type has its own **Coupling** setting. As probes are changed, the **Coupling** value will reflect the new probe's setting. Changing **Coupling** affects only the current probe type's setting and leaves all others unchanged
Preset	`DC`
State Saved	Saved with probe calibration data. Survives a power cycle and is not affected by a Preset or Restore
Range	DC | AC 1.7 Hz LFR1 | AC 0.14 Hz LFR2

Clear Calibration

Clears the calibration data for the current port and probe. It does not clear the data for other probe types or other ports. If the sensed probe has EEPROM identification, only the data for that specific probe is cleared. After this command has completed, the probe calibration state will be the same as if no probe calibration had ever been performed for the specified channel and probe. The probe attenuation will be the default value for that probe type and the Cable Calibration frequency response corrections will be used. This command is dependent on the Differential Input state. When Differential Input is on, both the data for the probe attached to the main port and the data for the probe attached to the complementary port are cleared. When Differential Input is off, only data for the probe attached to the main port is cleared.

Remote Command	`:CALibration:IQ:PROBe:Q:CLEar`
Example	Clear the calibration data for the Q channel and the current probe (with EEPROM identification) or probe type (without EEPROM identification): `:CAL:IQ:PROBe:I:CLE`

6.2.21.6 Calibrate

Invokes the guided probe calibration. The guided probe calibration is context sensitive and depends on the channel (I or Q) and the Differential Input state. The calibration is only performed on the selected channel. When the Differential control is switched to Differential, both the probe attached to the main port and the probe attached to the complementary port are calibrated. When the Differential control is switched to Single Ended, only the probe attached to the main port is calibrated.

The I/Q Isolation Calibration must be run before calibrating any port with either the I/Q Cable Calibration or I/Q Probe Calibration. See "I/Q Isolation Calibration" on page 2628

Q Port

The Q port calibration is performed with the probe body attached to the front panel's Q port and the probe tip connected via an adapter to the Cal Out port. The guided calibration will show a diagram of the required connections.

Remote Command	`:CALibration:IQ:PROBe:Q`
Example	`:CAL:IQ:PROB:Q`
Notes	The Q port must be connected to the Cal Out port before issuing the command The calibration data is saved as soon as the port is calibrated and survives power cycles. It is not reset by any preset or restore data commands
State Saved	No

Q Port Probe Calibration Time (Remote Query Only)

Return the last date and time that the I/Q Probe Calibration was performed for a specific port.

Remote Command	`:CALibration:IQ:PROBe:Q:TIME?`
Example	`:CAL:IQ:PROB:Q:TIME?`
Notes	Returns 6 integer values: year, month, day, hour, minute, second. When no calibration has been performed, all values are 0. The value is specific to both the port and probe, so the value will change as probes are connected or disconnected
Annunciation	Guided Calibration, Probe Calibration, Last Calibration

Q-bar Port

The Q-bar port calibration is performed with the probe body attached to the front panel's Q-bar port and the probe tip connected via an adapter to the Cal Out port. The Q-bar probe calibration is only available for passive probes with Differential On. The guided calibration will show a diagram of the required connections.

Remote Command	`:CALibration:IQ:PROBe:QBar`
Example	`:CAL:IQ:PROB:QB`
Notes	The Q-bar port must be connected to the Cal Out port before issuing the command

	The calibration data is saved as soon as the port is calibrated and will survive power cycles. It is not reset by any preset or restore data commands
State Saved	No

Q-bar Probe Calibration Time (Remote Query Only)

Return the last date and time that the I/Q Probe Calibration was performed for a specific port.

Remote Command	`:CALibration:IQ:PROBe:QBAR:TIME?`
Example	`:CAL:IQ:PROB:QBAR:TIME?`
Notes	Returns 6 integer values: year, month, day, hour, minute, second. When no calibration has been performed, all values are 0. The value is specific to both the port and probe, so the value will change as probes are connected or disconnected
Annunciation	Guided Calibration, Probe Calibration, Last Calibration

6.2.22 I/Q Cable Calibrate

The I/Q cable calibration creates correction data for each of the front panel I/Q ports. This calibration data is used whenever no probe specific calibration data is available. It is important that all ports are calibrated using the same short BNC cable so that the data is comparable from port to port.

The guided calibration (front panel only) will show connection diagrams and guide you through the isolation calibration and calibrating each port. The calibration data for each port is stored separately, so as soon as a port is calibrated that data is saved and will be used. If you press "Exit" to exit the calibration process, the data for the ports already completed will still be used. It is recommended that a calibration be completed once started, or if exited, that it be properly done before the next use of the I/Q ports. The "Next" button will perform the calibration for the current port and then proceed to the next step in the calibration procedure. The "Back" button will return to the prior port in the procedure. Both keys and dialog buttons are supplied for ease of use. The dialog buttons are for mouse use and the softkeys for front panel use.

The calibration can also be done via SCPI, but no connection diagrams will be shown. You will have to make the correct connections before issuing each port calibration command. Again, it is recommended that all ports be calibrated at the same time.

The instrument state remains as it was prior to entering the calibration procedure except while a port is actually being calibrated. Once a port is calibrated it returns to the prior state. A port calibration is in process only from the time the "Next" button is pressed until the next screen is shown. For SCPI, this corresponds to the time from issuing the CAL:IQ:FLAT:I|IB|Q|QB command until the operation is complete.

For example, if the prior instrument state is Cal Out = Off, Input = I+jQ, and Differential = Off, then up until the time the "Next" button is pressed the I Input and Q Input LEDs are on and the Cal Out, I-bar Input and Q-bar Input LEDs are off. Once the "Next" button is pressed for the I port calibration, only the Cal Out and I Input LEDs will be on and the others will be off. When the screen progresses to the next step ("Next" button again enabled), the prior state is restored and only the I Input and Q Input LEDs are on (Cal Out is off again).

The last calibration date and time for each port will be displayed. Any calibrations that are more than a day older than the most recent calibration will be displayed with the color amber.

The I/Q Isolation Calibration must be run before calibrating any port with either the I/Q Cable Calibration or I/Q Probe Calibration. See "I/Q Isolation Calibration" on page 2628

Dependencies	Only appears when I/Q is the selected input

6.2.22.1 I Port

The I port calibration is performed with the front panel's I port connected via a short BNC cable to the Cal Out port. The guided calibration will show a diagram of the required connections.

Remote Command	`:CALibration:IQ:FLATness:I`
Example	`:CAL:IQ:FLAT:I`
Notes	The recommended procedure is to use the same BNC cable to calibrate all I/Q ports. All I/Q ports should be calibrated sequentially during the procedure The calibration data is saved as soon as the port is calibrated and will survive power cycles. It is not reset by any preset or restore data commands The I port must be connected to the Cal Out port before issuing the command
State Saved	No

6.2.22.2 I-bar Port

The I-bar port calibration is performed with the front panel's I-bar port connected via a short BNC cable to the Cal Out port. The guided calibration will show a diagram of the required connections.

Remote Command	`:CALibration:IQ:FLATness:IBAR`

Example	`:CAL:IQ:FLAT:IBAR`
Notes	The recommended procedure is to use the same BNC cable to calibrate all I/Q ports. All I/Q ports should be calibrated sequentially during the procedure The calibration data is saved as soon as the port is calibrated and will survive power cycles. It is not reset by any preset or restore data commands The I-bar port must be connected to the Cal Out port before issuing the command
State Saved	No

6.2.22.3 Q Port

The Q port calibration is performed with the front panel's Q port connected via a short BNC cable to the Cal Out port. The guided calibration will show a diagram of the required connections.

Remote Command	`:CALibration:IQ:FLATness:Q`
Example	`:CAL:IQ:FLAT:Q`
Notes	The recommended procedure is to use the same BNC cable to calibrate all I/Q ports. All I/Q ports should be calibrated sequentially during the procedure The calibration data is saved as soon as the port is calibrated and will survive power cycles. It is not reset by any preset or restore data commands The Q port must be connected to the Cal Out port before issuing the command
State Saved	No

6.2.22.4 Q-bar Port

The Q-bar port calibration is performed with the front panel's Q-bar port connected via a short BNC cable to the Cal Out port. The guided calibration will show a diagram of the required connections.

Remote Command	`:CALibration:IQ:FLATness:QBAR`
Example	`:CAL:IQ:FLAT:QBAR`
Notes	The recommended procedure is to use the same BNC cable to calibrate all I/Q ports. All I/Q ports should be calibrated sequentially during the procedure The calibration data is saved as soon as the port is calibrated and will survive power cycles. It is not reset by any preset or restore data commands The Q-bar port must be connected to the Cal Out port before issuing the command
State Saved	No

6.2.22.5 I/Q Cable Calibration Time (Remote Query Only)

Returns the last date and time that the I/Q Cable Calibration was performed for a specific port.

Remote Command	`:CALibration:IQ:FLATness:I|IBAR|Q|QBAR:TIME?`
Example	`:CAL:IQ:FLAT:I:TIME?`
Notes	Returns 6 integer values: year, month, day, hour, minute, second. When no calibration has been performed, all values are 0
Annunciation	Guided Calibration, Cable Calibration, Last Calibration

6.2.23 Audio Input Channel

Determines which Audio Input to be used for audio measurements.

Remote Command	`[:SENSe]:FEED:AFINput:PORT CH1 | CH2` `[:SENSe]:FEED:AFINput:PORT?`
Example	`:FEED:AFIN CH1`
Dependencies	Only appears in Radio Test Mode Only appears in modular products, and only if an M9260A Audio Analyzer module is installed
Preset	Unaffected by Mode Preset, but set to Channel 1 by **Input/Output Preset**

6.2.24 Audio Calibrator

Lets you turn on the internal calibrator in the X-Series Audio board.

Remote Command	`[:SENSe]:FEED:AFALign OFF | REF10` `[:SENSe]:FEED:AFALign?`
Example	`:FEED:AFAL REF10`
Dependencies	Only appears in Measuring Receiver Mode’s Audio Measurements when Option 107 is present
Preset	`OFF`

6.2.25 Audio Coupling

Lets you set AC or DC coupling for the currently selected audio input.

Remote Command	`[:SENSe]:AFINput[1]|2:COUPling AC | DC` `[:SENSe]:AFINput[1]|2:COUPling?`

Example	`:AFIN:COUP AC`
Dependencies	Only appears in Measuring Receiver Mode and Radio Test Mode In Measuring Receiver Mode, only appear in Audio Measurements, and only if Option 107 is present In Radio Test Mode, only appears in modular products, and only if an M9260A Audio Analyzer module is installed
Preset	`AC`

6.2.26 Audio Input Ground

Lets you float or ground the low side of the currently selected audio input channel. When you choose `FLOat`, the low side of the input is disconnected from ground.

Remote Command	`[:SENSe]:AFINput[1]|2:LOW FLOat | GROund` `[:SENSe]:AFINput[1]|2:LOW?`
Example	`:AFIN2:LOW FLO`
Dependencies	Only appears in Radio Test Mode Only appears in modular products, and only if an M9260A Audio Analyzer module is installed
Preset	Unaffected by Mode Preset, but set to `GROund` by **Input/Output Preset**

6.2.27 Audio In Impedance

Lets you set the Impedance of the currently selected audio input channel.

The value you enter is rounded up to the nearest allowed value.

Remote Command	`[:SENSe]:AFINput[1]|2:IMPedance 50 | 600 | 1000000` `[:SENSe]:AFINput[1]|2:IMPedance?`
Example	`:AFIN:IMP 50`
Dependencies	Only appears in Radio Test Mode Only appears in modular products, and only if an M9260A Audio Analyzer module is installed
Preset	Unaffected by Mode Preset, but set to 600 by **Input/Output Preset**

6.2.28 Input/Output Preset

Resets the group of settings and data associated with the **Input/Output** front-panel key to their default values. These settings are not affected by **Mode Preset** because they are generally associated with connections to the instrument, which you generally would not want to reset every time you press **Mode Preset**.

This is the same as the control in the **Preset** dropdown, and also the same as **Input/Output** button in the **Restore Defaults** menu under **System**.

All the variables set under the **Input/Output** front panel key are reset by **Input/Output Preset**, including Amplitude Corrections and Data (described in the **Corrections** section), with the exception of RF Source settings, which are unaffected.

By using **Input/Output Preset** and **Restore Mode Defaults**, a full preset of the current mode will be performed, with the caveat that since **Input/Output Preset** is a global function it will affect *all* Modes.

When **Input/Output Preset** is selected, a message appears saying:

“This will reset all of the Input/Output variables to their default state, including which input is selected, all Amplitude Correction settings and data, all External Mixing settings, all Frequency Reference settings and all Output settings.

It will not affect Alignment data or settings.

It will not affect RF Source settings.

This action cannot be undone. Do you want to proceed?”

Use the **OK** or **Cancel** buttons to affirm or cancel the operation.

Example	`:SYST:DEF INP` presets all Input/Output variables to their factory default values

6.3 External Gain

Contains controls that allow you to compensate for gain or loss in the measurement system outside the instrument. The External Gain is subtracted from the amplitude readout (or the loss is added to the amplitude readout). So, the displayed signal level represents the signal level at the output of the device-under-test, which can be the input of an external device that provides gain or loss.

Entering an External Gain value does not affect the Reference Level, therefore the trace position on screen changes, as do all of the values represented by the trace data. Thus, the values of exported trace data, queried trace data, marker amplitudes, trace data used in calculations such as N dB points, trace math, peak threshold, etc., are all affected by External Gain. Changing the External Gain, even on a trace that is not updating, immediately changes all of the above, without new data needing to be taken.

NOTE

Changing the External Gain causes the instrument to immediately stop the current sweep and prepare to begin a new sweep. The data will not change until the trace data updates because the offset is applied to the data as it is taken. If a trace is exported with a nonzero External Gain, the exported data will contain the trace data with the offset applied.

In Spectrum Analyzer Mode, a Preamp is the common external device providing gain or loss. In a measurement application mode like GSM or W-CDMA, the gain or loss could be from a BTS (Base Transceiver Station) or an MS (Mobile Station). So, in the Spectrum Analyzer mode MS and BTS would be grayed out and the only choice would be Ext Preamp. Similarly, in some of the digital communications applications, Ext Preamp will be grayed out and you would have a choice of MS or BTS.

The Ext Preamp, MS, and BS controls may be grayed-out depending on which measurement is currently selected. If any of the grayed-out controls are pressed, or the equivalent SCPI command is sent, an advisory message is generated.

6.3.1 External Preamp

This function is similar to the reference level offset function. Both affect the displayed signal level. Ref Lvl Offset is a mathematical offset only, no instrument configuration is affected. Ext Preamp gain is used when determining the auto-coupled value of the Attenuator. The External Gain value and the Maximum Mixer Level settings are both part of the automatic setting equation for the RF attenuation setting. (10 dB of Attenuation is added for every 10 dB of External Gain.)

Note that the Ref Lvl Offset and Maximum Mixer Level are described in the Amplitude section. They are reset by Mode Preset. The External Preamp Gain is reset by the "Restore Input/Output Defaults" or "Restore System Defaults->All functions.

The Swept SA Measurement in SA Mode only supports the “Ext Preamp” function under External Gain. The other External Gain functions are grayed-out, and generate a settings conflict, if the SCPI for them is sent.

See "More Information" on page 2644

Remote Command	`[:SENSe]:CORRection:SA[:RF]:GAIN <rel_ampl>` `[:SENSe]:CORRection:SA[:RF]:GAIN?`

Example	Set the Ext Gain value to 10 dB:
	`:CORR:SA:GAIN 10`
	Set the Ext Gain value to -10 dB (that is, an attenuation of 10 dB):
	`:CORR:SA:GAIN -10`

Notes	Does not auto return This command is new in X-Series
Dependencies	The reference level limits are determined in part by the External Gain/Atten, Max Mixer Level, and RF Atten Grayed-out in Modes that do not support External Gain
Preset	Unaffected by Preset, but set to 0 dB by **Restore Input/Output Defaults** or **Restore System Defaults->All** 0.00 dB, Gain
State Saved	Saved in instrument state
Min	-120 dB
Max	120 dB
Annotation	Displayed in the Meas Bar as "Ext Gain <value>". When the gain is zero, no annotation is shown
Backwards Compatibility SCPI	`[:SENSe]:CORRection:OFFSet[:MAGNitude]` The legacy **Ext Preamp Gain** key is now called **Ext Gain** and the sub-menu has choices of Ext Preamp | MS | BTS for backwards compatibility The MS and BTS choices are unavailable in Swept SA and the Ext Preamp is unavailable in the cell comms measurements

More Information

The U7227A USB Preamplifier is an accessory for the X-Series Signal Analyzer that provides gain externally, and whose gain settings are automatically loaded into the instrument over USB whenever it is connected to one of the instrument’s USB ports.

While the USB Preamplifier is plugged into one of the instrument’s USB ports, the instrument will consider it to be in the signal path of the RF Input and will apply the calibration data from the USB Preamp to measurements taken at the RF Input (on 2 input boxes, it will be considered to be in the signal path of RF Input 1; it is not supported for RF Input 2).

The USB Preamplifier contains its own cal data. This includes a noise trace suitable for use with NFE, for those models which support NFE. The act of connecting the Preamp to USB will cause the cal data to be downloaded from the preamp. When this happens, an informational message is provided saying “Cal data loaded from USB Preamp”. The instrument will then automatically apply the calibration factors loaded from the Preamp in any measurement that supports the USB Preamp.

The External Preamp Gain setting may still be used, even though it is not required for the USB Preamp (since the USB Preamp supplies its own gain data to the instrument which is applied automatically). Connecting the USB Preamp does not change the External Preamp Gain setting, however unless you have another gain or attenuation element in the signal path, the appropriate setting for External Preamp Gain is 0 dB.

Overload detection and reporting will apply when the USB preamplifier is connected to USB. The USB Preamplifier has its own overload detector which reports overloads to the instrument over USB. This generates an error condition, “Input Overload; USB Preamp.”

If, while the USB Preamp is connected to USB, a measurement is selected that does not support the USB preamplifier, the "No result; Meas invalid with Preamp" error condition is generated.

6.3.2 External Gain - MS

Sets an external gain/attenuation value for MS (Mobile Station) tests.

Remote Command	`[:SENSe]:CORRection:MS[:RF]:GAIN <rel_ampl>` `[:SENSe]:CORRection:MS[:RF]:GAIN?`

Example	Set the Ext Gain value to 10 dB:
	`:CORR:MS:GAIN 10`
	Set the Ext Gain value to -10 dB (that is, a loss of 10 dB):
	`:CORR:MS:GAIN -10`

Notes	Does not auto return
Dependencies	The reference level limits are determined in part by the External Gain, Max Mixer Level, RF Atten Grayed-out in modes that do not support MS
Preset	Unaffected by Preset, but set to 0 dB by **Restore Input/Output Defaults** or **Restore System Defaults->All** 0.00 dB, Gain
State Saved	Saved in instrument state

Min	-100 dB
Max	100 dB

Backwards Compatibility SCPI

Example	Set the Ext Gain value to -10 dB, and subsequently querying :LOSS will give 10 dB:
	`:CORR:MS:LOSS 10`
	Set the Ext Gain value to 10 dB. Subsequently querying `:LOSS` will return -10 dB:
	`:CORR:MS:LOSS -10`

Notes	A positive value of `<rel_ampl>` in the above command means a loss and a negative value indicates a gain If `:LOSS` is set, `:GAIN` is set to the negative value of the parameter sent If `:LOSS` is queried, it returns the negative of `:GAIN`
Preset	Unaffected by Preset, but set to 0 dB by **Restore Input/Output Defaults** or **Restore System Defaults->All**
Min/Max	–/+100 dB
Backwards Compatibility SCPI	`[:SENSe]:CORRection:MS[:RF]:LOSS <rel_ampl>` `[:SENSe]:CORRection:MS[:RF]:LOSS?`

6.3.3 External Gain - BTS

Sets an external attenuation value for BTS (Base Transceiver Station) tests.

Remote Command	`[:SENSe]:CORRection:BTS[:RF]:GAIN <rel_ampl>` `[:SENSe]:CORRection:BTS[:RF]:GAIN?`

Example	Set the Ext Gain value to 10 dB:
	`:CORR:BTS:GAIN 10`
	Set the Ext Gain value to -10 dB (that is, a loss of 10 dB):
	`:CORR:BTS:GAIN -10`

Notes	Does not auto return
Dependencies	The reference level limits are determined in part by the External Gain, Max Mixer Level, RF Atten Grayed-out in modes that do not support BTS
Preset	Unaffected by Preset, but set to 0 dB by **Restore Input/Output Defaults** or **Restore System Defaults->All** 0.00 dB, Gain
State Saved	Saved in instrument state
Min	-100 dB
Max	100 dB

Backwards Compatibility SCPI

Example	Set the Ext Gain value to -10 dB, and subsequently querying :LOSS will give 10 dB:
	`:CORR:BTS:LOSS 10`
	Set the Ext Gain value to 10 dB. Subsequently querying `:LOSS` will return -10 dB:
	`:CORR:BTS:LOSS -10`

Notes	A positive value of `<rel_ampl>` in the above command means a loss and a negative value indicates a gain If `:LOSS` is set, `:GAIN` is set to the negative value of the parameter sent If `:LOSS` is queried, it returns the negative of `:GAIN`
Preset	Unaffected by Preset, but set to 0 dB by **Restore Input/Output Defaults** or **Restore System Defaults->All**
Min/Max	–/+100 dB
Backwards Compatibility SCPI	`[:SENSe]:CORRection:BTS[:RF]:LOSS <rel_ampl>` `[:SENSe]:CORRection:BTS[:RF]:LOSS?`

6.3.4 I Ext Gain

Affects the I channel input. However, when Q Gain in I+jQ is set to Same as I Gain, this value is applied to both I and Q channel inputs.

Remote Command	`[:SENSe]:CORRection:IQ:I:GAIN <rel_ampl>` `[:SENSe]:CORRection:IQ:I:GAIN?`

Example	Set the I Ext Gain to 10 dB:
	`:CORR:IQ:I:GAIN 10`
	Set the I Ext Gain to -10 dB (that is, a loss of 10 dB):
	`:CORR:IQ:I:GAIN -10`

Dependencies	Not available unless option BBA is installed Grayed-out when I/Q Path is Q Only
Preset	0 dB Unaffected by Preset, but set to 0 dB by **Restore Input/Output Defaults** or **Restore System Defaults->All**
State Saved	Yes
Min/Max	–/+100 dB
Annotation	Ext Gain: <I Ext Gain> dB No annotation is shown when Input is not I/Q. Also not shown when I Ext Gain is 0.00 dB. I Ext Gain is not shown for Input Path Q Only. When the Input Path is Independent I and Q and I Ext Gain is not the same as Q Ext Gain, both are shown. "Ext Gain: <I Ext Gain> dB, <Q Ext Gain> dB"

6.3.5 Q Ext Gain

Affects the Q channel input.

Remote Command	`[:SENSe]:CORRection:IQ:Q:GAIN <rel_ampl>` `[:SENSe]:CORRection:IQ:Q:GAIN?`

Example	Set the Q Ext Gain to 10 dB:
	`:CORR:IQ:Q:GAIN 10`
	Set the Q Ext Gain to -10 dB (that is, a loss of 10 dB):
	`:CORR:IQ:Q:GAIN -10`

Dependencies	Not available unless option BBA is installed Grayed-out when Q gain in I+jQ is set to Same as I Gain
Preset	0 dB Unaffected by Preset, but set to 0 dB by **Restore Input/Output Defaults** or **Restore System Defaults->All**
State Saved	Saved in instrument state
Min/Max	–/+100 dB
Annotation	Ext Gain: <Q Ext Gain> dB No annotation is shown when Input is not I/Q. Also not shown when Q Ext Gain is 0.00 dB. Q Ext Gain is not shown for Input Path I Only or I+jQ. When Input Path is Independent I and Q and when I and Q Ext Gain are both non-zero but are the same the annotation will be "Ext Gain: <Ext Gain> dB" and when I Ext Gain is not the same as Q Ext Gain, both are shown. "Ext Gain: <I Ext Gain> dB, <Q Ext Gain> dB"

6.3.6 Q Gain in I+jQ

When Same as I Gain (`ON`) is selected, I Ext Gain value is applied to both I and Q channel input if the Input Path is I+jQ.

When Independent (`OFF`) is selected, I and Q Ext Gain values are applied to I and Q channel input independently.

Remote Command	`[:SENSe]:CORRection:IQ:Q:GAIN:COUPle ON | OFF | 0 | 1` `[:SENSe]:CORRection:IQ:Q:GAIN:COUPle?`
Example	`:CORR:IQ:Q:GAIN:COUP ON` `:CORR:IQ:Q:GAIN:COUP?`
Preset	`ON`
State Saved	Yes
Range	Same as I Gain | Independent

6.4 Data Source

Contains controls that let you select the source of the data being fed to the instrument analysis engine.

The ability to Save and Record files of I/Q data is an important feature of some X-Series applications, and the Data Source controls allow you to switch back and forth from actual data at the instrument input and recorded data from a File.

In addition, some measurements allow you to retain a single measurement record in a Capture Buffer, and some measurements allow you to retain a specified length data record internally in a Recorded data area.

So, for measurements that support it, the controls on this tab allow you to select data from the instrument inputs, a recalled recording File, the Capture Buffer, or the Recorded data area. For measurements that do not support these features, the **Data Source** tab does not appear, and if `:FEED:DATA SCPI` is sent, an Undefined Header error is generated.

The available choices depend on which measurement you are running. All measurements support Input; Capture Buffer and File are only available in certain measurements, as shown in the table below. The choice of the internal Recorded data area is only available in Pulse Mode.

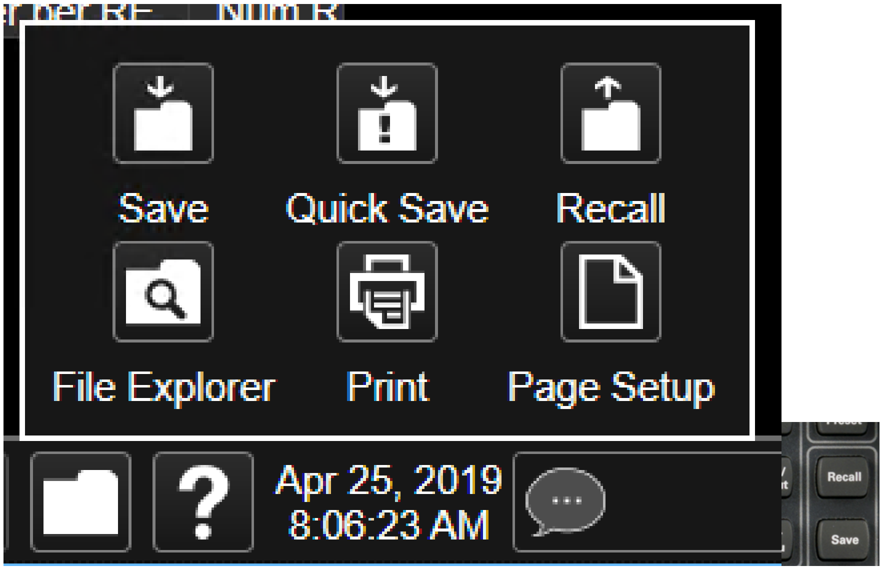
Measurement	Capture Buffer	File
WCDMA Code Domain	x	
WCDMA Mod Accuracy	x	
VMA Digital Demod		x
VMA Custom OFDM		x
5G NR Modulation Analysis		x
FDD LTE-A Modulation Analysis		x
TDD LTE-A Modulation Analysis		x
WLAN Modulation Analysis	x	x
WLAN Spectral Flatness		x
WLAN MIMO Modulation Analysis		x
Analog Demod AM		x
Analog Demod PM		x
Analog Demod FM		x
Analog Demod FM Stereo		x
Bluetooth Transmit Analysis	x	x
IoT & SRComms LoRa CSS Demod		x

How to Record and Playback I/Q Data

In several Demod measurements (and certain other measurements), it is possible to record I/Q data to files on your hard drive or network, and then recall these files for subsequent playback. These are the measurements shown in the table above with an “x” in the **File** column.

The Recording and Playback of signal data files is a multi-step process which involves controls in several menus (listed below).

Menus involved in Record/Playback:



- **Save**, **Recording** (under the **Save** hardkey or the **Save** icon in the **File** panel)
- **Recall**, **Recording** (under the **Recall** hardkey or the **Recall** icon in the **File** panel)
- **Sweep**, **Recording** tab
- **Sweep**, **Playback** tab
- **Input/Output**, **Data Source** tab (this tab)

Saving a Recording

When you save a recording, a certain number of measurement records are saved to a Recording file. The amount of data that is saved varies depending on the measurement and measurement settings. The following example uses VMA Digital Demod to illustrate the process.

If you press the **Recording** tab in the **Sweep** menu, you will see a certain number of parameters displayed on the menu panel. Before you save a Recording, these parameters are all 0, as shown below:

Input: RF Input
Coupling: AC
Align: Auto
Input Z: 50 Ω
Corrections: Off
Freq Ref: Int (S)
Atten: 10 dB (e0)
Preamp: Off
µW Path: Standard
Info BW: 5 MHz
Format: 16-QAM
Sym Rate: 1 MHz
Meas Intvl: 501 symbols
Equalizer: Off
CF: 1.000000000 GHz

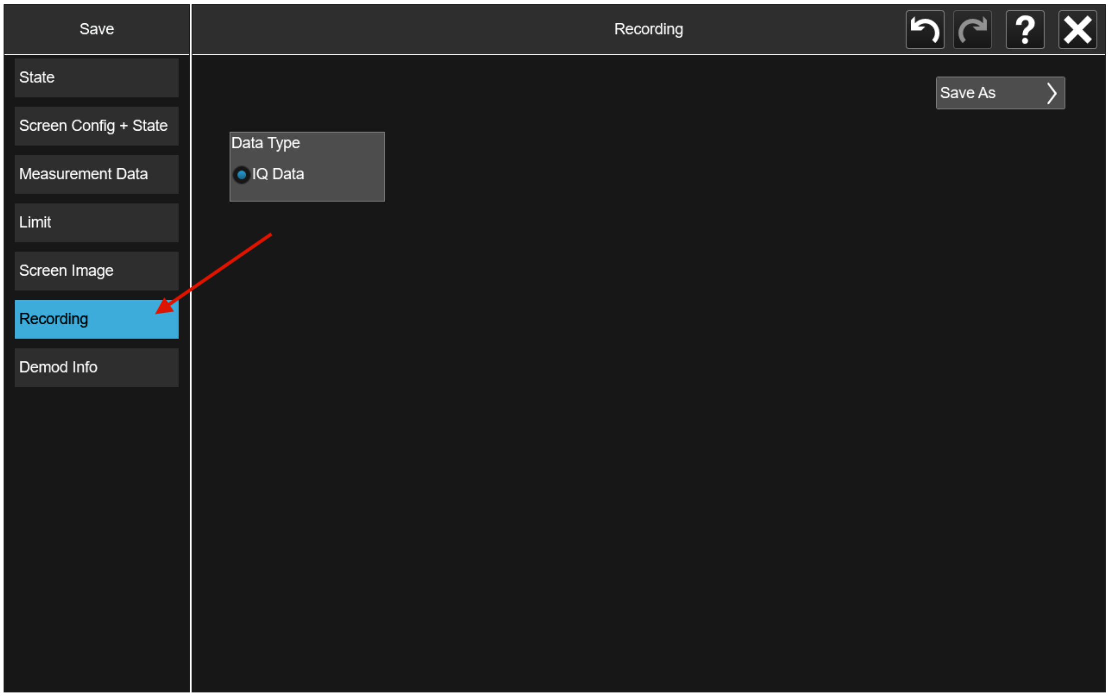
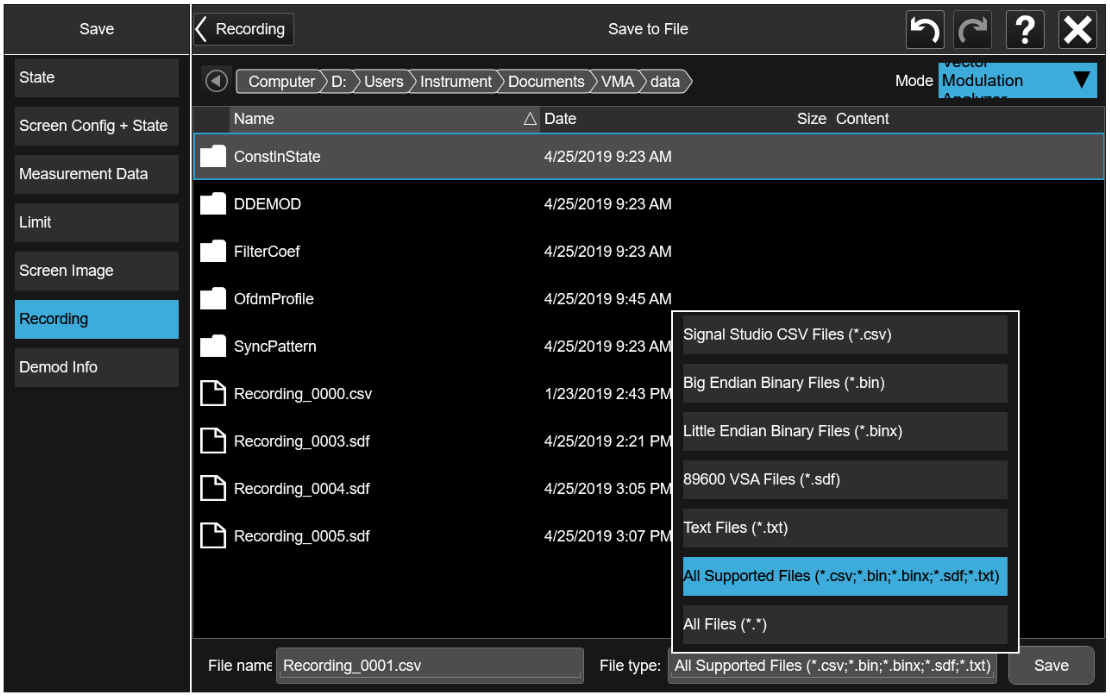
Apr 25, 2019
4:13:40 PM

To save the data for the current measurement, press the **Save** hardkey (or the **Save** icon in the **File** panel) and press the **Recording** tab on the left side of the **Save** panel:



Data Type
● IQ Data

Then press **Save As** and choose the file type you would like to use for the Save (`CSV`, `SDF`, `TXT`, `BIN`, `BINX`). You can find details of the file formats in **Save > Recording**.



Mode: Vector Modulation Analyzer

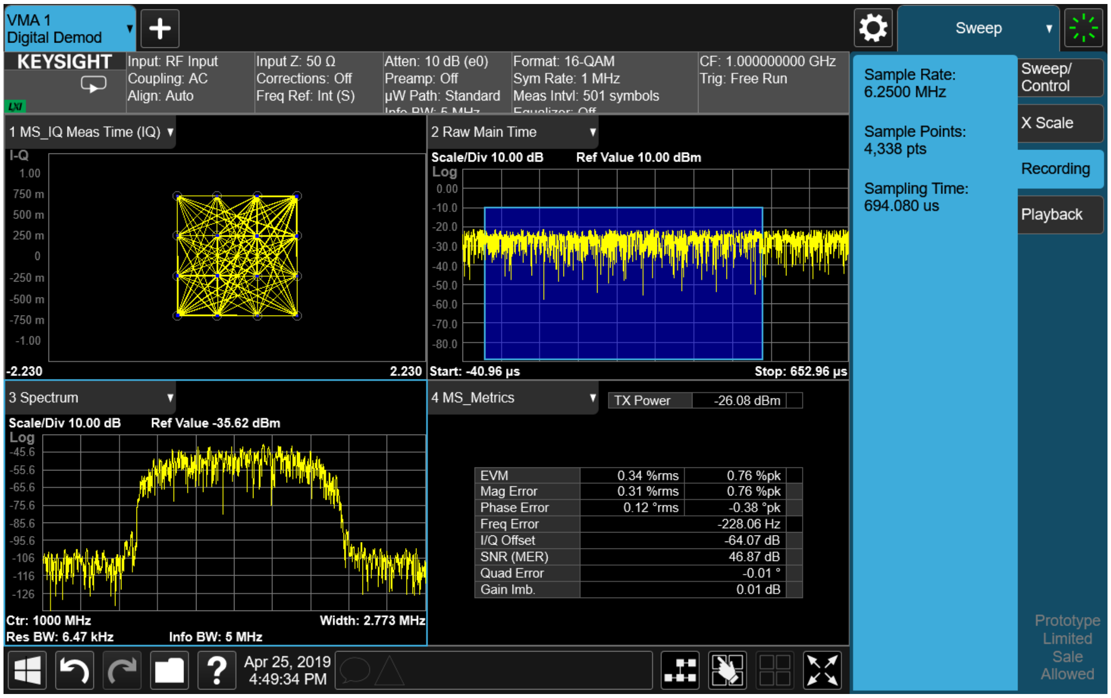
Name	Date	Size	Content
ConstInState	4/25/2019 9:23 AM		
DDEMOD	4/25/2019 9:23 AM		
FilterCoef	4/25/2019 9:23 AM		
OfdmProfile	4/25/2019 9:45 AM		
SyncPattern	4/25/2019 9:23 AM		
Recording_0000.csv	1/23/2019 2:43 PM		
Recording_0003.sdf	4/25/2019 2:21 PM		
Recording_0004.sdf	4/25/2019 3:05 PM		
Recording_0005.sdf	4/25/2019 3:07 PM		

File name: Recording_0001.csv

File type: All Supported Files (*.csv;*.bin;*.binx;*.sdf;*.txt)

Then press **Save** to save the raw I/Q data of the current measurement.

After the Save, you will see that the data on the Recording panel has changed to describe the data in the file you just saved. You should note this data in case you need to refer to it when you recall the file, particularly as not all file formats include the Sample Rate that was used to save the data. In particular, `BIN` and `BINX` files do not include sampling rate information inside the file, so after recalling one of these file types, you will need to set the Sample Rate manually in the **Sweep**, **Playback** menu.



Input: RF Input
Coupling: AC

Playback Start: 0.00 s
Sample Rate: 0.0000 Hz
Sample Points: 0 pts
Sampling Time: 0.0 s

Scale/Div 10.00 dB Ref Value 10.00 dBm
Start: -40.96 µs Stop: 652.96 µs

Scale/Div 10.00 dB Ref Value -35.62 dBm
Ctr: 1000 MHz Width: 2.773 MHz
Res BW: 6.47 kHz Info BW: 5 MHz

TX Power	-25.94 dBm	

EVM	0.26 %rms	0.65 %pk
Mag Error	0.21 %rms	0.65 %pk
Phase Error	0.13 °rms	-0.40 °pk
Freq Error		-228.24 Hz
I/Q Offset		-64.75 dB
SNR (MER)		49.07 dB
Quad Error		-0.01 °
Gain Imb.		0.01 dB

To recall a Recording, press the **Recall** hardkey (or the **Recall** icon in the **File** panel) and press the **Recording** tab on the left side of the **Recall** panel. Then press **Recall From** and choose the file you would like to recall. This will read the raw I/Q data from the specified file and feed it to the current measurement.

After the Recall, you will see that the data on the Recording panel has changed to describe the data in the file you just recalled:

VMA 1
Digital Demod

Input: RF Input
Coupling: AC
Align: Auto

Input Z: 50 Ω
Corrections: Off
Freq Ref: Int (S)

Atten: 10 dB (e0)
Preamp: Off
µW Path: Standard

Format: 16-QAM
Sym Rate: 1 MHz
Meas Intvl: 501 symbols

CF: 1.000000000 GHz
Trig: Free Run

Playback Start
0.00 s

Sample Rate
2.5000 MHz

Sample Points:
1,749 pts

Sampling Time:
699.600 us

TX Power -26.16 dBm

EVM	0.32 %rms	0.65 %pk
Mag Error	0.25 %rms	0.63 %pk
Phase Error	0.15 °rms	0.44 °pk
Freq Error		-155.63 Hz
I/Q Offset		-61.89 dB
SNR (MER)		47.61 dB
Quad Error		-0.01 °
Gain Imb.		0.01 dB

Apr 25, 2019
4:58:36 PM

Note that the **Sample Rate** key is grayed out if the file type you loaded contains Sample Rate information. `BIN` and `BINX` files do not include sampling rate information inside the file, so after recalling one of these file types, you will need to set the Sample Rate. You should have noted the Sample Rate that was displayed on the **Sweep**, **Recording** menu panel after you saved the file.

After the recall is performed, you will also see that the **Data Source** control has switched to **File**. You can see this on the **Data Source** menu panel, and also on the dropdown from the Measurement Bar on the far-left side of the instrument:

Input: RF Input
Coupling: AC
Align: Auto
Input Z: 50 Ω
Corrections: Off
Freq Ref: Int (S)
Atten: 10 dB (e0)
Preamp: Off
µW Path: Standard
Format: 16-QAM
Sym Rate: 1 MHz
Meas Intvl: 501 symbols
CF: 1.000000000 GHz
Trig: Free Run

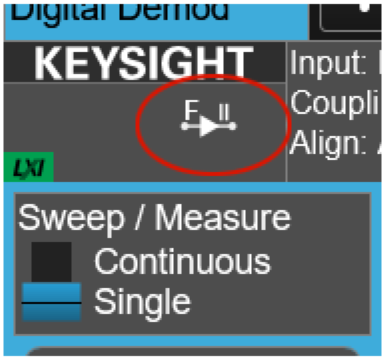
TX Power -26.16 dBm

EVM	0.32 %rms	0.65 %pk
Mag Error	0.25 %rms	0.63 %pk
Phase Error	0.15 °rms	0.44 °pk
Freq Error		-155.63 Hz
I/Q Offset		-61.89 dB
SNR (MER)		47.61 dB
Quad Error		-0.01 °
Gain Imb.		0.01 dB

You can also see that the control indicator on the measurement bar has an “F” in it and the playback symbol (right facing triangle) displayed:

This indicates that the instrument is in **Continuous Playback** mode and is using data from a File.

If you select **Single** in the control dropdown, the indicator will change to show that it is in **Single Pause** mode as below:



You can now examine data in the recorded file which you loaded. How you do this depends on whether you are in **Continuous Playback** mode or **Single Pause** mode.

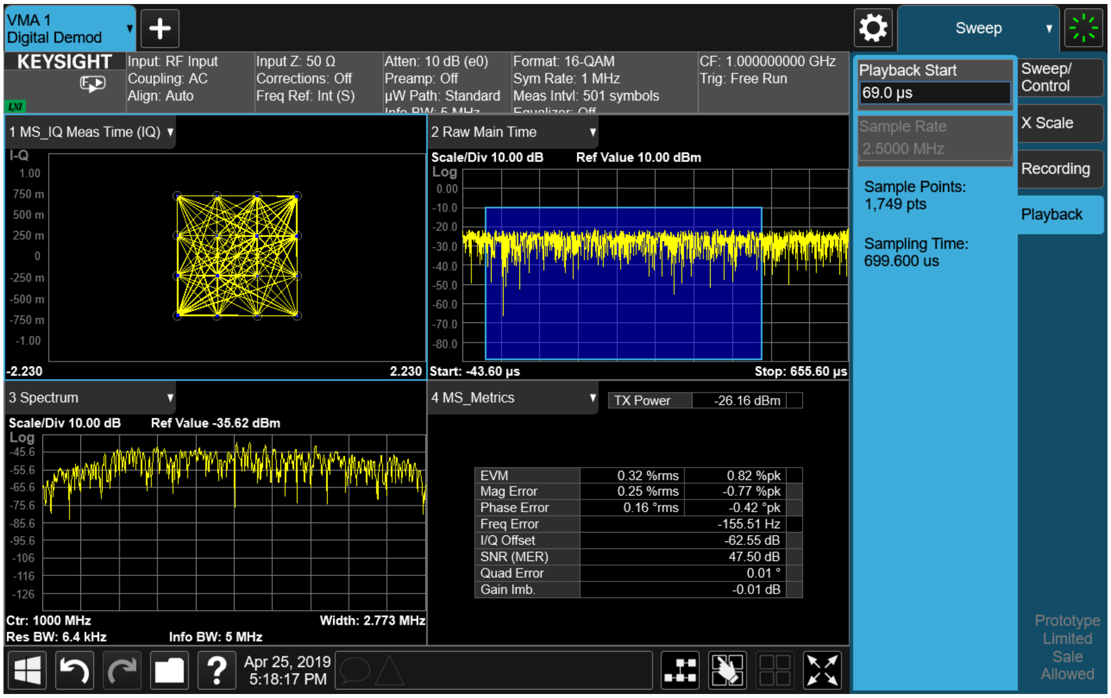
If you wish to return to looking at data at the instrument input, simply change the **Data Source** control from **File** back to **Input**.

Looking at your Recorded data

To examine the data you loaded, go to the **Playback** menu panel under **Sweep**. How you proceed from here depends on whether you are in **Continuous Playback** mode or **Single Pause** mode.

Continuous Playback mode

In this mode, turn the knob clockwise or use the **Up** key on the front panel to move through successive records in the recording. You will see the Playback Start control change from 0 to successively higher values as you move through the records.



VMA 1
Digital Demod

Input: RF Input
Coupling: AC
Align: Auto

Input Z: 50 Ω
Corrections: Off
Freq Ref: Int (S)

Atten: 10 dB (e0)
Preamp: Off
µW Path: Standard

Format: 16-QAM
Sym Rate: 1 MHz
Meas Intvl: 501 symbols

CF: 1.000000000 GHz
Trig: Free Run

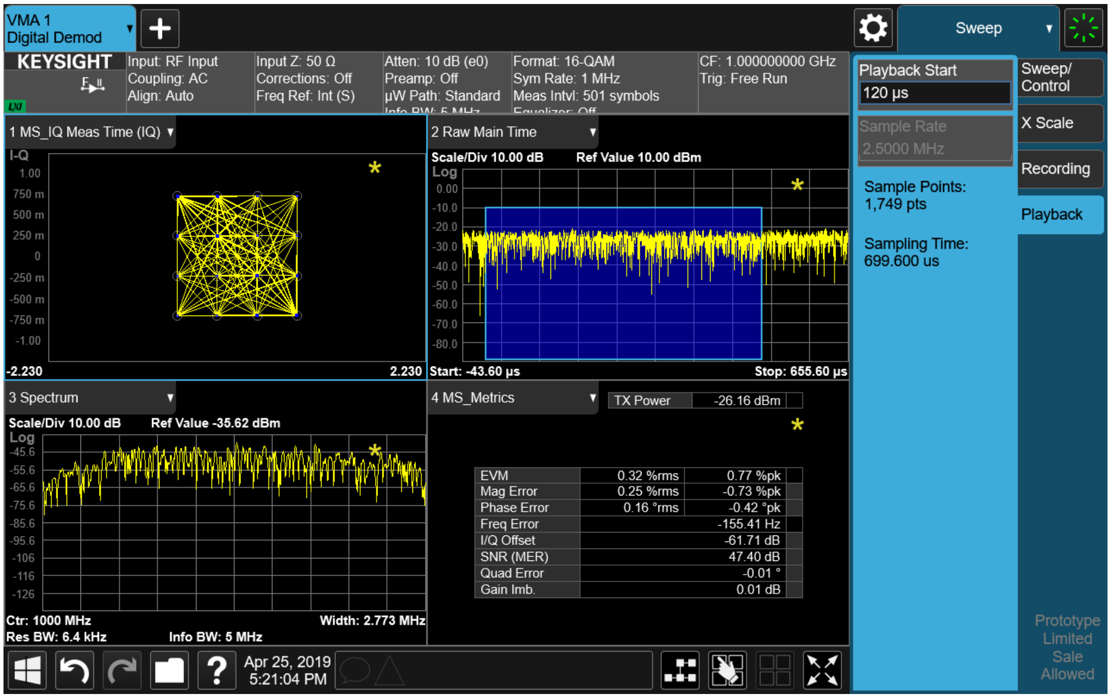
Playback Start: 69.0 µs
Sample Rate: 2.5000 MHz
Sample Points: 1,749 pts
Sampling Time: 699.600 us

TX Power	-26.16 dBm	
EVM	0.32 %rms	0.82 %pk
Mag Error	0.25 %rms	-0.77 %pk
Phase Error	0.16 °rms	-0.42 °pk
Freq Error		-155.51 Hz
I/Q Offset		-62.55 dB
SNR (MER)		47.50 dB
Quad Error		0.01 °
Gain Imb.		-0.01 dB

Single Pause mode

In this mode, you can only look at one record. Set the Playback Start time to the desired offset from zero and press **Restart**. A single record will be displayed.

Note that until you press **Restart**, the “invalid data” indicator (yellow asterisk) will be displayed in each window as below:



Input: RF Input
Coupling: AC
Align: Auto

Input Z: 50 Ω
Corrections: Off
Freq Ref: Int (S)

Atten: 10 dB (e0)
Preamp: Off
µW Path: Standard

Quad Error		0.01 °
Gain Imb.		-0.01 dB

Apr 25, 2019
5:21:40 PM

6.4.1 Data Source

Lets you select the input to the analysis engine. The following options are available:

Input	`INPut`	A hardware input signal (the default). This causes the measurement to take its input data from the hardware input (for example RF, I/Q, or EXTMixer) currently selected on the Input tab under Input/Output
Capture Buffer	`STORed`	Data stored in a storage buffer from a single earlier acquisition. Selecting "Capture Buffer" allows you to use data that has been previously stored using the "Current Meas -> Capture Buffer" control. You can make a measurement and then, if you want to make a different measurement using the exact same data, store the raw data using the "Current Meas -> Capture Buffer" control and select “Capture Buffer” as the Data Source, then switch to the other measurement. You must have previously done a "Current Meas -> Capture Buffer" before the Capture Buffer choice is available for use
Recorded	`RECorded`	Data recorded to memory from a set of earlier acquisitions. Selecting “Recorded” lets you use the record buffer, previously filled by using the “Recording” tab in the Sweep menu, as the input (only available in the Pulse measurement)
File	`FILE`	Data recorded on a storage device from a set of earlier acquisitions. If you load a Recording using Recording under the Recall key, “File” is automatically selected, which lets you use the recorded data as though it were coming from the Input

See "Data Source" on page 2649 for a table of available choices on a per-measurement basis.

Remote Command	`[:SENSe]:FEED:DATA INPut | STORed | RECorded | FILE` `[:SENSe]:FEED:DATA?`

Example	Cause the measurement to look at the input selection:
	`:FEED:DATA INP`
	Cause stored measurement data to be used with a different measurement that supports this:
	`:FEED:DATA STOR`

Dependencies	If you switch to a measurement that does not support the currently selected Data Source, the instrument switches Data Source to "Input". Attempting to select an unavailable Data Source via SCPI generates an error The Data Source setting is independent for each mode. Not all Data Sources are available in all modes
Preset	Unaffected by Preset, but set to `INPut` by **Restore Input/Output Defaults** or **Restore System Defaults->All**
State Saved	Saved in instrument state
Backwards Compatibility SCPI	`[:SENSe]:FEED:SOURce INPut | STORed` `[:SENSe]:FEED:SOURce?`

6.4.2 Current Meas -> Capture Buffer

Stores the raw data of one measurement in the internal memory of the instrument where it can then be used by a different measurement by pressing **Stored Data**. When raw data is stored, then the data source selection switch automatically changes to **Stored Data**. Stored raw data cannot be directly accessed. There is no save/recall function to save the raw data in an external media. If you want to get the stored raw data, you must first perform a measurement using the stored raw data. Now you can access the used raw data, which is the same as stored raw data, using the `:FETch` or `:READ` commands.

Remote Command	`[:SENSe]:FEED:DATA:STORe`
Example	`:FEED:DATA:STOR` stores recorded data
Notes	Command only; no query
Dependencies	Grayed-out in the SA measurement
Backwards Compatibility SCPI	`[:SENSe]:FEED:SOURce:STORe`

6.5 Corrections

Accesses the **Corrections** menu, which lets you select, turn on and off, and configure and edit Corrections. You can also select, turn on and off and configure Complex Corrections and Corrections Groups.

Corrections arrays provide Amplitude Corrections, and can be entered by the user, sent over SCPI, or loaded from a file. They allow you to correct the response of the instrument for various use cases. X-Series supports eight separate Corrections arrays, each of which can contain up to 2000 points. They can be turned on and off individually and any or all can be on at the same time. Corrections Groups let you load several (Amplitude) Corrections at a time into a Correction Group.

Complex Correction arrays provide both Amplitude and Phase Corrections, and can be loaded from a file. Currently the file type supported has the extension .s2p. Complex Corrections operate in much the same manner as Corrections - the X-series supports eight separate Complex Corrections arrays, each of which can contain up to 30000 points, and each Complex Correction can be turned on and off individually and any or all can be on at the same time. Some Modes, such as Spectrum Analyzer Mode, only support only the Amplitude (Magnitude) element of Complex Corrections. Other Modes, such as IQ Analyzer Mode and VMA, support both the Amplitude and Phase elements of Complex Corrections. If a Complex Correction is turned on in a Measurement that does not support Phase, only the Magnitude information will be used for the Correction.

Trace data is in absolute units and corrections data is in relative units. You can edit the Corrections arrays in the Corrections editor using the “Edit Correction” dialog (you cannot edit the Complex Corrections arrays; they can only be loaded from a file).

In zero span measurements (such as Zero Span in the Swept SA measurement), where the frequency is always the center frequency of the instrument, we apply the (interpolated) correction for the center frequency to all points in the trace. In the event where there are two correction amplitudes at the center frequency, we apply the first one in the table.

Note that the corrections are applied as the data is taken; therefore, a trace in **View** (Update Off) will not be affected by changes made to the corrections after the trace is put in **View**.

The **Corrections** tab only appears in Modes and Measurements that support Corrections and/or Complex Corrections. In other Modes, sending SCPI for Corrections and/or Complex Corrections will generate a Settings Conflict message

Corrections and Complex Corrections arrays are not affected by a Preset, because they are in the Input/Output system. They also survive shutdown and restarting of the instrument application, which means they will survive a power cycle. Corrections and Complex Corrections arrays are reset (deleted) by Restore Input/Output Defaults. The following commands delete the correction registers:

- User Preset the current mode `:SYST:PRES:USER`
- User Preset all modes `:SYST:PRES:USER ALL`
- Full mode preset `:SYST:PRES:FULL`
- Restore power on default `:SYST:DEF PON`
- Restore all defaults `:SYST:DEF`; `:SYST:DEF ALL`
- Preset Input/Output variables `:SYST:DEF INP`
- Delete all corrections `:CORR:CSET:ALL:DEL`

The instrument Save State and Save Screen Config + State includes the data in the correction registers. If a measurement setup is saved and then recalled at a later time, the correction data will be recalled as well. This feature is useful for recreating the full instrument condition, but the user has to be careful that the recalled correction data is the desired data. For example, if the state is recalled on a different instrument different correction data might be needed. Or if the system is recalibrated, the correction data in the save state would then be stale. Applications that use measured data for corrections will generally need to reload the correction data from file whenever a state is recalled; this ensures that the correction data is current and applies to hardware in use.

In the EXM and EXF, on the RF Input/Output panel, there are two full-duplex RF ports (RFIO1 and RFIO2), RF Input and RF Output. When RF Input is selected, it will correspond to one input port from two half-duplex RF ports (RFIO3 and RFIO4), and when RF Output is selected, it will correspond to one output port from two half-duplex RF ports (RFIO3 and RFIO4). So, there are 8 sets of corrections in all that can be applied to the RF ports. Ports cannot share the same set of corrections, but a single port can have multiple corrections applied to it. The correction data is applied to incoming signals as well as transmitted signals and is in the form of a list of spot frequencies and amplitude correction levels.

Annotation	In EMI Mode, you can choose to display the correction details in the graph area by turning on Display, Annotation, Correction Annotation

6.5.1 Select Correction

Specifies the selected correction. The term "selected correction" is used throughout this document to specify which correction will be affected by the functions.

Notes	The selected correction is remembered even when not in the correction menu
Preset	Set to Correction 1 by Restore Input/Output Defaults

6.5.2 Correction On/Off

Turning the Selected Correction from `OFF` to `ON` allows the values in it to be applied to the data. This state transition also automatically turns on "Apply Corrections" (sets it to `ON`), otherwise the correction would not take effect.

A new sweep is initiated if an amplitude correction is switched on or off. Note that changing, sending or loading corrections data does *not* directly initiate a sweep, however in general these operations will turn corrections on, which *does* initiate a sweep.

Remote Command	`[:SENSe]:CORRection:CSET[1]|2|…|16[:STATe] ON | OFF | 1 | 0` `[:SENSe]:CORRection:CSET[1]|2|…|16[:STATe]?`
Example	`:SENS:CORR:CSET1 ON`
Dependencies	Changing this from `OFF` to `ON` automatically turns on "Apply Corrections" Note that if any Correction is turned on that has a transducer unit set (other than “None”), the Y-Axis Unit of the instrument is forced to that Transducer Unit. All other Y-Axis Unit choices are grayed-out This command generates an “Option not available” error unless you have the proper option installed in your instrument
Preset	Not affected by Preset. Set to `OFF` by **Restore Input/Output Defaults**
State Saved	Saved in instrument state
Annotation	If *any* Correction is turned on, Corr in the Meas Bar displays in amber to indicate Corrections are in use
Backwards Compatibility Notes	Unlike legacy instruments, Preset does not turn Corrections off (**Restore Input/Output Defaults** does)

6.5.3 Correction Port

Maps one of the sets of corrections to a particular I/O port. This control allows any Input port (including External Mixing, BBIQ, the RF2 input, etc.) to be mapped to a specific Correction, so that the Correction is only applied when that Port is being used by the current Screen. You can also map any internal source Output port to a specific Correction.

When Current Input (CINPut) is selected for **Correction Port**, it chooses the current input port of the current Screen for the selected Correction. In other words, the Correction applies to whichever input is selected. If the input changes, the correction applies to the new input.

When using the VXT M9410A/11A with Remote Radio Heads (such as the Keysight M1740A mmWave Transceiver for 5G), the choices in the dropdown menu appear as :

Head h RFHD p

For example, if you have two Radio Heads (numbered 1 and 2), each of which have two RF half duplex ports, the choices for these ports appear as below:

Head and Port	Choice in dropdown	SCPI parameter
Head 1, port RF Tx/Rx 1	Head 1 RFHD 1	`RRH1RFHD1`
Head 1, port RF Tx/Rx 2	Head 1 RFHD 2	`RRH1RFHD2`
Head 2, port RF Tx/Rx 1	Head 2 RFHD 1	`RRH2RFHD1`
Head 2, port RF Tx/Rx 2	Head 2 RFHD 2	`RRH2RFHD2`

</table>

Parameter Options

Note that the presence of these ports is highly hardware dependent.

Correction Port	SCPI	Note
Current Input	`CINPut`	The correction will be applied to whichever input is currently selected in the Input menu
RF Input	`RFIN`	Main RF Port Not available on EXM with hardware M9431A
RF Input 2	`RFIN2`	Second RF Port, labeled **RF Input 2** Only available on certain instruments. Not available on modular instruments
BBIQ input	`AIQ`	Requires option BBA Not available on modular instruments
External Mixer	`EMIXer`	Requires option EXM Not available on modular instruments
Antenna	`ANT`	Antenna input port on M9470A, labeled **Ant**
Generator	`GEN`	Generator output port on M9470A, labeled **Gen**
T/R	`TR`	T/R port on M9470A, labeled **T/R**
RF Full Duplex	`RFFD`	On modular instruments, labeled **RFFD**. Option “FDX” is required to enable RFFD port
RF Half Duplex	`RFHD`	On modular instruments, labeled **RFHD**. Option “HDX” is required to enable RFHD port
A1	`A1`	On E7760B
A2	`A2`	On E7760B
A3	`A3`	On E7760B
B1	`B1`	On E7760B
B2	`B2`	On E7760B
B3	`B3`	On E7760B
IFIO1	`IFIO1`	On E7760B
IFIO2	`IFIO2`	On E7760B
RF Output	`RFOut`	Appears on some modular instruments Not available on EXM with hardware M9431A
RFIO1	`RFIO1`	Appears on some modular instruments
RFIO2	`RFIO2`	Appears on some modular instruments
RFIO3	`RFIO3`	Only available in EXM with hardware M9431A
RFIO4	`RFIO4`	Only available in EXM with hardware M9431A
GPS out	`GPS`	Appears on some modular instruments
GNSS out	`GNSS`	Appears on some modular instruments

6.5.4 Correction Direction

Selects whether corrections will be applied when the device associated with the specified correction is being used as an input, an output or in both directions. The choices are:

`INPut`	Correct the port only when the port is used as an Input
`OUTPut`	Correct the port only when the port is used as an Output
`BOTH`	Correct the port when the port is used as either an Input or an Output (or both)

A port that is only an Output is always corrected as an output if the Correction is On. A port that is only an Input is always corrected as an Input if the Correction is On. For a port that can be either an Input or an Output (or both), the Correction is determined by the Correction Direction setting. The default is `BOTH`, which means that by default a port that can be either an Input or an Output (or both) is corrected in both directions if the Correction is On.

Remote Command	`[:SENSe]:CORRection:CSET[1]|2|…|16:DIRection INPut | OUTPut | BOTH` `[:SENSe]:CORRection:CSET[1]|2|…|16:DIRection?`
Example	`:CORR:CSET2:DIR INP`
Dependencies	The Correction Direction control only appears when Correction Port selects a port that can either function as an input or an output (or both simultaneously), such as RFIO HD, RFFD or T/R. If the SCPI command is sent to any other port, it is accepted but ignored
Preset	Not affected by a Preset. Set to `BOTH` by **Restore Input/Output Defaults**
State Saved	Saved in State

Backwards Compatibility SCPI	The following SCPI results in the selection of `BOTH` (included for compatibility with early Multitouch implementations):
	`[:SENSe]:CORRection:CSET[1]|2|…|8:DIRection BIDirectiona`
	included for compatibility with A-models modular products:
	`[:SENSe]:CORRection:CSET[1]|2|…|8:RF:PORT:RFFD SOURce | ANALyzer | BOTH`
	`[:SENSe]:CORRection:CSET[1]|2|…|8:RF:PORT:RFIO1 SOURce | ANALyzer | BOTH`
	`[:SENSe]:CORRection:CSET[1]|2|…|8:RF:PORT:RFIO2 SOURce | ANALyzer | BOTH`
	`[:SENSe]:CORRection:CSET[1]|2|…|8:RF:PORT:RFIO3 SOURce | ANALyzer | BOTH`
	`[:SENSe]:CORRection:CSET[1]|2|…|8:RF:PORT:RFIO4 SOURce | ANALyzer | BOTH`

6.5.5 Edit Correction

Invokes the integrated editing facility for this correction set.When entering the menu, the editor window turns on, the selected correction is turned **On**, **Apply Corrections** is set to **On**, the amplitude scale is set to **Log**, and the Amplitude Correction (“Ampcor”) trace is displayed. The actual, interpolated correction trace is shown in green for the selected correction. Note that since the actual interpolated correction is shown, the correction trace may have some curvature to it. This trace represents only the correction currently being edited, rather than the total, accumulated amplitude correction for all amplitude corrections which are currently on, although the total, accumulated correction for all corrections which are turned on is still applied to the data traces.

Because corrections data is always in dB, but the Y-axis of the instrument is in absolute units, it is necessary to establish a reference line for display of the Corrections data. The reference line is halfway up the display and represents 0 dB of correction. It is labeled “0 dB CORREC”. It is drawn in blue. Corrections data is always in dB. Whatever dB value appears in the correction table represents the correction to be applied to that trace at that frequency. So, if a table entry shows 30 dB that means we ADD 30 dB to each trace to correct it before displaying it. By definition all points are connected. If a gap is desired for corrections data, enter 0 dB.

Note that a well-designed Corrections array should start at 0 dB and end at 0 dB. This is because whatever the high-end point is will be extended to the top frequency of the instrument, and whatever the low-end point is will be extended down to 0 Hz. So, for a Corrections array to have no effect outside its range, you should start and end the array at 0 dB.

NOTE **The table editor only operates properly if the instrument is sweeping, because its updates are tied to the sweep system. Thus, you should not try to use the editor in single sweep, and its response will be sluggish during compute-intensive operations like narrow-span FFT sweeps.**

When exiting the edit menu (by using the **Return** key or by pressing an instrument front-panel key), the editor window turns off and the Ampcor trace is no longer displayed; however, **Apply Corrections** remains **On**, any correction that was on while in the editor remains on, and the amplitude scale returns to its previous setting.

Corrections arrays are not affected by a Preset, because they are in the Input/Output system. They also survive shutdown and restarting of the instrument application, which means they will survive a power cycle.

When editing a correction, the editor remembers which correction and which element in the correction array you were editing, and returns you to that correction and that element when you return to the editor after leaving it.

6.5.5.1 Select Correction

Specifies the selected correction. The term "selected correction" is used throughout this document to specify which correction will be affected by the functions.

Notes	The selected correction is remembered even when not in the correction menu
Preset	Set to Correction 1 by Restore Input/Output Defaults

6.5.5.2 Frequency

Touching a frequency value makes the touched row the current row and lets you edit the frequency.

Min	0
Max	1 THz

6.5.5.3 Amplitude

Touching an amplitude value makes the touched row the current row and lets you edit the amplitude.

Min	-1000 dB
Max	1000 dB

6.5.5.4 Go to Row

Lets you move through the table to edit the desired point.

Min	1
Max	2000

6.5.5.5 Insert Row Below

Inserts a point below the current point. The new point is a copy of the current point and becomes the current point. The new point is not yet entered into the underlying table, and the data in the row is displayed in light gray. To enter the row into the table, press the **Enter** key, or tap either value and edit it.

6.5.5.6 Delete Row

Deletes the currently-selected point, whether or not that point is being edited, and selects the Navigate functionality. The point following the currently-selected point (or the point preceding if there is none) will be selected.

6.5.5.7 Scale X Axis

Matches the X-Axis to the selected Correction, as well as possible. Sets the Start and Stop Frequency to contain the minimum and maximum Frequency of the selected Correction. The range between Start Frequency and Stop Frequency is 12.5% above the range between the minimum and maximum Frequency, so that span exceeds this range by one graticule division on either side. If in zero-span, or there is no data in the Ampcor table, or the frequency range represented by the table is zero, no action is taken. Standard clipping rules apply if the value in the table is outside the allowable range for the X-Axis.

Dependencies	If either the first or last point in the array is outside the frequency range of the current input, an error message is generated: "-221. Settings conflict; Start or Stop Freq out of range for current input settings"

6.5.5.8 Delete Correction

Deletes the correction values for this set. When this key is pressed, a prompt appears on the screen saying "Please press **Enter** or **OK** key to delete correction. Press **ESC** or **Cancel** to close this dialog." The deletion is only performed if you press **OK** or **Enter**.

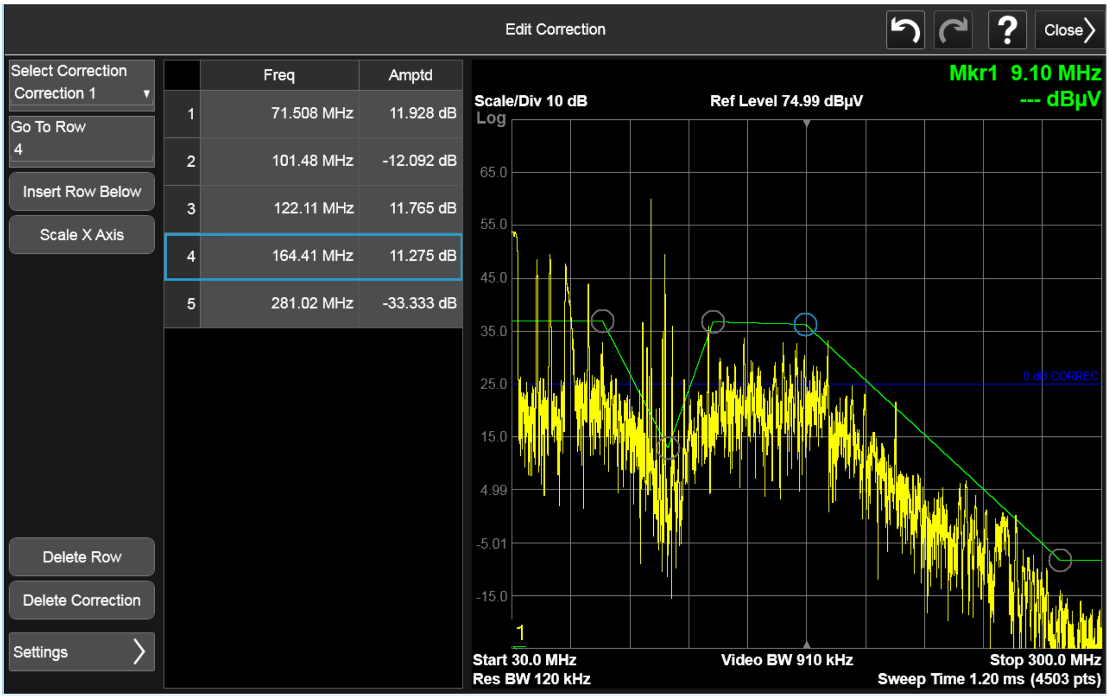
Remote Command	`[:SENSe]:CORRection:CSET[1]|2|…|16:DELete`

Example	`:CORR:CSET:DEL`
	`:CORR:CSET1:DEL`
	`:CORR:CSET4:DEL`

Notes	Pressing this key when no corrections are present is accepted without error

6.5.5.9 Correction Graph

The **Correction Graph** embedded in the Edit Correction dialog lets you edit the Amplitude Correction visually. Each node in the Correction is represented by a gray circle. The current node has a blue outline in the table and a blue circle in the graph. Touch any circle and drag it where you want it to go.



Select Correction: Correction 1

Go To Row: 4

	Freq	Amptd
1	71.508 MHz	11.928 dB
2	101.48 MHz	-12.092 dB
3	122.11 MHz	11.765 dB
4	164.41 MHz	11.275 dB
5	281.02 MHz	-33.333 dB

6.5.6 Edit Correction Settings

Opens another menu page that lets you set certain properties of the selected correction, such as Interpolation, Transducer Unit, Description and Comment.

6.5.6.1 Select Correction

Specifies the selected correction. The term "selected correction" is used throughout this document to specify which correction will be affected by the functions.

Notes	The selected correction is remembered even when not in the correction menu
Preset	Set to Correction 1 by Restore Input/Output Defaults

6.5.6.2 Freq Interpolation

Controls how the correction values per-bucket are calculated. We interpolate between frequencies in either the logarithmic or linear scale.

This setting is handled and stored individually per correction set.

VXT models M9410A/11A/15A/16A only support Linear Interpolation. For more details, see "Interpolation" on page 2670

Remote Command	`[:SENSe]:CORRection:CSET[1]|2|…|16:X:SPACing LINear | LOGarithmic` `[:SENSe]:CORRection:CSET[1]|2|…|16:X:SPACing?`
Example	`:CORR:CSET:X:SPAC LIN`
Preset	Unaffected by Preset. Set to Linear by **Restore Input/Output Defaults**
State Saved	Saved in instrument state

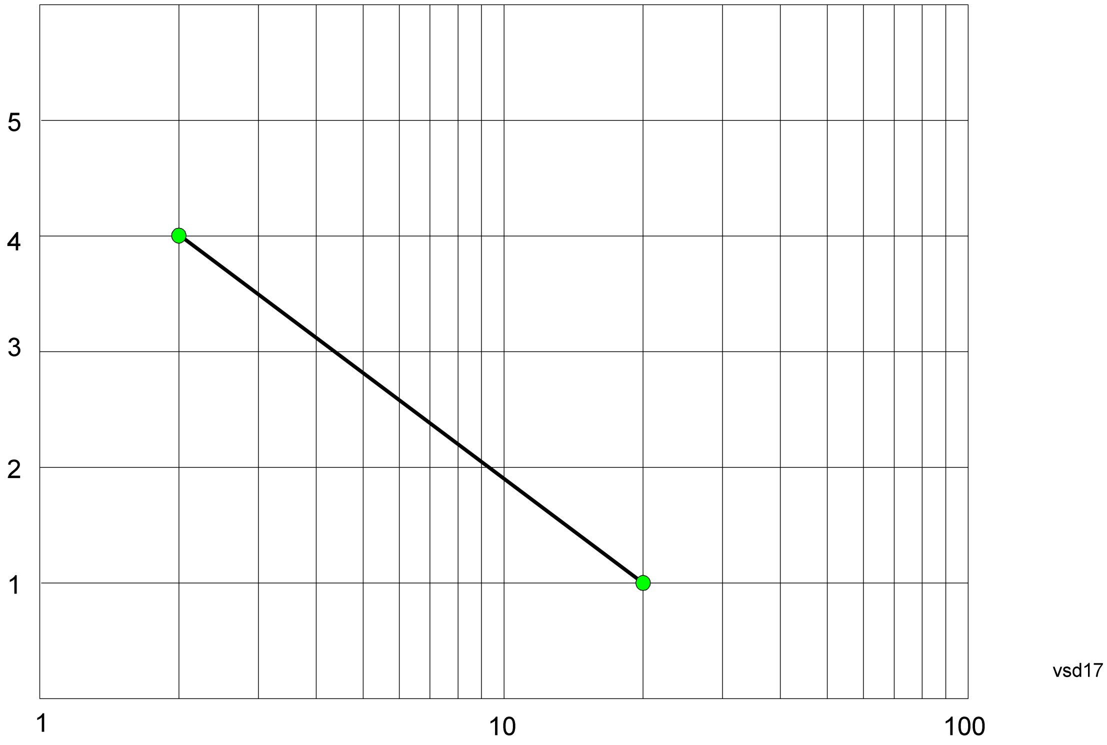
Interpolation

For each bucket processed by the application, all of the correction factors at the frequency of interest (center frequency of each bucket) are summed and added to the amplitude. All trace operations and post processing treat this post-summation value as the true signal to use.

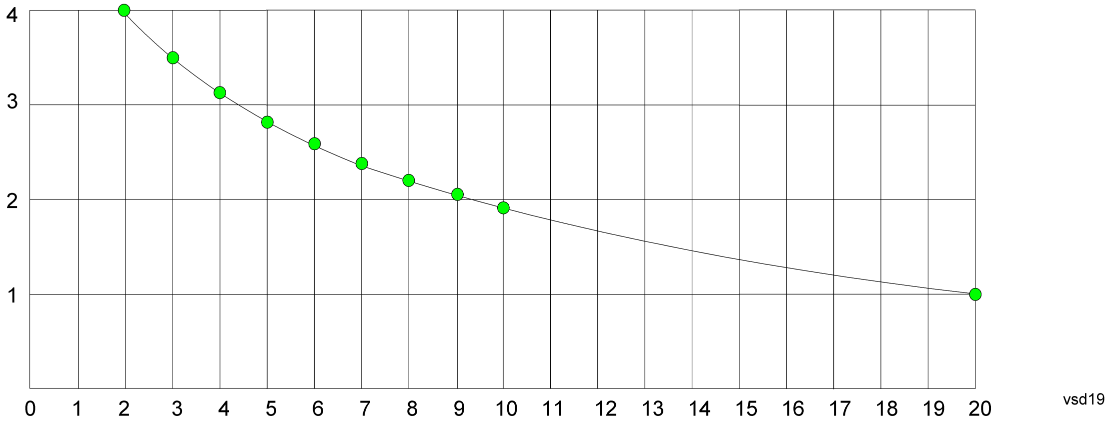
To effect this correction, the goal, for any particular start and stop frequency, is to build a correction trace, whose number of points matches the current Sweep Points setting of the instrument, which will be used to apply corrections on a bucket-by-bucket basis to the data traces.

For amplitudes that lie between two user specified frequency points, we interpolate to determine the amplitude value. You may select either linear or logarithmic interpolation between the frequencies.

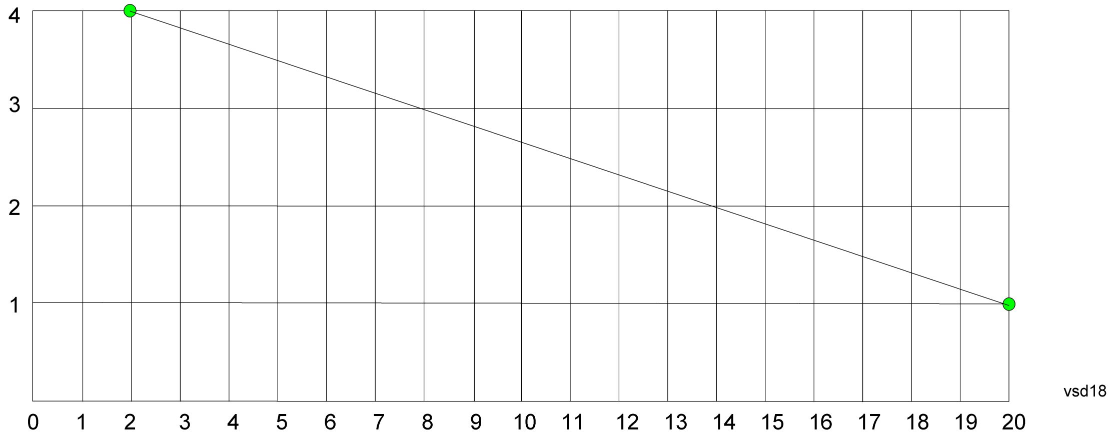
If we interpolate on a log scale, we assume that the line between the two points is a straight line on the log scale. For example, let’s say the two points are (2,4) and (20,1). A straight line between them on a log scale looks like:



On a linear scale (like that of the spectrum analyzer), this translates to:



If we interpolate on a linear scale, we assume that the two points are connected by a straight line on the linear scale, as below:



The correction to be used for each bucket is taken from the interpolated correction curve at the center of the bucket.

6.5.6.3 Transducer Unit

For devices (like antennas) that make measurements of field strength or flux density, the correction array should contain within its values the appropriate conversion factors such that, when the data on the instrument is presented in dBµV, the display is calibrated in the appropriate units. The "Transducer Unit" used for the conversion is contained within the corrections array database. It may be specifiedor loaded in from an external file or SCPI.

When an array with a Transducer Unit other than "None" is turned on, the Y Axis Unit of the instrument is forced to that unit. When this array is turned on, and it contains a Transducer Unit other than “None”, the Y Axis Unit of the instrument is forced to that Transducer Unit., and all other Y Axis Unit choices are grayed out.

Transducer Unit only appears in certain Modes, it does not appear in all Modes that support Corrections.

See "Examples" on page 2673

Remote Command	`[:SENSe]:CORRection:CSET[1]|2|…|16:ANTenna[:UNIT] GAUSs | PTESla | UVM | UAM | UA | NOConversion` `[:SENSe]:CORRection:CSET[1]|2|…|16:ANTenna[:UNIT]?`
Example	`:CORR:CSET:ANT GAUS`
Dependencies	Only one Transducer units can be on at any given time. Note that this means that if a correction file with a Transducer Unit is loaded into a particular Correction, all other Corrections are set to that same Transducer unit When **Normalize** is On (in the **Trace**, **Normalize** menu) Transducer Unit is grayed-out and forced to None
Preset	Unaffected by Preset. Set to NOC by **Restore Input/Output Defaults**
State Saved	Saved in instrument state

Examples

The units that may be specified and what appears in the file and on the screen are shown below:

Transducer Unit	SCPI Example	In the Correction file	On the screen (also Y Axis Unit forced to)
dBµV/m	:CORR:CSET:ANT UVM	Antenna Unit=µV/m	dBµV/m
dBµA/m	:CORR:CSET:ANT UVA	Antenna Unit=µA/m	dBµA/m
dBµA	:CORR:CSET:ANT UA	Antenna Unit=µA	dBµA
dBpT	:CORR:CSET:ANT PTES	Antenna Unit=pTesla	dBpT
dBG	:CORR:CSET:ANT GAUS	Antenna Unit=Gauss	dBG
None	:CORR:CSET:ANT NOC	Antenna Unit= (or no line at all)	none (not forced)

6.5.6.4 Description

Sets an ASCII description field which will be stored in an exported file. Can be displayed in the active function area by selecting as the active function, if desired to appear in a screen capture.

Remote Command	`[:SENSe]:CORRection:CSET[1]|2|…|16:DESCription "text"` `[:SENSe]:CORRection:CSET[1]|2|…|16:DESCription?`
Example	`:CORR:CSET1:DESC "11941A Antenna correction"`
Notes	45 chars max; may not fit on display if max chars used
Preset	Unaffected by a Preset. Set to empty by Restore Input/Output Defaults
State Saved	Saved in instrument state

6.5.6.5 Comment

Sets an ASCII comment field which will be stored in an exported file. Can be displayed in the active function area by selecting as the active function, if desired to appear in a screen capture.

Remote Command	`[:SENSe]:CORRection:CSET[1]|2|…|16:COMMent "text"` `[:SENSe]:CORRection:CSET[1]|2|…|16:COMMent?`

Example	`:CORR:CSET1:COMM "this is a comment"`
Notes	60 chars max; may not fit on display if max chars used
Preset	Unaffected by Preset. Set to empty by **Restore Input/Output Defaults**
State Saved	Saved in instrument state

6.5.7 Complex Corrections

This dialog is used to set up and display information about the **Complex Corrections** set. It also lets you view and edit certain information such as the Description and Comment for the selected Complex Correction.

Complex Corrections (loaded from `.s2p` files) support both magnitude and phase corrections, whereas standard corrections (loaded from standard Ampcor `.csv` files) support only magnitude corrections.

When loading an `.s2p` file, the component representing S21 is the one that is used to generate the complex correction. If no S21 component is present, a Mass Storage error is reported.

NOTE

Data types RI, MA, and DB are supported.

The phase components of the S2P file are taken to be in degrees, not in radians. You must provide the phase correction in degrees.

Unlike Correction files, S2P files describe device characteristics, rather than the correction required to compensate for those characteristics; so, when an S2P file is loaded, both the magnitude and phase are negated to turn it into a correction

Complex Corrections and standard corrections can be turned on at the same time. For example, you could turn on Correction 2, Correction 4, and Complex Correction 1 and 2, all at the same time. The magnitude part of all the corrections would add, and the phase part of the complex corrections would add.

You can have up to 64 Complex Corrections loaded simultaneously. Each Complex Correction can hold up to 30,000 points.

You can load a standard correction into Complex Corrections, but it will only provide a magnitude correction, not a phase correction.

NOTE

A standard correction (from a CSV file) can be loaded into a Complex Correction, but when it is loaded the Phase correction is set to 0 for all points.

Some measurements, like Swept SA, have no phase component to the measurement, but nonetheless support Complex Corrections. For such measurements, only the Magnitude part of the Complex Correction is applied.

6.5.7.1 Go To Row (Select Correction)

Specifies the selected complex correction. The selected correction will be identified by the blue outlined row in the dialog.

The "selected complex correction" is an important concept when sending SCPI commands to the Complex Corrections system, because in each case the SCPI command is directed to the currently selected Complex Correction and that will be the Correction which is modified by the SCPI command.

Remote Command	`[:SENSe]:CCORrection:CSET:SELect <integer>` `[:SENSe]:CCORrection:CSET:SELect?`
Example	`:CCOR:CSET:SEL 3` `:CCOR:CSET:SEL?`
Notes	The selected correction is remembered even when not in the correction menu
Preset	Set to Correction 1 by Restore Input/Output Defaults
Min	1
Max	64

6.5.7.2 Delete Row

Deletes the currently-selected Complex Correction and clears all entries in that row to the default.

Remote Command	`[:SENSe]:CCORrection:CSET:DELete`

Example	Select correction 3:
	`:CCOR:CSET:SEL 3`
	Delete correction 3:
	`:CCOR:CSET:DEL`

6.5.7.3 Delete All

Deletes all complex corrections and clears all entries in all rows to the default.

When this key is pressed a prompt is placed on the screen that says “Please press Enter or OK key to delete all complex corrections. Press ESC or Cancel to close this dialog.” The deletion is only performed if you press **OK** or **Enter**.

Remote Command	`[:SENSe]:CCORrection:CSET:ALL:DELete`
Example	`:CCOR:CSET:ALL:DEL`

6.5.7.4 Correction On

Checking or unchecking this box turns the Selected Complex Correction `ON` or `OFF`. Turning it `ON` causes the values in it to be applied to the data. This state transition also automatically turns on "Apply Corrections" (sets it to `ON`), otherwise the correction would not take effect.

A new sweep/acquisition is initiated if a complex correction is switched on or off. Note that changing, sending or loading corrections data does *not* directly initiate a sweep, however in general these operations will turn corrections on, which *does* initiate a sweep.

Remote Command	`[:SENSe]:CCORrection:CSET[:STATe] ON | OFF | 1 | 0` `[:SENSe]:CCORrection:CSET[:STATe]?`

Example	Select correction 3:
	`:CCOR:CSET:SEL 3`
	Turn correction 3 on:
	`:CCOR:CSET ON`

Dependencies	Changing this from `OFF` to `ON` automatically turns on "Apply Corrections" Grayed-out if Complex Corrections is not supported by the current measurement. A warning or SCPI error is generated if you try to turn it on under these circumstances: “Feature not supported for this measurement”
Preset	Not affected by Preset. Set to `OFF` by **Restore Input/Output Defaults**
State Saved	Saved in instrument state
Annotation	If *any* Complex Correction is turned on, CC in the Meas Bar will display in amber to indicate Complex Corrections are in use

6.5.7.5 Correction Port

Maps one of the sets of corrections to a particular I/O port. This control allows any Input port (including External Mixing, BBIQ, the RF2 input, etc.) to be mapped to a specific Correction, so that the Correction is only applied when that Port is being used by the current Screen. You can also map any internal source Output port to a specific Correction.

When Current Input (CINPut) is selected for **Correction Port**, it chooses the current input port of the current Screen for the selected Correction. In other words, the Correction applies to whichever input is selected. If the input changes, the correction applies to the new input.

When using the VXT M9410A/11A with Remote Radio Heads (such as the Keysight M1740A mmWave Transceiver for 5G), the choices in the dropdown menu will appear as

Head h RFHD p

For example, if you have two Radio Heads (numbered 1 and 2), each of which have two RF half duplex ports, the choices for these ports will appear as below:

Head and Port	Choice in dropdown	SCPI parameter
Head 1, port RF Tx/Rx 1	Head 1 RFHD 1	RRH1RFHD1
Head 1, port RF Tx/Rx 2	Head 1 RFHD 2	RRH1RFHD2
Head 2, port RF Tx/Rx 1	Head 2 RFHD 1	RRH2RFHD1
Head 2, port RF Tx/Rx 2	Head 2 RFHD 2	RRH2RFHD2

See also the parameters, notes and examples table under "Correction Port" on page 2663.

Remote Command	`[:SENSe]:CCORrection:CSET:PORT CINPut | RFIN | RFIN2 | AIQ | EMIXer | RFOut | RFIO1 | RFIO2 | RFIO3 | RFIO4 | RFHD | RFFD | ANT | GEN | TR | A1 | A2 | A3 | B1 | B2 | B3 | IFIO1 | IFIO2 | RRHnRFHD | ERFIN` `[:SENSe]:CCORrection:CSET:PORT?`

Example	Select correction 2:
	`:CCOR:CSET:SEL 2`
	Set correction 2 to RFIN:
	`:CCOR:CSET:PORT RFIN`
	Set Correction 2 to Radio Head 1, RF Tx/Rx Port 2:
	`:CCOR:CSET:PORT RRH1RFHD2`

Dependencies	`RFIN2|AIQ|EMIXer` are only available on C/E/M/P/UXA analyzers with the appropriate options loaded `RFOut` is only available on modular products such as VXT `ANT`, `GEN` and `TR` are only available in VXT and only when the M9470A module is installed, such as in the M8920A. Option “HDX” is required to enable the TR port `RFHD` and `RFFD` are only available on VXT. Option HDX is required to enable RFHD port and Option FDX is required to enable RFFD port `RFIO3` and `RFIO4` are only available on EXM with hardware M9431A `RFIN` and `RFOut` are not available on EXM with hardware M9431A `ERFIN` requires option “EXW”
Preset	Not affected by Preset. Set to `CINPut` by **Restore Input/Output Defaults**
State Saved	Saved in State

6.5.7.6 Direction

Selects whether corrections will be applied when the device associated with the specified correction is being used as an input, an output or in both directions. The choices are:

`INPut`	Correct the port only when the port is used as an Input

`OUTPut`	Correct the port only when the port is used as an Output
`BOTH`	Correct the port when the port is used as either an Input or an Output (or both)

Remote Command	`[:SENSe]:CCORrection:CSET:DIRection INPut | OUTPut | BOTH` `[:SENSe]:CCORrection:CSET:DIRection?`

Example	Firstly, select correction 4:
	`:CCOR:CSET:SEL 4`
	Set correction 4 to Input:
	`:CCOR:CSET:DIR INP`

Dependencies	For Inputs, the only choice is `INPut`, so an empty table cell is displayed. For Outputs, the only choice is `OUTPut`, so an empty table cell is displayed. If the SCPI command is sent while one of these ports is selected, it is accepted but ignored For a port that can be either an Input or an Output (or both), such as RFHD, RFFD or T/R, all three choices are available
Preset	Not affected by Preset. Set to `BOTH` by **Restore Input/Output Defaults**
State Saved	Saved in State
Backwards Compatibility SCPI	The following SCPI will result in the selection of `BOTH` (included for compatibility with early Multitouch implementations): `[:SENSe]:CCORrection:CSET:DIRection BIDirectiona`

6.5.7.7 Description

Shows the Description field for the selected Complex Correction. The Description field is loaded from the second line of the `.s2p` file. (Note that, if line 2 begins with "!", the ! is not displayed in the Description field.)

Remote Command	`[:SENSe]:CCORrection:CSET:DESCription "text"` `[:SENSe]:CCORrection:CSET:DESCription?`

Example	Firstly, select correction 4:
	`:CCOR:CSET:SEL 4`
	`:CCOR:CSET:DESC "PNA data import 1-1-18"`

Notes	45 chars max; may not fit on display if max chars used
Preset	Unaffected by Preset. Set to empty by **Restore Input/Output Defaults**
State Saved	Saved in instrument state

6.5.7.8 Comment

Shows the Comment field for the selected Complex Correction. The Comment field is loaded from the third line of the `.s2p` file. (Note that, if line 3 begins with "!", the ! is not displayed in the Comment field.)

Remote Command	`[:SENSe]:CCORection:CSET:COMMent "text"` `[:SENSe]:CCORection:CSET:COMMent?`

Example	Firstly, select correction 4:
	`:CCOR:CSET:SEL 4`
	`:CCOR:CSET:COMM "this is a comment"`

Notes	60 chars max; may not fit on display if max chars used
Preset	Unaffected by Preset. Set to empty by **Restore Input/Output Defaults**
State Saved	Saved in instrument state

6.5.7.9 File

Shows the file from which the selected correction was loaded. If correction was loaded with a SCPI command (see "Set Data (Remote Command Only)" on page 2680) displays “(SCPI)”. If no correction is loaded, displays “(No correction loaded)”

Notes	60 chars max; may not fit on display if max chars used
State Saved	Saved in instrument state

6.5.7.10 Freq Interpolation (Remote Command Only)

Controls how the correction values per-bucket are calculated. We interpolate between frequencies in either the logarithmic or linear scale.

This setting is handled and stored individually per correction set.

VXT models M9410A/11A/15A/16A and M9410E/11E/15E/16E only support Linear Interpolation.

See "Interpolation" on page 2670 under Corrections.

Remote Command	`[:SENSe]:CCORrection:CSET:X:SPACing LINear | LOGarithmic` `[:SENSe]:CCORrection:CSET:X:SPACing?`

Example	Firstly, select correction 4:
	`:CCOR:CSET:SEL 4`
	Set linear interpolation:
	`:CCOR:CSET:X:SPAC LIN`

Preset	Unaffected by Preset. Set to `LINear` by **Restore Input/Output Defaults**
State Saved	Saved in instrument state

6.5.7.11 Set Data (Remote Command Only)

Lets you set the magnitude part of a complex correction’s data via a SCPI command. This is provided for compatibility with the similar command for standard corrections, to allow you to use Complex Corrections as an extension to standard corrections.

Sending this command sets the phase part of the selected correction to 0 for all points.

The command takes an ASCII series of alternating frequency and amplitude points, each value separated by commas.

The values sent in the command will totally replace all existing correction points in the specified set.

A Complex Correction array can contain 30000 points maximum.

Remote Command	`[:SENSe]:CCORrection:CSET:DATA <freq>, <ampl>, ...` `[:SENSe]:CCORrection:DATA?`

Example	Firstly, select correction 4:
	`:CCOR:CSET:SEL 4`
	This defines two correction points at (10 MHz, -1.0 dB) and (20 MHz, 1.0 dB) for correction set 4:
	`:CCOR:CSET:DATA 10000000,-1.0,20000000,1.0`

Preset	Empty after **Restore Input/Output Defaults.** Survives a shutdown or restart of instrument application (including a power cycle)
State Saved	Saved in instrument state
Min/Max	

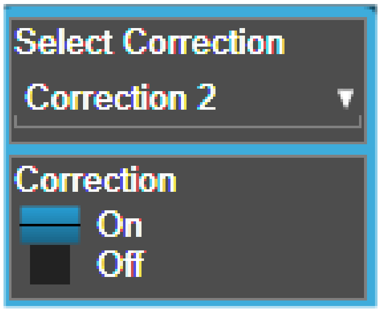
	Min	**Max**
Freq	0 Hz	1 THz
Amptd	-1000 dBm	+1000 dBm

6.5.8 Apply Corrections

When you turn on Apply Corrections, all of the Corrections that are turned On are applied to the measured data. When you turn off Apply Corrections, no Corrections are applied, even if they are turned On.

With this switch you can turn the entire Corrections system on and off without affecting the settings of any individual Corrections. Turning Apply Corrections On and Off has no effect on the On/Off switches under the individual Corrections.

Apply Corrections affects both normal Corrections and Complex Corrections. Normal Corrections are turned On and Off using the Correction switch under Select Correction:



Select Correction

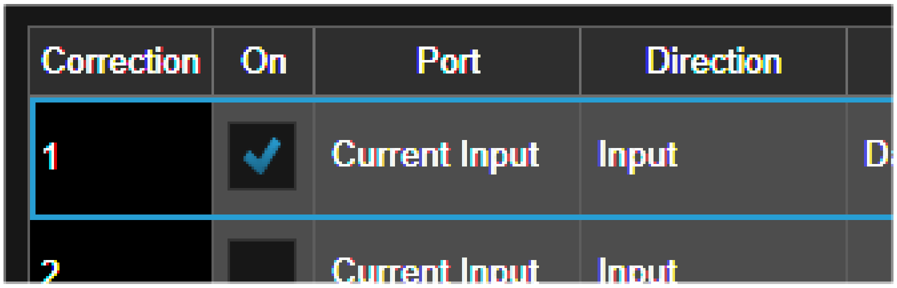
Correction 2

Correction

On

Off

Complex Corrections are turned On and Off using the checkboxes in the Complex Corrections dialog:



Correction	On	Port	Direction
1	☑	Current Input	Input
2	☐	Current Input	Input

See "Correction On/Off" on page 2663) and "Complex Corrections" on page 2674.

Remote Command	`[:SENSe]:CORRection:CSET:ALL[:STATe] ON | OFF | 1 | 0` `[:SENSe]:CORRection:CSET:ALL[:STATe]?`
Example	`:SENS:CORR:CSET:ALL OFF` This command makes sure that no amplitude corrections are applied, regardless of their individual on/off settings
Couplings	Whenever you turn on any Correction or Complex Correction, **Apply Corrections** is automatically set to ON
Preset	Not affected by Preset. Set to OFF by **Restore Input/Output Defaults**
State Saved	Saved in instrument state
Annunciation	When ON, 'CORREC' appears in the Meas Bar as long as at least one of the individual corrections is enabled

6.5.9 Delete All Corrections

Erases all correction values for all Amplitude Correction sets and Complex Corrections.

When this key is pressed a prompt is placed on the screen that says “Please press Enter or OK key to delete all corrections. Press ESC or Cancel to close this dialog.” The deletion is only performed if you press **OK** or **Enter**.

Remote Command	`[:SENSe]:CORRection:CSET:ALL:DELete`
Example	`:CORR:CSET:ALL:DEL`

6.5.10 Correction Group On/Off

Turns the Correction Group on and off. The Correction Group allow you to preload Correction files and associate them with specific frequency ranges, so that they can be switched in and out during a sweep at the appropriate frequencies. Use the control “Edit Correction Group” below to set up your Correction Group.

The state of each Correction will be set dynamically depending on the active measurement frequency. Only the correction selected for the range that matches the active measurement frequency will be turned on, and vice versa.

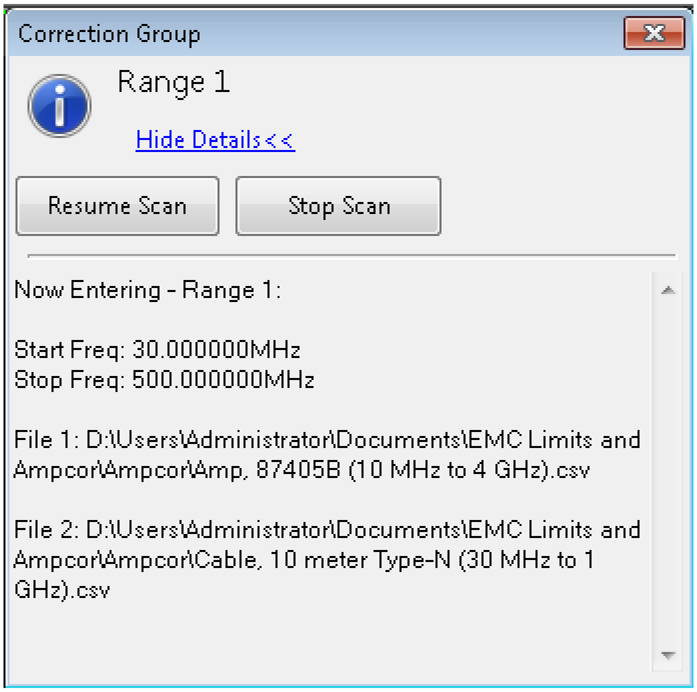
Note that the Corrections in the Correction Group, although they are loaded into memory, are independent of the main Correction registers at the top of the Corrections menu, and will not display under the Select Correction, Correction On/Off or Edit Correction functions.

Remote Command	`[:SENSe]:CORRection:CSET:GROup[:STATe] ON | OFF | 1 | 0` `[:SENSe]:CORRection:CSET:GROup[:STATe]?`
Example	`:SENS:CORR:CSET:GRO ON`
Dependencies	Correction group is supported in EMI Receiver Mode, and in Spectrum Analyzer Mode if option EMC or EMI Receiver Mode is present. If you switch to other measurements or modes, correction group is turned off and the Correction Group functions are not visible
Couplings	When on, Correction 1 through 8 is set to `OFF` and the correction on/off state keys are grayed out. If the grayed-out key is pressed, it generates an advisory message. If sending the SCPI to turn it on, this same message is generated as part of Settings conflict
Preset	Not affected by Preset. Set to `OFF` by **Restore Input/Output Defaults**
State Saved	Saved in instrument state

6.5.11 Break

If break is turned on, the scan or sweep will be paused when it reaches the boundary of correction group ranges. At the same time, a window at the size of ~ 6.5cm x 3.5 cm is prompt at the upper right-hand corner of the graticule.

When running Frequency Scan measurement of Emi Receiver application, the message prompt is like below. You are given the option to resume the scan or stop the scan.



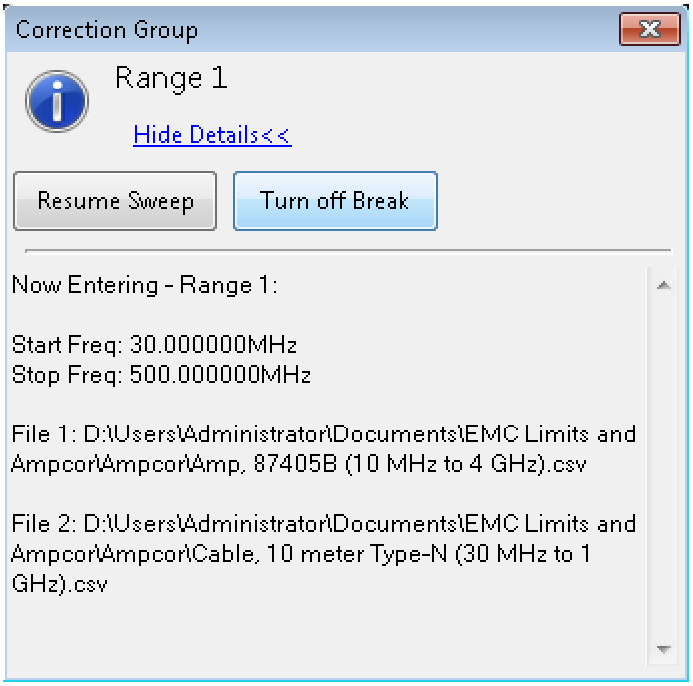
Now Entering - Range 1:

Start Freq: 30.000000MHz
Stop Freq: 500.000000MHz

File 1: D:\Users\Administrator\Documents\EMC Limits and Ampcor\Ampcor\Amp, 87405B (10 MHz to 4 GHz).csv

File 2: D:\Users\Administrator\Documents\EMC Limits and Ampcor\Ampcor\Cable, 10 meter Type-N (30 MHz to 1 GHz).csv

When running the Swept SA measurement in Spectrum Analyzer Mode, the message prompt is as below. You are given the option to resume the sweep or turn off the break. If in Continuous sweep, the sweep will resume after the break is turned off.



Now Entering - Range 1:

Start Freq: 30.000000MHz
Stop Freq: 500.000000MHz

File 1: D:\Users\Administrator\Documents\EMC Limits and Ampcor\Ampcor\Amp, 87405B (10 MHz to 4 GHz).csv

File 2: D:\Users\Administrator\Documents\EMC Limits and Ampcor\Ampcor\Cable, 10 meter Type-N (30 MHz to 1 GHz).csv

Remote Command	`[:SENSe]:CORRection:CSET:GROup:BReak ON | OFF | 1 | 0` `[:SENSe]:CORRection:CSET:GROup:BReak?`
Example	`:SENS:CORR:CSET:GRO:BR ON`

Notes	When running the Frequency Scan measurement in EMI Receiver Mode, if break is turned on when a SCPI is sent to start the scan, the scan pauses when it reaches the boundary of correction group ranges. Bit 8 (Paused) of status operation register is set to true. To resume, send `:INITiate2:RESume`. To stop the scan, send `:ABORt`
	When running the Swept SA measurement in Spectrum Analyzer Mode, the break state does not affect the operation of sweep when SCPI to control the sweep is sent. Instead, the SCPI commands close the message prompt if it is showing at the point the commands are sent, and the break is turned off. The SCPI includes:
	`:INITitate:IMMEdiate`
	`:INITitate:RESTart`
	`:INITitate:CONTinuous ON | OFF | 1 | 0`
	`:ABORt`

Dependencies	Correction group is supported in EMI Receiver Mode, and in Spectrum Analyzer Mode if option EMC or EMI Receiver mode is present. If you switch to other measurements or modes, correction group is turned off and the Correction Group functions (like Break) are not visible
Preset	Not affected by Preset. Set to `OFF` by **Restore Input/Output Defaults**
State Saved	Saved in instrument state

6.5.12 Reload Corrections From Files

Because the Correction data for the Correction Group is loaded into memory from Correction files at the time the Group is defined, it will be necessary to reload some or all of the data if any of the files changes. This function reloads all of the correction data from all of the correction files defined in all of the ranges in the Correction Group.

Remote Command	`[:SENSe]:CORRection:CSET:GROup:RELoad`
Example	`:MMEM:STOR:CORR:GRO:REL`
Notes	If invalid data is found in the files, the correction group will be set to off, and an Execution error is generated. Error icon appears on the status column correction group table
Dependencies	Correction group is supported in EMI Receiver Mode, and in Spectrum Analyzer mode if option EMC or EMI Receiver Mode is present. If you switch to other measurements or modes, correction group is turned off and the Correction Group functions (like Reload Correction From File) are not visible
Annotation	If reload fails, error icons appear in the status column of correction group editor for the range that has the error

6.5.13 Edit Correction Group

Opens the Table Editor for the correction group. The content of correction group table including the correction data loaded from the files is not affected by Preset, and it survives power cycle. You can set it to empty with **Restore Input/Output Defaults**.

Dependencies	Correction group is supported in EMI Receiver Mode, and in Spectrum Analyzer Mode if option EMC or EMI Receiver Mode is present. If you switch to other measurements or modes, correction group is turned off and the Correction Group functions (like Edit Correction Group) are not visible

6.5.13.1 Go to Row

Lets you move through the table to edit the desired point.

Min	1
Max	2000

6.5.13.2 Insert Row Below

Inserts a point below the current point. The new point starts from the current range stop frequency and becomes the current point. The new point is not yet entered into the underlying table, and the data in the row is displayed in light gray.

6.5.13.3 Delete Row

Deletes the currently-selected point, whether or not that point is being edited, and selects the Navigate functionality. The point following the currently-selected point (or the point preceding if there is none) will be selected.

6.5.13.4 Select File

Indicate the correction files in which the specify file and remove file operations will take effect.

Preset	Unaffected by a Preset. Set to empty by **Restore Input/Output Defaults**

6.5.13.5 Specify File

Displays the file browsing menu. When a file is selected, correction data will be loaded from the file. The correction data remains until the file is removed or the range is deleted.

Notes	If the file is empty, error -250 is reported. If the file does not exist error -256 is reported. If there is a mismatch of data type, error -250 is reported Only one file with antenna unit can be supported per range. If you try to add another file which contains an antenna unit, a Mass Storage error is generated All ranges have to use a common antenna unit. If you try to add a correction file that contains a different antenna unit, a Mass Storage error is generated If you try to add a correction file that contains data that does not cover the range frequency, the file cannot be added, and an Execution error is generated

6.5.13.6 Remove File

Removes the selected file. When a file is removed, correction data for that file will be removed as well.

Dependencies	The key is grayed-out if there the file has not been specified. If the grayed-out key is pressed, an advisory message is generated

6.5.13.7 Correction Trace Display

Enables you to view the correction traces of all corrections that are added to the range currently selected. A 2-column table in the function of frequency and the accumulated amplitude correction is displayed at the left pane.

Preset	`OFF`
State Saved	Saved in instrument state

6.5.13.8 Description

Provides a description of up to 60 characters by which you can easily identify the correction group. The descriptions will be stored in the exported file and can be displayed in the active function area by selecting them as the active function, if desired to be in a saved screen dump.

Remote Command	`[:SENSe]:CORRection:CSET:GROup:DESCription "text"` `[:SENSe]:CORRection:CSET:GROup:DESCription?`
Example	`:CORR:CSET:GRO:DESC "Radiated Setup"`
Notes	60 chars max; may not fit on display if max chars used
Preset	Unaffected by Preset. Set to empty by **Restore Input/Output Defaults**
State Saved	Saved in instrument state

6.5.13.9 Comment

Provides a comment of up to 60 characters by which you can easily identify the correction group. The comments will be stored in the exported file and can be displayed in the active function area by selecting them as the active function, if desired to be in a saved screen dump.

Remote Command	`[:SENSe]:CORRection:CSET:GROup:COMMent "text"` `[:SENSe]:CORRection:CSET:GROup:COMMent?`
Example	`:CORR:CSET:GRO:COMM "For internal only"`
Notes	60 chars max; may not fit on display if max chars used
Preset	Unaffected by Preset. Set to empty by **Restore Input/Output Defaults**
State Saved	Saved in instrument state

6.5.13.10 Start Frequency

Touching a **Start Frequency** value makes the touched row the current row and lets you edit the start frequency.

Notes	You cannot set the Start Frequency to a value greater than Stop Frequency or equal to Stop Frequency. You cannot set the Start Frequency to a value that would create a span of less than 10 Hz. If you try to do any of these, the Stop Frequency will change to maintain a minimum span of 10 Hz If you change the Start Frequency of the selected range to a value smaller than the previous range's Stop Frequency, the Stop Frequency of the previous range will be changed to the same value

	If you change the Start Frequency of the selected range to a value out of the correction data frequency range, an error icon appears on the status column and an Execution error is generated
Preset	Unaffected by Preset. Set to empty by **Restore Input/Output Defaults**
Min	0
Max	1 THz

6.5.13.11 Stop Frequency

Touching a **Stop Frequency** value makes the touched row the current row and lets you edit the stop frequency.

Notes	You cannot set the Stop Frequency to a value greater than Start Frequency or smaller than Start Frequency. You cannot set the Stop Frequency to a value that would create a span of less than 10 Hz. If you try to do any of these, the Start Frequency will change to maintain a minimum span of 10 Hz If you change the Stop Frequency of the selected range to a value greater the next range's Start Frequency, the Start Frequency of the next range will be changed to the same value If you change the Stop Frequency of the selected range to a value out of the correction data frequency range, an error icon appears on the status column and an Execution error is generated
Preset	Unaffected by Preset. Set to empty by **Restore Input/Output Defaults**
Min	0
Max	1 THz

6.5.14 Merge Correction Data (Remote Command Only)

Accepts an ASCII series of alternating frequency and amplitude points, each value separated by commas. The difference between this command and **Set Data** is that this merges new correction points into an existing set.

If any new point has the same frequency as an existing correction point, the existing point's amplitude is replaced by that of the new point.

An Ampcor array can contain 2000 total points, maximum.

Remote Command	`[:SENSe]:CORRection:CSET[1]|2|…|16:DATA:MERGe <freq>, <ampl>, ...`
Example	`:CORR:CSET1:DATA:MERGE 15000000,-5.0,25000000,5.0` This adds two correction points at (15 MHz, -5.0 dB) and (25 MHz, 5.0 dB) to whatever values already exist in correction set 1
Preset	Empty after **Restore Input/Output Defaults**. Survives shutdown/restart of instrument application (including power cycle)

Min/Max		**Min**	**Max**
	Freq	0 Hz	1 THz
	Amptd	-1000 dBm	+1000 dBm

6.5.15 Set (Replace) Data (Remote Command Only)

Accepts an ASCII series of alternating frequency and amplitude points, each value separated by commas.

The values sent in the command totally replace all existing correction points in the specified set.

An Ampcor array can contain 2000 points maximum.

Remote Command	`[:SENSe]:CORRection:CSET[1]|2|…|16:DATA <freq>, <ampl>, ...` `[:SENSe]:CORRection:CSET[1]|2|…|16:DATA?`
Example	`:CORR:CSET1:DATA 10000000,-1.0,20000000,1.0` This defines two correction points at (10 MHz, -1.0 dB) and (20 MHz, 1.0 dB) for correction set 1
Preset	Empty after **Restore Input/Output Defaults.** Survives a shutdown or restart of instrument application (including a power cycle)
State Saved	Saved in instrument state
Min	Freq: 0 Hz Amptd: -1000 dBm
Max	Freq: 1 THz Amptd: +1000 dBm

6.5.16 Correction Group Range Data (Remote Command Only)

Accepts an ASCII series of alternating start frequency, stop frequency and file names, each value separated by commas.

The values sent in the command replace the content of correction group.

The default path for CSV files is:

`D:\My Documents\amplitudeCorrections\`

Remote Command	`[:SENSe]:CORRection:CSET:GROup[1]|2|…|10:DATA <startFreq>,<stopFreq>,<filename1>,<filename2>,…,<filename8>`
	See Notes below for explanation of the <filenameN> parameters
	`[:SENSe]:CORRection:CSET:GROup[1]|2|…|10:DATA?`

Example	`:CORR:CSET:GRO:DATA 10000000,20000000,"myAmpcor.csv"` `myAmpcor.csv` refers to the Amplitude Correction data from the file `myAmpcor.csv` in the default path
Notes	`<filename>` is the string containing the path of the correction files <filename2>, <filename3>, <filename4>, <filename5>, <filename6>, <filename7>, <filename8> are optional. You can define only <filename1>. The file name defined is added to corresponding File keys based on the sequence sent in the command. File keys with no file name set in the SCPI will be emptied Data for ranges 1 to 10 must be set in ascending order. If you try to set the data for a correction group range that is not connecting to the range currently available, a Data out of range error is generated If the file defined in data is empty, error -250 is reported. If the file does not exist, error -256 is reported. If there is a mismatch of data type, error -250 is reported Only one file with antenna unit can be supported per range. If you try to add another file that contains an antenna unit, a Mass Storage error is generated All ranges have to use a common antenna unit. If you try to add a correction file that contains a different antenna unit, a Mass Storage error is generated
Preset	Reset to Not a Number (9.91e+37) for frequencies and "" for File 1 through File 8 after **Restore Input/Output Defaults**. Survives a shutdown or restart of instrument application (including a power cycle)
State Saved	Saved in instrument state
Min	Start Freq and Stop Freq: 0 Hz
Max	Start Freq and Stop Freq:1 THz

6.5.17 Delete Correction Group Range (Remote Command Only)

Deletes all range values of corrections Group.

Remote Command	`[:SENSe]:CORRection:CSET:GROup:DELete`
Example	`:CORR:CSET:GRO:DEL`
Notes	Sending this command when no range is defined in table is accepted without error

6.6 Freq Ref Input

Lets you configure the External Frequency Reference input on the rear panel.

6.6.1 Freq Ref Input

Specifies the frequency reference as being the internal reference, an external reference at the rear panel input labeled EXT REF IN, a 1 pulse per second signal at the EXT REF IN input, or automatically sensing the appropriate reference.

See "More Information" on page 2693

Remote Command	`[:SENSe]:ROSCillator:SOURce:TYPE INTernal | EXTernal | SENSe | PULSe` `[:SENSe]:ROSCillator:SOURce:TYPE?`

Example	`:ROSC:SOUR:TYPE SENS`
	`:ROSC:SOUR:TYPE INT`
	`:ROSC:SOUR:TYPE EXT`
	`:ROSC:SOUR:TYPE PULS`

Dependencies	The `PULSe` parameter, and support of the 1 pps signal at the EXT REF IN input, are not available in some models. If not available, the choice does not appear, and sending the `PULSe` parameter via SCPI generates an error For VXT models M9420A/10A/11A/15A and M9410E/11E/15E/16E the only available selection is `EXTernal`, unless M9420A/10A/11A/15A is configured in MIMO mode as Primary module. If configured in MIMO mode as Primary module, the available selection is `INTernal | EXTernal | SENSe` For EXM the only available selections are `INTernal | EXTernal | SENSe` For E7760B and M8920A/20B the only available selections are `INTernal | EXTernal` Not available in UXM
Preset	Unaffected by Preset, but set to `EXTernal` in VXT models M9420A/10A/11A/15A, `INTernal` for E7760B, and `SENSe` for other models, by **Restore Input/Output Defaults** or **Restore System Defaults->All**
State Saved	Saved in instrument state
Annunciation	In the Meas Bar: If you set this to Internal and no external reference is plugged in: Freq Ref: Internal If you set this to Internal and an external reference between 1 and 50 MHz, or a 1 pps signal, IS plugged in: Freq Ref: Internal (in amber, as a warning sign) If you set this to External and an External Reference between 1 and 50 MHz is plugged in: Freq Ref: External

	If you set this to External and no External Reference is sensed: Freq Ref: External (in amber, as a warning sign) When set to Pulse and a 1 pps signal is plugged in: Freq Ref: Pulse If you set this to Pulse and no Pulse Reference is sensed: Freq Ref: Pulse (in amber, as a warning sign) When set to Sense and neither a signal between 1 and 50 MHz nor a 1 pps signal is detected at the EXT REF IN input, "Sense:Int" is displayed: Freq Ref: Sense,Int When set to Sense and a signal within 5 ppm of the External Ref Freq (as set on the Ext Ref Freq control) is detected at the EXT REF IN input: Freq Ref: Sense,Ext When set to Sense and a 1 pps signal is detected at the EXT REF IN input, "Sense:Pulse" is displayed: Freq Ref: Sense,Pls
Status Bits/OPC dependencies	`STATus:QUEStionable:FREQuency` bit 1 set if unlocked Note: In EXM, the status bit is not set for non-controlling instances. To determine if the frequency reference is unlocked, the controlling instance must be queried
Backwards Compatibility Notes	Freq Ref In was not saved in state in the legacy instruments. It is part of state in the X-Series

Remote Query

Remote Command	`[:SENSe]:ROSCillator:SOURce?`
Notes	Returns the current switch setting. This means: 1. If it was set to `SENSe` but there is no external reference nor 1pps signal, so the instrument is actually using the internal reference, then this query returns `INTernal`, not `SENSe` 2. If it was set to `SENSe` and there is an external reference present, the query returns `EXTernal`, not `SENSe` 3. If it was set to `SENSe` and there is a 1 pps signal present, the query returns `PULSe`, not `SENSe` 4. If it was set to `EXTernal`, then the query returns `EXTernal` 5. If it was set to `INTernal`, then the query returns `INTernal` 6. If it was set to `PULSe`, then the query returns `PULSe` Note: In EXM, the SCPI query always returns `INTernal` for non-controlling instances
Preset	For VXT models M9420A/10A/11A/15A: `EXTernal` For E7760B, M8920A/20B: `INTernal` All other models: `SENSe`
Backwards	`[:SENSe]:ROSCillator:SOURce?` was query-only in ESA which always returned whichever

Compatibility Notes	reference the instrument was using. The instrument automatically switched to the ext ref if it was present In PSA (which had no sensing), `[:SENSe]:ROSCillator:SOURce` set the reference (INT or EXT), so again its query returned the actual routing Thus, the query is 100% backwards compatible with both instruments

Backwards Compatibility Command

Notes	For PSA compatibility the command form is provided and is directly mapped to `[:SENSe]:ROSCillator:SOURce:TYPE` Note: In EXM, the command does nothing for non-controlling instances
Backwards Compatibility SCPI	`[:SENSe]:ROSCillator:SOURce INTernal | EXTernal`

More Information

When the frequency reference is set to internal, the internal 10 MHz reference is used even if an external reference is connected.

When the frequency reference is set to external, the instrument will use the external reference. However, if there is no external signal present, or it is not within the proper amplitude range, a condition error message is generated. When the external signal becomes valid, the error is cleared.

When the frequency reference is set to Pulse, the instrument expects a 1 pulse per second signal at the EXT REF IN input. The instrument uses this signal to adjust the frequency of the internal reference.

If Sense is selected, the instrument checks whether a signal is present at the external reference connector. If it senses a signal within 5 ppm of the External Ref Freq (as set on the **External Ref Freq** control), it will automatically switch to the external reference. If it senses a 1 pulse per second signal, it enters Pulse mode, wherein the signal is used to adjust the internal reference. When no signal is present, it automatically switches to the internal reference. No message is generated as the reference switches between pulse, external and internal. The monitoring of the external reference occurs approximately on 1 millisecond intervals, and never occurs in the middle of a measurement acquisition, only at the end of the measurement (end of the request).

If for any reason the instrument's frequency reference is not able to obtain lock, Status bit 1 in the Questionable Frequency register will be true and a condition error message is generated. When lock is regained, Status bit 1 in the Questionable Frequency register will be cleared and the condition error will be cleared.

If an external frequency reference is being used, you must enter the frequency of the external reference if it is not exactly 10 MHz. The **External Ref Freq** key is provided for this purpose.

For VXT models M9420A/10A/11A/15A, there is no internal frequency reference. To work correctly, a 100MHz external frequency reference signal is needed to connect to the front panel of the module. The default Freq Ref In setting is "External" and it cannot be set to any other types.

For VXT models M9410A/11A, External Freq Ref Input controls the "100 MHz In" port on the front panel. For VXT models M9415A/16A, External Freq Ref Input controls the "REF In" port on the front panel. For M941xE, the External Freq Ref Input is the reference in port on M941xA module.

NOTE

In EXM, a common frequency reference module serves all instrument instances, but only one instance of the software application can change the reference input type (INT or EXT or SENSE). The software application allowed to change the reference input is called the primary or controlling instance; by default, the leftmost instrument instance is the controlling instance. This can be changed in the config file "`E66XXModules.config`" located in the folder `E:\Keysight\Instrument`. For the non-controlling instance(s) the reference input types (in SCPI commands, and in the Virtual Front Panel menus) are blanked and unavailable for use.

Sense

If **Sense** is selected, the instrument checks whether a signal is present at the external reference connector. If it senses a signal within 5 ppm of the External Ref Freq (as set by **External Ref Freq**), it uses this signal as an External Reference. If it senses a 1 pulse per second signal, it uses this signal to adjust the internal reference by adjusting the User setting of the Timebase DAC. When no signal is present, it automatically switches to the internal reference.

If set to `SENSe` and the instrument senses a 1 pulse per second signal, it sets the **System, Alignments, Timebase DAC** setting to **User**. This setting survives Preset and Power Cycle but is set to **Calibrated** by **System, Restore Defaults, Align** or **System, Restore Defaults, All**

Internal

The internal reference is used. A 1 pps signal at the EXT REF IN port, or a signal there between 1 and 50 MHz, causes a warning triangle to appear in the settings panel next to the word "INTERNAL", but will otherwise be ignored.

External

The external reference is used.

Pulse

The internal reference continues to be the frequency reference for the instrument in that it determines the reference contribution to the phase noise, but its average frequency is adjusted to follow the 1 pps signal at the EXT REF IN input. Therefore, the instrument frequency accuracy will be dominated by the aging rate of the 1 pps signal instead of the aging rate of the internal reference, except during the time it takes to lock to a new 1 pps signal, approximately 10 minutes.

Sets the System, Alignments, Timebase DAC setting to “User”. This setting survives Preset and Power Cycle, but it set to “Calibrated” on a System, Restore Defaults, Align or a System, Restore Defaults, All

When a 1 pps signal is present at the EXT REF IN input, and either **Pulse** or **Sense** is selected, the internal reference frequency is affected by this signal; in effect, it “learns” a new accuracy setting. This setting can be seen by going to the **System, Alignments, Timebase Dac** menu, and looking at the **User** key in that menu. You will note that User has become automatically selected, and that the value shown on the **User** key is the updated value of the timebase DAC as “learned” from the 1 pps signal. Note that this replaces any value the user might have previously set on this key.

Once the setting is learned the user may remove the 1 pps signal; the User setting for the Timebase DAC is retained until you manually select “Calibrated” or execute a System, Restore Defaults, Align or a System, Restore Defaults, All. If you want to make the User setting permanent there is information in the Service Guide that tells you how to change the Calibrated setting of the Timebase DAC.

Note also that if the 1 pps signal is removed when Sense is selected, the instrument will simply switch to the normal state of the Internal reference and display SENSE:INT in the Settings Panel. However, if the 1 pps signal is removed when Pulse is selected, the instrument will generate an error

The J7203A Atomic Frequency Reference is an accessory for the X-Series Signal Analyzer that provides a highly accurate 1 pps timebase to use in conjunction with the Pulse setting. With the J7203A, the 1 pps signal is guaranteed to meet the input requirements of the EXT REF IN port, and the improved accuracy of the instrument’s internal frequency reference is specified. This is the only 1 pps signal that is guaranteed to function properly with the X-Series.

6.6.2 Ext Ref Freq

This key tells the instrument the frequency of the external reference. When the external reference is in use (either because the reference has been switched to External or because the Reference has been switched to Sense and there is a valid external reference present) this information is used by the instrument to determine the internal settings needed to lock to that particular external reference signal.

For the instrument to stay locked, the value entered must be within 5 ppm of the actual external reference frequency. So, it is important to get it close, or you risk an unlock condition.

Note that this value only affects the instrument’s ability to lock. It does not affect any calculations or measurement results. See "Freq Offset" in the Frequency section for information on how to offset frequency values.

Remote Command	`[:SENSe]:ROSCillator:EXTernal:FREQuency <freq>` `[:SENSe]:ROSCillator:EXTernal:FREQuency?`

Example	Set the external reference frequency to 20 MHz, but does not select the external reference:
	`:ROSC:EXT:FREQ 20 MHz`
	Select the external reference:
	`:ROSC:SOUR:TYPE EXT`

Dependencies	Still available with Internal or Pulse selected, to allow setup for when External is in use. However, the setting has no effect if the Internal Reference is in use (Freq Ref In set to Internal, Pulse, or SENSE:INT or SENSE:PULSE) Not available in UXM For VXT models M9420A/10A/11A/15A/16A and M9410E/11E/15E/16E: only 100 MHz is available
Preset	Unaffected by **Mode Preset**, **Input/Output Preset**, or **Restore Defaults, Input/Output**, but set to 100 MHz for VXT models and 10 MHz for other models, by **Restore Defaults, Misc**, or **Restore Defaults, All**, or **Default External Ref Freq**
State Saved	Power On Persistent (survives power cycle)
Min/Max	See "Minimum & Maximum Values" on page 2696

Minimum & Maximum Values

Model	Min	Max
CXA, N897xB, E7760B, M8920A/20B, CXA-m	10 MHz	10 MHz
EXA without option R13	10 MHz	10 MHz
EXA with option R13	10 MHz	20 MHz
MXA, PXA, EXM	10 MHz	50 MHz

Model	**Min**	**Max**
VXT models	100 MHz	100 MHz
M9410E/11E/15E/16E	100 MHz	100 MHz
All other models	1 MHz	100 MHz

6.6.3 Default External Ref Freq

Restores the External Ref Freq to its default of 10 MHz.

When you set an External Ref Freq value with the **Ext Ref Freq** control, that Frequency is persistent; is not affected by Mode Preset or Input/Output Preset, and survives shutdown and power cycle. This control allows you to reset the External Ref Freq to its default value.

NOTE **The persistence of the External Ref Freq is a new behavior as of firmware version A.18.00, necessitating the addition of this control. In versions before A.18.00, the frequency reset on a power cycle/restart. Thus, you may need to use this command to retain backwards compatibility.**

Remote Command	`[:SENSe]:ROSCillator:EXTernal:FREQuency:DEFault`
Example	`:ROSC:EXT:FREQ:DEF` resets the external ref frequency
Notes	Command only; no query
Dependencies	Grayed-out if the Ext Ref Freq is already set to the default Does not appear in EXM, UXM, VXT models or M8920A/20B

6.6.4 LO Ref Input

This parameter sets the LO Reference signal Input to External or Internal.

Remote Command	`[:SENSe]:ROSCillator:LO:INPut INTernal | EXTernal`
	See "Option Details" on page 2698
	`[:SENSe]:ROSCillator:LO:INPut?`

Example	`:ROSC:LO:INP EXT` `:ROSC:LO:INP?`
Dependencies	Only available in VXT models M9410A/11A/15A/16A when MIMO is on
Preset	`INTernal`
State Saved	Saved in instrument state

Option Details

Parameter	SCPI	Notes
Internal	`INTernal`	When Internal is selected, internal reference signal will be used to synchronize the LO board
External	`EXTernal`	When External is selected, external reference signal will be used to synchronize the LO board. Route the correct reference signal to the specified port before changing the LO Ref Input to External For VXT models M9410A/11A, a 4.8 GHz reference signal is required to rout to the 4.8 GHz In port

6.6.5 Ref Lock BW

Lets you adjust the Frequency Reference phase lock bandwidth. This control is available in some models of the X-Series.

It is possible to improve the phase noise of the instrument by several dB, even tens of dB, by using an external reference with excellent phase noise. When an external reference is used the instrument’s close-in phase noise improves to match that of the reference.

Normally a narrow loop bandwidth is used to phase lock to the external reference. However, the Ref Lock BW control allows you to choose a wider loop bandwidth to reduce the phase noise at low offset frequencies, especially 4 to 400 Hz offset. The Wide setting represents about a 60 Hz loop bandwidth, the Narrow setting about 15 Hz.

When using an external reference with superior phase noise, Keysight recommends setting the external reference phase-locked-loop bandwidth to Wide to take advantage of that superior performance.

When using an external reference with inferior phase noise performance, Keysight recommends setting the bandwidth to Narrow.

In these relationships, inferior and superior phase noise are with respect to –134 dBc/Hz at 30 Hz offset from a 10 MHz reference. Because most reference sources have phase noise behavior that falls off at a rate of 30 dB/decade, this is usually equivalent to –120 dBc/Hz at 10 Hz offset.

In instruments with EP1 or EP2, this control only affects the external reference loop bandwidth. In instruments with EP0, this control also affects the loop bandwidth used when the Internal reference is selected (reference set manually to Internal or Pulse, or set to Sense and set by sensing to Internal or Pulse).

Remote Command	`[:SENSe]:ROSCillator:BANDwidth WIDE | NARRow` `[:SENSe]:ROSCillator:BANDwidth?`

Example	`:ROSC:BAND WIDE`
Dependencies	In instruments with EP1 or EP2: the control is available (not grayed-out) even with Internal or Pulse selected, to allow setup for when External is in use. However, the setting has no effect if the Internal Reference is in use Only appears in instruments equipped with the required hardware Does not appear in EXM, UXM, VXT models, or E7760B
Preset	Unaffected by Preset, but set to `NARRow` by **Restore Input/Output Defaults** or **Restore System Defaults -> All**
State Saved	Saved in Input/Output state

6.6.6 Reference Oscillator On/Off (Remote Command Only)

Provided for PSA code compatibility.

In PSA it turned the Reference Oscillator on and off, however in the X-Series the reference oscillator cannot be turned off, so no hardware is affected when it is received.

If queried it returns the state you set with the command, but note that this does not necessarily reflect the actual state of the Reference Oscillator, which is always `ON`.

Example	`:ROSCillator:OUTP ON`
Preset	Unaffected by Preset, but set to `ON` by **Restore Input/Output Defaults** or **Restore System Defaults -> All**
Backwards Compatibility SCPI	`[:SENSe]:ROSCillator:OUTPut[:STATe] ON | OFF | 1 | 0` `[:SENSe]:ROSCillator:OUTPut[:STATe]?`

6.6.6.1 Select Ref

Lets you select the reference model to control.

The reference status is not saved in a state file, because Reference is a standard alone module.

Remote Command	`[:SENSe]:ROSCillator:PXIReference:SELect NONE | M9300a` `[:SENSe]:ROSCillator:PXIReference:SELect?`
Example	`:ROSC:PXIR:SEL M9300` `:ROSC:PXIR:SEL?`
Dependencies	Only Keysight M9300A Frequency Reference is supported
State Saved	No

6.6.6.2 Freq Ref In

Specifies the frequency reference as being the internal reference, an external reference at the front panel input labeled **Ref In**.

Remote Command	`[:SENSe]:ROSCillator:PXIReference:SOURce INTernal | EXTernal` `[:SENSe]:ROSCillator:PXIReference:SOURce?`
Example	`:ROSC:PXIR:SOUR INT` `:ROSC:PXIR:SOUR?`
Dependencies	Only available when **Select Ref** is not NONE
Preset	`INTernal`
State Saved	Saved in instrument state

6.6.6.3 External Freq Ref

Tells the PXIe Ref module the frequency of the external reference. When the external reference is in use this information is used by the Ref module to determine the internal settings needed to lock to that particular external reference signal.

For the instrument to stay locked, the value entered must be within 5 ppm of the actual external reference frequency. So, it is important to get it close, or you risk an unlock condition.

Remote Command	`[:SENSe]:ROSCillator:PXIReference:EXTernal:FREQuency <freq>` `[:SENSe]:ROSCillator:PXIReference:EXTernal:FREQuency?`

Example	Set the external reference frequency to 20 MHz, but does not select the external reference:
	`:ROSC:PXIR:EXT:FREQ 20 MHz`
	Select the external reference:
	`:ROSC:PXIR:SOUR EXT`

Dependencies	Only available when **Select Ref** is not NONE
Preset	10 MHz
State Saved	Yes
Min	1 MHz
Max	110 MHz

6.6.6.4 Ext Ref Locked (Remote Query Only)

Returns the External Reference locked status

Remote Command	`[:SENSe]:ROSCillator:PXIReference:EXTernal:LOCK?`

Example	`:ROSC:PXIR:EXT:LOCK?`
Notes	Returns “1” if the Freq Ref Input is External and Reference is locked. Otherwise returns “0” When the Freq Ref Input is External and Reference is unlocked, the following warning message appears in the status bar: `Settings Alert; M9300A Ext Ref Unlocked`
Dependencies	Only available when **Select Ref** is not `NONE`

6.7 Output

Accesses controls that configure various output settings, like the frequency reference output, IF outputs and analog output.

Not all measurements support all output functions. For example, the Swept SA Measurement does not support the Digital Bus function or the I/Q Cal Out function under the **Output** tab; although the controls are visible, the outputs do not function in this measurement.

In addition, if the appropriate license is not present, some controls may not appear. In Modes/Measurements that do not support particular controls, the controls may appear, but no output will be generated if they are selected.

This tab does not appear in EXM or VXT model M9420A.

6.7.1 Analog Out

Lets you control which signal is fed to the “Analog Out” connector on the instrument rear panel.

In the Auto state, the Analog Output will automatically be set to the most sensible setting for the current mode or measurement.

If you make a selection manually from the **Analog Out** menu, the manually selected choice will remain in force until you change it (or re-select Auto), even if you switch to a mode or measurement for which the selected output does not apply.

Remote Command	`:OUTPut:ANALog OFF | SVIDeo | LOGVideo | LINVideo | DAUDio!See Option Details` `:OUTPut:ANALog?`
Example	`:OUTP:ANAL SVIDeo` causes the analog output type to be Screen Video
Preset	Unaffected by Preset, but set to `DAUDio` by **Restore Input/Output Defaults** or **Restore System Defaults->All**
State Saved	Saved in Input/Output State
Backwards Compatibility Notes	Prior to A.04.00, `OFF` was the default functionality except when in the Analog Demod application or with Tune and Listen, in which case it was `DAUDio`, and there was no selection menu. For backwards compatibility with earlier X-Series firmware versions, Auto (`:OUTP:ANAL:AUTO ON`) duplicates the prior behavior The `DNWB` and `SANalyzer` parameters, which were legal in PSA but perform no function in the X-Series, are accepted without error

Auto Function

Remote Command	`:OUTPut:ANALog:AUTO OFF | ON | 0 | 1` `:OUTPut:ANALog:AUTO?`
Example	`:OUTP:ANAL:AUTO ON`
Preset	`ON`

Option Details

Source	SCPI	Notes
Off	`OFF`	The Analog Output is off
Screen Video	`SVIDeo`	Selects the analog output to be the screen video signal. In this mode, the pre-detector data is output to the Analog Out connector. The output looks very much like the trace displayed on the instrument's screen, and depends on the Log/Lin display Scale, Reference Level, and dB per division, but is not influenced by the selected detector or any digital flatness corrections or trace post-processing (like Trace Averaging)
Log Video	`LOGVideo`	Selects the analog output to be the log of the video signal. In this mode, the pre-detector data is output to the Analog Out connector with a Log scaling. The output is referenced to the current level at the mixer, does not depend on display settings like Reference Level or dB per division, and it is not influenced by the selected detector or any digital flatness corrections or trace post-processing (like Trace Averaging), but does change with input attenuation
Linear Video	`LINVideo`	Selects the analog output to be the envelope signal on a linear (voltage) scale. In this mode, the pre-detector data is output to the Analog Out connector with a Linear scaling. The output is based on the current Reference Level, and is not influenced by the selected detector or any digital flatness corrections or trace post-processing (like Trace Averaging)
Demod Audio	`DAUDio`	Selects the analog output to be the demodulation of the video signal. When Demod Audio is selected, the demodulated audio signal appears at this output whenever the Analog Demod application is demodulating a signal or when **Analog Demod Tune and Listen** is operating in the Swept SA measurement When Analog Out is in the Auto state, this output is auto-selected when in the Analog Demod mode or when **Analog Demod Tune and Listen** is operating in the Swept SA measurement

The table below specifies the range for each output.

Analog Out	Nominal Range exc (10% overrange)	Scale Factor	Notes
Off	0 V		
Screen Video	0 – 1 V open circuit	10%/division	8566 compatible
Log Video	0 – 1 V terminated	1/(192.66 dB/V)	dB referenced to mixer level, 1V out for –10 dBm at the mixer
Linear Video	0 – 1 V terminated	100%/V	Linear referenced to Ref Level, 1 V out for RF envelope at the Ref Level

Analog Out	**Nominal Range exc (10% overrange)**	**Scale Factor**	**Notes**
Demod Audio	(varies with instrument setting)		

Notes about the Analog Outputs

Screen Video

This mode is similar to the Analog Output of the HP 8566 family and the Video Out (opt 124) capability of the Keysight PSA analyzer (E444x), although there are differences in the behavior.

Screen Video output changes while in FFT Sweeps, so for measurements that use exclusively FFT Sweeps, or if the user manually chooses FFT Sweeps, the Screen Video output will look different than it does in swept mode

Because the Screen Video output uses one of the two IF processing channels, only one detector is available while Screen Video is selected. All active traces will change to use the same detector as the selected trace when Screen Video is activated.

Screen Video output is not available while any EMI Detector is selected (Quasi Peak, RMS Average or EMI Average), because these detectors use both IF processing channels. Consequently, if the user chooses an EMI Detector, there will be no Screen Video output.

The output holds at its last value during an alignment and during a marker count. After a sweep:

- If a new sweep is to follow (as in Continuous sweep mode), the output holds at its last value during the retrace before the next sweep starts. If the instrument is in zero-span, there is no retrace, as the instrument remains tuned to the Center Frequency and does not sweep. Therefore, in zero-span, the output simply remains live between display updates
- If no new sweep is to follow (as in Single sweep mode), the output remains live, and continues to show the pre-detector data

This function depends on optional capability; the selection is not available, and the command will generate an “Option not available” error unless you have Option YAV or YAS licensed in your instrument.

The Screen Video function is intended to be very similar to the 8566 Video Output and the PSA Option 124. However, unlike the PSA, it is not always on; it must be switched on by the Screen Video key. Also, unlike the PSA, there are certain dependencies (detailed above) – for example, the Quasi Peak Detector is unavailable when Screen Video is on.

Furthermore, the PSA Option 124 hardware was unipolar, and its large range was padded to be exactly right for use as a Screen Video output. In the X-Series, the hardware is bipolar and has a wider range to accommodate the other output choices. Therefore, the outputs won't match up exactly and users may have to modify their setup when applying the X-Series in a PSA application.

Log Video

Log Video shows the RF Envelope with the Reference equal to the Mixer Level. The output is designed so that full scale (1 V) corresponds to -10 dBm at the mixer. The full range (0-1 V) covers 192.66 dB ; thus, 0 V corresponds to -202.66 dBm at the mixer.

Because the Log Video output uses one of the two IF processing channels, only one detector is available while Screen Video is selected. All active traces will change to use the same detector as the selected trace when Log Video is activated.

Log Video output is not available while any EMI Detector is selected (Quasi Peak, RMS Average or EMI Average), because these detectors use both IF processing channels. Consequently, if the user chooses an EMI Detector, there will be no Log Video output.

The output holds at its last value during an alignment, during a marker count, and during retrace (after a sweep and before the next sweep starts).

This function depends on optional capability. The choice will not appear, and the command will generate an “Option not available” error unless you have Option YAV licensed in your instrument.

Log Video output changes while in FFT Sweeps, so for measurements that use exclusively FFT Sweeps, or if the user manually chooses FFT Sweeps, the Log Video output will look different than it does in swept mode.

Linear Video

Linear Video shows the RF Envelope with the Reference equal to the Ref Level. The scaling is set so that 1 V output occurs with an instantaneous video level equal to the reference level, and 0 V occurs at the bottom of the graticule. This scaling gives you the ability to control the gain without having another setup control for the key. But it requires you to control the look of the display (the reference level) in order to control the analog output.

This mode is ideal for looking at Amplitude Modulated signals, as the linear envelope effectively demodulates the signal.

Because the Linear Video output uses one of the two IF processing channels, only one detector is available while Linear Video is selected. All active traces will change to use the same detector as the selected trace when Log Video is activated.

Linear Video output is not available while any EMI Detector is selected (Quasi Peak, RMS Average or EMI Average), because these detectors use both IF processing channels. Consequently, if the user chooses an EMI Detector, there will be no Linear Video output.

The output holds at its last value during an alignment and during a marker count and during retrace (after a sweep and before the next sweep starts).

This function depends on optional capability; the choice will not appear, and the command will generate an “Option not available” error unless you have Option YAV licensed in your instrument. Linear Video output changes while in FFT Sweeps, so for measurements that use exclusively FFT Sweeps, or if the user manually chooses FFT Sweeps, the Linear Video output will look different than it does in swept mode.

Demod Audio

When Analog Out is in the Auto state, this output is auto-selected when in the Analog Demod mode or when **Analog Demod Tune and Listen** is operating in the Swept SA measurement.

If any other Analog Output is manually selected when in the Analog Demod mode or when **Analog Demod Tune and Listen** is operating in the Swept SA measurement, a condition warning message appears. This choice only appears if the Analog Demod application (N9063A), the N6141A or W6141A application, or Option EMC is installed and licensed, otherwise the choice will not appear, and the command will generate an “Option not available” error.

The output holds at its last value during an alignment and during a marker count. It is not held between sweeps, in order for Tune and Listen to work properly.

When Demod Audio is the selected Analog Output, all active traces are forced to use the same detector, and the CISPR detectors (QPD, EMI Avg, RMS Avg) are unavailable

6.7.2 Screen Video Level

Lets you control the amplitude of the Analog Output when Screen Video is selected.

- The 1V (`NORMal`) setting provides a nominal output of 1 V peak-to-peak into an open circuit. This matches the traditional behavior of X-series instruments
- The 2V (`COMPatible`) setting provides a nominal output of 2 V peak-to-peak into an open circuit. This matches the legacy behavior of PSA and earlier analyzers

Remote Command	`:OUTPut:ANALog:SVIDeo NORMal | COMPatible` `:OUTPut:ANALog:SVIDeo?`
Example	`:OUTP:ANAL:SVID COMP` causes the Screen Video level to be 2 V

Dependencies	Only appears if Screen Video is the selected Analog Output
Preset	Unaffected by Preset, but set to `NORM` by **Restore Input/Output Defaults** or **Restore System Defaults->All**
State Saved	Saved in Input/Output State

6.7.3 Digital Bus Out

Turns on the LVDS Digital Output port for outputting digital acquisition data.

- When `ON`, all acquisitions are streamed to the output port including acquisitions for internal purposes such as Alignment. The internal processing and routing of acquisitions continues as usual and is unaffected by the state of Bus Out
- When `OFF`, no signal appears on the LVDS port

Remote Command	`:OUTPut:DBUS[1][:STATe] ON | OFF | 1 | 0` `:OUTPut:DBUS[1][:STATe]?`
Example	`:OUTP:DBUS ON`
Dependencies	Requires option RTL or control is not displayed **Digital Bus Out** and **Wideband Digital Bus** cannot both be ON at the same time, so: – When **Wideband Digital Bus** is turned ON, if **Digital Bus Out** is already ON, an advisory message is displayed, “Wideband Digital Bus On, Digital Bus (narrow band) forced to Off” – When **Digital Bus Out** is turned ON, if **Wideband Digital Bus** is already ON, an advisory message is displayed, “Digital Bus (narrow band) On, Wideband Digital Bus forced to Off”
Preset	`OFF` Set by **Restore Input/Output Defaults**
State Saved	Saved in Input/Output State

6.7.4 Wideband Digital Bus

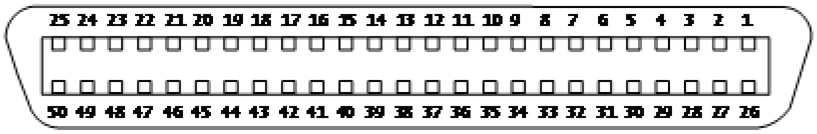
Turns on the LVDS port on the Wideband IF, which causes the I/Q pairs from the current measurement to be sent to this port.

NOTE **This control is grayed-out in all Modes except RTSA, which offers the only measurement that supports wideband streaming.**

- When `ON`, the internal processing and routing of acquisitions continues as usual, and the display of measurement data is unaffected
- When `OFF`, no signal appears on the LVDS port

Remote Command	`:OUTPut:DBUS2[:STATe] OFF | ON | 0 | 1` `:OUTPut:DBUS2[:STATe]?`
Example	`:OUTP:DBUS2 ON`
Notes	If this command is sent while running a measurement that does not support **Wideband Digital Bus**, the message “Settings conflict; Feature not supported for this measurement” is displayed
Dependencies	Requires option RTS or control is not displayed **Digital Bus Out** and **Wideband Digital Bus** cannot both be ON at the same time, so: – When **Wideband Digital Bus** is turned ON, if **Digital Bus Out** is already ON, an advisory message is displayed, “Wideband Digital Bus On, Digital Bus (narrow band) forced to Off” – When **Digital Bus Out** is turned ON, if **Wideband Digital Bus** is already ON, an advisory message is displayed, “Digital Bus (narrow band) On, Wideband Digital Bus forced to Off”
Preset	`OFF` Set by **Restore Input/Output Defaults**
State Saved	Saved in Input/Output State

Here is the Wideband LVDS connector as viewed from the rear panel. The pin assignments are listed below:



I-Cable

Connection	**“-“ pin #**	**“+” pin #**
GND	1	26
N/C	2	27
Stream_I[00]	3	28
Stream_I[01]	4	29
Stream_I[02]	5	30
Stream_I[03]	6	31
GND	7	32
Stream_I[04]	8	33
Stream_I[05]	9	34
Stream_I[06]	10	35
Stream_I[07]	11	36
GND	12	37
Stream_I[08]	13	38
Stream_I[09]	14	39

Connection	“-“ pin #	“+” pin #
Stream_I[10]	15	40
Stream_I[11]	16	41
GND	17	42
Stream_I[12]	18	43
Stream_I[13]	19	44
Stream_I[14]	20	45
Stream_I[15]	21	46
GND	22	47
GND	23	48
Stream_VALID	24	49
Stream_CLK	25	50

Q-Cable

Connection	“-“ pin #	“+” pin #
GND	1	26
Stream_ALT	2	27
Stream_Q[00]	3	28
Stream_Q[01]	4	29
Stream_Q[02]	5	30
Stream_Q[03]	6	31
GND	7	32
Stream_Q[04]	8	33
Stream_Q[05]	9	34
Stream_Q[06]	10	35
Stream_Q[07]	11	36
GND	12	37
Stream_Q[08]	13	38
Stream_Q[09]	14	39
Stream_Q[10]	15	40
Stream_Q[11]	16	41
GND	17	42
Stream_Q[12]	18	43
Stream_Q[13]	19	44
Stream_Q[14]	20	45
Stream_Q[15]	21	46
GND	22	47

Connection	"-" pin #	"+" pin #
GND	23	48
Stream_MARK_1	24	49
Stream_MARK_2	25	50

Stream_I	16 bit "I" Data
Stream_Q[15:0]	16 bit "Q" Data
Stream_VALID	Data valid, when '1' then I/Q data is valid
Stream_CLK	150 MHz DDR clock
Stream_MARK_1	Stream Mark Bit 1
Stream_MARK_2	Stream Mark Bit 2
Stream_ALT	currently unused

6.7.5 Data Stream

Lets you choose data or a test pattern to output to the Wideband IF LVDS port. This can help you set up your streaming target devices.

Remote Command	`:OUTPut:DBUS2:DATA MEASure | TEST` `:OUTPut:DBUS2:DATA?`
Example	`:OUTP:DBUS2:DATA TEST`
Notes	Selecting `TEST` routes a test pattern to the Wideband Digital Bus stream output
Preset	`MEAS` (set by Restore Input/Output Defaults)
State Saved	Saved in Input/Output State

6.7.6 I/Q Cal Out

The Baseband I/Q "Cal Out" port can be turned on with either a 1 kHz or a 250 kHz square wave. This can be turned on independent of the input selection. Preset resets this to `OFF`.

Remote Command	`:OUTPut:IQ:OUTPut IQ1 | IQ250 | OFF` `:OUTPut:IQ:OUTPut?`
Example	`:OUTP:IQ:OUTP IQ1`
Dependencies	Only available with Option BBA
Couplings	An I/Q Cable Calibration or an I/Q Probe Calibration will change the state of the Cal Out port as needed by the calibration routine. When the calibration is finished the I/Q Cal Out is restored to the pre-calibration state
Preset	`OFF`

State Saved	Saved in instrument state
Range	1 kHz Square Wave | 250 kHz Square Wave | Off

6.7.7 Aux IF Out

Controls the signals that appear on the SMA output on the rear panel labeled **AUX IF OUT**

NOTE

Aux IF Out is valid for the RF Input and for the External Mixer input. In external mixing, the Aux IF output level is set by factory default to accommodate expected IF levels for the RF path. When using the External Mixing path, the **Aux IF Out** levels (for all three options CR3, CRP and ALV) will therefore be uncalibrated.

Remote Command	`:OUTPut:AUX SIF | AIF | LOGVideo | OFF`
	See "Option Details" on page 2711 and "Notes on the Aux IF Outputs" on page 2712 below
	`:OUTPut:AUX?`

Dependencies	Does not appear in models that do not support the Aux IF Out
Preset	Unaffected by Preset, but set to `OFF` by **Restore Input/Output Defaults** or **Restore System Defaults->All**
State Saved	Saved in Input/Output state
Backwards Compatibility Notes	In PSA, the IF output had functionality equivalent to the `SIF` option in X-Series' **Aux IF Out** menu. In X-Series, it is necessary to switch **Aux IF Out** to `SIF` to get this functionality, whereas in PSA it is always on, since there are no other choices Hence, if you are migrating remote code from PSA, and you use the IF Output in PSA, you will need to add a command to switch this function to `SIF`

Option Details

The Aux IF Output options are:

Source	SCPI	Notes
Off	`OFF`	No signal is output from the **AUX IF OUT** connector on the rear panel The connector appears as an open-circuit (that is, it is not terminated in any way)
Second IF	`SIF`	The 2nd IF output is routed to the rear panel connector. Annotation on the menu panel shows the current 2nd IF frequency in use in the instrument
Arbitrary IF	`AIF`	The 2nd IF output is mixed with a local oscillator and mixer to produce an arbitrary IF output between 10 MHz and 75 MHz with 500 kHz resolution. The phase noise in this mode will not be as good as in Second IF mode The IF output frequency is adjustable, through an active function which appears on the menu panel, from 10 MHz to 75 MHz with 500 kHz resolution Note that, in instruments with Options B2X or B5X, the Arbitrary IF Output is only

Source	SCPI	Notes
		practical when the IF Bandwidth is <= 40 MHz, IF Path is <= 40 MHz, or FFT Width is <= 40 MHz
Fast Log Video	`LOGVideo`	The 2nd IF output is passed through a log amp and the log envelope of the IF signal is sent to the rear panel. The open circuit output level varies by about 25 mV per dB, with a top-of-screen signal producing about 1.6 Volts. The output impedance is nominally 50 ohms This mode is intended to meet the same requirement as Option E4440A-H7L Fast Rise Time Video Output on E4440A PSA Series, allowing you to characterize pulses with fast rise times using standard measurement suites on modern digital scopes

Notes on the Aux IF Outputs

Second IF

Does not appear unless Option CR3 is installed.

The frequency of the 2nd IF depends on the current IF signal path as shown in the table below:

IF Path Selected	Frequency of “Second IF” Output
10 MHz	322.5 MHz
25 MHz	322.5 MHz
40 MHz	250 MHz
85-160 MHz	300 MHz
255 MHz	750 MHz
510 MHz	877.1484375 MHz

The signal quality, such as signal to noise ratio and phase noise, are excellent in this mode.

Arbitrary IF

Does not appear unless Option CRP is installed.

The bandwidth of this IF output varies with band and center frequency, but is about 40 MHz at the -3 dB width. When the output is centered at lower frequencies in its range, signal frequencies at the bottom of the bandwidth will “fold”. For example, with a 40 MHz bandwidth (20 MHz half-bandwidth), and a 15 MHz IF center, a signal -20 MHz relative to the spectrum analyzer center frequency will have a relative response of about -3 dB with a frequency 20 MHz below the 15 MHz IF center. This -5 MHz frequency will fold to become a +5 MHz signal at the IF output. Therefore, lower IF output frequencies are only useful with known band-limited signals.

Fast Log Video

Does not appear unless Option ALV is installed.

The output is off during an alignment but not during a marker count, and is not blanked during retrace (after a sweep and before the next sweep starts).

6.7.8 Arbitrary IF Freq

Sets the frequency of the Arbitrary IF when "Aux IF Out" on page 2711 is set to `AIF`.

NOTE **In instruments with Options B2X or B5X, the Arbitrary IF Output is only practical when the IF Bandwidth is <= 40 MHz, IF Path is <= 40 MHz, or FFT Width is <= 40 MHz.**

Remote Command	`:OUTPut:AUX:AIF <value>` `:OUTPut:AUX:AIF?`
Example	`:OUTP:AUX:AIF 50 MHZ`
Dependencies	Only appears if "Aux IF Out" on page 2711 is `AIF`
Preset	Unaffected by a Preset, but set to 70 MHz by **Restore Input/Output Defaults** or **Restore System Defaults->All**
State Saved	Saved in Input/Output State
Min	10 MHz
Max	75 MHz

6.7.9 Ext/Wide IF Out

Causes the signal that is normally routed to the IF to be routed instead to the **Ext IF Out** connector on the rear panel (N9041B) or **Wide IF Out** connector on the front panel (N9042B) or rear panel (N9032B). This is available in N9041B when RF Input 2 is the selected input port and in N9032B/N9042B on RF Input and, when V3050A is attached, External RF Input.

Only one IF output (**Ext/Wide IF Out**, IF2 Out, or Aux IF Out) can be selected at a time, so switching Ext/Wide IF Out to `ON` changes IF2 Out and Aux IF Out to `OFF`, and setting Aux IF Out to something other than `OFF` or IF2 Out to `ON` forces Ext/Wide IF Out to `OFF`.

Remote Command	`:OUTPut:EIF ON | OFF | 1 | 0` `:OUTPut:EIF?`
Example	`:OUTP:EIF ON`
Dependencies	Only appears in N9041B, N9032B, and N9042B For N9041B, enabled when RF Input 2 is the selected input. When RF Input 2 is not selected, the control is grayed out and forced to Off and attempting to set it On will result in an error message

	For N9032B/N9042B, enabled on RF Input and on External RF Input when V3050A is attached When this switch is `ON`, no measurement is displayed, and the error "No result; meas invalid with Ext/Wide IF Out set to On" appears in the Status bar
Preset	`OFF` Not affected by **Mode Preset**, but set to `OFF` by **Input/Output Preset**
State Saved	Saved in Input/Output state
Annotation	None (but error message appears when on)
Status Bits/OPC dependencies	`STATus:QUEStionable:INTegrity` bit 1 is set when **Ext/Wide IF Out** is `ON`. This indicates an error, because no valid data is on the screen or available via SCPI. However, the signal at the **Ext/Wide IF Out** port is still valid given the other settings

6.7.10 IF2 Out

Causes the signal that is normally routed to the IF, when the 1 GHz IF Path is selected, to be routed instead to the **IF2 Out** connector on the rear panel.

Only one IF output (Ext IF Out, **IF2 Out**, or Aux IF Out) can be selected at a time, so switching IF2 Out to On changes Ext IF Out and Aux IF Out to Off, and setting Aux IF Out to something other than Off or Ext IF Out to On forces IF2 Out to Off.

This control only appears if Option H1G is installed. It is only available when the 1 GHz IF Path is chosen, either directly or indirectly. In all other paths it is visible but grayed out and forced to Off. Attempting to set it On when the 1GHz path is not selected generates an error.

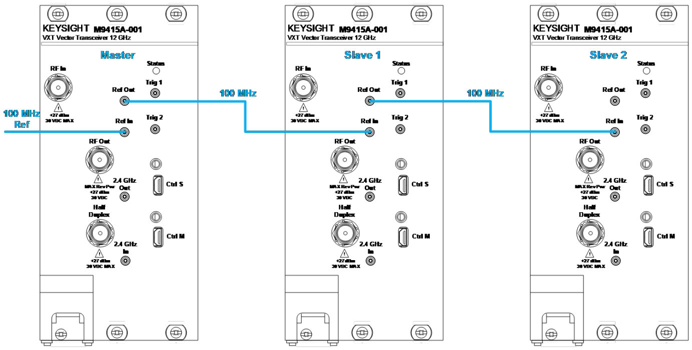
- Direct selection of the 1 GHz path: Measurements that directly support the 1 GHz path have a 1 GHz selection in the IF Path menu in Meas Setup
- Indirect selection of the 1 GHz path: certain measurements, like CCDF, always choose the widest available path, and so will choose the 1 GHz path if it is available, even if there is no IF Path menu in the measurement. IF2 Out will be visible when this results in the 1 GHz path being selected, even if there is no control or readout indicating that the 1 GHz path is chosen

Remote Command	`:OUTPut:IF2 ON | OFF | 1 | 0` `:OUTPut:IF2?`
Example	`:OUTP:IF2 ON`
Dependencies	Only appears in UXA and only when Option HIG is installed When this is `ON`, no measurement is displayed, and the error "No result; meas invalid with IF2 Out set to On" appears in the Status bar
Preset	`OFF` Not affected by Mode Preset but set to `OFF` by Input/Output Preset
State Saved	Saved in Input/Output state

Annotation	None (but error message appears when on)
Status Bits/OPC dependencies	`STATus:QUEStionable:INTegrity` bit 1 is set when IF2 Out is `ON`. This indicates an error, because no valid data is on the screen or available via SCPI. However, the signal at the **IF2 Out** port is still valid given the other settings

6.7.11 REF Out

Lets you toggle the state of REF Out. The REF Out port is designed for MIMO, which provides the reference daisy chain for the Primary and Secondary modules.



Remote Command	`:OUTPut:EREFerence:OUTPut ON | OFF | 1 | 0` `:OUTPut:EREFerence:OUTPut?`
Example	`:OUTP:EREF:OUTP ON` `:OUTP:EREF:OUTP?`
Notes	Used to route the 100 MHz reference signal on the REF In port to the REF Out port
Dependencies	Only available in VXT models M9415A/16A and M9415E/16E when **Freq Ref Input** is External, and **Ext Ref Freq** is 100 MHz
Preset	`OFF`
Range	`ON|OFF`

6.7.12 LO Ref Out

Turns the LO Reference Signal Out on or off. **LO Ref Out** is used to provide reference daisy chain in MIMO or Phase Coherency.

For VXT models M9410A/11A, controls the **4.8 GHz Out** port on the front panel. Setting it `ON` outputs a 4.8 GHz reference signal.

Remote Command	`:OUTPut:ROSCillator:LO:OUTPut ON | OFF | 1 | 0` `:OUTPut:ROSCillator:LO:OUTPut?`
Example	`:OUTP:ROSC:LO:OUTP ON` `:OUTP:ROSC:LO:OUTP?`
Dependencies	Only available in VXT models M9410A/11A/15A/16A and M9410E/11E/15E/16E
Preset	`OFF`

6.8 Trigger Output

Accesses controls that configure the **Trigger Output** settings.

6.8.1 Trig 1 – 4 Out

Selects the type of output signal that will be output from the available **Trig n Out** connectors, where **n** = 1, 2, 3, or 4.

Some instruments do *not* support **Trig 2 Out** through **Trig 4 Out** outputs, nor their associated controls.

For most instruments, **Trig 1 Out** applies to the connector labeled **Trigger 1**, but for VXT model M9420A, it is labeled **Trigger 4**.

The front panel includes separate controls for each available trigger: **Trig 1 Out** – **Trig 4 Out**. The remote command can be used for *any* of the **Trig n Out** connectors, by specifying the appropriate parameter (for example `TRIG1`, `TRIG2`, etc.).

NOTE Option `TARMed` is *not* available in modular instruments.

Remote Command	`:TRIGger[1]|2|…|4[:SEQuence]:OUTPut HSWP | MEASuring | MAIN | GATE | GTRigger | OEVen | TARMed | SPOint | S1Marker | S2Marker | S3Marker | S4Marker | PARB | FSYNc | OFF`
	See "Trigger Out Options" on page 2718
	`:TRIGger[1]|2|…|4[:SEQuence]:OUTPut?`

Example	`:TRIG:OUTP HSWP` `:TRIG2:OUTP GATE`
Notes	**Trig 2 Out** is used as the source trigger out in EXM and VXT model M9420A The available choices in EXM and VXT model M9420A are `S1Marker`, `S2Marker`, `S3Marker`, `S4Marker` and `OFF` For Power Amplifier Mode, **Trig 2 Out** is set to Source Marker2 when **Burst Shape & Mask** is `ON`. In this case, **Trigger 2** is used to output PA Enable Mask
Dependencies	**Trig 2 Out** through **Trig 4 Out** are not supported in all models. In models that do not support them, the **Trig n Out** control is blanked, and sending the SCPI command for this output generates an error, "Hardware missing; Not available for this model number" Querying **Trig 2 Out** through **Trig 4 Out** in models that do not support them returns `OFF` For VXT models M9410A/11A/15A/16A and M9410E/11E/15E/16E: – When **Trig n Out Device** is `ANALyzer`, only `MEASuring`, `MAIN` and `OFF` are available – When **Trig n Out Device** is `SOURce`, only `S1Marker`, `S2Marker`, `S3Marker`, `S4Marker`, `PARB`, `FSYNc` and `OFF` are available

<table>

<tr><td>State Saved</td><td>Saved in instrument state</td></tr>
</table>

Trigger Out Options

Source	SCPI	Notes
Off	`OFF`	Selects no signal to be output to the **Trig n Out** connector
Sweeping	`HSWP`	Selects the Sweeping Trigger signal to be output to the **Trig n Out** connector when a measurement is made This signal has historically been known as `HSWP` (High = Sweeping), and is 5 V TTL level with 50 Ω output impedance
Measuring	`MEASuring`	Selects the Measuring trigger signal to be output to the **Trig n Out** connector. This signal is true while the Measuring status bit is true
Main Trigger	`MAIN`	Selects the current instrument trigger signal to be output to the **Trig n Out** connector Note: For multi segment sweeps, only the first sweep segment uses the selected trigger signal. All other sweep segments trigger using Free-Run and the trigger output will reflect that
Gate Trigger	`GTRigger`	Selects the gate trigger signal to be output to the **Trig n Out** connector. This is the source of the gate timing, not the actual gate signal
Gate	`GATE`	Selects the gate signal to be output to the **Trig n Out** connector. The gate signal has been delayed and its length determined by delay and length settings. When the polarity is positive, a high on the **Trig n Out** connector represents the time the gate is configured to pass the signal
Odd/Even Trace Point	`OEVen`	Selects either the odd or even trace points as the signal to be output to the **Trig n Out** connector when performing swept spectrum analysis. When the polarity is positive, this output goes high during the time the instrument is sweeping past the first point (Point 0) and every other following trace point. The opposite is true if the polarity is negative
Trigger Armed	`TARMed`	Selects the “trigger armed” trigger signal to be output to the **Trig n Out** connector. This signal is true when the instrument reaches its trigger armed state *Not* available in modular instruments
Source Point Trigger	`SPOint`	Selects the gate signal to be output to the **Trig n Out** connector for use as the Point Trigger when operating an external source in Tracking mode. When Ext Trigger 1 is

Source	SCPI	Notes
		selected as the Point Trigger under **Source**, the Source Point Trigger under **Trig 1 Out** automatically gets selected. A similar pattern is used for the other Ext Trigger inputs; for example, when Ext Trigger 2 is selected as the Point Trigger under **Source**, the Source Point Trigger under **Trig 2 Out** automatically gets selected
Source Marker 1	`S1Marker`	Only available in VXT and M941xE. For M9420A, only for `TRIG2`, for M9410A/11A/15A/16A available for both `TRIG1` and `TRIG2` Selects the Trigger Output at Marker 1 in the Waveform file that is currently playing
Source Marker 2	`S2Marker`	Only available in VXT and M941xE. For M9420A, only for `TRIG2`, for M9410A/11A/15A/16A and M9410E/11E/15E/16E available for both `TRIG1` and `TRIG2` Selects the Trigger Output at Marker 2 in the Waveform file that is currently playing
Source Marker 3	`S3Marker`	Only available in VXT and M941xE. For M9420A, only for `TRIG2`, for M9410A/11A/15A/16A and M9410E/11E/15E/16E available for both `TRIG1` and `TRIG2` Selects the Trigger Output at Marker 3 in the Waveform file that is currently playing
Source Marker 4	`S4Marker`	Only available in VXT and M941xE. For M9420A, only for `TRIG2`, for M9410A/11A/15A/16A and M9410E/11E/15E/16E available for both `TRIG1` and `TRIG2` Selects the Trigger Output at Marker 4 in the Waveform file that is currently playing
PerArb	`PARB`	Only available in VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E Selects the Trigger Output as PerArb. PerArb is a synchronization trigger which is generated by the ARB at the beginning of each repetition of playing the signal

FSYNc	`FSYNc`	Only available in VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E
		Selects the Trigger Output as `FSYNc`, routing the Periodic Timer Sync Source signal to the specified Trigger output. That is, the signal selected by `:TRIGger[:SEQuence]:FRAMe:SYNC` is routed to the specified trigger output
		The following example specifies that External 1 trigger will be used as the Periodic Timer Sync Source, and this signal will then be routed to the **Trigger 2** output:
		`TRIG:FRAM:SYNC EXT1`
		`TRIG2:OUTP FSYNc`

–

6.8.2 Trig 1 – 4 Out Polarity

Sets the output to the **Trig n Out** connector to trigger on either the positive or negative polarity.

Remote Command	`:TRIGger[1]|2|…|4[:SEQuence]:OUTPut:POLarity POSitive | NEGative` `:TRIGger[1]|2|…|4[:SEQuence]:OUTPut:POLarity?`
Example	`:TRIG1:OUTP:POL POS`

Dependencies	You can only send `TRIG` parameters for the hardware you have; for example, you cannot send a `TRIG3` parameter if your hardware does not support `TRIG3`. Sending the command for an output you do not have generates an error, “Hardware missing; Not available for this model number” Querying a non-existent output returns `OFF` **Trig 2 Out Polarity** does not appear in EXM or VXT
Preset	Unaffected by Preset, but set to `POSitive` by **Restore Input/Output Defaults** or **Restore System Defaults->All**
State Saved	Saved in instrument state

6.8.3 Trig 1 – 4 Out Device

Sets the output to the **Trig n Out** connector to trigger on either `ANALyzer` or `SOURce`.

Remote Command	`:TRIGger[1]|2|…|4[:SEQuence]:OUTPut:DIRection ANALyzer | SOURce` `:TRIGger[1]|2|…|4[:SEQuence]:OUTPut:DIRection?`
Example	`:TRIG1:OUTP:DIR ANAL`
Dependencies	Only available on VXT models M9410A/11A/15A/16A and M9410E/11E/15E/16E
Preset	Unaffected by Preset **Restore Input/Output Defaults** and **Restore System Defaults->All** preset the triggers as follows:
State Saved	Saved in instrument state

Trig n Out Device	Preset
1, 3, 4	`ANALyzer`
2	`SOURce`

6.8.4 Src PXI Trig Out

Selects which signal will be routed to the backplane Source PXI Trigger Output Line.

Remote Command	`:TRIGger:PXIE:SOURce[:SEQuence]:OUTPut S1Marker | S2Marker | S3Marker | S4Marker | PARB | OFF`
	See "Option details" on page 2721
	`:TRIGger:PXIE:SOURce[:SEQuence]:OUTPut?`

Example	`:TRIG:PXIE:SOUR:OUTP S1M` `:TRIG:PXIE:SOUR:OUTP?`
Dependencies	Only appears in EXM, VXT and M941xE
Preset	`OFF`
State Saved	Saved in instrument state

Option details

Here are details of all Source PXI Trigger Output options:

Source	SCPI	Notes
Off	`OFF`	Selects no signal to be output to the Source PXI backplane line
Source Marker 1	`S1Marker`	Selects the Trigger Output at Marker 1 in the Waveform file that is currently playing to be output to the Source PXI backplane line
Source Marker 2	`S2Marker`	Selects the Trigger Output at Marker 2 in the Waveform file that is currently playing to be output to the Source PXI backplane line
Source Marker 3	`S3Marker`	Selects the Trigger Output at Marker 3 in the Waveform file that is currently playing to be output to the Source PXI backplane line
Source Marker 4	`S4Marker`	Selects the Trigger Output at Marker 4 in the Waveform file that is currently playing to be output to the Source PXI backplane line
PerArb	`PARB`	A synchronization trigger that is generated by the ARB at the beginning of each repetition of playing the signal. This selection causes the PerArb Trigger Output that is currently playing to be output to the Source PXI backplane line Only available in VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E

6.8.5 Src Trig Out Polarity

Sets the output to the Source PXI backplane trigger line to trigger on either the positive or negative polarity.

Remote Command	`:TRIGger:PXIE:SOURce[:SEQuence]:OUTPut:POLarity POSitive | NEGative` `:TRIGger:PXIE:SOURce[:SEQuence]:OUTPut:POLarity?`
Example	`:TRIG:PXIE:SOUR:OUTP:POL POS`
Dependencies	Only appears in EXM, VXT and M941xE
Preset	Unaffected by Preset, but set to `POSitive` by **Restore Input/Output Defaults** or **Restore System Defaults->All**
State Saved	Saved in instrument state

6.8.6 Select Src PXI Line

Controls which backplane trigger line `TRIG[0…7]` is used for the Source Trigger Output.

Remote Command	`:TRIGger:PXIE:SOURce[:SEQuence]:OUTPut:LINE <line>` `:TRIGger:PXIE:SOURce[:SEQuence]:OUTPut:LINE?`

Example	`:TRIGger:PXIE:SOURce:OUTPut:LINE 0`
Dependencies	Only appears in EXM, VXT and M941xE
Preset	4
State Saved	Saved in instrument state
Range	[0,7]

6.8.7 Analyzer PXI Trig Out

Selects the signal that will be output from Analyzer PXI Trigger Line (Backplane Trigger Line 0~3).

Remote Command	`:TRIGger:PXIE:ANALyzer[:SEQuence]:OUTPut HSWP | MEASuring | MAIN | GATE | GTRigger | OEVen | OFF`
	See "Option Details" on page 2722
	`:TRIGger:PXIE:ANALyzer[:SEQuence]:OUTPut?`

Example	`:TRIG:PXIE:ANAL:OUTP HSWP`
Dependencies	Only available on certain modular analyzers, such as CXA-m, VXT models M9410A/11A/15A/16A and M9410E/11E/15E/16E For VXT models M9410A/11A/15A/16A, only `OFF`, `MEASuring` and `MAIN` are available
Preset	Unaffected by **Preset** but is preset to `OFF` by **Restore Input/Output Defaults** or **Restore System Defaults->All**
State Saved	Saved in instrument state

Option Details

Here are details of all Analyzer PXI Trigger Output options:

Source	SCPI	Notes
Off	`OFF`	Selects no signal to be output to the Analyzer PXI backplane trigger line
Sweeping (HSWP)	`HSWP`	Selects the Sweeping Trigger signal to be output to the Analyzer PXI backplane trigger line when a measurement is made. This signal has historically been known as "HSWP" (High = Sweeping), and is 5 V TTL level with 50-ohm output impedance
Measuring	`MEAS`	Selects the Measuring trigger signal to be output to the Analyzer PXI backplane trigger line. This signal is true while the Measuring status bit is true
Main Trigger	`MAIN`	Selects the current instrument trigger signal to be output to the Analyzer PXI backplane trigger line
Gate Trigger	`GTR`	Selects the gate trigger signal to be output to the Analyzer PXI backplane trigger line. This is the source of the gate timing, not the actual gate signal
Gate	`GATE`	Selects the gate signal to be output to the Analyzer PXI backplane trigger line. The gate signal has been delayed and its length determined by delay and length settings. When the

Source	SCPI	Notes
		polarity is positive, a high on the Trig Out connector represents the time the gate is configured to pass the signal
Odd/Even Trace Point	`OEV`	Selects either the odd or even trace points as the signal to be output to the Analyzer PXI backplane trigger line when performing swept spectrum analysis. When the polarity is positive, this output goes high during the time the instrument is sweeping past the first point (Point 0) and every other following trace point. The opposite is true if the polarity is negative

6.8.8 Analyzer Trig Out Polarity

Sets the output to the Analyzer PXI backplane trigger line to trigger on either the positive or negative polarity.

Remote Command	`:TRIGger:PXIE:ANALyzer[:SEQuence]:OUTPut:POLarity POSitive | NEGative` `:TRIGger:PXIE:ANALyzer[:SEQuence]:OUTPut:POLarity?`
Example	`:TRIG:PXIE:ANAL:OUTP:POL POS`
Dependencies	Only available on certain modular analyzers, such as CXA-m, VXT models M9410A/11A/15A/16A and M9410E/11E/15E/16E
Preset	Unaffected by Preset, but set to `POSitive` by **Restore Input/Output Defaults** or **Restore System Defaults->All** `POSitive`
State Saved	Saved in instrument state

6.8.9 Select Analyzer PXI Line

Controls which `PXI_TRIG[0…3]` is used for the Analyzer Trigger Output.

Remote Command	`:TRIGger:PXIE:ANALyzer[:SEQuence]:OUTPut:LINE <line>` `:TRIGger:PXIE:ANALyzer[:SEQuence]:OUTPut:LINE?`
Example	`:TRIGger:PXIE:ANALyzer:OUTPut:LINE 0`
Dependencies	Only available on certain modular analyzers, such as CXA-m, VXT models M9410A/11A/15A/16A and M9410E/11E/15E/16E
Preset	0
State Saved	Saved in instrument state
Range	[0,3]

6.8.10 Source Internal Trig Out

Selects the signal which will be output from Source Internal Trigger Line.

NOTE

In some software released in 2018 and 2019, the SCPI command for this function was as below:

`:TRIGger:SOURce:INTernal[:SEQuence]:OUTPut S1Marker|S2Marker|S3Marker|S4Marker|OFF`

It was necessary to change this SCPI in release A.24.00 due to internal conflicts in the software. User code written for the A.22.xx or A.23.xx instrument software which used the old form must be rewritten to use the form below.

Remote Command	`:TRIGger[:SEQuence]:INTernal:SOURce:OUTPut S1Marker | S2Marker | S3Marker | S4Marker | PARB | OFF` `:TRIGger[:SEQuence]:INTernal:SOURce:OUTPut?`
Example	`:TRIG:INT:SOUR:OUTP S1M`
Notes	`PARB` (Per ARB) -A synchronization trigger that is generated by the ARB at the beginning of each repetition of playing the signal
Dependencies	Only available on VXT models M9420A, M9410A/11A/15A/16A and M9410E/11E/15E/16E
Preset	Unaffected by Preset but preset by **Restore Input/Output Defaults** or **Restore System Defaults->All.** The value is Mode-dependent: Power Amplifier Mode: `S1Marker` All other Modes: `OFF`
State Saved	Saved in instrument state

6.8.11 Source Internal Trig Out Polarity

Sets the output to the Source Internal trigger line to trigger on either the positive or negative polarity.

NOTE

In some software released in 2018 and 2019, the SCPI command for this function was as below:

`:TRIGger:SOURce:INTernal[:SEQuence]:OUTPut:POLarity POSitive|NEGative`

It was necessary to change this SCPI in release A.24.00 due to internal conflicts in the software. User code written for the A.22.xx or A.23.xx instrument software which used the old form must be rewritten to use the form below.

Remote Command	`:TRIGger[:SEQuence]:INTernal:SOURce:OUTPut:POLarity POSitive | NEGative` `:TRIGger[:SEQuence]:INTernal:SOURce:OUTPut:POLarity?`
Example	`:TRIG:INT:SOUR:OUTP:POL POS`
Dependencies	Only available on VXT models and M9410E/11E/15E/16E
Preset	Unaffected by **Preset**, but set to `POSitive` by **Restore Input/Output Defaults** or **Restore System**

	Defaults->All
State Saved	Saved in instrument state

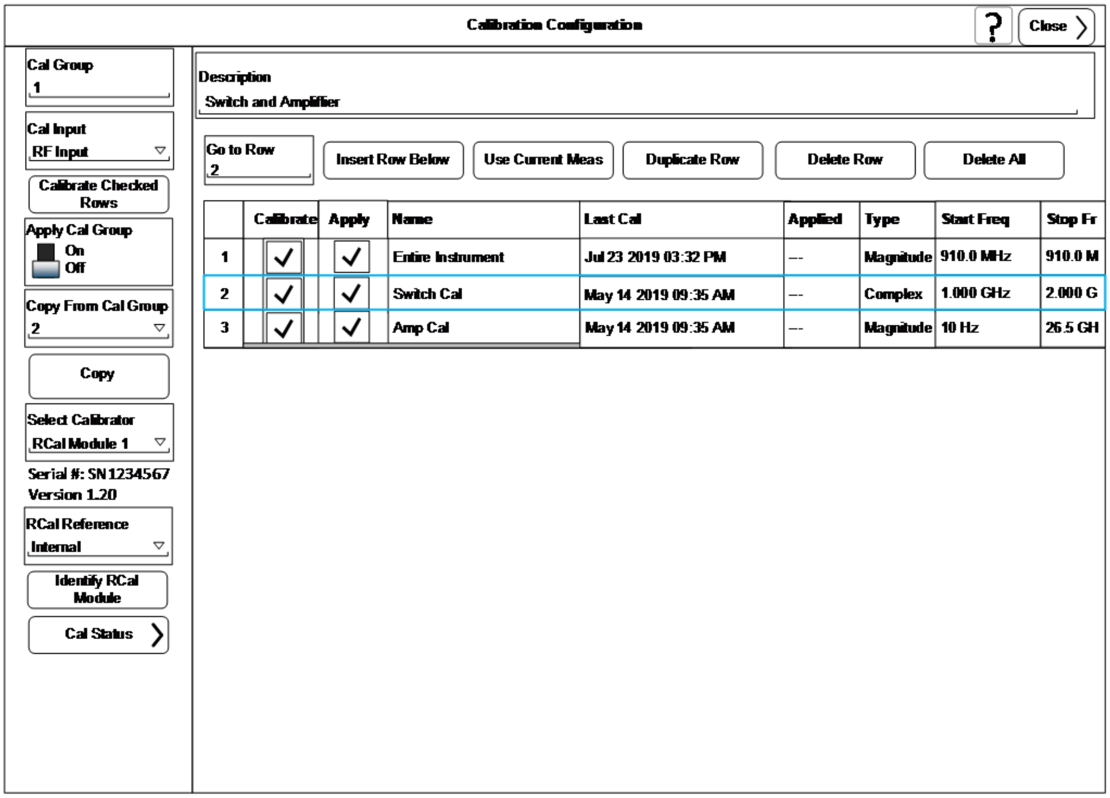
6.9 Calibration

Lets you configure the Comb Calibrator. This tab only appears when an RCal license is installed. Settings associated with the Calibrator are configured here.

6.9.1 Configuration

Opens the dialog shown below. This is a full screen dialog. Configuring of Cals is done using this dialog. The table consists of rows of Cals and Columns of Cal settings. You can scroll or swipe vertically or horizontally to view Cals or settings not currently shown on the screen.

Dialog with Example Table entries:



Cal Group: 1

Cal Input: RF Input

Apply Cal Group: On / Off

Copy From Cal Group: 2

Select Calibrator: RCal Module 1

Serial #: SN1234567
Version 1.20

RCal Reference: Internal

Description: Switch and Amplifier

Go to Row: 2

	Calibrate	Apply	Name	Last Cal	Applied	Type	Start Freq	Stop Fr

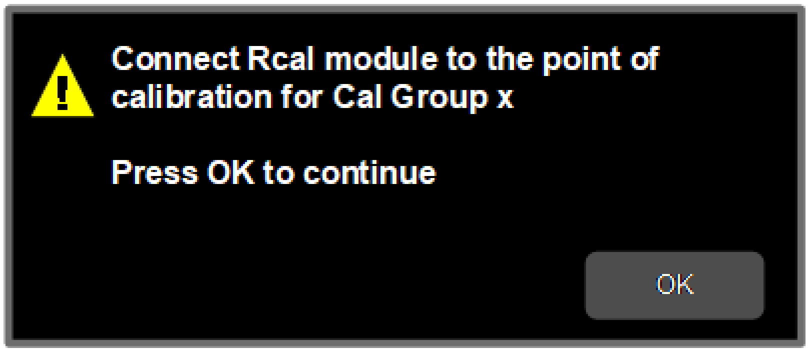
6.9.1.1 Cal Group

This is the same as "Cal Group" on page 2761 in the **Calibration** tab.

6.9.1.2 Calibrate Checked Rows

Executes the Cals within the currently selected Cal Group that have the **Calibrate** box checked in the RCal Configuration Table.

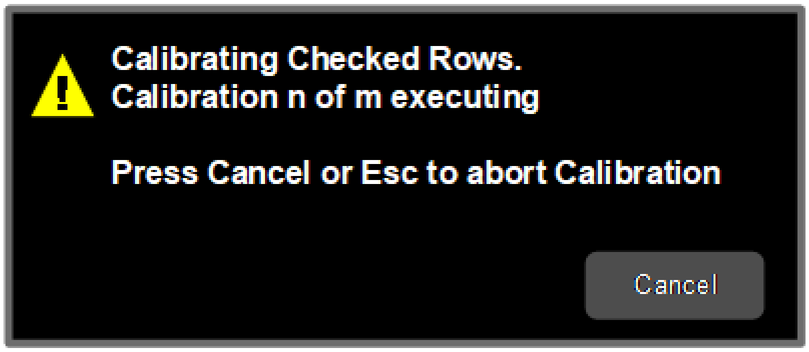
Once selected, the following dialog box is displayed;



Connect Rcal module to the point of calibration for Cal Group x

Press OK to continue

When you click **OK**, the following dialog is displayed;



Calibrating Checked Rows.
Calibration n of m executing

Press Cancel or Esc to abort Calibration

If there are multiple Cals being executed in a Cal Group, this dialog advises you when each Cal is complete. It also provides the ability to abort the Execute Cal Request.If you choose to abort, calibrations that have completed use the new Cal data and update the Last Cal field. Calibrations that have not completed retain the existing Cal data and Last Cal timestamp, or show “---” if the Cal had never been executed.

Remote Command	`:SYSTem:CALibration:INITiate:SELected`
Example	`:SYST:CAL:INIT:SEL`
Notes	Cals cannot be applied until they have been calibrated. Once a Cal has been calibrated, the Last Cal field in the table displays the date and time the Cal was last calibrated
Dependencies	Applied to the currently selected Cal Group
Couplings	**Calibrate Selected** is disabled if there are no Calibrate checkboxes checked. If the disabled control is selected, the advisory message “Check the Calibrate box for the Cals you want to calibrate” is displayed

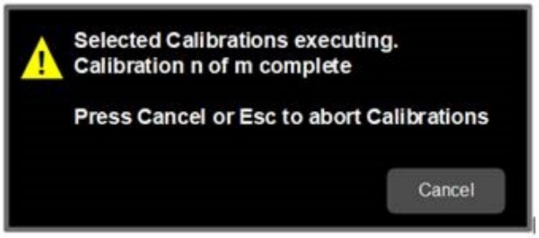
6.9.1.3 Apply Cal Group

This is the same as "Apply Cal Group" on page 2761 in the **Calibration** tab.

6.9.1.4 Abort Calibration

Aborts the Calibration routine of the currently selected Cal Group

Remote Command	`:SYSTem:CALibration:ABORt`
Example	`:SYST:CAL:ABOR`
Dependencies	Aborts the currently running calibration. The previously-run calibrations will still be available, but the current calibration is halted, and next calibrations selected are not executed. Once the calibration starts, the modal dialog appears, and the abort can be executed by selecting **Cancel**



Selected Calibrations executing.
Calibration n of m complete

Press Cancel or Esc to abort Calibrations

6.9.1.5 Copy From Cal Group

Determines the Cal Group from which existing rows are copied when using the "Copy" on page 2730**Group** feature.

Remote Command	`:SYSTem:CALibration:CGRoup:COPY:FROM <integer>` `:SYSTem:CALibration:CGRoup:COPY:FROM?`
Example	`:SYST:CAL:CGR:COPY:FROM 2` `:SYST:CAL:CGR:COPY:FROM?`
Preset	1
Min	1
Max	100

6.9.1.6 Copy

Lets you copy the settings in the Cal Group specified by the **Copy From Cal Group** parameter.

All the rows in the table are copied to the selected Cal Group. The columns **Apply**, **Last Cal** and **Applied** are set to their default values.

The group level parameters are also copied, with the exception of **Apply Cal Group** and **Copy From Cal Group**.

Remote Command	`:SYSTem:CALibration:CGRoup:COPY`
Example	`:SYST:CAL:CGRoup:COPY`
Dependencies	Applied to the currently selected Cal Group
Couplings	Disabled if **Copy From Cal Group** is the same as the currently selected Cal Group. If the disabled control is selected, the advisory message “Unable to Copy from same Cal Group” is displayed, and the same message is returned remotely as a Settings Conflict If you attempt to copy from a Cal Group that is empty, the advisory message “Copy From Cal Group is empty” is displayed, and the same message is returned remotely as a Settings Conflict

6.9.1.7 Cal Input

Maps the currently selected Cal Group to a particular I/O port. This control allows any Input port (including External Mixing, the RF2 input, etc.) to be mapped to a specific Cal Group

Remote Command	`:SYSTem:CALibration:INPut RFIN | RFIN2 || EMIXer | ERFIN`
	See "Option Details" on page 2731
	`:SYSTem:CALibration:INPut?`

Example	`:SYST:CAL:INPut RFIN2`
Dependencies	`RFIN2|EMIXer` are only available on C/E/M/P/UXA analyzers with the appropriate options loaded `ERFIN` is only available if a V3050A unit is connected
State Saved	Saved in State

Option Details

Note that the presence of these ports is highly hardware dependent.

Cal Input	SCPI	Notes
RF Input	`RFIN`	Main RF Port Not available on EXM with hardware M9431A
RF Input 2	`RFIN2`	Second RF Port, labeled RF Input 2 Only available on certain instruments
External Mixer	`EMIX`	Requires option EXM
External RF	`ERFIN`	Only available if a V3050A unit is connected

6.9.1.8 Freq Offset

Specifies any frequency offset that is to be applied to the currently selected Cal Group. This can be used when using an external mixer.

Remote Command	`:SYSTem:CALibration:FREQuency:OFFSet <freq>` `:SYSTem:CALibration:FREQuency:OFFSet?`
Example	`:SYST:CAL:FREQ:OFFS 1e9`
Dependencies	The query applies to the currently selected Cal Group
Preset	All 0 Hz
State Saved	Saved in instrument state
Min	0 Hz
Max	100.0 GHz

6.9.1.9 Select Calibrator

Selects the calibrator for the currently selected Cal Group to use for executing the calibration when multiple modules are connected.

Remote Command	`:SYSTem:CALibration:MODule:SELect NONE | RCM1 | RCM2 | RCM3 | RCM4 | RCM5 | RCM6 | RCM7 | RCM8 | RCM9 | RCM10` `:SYSTem:CALibration:MODule:SELect?`
Example	`:SYST:CAL:MODule:SELect RCM1`
Notes	Details of the RCal module are displayed beneath the control. If there are no modules connected, the text states “No Modules Connected” For SCPI, if the parameter sent is for a module that is not currently connected to the instrument, the message “Selected RCal module not connected” is generated
Dependencies	The SCPI command is applied to the currently selected Cal Group
State Saved	Saved in instrument state
Range	All connected RCal modules

6.9.1.10 Identify RCal Module

Control to connect to the RCal module of the currently selected Cal Group and blink its identity light

6.9.1.11 RCal Module Serial Number (Remote Query Only)

Returns the serial number of the specified module

Remote Command	`:SYSTem:CALibration:MODule[1]|2|...|10:SNUMber?`
Example	`:SYST:CAL:MOD:SNUM?`
Notes	If there is no module associated with the specified module number, returns an empty string

6.9.1.12 RCal Reference

Determines the reference type used by the RCal module of the currently selected Cal Group

Remote Command	`:SYSTem:CALibration:REFerence INTernal | EXTernal` `:SYSTem:CALibration:REFerence?`
Example	`:SYST:CAL:REF EXT`
Dependencies	The SCPI command is applied to the currently selected Cal Group

Preset	`EXTernal`
State Saved	Saved in instrument state
Range	`INTernal|EXTernal`

6.9.1.13 RCal Status

Opens a dialog that is used to provide the status of all active rows in all groups. Status can be one of the following: Calibrated, Applied, Calibration Failed or Apply Failed.

If a Calibration Fails, an error icon is shown in the **Calibrate** column of the row(s) that failed, with a message indicating the nature of the failure. If the failure cannot be addressed by the user, the error message “Calibration Failed. See Error Log” will be shown and details of the failure will be written to the SA Event Log.

Applying the Calibration can result in a warning if there is a mismatch between the currently executing instrument state and any of the following parameter settings;

- Cal Input
- Frequency
- IF Path
- IF Gain
- Phase Noise Optimization
- Preamp
- Coupling
- Mechanical Attenuator
- Electrical Attenuator
- Full Range Attenuator
- uW Path Control
- Mixing Mode
- External Mixer

When there is a mismatch a warning icon will be shown in the Applied column of the row(s) that had the mismatch with details in the format “<Parameter Name> does not match meas state”.

The Status dialog provides you with the group and row of a Calibration and its current state and any error details if the status is not OK.

RCal Status (Remote Query Only)

Returns a comma-separated list of the status of an individual row status in the format “Group”, “Row”, ‘Status’, “Details”

Remote Command	`:SYSTem:CALibration:ROW[1]|2|…|100:STATus?`
Example	Return a comma-separated list for the status of an individual row, in the format “Group”, “Row”, ‘Status’, “Details”: `:SYST:CAL:ROW2:STAT?`
Dependencies	The SCPI command is applied to the currently selected Cal Group. The subopcode is used to identify the Cal row in the Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221, Settings conflict; Subopcode does not reference an existing Cal row” is generated

All RCal Status (Remote Query Only)

Returns a comma-separated list of all entries in the Cal Status table in the format “Group”, “Row”, ‘Status’, “Details”, which is repeated for each row in the table. If there are no entries in the table, returns an empty string.

Remote Command	`:SYSTem:CALibration:STATus:ALL?`
Example	Return a comma-separated list of all entries in the Cal Status table in the format “Group”, “Row”, ‘Status’, “Details”, repeated for each row in the table: `:SYST:CAL:STAT:ALL?`

6.9.1.14 Go to Row

Sets the selected row in the Cal table for the currently selected Cal Group.

Notes	You can only go to a row that has already been added
Preset	1
State Saved	Saved in instrument state
Min	1
Max	32

6.9.1.15 Insert Row Below

Adds a new row to the currently selected Cal Group, under the currently selected row in the table or after the sub opcode used in the SCPI command. The default values for each of the settings in the row is used.

Remote Command	`:SYSTem:CALibration:ROW[1]|2|…|100:INSert`
Example	`:SYST:CAL:ROW2:INSert`
Dependencies	The SCPI command is applied to the currently selected Cal Group. The subopcode is used to identify the Cal row in the Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message "-221, Settings conflict; Subopcode does not reference an existing Cal row" is generated

6.9.1.16 Description

Provides a description for the currently selected Cal Group from which the operator can easily identify the Cal Group.

Remote Command	`:SYSTem:CALibration:DESCription "Description"` `:SYSTem:CALibration:DESCription?`
Example	`:SYST:CAL:DESC "Description"`
Notes	Also shown on the **Calibration** menu panel, but limited to the first 18 characters
Dependencies	The SCPI command is applied to the currently selected Cal Group
State Saved	Saved in instrument state

6.9.1.17 Use Current Meas

Takes the settings from the current running measurement state to populate the Cal Row settings of the currently selected Cal Group.

Remote Command	`:SYSTem:CALibration:ROW[1]|2|…|100:UCMeas`
Example	`:SYST:CAL:ROW2:UCM`
Dependencies	The SCPI command is applied to the currently selected Cal Group. The subopcode is used to identify the Cal row in the Cal Group If the group table is empty and subopcode is omitted or 1, a new row is created and populated using the current running measurement If the subopcode does not reference an existing Cal row in the Cal Group, the error message "-221,Settings conflict; Subopcode does not reference an existing Cal row" is generated Pressing the control or sending the SCPI command in measurements that do not support this parameter generates error -221, "Settings conflict; Feature not supported for this measurement"

6.9.1.18 Duplicate Row

Creates a new row the currently selected row, and populates the new row with the settings from the selected row of the currently selected Cal Group

Remote Command	`:SYSTem:CALibration:ROW[1]|2|…|100:DUPLicate`
Example	`:SYST:CAL:ROW2:DUPL`
Dependencies	The SCPI command is applied to the currently selected Cal Group. The subopcode is used to identify the Cal row in the Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message "-221,Settings conflict; Subopcode does not reference an existing Cal row" is generated

6.9.1.19 Delete Row

Deletes the settings from the selected row of the currently selected Cal Group

Remote Command	`:SYSTem:CALibration:ROW[1]|2|…|100:DELete`
Example	`:SYST:CAL:ROW2:DEL`
Notes	Disabled if the Cal Group contains no Cal rows
Dependencies	The SCPI command is applied to the currently selected Cal Group. The subopcode is used to identify the Cal row in the Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message "-221, Settings conflict; Subopcode does not reference an existing Cal row" is generated

6.9.1.20 Delete All

Deletes all the Cals in the currently selected Cal Group

Remote Command	`:SYSTem:CALibration:DELete:ALL`
Example	`:SYST:CAL:DEL:ALL`
Notes	Disabled if the Cal Group contains no Cal rows
Dependencies	The SCPI command is applied to the currently selected Cal Group

6.9.1.21 Calibrate

Determines whether the Cal row should be included when Calibrate Selected is executed.

Remote Command	`:SYSTem:CALibration:ROW[1]|2|…|100:CALibrate:STATe ON | OFF | 1 | 0` `:SYSTem:CALibration:ROW[1]|2|…|100:CALibrate:STATe?`

Example	`:SYST:CAL:ROW2:CAL:STAT ON` `:SYST:CAL:ROW2:CAL:STAT?`
Dependencies	The SCPI command is applied to the currently selected Cal Group. The subopcode is used to identify the Cal row in the Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221, Settings conflict; Subopcode does not reference an existing Cal row” is generated
Preset	All `OFF`
State Saved	Saved in instrument state
Range	`ON|OFF`

6.9.1.22 Apply

Determines the Cal that is applied.

Remote Command	`:SYSTem:CALibration:ROW[1]|2|…|100:APPLy:STATe ON | OFF | 1 | 0` `:SYSTem:CALibration:ROW[1]|2|…|100:APPLy:STATe?`
Example	`:SYST:CAL:ROW2:APPL:STAT ON` `:SYST:CAL:ROW2:APPL:STAT?`
Dependencies	The SCPI command is applied to the currently selected Cal Group. The subopcode is used to identify the Cal row in the Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221, Settings conflict; Subopcode does not reference an existing Cal row” is generated You can only check the **Apply** checkbox for a Cal that has been executed. If you attempt to select the **Apply** checkbox for Cal’s that have not been executed, the advisory message “Cal must be executed before it can be applied” is displayed If Apply Cal is `ON`, and you attempt to check the **Apply** checkbox for a Cal that is invalid for use with the current measurement state, the error “Cal invalid with current measurement settings is shown, and the checkbox remains unchecked
Couplings	When the **Apply** check box is checked, if the Apply Cal Group setting is `OFF`, it will be turned on. Calibrations are only applied when the Apply Cal Group is `ON`
Preset	All `OFF`
State Saved	Saved in instrument state
Range	`ON|OFF`
Annotation	If *any* Cal check box in any group is checked and Apply Cal Group for that group is `ON`, RCal in the Meas Bar displays in amber to indicate Calibrations are in use

6.9.1.23 Name

Sets an ASCII text field allowing you to name the selected Cal

Remote Command	`:SYSTem:CALibration:ROW[1]|2|…|100:NAME <string>` `:SYSTem:CALibration:ROW[1]|2|…|100:NAME?`
Example	`:SYST:CAL:ROW2:NAM "Monday AM Cal"`
Notes	45 chars max; may not fit on display if max chars used
Dependencies	The SCPI command is applied to the currently selected Cal Group. The subopcode is used to identify the Cal row in the Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221, Settings conflict; Subopcode does not reference an existing Cal row” is generated
Preset	“Cal #”, where # is corresponding Cal number
State Saved	Saved in instrument state

6.9.1.24 Last Cal

Displays the date and time the selected Cal was last executed. Read only field.

Remote Command	`:SYSTem:CALibration:ROW[1]|2|…|100:LAST?`
Example	Return data and time Cal 2 was last executed: `:SYST:CAL:ROW2:LAST?`
Notes	Returns a string containing the date and time the Cal was executed. If the Cal has never been executed, or any of the settings are changed, SCPI returns an empty string, and the front panel displays “---"
Dependencies	The SCPI query applies to the currently selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221, Settings conflict; Subopcode does not reference an existing Cal row” is generated

6.9.1.25 Cal Applied

Displays the status of a Cal once it is applied. Is either Yes or No, depending on if the Cal was successfully applied or not. See RCalStatus for more details. If it is not being applied, the field shows “---". Read-only field.

Remote Command	`:SYSTem:CALibration:ROW[1]|2|…|100:CAPPlied?`
Example	Return Cal Stats of Cal 2: `:SYST:CAL:ROW2:CAPP?`
Notes	Returns a string containing the date and time the Cal was executed. If the Cal has never been executed, or any of the settings are changed, SCPI returns an empty string, and the front panel displays “---"
Dependencies	The SCPI query applies to the currently selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221, Settings conflict; Subopcode does not reference an existing Cal row” is generated

6.9.1.26 Cal Type

Specifies how the calibration is to be performed on the selected Cal. Options are;

- `MAGNitude`: A single CW tone is measured at the center of the screen for each frequency point
- `COMPlex`: A comb signal is measured across the full IF passband at each frequency point. Magnitude and Phase are measured

Remote Command	`:SYSTem:CALibration:ROW[1]|2|…|100:TYPE MAGNitude | COMPlex` `:SYSTem:CALibration:ROW[1]|2|…|100:TYPE?`
Example	`:SYST:CAL:ROW2:TYPE COMP`
Dependencies	Only available if the selected RCal module has a license for complex calibrations. If it does not, this control is disabled The SCPI command applies to the currently selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message "-221, Settings conflict; Subopcode does not reference an existing Cal row" is generated
Preset	`MAGNitude`
State Saved	Saved in instrument state
Range	`MAGNitude|COMPlex`

6.9.1.27 Start Freq

Specifies the start frequency of the selected Cal.

Remote Command	`:SYSTem:CALibration:ROW[1]|2|…|100:FREQuency:STARt <freq>` `:SYSTem:CALibration:ROW[1]|2|…|100:FREQuency:STARt?`
Example	`:SYST:CAL:ROW2:FREQ:STAR 1e9`
Notes	Max values depend on Hardware Options (503, 507, 508, 513, 526)
Dependencies	The SCPI command applies to the currently selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message "-221, Settings conflict; Subopcode does not reference an existing Cal row" is generated By direct entry: You cannot set Start Frequency > Stop Frequency. You can set the Start frequency = Stop frequency. If you set Start Frequency = Stop Frequency, "Freq Step" on page 2741 is adjusted to 0, and "Freq Points" on page 2741 is adjusted to 1 With the knob or step keys: If you set Start Frequency = Stop Frequency, **Freq Step** is adjusted to 0, and **Freq Points** is adjusted to 1
Couplings	If you change the start frequency of the selected range to a value > the range's stop frequency, the

	stop frequency of the previous range is changed to the same value. **Freq Step** is set to 0 Hz and **Freq Points** is set to 1 If you change the start frequency <= min frequency of the instrument, the start frequency of the selected range is set to the minimum frequency of the instrument If you change the start frequency >= maximum frequency of the instrument, the start frequency of the selected range is set to the maximum frequency of the instrument and the stop frequency of selected range is set to the maximum frequency of the instrument. **Freq Step** is set to 0 Hz and **Freq Points** is set to 1
Preset	Depends on the instrument maximum frequency
State Saved	Saved in instrument state
Min	If **Scale Type** is set to Lin, the min Start Frequency changes to -80 MHz
Max	Depends on the instrument maximum frequency – 10 Hz minimum span

6.9.1.28 Stop Freq

Specifies the stop frequency of the selected Cal.

Remote Command	`:SYSTem:CALibration:ROW[1]|2|…|100:FREQuency:STOP <freq>` `:SYSTem:CALibration:ROW[1]|2|…|100:FREQuency:STOP?`
Example	`:SYST:CAL:ROW2:FREQ:STOP 1e9`
Notes	Max values depend on Hardware Options
Dependencies	The SCPI command applies to the currently selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221, Settings conflict; Subopcode does not reference an existing Cal row” is generated By direct entry: You cannot set Stop frequency < Start frequency. You cannot set Start frequency = Stop frequency. You can set Start frequency = Stop frequency. If you set Start Frequency = Stop Frequency, "Freq Step" on page 2741 is adjusted to 0, and "Freq Points" on page 2741 is adjusted to 1 With the knob or step keys: If you set Start Frequency = Stop Frequency, **Freq Step** is adjusted to 0, and **Freq Points** is adjusted to 1
Couplings	If you change the stop frequency of the selected range to a value < the range’s start frequency the start frequency of the range is changed to the same value. **Freq Step** is set to 0 Hz and **Freq Points** is set to 1 If you change the stop frequency >=the maximum frequency of the instrument, the stop frequency of the selected range is set to the maximum frequency of the instrument If you change stop frequency <= the minimum frequency of the instrument, the stop frequency of the selected range is set to the minimum frequency of the instrument and the start frequency of the selected range is set to the minimum frequency of the instrument. **Freq Step** is set to 0 Hz and **Freq Points** is set to 1
Preset	Depends on the instrument maximum frequency

State Saved	Saved in instrument state
Min	If **Scale Type** is Lin, the min Stop Frequency is changed to -79.999990 MHz
Max	Depends on the instrument maximum frequency

6.9.1.29 Freq Step

Specifies the step frequency of the selected Cal. This determines the points between the start and stop frequencies to use for Calibration.

Remote Command	`:SYSTem:CALibration:ROW[1]|2|…|100:FREQuency:STEP <freq>` `:SYSTem:CALibration:ROW[1]|2|…|100:FREQuency:STEP?`
Example	`:SYST:CAL:ROW2:FREQ:STEP 1e9`
Notes	Max values depend on Hardware Options
Dependencies	The SCPI command applies to the currently selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221, Settings conflict; Subopcode does not reference an existing Cal row” is generated You cannot set **Freq Step** > Stop frequency - Start frequency Attempts to set **Freq Step** > Stop frequency - Start frequency results in **Freq Step** being set to Stop frequency - Start frequency
Couplings	Coupled to "Freq Points" on page 2741. Changing **Freq Step** adjusts **Freq Points** using (((Stop Freq – Start Freq) / Freq Step) + 1) and clips to the next integer value, which may result in **Freq Step** being clipped too If **Freq Step** is set to a value > Stop Freq – Start Freq **Stop Freq** is increased, and **Freq Points** is set to 1
Preset	All 10 kHz
State Saved	Saved in instrument state
Min	1 Hz
Max	Depends on the instrument maximum frequency

6.9.1.30 Freq Points

Specifies the frequency points of the selected Cal. This determines the points between the start and stop frequencies to use for Calibration.

Remote Command	`:SYSTem:CALibration:ROW[1]|2|…|100:FREQuency:POINts` `:SYSTem:CALibration:ROW[1]|2|…|100:FREQuency:POINts?`
Example	`:SYST:CAL:ROW2:FREQ:POIN 100`
Couplings	Coupled to "Freq Step" on page 2741. Changing **Freq Points** adjusts **Freq Step** using (Stop Freq – Start Freq) / (Freq Points – 1) and clips to the next integer value, which may result in **Freq Step** being clipped

Preset	1
Min	1
Max	100000

6.9.1.31 Mech Atten Type

Specifies the Mech Atten type to use:

- `STEP`: Use multiple Mech Atten states determined by Mech Atten Start, Mech Atten Stop and Mech Atten Step
- `ALL`: Use all the attenuator states
- `BYPass`: Bypasses the attenuator

Remote Command	`:SYSTem:CALibration:ROW[1]|2|…|100:ATTenuation:TYPE STEP | ALL | BYPass` `:SYSTem:CALibration:ROW[1]|2|…|100:ATTenuation:TYPE?`
Example	`:SYST:CAL:ROW3:ATT:TYPE STEP`
Dependencies	The SCPI command applies to the currently selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message "-221,Settings conflict; Subopcode does not reference an existing Cal row" is generated
Preset	`STEP`
State Saved	Saved in instrument state
Range	`STEP|ALL|BYPass`

6.9.1.32 Mech Atten Start

Determines the first Mechanical Attenuator to be used in the Calibration

Remote Command	`:SYSTem:CALibration:ROW[1]|2|…|100:ATTenuation:STARt <rel_ampl>` `:SYSTem:CALibration:ROW[1]|2|…|100:ATTenuation:STARt?`
Example	`:SYST:CAL:ROW3:ATT:STARt 20`
Dependencies	Disabled unless "Mech Atten Type" on page 2742 is `STEP` The SCPI command applies to the currently selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message "-221,Settings conflict; Subopcode does not reference an existing Cal row" is generated
Couplings	Coupled to "Mech Atten Stop" on page 2743. **Mech Atten Start** must be <= **Mech Atten Stop**. If **Mech Atten Start** > **Mech Atten Stop**, then **Mech Atten Stop** = **Mech Atten Start**
Preset	10 dB
State Saved	Saved in instrument state
Min	0 dB

	The attenuation set by this control cannot be decreased below 6 dB with the knob or step keys. To get to a value below 6 dB it must be directly entered from the keypad or via SCPI. This protects from adjusting the attenuation to a dangerously small value, which can put the instrument at risk of damage to input circuitry. However, if the current mechanical attenuation is below 6 dB it can be increased with the knob and step keys, but not decreased
Max	CXA Option 503 or 507: 50 dB EXA: 60 dB All other models: 70 dB Note that, in the single attenuator configuration, the total of ATT and EATT cannot exceed 50 dB, so if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and is reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB

6.9.1.33 Mech Atten Stop

Determines the last Mechanical Attenuator to be used in the Calibration

Remote Command	`:SYSTem:CALibration:ROW[1]|2|…|100:ATTenuation:STOP <rel_ampl>` `:SYSTem:CALibration:ROW[1]|2|…|100:ATTenuation:STOP?`
Example	`:SYST:CAL:ROW3:ATT:STOP 30`
Dependencies	Disabled unless "Mech Atten Type" on page 2742 is `STEP` The SCPI command applies to the currently selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message "-221,Settings conflict; Subopcode does not reference an existing Cal row" is generated
Couplings	Coupled to "Mech Atten Start" on page 2742. **Mech Atten Start** must be <= **Mech Atten Stop**. If **Mech Atten Start** > **Mech Atten Stop**, then **Mech Atten Stop** = **Mech Atten Start**
Preset	10 dB
State Saved	Saved in instrument state
Min	0 dB The attenuation set by this control cannot be decreased below 6 dB with the knob or step keys. To get to a value below 6 dB it must be directly entered from the keypad or via SCPI. This protects from adjusting the attenuation to a dangerously small value which can put the instrument at risk of damage to input circuitry. However, if the current mechanical attenuation is below 6 dB it can be increased with the knob and step keys, but not decreased
Max	CXA Option 503 or 507: 50 dB EXA: 60 dB All other models: 70 dB Note that, in the single attenuator configuration, the total of ATT and EATT cannot exceed 50 dB, so if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and is reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB

6.9.1.34 Mech Atten Step

Determines the Mech Attenuation Step. This determines the points between the Mechanical Attenuation min and max to use for Calibration.

Remote Command	`:SYSTem:CALibration:ROW[1]|2|…|100:ATTenuation:STEP <rel_ampl>` `:SYSTem:CALibration:ROW[1]|2|…|100:ATTenuation:STEP?`
Example	`:SYST:CAL:ROW2:ATT:STEP 2dB`
Dependencies	Disabled unless "Mech Atten Type" on page 2742 is `STEP` The SCPI command applies to the currently selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message "-221, Settings conflict; Subopcode does not reference an existing Cal row" is generated
Preset	2 dB
State Saved	Saved in instrument state
Min	2 dB
Max	10 dB

6.9.1.35 Elec Atten Type

Specifies the Elec Atten type to use:

- `STEP`: Use multiple Elec Atten states determined by Elec Atten Start, Elec Atten Stop and Elec Atten Step
- `ALL`: Use all the attenuator states
- `BYPass`: Bypasses the attenuator

Remote Command	`:SYSTem:CALibration:ROW[1]|2|…|100:EATTenuation:TYPE STEP | ALL | BYPass` `:SYSTem:CALibration:ROW[1]|2|…|100:EATTenuation:TYPE?`
Example	`:SYST:CAL:ROW3:EATT:TYPE STEP`
Dependencies	The SCPI command applies to the currently selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message "-221, Settings conflict; Subopcode does not reference an existing Cal row" is generated
Preset	`STEP`
State Saved	Saved in instrument state
Range	`STEP|ALL|BYPass`

6.9.1.36 Elec Atten Start

Determines the first Electronic Attenuator to be used in the Calibration

Remote Command	`:SYSTem:CALibration:ROW[1]|2|…|100:EATTenuation:STARt <rel_ampl>` `:SYSTem:CALibration:ROW[1]|2|…|100:EATTenuation:STARt?`
Example	`:SYST:CAL:ROW3:EATT:STARt 0`
Dependencies	Only appears in Dual Attenuator models with an Electronic Attenuator installed and licensed. It does not appear in models with the Single Attenuator configuration, as in the single attenuator configuration there is no “electronic attenuator” there is only a single integrated attenuator (which has both a mechanical and electronic stage) Disabled unless "Elec Atten Type" on page 2744 is `STEP` The electronic attenuator is unavailable above the low band (0-3.6 GHz, 0-3.4 GHz, or 0-3 GHz, depending on the model). If the low band ranges from 0-3.6 GHz, and Stop Frequency of the Calibration is > 3.6 GHz, then this parameter is grayed out If the Internal Preamp is on, meaning it is set to Low Band or Full, or the electronic attenuator is unavailable, then this parameter is grayed-out If either of the above is true, and if the SCPI command is sent, an error indicating that the electronic attenuator is unavailable is sent If both of the above are true, pressing the control generates error message -221, in other words, the frequency range lockout takes precedence The SCPI command applies to the currently selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221, Settings conflict; Subopcode does not reference an existing Cal row” is generated
Couplings	Coupled to Elec Atten Stop. Elec Atten Start must be <= Elec Atten Stop. If Elec Atten Start > Elec Atten Stop, Elec Atten Stop = Elec Atten Start
Preset	0 dB
State Saved	Saved in instrument state
Min	0 dB
Max	24 dB

6.9.1.37 Elec Atten Stop

Determines the last Electrical Attenuator to be used in the Calibration

Remote Command	`:SYSTem:CALibration:ROW[1]|2|…|100:EATTenuation:STOP <rel_ampl>` `:SYSTem:CALibration:ROW[1]|2|…|100:EATTenuation:STOP?`
Example	`:SYST:CAL:ROW3:EATT:STOP 10`
Dependencies	Only appears in Dual Attenuator models with an Electronic Attenuator installed and licensed. It does not appear in models with the Single Attenuator configuration, as in the single attenuator configuration there is no “electronic attenuator” there is only a single integrated attenuator (which has both a mechanical and electronic stage) Disabled unless "Elec Atten Type" on page 2744 is `STEP` The electronic attenuator is unavailable above the low band (0-3.6 GHz, 0-3.4 GHz or 0-3 GHz, depending on the model). If the low band ranges from 0-3.6 GHz, and Stop Frequency of the

	Calibration is > 3.6 GHz, then this parameter is grayed out If the Internal Preamp is on, meaning it is set to Low Band or Full, the electronic attenuator is unavailable, then this parameter is grayed out If either of the above is true, and if the SCPI command is sent, an error indicating that the electronic attenuator is unavailable is sent If both of the above are true, pressing the control generates error message -221, in other words, the frequency range lockout takes precedence For SCPI, this query applies to the currently selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message "-221, Settings conflict; Subopcode does not reference an existing Cal row" is generated
Couplings	Coupled to Elec Atten Start. Elec Atten Stop must be >= Elec Atten Start. If Elec Atten Stop < Elec Atten Start, Elec Atten Start = Elec Atten Stop
Preset	0 dB
State Saved	Saved in instrument state
Min	0 dB
Max	24 dB

6.9.1.38 Elec Atten Step

Determines the Elec Attenuation Step. This determines the points between the Electric Attenuation min and max to use for Calibration.

Remote Command	`:SYSTem:CALibration:ROW[1]|2|…|100:EATTenuation:STEP <rel_ampl>` `:SYSTem:CALibration:ROW[1]|2|…|100:EATTenuation:STEP?`
Example	`:SYST:CAL:ROW2:EATT:STEP 2dB`
Dependencies	Disabled unless "Elec Atten Type" on page 2744 is `STEP` The SCPI command applies to the currently selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message "-221, Settings conflict; Subopcode does not reference an existing Cal row" is generated
Preset	1 dB
State Saved	Saved in instrument state
Min	1 dB
Max	24 dB

6.9.1.39 Full Range Atten Type

Specifies the Full Range Atten type to use. The Full Range Attenuator adds a second input attenuator at the beginning of the RF Input 2, which enhances the protection and optimizes the performance of the extra internal mixers used by RF Input 2.

- `STEP`: Use multiple Full Range Atten states determined by Full Range Atten Start and Full Range Atten Stop
- `ALL`: Use all the attenuator states

Remote Command	`:SYSTem:CALibration:ROW[1]|2|…|100:FATTenuation:TYPE STEP | ALL |` `:SYSTem:CALibration:ROW[1]|2|…|100:FATTenuation:TYPE?`
Example	`:SYST:CAL:ROW3:FATT:TYPE STEP`
Dependencies	Only appears if input RF is selected, and RF Input Port 2 is selected, and the Full Range Attenuator exists The SCPI command applies to the currently selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message "-221, Settings conflict; Subopcode does not reference an existing Cal row" is generated
Preset	`STEP`
State Saved	Saved in instrument state
Range	`STEP|ALL|`

6.9.1.40 Full Range Atten Start

Determines the first Full Range Attenuator to be used in the Calibration

Remote Command	`:SYSTem:CALibration:ROW[1]|2|…|100:FATTenuation:STARt <rel_ampl>` `:SYSTem:CALibration:ROW[1]|2|…|100:FATTenuation:STARt?`
Example	`:SYST:CAL:ROW3:FATT:STARt 0`
Dependencies	Only appears in N9041B, when the RF input is selected, and the RF Input Port is set to RF Input 2, and the Full Range Attenuator is installed Disabled unless "Full Range Atten Type" on page 2746 is `STEP` The SCPI command applies to the currently selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message "-221, Settings conflict; Subopcode does not reference an existing Cal row" is generated
Couplings	Coupled to Full Range Atten Stop. Full Range Atten Start must be <= Full Range Atten Stop. If Full Range Atten Start > Full Range Atten Stop, Full Range Atten Stop = Full Range Atten Start
Preset	20 dB
State Saved	Saved in instrument state
Min	0 dB
Max	Only valid values are 0, 6, 14, 20 dB

6.9.1.41 Full Range Atten Stop

Determines the last Full Range Attenuator to be used in the Calibration

Remote Command	`:SYSTem:CALibration:ROW[1]|2|…|100:FATTenuation:STOP <rel_ampl>` `:SYSTem:CALibration:ROW[1]|2|…|100:FATTenuation:STOP?`
Example	`:SYST:CAL:ROW3:FAT:PT:STOP 10`
Dependencies	Only appears in N9041B, when the RF input is selected, and the RF Input Port is set to RF Input 2, and the Full Range Attenuator is installed Disabled unless "Full Range Atten Type" on page 2746 is `STEP` The SCPI command applies to the currently selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message "-221, Settings conflict; Subopcode does not reference an existing Cal row" is generated
Couplings	Coupled to Full Range Atten Start. Full Range Atten Stop must be >= Full Range Atten Start. If Full Atten Stop < Full Range Atten Start, Full Range Atten Start = Full Range Atten Stop
Preset	20 dB
State Saved	Saved in instrument state
Min	0 dB
Max	Only valid values are 0, 6, 14, 20 dB

6.9.1.42 Frequency Extender Attenuation Type

Specifies the Frequency Extender Attenuation type to use. **Frequency Extender Attenuation** is applied to the frequency extender's high frequency input signal path (for example, with a V3050A frequency extender, the high frequency path is 50 GHz to 110 GHz).

- `STEP`: Use multiple Frequency Extender Attenuation states determined by Frequency Extender Attenuation Start and Frequency Extender Attenuation Stop
- `ALL`: Use all the attenuator states

Remote Command	`:SYSTem:CALibration:ROW[1]|2|…|100:FEATtenuation:TYPE STEP | ALL` `:SYSTem:CALibration:ROW[1]|2|…|100:FEATtenuation:TYPE?`
Example	`:SYST:CAL:ROW3:FEAT:TYPE STEP`
Dependencies	Only applies, and is only visible, when the External RF (ERFIN) input is selected The SCPI command applies to the currently selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message "-221, Settings conflict; Subopcode does not reference an existing Cal row" is generated
Preset	`STEP`
State Saved	No
Range	`STEP|ALL|REFerence`

6.9.1.43 Frequency Extender Attenuation Start

Determines the first Frequency Extender Attenuator to be used in the Calibration.

Remote Command	`:SYSTem:CALibration:ROW[1]|2|…|100:FEATtenuation:STARt <rel_ampl>` `:SYSTem:CALibration:ROW[1]|2|…|100:FEATtenuation:STARt?`
Example	`:SYST:CAL:ROW3:FEAT:STARt 0`
Dependencies	Only applies, and is only visible, when the External RF (`ERFIN`) input is selected Disabled unless "Frequency Extender Attenuation Type" on page 2748 is `STEP` The SCPI command applies to the currently selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message "-221, Settings conflict; Subopcode does not reference an existing Cal row" is generated
Couplings	Coupled to Frequency Extender Attenuation Stop. Frequency Extender Attenuation Start must be <= Frequency Extender Attenuation Stop. If Frequency Extender Attenuation Start > Frequency Extender Attenuation Stop, Frequency Extender Attenuation Stop = Frequency Extender Attenuation Start
Preset	0 dB
State Saved	Saved in instrument state
Min	0 dB
Max	V3050A: 26 dB

6.9.1.44 Frequency Extender Attenuation Stop

Determines the last Frequency Extender Attenuation to be used in the Calibration.

Remote Command	`:SYSTem:CALibration:ROW[1]|2|…|100:FEATtenuation:STOP <rel_ampl>` `:SYSTem:CALibration:ROW[1]|2|…|100:FEATtenuation:STOP?`
Example	`:SYST:CAL:ROW3:FEAT:PT:STOP 26`
Dependencies	Only applies, and is only visible, when the External RF (ERFIN) input is selected Disabled unless "Frequency Extender Attenuation Type" on page 2748 is `STEP` The SCPI command applies to the currently selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message "-221, Settings conflict; Subopcode does not reference an existing Cal row" is generated
Couplings	Coupled to Frequency Extender Attenuation Start. Frequency Extender Attenuation Stop must be >= Frequency Extender Attenuation Start. If Frequency Extender Attenuation Stop < Frequency Extender Attenuation Start, Frequency Extender Attenuation Start = Frequency Extender Attenuation Stop
Preset	26 dB
State Saved	Saved in instrument state
Min	0 dB
Max	V3050A: 26 dB

6.9.1.45 Frequency Extender Atten Step

Determines the Frequency Extender Attenuation Step. This determines the points between the Frequency Extender Attenuation min and max to use for Calibration.

Remote Command	`:SYSTem:CALibration:ROW[1]|2|…|100:FEATtenuation:STEP <rel_ampl>` `:SYSTem:CALibration:ROW[1]|2|…|100:FEATtenuation:STEP?`
Example	`:SYST:CAL:ROW2:FEAT:STEP 2dB`
Dependencies	Only applies, and is only visible, when the External RF (`ERFIN`) input is selected The SCPI command applies to the currently selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message "-221, Settings conflict; Subopcode does not reference an existing Cal row" is generated
Preset	1 dB
State Saved	No
Min	1 dB
Max	V3050A: 26 dB

6.9.1.46 IF Path

Determines the IF Path to be used in the Calibration.

Remote Command	`:SYSTem:CALibration:ROW[1]|2|…|100:IF:PATH B10M | B25M | B40M | B85M | B125M | B140M | B160M | B255M | B510M | B1G | B1500M | B2G | B4G | EXT` `:SYSTem:CALibration:ROW[1]|2|…|100:IF:PATH?`
Example	`:SYST:CAL:ROW2:IF:PATH B25M`
Notes	

`B10M`	10 MHz
`B25M`	25 MHz
`B40M`	40 MHz
`B85M`	85 MHz
`B125M`	125 MHz
`B140M`	140 MHz
`B160M`	160 MHz
`B255M`	255 MHz
`B510M`	510 MHz
`B1G`	1 GHz
`B1500M`	1.5 GHz
`B2G`	2 GHz

`B4G`	4 GHz
`EXT`	Depends on the hardware

In cases where the path is not available but is selected via SCPI, generates error -241,"Hardware missing; Option not installed"

Dependencies

Path	Availability requires Installation of:
25 MHz	25 MHz or wider IF Bandwidth option
40 MHz	40 MHz or wider IF Bandwidth option
85 MHz	85 MHz or wider IF Bandwidth option
125 MHz	125 MHz or wider IF Bandwidth option
140 MHz	Option B1X
160 MHz	Option B1Y. B1Y cannot be installed without B1X
255 MHz	Option B2X or wider IF Bandwidth option
510 MHz	Option B5Y or wider IF Bandwidth option
1 GHz	Option H1G/B1G or wider IF Bandwidth option
2 GHz	Option B2G(R20) or wider IF Bandwidth option
4 GHz	Option B4G(R40) or wider IF Bandwidth option
1.5 GHz	Option R15

If Option B85 *and* either Option B1A or Option B1X are installed, the 85 MHz option does not appear, and `B85M` is disabled. Sending the command to select `B85M` in this case generates an error -221, "Settings Conflict; Use wider bandwidth selection"

If Option B1A *and* Option B1X are both installed, the 125 MHz option does not appear, and `B125M` is disabled. Sending the command to select `B125M` in this case generates an error -221, "Settings Conflict; Use wider bandwidth selection"

In cases where the path is not available, but is selected via SCPI, error -241,"Hardware missing; Option not installed" is generated

The preset value depends on the Digital IF BW setting of the default measurement

Preset	If the 25 MHz path is not available, presets to 10 MHz
State Saved	No
Range	`B10M | B25M | B40M | B85M | B125M | B140M | B160M | B255M | B510M | B1G | B1500M | B2G | B4G | EXT`

6.9.1.47 IF Gain

Determines the IF Gain to be used in the Calibration

Remote Command

```
:SYSTem:CALibration:ROW[1]|2|…|100:IF:GAIN[:STATe]AUTO|HIGH|LOW|ALL
:SYSTem:CALibration:ROW[1]|2|…|100:IF:GAIN[:STATe]?
```

Example	`:SYST:CAL:ROW3:IF:GAIN ALL`
Dependencies	The SCPI command applies to the current selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221, Settings conflict; Subopcode does not reference an existing Cal row” is generated
Preset	`AUTO`
State Saved	Saved in instrument state
Range	Auto | High Gain | Low Gain | All

6.9.1.48 Preamp

Determines if the Preamp is to be used in the Calibration

Remote Command	`:SYSTem:CALibration:ROW[1]|2|…|100:POWer[:RF]:GAIN:BAND OFF | LOW | FULL` `:SYSTem:CALibration:ROW[1]|2|…|100:POWer:GAIN:BAND?`
Example	`:SYST:CAL:ROW2:POWer:GAIN:BAND OFF`
Dependencies	The SCPI command applies to the current selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221, Settings conflict; Subopcode does not reference an existing Cal row” is generated
Preset	`OFF`
State Saved	Saved in instrument state
Range	`OFF|LOW|FULL`

6.9.1.49 Low Noise Amplifier (LNA)

Determines if the LNA is to be used in the Calibration.

Remote Command	`:SYSTem:CALibration:ROW[1]|2|…|100:POWer[:RF]:GAIN:LNA[:STATe] ON | OFF | 1 | 0` `:SYSTem:CALibration:ROW[1]|2|…|100:POWer[:RF]:GAIN:LNA[:STATe]?`
Example	`:SYST:CAL:ROW2:POW:GAIN:LNA ON` `:SYST:CAL:ROW2:POW:GAIN:LNA?`
Dependencies	The SCPI command is applied to the currently selected Cal Group. The subopcode is used to identify the Cal row in the Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221, Settings conflict; Subopcode does not reference an existing Cal row” is generated
Preset	`OFF`
State Saved	No
Range	`ON|OFF`

6.9.1.50 µW Path Control

Determines the µW Path Control to be used in the Calibration.

Option	SCPI
Standard Path	`STD`
Low Noise Path	`LNPath`
µW Presel Bypass	`MPBypass`
Full Bypass	`FULL`

Remote Command	`:SYSTem:CALibration:ROW[1]|2|…|100:POWer[:RF]:MW:PATH STD | LNPath | MPBypass | FULL` `:SYSTem:CALibration:ROW[1]|2|…|100:POWer[:RF]:MW:PATH?`
Example	`:SYST:CAL:ROW2:POW:MW:PATH FULL`
Dependencies	The SCPI command applies to the current selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221, Settings conflict; Subopcode does not reference an existing Cal row” is generated This column is not shown in the table unless *either* Option MPB or Option LNB is present and licensed The Low Noise Path selection does not appear unless Option LNP is present and licensed The µW Presel Bypass selection does not appear unless Option MPB is present and licensed The Full Bypass selection does not appear unless Options LNP, MPB and FBP are installed and licensed In any of these cases, if the required options are not present and the SCPI command is sent, error -241, "Hardware missing; Option not installed" is generated
Preset	`STD`
State Saved	Saved in instrument state
Range	`STD|LNPath|MPBypass|FULL`

6.9.1.51 Coupling

Determines the Coupling to be used in the Calibration

Remote Command	`:SYSTem:CALibration:ROW[1]|2|…|100:COUPling AC | DC` `:SYSTem:CALibration:ROW[1]|2|…|100:COUPling?`
Example	`:SYST:CAL:ROW3:COUP AC`
Dependencies	The SCPI command applies to the current selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221, Settings conflict; Subopcode does not reference an existing Cal row” is generated
Preset	`AC`

State Saved	Saved in instrument state
Range	`AC|DC`

6.9.1.52 Phase Noise Optimization

Selects the LO (local oscillator) phase noise behavior for various desired operating conditions.

For full details, see "Parameter Options & Installed Options" on page 2754 below.

Remote Command	`:SYSTem:CALibration:ROW[1]|2|…|100:FREQuency:SYNThesis[:STATe] 1 | … | 5`
	For the meaning of each numeric option value, see "Parameter Options & Installed Options" on page 2754 below
	`:SYSTem:CALibration:ROW[1]|2|…|100:FREQuency:SYNThesis[:STATe]?`

Example	Select optimization for best wide offset phase noise: `:SYST:CAL:ROW1:FREQ:SYNT 2`
Dependencies	The SCPI command applies to the current selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message "-221, Settings conflict; Subopcode does not reference an existing Cal row" is generated
Couplings	Coupled with "Phase Noise Optimization All Option" on page 2759 When **Phase Noise Optimization All** is `ON`, selects all available LO mappings, and Phase Noise Optimization parameter will display **All** in the Configuration table. SCPI Query is still available to determine which parameter will be displayed when **Phase Noise Optimization All** is `OFF`
Preset	2
State Saved	Yes
Range	See "Ranges" on page 2759 below
Min	1
Max	5

Parameter Options & Installed Options

The Phase Noise Optimization control lets you optimize the setup and behavior of the Local Oscillator (LO) depending on your specific measurement conditions. You may wish to trade off noise and speed, for example, to make a measurement faster without regard to noise or with optimum noise characteristics without regard to speed.

Parameter Values Summary

Option	#	Description
"Balanced" on page 2756	1	– In instruments with EP0, balances close-in phase noise with spur avoidance

Option	#	Description
		– In instruments without EP0 optimizes phase noise for small frequency offsets from the carrier
"Best Wide-offset" on page 2756	2	Optimizes phase noise for wide frequency offsets from the carrier
"Fast Tuning" on page 2756	3	Optimizes LO for tuning speed
"Best Close-in" on page 2755	4 or 1*	– In instruments with EP0, emphasizes close-in phase noise performance without regard to spur avoidance – In instruments without EP0, this setting is accepted but no action is taken
"Best Spurs" on page 2756	5	– In instruments with EP0, emphasizes spur avoidance over close-in phase noise performance – In instruments without EP0, this setting is accepted but no action taken
Auto	-	Automatically selects LO (local oscillator) phase noise behavior to optimize dynamic range and speed for various instrument operating conditions

*Dependent on Option EP0 installation. See "Best Close-in" on page 2755 below.

The actual behavior varies somewhat depending on model number and option; for example, you always get Fast Tuning by choosing Option #3, but in some models, "Fast Tuning" on page 2756 is identical in effect to "Best Close-in" on page 2755.

Best Close-in

Without option EP0

`:FREQ:SYNT 1`

The LO phase noise is optimized for smaller offsets from the carrier, at the expense of phase noise farther out.

The actual frequency offset within which noise is optimized is shown with in square brackets, as this can vary depending on the hardware set in use. For example, in some instruments this annotation appears as [offset <20 kHz]

With option EP0

`:FREQ:SYNT 4`

In instruments with Option EP0, the LO is configured for the best possible close-in phase noise (offsets up to 600 kHz from the carrier), regardless of spurious products that occur with some center frequencies. Because this is generally less desirable for close-in measurements than the "Balanced" on page 2756 setting, parameter 1 selects "Balanced" on page 2756 in EP0 instruments, in the interests of optimizing code compatibility across the family. Parameter 4 selects "Best Close-in" on page 2755, which is usually not as good a choice as "Balanced" on page 2756.

Balanced

`:FREQ:SYNT 1`

In instruments with EP0, the LO is configured for the best possible phase noise at offsets up to 600 kHz from the carrier whenever there are no significant spurs within the span observed with an on-screen carrier. When there will be such a spur, the LO is reconfigured in a way that allows the phase noise to increase by 7 dB mostly within ±1 octave around 400 kHz offset. The spurs will always be below –70 dBc.

Best Spurs

`:FREQ:SYNT 5`

In instruments with EP0, the LO is configured for better phase noise than the "Best Wide-offset" on page 2756 case close to the carrier, but the configuration has 11 dB worse phase noise than the "Best Close-in" on page 2755 case mostly within ±1 octave around 300 kHz offset. Spurs are even lower than in the "Balanced" on page 2756 case at better than –90 dBc, whether or not the carrier is on-screen.

This setting is never selected when Phase Noise Optimization is in Auto, you must select it manually.

Best Wide-offset

`:FREQ:SYNT 2`

The LO phase noise is optimized for wider offsets from the carrier. Optimization is especially improved for offsets from 70 kHz to 300 kHz. Closer offsets are compromised and the throughput of measurements (especially remote measurements where the center frequency is changing rapidly), is reduced.

The actual frequency offset beyond which noise is optimized is shown with in square brackets, as this can vary depending on the hardware set in use. For example, in some instruments this annotation appears as [offset >30 kHz]

In instruments with Option EP0, the LO is configured for the best possible phase noise at offsets up to 600 kHz from the carrier whenever there are no significant spurs within the span observed with an on-screen carrier. When there will be such a spur, the LO is reconfigured in a way that allows the phase noise to increase by 7 dB mostly within ±1 octave around 400 kHz offset. The spurs will always be below –70 dBc.

Fast Tuning

`:FREQ:SYNT 3`

In this mode, the LO behavior compromises phase noise at many offsets from the carrier in order to allow rapid measurement throughput when changing the center frequency or span. The term "Fast Tuning" on page 2756 refers to the time it takes to move the local oscillator to the start frequency and begin a sweep; this setting does not impact the actual sweep time in any way.

In instruments with EP1, the LO behavior compromises phase noise at offsets below 4 MHz in order to improve measurement throughput. The throughput is especially affected when moving the LO more than 2.5 MHz and up to 10 MHz from the stop frequency to the next start frequency.

In instruments with Option EP0, this is the same configuration as "Best Spurs" on page 2756. It is available with the "Fast Tuning" on page 2756 label for convenience, and to make the user interface more consistent with other X-Series instrument family members.

(In models whose hardware does not provide for a "Fast Tuning" on page 2756 option, the settings for "Best Close-in" on page 2755 are used if "Fast Tuning" on page 2756 is selected. This gives the fastest possible tuning for that hardware set.)

Auto

`:FREQ:SYNT:AUTO ON`

Selects the LO (local oscillator) phase noise behavior to optimize dynamic range and speed for various instrument operating conditions. The selection rules are as follows.

Auto Optimization Rules

X-Series instruments have several grades of LO, offering different configurations when in the Auto Mode. The rules for Auto selection are as follows:

Models with Option	Conditions	Selection
EP0 Models with option EP0 have a two stage local oscillator, which switches to a single loop for fast tuning (available in UXA)	Center frequency is < 699.9 kHz	"Balanced" on page 2756
	Span > 114.1 MHz, *or* RBW > 800 kHz	"Fast Tuning" on page 2756
	RBW > 290 kHz, *or* Span > 4.2 MHz	"Best Wide-offset" on page 2756
	Other conditions	"Balanced" on page 2756
EP1 Models with option EP1 have a two-	Span > 44.44 MHz, *or* RBW > 1.9 MHz, *or*	"Fast Tuning" on page 2756

Models with Option	Conditions	Selection
loop local oscillator, which switches to a single loop for fast tuning (available in PXA)	Source Mode is set to “Tracking”	
	Center frequency is < 195 kHz, *or* CF >= 1 MHz *and* Span <= 1.3 MHz *and* RBW <= 75 kHz	"Best Close-in" on page 2755
	All other conditions	"Best Wide-offset" on page 2756
EP2 Models with option EP2 use a different loop bandwidth for the fast-tuning choice, which is a compromise between tuning speed and phase noise, giving good tuning speed at all offsets. Although not as good as for "Best Close-in" on page 2755; this is useful when you have to look across a wide range of spans (available, for example, in MXA for excellent phase noise)	CF < 130 kHz , *or* CF > 12 MHz *and* Span < 495 kHz *and* RBW < 40 kHz	"Best Close-in" on page 2755
	Span > 22 MHz, *or* RBW > 400 kHz, *or* CF ≤ 12 MHz *and* Span < 495 kHz *and* RBW < 23 kHz	"Fast Tuning" on page 2756
	All other conditions	"Best Wide-offset" on page 2756
EP4 (available in CXA for improved phase noise)	Span > 101 MHz *or* RBW > 1.15 MHz *or* Source Mode is set to “Tracking”	"Fast Tuning" on page 2756
	CF is < 109 kHz *or* CF >= 4.95 MHz *and* Span <= 666 kHz *and* RBW < 28 kHz	"Best Close-in" on page 2755
	All other conditions	"Best Wide-offset" on page 2756
All Other Models Note that in these models, the hardware does not actually provide for an extra-fast tuning option, so the settings for "Fast Tuning" on page 2756 are actually the same as "Best Close-in" on page 2755, but the rules are implemented this way so that the user who doesn't care about phase noise but does care about tuning speed doesn't have to remember which of the other two settings gives faster tuning	Span > 12.34 MHz, *or* RBW > 250 kHz, *or* Source Mode is set to “Tracking”	"Fast Tuning" on page 2756
	Center frequency is < 25 kHz, *or* CF >= 1 MHz *and* Span <= 141.4 kHz *and* RBW <= 5 kHz	"Best Close-in" on page 2755
	All other conditions	"Best Wide-offset" on page 2756

In all the above cases:

- The RBW to be used in the calculations is the equivalent –3 dB bandwidth of the current RBW filter
- The rules apply whether in swept spans, zero span, or FFT spans

Ranges

Option	Option #	Phase Noise Option	Range
No EPx Option	1	Best Close-in	[offset < 20 kHz]
	2	Best Wide-offset	[offset > 30 kHz]
	3	Fast Tuning	[same as Best Close-In]
EP0	4	Best Close-in	[offset < 600 kHz]
	1	Balanced	[offset < 600 kHz]
	5	Best Spurs	[offset < 600 kHz]
	2	Best Wide-offset	[offset > 800 kHz]
	3	Fast Tuning	[same as Best Close-In]
EP1	1	Best Close-in	[offset < 140 kHz]
	2	Best Wide-offset	[offset > 160 kHz]
	3	Fast Tuning	[single loop]
EP2, EP3, EP5	1	Best Close-in	[offset < 70 kHz]
	2	Best Wide-offset	[offset > 100 kHz]
	3	Fast Tuning	[medium loop bw]
EP4	1	Best Close-in	[offset < 90 kHz]
	2	Best Wide-offset	[offset > 130 kHz]
	3	Fast Tuning	[same as Best Close-In]

6.9.1.53 Phase Noise Optimization All Option

Selects all available LO settings

Remote Command	`:SYSTem:CALibration:ROW[1]|2|…|100:FREQuency:SYNThesis:ALL[:STATe] ON | OFF | 1 | 0` `:SYSTem:CALibration:ROW[1]|2|…|100:FREQuency:SYNThesis:ALL[:STATe]?`
Example	`:SYST:CAL:ROW1:FREQ:SYNT:ALL ON`
Notes	When this parameter is ON, it overrides the Phase Noise Optimization parameter, and selects all available LO settings
Dependencies	The SCPI command applies to the current selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message "-221, Settings conflict; Subopcode does not reference an existing Cal row" is generated

Couplings	Coupled with "Phase Noise Optimization" on page 2754. When this parameter is `ON`, it selects all available LO mappings, and **Phase Noise Optimization** parameter displays **All** in the Configuration table. When this parameter is `OFF`, the **Phase Noise Optimization** parameter displays its previously set value in the Configuration table
Preset	`OFF`
State Saved	Saved in instrument state
Range	`ON|OFF`

6.9.1.54 Mixing Mode

Determines the LO Mixing Mode to be used.

Remote Command	`:SYSTem:CALibration:ROW[1]|2|…|100:LO:MMODe NORMal | ALTernate | ALL` `:SYSTem:CALibration:ROW[1]|2|…|100:LO:MMODe?`
Example	`:SYST:CAL:ROW3:LO:MMOD NORM`
Dependencies	The SCPI command applies to the current selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message "-221,Settings conflict; Subopcode does not reference an existing Cal row" is generated
Preset	`NORMal`
State Saved	Saved in instrument state
Range	`NORMal|ALTernate|ALL`

6.9.1.55 Match State

Determines if the Cal settings must match exactly when applying the correction. If not, the system may find the closest matching state or interpolate between states.

Remote Command	`:SYSTem:CALibration:ROW[1]|2|…|100:MATCh[:STATe] ON | OFF | 1 | 0` `:SYSTem:CALibration:ROW[1]|2|…|100:MATCh[:STATe]?`
Example	`:SYST:CAL4:MATC ON` `:SYST:CAL4:MATC?`
Dependencies	The SCPI command is applied to the currently selected Cal Group. The subopcode is used to identify the Cal row in the Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message "-221, Settings conflict; Subopcode does not reference an existing Cal row" is generated
Preset	All True
State Saved	Saved in instrument state
Range	True | False

6.9.2 Cal Group

Specifies the selected Calibration Group. You can use different Cal Groups for different external hardware configurations. The Cal Group is also an important concept when sending SCPI commands to the Calibration System, because in each case the SCPI command is directed to the currently-selected Cal Group, which is the Cal Group that is modified by the SCPI command.

Remote Command	`:SYSTem:CALibration:CGRoup <integer>` `:SYSTem:CALibration:CGRoup?`
Example	`:SYST:CAL:CGR 2` `:SYST:CAL:CGR?`
Preset	1
Min	1
Max	100

6.9.3 Apply Cal Group

Controls whether or not the checked **Apply** rows of the currently selected Cal Group are applied.

Remote Command	`:SYSTem:CALibration:CGRoup:APPLy <bool>` `:SYSTem:CALibration:CGRoup:APPLy?`
Example	`:SYST:CAL:CGR:APPL ON` `:SYST:CAL:CGR:APPL?`
Dependencies	The SCPI command is applied to the currently selected Cal Group You can only turn on **Apply Cal Group** if at least one Cal for the currently selected group has been executed. If you attempt to select **Apply Cal Group** before any Cals have been executed, the advisory message “At least one Row must be calibrated before it can be applied” is displayed
Preset	`OFF`
State Saved	Saved in instrument state
Range	`ON|OFF`
Annotation	If *any* Cal Group is `ON`, RCal in the Meas Bar displays in amber, to indicate that Calibrations are in use

6.9.4 All Apply Cal Group Off

Turns off **Apply Cal Group** for all groups.

Remote	`:SYSTem:CALibration:CGRoup:APPLy:AOFF`

Command	
Example	`:SYST:CAL:CGR:APPL:AOFF`

6.9.5 Connection

Opens the **Connection** dialog, which provides step-by-step instructions for its use.

6.10 Calibrator Control

Lets you select a calibrator and control the calibrator settings.

6.10.1 Select Cal Source

Lets you select the calibrator to control.

Remote Command	`:SYSTem:CALibration:TUNE[:SELected] NONE | REF50 | REF4800 | TUNAble | CALOUT | RCM1 | RCM2 | RCM3 | RCM4 | RCM5 | RCM6 | RCM7 | RCM8 | RCM9 | RCM10` `:SYSTem:CALibration:TUNE[:SELected]?`
Example	`:SYST:CAL:TUNE:SEL TUNABLE` `:SYST:CAL:TUNE?`
Notes	Options are:

`NONE`	No calibrator selected
`TUNAble`	Tunable internal calibrator present in N9042B
`CALOUT`	Tunable calibrator available through CALOUT front panel port in N9042B
`REF50`	50 MHz calibrator
`REF4800`	4.8 GHz calibrator
`RCM1 – RCM10`	RCal module

Dependencies	If the selected calibrator is not available, it does not appear in the dropdown. If you send SCPI to select a calibrator that is not available, the instrument generates an error
Couplings	Selecting `REF50` sets the RF Calibrator to `REF50` Selecting `REF4800` sets the RF Calibrator to `REF4800` Selecting a calibrator source other than `REF50` or `REF4800` sets RF Calibrator to `OFF`
Preset	Unaffected by **Mode Preset**. Set to `NONE` by **Restore Input/Output Defaults** or **Restore System Defaults->All**

6.10.2 Cal Output

Lets you set the selected calibrator’s RF power output state.

Remote Command	`:SYSTem:CALibration:TUNE:OUTPut[:STATe] ON | OFF | 1 | 0` `:SYSTem:CALibration:TUNE:OUTPut[:STATe]?`
Example	`:SYST:CAL:TUNE:OUTP ON` `:SYST:CAL:TUNE:OUTP?`

Preset	Unaffected by **Mode Preset**. Set to `OFF` by **Restore Input/Output Defaults** or **Restore System Defaults->All**

6.10.3 Cal Frequency

Lets you set the selected calibrator's frequency.

Remote Command	`:SYSTem:CALibration:TUNE:FREQuency <freq>` `:SYSTem:CALibration:TUNE:FREQuency?`
Example	Set source frequency to 150 MHz: `:SYST:CAL:TUNE:FREQ 150000000`
Preset	Unaffected by **Mode Preset**. Set to 1 GHz by **Restore Input/Output Defaults** or **Restore System Defaults->All**
Min/Max	Depend on the selected calibrator

6.10.4 Cal Signal Type

Lets you set the selected calibrator's signal type.

Remote Command	`:SYSTem:CALibration:TUNE:TYPE CW | COMB` `:SYSTem:CALibration:TUNE:TYPE?`
Example	`:SYST:CAL:TUNE:TYPE CW` `:SYST:CAL:TUNE:TYPE?`
Dependencies	If the selected calibrator does not support a signal type, then that type is disabled in the dropdown Changing the signal type to a disabled option generates an error
Preset	Unaffected by **Mode Preset**. Set to `CW` by **Restore Input/Output Defaults** or **Restore System Defaults->All**

6.10.5 Cal Comb Spacing

Lets you set the calibrator's comb spacing, when the signal type is `COMB`.

Remote Command	`:SYSTem:CALibration:TUNE:SPACing <freq>` `:SYSTem:CALibration:TUNE:SPACing?`
Example	Set comb spacing to 1 MHz: `:SYST:CAL:TUNE:SPAC 1000000`
Dependencies	Only appears when `COMB` is selected as "Cal Signal Type" on page 2764 If the selected calibrator does not support the Comb signal, attempting to set the spacing generates an error

Preset	Unaffected by **Mode Preset.** Set to 0 Hz by **Restore Input/Output Defaults** or **Restore System Defaults->All**
Min/Max	Dependent on the selected calibrator

6.10.6 Calibrator Reference

Determines the frequency reference type used by the RCal module of the currently selected Cal Group

Remote Command	`:SYSTem:CALibration:TUNE:REFerence INTernal | EXTernal` `:SYSTem:CALibration:TUNE:REFerence?`
Example	Set the calibrator frequency reference to Internal: `:SYSTem:CALibration:TUNE:REFerence INTERNAL`
Dependencies	Only displayed when an RCal module is the selected calibrator
Preset	Unaffected by **Mode Preset.** Set to preset value by **Restore Input/Output Defaults** or **Restore System Defaults->All**
Range	`INTernal|EXTernal`

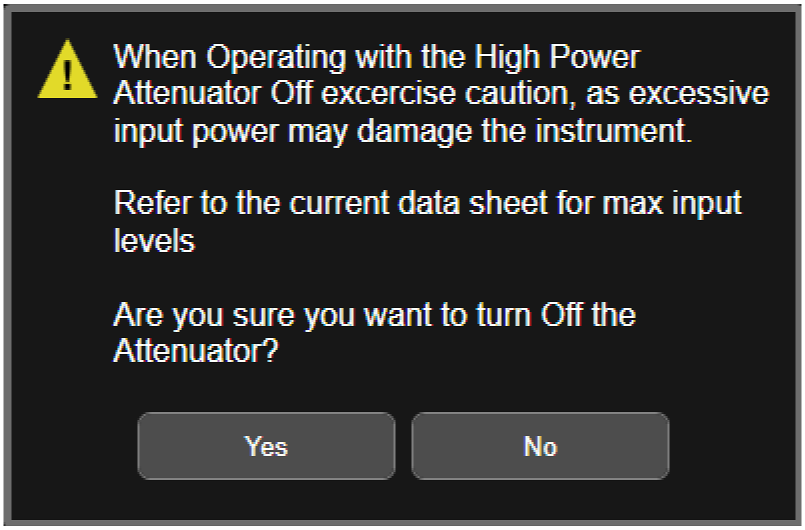
6.11 Advanced

6.11.1 T/R Port High Power Attenuator

Controls whether additional attenuation is added at the T/R Port. The T/R port has twoinput paths, one that provides a 16 dB attenuator, and the other that bypasses this attenuator.

- When `ON`, the path includes the 16 dB attenuator, so the max input level for this path is +47 dBm (50 W)
- When `OFF`, the 16 dB attenuator is bypassed, so the max input level for this path is +33 dBm (2 W)

If the attenuator is turned off, the following warning message is displayed and confirmation that the attenuator is to be turned off is required;



When Operating with the High Power Attenuator Off excercise caution, as excessive input power may damage the instrument.

Refer to the current data sheet for max input levels

Are you sure you want to turn Off the Attenuator?

Whenever the attenuator is bypassed (`OFF`), a warning appears in the status bar: “Input caution; T/R unprotected"

In the case of an input overload at the T/R input, (>2 W with Attenuator off, or >50 W with attenuator on), or an over-temperature at the T/R input, the input is disconnected, and a dialog is displayed, stating:

“CAUTION! Excessive power has been detected at the T/R Port. The input has been disconnected. Remove the high signal power and press OK”

Or:

"CAUTION! Over temperature has been detected at the T/R Port. The input has been disconnected. Remove the signal, allow to cool & press OK"

Until you press **OK**, the input remains disconnected, and no measurement can be made.

Remote Command	`[:SENSe]:FEED:RF:PORT:TR:HPOWer:ATTenuator[:STATe] ON | OFF` `[:SENSe]:FEED:RF:PORT:TR:HPOWer:ATTenuator[:STATe]?`
Example	`:FEED:RF:PORT:TR:HPOW:ATT ON` `:FEED:RF:PORT:TR:HPOW:ATT?`
Dependencies	Only appears in modular analyzers, and only when the M9470A module is installed, such as in M8920A. Option HDX is required to enable the T/R port
Preset	`ON`
State Saved	Saved in instrument state

6.12 Aux I/O Control

This menu is only available with Option LSN, indicating that the LISN IO board is installed. It is used to control each of the eight control lines out of the rear panel connector independently. There are eight bits of control lines. The LISN Control (Mode setup) of the EMI Receiver application affects the **AUX I/O Control** settings. Whenever you change the LISN Control in Mode Setup, the corresponding AUX I/O Control data lines will also be changed. The selection at the AUX I/O Control does not affect the LISN Control (Mode Setup) setting.

6.12.1 Data 0 – Data 7

Sets the value for Data 0 through Data 7 respectively.

Remote Command	`:OUTPut:AUX:IO:DATA<n> OFF | ON | 0 | 1` where `<n>` in an integer 0 - 7
Example	`:OUTP:AUX:IO:DATA0 OFF`
Notes	Unaffected by **Mode Preset**, but **Input/Output Preset** presets the value to `ON` for all 8 data lines
Preset	`ON`
Range	`OFF|ON`

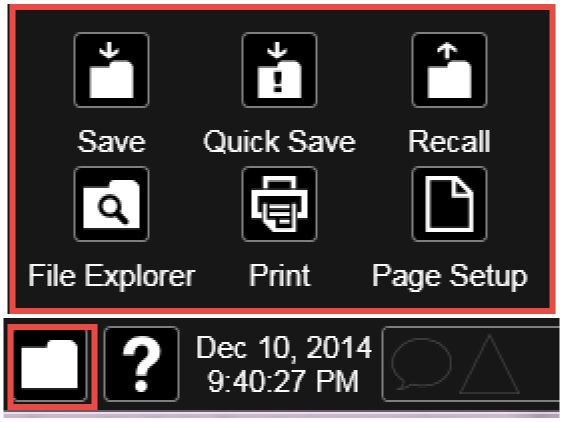
6.12.2 Aux IO Control (Remote Command Only)

Sets/Queries the value for all 8 data lines.

Remote Command	`:OUTPut:AUX:IO <Value>` `:OUTPut:AUX:IO?`
Example	`:OUTP:AUX:IO 31`
Notes	Unaffected by **Mode Preset**, but **Input/Output Preset** presets the value to `ON` for all 8 data lines
Couplings	The states of Data 0 to Data 7 under the **AUX I/O Control** panel (**Input/Output** menu) change according to the keyed-in AUX IO value
Preset	31
Min	0
Max	255
Backwards Compatibility SCPI	`:OUTPut:UPORt <Value>`

7 Save/Recall/Print

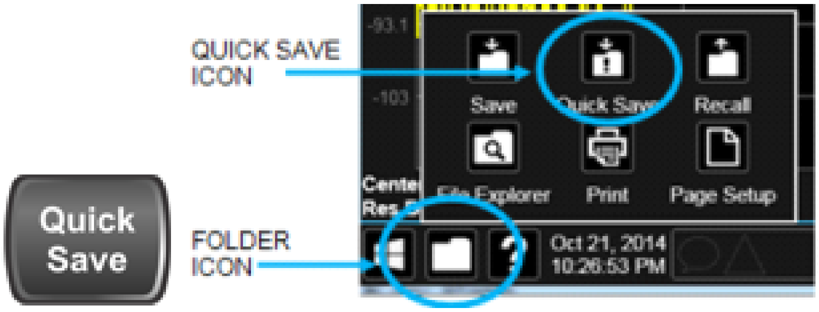
This section describes the functions that can be accessed via the front panel **Save**, **Quick Save**, and **Recall** hardkeys, as well as via the controls in the front-panel folder icon, as shown below.



7.1 Quick Save

Quick Save repeats the previous Save at the touch of a single button. Whatever you saved before gets saved again to the same directory, and with a filename derived from the previous filename.

You access Quick Save by pressing the **Quick Save** hardkey, or by pressing the folder icon at the bottom of the display and then pressing the **Quick Save** icon. In addition, if you have a PC keyboard plugged in, the sequence `CTL-Q` will perform a Quick Save.



The **Quick Save** front-panel key repeats the most recent save that was performed from the **Save** menu, with the following exceptions:

- Register saves are not remembered as Saves for the purpose of the Quick Save function
- If the current measurement does not support the last non-register save that was performed, an informational message is generated, “File type not supported for this measurement”

Quick Save repeats the last type of qualified save (that is, a save qualified by the above criteria) in the last save directory by creating a unique filename using the Auto File Naming algorithm described below.

If the previous save was a Screen Image save, Quick Save saves a Screen Image when the Quick Save button is pressed. This image is *exactly* what is on the screen when the **Quick Save** button is pressed. Quick Save does *not* force a dialog exit or navigate in any way, it simply snaps the image on the screen and saves it. This lets you save images of dialogs and setup screens that would be impossible to save using the **Save** dialog.

NOTE

When **Quick Save** is pressed the display theme changes to the theme specified by the **Screen Image Theme** control in order to take the screen shot, and then changes back to the Display Theme, but no navigation is performed, and no dialogs are exited.

If **Quick Save** is pressed after startup and before any qualified Save has been performed, the Quick Save function performs a Screen Image save using the current settings for Screen Image saves (current theme, current directory), which then becomes the "last save" for the purpose of subsequent Quick Saves.

The Auto File Naming feature automatically generates a file name for use when saving a file. The filename consists of a prefix and suffix separated by a dot, as is standard for the Windows file system. A default prefix exists for each of the available file types:

Type	Default Prefix	Menu
State	`State_`	(Save/Recall)
Trace + State	`State_`	(Save/Recall)
Screen	`Screen_`	(Save/Recall)
Amplitude Corrections	`Ampcor_`	(Import/Export)
Traces	`Trace_`	(Import/Export)
Limit Lines	`Limit_`	(Import/Export)
Measurement Result	`MeasR_`	(Import/Export)
Capture Buffer	`CapBuf_`	(Import/Export)

A four-digit number is appended to the prefix to create a unique file name. The numbering sequence starts at 0000 within each Mode for each file type and updates incrementally to 9999, then wraps to 0000 again. It remembers where it was through a Mode Preset and when leaving and returning to the Mode. It is reset by Restore Misc Defaults and Restore System Defaults and subsequent running of the instrument application. So, for example, the first auto file name generated for State files is `State_0000.state`. The next is `State_0001`, and so forth.

One of the key features of Auto File Name is that we guarantee that the Auto File Name will never conflict with an existing file.The algorithm looks for the next available number. If it gets to 9999, then it looks for holes. If it find no holes, that is no more numbers are available, it gives an error.

For example, if when we get to State_0010.state there is already a State_0010.state file in the current directory, it advances the counter to State_0011.state to ensure that no conflict will exist (and then it verifies that State_0011.state also does not exist in the current directory and advances again if it does, and so forth).

If you enter a file name for a given file type, then the prefix becomes the filename you entered instead of the default prefix, followed by an underscore. The last four letters (the suffix) are the 4-digit number.

For example, if you save a measurement results file as "`fred.csv`", then the next auto file name chosen for measurement results save will be `fred_0000.csv`.

NOTE **Although 0000 is used in the example above, the number that is used is actually the current number in the Meas Results sequence, that is, the number that would** have been used if you had not entered your own file name.

NOTE

If the filename you entered ends with _dddd, where d=any digit, making it look just like an auto file name, then the next auto file name picks up where you left off with the suffix being dddd + 1.

Quick Save Mode

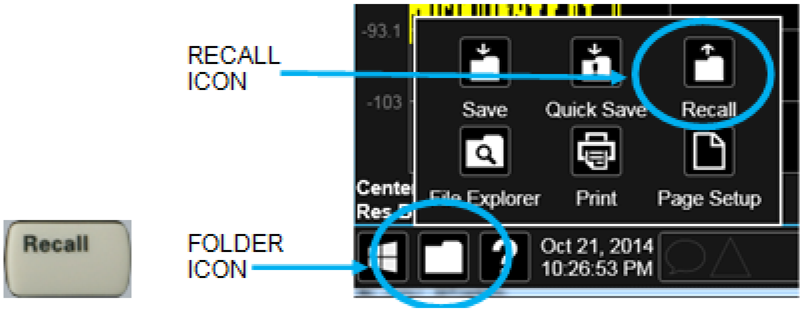
Quick Save can be operated in the Normal mode and in a special “Prompt” mode. There is a switch on the User Interface page of the **System** menus that lets you control this.

When Quick Save Mode is in Normal (the default setting), the instrument does an immediate save of a new file of the same type and to the same directory as the previous Save action. When Quick Save Mode is in the Prompt state, instead of immediately performing a Save, the Alpha Keyboard pops up with the proposed auto-filename in the entry area. The user can then press Enter to accept the auto filename, or edit the name and press Enter. This allows you to easily save a file with a custom file name.

Notes	No remote command for this key specifically

7.2 Recall

The **Recall** dialog lets you recall previously saved states, traces and other items to the instrument from files on the instrument's internal storage, from removable devices, and from directories on the network. You access the Recall dialog by pressing the **Recall** hardkey, or by pressing the folder icon at the bottom of the display and then pressing the **Recall** icon.



The dialog has section tabs running down the left side, which you use to specify what you want to recall, similar to the **Save** dialog. You choose the recall item and then complete the recall by choosing a register or file location from which to recall the item.

Notes	No remote command for this key specifically, but `:MMEM:LOAD` is available for specific file types. For example: `:MMEM:LOAD:STATe <filename>` If you try to recall a State file for a mode that is not licensed or not available in the instrument, an error message will occur and the state will not change
Backwards Compatibility Notes	In legacy analyzers, it was possible to load a state without affecting the trace data, limit lines or correction data. Similarly (since User Preset is actually loading a state), it was possible to do a User Preset without affecting the trace data, limit lines or correction data In the X-Series, "state" always includes all of this data; so, whenever state is loaded, all of the traces, limit lines and corrections are affected. Although this differs from previous behavior, it is desirable behavior, and should not cause adverse issues for users Recall for the X-Series supports backward compatibility in the sense that you can recall a state file from any X-Series model number and any version of X-Series software. This is only possible if part of the recalling process goes through a limiting step after recalling the mode settings, at least for settings that may vary with version number, model number, option and license differences. If you try to recall a state file onto an instrument with less capability than what was available on the instrument during the save, the recall will ignore the state it doesn't support, and it will limit the recalled setting to what it allows Example: if the saved state includes preamp ON, but the recalling instrument does not have a preamp; the preamp is limited to OFF. Conversely, if you save a state without a preamp, the preamp is OFF in the state file. When this saved file is recalled on an instrument with a licensed preamp, the preamp is changed to OFF. Another example is if the saved state has center frequency set to 20 GHz, but the instrument recalling the saved state is a different model and only supports 13.5 GHz. In this case, the

center frequency is limited along with any other frequency-based settings. Since the center frequency can't be preserved in this case, the recall limiting tries to at least preserve span to keep the measurement setup as intact as possible

Note that there is no state file compatibility outside of the X-Series. For example, you cannot recall a state file from ESA or PSA

7.2.1 Recall From File / Open

For every Recall type, a button appears called **Recall From File** or **Open**. "Recall From File" appears for recall types that also include registers (like State and Trace+State), and "Open" appears for all other recall types.

When you push the "Recall From File" or "Open" button, a dialog slides in from the right which allows you to see what files are saved in the current directory. See the "Save to File/Save As" section (3.1) for a depiction of this screen for the Save menu, which is similar to Recall.

The default directory is the internal directory for the current Mode and save type, on the D: drive. You may also change to another Mode's state directory by pressing the dropdown in the upper right corner labeled "Mode". Once you have chosen a directory, the files in that directory whose extension matches the current data type (e.g., .state or .trace) are displayed in the right-hand window of the dialog. You can sort this list by name, date, file size or extension by tapping the Name, Date, Size, or Content header at the top of each column. A second tap toggles the sort order between Ascending and Descending.

Also displayed is a path depiction showing the path to the current directory. In the example shown, the path is D:\Users\Instrument\Documents\SA\screen. Tapping any element of this path lets you select an alternate route. Tapping the "Computer" arrow lets you select a different drive.

◀Tapping the "back" arrow navigates to the previously selected directory.

If you plug in a removable drive (e.g., a thumb drive), the browser immediately navigates to the root of that drive. Furthermore, if you had a thumb drive in and you were in a directory on the thumb, and then you exit the browser, when you come back in you are still in the same directory on that removable drive. If you remove the thumb drive, you return to the directory you had been in before the thumb drive was plugged in.

Note that for each data type there is a "current" directory, and it is the last directory used by either Save or Recall for that Mode. For example, if in SA Mode you save a Corrections file to a particular directory, then when you go to recall a Correction in SA Mode, you should be pointing at that directory. Or if in EMC Mode you recall a Limit from a particular directory then when in EMC Mode you go to save a Limit, it should be pointing at that same directory. There is one “current” directory for each data type for each Mode (not one for Save and one for Recall).

The Filename field, just below the Path field, shows the filename that will be used. The **File Name** field is loaded with the name of the selected file. You may edit the filename by tapping it, which brings up the onscreen alpha keyboard. Press the “Done” button on this keyboard when you are done editing.

Select a file to load and press Recall. After a successful recall, a message "File <filename> recalled" or "State Register <register number> recalled" is displayed in an info box for a few seconds.

The **Files of Type** field shows the file suffix for the type of file you have selected to recall. This field only appears for files which have multiple file types that can be recalled. These file types are:

Amplitude Corrections:

- Amplitude Corrections (`*.csv`)
- Legacy Cable Corrections (`*.cbl`)
- Legacy User Corrections (`*.amp`)
- Legacy Other Corrections (`*.oth`)
- Legacy Antenna Corrections (`*.ant`)

Limits:

- Limit Data (`*.csv`)
- Legacy Limit Data (`*.lim`)

7.2.2 State

Lets you choose a register or file from which to recall the state.

See the Save State description for information on state files and their contents and the default paths. State files have the extension “.state”.

For rapid recall, the State menu lists 16 registers from which you can recall states. Pressing a Register button initiates the recall. You can also select a file from which to recall by pressing “Recall From File”.

Since each state file is only for one Mode, the settings for other Modes are unaffected when it is loaded. Recall State will cause a mode switch if the state being recalled is not from the current active mode.

NOTE In products that run multiple simultaneous instances of the X-Series Application, all instances share the same registers and file directories, so make sure you know from what instance a file or register was saved before recalling it.

Remote Command	`:MMEMory:LOAD:STATe <filename>`
Example	Load the state file data (on the default file directory path) into the instrument state: `:MMEM:LOAD:STAT "MyStateFile.state"`
Notes	When you pick a file to recall, the instrument first verifies that the file is recallable in the current instrument by checking the software version and model number of the instrument. If there is a mismatch between the file and the instrument, the recall function tries to recall as much as possible. It may limit settings that differ based on model number, licensing or version number. In general, variables in the instrument which are not contained in the state file will be unaffected, and variables in the state file which are not contained in the instrument will be ignored The recall proceeds by aborting the currently running measurement, clearing any pending operations, and then loading the State from the saved state file. You can open state files from any Mode, so recalling a State file switches the instrument to the Mode that was active when the save occurred. After switching to the Mode of the saved state file, Mode settings and data (if any for the Mode) become those from the saved file. The active measurement becomes the measurement which was running when the state file was saved and the data relevant to the measurement (if there is any) is recalled After recalling the state, the Recall State function does the following: – Clears the input and output buffers – Status Byte is set to 0 – Executes `*CLS` If the file specified is empty an error is generated. If the specified file does not exist, another error is generated. If there is a mismatch between the file and the proper file type, an error is generated. If there is a mismatch between file version or model number or instrument version or model number, a warning is displayed. Then it returns to the State menu and File Open dialog goes away After the Recall, the instrument exits the Recall menu and returns to the previous menu
Backwards Compatibility SCPI	`:MMEMory:LOAD:STATe 1,<filename>` The "1" is simply ignored

7.2.2.1 Recall Type

If you have a built-in Source in your instrument, you may wish, when recalling State, to recall only the part of the State file that applies to the instrument, and leave the Source unaffected. Or you may wish to recall only the part of the State file that applies to the Source, and leave the instrument unaffected.

Lets you choose whether you wish to recall the entire Analyzer + Source state (`ALL`), just the Analyzer State `ANALyzer`), or just the Source State (`SOURce`).

Remote Command	`:MMEMory:LOAD:RTYPe ALL | ANALyzer | SOURce`
Example	`:MMEM:LOAD:RTYP ALL`
Dependencies	Only available in models with a built-in source, such as VXT models
Preset	`ALL`
Range	`ALL|ANALyzer|SOURce`

7.2.2.2 Register 1 thru Register 16

Selecting any one of these register buttons causes the State to be recalled from the specified Register. The registers are provided for rapid saving and recalling, since you do not need to specify a filename or navigate to a file. Each of the register menu keys annotates whether it is empty or at what date and time it was last modified. In addition, you can edit any of the register names to enter custom names for any register.

Although these 16 registers are the only registers available from the front panel, there are 128 state registers available in the instrument. Registers 17–128 are only available from the SCPI interface, using the `*RCL` command.

There is one set of 128 state registers in the instrument, not one set for each Mode. When a state is saved, the Mode it was saved from is saved with it; then when it is recalled, the instrument switches to that Mode.

NOTE **In products that run multiple simultaneous instances of the X-Series Application, all instances share the same registers and file directories, so make sure you know from what instance a file or register was saved before recalling it.**

The date displayed follows the format specified in the **Date Format** setting in the **Control Panel**. The time shows hours and minutes.

After the recall completes, the message "Register <register number> recalled" is displayed.

If you are in the Spectrum Analyzer Mode, and you are recalling a register that was saved in the Spectrum Analyzer Mode, then after the recall, you will still be in the Recall Register menu. If the Recall causes you to switch modes, then after the Recall, you will be in the Frequency menu.

If a requested register is empty an error is generated.

Example	`*RCL 1`
Range	1-16 from front panel, 1-128 from SCPI

7.2.2.3 Edit Register Names

You may enter a custom name on any of the **Register** keys, to help you remember what you are using that state to recall. To do this, press the **Name** field for the register you want to rename, which brings up the onscreen alpha keyboard. Press the **Done** button on this keyboard when you are done editing.

The maximum number of characters for a register name is 30. If you delete all the characters in the custom name, it restores the default (time and date).

For more information and the SCPI command, see "Edit Register Names" on page 2802 under **Save, State**.

7.2.3 Trace+State

Lets you choose a register or file for recalling the state.

See **Save**, "State" on page 2801 for information on state files and their contents and the default paths. State files have the extension "`.state`".

For rapid recall, the **Trace+State** menu lists 16 registers from which you can recall trace+state files. Pressing a **Register** control initiates the recall. You can also select a file from which to recall by pressing **Recall From File**.

Since each trace+state file is only for one Mode, the settings for other Modes are unaffected when it is loaded. **Recall Trace+State** will cause a mode switch if the trace+state being recalled is not from the current active Mode.

NOTE **In products that run multiple simultaneous instances of the X-Series Application, all instances share the same registers and file directories, so make sure you know from what instance a file or register was saved before recalling it.**

Trace+State files have the extension `.trace`.

The Trace+State selection only appears for measurements that support trace saves. It is blanked for modes that do not support trace saves. Saving Trace is identical to saving State, except that a `.trace` extension is used on the file instead of `.state`, and internal flags are set in the file indicating which trace was saved.

Remote Command	`:MMEMory:LOAD:TRACe TRACE1 | … | TRACE6,<filename>` `:MMEMory:LOAD:TRACe:REGister TRACE1 | … | TRACE6,<integer>`
Example	Loads the trace file data (on the default file directory path) into the specified trace; if it is a "single trace" save file, that trace is loaded to trace 2, and is set to be not updating: `:MMEM:LOAD:TRAC TRACE2,"MyTraceFile.trace"` Restore the trace data in register 2 to Trace 1:

	`:MMEM:LOAD:TRAC:REG TRACE1,2`

Notes	When you perform the recall, the recalling Trace function must first verify the file is recallable in this instrument by checking instrument software version and model number, since it includes State. If everything matches, a full recall proceeds by aborting the currently running measurement, and loading the state from the saved state file to as close as possible to the context in which the save occurred. You can open .trace files from any mode that supports them, so recalling a Trace file switches to the mode that was active when the save occurred. After switching to the mode of the saved state file, mode settings and data (if any for the mode) are loaded with values from the saved file and the saved measurement of the mode becomes the newly active measurement, and the data relevant to the measurement (if there is any) is recalled
	Once the state is loaded, the trace data must be loaded. The internal flags are consulted to see which trace to load and the "To Trace" setting to see where to load it. Trace data is always loaded with the specified trace set to View, so that the data is visible and not updating (so as not to erase the recalled data). If the file is an "all trace" file, all traces are loaded with the saved data (to the original trace the data was saved from) and set to View. Traces whose data is not loaded are restored to the update state that existed when they were saved
	After recall, the instrument exits the **Recall** menu and returns to the previous menu
	Some Modes and measurements do not have 6 available traces. For example, Phase Noise Mode:
	`:MMEMory:LOAD:TRACe TRACE1|TRACE2|TRACE3,<filename>`
	Some Modes and measurements have more than 6 traces. For example, Realtime SA Mode:
	`:MMEMory:STORe:TRACe TRACE1 | TRACE2 | TRACE3 | TRACE4 | TRACE5 | TRACE6 | TRACE7 | TRACE8 | TRACE9 | TRACE10 | TRACE11 | TRACE12 | ALL,<filename>`

7.2.3.1 Recall To Trace

Lets you select which Trace to recall to. Not all Modes have the same number of available traces. The default is the currently selected trace, selected in this or any other menu with **Trace** selection. If you have selected `ALL`, then that remains selected until you specifically change it to a single trace, regardless of the trace selected in the **Trace** menu.

If the `.trace` file is an "all trace" type, **To Trace** is ignored, and the traces each go back to the trace from which they were saved.

7.2.3.2 Register 1 thru Register 16

Selecting any one of these register buttons causes the specified trace(s) and the state of the currently active mode to be recalled from the specified Register. The registers are provided for rapid saving and recalling, since you do not need to specify a filename or navigate to a file. Each of the register menu keys annotates whether it is empty or at what date and time it was last modified. In addition, you can edit any of the register names to enter custom names for any register.

There is one set of 16 trace+state registers in the instrument, not one set for each Mode. When trace+state is saved, the Mode it was saved from is saved with it; then when it is recalled, the instrument switches to that Mode.

NOTE	In products that run multiple simultaneous instances of the X-Series Application, all instances share the same registers and file directories, so make sure you know from what instance a file or register was saved before recalling it.

The date displayed follows the format specified in the **Date Format** setting under the **Control Panel**. The time shows hours and minutes.

After the recall completes, the message `Register <register number> recalled` is displayed. If a requested register is empty, an error is generated.

Recalling state from a Register is the same as recalling state from a **Trace+State** File.

Example	`*RCL 1`
Range	1-16

7.2.3.3 Edit Register Names

You may enter a custom name on any of the **Register** keys, to help you remember what you are using that state to recall. To do this, press the **Name** field for the register you want to rename, which brings up the onscreen alpha keyboard. Press the **Done** button on this keyboard when you are done editing

The maximum number of characters for a register name is 30. If you delete all the characters in the custom name, it restores the default (time and date).

For more information and the SCPI command, see "Edit Register Names" on page 2802 under **Save, State**.

7.2.4 Screen Config + State

Lets you load the complete configuration of all your screens from a file which you specify.

Note that recalling a screen config file wipes out your current screen configuration; you do not see a warning before it loads, but there is a note on the **Recall** page letting you know what is going to happen.

The filenames are of the form:

`State_0001.screen`

Remote	`:MMEMory:LOAD:SCONfig <filename>`

Command	
Example	Load the screen configuration from the file `MyScreenConfig.screen` in the default directory: `:MMEM:LOAD:SCON "myScreenConfig.screen"`

7.2.5 Measurement Data

Lets you specify a data type (for example, trace data) and choose a file from which to import the data.

Measurement Data files are comma-separated value (CSV) files, and contain the requested data in a form that can be imported into Excel or other spreadsheets, as well as header data that gives information on relevant instrument settings at the time the save occurred.

For more on **Measurement Data** files, see "Measurement Data" on page 2807 under **Save**.

Since the commonly exported data files are in CSV format, you can edit the data prior to importing it. This allows you to export a data file, manipulate the data in Excel (for example) and then import it.

7.2.5.1 Data Type

Lets you select the data type to recall.

Notes	There is no SCPI command for Data Type, as the type is implied in the SCPI command for each item
Dependencies	The **Data Type** menu for any given measurement only contains data types that are supported by that measurement. Data types that are not importable do not appear, even if they *do* appear in the corresponding **Save** menu

Trace

Allows you to import Trace files in the PC-readable CSV format.

Trace data files have the extension `.csv`. The trace file contains a “metadata” header which describes the state of the instrument when the file was saved. This metadata is compared to the current state of the instrument when the file is recalled; if it does not match the current state, the “invalid data indicator” (*) is displayed.

The metadata is detailed in Trace File Contents in the **Save** section.

Remote Command	`:MMEMory:LOAD:TRACe:DATA TRACE1 | … | TRACE6,<filename>`
Example	Import the 2nd trace from the file `myTrace2.csv` in the current path. For SA Mode, the default path is:

	`My Documents\SA\data\traces` `:MMEM:LOAD:TRAC DATA TRACE2,"myTrace2.csv"`
Dependencies	For SA measurements, a trace cannot be recalled from a trace file that was exported with `ALL` traces selected A trace cannot be imported if the number of trace points in the file do not match the number of sweep points currently set for the measurement. If this happens, an error message is generated Errors are reported if the file is empty or missing, or if the file type does not match, or if there is a mismatch between the file type and the destination data type
Couplings	When a trace is imported, **Trace Update** is always turned `OFF` for that trace and **Trace Display** is always turned `ON`
Annotation	After recall is complete, an advisory is displayed in the message bar confirming which trace file was loaded
Status Bits/OPC dependencies	Sequential - aborts the current measurement

7.2.6 Limit

Lets you select a file from which to import the **Limit** data.

Limit files are CSV files, and contain the limit data in a form that can be imported into Excel or similar spreadsheets, as well as header data that provides information on the limit.

See the **Save Limit** description ("Limit" on page 2837) for information on Limit files and their contents and the default paths. **Limit** files have the extension `.csv`.

For backwards compatibility, older limit files with the extension `.lim` can be read into the instrument, but you can only *save* limits as `.csv` files.

A set of preloaded **Limits** files can be found in the directory:

`My Documents/EMC Limits and Ampcor/Limits`

Remote Command	`:MMEMory:LOAD:LIMit LLINE1 | LLINE2 | LLINE3 | LLINE4 | LLINE5 | LLINE6,<-filename>`
Example	Import the 2nd Limit Line from the file `myLimitLine2.csv` in the current path: `:MMEM:LOAD:LIM LLINE2,"myLimitLine2.csv"`
Dependencies	Errors are reported if the file is empty or missing, or if the file type does not match, or if there is a mismatch between the file type and the destination data type In the Log Plot measurement in Phase Noise Mode, there are only three Limit Lines, so the valid parameters are `LLINE1 | LLINE2 | LLINE3` This key only appears if you have the proper option installed in your instrument
Couplings	When a limit line is loaded from mass storage, it is automatically turned on. This allows the user to see it, thus confirming the load. The Margin settings will match those when the limit was saved

	The instrument cannot mix **Limits** domains (X Axis Unit must be **Frequency** or **Time** for both **Limits**). So, when a **Limits** file is loaded, the instrument sets the **Limits** domain (X Axis Unit) to match that of the file. If this changes the **Limits** domain from what it was before the file was loaded, all **Limits** data in all **Limits** sets is erased before the data loads. If this operation is over the remote interface, there is no warning if this occurs, so care should be taken to know the domain of the file you are loading
Annotation	After recall is complete, an advisory is displayed in the message bar confirming which limit file was loaded
Status Bits/OPC dependencies	Sequential - aborts the current measurement

7.2.6.1 Select Limit

Selects the Limit register into which the recalled **Limit** will be placed, for example, **Limit 1**.

Preset	Not part of **Preset**, but is reset to LLINE1 by **Restore Mode Defaults** Survives shutdown

7.2.7 Correction

Allows you to import Amplitude Corrections files in the PC-readable CSV format.

Amplitude Correction files contain the correction data in a form that can be imported into Excel or similar spreadsheets, as well as header data that provides information on the correction.

For backwards compatibility, older limit files with the extensions `.amp`, `.cbl`, `.ant` and `.oth` can be read into the instrument.

A set of preloaded **Corrections** files can be found in the directory:

`My Documents\EMC Limits and Ampcor\Ampcor`

The default path for CSV files is:

`My Documents\amplitudeCorrections\`

Antenna corrections are a particular kind of Amplitude Corrections – they are distinguished in the corrections file by having **Antenna Unit** set to a value other than **None**. When the Amplitude Correction is an Antenna correction and the **Antenna Unit** in the file is not **None**, the Y-Axis Unit setting changes to match the Antenna (Transducer) Unit in the file.

Remote Command	`:MMEMory:LOAD:CORRection 1 | … | 8, <filename>`
Example	Recall the Amplitude Correction data from the file `myAmpcor.csv` in the current directory to the 2nd Amplitude Correction table, and turns on Correction 2: `:MMEM:LOAD:CORR 2, "myAmpcor.csv"`

Dependencies	Only one Transducer units can be on at any given time. Note that this means that if a correction file with a Transducer Unit is loaded into a particular Correction, all other Corrections are set to that same Transducer unit Corrections are not supported by all Measurements. If in a Mode in which some Measurements support it, this key is grayed-out in measurements that do not. The key does not show at all if no measurements in the Mode support it Errors are reported if the file is empty or missing, or if the file type does not match, or if there is a mismatch between the file type and the destination data type This key does not appear unless you have the proper option installed in your instrument This command will generate an “Option not available” error unless you have the proper option installed in your instrument
Couplings	When a correction file is loaded from mass storage, it is automatically turned on (**Correction** `ON`) and **Apply Corrections** is set `ON`. This allows you to see its effect, thus confirming the load
Annotation	After recall is complete, an advisory is displayed in the message bar confirming which file was recalled
Backwards Compatibility SCPI	`:MMEMory:LOAD:CORRection ANTenna | CABLe | OTHer | USER, <filename>` For backwards compatibility, `ANTenna` maps to 1, `CABle` maps to 2, `OTHer` maps to 3 and `USER` maps to 4

7.2.7.1 Select Correction

Selects the register into which the recalled **Correction** will be placed, for example, **Correction 1**.

Preset	Not part of **Preset**, but reset to **Correction 1** by **Restore Input/Output Defaults** Survives a shutdown

7.2.8 Complex Correction

Imports **Complex Corrections** files in the PC-readable `.s2p` format.

Complex Correction files contain amplitude and phase correction data in a form that can be imported into Excel or similar spreadsheets, as well as header data that gives information on the correction.

The default path for Complex Corrections files is:

`My Documents\complexCorrections\`

Remote Command	`:MMEMory:LOAD:CCORrection <integer>, <filename>`
Example	Recall the **Complex Correction** data from the file `mycor.s2p` in the current directory to the 2nd Complex Correction table, and turns on **Complex Correction 2**: `:MMEM:LOAD:CCOR 2, "mycor.s2p"`
Dependencies	Not supported by all measurements. The tab does not appear at all if no measurements in the Mode

	support it Errors are reported if the file is empty or missing, or if the file type does not match, or if there is a mismatch between the file type and the destination data type
Couplings	When a complex correction file is loaded from mass storage, it is automatically turned ON and **Apply Corrections** is set ON. This allows you to see its effect, thus confirming the load
Annotation	After recall is complete, an advisory is displayed in the message bar confirming which file was recalled

7.2.8.1 Select Complex Correction

Selects the register into which the recalled **Complex Correction** will be placed, for example, **Complex Correction 1**.

Preset	Not part of **Preset**, but is reset to Correction 1 by **Restore Input/Output Defaults** Survives a shutdown

7.2.9 Recall VDI CCD Correction

Imports VDI CCD External Mixer Correction files in the PC-readable CSV (.csv) format.

The default path for VDI CCD External Mixer Correction files is the instrument's `My Documents` folder.

Remote Command	`:MMEMory:LOAD:VCORrection <filename>`
Example	`:MMEM:LOAD:VCOR "vdi_ccd_corr.csv"`
Dependencies	Requires the EXW (External Mixing Wide Bandwidth) and Ampcor (Amplitude Correction) licenses VDI CCD Corrections are not supported by all measurements. The tab does not appear at all if no measurements in the Mode support it Errors are reported if the file is empty or missing, or if the file type does not match, or if there is a mismatch between the file type and the destination data type If the file is empty, message –250 is reported. If the file does not exist, message –256 is reported. If there is a mismatch between the file and the destination data type, message –250 is reported
Couplings	When a VDI CCD correction file is loaded into memory, if the correction matches the current external mixer setup and "Select VDI CCD Correction" on page 2612 is NONE, the selected VDI CCD Correction is set to the serial number of the matching correction data
Annotation	After recall is complete, an advisory is displayed in the message bar confirming which file was recalled

7.2.10 SCPI Recorder

Contains controls to let you recall SCPI recordings.

7.2.10.1 Recall From File

Recalls a previously saved SCPI Recorder file. For details of the SCPI Recording feature, see "SCPI Recorder" on page 2436.

After the file contents have been read, each of the SCPI commands or queries present in the file at the time of recall is applied to the system. If the file is from another instrument, or from a different model, some commands may cause unexpected data changes as each is applied. If any commands result in errors, the command(s) and the corresponding error(s) are displayed after playback is completed.

Recalling a SCPI recording plays the contents of the file immediately after recall. You can view the content of the file in the SCPI recorder dialog. If there are any entries in the SCPI recorder, you are prompted either to keep the previously recorded data, or let it be discarded.

If you choose to discard the data, all existing recording entries are cleared, and the SCPI recorder is populated with the recalled data.

If you choose to keep the existing recorded data, the recalled file content is appended to the existing recording.

NOTE Some SCPI entries in the recorded file may require the presence of other files, if a command in the recorded file specifies the recall of other files.

7.2.11 Mask

The **Mask** data type is used to import and export Mask files for measurements that use masks, such as cellular comms and real-time measurements.

7.2.12 Sequence

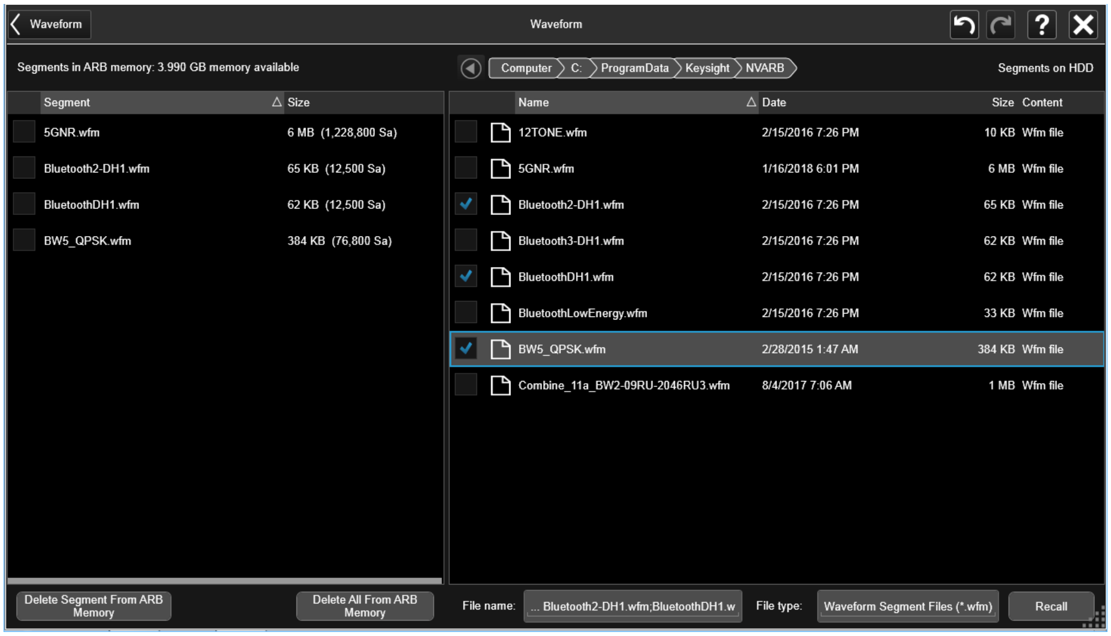
These need to be brought over for the EXT and/or Sequence Analyzer when they are available in the Touch UI

7.2.13 Waveform

Recalls waveforms into the ARB memory of an Internal Source.

When you select the **Waveform** tab in the **Save** dialog,, a hint appears saying “Recalls files from Mass Storage to the ARB and lets you manage the ARB memory at the same time.”

You then tap **Recall From File** to display the **Recall Waveform** dialog.



Segments in ARB memory: 3.990 GB memory available

	Segment	Size
☐	5GNR.wfm	6 MB (1,228,800 Sa)
☐	Bluetooth2-DH1.wfm	65 KB (12,500 Sa)
☐	BluetoothDH1.wfm	62 KB (12,500 Sa)
☐	BW5_QPSK.wfm	384 KB (76,800 Sa)

	Name	Date	Size	Content
☐	12TONE.wfm	2/15/2016 7:26 PM	10 KB	Wfm file
☐	5GNR.wfm	1/16/2018 6:01 PM	6 MB	Wfm file
☑	Bluetooth2-DH1.wfm	2/15/2016 7:26 PM	65 KB	Wfm file
☐	Bluetooth3-DH1.wfm	2/15/2016 7:26 PM	62 KB	Wfm file
☑	BluetoothDH1.wfm	2/15/2016 7:26 PM	62 KB	Wfm file
☐	BluetoothLowEnergy.wfm	2/15/2016 7:26 PM	33 KB	Wfm file
☑	BW5_QPSK.wfm	2/28/2015 1:47 AM	384 KB	Wfm file
☐	Combine_11a_BW2-09RU-2046RU3.wfm	8/4/2017 7:06 AM	1 MB	Wfm file

File name: ... Bluetooth2-DH1.wfm;BluetoothDH1.w

File type: Waveform Segment Files (*.wfm)

The left-hand window shows the files in ARB memory. The right-hand window shows the files on the hard drive.

You can select one or more waveform files in the right-hand window. Each file selected has a blue check box in it. To select a single file, tap that file’s row. To select additional files, tap the check box in the row of the desired additional files.

When you have selected the file or files that you wish to recall, tap Recall. The file(s) are recalled into the ARB memory, and appear in the left-hand window.

If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or `:MMEMory:COPY`.

You can select one or more segments in the left-hand window and tap “Delete Segments from ARB memory” to delete the selected files. You can also delete all files in ARB memory by tapping “Delete All from ARB memory.

You can change the current directory by tapping on an element of the file path at the top of the screen and selecting the desired subdirectory in the list that appears, and repeating until you have the path you want. The current directory is used for manually loading waveform segments into ARB memory for playback, and as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence or a list sequence.

File Type allows you to specify a waveform format. The available file types are listed below:

]

Type	Extension	Notes
Waveform Files	`.wfm`	Keysight Signal Studio files
Binary Files	`.bin`	Interleaved IQ data files. They could be single precision or double precision customer created files. One-byte marker may be added
CSV Files	`.csv`	Comma-separated value file. Could be generated by Excel
Text Files	`.txt`	
Matlab Files	`.mat`	Should be Level 4, Level 5 or HDF5 MAT-files (only Level 5 Matlab file is supported in X24)

Waveforms in `.csv`, `.txt` and `.mat` formats are supported by models with a built-in source, such as VXT and EXM.

`.txt` files are formatted according to the following rules:

1. Text files only contain the IQ information. Data in the right column represents the amplitude of real(I) points, Data in the left column represents the amplitude of imaginary(Q) points
2. The amount of data should be multiple of two (IQ pairs)
3. The data range is from -1e10 to1e10, the data type should be `int`, `float` or `double`. 16 digits or fewer for every data is acceptable
4. The values are separated by comma or tab. Extra commas or tabs are ignored
5. Use **Enter** to separate IQ pairs

Example for text file data:

```
0.46425922,-0.57411048
0.47184454,-0.58435995
0.48107329,-0.59014958
0.49223323,-0.58998679
0.50419607,-0.58558843
0.51679158,-0.57721768
0.53005322,-0.56481976
0.54373011,-0.54879346
0.55759183,-0.52950807
0.57141409,-0.50732489
```

Rules 1-3 above also apply to `.csv` data.

Dependencies	Only appears if your hardware includes an Internal Source, such as in VXT

7.2.13.1 Load Segment to ARB Memory

Loads a single segment to ARB memory. Same as pressing the **Recall** button with a single waveform selected.

Remote Command	`:SOURce:RADio:ARB:LOAD <string>` `<string>` - specifies the path name of the file to load from the HDD into ARB memory. May be a <full path + filename>, or <“NVWFM” MSUS + colon + filename>

Example	`:SOUR:RAD:ARB:LOAD "D:\NVARB\testwaveform.bin"`
	or
	`:SOUR:RAD:ARB:LOAD "NVWFM:testwaveform.bin"`

Notes	Because loading the file involves a delay of unpredictable length, this command should be followed by `*OPC?`, which holds off subsequent commands until the loading operating is complete If you specify a file over SCPI, but the file is not at the specified location, an error is generatedIf you try to load a waveform file but the file contains less than 500 IQ samples, an error is generated VXT models M9410A/11A/15A/16A and M9410E/11E/15E/16E: If you try to load a waveform file but the file contains less than 1024 IQ samples, an error is generated If you try to load a Signal Studio waveform `*.wfm` that contains invalid waveform header, an error is generated If the ARB is `ON` when you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform is replayed after the ARB operation is finished ARB can be loaded into ARB memory even if required licenses are not present on the instrument. In this case, a GUI-only warning message -800, “Operation complete; Loaded <filename> successfully, but no license <required licenses> installed”. You can install required licenses according to <required licenses> string to license it, or multi-pack license it When in Sequence Analyzer Mode, and **Include Source** is **Yes**, an attempt to load a file to ARB memory is rejected with an error. When **Include Source** is **No**, and if there is insufficient free ARB memory to load the selected waveform, an error is generated

Remote Command	`:SOURce:RADio:ARB:LOAD:ALL <string>` `<string>` specifies the directory on the HDD to load the files into ARB memory from
Example	`:SOUR:RAD:ARB:LOAD:ALL "D:\nvarb"`
Notes	Loads all the segment files within the currently selected directory into ARB memory. If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, either use Windows File Explorer, or `:MEMory:COPY` If you specify a directory over SCPI, but the directory does not exist, an error is generated If the ARB is `ON`, and you then load or delete a file to ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform is replayed after the ARB operation is finished When in Sequence Analyzer Mode, and **Include Source** is **Yes**, an attempt to load all files from a

directory to ARB memory is rejected with an error. When **Include Source** is **No** and there is insufficient free ARB memory to load all the waveforms, when the ARB memory is full, the copy ceases, and an error is generated

7.2.13.2 Delete Segment From ARB Mem

Deletes a segment from ARB memory.

Remote Command	`:SOURce:RADio:ARB:DELete <string>` `<string>` specifies the waveform to be deleted from the ARB playback memory
Example	`:SOUR:RAD:ARB:DEL "testwaveform.bin"`
Notes	It is possible to delete files from within the ARB memory when the ARB is ON. However, if you attempt to delete the file that is currently playing an error is generated It is possible to delete a file from within the ARB memory when the sequencer state is ON, and the file is not being used by the List Sequencer. If you attempt to delete a file that is being used by the list sequencer, an error is generated When the Sequencer state of the List Sequencer is **On**, even if ARB state is **On**, the selected waveform will not be played. In this case, if the selected waveform is not used in List Sequence, it can be deleted, and the ARB state is turned **Off** If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform is replayed after the ARB operation is finished When in Sequence Analyzer Mode, and **Include Source** is **Yes**, an attempt to delete a file from ARB memory is rejected with an error . When **Include Source** is **No**, and you specify a file that does not exist within ARB memory, an error is generated

7.2.13.3 Delete All From ARB Memory

Removes all segments from ARB memory.

Remote Command	`:SOURce:RADio:ARB:DELete:ALL`
Example	`:SOUR:RAD:ARB:DELete:ALL`
Notes	If you attempt to delete all files from ARB memory when there are waveform files used in the Sequencer function of the List Sequencer and the Sequencer state is ON, all files except the files currently being used in list sequencer are deleted, and an error is generated If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform is replayed after the ARB operation is finished When in Sequence Analyzer Mode, and **Include Source** is **Yes**, an attempt to delete all files from ARB memory is rejected with an error. When **Include Source** is **No**, and you attempt to delete all files from ARB memory when the ARB is currently playing a file, all files except the one playing are deleted and an error is generated

7.2.13.4 Set Default Directory (Remote Command Only)

Sets the default directory for loading ARB files from SCPI.

Remote Command	`:SOURce:RADio:ARB:DEFault:DIRectory <string>` `:SOURce:RADio:ARB:DEFault:DIRectory?`
Example	`:SOUR:RAD:ARB:DEF:DIR "D:\ArbFiles"` `:SOUR:RAD:ARB:DEF:DIR?`
Notes	Sets the default directory to be used as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence, and as a search location for selecting waveforms using SCPI
State Saved	Persistent, survives a power cycle and a preset but not saved in the instrument state

7.2.13.5 Query ARB Memory File List (Remote Query Only)

Queries the instrument for the list of waveform segments in the ARB memory.

NOTE

Returns a string for waveform segment names in ARB memory. If you want a string list of waveform segments in the ARB memory, use "Query ARB Memory Full File List (Remote Query Only)" on page 2791.

Remote Command	`:SOURce:RADio:ARB:CATalog?`
Example	`:SOUR:RAD:ARB:CATalog?`
Notes	The return data is in the following format:

`<integer>`	memory used
`<integer>`	memory free
`<string>…`	comma separated list of waveform segments within ARB memory

7.2.13.6 Query ARB Memory Full File List (Remote Query Only)

Queries the instrument for the string list of waveform segments in the ARB memory. Returns a string list for waveform segment names in the ARB memory.

Remote Command	`:SOURce:RADio:ARB:FCATalog?`
Example	`:SOUR:RAD:ARB:FCATalog?`
Notes	The return data is in the following format:

`<integer>`	Memory used
`<integer>`	Memory free
`<integer>`	File count in ARB memory
`<string>,<string>, … <string>`	Comma-separated string list of waveform segments within ARB memory

Example:

`:SOUR:RAD:ARB:FCAT?`

EXT returns: 27499,2069653,3,"c2k.wfm","gsm.wfm","wcdma.wfm"

7.2.14 Power Sensor Cal Factor

Selects a file to which to export the Power Sensor Cal factor data.

Cal Factor files are XML files, and contain the cal factor data and header data that gives information on the power sensor.

The default path for **Cal Factor** Files is:

`My Documents\<mode name>\data\PSCF`

where `<mode name>` is the parameter used to select the mode with `:INST:SEL` (for example, `MRECEIVE` for Measuring Receiver Mode). Hence, a **Cal Factor** file from any measurement in the Measuring Receiver mode would be stored in:

`My Documents\MRECEIVE\data\PSCF`

Cal Factor files have the extension `.xml`. The default filename is `<Sensor Model>_<Sensor Serial Number>_0000.xml`, where the 4-digit number is the lowest number that does not conflict with any filename in the current directory. If the sensor model or serial number is blank, the default filename is `PSCF_0000.xml`.

Remote Command	`:MMEMory:STORe:PSCFactor <file_name>`
Example	`:MMEM:STOR:PSCF "myPSCF.xml"`
Notes	If the save is initiated via SCPI, and the file already exists, the file will be overwritten Using the `C:` drive is strongly discouraged, since it runs the risk of being overwritten during an instrument software upgrade Both single and double quotes are supported for any filename parameter over SCPI
Dependencies	Only appears if you have the proper option installed in your instrument

7.2.15 Recording

Lets you specify a data type (for example, I/Q data) and select a file from which to import the data, then the data can be routed to the measurement engine as though it were being acquired from the Input.

The recording and playback of signal data files is a multi-step process that involves controls in several menus.

The menus that are involved in Record/Playback are:

- **Save**, "Recording" on page 2850 (under the **Save** hardkey or the **Save** icon in the **File** panel)
- **Recall**, **Recording** (this menu)
- **Sweep**, **Recording** tab
- **Sweep**, **Playback** tab
- **Input/Output**, "Data Source" on page 2649 tab

NOTE

A complete tutorial for the Record/Playback functionality, including how to load and save Recording files, can be found under the **Data Source** tab in **Input/Output**.

Dependencies	Only available in the following modes and measurements: – VMA (Digital Demod and Custom OFDM) – 5G NR (Modulation Analysis) – LTE (Modulation Analysis) – WLAN (Modulation Analysis, MIMO Modulation Analysis, Spectral Flatness) – Analog Demod – Bluetooth (Transmit Analysis) – IoT & SRComms (LoRa CSS Demod)

7.2.15.1 Data Type

Allows you to recall IQ data from the measurement using a specified file type (`CSV, SDF, TXT, BIN, BINX, BINF, ORB`). See "Recording" on page 2792 for details about the available file types.

Note that `BIN`, `BINX` and `BINF` files do not include sampling rate information inside the file, so after recalling one of these file types you will need to set the Sample Rate in **Sweep**, **Playback**., based on your note of the Sample Rate that was displayed on the **Sweep**, **Recording** menu panel when you saved the file.

Example	`:MMEM:LOAD:RECording "C:\TEMP\MyIQData.csv"`

7.2.15.2 Channel

Select data channels to recall. This is only supported in the 5GNR EVM, VMA Digital Demod, VMA Custom OFDM and WLAN MIMO EVM measurements.

The `<meas>` param in the command must be replaced with the node of the active measurement:

- `EVM` for 5GNR EVM
- `EVMM` for WLAN MIMO EVM
- `DDEM` for VMA Digital Demod
- `OFDM` for VMA Custom OFDM

Remote Command	`:MMEMory:LOAD:<meas>:RECording:CHANnel ALL | CH1 | CH2 | CH3 | CH4 | CH5 | CH6 | CH7 | CH8` `:MMEMory:LOAD:<meas>:RECording:CHANnel?`
Example	`:MMEM:LOAD:EVM:REC:CHAN CH1` `:MMEM:LOAD:EVM:REC:CHAN?`
Preset	`ALL`
State Saved	No
Range	`ALL|CH1|CH2|CH3|CH4|CH5|CH6|CH7|CH8`

7.2.15.3 Reset

Clears all recalled data channels.

This is only supported by 5GNR EVM, VMA Digital Demod, VMA Custom OFDM and WLAN MIMO EVM measurements.

The `<meas>` param in the command must be replaced with the node of the active measurement:

- `EVM` for 5GNR EVM
- `EVMM` for WLAN MIMO EVM
- `DDEM for VMA Digital Demod`
- `OFDM for VMA Custom OFDM`

Remote Command	`:MMEMory:LOAD:<meas>:RECording:RESet`
Example	`:MMEM:LOAD:EVM:REC:RES`

7.2.15.4 Recalled data channel table (Display only)

Displays recalled IQ data file for each channel in a table.

7.2.16 Component Carrier Setup

Lets you export LTE-A Component Carrier Setup files for the specified Component Carrier. Selecting this control displays a menu that enables you to specify which Component Carrier Setup configuration will be exported. Select the desired configuration, then press **Save As...** to display a file dialog that you can use to select the directory and define the exported file name. This function is valid for Modulation Analysis and Conformance EVM measurements only.

EVM Setup File Format

Extension:	`evms`

LTE EVM Setup parameters of specific component carriers in LTE-Advanced FDD/TDD EVM or CEVM measurement are stored in special binary files with a `.evms` extension. The specific set of component carrier configuration parameters that are exported depend on the Component Carrier specified.

The default path is for the files is:

`My Documents\LTEATDD | LTEAFDD\data\evmsetup`

(`My Documents` is an alias to a directory, the exact name of which depends on which user is logged in)

The default file name of the EVM Setup File is assembled from the DuplexMode, Bandwidth, and ComponentCarrierNumber values, plus a file number. For example, the file name could be:

`FDD_BW5MHz_CC0_0000.evms`

Remote Command	`:MMEMory:STORe:EVMSetup CC0 | … | CC4,<string>`
Example	`:MMEM:STORe:EVMSetup CC0,"FDD_BW5MHz_CC0_0000.evms"`
Notes	`CC*` is used to export LTE-A setup file for the specified component carrier Available only for the Modulation Analysis and Conformance EVM measurements

For X-Series Measurement Application LTE Component Carrier EVM Setup Files (`*.evms`), the settings below are saved/recalled:

Mode Level	– Direction (Meas Setup – Radio) – Bandwidth (Meas Setup – Component Carriers – Configure Comp Carriers – Configure CCs)

	– UL/DL Allocation (Meas Setup – Component Carriers – Configure Comp Carriers – Configure CCs) – Dw/GP Up Length(Meas Setup – Component Carriers – Configure Comp Carriers – Configure CCs)
Meas Level	– Meas Time parameters(Meas Setup – Meas Time) – Cell ID Mode (Meas Setup – Sync/Format) – Cell ID Value (Meas Setup – Sync/Format) – RS PRS (Meas Setup – Sync/Format) – CP Length (Meas Setup – Sync/Format – Advanced Sync Setup) – PDSCH IQ ref (Meas Setup – Sync/Format – Advanced Demod Setup) – Basic Control Channel settings (Meas Setup – Channel Profile – Control and User Channels – Edit Basic Control Channels) – PDCCH Control channel Settings (Meas Setup – Channel Profile – Control and User Channels – Edit PDCCH Control channels) – Channel Include Settings (Meas Setup – Channel Profile – Control and User Channels) – PDSCH Configuration Settings (Meas Setup – Channel Profile – Edit User Mapping)

7.2.17 Loss Comp

Sets the import file type to Loss Compensation Before DUT Table or to Loss Compensation After DUT Table.

Mode	NFIGURE
Parameter Name	Recall Loss Comp
Control Path	Recall
Parameter Type	ImmediateAction
SCPI Command	`:MMEMory:LOAD:LOSS BEFore | AFTer,<file_name>`
SCPI Example	`:MMEM:LOAD:LOSS BEF,"C:\LossBefore.csv"` `:MMEM:LOAD:LOSS AFT,"C:\LossAfter.csv"`
Notes	Three file formats are supported: – Loss Compensation file (`.csv`) – Legacy Loss Compensation file (`.loss`) – S parameter file (`.s2p`)
Soft Key Label	Loss Comp

Backwards Compatibility SCPI	:MMEMory:LOAD:LOSS
Initial S/W Revision	A.04.00

For `.s2p` files, only the `S21` component is used for the loss compensation.

The CSV format contains the following data:

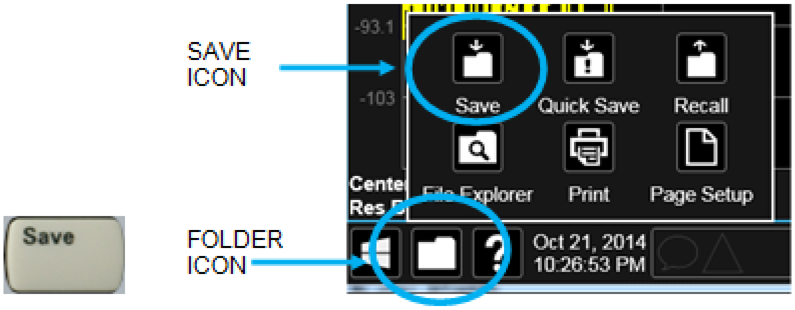
```
File Type
Application Name: Measurement Name
Version and Model Number
Loss Comp Data
```

Below is an example of a valid CSV Loss Compensation file:

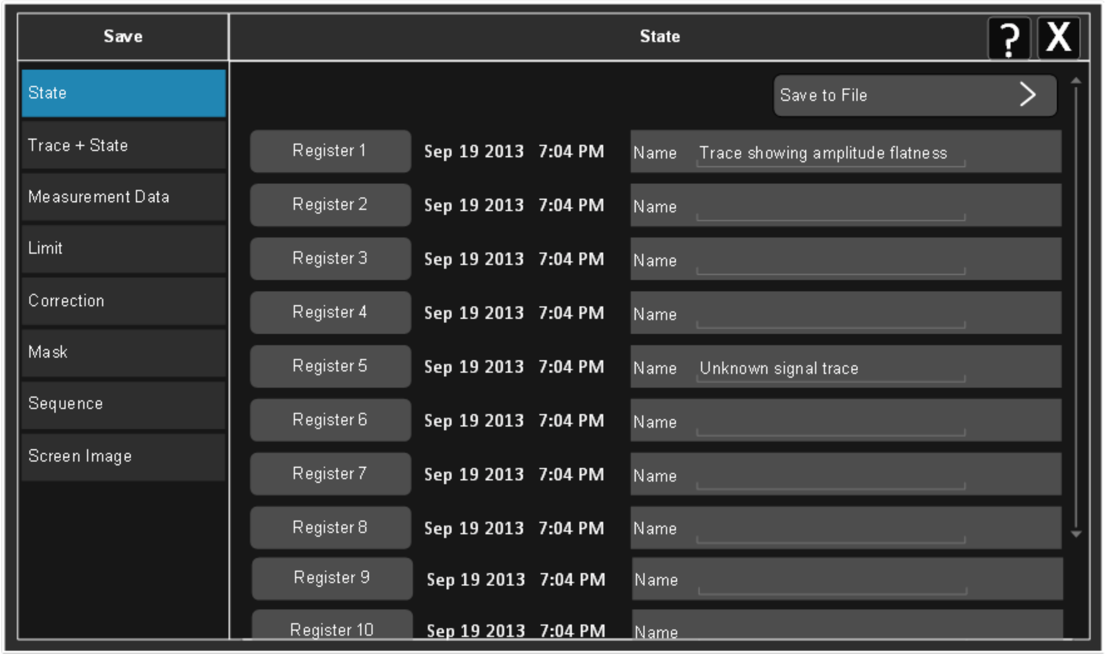
```
[Filetype LossCompensation]
[NF:NFIG]
Ver. ***, Model ***
10, 1.0000
20, 2.0000
30, 3.0000
40, 4.0000
50, 5.0000
60, 6.0000
```

7.3 Save

The **Save** dialog lets you save states, traces, screen images and other items from the instrument to files on the instrument's internal storage, to removable devices, and to directories on the network. You access the dialog by pressing the **Save** hardkey, or by pressing the folder icon at the bottom of the display and then pressing the **Save** icon.



The dialog has tabs running down the left side, which you use to specify what you want to save.



Register 1	Sep 19 2013 7:04 PM	Name	Trace showing amplitude flatness
Register 2	Sep 19 2013 7:04 PM	Name	
Register 3	Sep 19 2013 7:04 PM	Name	
Register 4	Sep 19 2013 7:04 PM	Name	
Register 5	Sep 19 2013 7:04 PM	Name	Unknown signal trace
Register 6	Sep 19 2013 7:04 PM	Name	
Register 7	Sep 19 2013 7:04 PM	Name	
Register 8	Sep 19 2013 7:04 PM	Name	
Register 9	Sep 19 2013 7:04 PM	Name	
Register 10	Sep 19 2013 7:04 PM	Name	

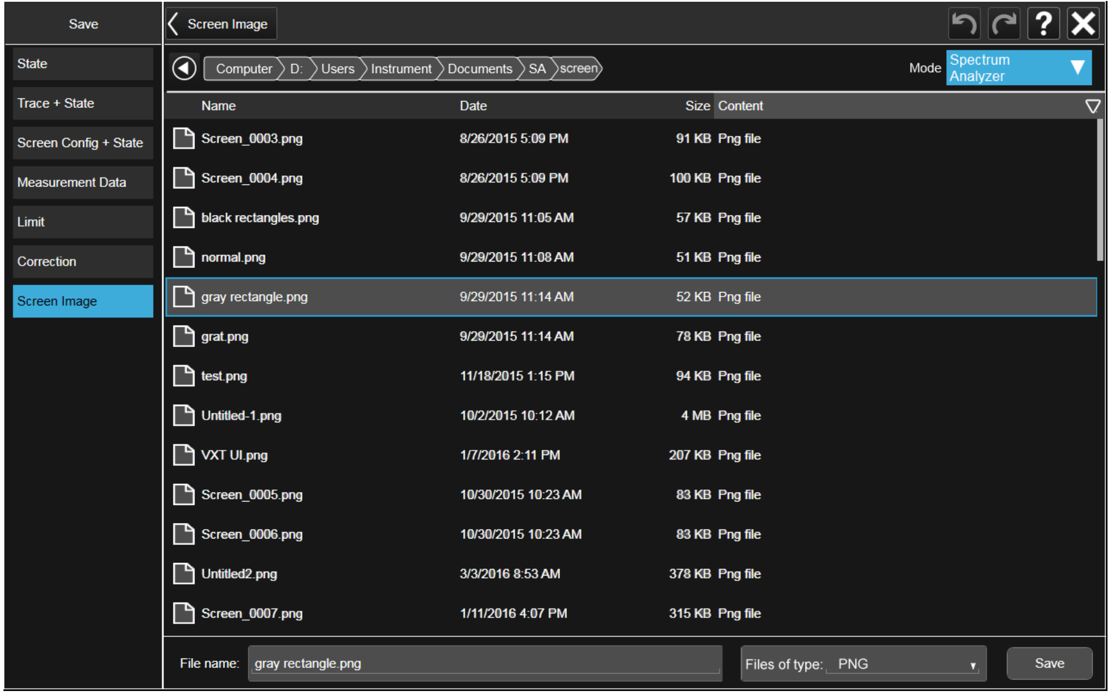
You choose the save item and then complete the save by choosing a register or file location to which to save the item.

Notes	No remote command for this key specifically, but `:MMEM:STORe` is available for specific file types Example: `:MMEM:STOR:STATe <filename>`

7.3.1 Save to File / Save As

For every Save type, a control appears labeled **Save to File** or **Save As**. **Save to File** appears for save types that also include registers (like State and Trace+State), and **Save As** appears for all other save types.

When you press **Save to File** or **Save As**, a dialog slides in from the right that allows you to see what files are already saved in the current directory.



Mode: Spectrum Analyzer

Name	Date	Size	Content
Screen_0003.png	8/26/2015 5:09 PM	91 KB	Png file
Screen_0004.png	8/26/2015 5:09 PM	100 KB	Png file
black rectangles.png	9/29/2015 11:05 AM	57 KB	Png file
normal.png	9/29/2015 11:08 AM	51 KB	Png file
gray rectangle.png	9/29/2015 11:14 AM	52 KB	Png file
grat.png	9/29/2015 11:14 AM	78 KB	Png file
test.png	11/18/2015 1:15 PM	94 KB	Png file
Untitled-1.png	10/2/2015 10:12 AM	4 MB	Png file
VXT UI.png	1/7/2016 2:11 PM	207 KB	Png file
Screen_0005.png	10/30/2015 10:23 AM	83 KB	Png file
Screen_0006.png	10/30/2015 10:23 AM	83 KB	Png file
Untitled2.png	3/3/2016 8:53 AM	378 KB	Png file
Screen_0007.png	1/11/2016 4:07 PM	315 KB	Png file

File name: gray rectangle.png

Files of type: PNG

The default directory is the internal directory for the current Mode and save type, on the `D:` drive. You may also change to another Mode’s state directory by pressing the dropdown in the upper right corner labeled **Mode**. Once you have chosen a directory, the files in that directory whose extension matches the current data type (for example, `.state` or `.trace`) are displayed in the right-hand window of the dialog. You can sort this list by name, date, file size or extension by tapping the Name, Date, Size, or Content header at the top of each column. A second tap toggles the sort order between Ascending and Descending.

Also displayed is a path depiction showing the path to the current directory. In the example above, the path is `D:\Users\Instrument\Documents\SA\screen`. Tapping any element of this path lets you select an alternate route. Tapping the **Computer** arrow lets you select a different drive.

◀ Tapping the “Back” arrow navigates to the previously selected directory.

Note: Using the C: drive is strongly discouraged, due to the risk of data being overwritten during an instrument software upgrade.

If you plug in a removable drive (for example, a thumb drive), the browser immediately navigates to the root of that drive. Furthermore, if you had a thumb drive in and you were in a directory on the thumb, and then you exit the browser, when you come back in you are still in the same directory on that removable drive. If you remove the thumb drive, you return to the directory you had been in before the thumb drive was plugged in.

Note that for each data type there is a “current” directory, and it is the last directory used by either Save or Recall for that Mode. For example, if in SA Mode you save a Corrections file to a particular directory, then when you go to recall a Correction in SA Mode, you should be pointing at that directory. Or if in EMC Mode you recall a Limit from a particular directory then when in EMC Mode you go to save a Limit, it should be pointing at that same directory. There is one “current” directory for each data type for each Mode (not one for Save and one for Recall).

The Filename field, just below the Path field, shows the filename that will be used. The **File Name** field is initially loaded with an automatically generated filename specific to the appropriate Save Type. The automatically generated filename is guaranteed not to conflict with any filename currently in the directory. You may edit the filename by tapping it, which brings up the onscreen alpha keyboard. Press the “Done” button on this keyboard when you are done editing.

Select a file to overwrite, type in a file name, or use the name suggested by the instrument (guaranteed not to conflict with any file in the current directory), and press Save. If the file specified already exists, a dialog will appear that allows you to replace the existing file by selecting **OK,** or you can Cancel the request.

After a successful save, a message "File <filename> saved" or "State Register <register number> saved" is displayed in an info box for a few seconds.

See "Quick Save" on page 2770 for details of the automatic file naming algorithm.

7.3.2 State

Selects a register or file for saving the state.

State files contain essentially all the information required to return the instrument to the measurement and settings that were in effect at the time of the save. **State** files are in a proprietary binary form (for speed) and cannot be read or edited by PC software, but can be loaded back into the instrument to restore the state.

State files contain all the settings of the **Input/Output** system as well, even though **Input/Output** variables are outside of the Mode's state and unaffected by **Mode Preset,** because these are needed to restore the complete setup.

Persistent System settings (for example, GPIB address) are affected by neither **Mode Preset** nor **Restore Mode Defaults,** nor are they included in a saved **State** file.

For rapid saving, the **State** menu lists 16 registers to which you can save states. Pressing a **Register** button initiates the save. You can also select a file to which to save by pressing **Save to File**.

The default path for all **State** files is:

`My Documents\<mode name>\state`

where `<mode name>` is the parameter used to select the Mode with `:INST:SEL` (for example, `SA` for Spectrum Analyzer Mode).

State files have the extension `.state`. The default filename is `State_0000.state`, where the 4-digit number is the lowest number that does not conflict with any filename in the current directory.

NOTE

In products that run multiple simultaneous instances of the X-Series Application, all instances share the same registers and file directories, so take care not to overwrite files and/or registers from one instance that were saved by another instance.

Remote Command	`:MMEMory:STORe:STATe <filename>`
Example	Store the current instrument state data in the file `MyStateFile.state` in the default directory: `:MMEM:STOR:STATe "MyStateFile.state"`
Notes	Both single and double quotes are supported for any filename parameter over remote After saving to a register, that register's menu key is updated with the date the time, unless a custom label has been entered for that key After saving to a register, you remain in the **Save State** menu, so that you can see the **Register** key update. After saving to a file, the instrument automatically returns to the previous menu and any **Save As** dialog goes away

Backwards Compatibility SCPI	`:MMEMory:STORe:STATe 1,<filename>` The "1" is simply ignored. The command is sequential

7.3.2.1 Register 1 thru Register 16

Selecting any one of these register buttons causes the state of the currently active Mode to be saved to the specified **Register**. The registers are provided for rapid saving and recalling, since you do not need to specify a filename or navigate to a file. Each of the register menu keys annotates whether it is empty or at what date and time it was last modified. In addition, you can edit any of the register names to enter custom names for any register.

Although these 16 registers are the only registers available from the front panel, there are 128 state registers available in the instrument. Registers 17-128 are only available from the SCPI interface, using the `*SAV` command.

There is one set of 128 state registers in the instrument, not one set for each Mode. When a state is saved, the Mode it was saved from is saved with it; then when it is recalled, the instrument switches to that Mode.

NOTE **In products that run multiple simultaneous instances of the X-Series Application, all instances share the same registers and file directories, so take care not to overwrite files and/or registers from one instance that were saved by another instance.**

The date displayed follows the format specified in the **Date Format** setting under the **Control Panel**. The time shows hours and minutes.

After the save completes, the corresponding register menu key annotation is updated with the date and time and the message `Register <register number> saved` is displayed.

Example	`*SAV 1`
Range	1-16 from front panel, 1-128 from SCPI

7.3.2.2 Edit Register Names

You may enter a custom name for any of the **Registers**, to help you remember what you are using that state to save. To do this, press the **Name** field for the register you want to rename, which displays the onscreen alpha keyboard. Press **Done** on this keyboard when you are done editing.

The maximum number of characters for a register name is 30. If you delete all the characters in the custom name, it restores the default (time and date).

The register names are stored within the state files, but they are not part of the instrument state; that is, once you have edited a register name, loading a new state will not change that register name. Another consequence of this is that the names will be persistent through a power cycle. Also, if a named state file is transferred to another instrument, it will bring its custom name along with it.

If you try to edit the name of an empty register, the instrument first saves the state to have a file to put the name in. If you load a named state file into an instrument with older firmware, it ignores the metadata.

The `*SAV` and `*RCL` commands are not affected by the custom register names, nor are the `:MMEM` commands.

Remote Command	`:MMEMory:REGister:STATe:LABel <reg number>,"label"` `:MMEMory:REGister:STATe:LABel? <reg number>`
Example	`:MMEM:REG:STAT:LAB 1,"my label"`
Notes	`<reg number>` is an integer from 1 to 16. If the SCPI specifies an invalid register number an error message is generated, -222, "Data out of range; Invalid register label number" `“label”` is a string from 0 to 30 characters in length. If a label exceeds 30 characters, an error message is generated, -150,“String data error; Label clipped to 30 characters” `“label”` of zero length erases the custom label and restores the default (time and date) label. For example, `:MMEM:REG:STAT:LAB 1,””`
Preset	The names are unaffected by **Preset** or power cycle but are set to the default label (time and date) on **Restore System Defaults>Misc**

7.3.3 Trace+State

Selects a register or file for saving selected traces and the state.

Trace+State files contain essentially all the information required to return the instrument to the measurement and settings that were in effect at the time of the save, as well as the data for one or all traces. **Trace+State** files are in a proprietary binary form (for speed) and cannot be read or edited by PC software, but can be loaded back into the instrument to restore the state and trace(s).

Trace+State files contain all the settings of the **Input/Output** system as well, even though **Input/Output** variables are outside of the Mode’s state and unaffected by **Mode Preset**, because these are needed to restore the complete setup.

Persistent **System** settings (for example, GPIB address) are affected by neither **Mode Preset** nor **Restore Mode Defaults,** nor are they included in a saved **Trace+State** file.

For rapid saving, the **Trace+State** menu lists 16 registers to which you can save trace+state files. The **Trace+State** registers are separate registers from the **State** registers. Pressing a **Register** button initiates the save. You can also select a file to which to save by pressing **Save to File**.

The default path for all **Trace+State** files is the same as that for **State** files:

`My Documents\<mode name>\state`

where `<mode name>` is the parameter used to select the mode with `:INST:SEL` (for example, `BASIC` for IQ Analyzer Mode).

NOTE **In products that run multiple simultaneous instances of the X-Series Application, all instances share the same registers and file directories, so take care not to overwrite files and/or registers from one instance that were saved by another instance.**

Trace+State files have the extension `.trace`. The default filename is `State_0000.trace`, where the 4-digit number is the lowest number that does not conflict with any filename in the current directory.

The **Trace+State** selection only appears for measurements that support trace saves. It is blanked for modes that do not support trace saves. Saving **Trace** is identical to saving **State** except a `.trace` extension is used on the file instead of `.state`, and internal flags are set in the file indicating which trace was saved.

See "More Information" on page 2805.

Remote Command	`:MMEMory:STORe:TRACe TRACE1 | TRACE2 | TRACE3 | TRACE4 | TRACE5 | TRACE6 | ALL,<filename>` `:MMEMory:STORe:TRACe:REGister TRACE1 | TRACE2 | TRACE3 | TRACE4 | TRACE5 | TRACE6 | ALL,<integer>`

Example	Save the file `myState.trace` on the default path and flags it as a “single trace” file with Trace 1 as the single trace (even though all of the traces are in fact stored):
	`:MMEM:STOR:TRAC TRACE1,"myState.trace"`
	Save the file `myState.trace` on the default path and flags it as an “all traces” file:
	`:MMEM:STOR:TRAC ALL,"myState.trace"`
	Store trace 1 data in trace register 2:
	`:MMEM:STOR:TRAC:REG TRACE1,2`

Notes	This command actually performs a **Save State**, which in the Swept SA measurement includes the trace data. However, it flags it (in the file) as a “save trace” file of the specified trace (or all traces)
	Some Modes and measurements do not have available all 6 traces. The Phase Noise Mode command, for example, is:
	`:MMEMory:STORe:TRACe TRACE1 | TRACE2 | TRACE3 | ALL,<filename>`
	Some modes and measurements have more than 6 traces available. The Realtime SA Mode command, for example, is:
	`:MMEMory:STORe:TRACe TRACE1 | TRACE2 | TRACE3 | TRACE4 | TRACE5 | TRACE6 | TRACE7 | TRACE8 | TRACE9 | TRACE10 | TRACE11 | TRACE12 | ALL,<filename>`
	The range for the register parameter is 1-5
	When you initiate a save, if the file already exists, a dialog will appear that allows you to replace the existing file by selecting **OK** or you can cancel the request. If you select **OK**, the file will be overwritten. Using the `C:` drive is strongly discouraged, since it runs the risk of being overwritten during an instrument software upgrade

Both single and double quotes are supported for any filename parameter over remote

After saving to a register, that register's menu key is updated with the date and time of the save

After saving to a register, you remain in the **Save Trace** menu, so that you can see the **Register** key update. After saving to a file, the instrument automatically returns to the previous menu and any **Save As** dialog goes away

More Information

In measurements that support saving **Traces**, for example, Swept SA, the **Trace** data is saved along with the **State** in the **State** file. When recalling the **State**, the **Trace** data is recalled as well. Traces are recalled exactly as they were stored, including the writing mode and update and display modes. If a Trace was updating and visible when the **State** was saved, it returns updating and visible, and its data will be rewritten right away. When you use **State** to save and recall traces, any trace whose data must be preserved should be placed in **View** or **Blank** mode before saving.

The following table describes the **Trace Save** and **Recall** possibilities:

You want to recall state and one trace's data, leaving other traces unaffected	**Save Trace+State** from 1 trace. Make sure that no other traces are updating (they should all be in View or Blank mode) when the save is performed	On recall, specify the trace you want to load the one trace's data into. This trace loads in view. All other traces' data will be unaffected, although their trace mode will be as it was when the state save was performed
You want to recall all traces	**Save Trace+State** from `ALL` traces	On recall, all traces come back in **View** (or **Blank** if they were in **Blank** or **Background** when saved)
You want all traces to load exactly as they were when saved	**Save State**	On recall, all traces' mode and data will be exactly as they were when saved. Any traces that were updating will have their data immediately overwritten

7.3.3.1 Save From Trace

Selects the trace to be saved. The default is the currently selected trace, selected in this this or any other menu with Trace selection. If you have chosen All then it remains chosen until you specifically change it to a single trace, regardless of the trace selected in the **Trace** menu.

When you select a trace, it makes that trace the current trace, so it displays on top of all of the other traces.

7.3.3.2 Register 1 thru Register 16

Selecting any one of these register buttons causes the specified trace(s) and the state of the currently active mode to be saved to the specified register. The registers are provided for rapid saving and recalling, since you do not need to specify a filename or navigate to a file. Each of the register menu keys annotates whether it is empty or at what date and time it was last modified. In addition, you can edit any of the register names to enter custom names for any register.

There is one set of 16 trace+state registers in the instrument, not one set for each Mode. When trace+state is saved, the Mode it was saved from is saved with it; then when it is recalled, the instrument switches to that Mode.

NOTE **In products that run multiple simultaneous instances of the X-Series Application, all instances share the same registers and file directories, so take care not to overwrite files and/or registers from one instance that were saved by another instance.**

The date displayed follows the format specified in the **Date Format** setting in **Control Panel**. The time shows hours and minutes.

After the save completes, the corresponding register menu key annotation is updated with the date and time and the message `Register <register number> saved` is displayed.

Example	`*SAV 1`
Range	1-16

7.3.3.3 Edit Register Names

You may enter a custom name for any of the registers, to help you remember what you are using that trace+state to save. To do this, press the **Name** field for the register you want to rename, which displays the onscreen alpha keyboard. Press the **Done** button on this keyboard when you are done editing.

The maximum number of characters for a register name is 30. If you delete all the characters in the custom name, it restores the default (time and date).

The register names are stored within the trace+state files, but they are not part of the instrument state; that is, once you have edited a register name, loading a new state does not change that register name. Another consequence of this is that the names are persistent through a power cycle. Also, if a named state file is transferred to another instrument, it brings its custom name along with it.

If you try to edit the name of an empty register, the instrument will first save the trace+state to have a file to put the name in. If you load a named state file into an instrument with older firmware, it ignores the metadata.

Remote Command	`:MMEMory:REGister:TRACe:LABel <reg number>,"label"` `:MMEMory:REGister:TRACe:LABel? <reg number>`
Example	`:MMEM:REG:TRAC:LAB 1,"my label"`
Notes	`<reg number>` is an integer from 1 to 16. If the SCPI specifies an invalid register number an error message is generated, -222, "Data out of range; Invalid register label number" `“label”` is a string from 0 to 30 characters in length. If a label exceeds 30 characters, an error message is generated, -150, “String data error; Label clipped to 30 characters” `“label”` of zero length erases the custom label and restores the default (time and date) label, e.g., `:MMEM:REG:TRAC:LAB 1,””`
Preset	The names are unaffected by **Preset** or power cycle but are set to the default label (time and date) on **Restore System Defaults** > **Misc**

7.3.4 Screen Config + State

Saves the complete configuration of all your screens to a file. You choose a file to which to export the data.

Remote Command	`:MMEMory:STORe:SCONfig <filename>`
Example	Store the current screen configuration in the file `myScreenConfig.screen` in the default directory: `:MMEM:STOR:SCON "myScreenConfig.screen"`

7.3.5 Measurement Data

Specifies a data type (for example, trace data) and choose a file to which to export the data.

Measurement Data files are comma-separated Value (CSV) files, and contain the requested data in a form that can be imported into Excel or similar spreadsheets, as well as header data that gives information on relevant instrument settings at the time the save occurred.

The main application of **Measurement Data** files is for importing data to a PC for analysis, but in some cases **Measurement Data** files can also be imported back into the instrument to recreate the data object that existed at the time of the save. For example, most **Trace** data files can be imported back into the instrument.

The default path for **Measurement Data** Files is:

```
My Documents\<mode name>\data
```

with the subdirectory reflecting the data type and where `<mode name>` is the parameter used to select the Mode with `:INST:SEL` (for example, `SA` for Spectrum Analyzer Mode) and `<measurement name>` is the parameter used to select the measurement with `:CONF` (for example, `SAN` for Swept SA). For example, a Peak Table file from Swept SA in SA Mode would be stored in:

`My Documents\SA\data\SAN\results`

Measurement Data files have extension `.csv`. The default filename is `Prefix_0000.csv`, where the 4-digit number is the lowest number that does not conflict with any filename in the current directory, and "Prefix" is dependent on the data type:

Type	Default Prefix
Traces	`Trace_`
Measurement Result	`MeasR_`
Capture Buffer	`CapBuf_`

For example, the default filename for a trace data file in an empty directory would be `Trace_0000.csv`

7.3.5.1 Save From

Selects the specific item to be saved, for example, if you are exporting trace data you may specify Trace 1, Trace 2, etc.

The default for traces is the currently selected trace, selected in this this or any other menu with Trace selection. If you have chosen **All** then it remains chosen until you specifically change it to a single trace, regardless of the trace selected in the Trace menu. The **All** selection saves all six traces in one CSV file with the x-axis data in the first column and the individual trace data in succeeding columns. The header data and x-axis data in this file reflect the current settings of the measurement. Note that any traces that are in **View** or **Blank** may have different x-axis data than the current measurement settings; but this different x-axis data is *not* output to the file.

Preset	Not part of **Preset**, but is reset to by **Restore Mode Defaults** Survives shutdown

7.3.5.2 Data Type

You choose the data type to save by using the radio button selection box. Below are the specifications for Data files for each measurement.

Notes	There is no SCPI command for **Data Type**, as the type is implied in the SCPI command for each item
Dependencies	The **Data Type** menu for any given measurement only contains data types that are supported by that measurement

Meas Results

Meas Results files contain information that describes the current state of the instrument, as detailed in Meas Result File Contents below.

This command is only available in certain measurements, such as:

- PowerSuite: Channel Power, OBW, ACP, Spectrum Emissions Mask, Spurious Emissions, Power Stat CCDF, Transmit Power, Monitor Spectrum, IQ Waveform
- IQ Analyzer: Complex Spectrum
- Phase Noise: Log Plot and Spot Frequency
- WCDMA: Code Domain, Mod Accuracy, Power Control, and QPSK EVM
- Analog Demod: AM, FM, PM and FM Stereo
- Noise Figure
- Pulse

In general, the data in the Meas Results file matches the data which is returned to a measurement data query (`:FETCh?`, `:READ?`, `:MEASure?)`. These queries and the results they return are documented for each measurement, and can be found in the Help for that measurement (or in the manual for that measurement) in the section titled **Remote Command Results**.

In the `MeasResults` file, you will see a column for each value of `n`. Each column contains the value for the corresponding value of n in the **Remote Command Results** table.

For example, Complex Spectrum allows values of `n` up to 17, and the `MeasResults` file for Complex Spectrum has 17 columns. So, the data returned when you send `:FETCh:SPECtrum1?` matches the data in the column labeled `MeasResult1` of the Meas Results file. See the example below:

Response to FETCh:SPECtrum1?

```
2.125444221E+01,6.487077992E+07,2.050000000E+02,6.004725051E+07,3.921568627E+04,2.370000000E+02,0.000000000E+00,1.000000000E-07,1.000000000E+00,2.360000000E-05,2.500000000E+01
```

MeasResult1 column from Meas Results file

MeasResult1

In addition, examples of the Meas Results files are given for each data type in the Help below.

Remote Command	`:MMEMory:STORe:RESults <string>`
Example	`:MMEM:STOR:RES "MeasR_0000.csv"`
Notes	If the save is initiated via SCPI and the file already exists, the file will be overwritten The SCPI command exports measurement results to the file specified as the parameter in the current path. The default path is: `My Documents\<current mode>\data\<measurement name>\results` where `<mode name>` is the parameter used to select the mode with the `:INST:SEL` command (for example, `SA` for Spectrum Analyzer Mode) and `<measurement name>` is the parameter used to select the measurement with the `:CONF`: command (for example, `SAN` for the Swept SA measurement) Using the `C:` drive is strongly discouraged, since it runs the risk of being overwritten during an instrument software upgrade The SCPI parameter is a quoted string, which specifies the filename. Both single and double quotes are supported for any filename parameter over SCPI
Annotation	After the save is complete, an advisory is displayed in the window so that the user can confirm which file was saved
Status Bits/OPC dependencies	Sequential – waits for the previous measurement to complete

CHP Meas Results File Contents

The file contains measurement results, preceded by the following header information.

- File ID string, which is `MeasResult`
- Mode ID: Measurement ID, for example, `SA:CHP`

- Firmware rev and model number
- Option string
- Auto Sweep Time Rules
- Average Mode
- Average Number
- Average State
- Center Frequency
- Detector
- Electrical Atten
- Electrical Atten State
- IFGain
- IFGainAuto
- Impedance
- Integ BW
- Internal Preamp
- Internal Preamp Band
- Mechanical Atten
- MechanicalAttenStepEnum
- PSD Unit
- Resolution Band Width
- Resolution Bandwidth Shape
- RRC Filter Alpha
- RRC Filter BW
- RRC Filter State
- Span

- Sweep Points
- Sweep Time
- Sweep Time Auto
- TriggerSource
- Video Bandwidth
- Y Axis Unit

Following the header entries above is a line containing only `MeasResult1` and `MeasResult2`, which flags the start of the measurement results. Each subsequent line consists of two comma-separated values, the `MeasResult1` value and the `MeasResult2` value.

- `MeasResult1` contains the same results as `:MEAS|:READ|:FETCh:CHPower1`
- `MeasResult2` contains the same results as `:MEAS|:READ|:FETCh:CHPower2`

The exported file is in CSV format. When imported into Microsoft Excel or a similar spreadsheet application, a typical file appears as follows:

`MeasResult`	
`SA:CHP`	
A.10.53	N9030A
526 ALV ATP B1X B1Y B25 B40 BBA CR3 CRP DCF DDA DP2 DRD EA3 EDP EMC EP1 ERC ESC ESP EXM FSA LFE LNP MAT MPB NFE NUL P26 PFR PNC RTL RTS S40 SB1 SEC SM1 TVT YAS YAV	1

OBW Meas Results File Contents

The first lines in the OBW Meas results file consist of header information, as follows.

- File ID string, which is “MeasResult”
- Measurement ID following Mode ID, which is “SA:OBW” for example.
- Firmware rev and model number
- Option string
- Auto Sweep Time Rules
- Average Mode
- Average Number
- Average State
- Center Frequency
- Detector
- Electrical Atten

- Electrical Atten State
- IFGain
- IFGainAuto
- Internal Preamp
- Internal Preamp Band
- Limit
- Limit State
- Max Hold
- Mechanical Atten
- MechanicalAttenStepEnum
- OBW Percent Pwr
- Resolution Band Width
- Resolution Bandwidth Shape
- Span
- Sweep Points
- Sweep Time
- Sweep Time Auto
- TriggerSource
- Video Bandwidth
- x DB

The data above is followed in the file by a line containing “MeasResult1” and “MeasResult2”. This line forms a header for each set of measurement results, which appear in subsequent lines. Each line of Measurement Results consists of two comma-separated values, for MeasResult1 and MeasResult2 respectively.

The MeasResult1 set in the file corresponds to the data returned by `:MEAS|:READ|:FETCh:OBWidth`1, and the MeasResult2 set corresponds to the data returned by `:MEAS|:READ|:FETCh:OBWidth2`.

The exported file is in CSV format, with a `.csv` extension.

Meas Results File Example

When imported into Microsoft Excel, a typical Meas Results CSV file appears as shown in the example below.

MeasResult

ACP Meas Results File Contents

An ACP Meas Results File contains measurement results with the following header information, columns A and B unless otherwise stated:

- File ID string, which is `MeasResult`
- Mode ID: Measurement ID, for example, `SA:ACP`
- Firmware rev and model number
- Option string
- Auto Scaling
- Auto Sweep Time Rules
- Automatic Trigger Time
- Automatic Trigger Time State
- Average Mode
- Average Number
- Average State
- Bar Graph
- Carrier Coupling (columns A thru S, TRUE or FALSE)
- Carrier Pwr Present (columns A thru S, Yes or No)
- Carrier Spacing (columns A thru S, in Hz)
- Carriers
- Center Frequency
- Center Frequency Step
- Center Frequency Step State
- Detector Auto
- Detector Selection
- Electrical Atten
- Electrical Atten State
- External Array Trigger Delay (columns A thru E)
- External Array Trigger Delay State (columns A thru E)

- External Array Trigger Level (columns A thru E)
- External Array Trigger Slope (columns A thru E)
- Filter Alpha (columns A thru S)
- Filter BW
- Filter Type
- Internal Preamp
- Internal Preamp Band
- Limit Test
- Line Trigger Delay
- Line Trigger Delay State
- Line Trigger Slope
- Meas Method
- Meas Type
- Measurement Noise Bandwidth (columns A thru S, in Hz)
- Mechanical Atten
- MechanicalAttenStepEnum
- Method (columns A thru S)
- Noise Correction
- Offset Abs Limit (columns A thru G)
- Offset Fail (columns A thru G)
- Offset Filter Alpha
- Offset Filter BW (columns A thru G)
- Offset Filter Type (columns A thru G)
- Offset Freq (columns A thru G)
- Offset Freq State (columns A thru G)

- Offset Integ BW (columns A thru G)
- Offset Method
- Offset Rel Lim (Car) (columns A thru G)
- Offset Rel Lim (PSD) (columns A thru G)
- Offset Res BW (columns A thru G)
- Offset Res BW Mode (columns A thru G)

- Sweep Time Auto
- Trigger Holdoff
- Trigger Holdoff State
- Trigger Source
- Video BW
- Video BW Auto

The file contains this header, followed by a line containing `MeasResult1`, `MeasResult2`, and `MeasResult3`. This line flags the start of the measurement results. Each line of Measurement Results consists of three comma separated values, for `MeasResult1`, `MeasResult2`, and `MeasResult3`.

`MeasResult1` contains the same result as `MEAS|READ|FETCh:ACPower1`; `MeasResult2`, `MEAS|READ|FETCh:ACPower2`; `MeasResult3`, `MEAS|READ|FETCh:ACPower3`.

The exported file is in CSV format, with a `.csv` extension. When imported into Microsoft Excel or a similar spreadsheet application, the *first three* columns of a typical file appear as follows:

Column A	Column B	Additional columns (if any)
`MeasResult`		
`SA:ACP`		

Column A	Column B	Additional columns (if any)

SPUR Meas Results File Contents

A Spurious Emissions Meas Results File contains measurement results with the following header information, columns A and B unless otherwise stated:

- File ID string, which is “MeasResult”
- Measurement ID following Mode ID, which is “SA:SPUR” for example.
- Firmware rev and model number
- Option string
- Abs Start Limit (columns A thru K)
- Abs Stop Limit (columns A thru K)
- Abs Stop Limit Mode (columns A thru K, TRUE or FALSE)
- Auto Scaling
- Auto Sweep Time Rules
- Automatic Trigger Time
- Automatic Trigger Time State
- Average Mode
- Average Number
- Average State
- Detector 1 (columns A thru K)
- Detector 2 (columns A thru K)
- Electrical Atten
- Electrical Atten State
- External Array Trigger Delay (columns A thru E)
- External Array Trigger Delay State (columns A thru E)
- External Array Trigger Level (columns A thru E)
- External Array Trigger Slope (columns A thru E)
- Filter Type (columns A thru K)
- IF Gain Auto (columns A thru K, TRUE or FALSE)
- IF Gain State (columns A thru K, TRUE or FALSE)

- Internal Preamp
- Internal Preamp Band
- Line Trigger Delay
- Line Trigger Delay State
- Line Trigger Slope
- Meas Type
- Mechanical Atten
- MechanicalAttenStepEnum
- Peak Excursn (columns A thru K)
- Periodic Timer Period
- Periodic Timer Sync Source
- Periodic Timer Trigger Delay
- Periodic Timer Trigger Delay State
- Pk Threshold (columns A thru K)
- Points (columns A thru K)

- Trigger Holdoff State
- TriggerSource
- Video BW (columns A thru K)
- Video BW Mode (columns A thru K)

The data above is followed in the file by a line containing “MeasResult1” to “MeasResult42”. This line forms a header for each set of measurement results, which appear in subsequent lines. Each line of Measurement Results consists of 42 comma-separated values, from the MeasResult1 value to the MeasResult42 value.

The MeasResult1 set in the file corresponds to the data returned by MEAS/READ/FETCh:SPURious1; the MeasResult2 set corresponds to the data returned by MEAS/READ/FETCh:SPURious2, and so on.

The exported file is in CSV format, with a .csv extension.

Meas Results File Example

When imported into Excel, a typical Meas Results file will show the header information above followed by the data. A sample of what the data rows look like appears below. Only the columns for Meas Result 1 through 6 are shown, due to lack of space:

MeasResult 1	MeasResult 2	MeasResult 3	MeasResult 4	MeasResult 5	MeasResult 6
19	-80.27209	-80.87862	-90.94577	-89.27086	-76.77856
1	-78.28497	-80.93996	-91.00485	-90.56063	-76.33968

SEM Meas Results File Contents

SEM Meas Results Files are CSV files, with a `.csv` extension. Each file contains sets of measurement results, preceded by a header section.

The header section items are as follows. They span columns A and B, unless otherwise stated:

- File ID string, which is `MeasResult`
- Mode ID: Measurement ID, for example, `SA:SEM`
- Firmware rev and model number
- Option string
- Automatic Trigger Time
- Automatic Trigger Time State

The header section is followed by a line containing items `MeasResult1` to `MeasResult20`, which flags the start of the measurement results. Each line of Measurement Results consists of 20 comma-separated values, from `MeasResult1` through `MeasResult20`.

`MeasResult1` contains the same results as `MEAS/READ/FETCh:SEMask1`; `MeasResult2`, `MEAS/READ/FETCh:SEMask2`; `MeasResult3`, `MEAS/READ/FETCh:SEMask3`; and so on.

When imported into Microsoft Excel or a similar spreadsheet application, a typical Meas Results file displays the header information above, followed by the data section. A sample of the data rows appears below. Only the columns for `MeasResult1` through `MeasResult6` are shown, due to lack of space:

MeasResult1	MeasResult2	MeasResult3	MeasResult4	MeasResult5	MeasResult6	...etc.
-999	0	-13	999	15.59025	-999	
15.59025359	0	-13	999	-999	-999	

CCDF Meas Results File Contents

CCDF Meas Results Files are in CSV format, with a `.csv` extension. Each file contains sets of measurement results, preceded by a header section. The header section contains the following lines:

- File ID string, which is `MeasResult`
- Mode ID: Measurement ID, for example `SA:PST`
- Firmware rev and model number
- Option string
- Automatic Trigger Time
- Automatic Trigger Time State
- CcdfCurrentCounts
- Center Frequency

- RFBurst Trigger Delay State
- RFBurst Trigger Level Abs
- RFBurst Trigger Level Rel
- RFBurst Trigger Level Type

- RFBurst Trigger Slope
- Scale/Div
- Trigger Holdoff
- Trigger Holdoff State
- TriggerSource

The header section is followed by a line containing items `MeasResult1` through `MeasResult4`. This line forms a header for each set of measurement results, which are listed in subsequent lines. Each line of Measurement Results consists of 4 comma-separated values, from the `MeasResult1` value to the `MeasResult4` value.

The `MeasResult1` set in the file corresponds to the data returned by `MEAS|READ|FETCh:PSTatistic1`; the `MeasResult2` set corresponds to the data returned by `MEAS|READ|FETCh:PSTatistic2`, and so on.

Meas Results File Example

When imported into Microsoft Excel or a similar spreadsheet application, a typical Meas Results file appears as shown in the example below.

IQ Waveform Meas Results File Contents

An IQ Waveform Meas Results File contains measurement results with the following header information:

- File ID string, which is “MeasResult”
- Measurement ID following Mode ID, for example, `WCDMA:WAV`
- Firmware rev and model number
- Option string
- Center Frequency
- Input Port
- Info BW
- Capture Time

The data above is followed in the file by a line containing `MeasResult0`, `MeasResult1`, and `MeasResult2`. This line forms a header for each set of measurement results, which appear in subsequent lines. Each line of Measurement Results consists of 3 comma-separated values.

The `MeasResult0` set in the file corresponds to the data returned by `MEAS|READ|FETCh:WAVeform0`; the `MeasResult1` set corresponds to the data returned by `:MEAS|READ|FETCh WAVeform1`, and the `MeasResult2` set corresponds to the data returned by `:MEAS|READ|FETCh WAVeform2`. See "Remote Command Results" on page 2149 for details.

The exported file is in CSV format, with a `.csv` extension.

Meas Results File Example

When imported into Microsoft Excel or a similar spreadsheet application, a typical Meas Results CSV file appears as shown in the example below.

MeasResult

`MeasResult0`	`MeasResult1`	`MeasResult2`
3.24E-06	8.00E-06	-99.79862
7.28E-08	-96.51288923	-95.87017
2.43E-06	-96.51288923	-101.4529
-4.47E-06	251	-94.5003
7.65E-07	7.796300857	-95.8662
-2.56E-06	-88.71658837	-97.78934
4.79E-07	-125.5631137	-101.0861
5.94E-06		-97.72218
4.71E-06		-96.72934
1.93E-06		-100.7464
4.04E-07		-99.8119

(rows continue until all data is displayed)

7.3.6 Limit

Lets you choose a file to which to export the **Limit** data.

Limit files are CSV files, and contain the limit data in a form that can be imported into Excel or similar spreadsheets, as well as header data that gives information on the limit.

The default path for most Limits files is:

`My Documents\<mode name>\data\limits`

where `<mode name>` is the parameter used to select the mode with the `:INST:SEL` command (for example, `SA` for Spectrum Analyzer). Hence a **Limit** file from any measurement in Spectrum Analyzer Mode would be stored in:

`My Documents\SA\data\limits`

The default path for **Limit** files from the Log Plot measurement in Phase Noise Mode is:

`My Documents\PNOISE\data\LPL\limits`

The default filename is `Limit_0000.csv`, where the 4-digit number is the lowest number that does not conflict with any filename in the current directory.

For backwards compatibility, older limit files with the extension `.lim` can be read into the instrument, but you can only save limits as `.csv` files.

Remote Command	`:MMEMory:STORe:LIMit LLINE1 | … | LLINE6,<filename>`
Example	Save the 2nd Limit Line to the file `myLimitLine2.csv` in the current path: `:MMEM:STOR:LIM LLINE2,"myLimitLine2.csv"`
Notes	If the save is initiated via SCPI, and the file already exists, the file will be overwritten Using the `C:` drive is strongly discouraged, since it runs the risk of being overwritten during an instrument software upgrade Both single and double quotes are supported for any filename parameter over SCPI
Dependencies	Only appears if you have the proper option installed in your instrument In the Log Plot measurement in Phase Noise Mode, there are only three Limit Lines, so the valid parameters are `LLINE1 | LLINE2 | LLINE3`
Preset	1 Not part of **Preset**, but reset by **Restore Mode Defaults** Survives power cycles
State Saved	The selected Limit number is saved in instrument state
Status Bits/OPC dependencies	Sequential - waits for previous measurement to complete

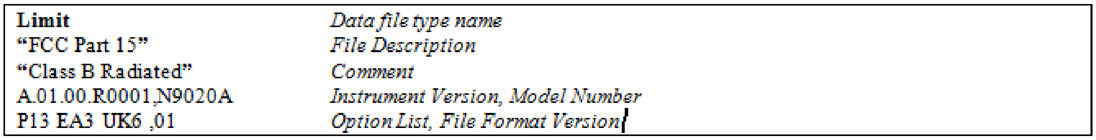
Limit File Contents

Limits may be exported into a data file with a `.csv` extension. They may be imported from that data file; they may also be imported from a legacy limit file with a `.lim` extension. The `.lim` files meet the specification for limit files contained in the EMI measurement guide, HP E7415A.

.csv file format

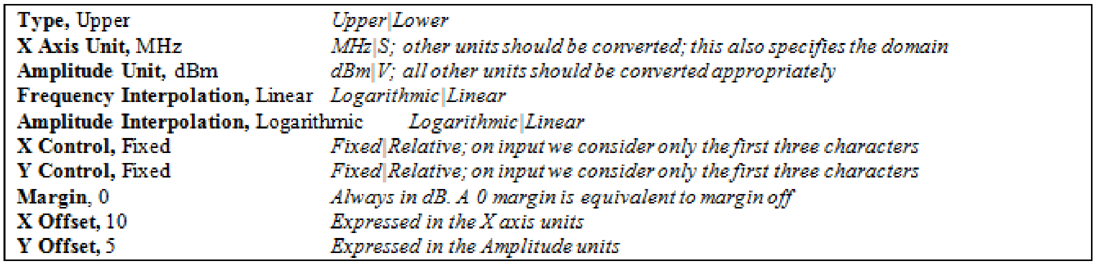
Except for information in quotes, limit line files are not case sensitive. Information in bold is required verbatim; other text is example text, and italic text is commentary which should not be present in the file.

The first five lines are system-required header lines, and must be in the correct order:



Limit	*Data file type name*
"FCC Part 15"	*File Description*
"Class B Radiated"	*Comment*
A.01.00.R0001,N9020A	*Instrument Version, Model Number*
P13 EA3 UK6 ,01	*Option List, File Format Version*

The next few lines describe the parameters; on export they will be in the order shown, on import they can be in any order. If some parameters are missing, they will revert to the default.



Type, Upper	*Upper|Lower*
X Axis Unit, MHz	*MHz|S; other units should be converted; this also specifies the domain*
Amplitude Unit, dBm	*dBm|V; all other units should be converted appropriately*
Frequency Interpolation, Linear	*Logarithmic|Linear*
Amplitude Interpolation, Logarithmic	*Logarithmic|Linear*
X Control, Fixed	*Fixed|Relative; on input we consider only the first three characters*
Y Control, Fixed	*Fixed|Relative; on input we consider only the first three characters*
Margin, 0	*Always in dB. A 0 margin is equivalent to margin off*
X Offset, 10	*Expressed in the X axis units*
Y Offset, 5	*Expressed in the Amplitude units*

The Amplitude Unit line in the limits file may contain a transducer (formerly “antenna”) factor unit, for example:

Amplitude Unit=dBuV/m

Transducer factor units are dBuV/m, dBuA/m, dBpT, and dBG. In this case, the unit is treated exactly as though it were dBuV, meaning that all of the limits are interpreted to have units of dBuV. The box does NOT change Y Axis Units when such a limit is loaded in.

The X-Axis unit also specifies the domain (time or frequency). It is not possible to have both time-domain lines and frequency-domain lines at the same time; if a time-domain line is imported while the other lines are in the frequency domain (or vice-versa), all limit lines will be deleted prior to import.

If the sign of the margin is inappropriate for the limit type (for example a positive margin for an upper limit), the sign of the margin will be changed internally so that it is appropriate.

The remaining lines describe the data. Each line in the file represents an X-Y pair. The X values should be monotonically non-decreasing, although adjacent lines in the file can have the same X value as an aid to building a stair-stepped limit line. To specify a region over which there is no limit, use +1000 dBm for upper limits or –1000 dBm for lower limits.

The data region begins with the keyword `DATA`:

```
DATA
200.000000,–10.00
300.000000,–10.00
300.000000,–20.00
500.000000,–20.00
```

.lim file format

This is a legacy format which allows files saved from older instruments to be loaded into the X-Series. *Design of files in this format is not recommended.*

Except for name and description text (which is taken verbatim), limit line files are not case sensitive.

The file may optionally start with a description block, consisting of the single line `[DESCRIPTION]` followed by arbitrary text. If there is no Limit Line Name header, the description text will be used as the limit line description in the GUI. If there is a Limit Line Name header, the Limit Line Name will be used instead.

Arbitrary text

The header block begins with the single line `[HEADER]`, followed by some or all of the following fields, each with `<parameter name>=<parameter value>`. Excess white space around the "=" is ignored. If a field is not present or the data is invalid, the value is not changed when the limit line is loaded. Ordering of the fields is unimportant.

Limit Line Name="FCC Part 15;Class B Radiated"	
Type=Upper	Upper|Lower
Frequency Unit=MHz	For time domain limits, this should say "Time Unit"
Amplitude Unit=dBm	
Frequency Interpolation=Lin	Log|Lin; on input we consider only the first three characters
Amplitude Interpolation=Log	Log|Lin; on input we consider only the first three characters
Mode=Fixed	Fixed|Relative
Margin=0	Always in dB. A 0 margin is equivalent to margin off
Domain=Frequency	Frequency|Time
Delimiter=TAB	

The data block begins with the line `[DATA]`, and consists of any number of segments.

The Data lines represent segments – X1, Y1, X2, Y2. If the list of segments includes a gap in the middle on input, the space inside the gap will be set to ensure the limit does not fail: for upper limits maxtracevalue, for lower limits mintracevalue. If two segments overlap on input, the stricter of the two segments is used – for upper limits the lower segment, for lower limits the upper segment.

Thus, the following segments indicate into a –5 dB limit from 10 MHz to 20 MHz and 30 MHz to 40MHz:

10	–5	20	–5
30	–5	40	–5

If this was an upper limit, this would be translated into the following set of limit points:

10	–5
20	–5
20	maxtracevalue

30			maxtracevalue		
30			-5		
40			-5		
	30	-29.5	88	-29.5	
	88	-33	216	-33	note that we are stair-stepping the line
	230	-35.6	960	-35.6	The gap between 216 MHz and 230 MHz will never fail
	960	-43.5	5000	-43.5	

7.3.6.1 Select Limit

Selects the specific Limit to be saved, for example, Limit 1.

Preset	Not part of **Preset**, but reset to `LLINE1` by **Restore Mode Defaults** Survives shutdown

7.3.7 Correction

Exports Amplitude Corrections files in the PC-readable `.csv` format.

Amplitude Correction files contain the correction data in a form that can be imported into Excel or similar spreadsheets, as well as header data that gives information on the correction.

The default filename is `Ampcor_0000.csv`, where the 4-digit number is the lowest number that does not conflict with any filename in the current directory.

The default path for Corrections files is:

`My Documents\amplitudeCorrections`

For backwards compatibility, older limit files with the extensions `.amp`, `.cbl`, `.ant` and `.oth` can be read into the instrument, but you can only save corrections as `.csv` files.

See "Correction Data File" on page 2842

Remote Command	`:MMEMory:STORe:CORRection 1 | … | 8, <filename>`
Example	Save Correction 2 to the file `myAmpcor.csv` on the current path: `:MMEM:STOR:CORR 2 "myAmpcor.csv"`
Notes	If the save is initiated via SCPI, and the file already exists, the file will be overwritten Using the `C:` drive is strongly discouraged, since it runs the risk of being overwritten during an instrument software upgrade Both single and double quotes are supported for any filename parameter over SCPI

Dependencies	Corrections are not supported by all measurements. If in a Mode in which some measurements support it, this key is grayed-out in measurements that do not. Does not appear at all if no measurements in the Mode support it Does not appear unless you have the proper option installed in your instrument
Annotation	After save is complete, an advisory is displayed in the message bar confirming which file was saved
Backwards Compatibility SCPI	`:MMEMory:STORe:CORRection ANTenna | CABLe | OTHer | USER, <filename>` For backwards compatibility, `ANTenna` maps to 1, `CABle` maps to 2, `OTHer` maps to 3 and `USER` maps to 4

Correction Data File

A Correction Data File contains a copy of one of the instrument correction tables. Corrections provide a way to adjust the trace display for predetermined gain curves (such as for cable loss).

Corrections files are text files in `.csv` (Comma-Separated Values) form, to make them importable into Excel or other spreadsheet programs. The format for Corrections files is as follows:

Line #	Type of field	Example	Notes
1	File type, must be "Amplitude Correction"	Amplitude Correction	May not be omitted
2	File Description (in quotes)	"Correction Factors for 11966E"	60 characters max; may be empty but may not be omitted. If exceeds 60 characters, error -233 Too much data reported
3	Comment (in quotes)	"Class B Radiated"	60 characters max; may be empty but may not be omitted. . If exceeds 60 characters, error -233 Too much data reported
4	Instrument Version, Model #	A.02.06,N9020A	May be empty but may not be omitted
5	Option List, File Format Version	K03 LFE EXM ,01	May be empty but may not be omitted
6	Freq Unit to be used for all frequency values in the file	Frequency Unit, MHz	assumed to be Hz if omitted
7	Transducer Unit	Antenna Unit, None	If omitted leaves the Transducer unit unchanged. The amplitude unit in the Transducer Unit field is a conversion factor that is used to adjust the Y Axis Units of the current mode, if the mode supports Transducer Units. For more details

Line #	Type of field	Example	Notes
			on transducer correction data, refer to the Input/Output, Corrections key description. Allowable values: dBuV/m, dBuA/m, dBG, dBpT, None
8	Freq Interpolation	Frequency Interpolation, Linear	if omitted leaves the Freq Interpolation unchanged. Allowable values: Linear, Logarithmic
9	Bias value in mA	Bias,0.00	If omitted leaves the Bias value unchanged (added as of A.08.50)
10	Bias State	Bias State,On	If omitted leaves the Bias State unchanged. Allowable values: On, Off (added as of A.08.50)
11	Overlap, two values, Freq1 and Freq2, separated by commas	Overlap,33500,40000	Uses Freq Unit from line 6. Thus, in this example Freq1=33.5 GHz, Freq2= 40.0 GHz (see note below). If omitted leaves the overlap unchanged (added as of A.08.50)
12	DATA marker	DATA	Corrections data begins in the next line

Lines 2 through 5 can be empty but must appear in the file. Lines 6 through 11 are optional, the lines can be left out of the file altogether.

The Overlap row and the two Bias rows apply only to external mixing. Both are read-only, they are never written by the instrument. The only way to insert or modify these rows is to edit the file with a text editor or a spreadsheet editor. These rows are intended for use by mixer manufacturers, as they allow the manufacturer to insert data about how the mixer corrections were generated and how they should be applied. The Bias rows allow you to specify whether to turn Bias on or off when the Correction is turned on and to specify a Bias value (turning off the Correction does not change the Bias, but turning it back on again sets it to the value specified in the file). The Overlap row allows you to specify an overlap region in which two different corrections may be applied. It is expected that in the corrections data itself, there will be TWO corrections values exactly at Max Freq, otherwise Overlap is ignored. The way the overlap is processed is as follows: if at any given time the current instrument Start Freq is greater than Freq 1 and lower than Freq 2, and the current Stop Freq is greater than Freq 2, extend the first correction point at or above Freq 2 down to Freq 1, rather than using the correction data between Freq1 and Freq2.

Only one Transducer units can be on at any given time. Note that this means that if a correction file with a Transducer Unit is loaded into a particular Correction, all other Corrections are set to that same Transducer unit. Note that the legacy term “Antenna Unit” is still used in the correction file, even though the more modern term “Transducer Unit” is used in the user interface.

Similarly, the Bias rows can only be used in Correction register 1, because there can only be one setting for Bias at any given time. If a Correction file with a Bias or Bias State row is loaded into any Correction register but 1, an error is generated: Mass storage error; Can only load Bias Settings into Correction 1

The data follows the DATA row, as comma separated X, Y pairs; one pair per line.

For example, suppose you have an Antenna to correct for on an N9020A version A.02.06 and the correction data is:

- 0 dB at 200 MHz
- 17 dB at 210 MHz
- 14.8 dB at 225 MHz

Then the file will look like:

- Amplitude Correction
- "Correction Factors for 11966E"
- "Class B Radiated"
- A.02.06,N9020A
- P13 EA3 UK6,01
- Frequency Unit, MHz
- Antenna Unit, dBuV/m
- Frequency Interpolation, Linear
- DATA
- 200.000000,0.00
- 210.000000,17.00
- 225.000000,14.80

The choices for the 1 of N fields in the metadata are as follows:

- Frequency Unit: Hz, kHz, MHz, GHz
- Antenna Unit: dBuV/m, dBuA/m, dBG, dBpT, None
- Frequency Interpolation: Logarithmic, Linear

7.3.7.1 Select Correction

Selects the specific Correction to be saved, for example, Correction 1.

Preset	Not part of a **Preset**, but reset to **Correction 1** by **Restore Input/Output Defaults** Survives a shutdown

7.3.8 SCPI Recorder

Contains controls to allow you to save SCPI recordings.

7.3.8.1 Save To File

Saves SCPI recording content to a file. For details of the SCPI Recording feature, see "SCPI Recorder" on page 2436.

There are two possible file formats:

Type	Extension	Details
Text	`.txt`	Default
Python Script	`.py`	Generates a Python script that can be executed in Python environment.. For details, see "Saving a SCPI Recording as a Python Script" on page 2845

The saved file content does not include the label of each recorded entry, just the SCPI mnemonics. The file is saved to the following folder:

`<user_name>:\Documents\Keysight\Infrastructure\ScpiRecording folder`

Saving a SCPI Recording as a Python Script

To execute the generated Python script:

- Install the Python version required by PyVisa
- Download the PyVisa library from: `https://pypi.org/project/PyVISA/`
- Modify the connection string, to specify *your* instrument’s connection string

Example Script

An example of the generated script is shown below.

_install location: https://pypi.org/project/PyVISA/

import pyvisa

```
import re
# connected instrument
_inst = ''
# SCPI Recording commands and queries
# Add/Modify the instrument address to execute the script
_connectionString = 'your instrument connection string here'
#Example SCPI Recording Entries
_recordingEntries = ['Active Mode & Measurement'|':INST:CONF:SA:SANalyzer',
'Query Operation Complete'|'*OPC?',
'Active Mode & Measurement'|':INST:CONF:SA:SANalyzer',
'Query Operation Complete'|'*OPC?',
'Center Frequency'|':SENSe:FREQuency:CENTer 12000000000',
'Freq Offset'|':SENSe:FREQuency:OFFSet 10',
'Ref Level'|':DISPlay:WINDow:TRACe:Y:SCALe:RLEVel 5']
def ConnecToInstrument():
    rm = pyvisa.ResourceManager()
    _inst = rm.open_resource(_connectionString)
    _inst.read_termination = '\n'
    _inst.write_termination = '\n'
    idn = _inst.query('IDN?')
    print("Sending Recording Entries to: " + idn)
def CheckError()
    err = _inst.query('SYST:ERR?')
    return err.lower.find("no error")
def SendCommand(recordingEntry):
    # split the recording entry into label and mnemonic
    labelAndMnemonic = recordingEntry.split('|')
    label = labelAndMnemonic[0]
    mnemonic = labelAndMnemonic[1]
    # check and see if this is OPC query
```

```
    opcIndex = mnemonic.find('OPC?')
    #if OPC query send the query and get OPC query value
    if opcIndex >= 0:
        opcQueryValue = _inst.query(mnemonic)
        print(opcQueryValue)
    else:
    print(mnemonic)
        _inst.write(mnemonic)
    err = CheckError()
    # publish any errors from the previous command
    if err:
        print('Error for command ' + label + ': ' + err)
for entry in _recordingEntries
    SendCommand(entry)
```

7.3.9 Mask

The **Mask** data type is used to import and export Mask files for measurements that use masks, such as cellular comms and real-time measurements.

7.3.10 Waveform Sequence

Saves waveform sequences from the ARB memory of an Internal Source. When you open the Save **Waveform Sequence** dialog and press **Save**, the current waveform sequence is saved to the selected directory.

Notes	No remote command, front panel only
Dependencies	Only appears if your hardware includes an Internal Source, such as in VXT

7.3.11 Screen Image

Selects a file for saving the contents of the display.

Screen Image files are PNG (Portable Network Graphics) files with the same resolution as the data display. They contain the image that was on the screen before you opened the **Save** dialog. When the **Screen Image** key is pressed, a "thumbnail" of the captured image is displayed, with the note “This is the image that will be saved” below it.

After you have completed the save, a message “File image.png saved” (assuming `image.png` was the filename you used).

NOTE

As of firmware release A.17.50, sending `*CLS` (Clear Status) removes any message displayed on the screen. If you do not want to see the “File saved” message after sending `:MMEM:STOR:SCR` (described below), send the following sequence (substituting your file name for `filename.png`): `:MMEM:STOR:SCR “filename.png”;*CLS`

NOTE

As of firmware release A.19.50, saving a screen image removes any informational message displayed on the screen before it captures the screen. This is useful if you are sending “save image” commands in rapid sequence, as it keeps the “File saved” message from one screen capture from appearing in the next screen capture. Error messages are still captured.

If you send a succession of screen image commands *too* rapidly, the system may not have time to remove the previous message before the next screen capture. Sending screen image commands more rapidly than twice per second is not advised.

The default path for State Files is:

`My Documents\<mode name>\screen`

where `<mode name>` is the parameter used to select the mode with `:INST:SEL`, for example, `SA` for Spectrum Analyzer Mode.

Screen Image files have extension `.png`. The default filename is `Screen_0000.png`, where the 4-digit number is the lowest number that does not conflict with any filename in the current directory.

After you have completed the save, the **Quick Save** front-panel key lets you quickly repeat the last save performed, using an auto-named file, with new current screen data.

Remote Command	`:MMEMory:STORe:SCReen <filename>`
Example	Store the current screen image in the file `MyScreenFile.png` in the default directory: `:MMEM:STOR:SCR "myScreen.png"`
Backwards Compatibility SCPI	`:HCOPy:SDUMp:DATA?` returns the screen image in a `<DEFINITE LENGTH ARBITRARY RESPONSE DATA>` element. The response data is IEEE Block format; the controlling computer can strip the header and store the result as a `.png` file

Blocking Screen Capture (Remote Command Only)

This command works *only* when the measurement is in **Single** mode (see "Sweep/Measure" on page 2282). When the command is sent, it blocks the SCPI client, waits for the current refresh to complete, then captures the screen shot and saves it. In some instances, a single measurement is taken, and a screen shot of that measurement is captured.

This command ensures that the last-measured data is refreshed on the screen before it is captured, by blocking the command and waiting for refresh to complete. The command may time out, in which case it must be re-sent.

If timeout occurs, or if the active measurement is in **Continuous** mode, an error is returned.

Remote Command	`:MMEMory:STORe:SCReen:BLOCked <filename>`
Example	Wait for the current screen refresh to complete before capturing the screen shot, then store the current screen image in the file `MyScreenFile.png` in the default directory: `:MMEM:STOR:SCR:BLOC "myScreen.png"`

7.3.11.1 Theme

Accesses a menu of functions that enable you to choose the theme to be used when saving the screen image. You can choose between themes to be used when saving the screen image.

See "More Information" on page 2849 for examples of the themes.

Remote Command	`:MMEMory:STORe:SCReen:THEMe FILLed | OUTLine` `:MMEMory:STORe:SCReen:THEMe?`
Example	`:MMEM:STOR:SCR:THEM OUTL`
Preset	`FILLed`; not part of **Preset**, but reset by **Restore Misc Defaults** or **Restore System Defaults All**
Backwards Compatibility SCPI	`:MMEMory:STORe:SCReen:THEMe TDColor | TDMonochrome | FCOLor | FMONochrome`

Backwards Compatibility Notes	To permit code compatibility with A-model X-Series Signal Analyzer instruments, the command parameters from the A-models are mapped as follows:
	`TDColor` and `TDMonochrome` are both mapped to `FILLed`
	(exact full color representation of what is on the screen)
	`FCOLor` and `FMONochrome` are both mapped to `OUTLine`
	(uses color for traces and other items, but most filled areas are white)
	There is no Monochrome theme in B-models, so the A-models monochrome commands yield color
	`:MMEM:STOR:SCR:THEM?` always returns `FILLed` or `OUTLine`, never `FCOLor`, `FMONochrome`, `TDColor`, or `TDMonochrome`
	There is no monochrome theme in the X-Series Touch UI

More Information

- The `FILLed` theme is an exact representation of the information on the display
- The `OUTLine` theme eliminates most of the filled areas, in order to save ink when the image is printed. In addition, the yellow trace color is changed to be more orange, to improve visibility against a white background. Note that some objects remain filled. In particular, the selected marker remains filled with the green marker color, in order to distinguish it from the other markers. This is important, as it is the selected marker whose readout appears in the upper right corner of the display

7.3.12 Power Sensor Cal Factor

Selects a file to which to export the Power Sensor Cal factor data.

Cal Factor files are XML files, and contain the cal factor data and header data that gives information on the power sensor.

The default path for **Cal Factor** Files is:

`My Documents\<mode name>\data\PSCF`

where `<mode name>` is the parameter used to select the mode with `:INST:SEL` (for example, `MRECEIVE` for Measuring Receiver Mode). Hence, a **Cal Factor** file from any measurement in the Measuring Receiver mode would be stored in:

`My Documents\MRECEIVE\data\PSCF`

Cal Factor files have the extension `.xml`. The default filename is `<Sensor Model>_<Sensor Serial Number>_0000.xml`, where the 4-digit number is the lowest number that does not conflict with any filename in the current directory. If the sensor model or serial number is blank, the default filename is `PSCF_0000.xml`.

Remote Command	`:MMEMory:STORe:PSCFactor <file_name>`
Example	`:MMEM:STOR:PSCF "myPSCF.xml"`
Notes	If the save is initiated via SCPI, and the file already exists, the file will be overwritten Using the `C:` drive is strongly discouraged, since it runs the risk of being overwritten during an instrument software upgrade Both single and double quotes are supported for any filename parameter over SCPI
Dependencies	Only appears if you have the proper option installed in your instrument

7.3.13 Recording

Lets you save to a file data being acquired by the measurement, so that it can later be recalled and played back as though it were coming from the input.

You may specify a data type (for example, I/Q data) and choose a file to which to save the data.

The recording and playback of signal data files is a multi-step process that involves controls in several menus.

The menus that are involved in Record/Playback are:

- **Save**, **Recording** (this menu)
- **Recall**, "Recording" on page 2792 (under the **Recall** hardkey or the **Recall** icon in the **File** panel)
- **Sweep**, **Recording** tab
- **Sweep**, **Playback** tab
- **Input/Output**, "Data Source" on page 2649 tab

NOTE A complete tutorial for the Record/Playback functionality, including how to load and save Recording files, can be found under the **Data Source** tab in **Input/Output**.

Dependencies	Only available in the following Modes and measurements: – VMA (Digital Demod and Custom OFDM) – 5G NR (Modulation Analysis) – LTE (Modulation Analysis) – WLAN (Modulation Analysis, MIMO Modulation Analysis, Spectral Flatness) – Analog Demod – Bluetooth (Transmit Analysis) – IoT & SRComms (LoRa CSS Demod)

7.3.13.1 Data Type

Lets you save IQ data from the measurement using a specified file type (`CSV, SDF, TXT, BIN, BINX, BINF, ORB`).

`CSV`	Comma-Separated Values. Excel compatible format. Plain text roughly three times the size of BINF
`TXT`	Text format. Plain text roughly three times the size of BINF
`SDF`	Format developed for Keysight 89600 VSA Software. Note that due to differences in the internal file structure, SDF files saved by X-Series are not guaranteed to work perfectly with 89600
`BIN`	Interleaved 16-bit Q15 signed IQ file, in Big Endian format. Q15 is a DSP format in which the most significant bit is the sign bit, followed by 15 bits of fraction. The Q15 number

	has a decimal range between -32768 and -32767. The data is scaled to fit within this decimal range BIN files do not include sampling rate information inside the file, there will be associated txt file including sampling rate and scaling information
`BINX`	Interleaved 16-bit Q15 signed IQ file, in Little Endian format. The data is scaled to fit within the decimal range BINX files do not include sampling rate information inside the file, there will be associated txt file including sampling rate and scaling information
`BINF`	32-bit IEEE 754 floating-point number in Little Endian format. The data is raw IQ data BINF files do not include sampling rate information inside the file, there will be associated txt file including sampling rate information
`ORB`	Format developed for Keysight ORAN Studio. This format is only supported by 5GNR, LTEAFDD and LTEATDD Modulation Analysis measurements, LTEAFDD and LTEATDD CEVM measurements

Example	`:MMEM:STORe:RECording "C:\TEMP\MyIQData.csv"`

7.3.13.2 Channel

Select data channels to save. This is only supported by 5GNR Mode's EVM, VMA Digital Demod, VMA Custom OFDM measurements, and by WLAN Mode's MIMO EVM measurement.

The `<meas>` param in the command must be replaced with the node of the active measurement:

Parameter	Mode	Measurement
`EVM`	5GNR	EVM
`EVMM`	WLAN	MIMO EVM
`DDEM`	VMA	Digital Demod
`OFDM`	VMA	Custom OFDM

Remote Command	`:MMEMory:STORe:<meas>:RECording:CHANnel ALL | CH1 | CH2 | CH3 | CH4 | CH5 | CH6 | CH7 | CH8` `:MMEMory:STORe:<meas>:RECording:CHANnel?`
Example	`:MMEM:STOR:EVM:REC:CHAN CH1` `:MMEM:STOR:EVM:REC:CHAN?`
Preset	`ALL`
State Saved	No
Range	`ALL|CH1|CH2|CH3|CH4|CH5|CH6|CH7|CH8`

7.3.14 Component Carrier Setup

Lets you export LTE-A Component Carrier Setup files for the specified Component Carrier. Selecting this control displays a menu that enables you to specify which Component Carrier Setup configuration will be exported. Select the desired configuration, then press **Save As...** to display a file dialog that you can use to select the directory and define the exported file name. This function is valid for Modulation Analysis and Conformance EVM measurements only.

EVM Setup File Format

Extension:	`evms`

LTE EVM Setup parameters of specific component carriers in LTE-Advanced FDD/TDD EVM or CEVM measurement are stored in special binary files with a `.evms` extension. The specific set of component carrier configuration parameters that are exported depend on the Component Carrier specified.

The default path is for the files is:

`My Documents\LTEATDD | LTEAFDD\data\evmsetup`

(`My Documents` is an alias to a directory, the exact name of which depends on which user is logged in)

The default file name of the EVM Setup File is assembled from the DuplexMode, Bandwidth, and ComponentCarrierNumber values, plus a file number. For example, the file name could be:

`FDD_BW5MHz_CC0_0000.evms`

Remote Command	`:MMEMory:STORe:EVMSetup CC0 | … | CC4,<string>`
Example	`:MMEM:STORe:EVMSetup CC0,"FDD_BW5MHz_CC0_0000.evms"`
Notes	`CC*` is used to export LTE-A setup file for the specified component carrier Available only for the Modulation Analysis and Conformance EVM measurements

For X-Series Measurement Application LTE Component Carrier EVM Setup Files (`*.evms`), the settings below are saved/recalled:

Mode Level	– Direction (Meas Setup – Radio) – Bandwidth (Meas Setup – Component Carriers – Configure Comp Carriers – Configure CCs) – UL/DL Allocation (Meas Setup – Component Carriers – Configure Comp Carriers – Configure CCs)

	– Dw/GP Up Length(Meas Setup – Component Carriers – Configure Comp Carriers – Configure CCs)
Meas Level	– Meas Time parameters(Meas Setup – Meas Time) – Cell ID Mode (Meas Setup – Sync/Format) – Cell ID Value (Meas Setup – Sync/Format) – RS PRS (Meas Setup – Sync/Format) – CP Length (Meas Setup – Sync/Format – Advanced Sync Setup) – PDSCH IQ ref (Meas Setup – Sync/Format – Advanced Demod Setup) – Basic Control Channel settings (Meas Setup – Channel Profile – Control and User Channels – Edit Basic Control Channels) – PDCCH Control channel Settings (Meas Setup – Channel Profile – Control and User Channels – Edit PDCCH Control channels) – Channel Include Settings (Meas Setup – Channel Profile – Control and User Channels) – PDSCH Configuration Settings (Meas Setup – Channel Profile – Edit User Mapping)

7.3.15 Remote Only Commands

The following commands execute file system operations such as move, copy, and transfer data from a file.

7.3.15.1 Mass Storage Catalog (Remote Command Only)

Remote Command	`:MMEMory:CATalog? [<directory_name>]` The string `<directory_name>` must be a valid logical path. If no string then it uses the current directory
Example	`:MMEM:CAT? "C:\"`

Notes	Queries disk usage information (drive capacity, free space available) and obtains a list of files and directories in a specified directory in the following format:
	`<numeric_value>,<numeric_value>,\{<file_entry>\}`
	It returns two numeric parameters and as many strings as there are files and directories
	The first parameter indicates the total amount of storage currently used in bytes
	The second parameter indicates the total amount of storage available, also in bytes. `<file_entry>` is a string. Each `<file_entry>` indicates the name, type, and size of one file in the directory list:
	`<file_name>,<file_type>,<file_size>`
	As the Windows file system has an extension that indicates file type, `<file_type>` is always empty.

	`<file_size>` provides the size of the file in bytes. For directories, `<file_entry>` is surrounded by square brackets and both `<file_type>` and `<file_size>` are empty

7.3.15.2 Mass Storage Change Directory (Remote Command Only)

Remote Command	`:MMEMory:CDIRectory [<directory_name>]`
	`<directory_name>` must be a valid logical path
	`:MMEMory:CDIRectory?`

Example	`:MMEM:CDIR "C:\Program Files"`
Notes	Changes the current directory for a mass memory file system. The `<directory_name>` parameter is a string. If no parameter is specified, the directory is set to the `*RST` value At `*RST`, this value is set to the default user data storage area, that is defined as System.Environment.SpecialFolder.Personal Query returns full path of the current directory as a quoted string

7.3.15.3 Mass Storage Copy (Remote Command Only)

Remote Command	`:MMEMory:COPY <string>,<string>[,<string>,<string>]` `<string>` must be a valid logical path
Example	`:MMEM:COPY "C:\TEMP\Screen_0000.png","C:\"`
Notes	Copies an existing file to a new file or an existing directory to a new directory If no directory is specified, uses the current directory Two forms of parameters are allowed. The first form has two parameters. In this form, the first parameter specifies the source, and the second parameter specifies the destination The second form has four parameters. In this form, the first and third parameters specify the source. The second and fourth parameters specify the directories. The first pair of parameters specifies the source. The second pair specifies the destination. An error is generated if the source doesn't exist or the destination file already exists This command will generate an “access denied” error if the destination is a restricted folder (for example, `C:\Windows`) and you do not have Power User or Administrator privileges

7.3.15.4 Mass Storage Device Copy (Remote Command Only)

Transfers data to/from a file and a peripheral device.

Remote Command	`:MMEMory:COPY:DEVice <source_string>,<dest_string>` `<source_string>` and `<dest_string>` must be valid logical paths
Notes	The strings must be a valid logical path or a valid device keyword. If `dest_string` is a device keyword, the data is copied from the source file to the device. If `source_string` is a device keyword, the data is copied to the source file from the device

Valid device keywords are:

`SNS` (smart noise source)

An error is generated if the file or device is not found

7.3.15.5 Mass Storage Delete (Remote Command Only)

Remote Command	`:MMEMory:DELete <file_name>[,<directory_name>]` `<file_name>` and `<directory_name>` must be valid logical paths
Example	`:MMEM:DEL "Screen_0000.png"`
Notes	If no directory is specified, uses the current directory Removes a file from the specified directory. `<file_name>` specifies the file name to be removed. This command generates an “access denied” error if the file is in a restricted folder (for example, `C:\Windows`) and you do not have Power User or Administrator privileges

7.3.15.6 Mass Storage Data (Remote Command Only)

Creates a file containing the specified data *or* queries the data from an existing file.

Remote Command	`:MMEMory:DATA <file_name>, <data>`
	`<file_name>` must be a valid logical path
	`:MMEMory:DATA? <file_name>`

Example	`:MMEM:DATA? "MyFile.txt"`
Notes	If no directory is specified, uses the current directory The command form `:MMEMory:DATA <file_name>,<data>` loads `<data>` into the file `<file_name>`. `<data>` is in 488.2 block format. `<file_name>` is string data The response to `:MMEMory:DATA? <file_name>` is the associated `<data>` in block format

7.3.15.7 Mass Storage Make Directory (Remote Command Only)

Remote Command	`:MMEMory:MDIRectory <directory_name>` `<directory_name>` must be a valid logical path
Example	`:MMEM:MDIR "C:\TEMP\NewDir"`
Notes	Creates a new directory. `<directory_name>` specifies the name to be created Generates an “access denied” error if the new directory would be in a restricted folder (for example, `C:\Windows`) and you do not have Power User or Administrator privileges

7.3.15.8 Mass Storage Move (Remote Command Only)

Remote Command	`:MMEMory:MOVE <string>,<string>[,<string>,<string>]` `<string>` must be valid logical paths
Example	`:MMEM:MOVE "C:\TEMP\Screen_0000.png","C:\"`
Notes	Moves an existing file to a new file or an existing directory to a new directory Two forms of parameters are allowed. The first form has two parameters. In this form, the first parameter specifies the source, and the second parameter specifies the destination The second form has four parameters. In this form, the first and third parameters specify the source. The second and fourth parameters specify the directories. The first pair of parameters specifies the source. The second pair specifies the destination. An error is generated if the source doesn't exist or the destination file already exists This command generates an "access denied" error if the destination is a restricted folder (for example, `C:\Windows`) and you do not have Power User or Administrator privileges

7.3.15.9 Mass Storage Remove Directory (Remote Command Only)

Remote Command	`:MMEMory:RDIRectory <directory_name>` `<directory_name>` must be a valid logical path
Example	`:MMEM:RDIR "C:\TEMP\NewDir"`
Notes	Removes a directory. The `<directory_name>` parameter specifies the directory name to be removed. All files and directories under the specified directory will also be removed This command generates an "access denied" error if the folder is a restricted folder (for example, `C:\Windows`) or is in a restricted folder and you do not have Power User or Administrator privileges

7.3.15.10 Mass Storage Determine Removable Media (Remote Query Only)

Used to determine whether any removable media devices are connected to the instrument. Primarily, these are USB memory devices plugged-in to the front panel or rear panel USB ports. On instruments with PC6 or PC7 CPUs, one SD card slot is available for removable media. The instrument's primary disk drive is *not* a removable media device.

Remote Command	`:MMEMory:RMEDia:LIST?`
Example	`:MMEM:RMED:LIST?`
Notes	The return value is a string containing a list of partition identifiers, which are removable media devices. Each identifier will be separated by a comma. If no removable media is present, an empty string is returned Examples:

- One removable device present results in a return string of “F:”
- Two removable devices present results in a return string of “F:,G:”

No removable devices present results in a return string of “”

7.3.15.11 Mass Storage Determine Removable Media Label (Remote Command Only)

Used to set or query a removable media device’s label.

Remote Command	`:MMEMory:RMEDia:LABel <partition>,<string>` `:MMEMory:RMEDia:LABel? <partition>`
Example	`:MMEM:RMED:LAB "F:","My Device"`
Notes	If the `<partition>` specified does not exist or is not a removable media device, the error -252, ”Missing Media” is generated Setting the removable media label requires Administrative privileges. If the currently logged-in user does not have appropriate privileges, error “-221, Settings conflict; Administrator privileges required” is generated

7.3.15.12 Mass Storage Determine Removable Media Write-protect status (Remote Query Only)

Used to query a removable media device’s write-protect status.

Remote Command	`:MMEMory:RMEDia:WPRotect? <partition>`
Example	`:MMEM:RMED:WPR? "F:"`
Notes	The return value is 1 if the device is write-protected, and 0 if the device is write-enabled If the `<partition>` specified does not exist or is not a removable media device the error -252, ”Missing Media” is generated
Preset	The return value depends on the SD card installed

7.3.15.13 Mass Storage Determine Removable Media size (Remote Query Only)

Queries a removable media device’s total memory size (not available memory size).

Remote Command	`:MMEMory:RMEDia:SIZE? <partition>`
Example	`:MMEM:RMED:SIZE? "F:"`
Notes	The return value is integer value in GBytes. Any device that is less than 1 GB returns 0 GB If the `<partition>` specified does not exist or is not a removable media device, the error -252,”Missing Media” is generated

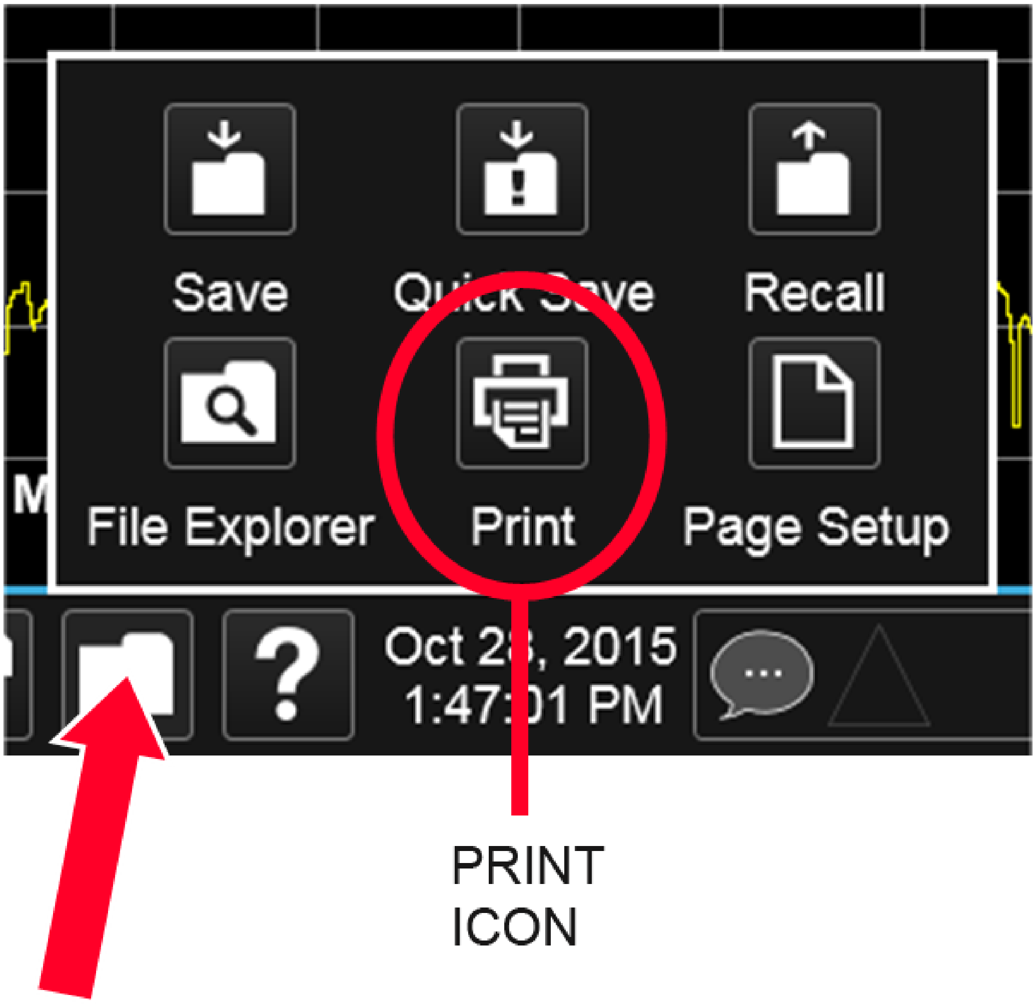
7.3.15.14 :SYSTem:SET (Remote Command Only)

Obtains the state of the currently active mode in a form that can then be loaded back into the instrument quickly.

Remote Command	`:SYSTem:SET <instrument state in IEEE Block>` `:SYSTem:SET?`

Notes	The query returns current instrument state of the active mode in IEEE Block data format. The state is in a machine-readable format only, as follows:
	`<syst set preamble><state block data>`
	Where:
	`<syst set preamble>` is the format:
	`#NMMM`
	– `N` = number of digits that comprise `MMM`
	– `MMM` = length in bytes of following data
	`<state block data>` is machine readable state data
	Example response: `#42016<state data>`
	The state is recalled by sending the `:SYST:SET?` response data to the instrument. From example above:`:SYST:SET #42016<state data>`

7.4 Print

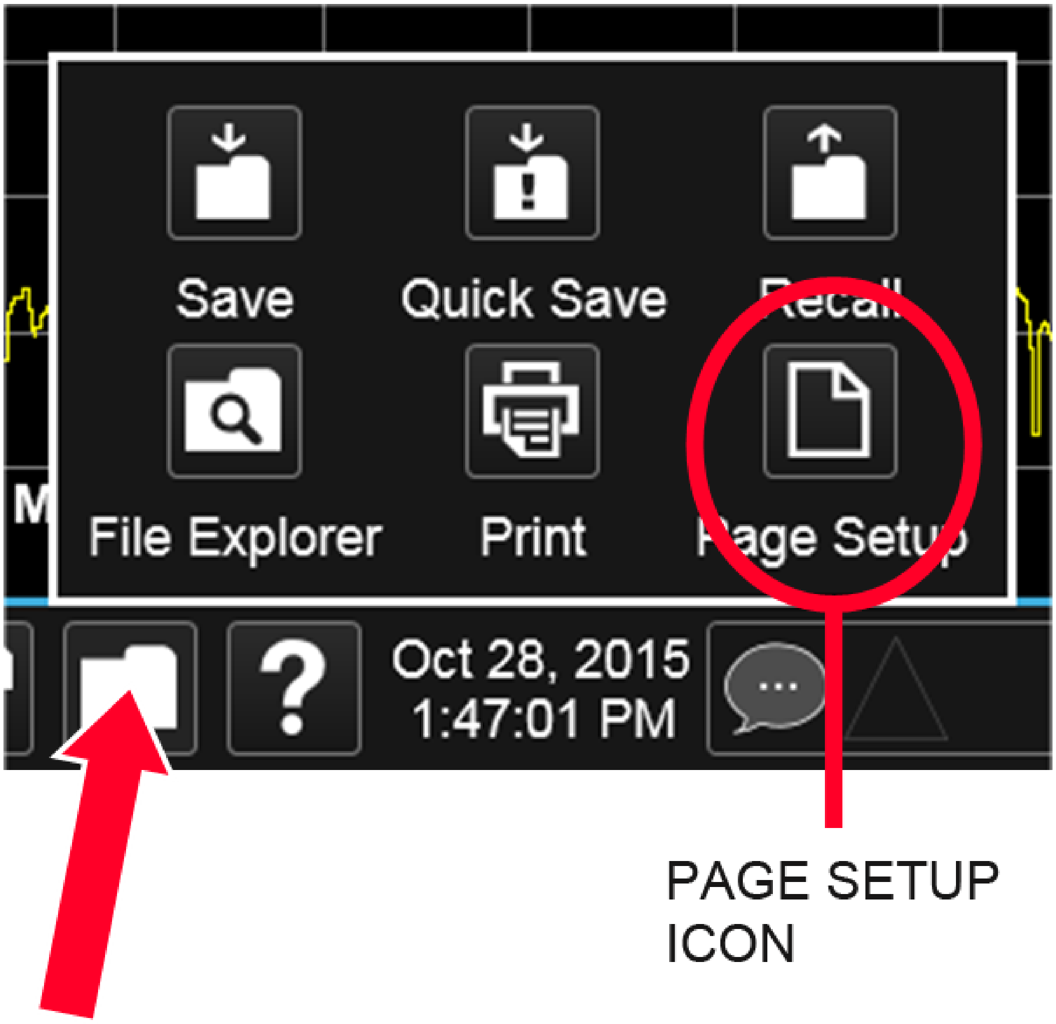


Opens a dialog for configuring printing (to the printer of your choice).

The `:HCOPy` command is equivalent to pressing the **PRINT** key.

Remote Command	`:HCOPy[:IMMediate]`
	`:HCOPy:ABORt` can be used to abort a print that is already in progress. Sending `:HCOPy:ABORt` causes the instrument to stop sending data to the printer, although the printer may continue or even complete the print, depending on how much data was sent to the printer before you sent the `:ABORt` command.
Remote Command	`:HCOPy:ABORt`

7.5 Page Setup



Opens a Windows Page Setup dialog that allows you to control aspects of the pages sent to the printer when the **PRINT** hardkey is pressed.

Depending on the abilities of the attached printer, paper size, paper source, page orientation and margins may all be set. There are no SCPI commands for controlling these parameters.

The dialog also has a dropdown control to let you select the Display Theme to use when printing. **Page Setup** themes are the same as those for **Screen Image**"Theme" on page 2849.

The **Theme** control has a corresponding SCPI command:

Remote Command	`:SYSTem:PRINt:THEMe FILLed | OUTLine` `:SYSTem:PRINt:THEMe?`
Example	`:SYST:PRIN:THEM OUTL`
Preset	`OUTL`; not part of **Preset**, but reset by **Restore Misc Defaults** or **Restore System Defaults All** and survives subsequent running of the modes
State Saved	No
Backwards Compatibility SCPI	`:SYSTem:PRINt:THEMe TDColor | TDMonochrome | FCOLor | FMONochrome`
Backwards Compatibility Notes	To permit code compatibility with A-model X-Series Signal Analyzer instruments, the command parameters from A-models are mapped as follows: `TDColor` and `TDMonochrome` are both mapped to `FILLed`: Exact full color representation of what is on the screen `FCOLor` and `FMONochrome` are both mapped to `OUTLine`: Uses color for traces and other items, but most filled areas are white There is no Monochrome theme in B-models, so the A-models' monochrome commands yield color `:SYST:PRINT:THEM?` always returns `FILLed` or `OUTLine`; never `FCOLor`, `FMONochrome`, `TDColor`, or `TDMonochrome`

8 Trigger

Controls the **Trigger** system of the instrument. In general, these are functions associated with internal triggers or trigger inputs. Trigger Output functions are configured under **Input/Output**.

Trigger functions are common across multiple Modes and Measurements, although some controls appear only in certain Modes and/or certain Measurements. Additionally, some of the tabs on the **Trigger** menu are only available in certain Modes.

Many of the Trigger functions can be set graphically using the Trigger Setting Diagram. For more information see: "Trigger Optimization" on page 2909

In general, each Measurement can have a different Trigger, and each Measurement remembers its previous-trigger setting.

8.1 Trigger

Contains controls that let you select the trigger source, and setup of each of the trigger sources. The instrument is designed to allow triggering from many sources, for example, Free Run, Video, External, RF Burst, etc.

In general, each Measurement can have a different Trigger Source, and each Measurement remembers its previous-Trigger Source.

8.1.1 Select Trig Source

Specifies the trigger source for the currently selected instrument input (RF or I/Q). If you change inputs, the new input remembers the trigger source it was last programmed to for the current measurement and uses that trigger source. When in External Mixing, the instrument uses the RF trigger source. You can directly set the trigger source for the RF Input and for the I/Q input using SCPI commands; see "Trigger Source Presets" on page 2872, "RF Trigger Source (Remote Command Only)" on page 2874 ,and "I/Q Trigger Source (Remote Command Only)" on page 2876.

In general, each Measurement can have a different Trigger Source, and each Measurement remembers its previously-set Trigger Source. Not every Trigger Source is available for every Measurement, so the available choices for Select Trig Source may vary from Mode to Mode and Measurement to Measurement. The trigger sources that are available for each measurement are shown in the “List of Available Trigger sources” dropdown below.

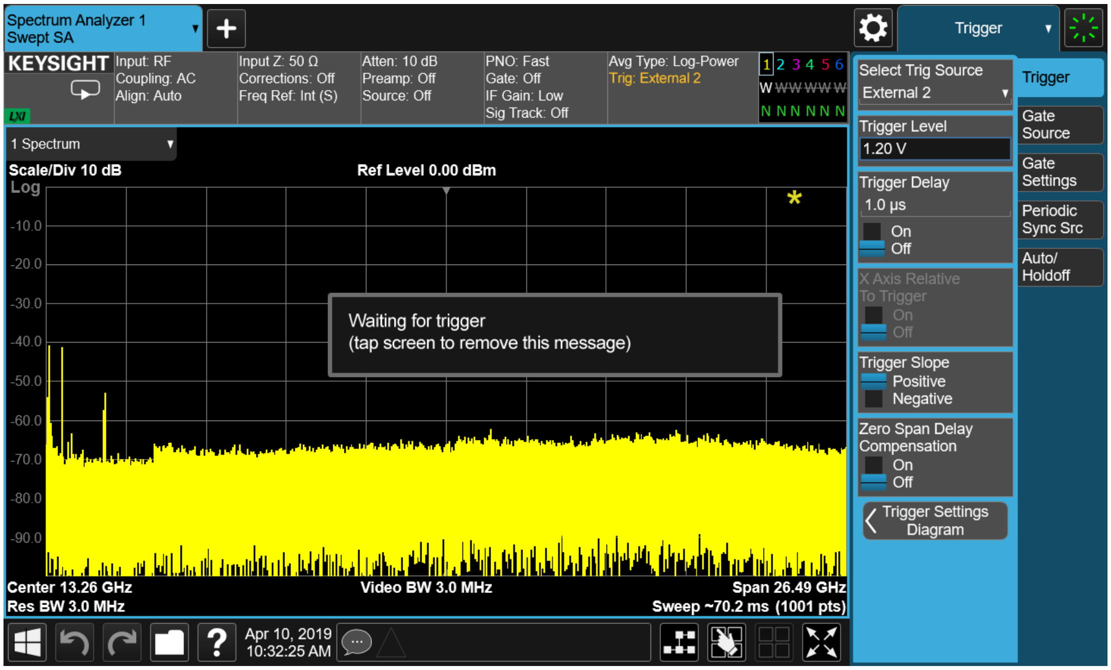
Note that the controls available on the Trigger Tab change depending on which trigger source is selected. Tap each trigger source in the table in the “List of Available Trigger sources” dropdown to see what parameters are available for that trigger source.

Note that most measurements require the inclusion of a <measurement> parameter in the Trigger Source command. However, for the Swept SA measurement and RTSA this is not the case; for backwards compatibility, no <measurement> parameter is used when setting the Trigger Source for the Swept SA measurement or RTSA.

Waiting for Trigger

After you select a trigger source, the instrument will start its next measurement when that trigger source is satisfied. For example, if you choose External 1, the next measurement will start when the appropriate signal appears at the Trigger 1 In connector.

If the trigger source is not satisfied (for example, if no signal at the appropriate level appears at the Trigger 1 In connector), after approximately 2 seconds a popup message will appear that says, “Waiting for trigger”. The trigger annotation in the Meas Bar will also turn amber, as shown below:



Input: RF
Coupling: AC
Align: Auto
Input Z: 50 Ω
Corrections: Off
Freq Ref: Int (S)
Atten: 10 dB
Preamp: Off
Source: Off
PNO: Fast
Gate: Off
IF Gain: Low
Sig Track: Off
Avg Type: Log-Power
Trig: External 2
Scale/Div 10 dB
Ref Level 0.00 dBm
Center 13.26 GHz
Res BW 3.0 MHz
Video BW 3.0 MHz
Span 26.49 GHz
Sweep ~70.2 ms (1001 pts)
Select Trig Source: External 2
Trigger Level: 1.20 V
Trigger Delay: 1.0 µs

Waiting for trigger
(tap screen to remove this message)

Tap anywhere on the screen (except on the message itself) to clear the popup. The annotation will remain amber until the trigger conditions are satisfied.

List of available Trigger sources

The tables show which Trigger sources are available for which Modes and Measurements, with the following exceptions:

- the Noise Figure Mode does not support Triggering at all
- the Disturbance Analyzer measurement in the EMI Mode does not support Triggering
- the Tx Band Spur measurement in the GSM/EDGE Mode does not support Triggering
- For some models (like N9042B) with ADC trigger: some IF Paths do not support Video trigger, instead they support ADC trigger

"Free Run" on page 2877	`IMMediate`	All Modes and measurements, except those measurements that support no triggers at all
"Video/ADC" on page 2877	`VIDeo`	All Modes except RTSA and Pulse In Spectrum Analyzer Mode, all measurements except ACP and List Sweep In WCDMA, MSR, Short Range Comms, VMA and LTE, all measurements

		except ACP In WLAN, all measurements In Phase Noise, all measurements except Log Plot and Spot Frequency
"ADC Trigger" on page 2878	`ADC`	All Modes and measurements supporting Video or Level, except Spectrum Analyzer mode Only supported in certain model’s IF Paths
"Line" on page 2879	`LINE`	All Modes except EMI, Avionics and Analog Demod In Spectrum Analyzer, all measurements except List Sweep In WLAN and GSM/EDGE, all measurements except Power vs. Time In LTE and 5G NR, all measurements except Transmit On/Off Power In Short Range Comms, all measurements except Modulation Analysis In MSR, all measurements
Level [Mode: RTSA, PULSEX]	`LEVel`	RTSA and Pulse Modes only
FMT [Mode: RTSA, PULSEX]	`FMT`	RTSA and Pulse Modes only
"External 1" on page 2879	`EXTernal1`	All Modes and measurements
"External 2" on page 2880	`EXTernal2`	All Modes and measurements
"External 3" on page 2881	`EXTernal3`	See "External 3 Support" on page 2867
"RF Burst" on page 2882	`RFBurst`	All Modes except EMI In Spectrum Analyzer, all measurements except List Sweep
"Periodic" on page 2883	`FRAMe`	All Modes except EMI In Spectrum Analyzer, all measurements except List Sweep
TV [Mode: SA]	`TV`	Spectrum Analyzer Mode only, and only in the Swept SA measurement

I/Q Triggers

"I/Q Mag" on page 2885	`IQMag`	All Modes except EMI, Avionics, RTSA, Analog Demod and Pulse In Spectrum Analyzer, only in Power Stat CCDF and Burst Power In WCDMA, only in Power Stat CCDF and IQ Waveform In GSM/EDGE, only in EVM, GMSK Phase & Freq Error, Transmit Power and IQ Waveform In Phase Noise, only in IQ Waveform In Bluetooth, only in Transmit Analysis In LTE, only in Power Stat CCDF, Modulation Analysis, Conformance EVM, and IQ Waveform In WLAN, only in Power Stat CCDF, Modulation Analysis, Spectral Flatness, and IQ Waveform In Short Range Comms, only in Power Stat CCDF and Modulation Analysis In VMA, only in Power Stat CCDF, Digital Demod and IQ Waveform In CQM, only in Group Delay, Power Stat CCDF, and IQ Waveform
"Input I" on page 2885	`IINPut`	
"Input Q" on page 2886	`QINPut`	
"I (Demodulated)" on page 2886	`IDEMod`	
"Q (Demodulated)" on page 2887	`QDEMod`	
"Aux I/Q Mag" on page 2887	`AIQMag`	
"PXI" on page 2888	`PXI`	All Modes and measurements (only found in modular analyzers)
"Internal" on page 2888	`INTernal`	All Modes and measurements (only found in modular analyzers)
"Audio External" on page 2882	`AEXTernal`	Via the TRIG IN connector on the M9260A Audio Analyzer module
"Prot Channel Detection" on page 2889	`PRTChandet`	Base Station Emulation; valid UL signal detected (PUSCH/PUCCH/PRACH/SRS)
"Prot Frame Aligned" on page 2889	`PRTFrame`	Base Station Emulation; periodic technology format radio frame with data frame aligned to the BSE timing
"Prot Event" on page 2890	`PRTEvent`	Base Station Emulation events

External 3 Support

Trigger Source **External 3** is available only in certain Modes and measurements, as follows:

`5GNR`	Transmit On|Off, Modulation Analysis, Power Stat CCDF, and IQ Waveform measurements only
`ADEMOD`	Not supported
`AVIONICS`	Not supported
`BT`	Not supported
`CQM`	Group Delay, Power Stat CCDF, and IQ Waveform measurements only
`EMI`	Not supported
`GSMEDGE`	IQ Waveform and Transmit Power measurements only
`LTEAFDD,`	Power Stat CCDF, IQ Waveform, and Transmit On|Off measurements only

`LTEATDD`	
`MSR`	Power Stat CCDF, and IQ Waveform measurements only
`PA`	Power Amplifier measurement
`PNOISE`	IQ Waveform measurement only
`PULSEX`	Pulse measurement only
`SA`	Power Stat CCDF and Burst Power measurements only
`SRCOMMS`	Modulation Analysis, Power Stat CCDF, and IQ Waveform measurements only
`VMA`	Digital Demod, Custom OFDM, IQ Waveform, and Power Stat CCDF measurements only
`WCDMA`	QPSK EVM, Power Stat CCDF, and IQ Waveform measurements only
`WLAN`	Spectral Flatness, Modulation Analysis, Power Vs Time, Power Stat CCDF, and IQ Waveform measurements only

Backwards Compatibility SCPI

The following SCPI commands are provided for Backwards Compatibility:

Backwards Compatibility SCPI

`:TRIGger[:SEQuence]:SOURce EXTernal`

For backward compatibility, the parameter `EXTernal` is mapped to `EXTernal1`

`[:SENSe]:<measurement>:TRIGger:SOURce`

This backwards compatibility alias command is provided for ESA/PSA compatibility

This backwards compatibility command does not apply to the Swept SA measurement, for that just use `:TRIGger:SOURce`

This backwards compatibility command does not apply to the monitor spectrum, log plot and spot frequency measurements

`[:SENSe]:<measurement>:TRIGger:SOURce IF`

In earlier instruments, the parameter IF was used by apps for the video trigger, so using the IF parameter selects `VIDeo` triggering. Sending IF in the command causes `VID` to be returned to a query

`[:SENSe]:ACPR:TRIGger:SOURce`

This backwards Compatibility SCPI command is provided to support the same functionality as `[:SENSe]:ACPr:TRIGger:SOURce` (PSA W-CDMA, PSA cdma2000 and PSA 1xEVDO) due to the fact that the `ACPr` node conflicts with the `ACPower` node

The legacy command:

`:TRIGger[:SEQuence]:RFBurst:FSELectivity[:STATe] OFF | ON | 0 | 1`

is not supported in the X-Series, as the hardware to do Frequency Selective burst triggers does not exist in X-Series

More Information

The **Trigger** menus let you select the trigger source and trigger settings for a sweep or measurement. In triggered operation (basically, any trigger source other than Free Run), the instrument will begin a sweep or measurement only when the selected trigger conditions are met, generally when your trigger source signal meets the specified trigger level and polarity requirements. (In FFT measurements, the trigger controls when the data acquisition begins for FFT conversion.)

For each of the trigger sources, you may define a set of operational parameters or settings, which will be applied when that source is selected as the current trigger source. Examples of these settings are Trigger Level, Trigger Delay, and Trigger Slope. You may apply different settings for each source; so, for example, you could have a Trigger Level of 1v for External 1 trigger and -10 dBm for Video trigger.

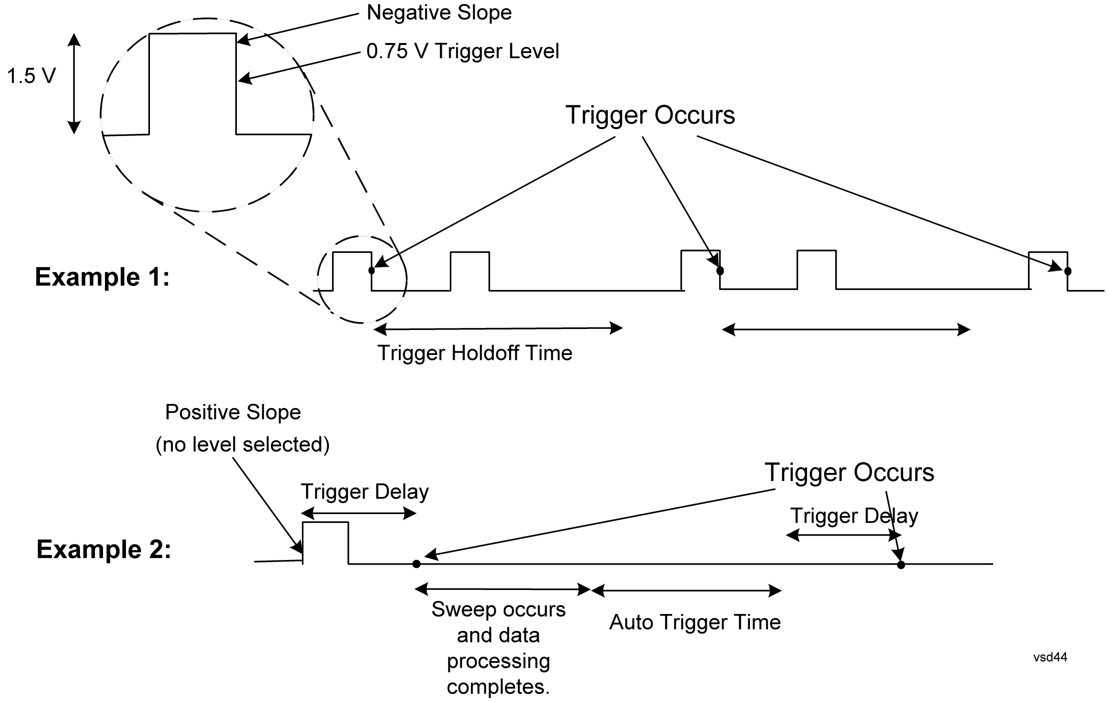
Once you have established the settings for a given trigger source, they generally will remain unchanged for that trigger source as you go from measurement to measurement within a Mode (although the settings can change as you go from Mode to Mode). Furthermore, the trigger settings within a Mode are the same for the **Trigger** menu, the **Gate Source** menu, and the **Periodic Sync Src** menu. That is, if **Ext1** trigger level is set to 1v in the **Trigger** menu, it will appear as 1v in both the **Gate Source** and the **Periodic Sync Src** menus. For these reasons the trigger settings commands are not qualified with the measurement name, the way the trigger source commands are.

Trigger Setup Parameters:

The following examples show trigger setup parameters using an external trigger source.

Example 1 illustrates the trigger conditions with negative slope and no trigger occurs during trigger Holdoff time.

Example 2 illustrates the trigger conditions with positive slope, trigger delay, and auto trigger time.



Remote Command	Swept SA and RTSA measurements:
	`:TRIGger[:SEQuence]:SOURce EXTernal1 | EXTernal2 | EXTernal3 | IMMediate | LINE | FRAMe | RFBurst | VIDeo | TV | PXI | INTernal`
	`:TRIGger[:SEQuence]:SOURce?`
	All other measurements
	`:TRIGger:<measurement>[:SEQuence]:SOURce EXTernal1 | EXTernal2 | EXTernal3 | AEXTernal | IMMediate | LEVel | FMT | LINE | ADC | FRAMe | RFBurst | VIDeo | IQMag | IDEMod | QDEMod | IINPut | QINPut | AIQMag | PXI | INTernal | PRTChandet | PRTFrame | PRTEvent`
	`:TRIGger:<measurement>[:SEQuence]:SOURce?`

Example	The following commands set the External 1 trigger input for various measurements
	Swept SA and RTSA measurements:
	`:TRIG:SOUR EXT1`
	Other Spectrum Analyzer Mode measurements:
	Harmonics:
	`:TRIG:HARM:SOUR EXT1`
	Power Suite measurements (appear in many Modes):
	Channel Power:
	`:TRIG:CHP:SOUR EXT1`
	Occupied BW, Output Spectrum BW:
	`:TRIG:OBW:SOUR EXT1`

Notes	For some of the trigger parameters, the tie-in to the parameter is not obvious. These are: `IMMediate`, selects Free Run `FRAMe` , selects Periodic Trigger `FMT`, selects Frequency Mask Trigger `AEXTernal`, selects Audio External trigger, using the TRIG IN connector on the M9260A Audio Analyzer module For most measurements, the `<measurement>` keyword follows `TRIGger`. For Swept SA and RTSA Modes, do *not* use the `<measurement>` keyword. Using the wrong command form will result in an Undefined Header error Other trigger-related commands are found in the `:INITiate` and `:ABORt` SCPI command subsystems `*OPC` should be used after requesting data. This will hold off any subsequent changes to the selected trigger source, until after the sweep is completed and the data is returned Available ranges and presets can vary from mode to mode **FMT (Pulse and RTSA apps):** The amplitude resolution of the Frequency Mask is coupled to the Scale/Division. There are 256 vertical points therefore the amplitude resolution is computed using the algorithm: (10 * Scale/Div) / # Vertical Points

Dependencies	Not all trigger sources are available for each input. See the "RF Trigger Source (Remote Command Only)" on page 2874 and "I/Q Trigger Source (Remote Command Only)" on page 2876 commands for detailed information on which trigger sources are available for each input
	In some models, there is no second External input. In these models, the External 2 selection is not shown and the `EXTernal2` parameter will generate a “Hardware missing; Not available for this model number” message
	`EXTernal3` is available only when Option H1G is installed
	For the E7760 the only available selections are:
	`EXTernal1|IMMediate|INTernal|RFBurst|VIDeo`
	For UXM the only available selections are:
	`EXTernal1|IMMediate|PRTChandet|PRTFrame|PRTEvent`
	In the Pulse app, when Option B2X and H1G are installed and Digital IF BW is greater than 255.176 MHz, only three trigger sources, `IMMediate`, `LEVel`, and `EXTernal3` are available
	Level Trigger (Pulse and RTSA apps):
	Level trigger is allowed in average detector mode
	When Level Trigger is the selected Trigger Source in the Spectrum measurement, Spectrum minimum Acquisition Time is limited to the PVT minimum Acquisition Time. If the Spectrum Acquisition Time changed as a result of going into Level Trigger, a message is posted “Min Acq Time is 200 usec when Level Trigger is ON”. When Level Trigger is no longer the selected Trigger Source, Spectrum minimum Acquisition Time is restored
	FMT (Pulse and RTSA apps):
	If you were not in Free Run when you entered the FMT Setup View, you can change Trigger Source to Free Run while in the editor. This will allow you to configure the mask with a continually updating trace. When exiting FMT Setup View, the Trigger Source will be changed back to FMT

	For Power Stat CCDF and IQ Waveform in 5G NR and LTEATDD, switching the radio direction changes this parameter to the preset value In Transmit On|Off Power in 5G NR and LTEATDD, the value changes as follows – If changed to uplink: Periodic – If changed to downlink: External 1 except for models with the H1G option. With the H1G option, it changes as follows – External 1, when Info BW ≤ 255 MHz – External 3, when Info BW ≥ 256 MHz
Couplings	**FMT (Pulse and RTSA apps):** A remote user can enter or access FMT data via `:TRIGger[:SEQuence]:FMT[1]|2:DATA` The upper and lower masks can have different freq/ampl pairs therefore subop code 1 is for the upper mask and subop code 2 is for the lower mask
Preset	See “Trigger Source Presets” below
Status Bits/OPC dependencies	The Status Operation Register bit 5 "Waiting for Trigger" is set at the same time as the Sweeping or Measuring bit is set. It is cleared when the trigger actually occurs (that is, after the trigger event occurs and all the applicable trigger criteria have been met). A corresponding pop-up message ("Waiting for trigger") is generated if no trigger signal appears after approximately 2 sec. This message goes away when a trigger signal appears

Trigger Source Presets

The following Trigger Source presets are used for these measurements after a Mode Preset or Meas Preset:

Meas	Mode	Preset for RF	Preset for IQ
Swept SA	`SA`	`IMM`	IQ not supported
CHP	`SA, WCDMA, MSR,SRCOMMS, 5GNR, WLAN`	`IMM`	IQ not supported
OBW	`SA, WCDMA, LTEAFDD, LTEATDD, BT, 5GNR, WLAN`	1xEVDO: `EXT1` Others: `IMM`	IQ not supported
Transmit Analysis	`BT`	`RFB`	`IQM`
Adjacent Channel Power	`BT`	`IMM`	IQ not supported
LE In-band Emissions	`BT`	`IMM`	IQ not supported
EDR In-band Spurious Emissions	`BT`	RF Burst	IQ not supported
CCDF	`SA, WCDMA, LTEAFDD, LTEATDD, MSR,SRCOMMS, 5GNR, WLAN, CQM`	LTEATDD:	LTEATDD: - BTS: `EXT1`

Meas	Mode	Preset for RF	Preset for IQ
		– BTS: External 1 – MS: Periodic Timer Others: `IMM`	- MS: `FRAM` Others: `IMM`
ACP	`SA, WCDMA, LTEAFDD, LTEATDD, MSR,SRCOMMS, 5GNR`	`IMM`	IQ not supported
Tx Power	`SA, GSM`	`RFBurst`	`IMM`
SPUR	`SA, WCDMA, MSR, LTEAFDD, LTEATDD, 5GNR, WLAN`	`IMM`	IQ not supported
SEM	`SA, WCDMA, MSR, LTEAFDD, LTEATDD, SRCOMMS, 5G NR, WLAN`	`IMM`	IQ not supported
CDP	`WCDMA`	`IMM`	`IMM`
RHO	`WCDMA`	`IMM`	`IMM`
PCON	`WCDMA`	`IMM`	`IMM`
QPSK	`WCDMA`	`EXT1`	`IMM`
MON	All except: `SA, BASIC`	`IMM`	IQ not supported
WAV	All except: `SA`	LTEATDD: – BTS: External 1 – MS: Periodic Timer GSM/EDGE: `RFBurst` All others: `IMM`	LTEATDD: - BTS: `EXT1` - MS: `FRAM` GSM/EDGE: `IQM` All others: `IMM`
EVM	`LTEAFDD, LTEATDD, SRCOMMS, 5GNR, WLAN`	`IMM`	`IMM`
PVT	`WLAN`	`RFB`	IQ not supported
Spectral Flatness	`WLAN`	`IMM`	`IMM`
SPEC	`BASIC`	`IMM`	`IMM`
LOG Plot	`PN`	`IMM`	IQ not supported
Spot Freq	`PN`	`IMM`	IQ not supported
GMSK PVT	`EDGE/GSM`	`RFB`	`IMM`
GMSK PFER	`EDGE/GSM`	`RFB`	`IQM`
GMSK ORFS	`EDGE/GSM`	`RFB`	IQ not supported
EDGE PVT	`EDGE/GSM`	`RFB`	`IMM`

Meas	Mode	Preset for RF	Preset for IQ
EDGE EVM	`EDGE/GSM`	`RFB`	`IQM`
EDGE ORFS	`EDGE/GSM`	Periodic Timer	IQ not supported
Combined WCDMA	`WCDMA`	`IMM`	IQ not supported
Combined GSM	`EDGE/GSM`	`RFB`	IQ not supported
List Power Step	`WCDMA, EDGE/GSM`	`IMM`	IQ not supported
Transmit On/Off Power	`LTETDD, LTEATDD, 5GNR`	BTS: External 1 (External3 when IFBW ≥ 256 MHz with H1G option) MS: Periodic Timer	BTS: `EXT1` MS: `FRAM`
Transmit Analysis	`BLUETOOTH`	`RFB`	IQ not supported
Adjacent Channel Power	`BLUETOOTH`	`IMM`	IQ not supported
LE In-band Emissions	`BLUETOOTH`	`IMM`	IQ not supported
EDR In-band Spurious Emissions	`BLUETOOTH`	Periodic Timer	IQ not supported
Conformance EVM	`LTEAFDD, LTEATDD, MSR`	`IMM`	`IMM`
Spectrum & PvT	`RTSA`	`IMM`	IQ not supported
Pulse	`PULSEX`	`IMM`	IQ not supported
AM, FM, PM, FM Stereo	`ADEMOD`	`IMM`	IQ not supported
PAvT	`SA, 5GNR, VMA`	`IMM`	`IMM`
Group Delay	`CQM`	`IMM`	`IMM`

RF Trigger Source (Remote Command Only)

Selects the trigger to be used for the specified measurement when RF is the selected input. The RF trigger source can be queried and changed even while another input is selected, but it is inactive until RF becomes the selected input.

Note the inclusion of the <measurement> parameter in the command below. Because each measurement remembers its own Trigger Source, the command must be qualified with the measurement name. Note that for the Swept SA measurement this is not the case; for backwards compatibility, no <measurement> parameter is used when setting the Trigger Source for the Swept SA measurement.

Remote Command	`:TRIGger:<measurement>[:SEQuence]:RF:SOURce EXTernal1 | EXTernal2 | IMMediate | LEVel | FMT | LINE | FRAMe | RFBurst | VIDeo | IF | TV | PXI | INTernal | PRTChandet | PRTFrame | PRTEvent`
	`:TRIGger:<measurement>[:SEQuence]:RF:SOURce?`
	Note that the available parameters are model number and hardware dependent

Example	Select the external 1 trigger input for the ACP measurement and the RF input:
	`:TRIG:ACP:RF:SOUR EXT1`
	Select video triggering for the `SANalyzer` measurement and the RF input. For `SAN`, do not use the `<measurement>` keyword:
	`:TRIG:RF:SOUR VID`

Notes	Not all measurements have all the trigger sources available to them. Check the trigger source documentation for your specific measurement to see what sources are available Note that not all trigger sources are available for each input, and that the available parameters are model number and hardware dependent For the **RF Trigger Source,** the following trigger sources are available:

`IMMediate`	free run triggering
`VIDeo`	triggers on the video signal level
`LEVel`	triggers on the video signal level with time qualified triggering
`FMT`	triggers on the amplitude spectrum with frequency mask triggering
`LINE`	triggers on the power line signal
`EXTernal1` or `EXTernal`	triggers on an externally connected trigger source marked “Trigger 1 In” on the rear panel of standalone instruments, “Trigger 3” on the front panel of EXM and VXT model M9421A, and “Trigger 1” on the front panel of VXT models M9410A/11A/15A/16A
`EXTernal2`	triggers on an externally connected trigger source marked “Trigger 2 In” on the front panel of standalone instruments, and “Trigger 1” on the front panel of EXM and VXT model M9421A, and “Trigger 2” on the front panel of VXT models M9410A/11A/15A/16A. In some models, there is no second External input. In these models, the External 2 selection is not shown and the `EXTernal2` parameter will generate a “Hardware missing; Not available for this model number” message
`RFBurst`	triggers on the bursted frame
`FRAMe`	triggers on the periodic timer
`IF` (video)	same as video, for backwards compatibility only
`PRTChandet`	triggers on Base Station Emulation detecting a valid UL signal (PUSCH/PUCCH/PRACH/SRS)

`PRTFrame`	triggers on the Base Station Emulation periodic technology format radio frame with data frame aligned to the BSE timing
`PRTEvent`	triggers on the Base Station Emulation events
`INTernal`	triggers on the internal source trigger output, for models with an internal source such as VXT
`PXI` trigger	only supported in PXI (modular) instruments

`*OPC` should be used after requesting data. This will hold off any subsequent changes to the selected trigger source, until after the sweep is completed and the data is returned

Available ranges, and presets can vary from mode to mode

Dependencies	The available choices for VXT are: Free Run, Video, Internal, External 1, External 2, RF Burst, Periodic and PXI In VXT, Internal is only in VXT models M9410A/11A/15A/16A, not in models M9420/21A, and Internal and Periodic are not available in Spectrum Analyzer Mode `PXI` is only found in VXT The available choices for EXM are Free Run, Video, Internal, External 1, External 2, RF Burst, and Periodic The available choices for UXM are Free Run, External 1, Prot Channel Detection, Prot Frame Aligned, and Prot Event Prot Channel Detection, Prot Frame Aligned, and Prot Event are only available in UXM The available choices for E7760 are Free Run, External 1, Internal, Video and RF Burst In some models, there is no second External input. In these models, the External 2 selection is not shown and the `EXTernal2` parameter will generate a “Hardware missing; Not available for this model number” error
Status Bits/OPC dependencies	The Status Operation Register bit 5 "Waiting for Trigger" is set at the same time as the Sweeping or Measuring bit is set. It is cleared when the trigger actually occurs (that is, after the trigger event occurs and all the applicable trigger criteria have been met). A corresponding pop-up message ("Waiting for trigger") is generated if no trigger signal appears after approximately 2 seconds. This message goes away when a trigger signal appears

I/Q Trigger Source (Remote Command Only)

Selects the trigger to be used for the specified measurement when I/Q (which requires option BBA) is the selected input. The I/Q trigger source can be queried and changed even while another input is selected, but it is inactive until I/Q becomes the selected input.

Remote Command	`:TRIGger:<measurement>[:SEQuence]:IQ:SOURce EXTernal1 | EXTernal2 | IMMediate | IQMag | IDEMod | QDEMod | IINPut | QINPut | AIQMag` `:TRIGger:<measurement>[:SEQuence]:IQ:SOURce?`
Example	`:TRIG:WAVeform:SOUR IQM` Selects I/Q magnitude triggering for the IQ Waveform measurement and the I/Q input

<table>
<tr><td>Notes</td><td>Not all measurements have all the trigger sources available to them. Check the trigger source documentation for your specific measurement to see what sources are available

A corresponding pop-up message ("Waiting for trigger") is generated if no trigger signal appears after approximately 2 sec. This message goes away when a trigger signal appears</td></tr>
</table>

8.1.1.1 Free Run

Free Run triggering occurs immediately after the sweep/measurement is initiated.

Example	Swept SA measurement:
	`:TRIG:SOUR IMM`
	Measurements other than Swept SA:
	`:TRIG:<meas>:SOUR IMM`

Annunciation	Free Run (in the Meas Bar)

8.1.1.2 Video/ADC

The Video trigger condition is met when the video signal at the left edge of the graticule (the filtered and detected version of the input signal, including both RBW and VBW filtering) crosses the video trigger level with the chosen slope.

The Video trigger level is shown as a labeled line on the display. The line is displayed as long as Video is the selected trigger source. The Trigger Level line can be adjusted using the step keys, knob, or numeric keypad. It can also be dragged on the display with your finger or with a mouse.

When the detector selected for all active traces is the average detector, the video signal for triggering does not include any VBW filtering.

Log Plot and Spot Frequency measurements, in the Phase Noise Mode, do not support Video Trigger.

The **Trigger** tab contains the following Trigger Source dependent controls when Video Trigger is selected:

- "Prot Frame Aligned" on page 2889
- "Trigger Delay" on page 2892
- "Trigger Slope" on page 2896

Additional controls are also present, which are not dependent on the selected Trigger Source.

Note that Video Trigger is a software trigger of the acquired trace for some measurements and a hardware trigger of the IF envelope for others. Most measurements support one method or the other, although some (like ACP) don’t support Video Trigger at all. For those measurements that support Video Trigger as a software trigger, the Trigger Level units will be dependent on the current Y Axis Unit for the measurement; for those that support Video Trigger as an IF Envelope trigger, the units are typically in dBm.

Example	Swept SA measurement:
	`:TRIG:SOUR VID`
	Measurements other than Swept SA:
	`:TRIG:<meas>:SOUR VID`

Annunciation	Video (in the Meas Bar)

8.1.1.3 ADC Trigger

Some IF Paths in certain models (like N9042B) in IQ Measurements have an ADC trigger. ADC is like the Video trigger, but with 2 limitations due to a lack of post-processing.

First, the trigger is not limited to the current measurement’s setup IF BW. The trigger sees everything in the passband, so measurements like IQA Complex Spectrum can be triggered outside of the current Digital IF BW.

The final limitation is, due to lack of post-processing, the amplitude accuracy of the ADC trigger is less than the video trigger.

If ADC trigger is available for at least one IF Path on a model, then the ADC trigger will always be seen as a trigger option in IQ Measurements. However, it will only be available (not grayed out) to select when using IF Paths that support it.

If Video Trigger is selected and measurement setup (IF Path or IF BW) is changed to a path that only supports the ADC trigger instead, then ADC trigger will be selected and *vice versa*.

Example	Measurements other than Swept SA: `:TRIG:<meas>:SOUR ADC`
Annunciation	ADC (in the Meas Bar)

8.1.1.4 Line

When **Line** is selected, start of a new sweep/measurement will be synchronized with the next cycle of the line voltage.

Line trigger is not available when operating from a "dc power source", for example, when the instrument is powered from batteries.

Line trigger is not available when using modular instruments like the VXT.

The **Trigger** tab contains the following Trigger Source dependent controls when **Line** Trigger is selected:

- "Trigger Delay" on page 2892
- "Trigger Slope" on page 2896

Additional controls are also present that are not dependent on the selected Trigger Source.

Example	`:TRIG:SOUR LINE`
	Swept SA measurement
	`:TRIG:<meas>:SOUR LINE`
	Measurements other than Swept SA

Annunciation	LINE (in the Meas Bar)

8.1.1.5 External 1

When **External 1** is selected, a new sweep/measurement starts when the external trigger condition is met using the TRIGGER 1 IN input connector on the rear panel.

Grayed-out if Ext 1 is in use by Point Trigger in the Source Setup menu of Swept SA. Forced to "Free Run" on page 2877 if already selected and Point Trigger is set to External 1.

The **Trigger** tab contains the following Trigger Source dependent controls when External 1 Trigger is selected:

- "Prot Frame Aligned" on page 2889
- "Trigger Delay" on page 2892
- "Trigger Slope" on page 2896

Additional controls are also present that are not dependent on the selected Trigger Source.

Example	`:TRIG:SOUR EXT1`
	Swept SA measurement
	`:TRIG:<meas>:SOUR EXT1`
	Measurements other than Swept SA

Annunciation	External 1 (in the Meas Bar)

8.1.1.6 External 2

When **External 2** is selected, a new sweep/measurement starts when the external trigger condition is met using the TRIGGER 2 IN input connector on the rear panel.

Grayed-out if Ext 2 is in use by Point Trigger in the Source Setup menu of Swept SA. Forced to "Free Run" on page 2877 if already selected and Point Trigger is set to External 2.

The **Trigger** tab contains the following Trigger Source dependent controls when External 2 Trigger is selected:

- "Prot Frame Aligned" on page 2889
- "Trigger Delay" on page 2892
- "Trigger Slope" on page 2896

Additional controls are also present that are not dependent on the selected Trigger Source.

Example	`:TRIG:SOUR EXT2`
	Swept SA measurement
	`:TRIG:<meas>:SOUR EXT2`
	Measurements other than Swept SA

Annunciation	External 2 (in the Meas Bar)

8.1.1.7 External 3

When **External 3** is selected, a new sweep/measurement starts when the external trigger condition is met using the TRIGGER 3 IN input connector on the rear panel.

This control only appears in certain instrument and option combinations, as follows.

- For N9042B, selects the Precision External Trigger, but available only when IF Path is 255 MHz or wider. The resolution will be within one sample count of the 4.8 GHz ADC sampling rate for 255 ~ 2 GHz IF Paths, and within one sample count of the 10.2 GHz sampling rate for the 4 GHz IF Path
- For all other instruments, available only if Option H1G is installed. It is only available when the 1 GHz path is chosen, either directly or indirectly; in all other paths it is visible but grayed-out. Direct and indirect selection of the 1 GHz path occurs as follows:
    - **Direct**: Measurements that directly support the 1 GHz path have a 1 GHz selection in the **IF Path** menu in **Meas Setup**
    - **Indirect**: Certain measurements, such as Power Statistics CCDF (`PST`), always choose the widest available path, and so will choose the 1 GHz path if it is available, even if there is no **IF Path** menu for the measurement. **External 3** will be visible when this results in the 1 GHz path being selected, even if there is no control or readout indicating that the 1 GHz path has been selected

For a full list of Modes and measurements that support **External 3**, see "External 3 Support" on page 2867 in the section "Select Trig Source" on page 2864.

When **External 3** is set, and then becomes disabled because you switched away from the 1 GHz path, the Trigger Source selection reverts to the default ("Free Run" on page 2877).

When **External 3** Trigger is selected, the **Trigger** tab displays the following Trigger Source dependent controls:

- "Prot Frame Aligned" on page 2889
- "Trigger Delay" on page 2892
- "Trigger Slope" on page 2896

Additional controls are also present that are not dependent on the selected Trigger Source.

Example	`:TRIG:SPEC:SOUR EXT3` Sets External 3 as the trigger source for the Complex Spectrum measurement
Annunciation	External 3 (in the Meas Bar)

8.1.1.8 Audio External

When **Audio External** is selected, a new sweep/measurement starts when the external trigger condition is met using the TRIG IN input connector on the front panel of the M9260A Audio Analyzer module. This is a TTL level input (not analog) that supports both rising edge and falling edge triggers.

Only appears in modular instruments, and only when the M9260A Audio Analyzer module is installed, such as in M8920A.

The **Trigger** tab contains the following Trigger Source dependent controls when Audio External Trigger is selected:

- "Trigger Delay" on page 2892
- "Trigger Slope" on page 2896

Additional controls are also present that are not dependent on the selected Trigger Source.

Example	`:TRIG:RTES:SOUR AEXT` Sets Audio External as the trigger source for the Radio Test measurement
Annunciation	Audio Ext (in the Meas Bar)

8.1.1.9 RF Burst

When **RF Burst** is selected, a new sweep/measurement starts when an RF burst envelope signal is identified from the signal at the RF Input connector.

In some models, a variety of burst trigger circuitry is available, resulting in various available burst trigger bandwidths. The instrument automatically chooses the appropriate trigger path based on the hardware configuration and other settings of the instrument.

The **Trigger** tab contains the following Trigger Source dependent controls when RF Burst is selected:

- "Trigger Level Absolute/Relative" on page 2897
- "Absolute Trigger Level" on page 2898
- "Relative Trigger Level" on page 2898
- "Trigger Delay" on page 2892
- "Trigger Slope" on page 2896

Additional controls are also present that are not dependent on the selected Trigger Source.

Example	`:TRIG:SOUR RFB`
	Swept SA measurement
	`:TRIG:<meas>:SOUR RFB`
	Measurements other than Swept SA

Annunciation	RF Burst (in the Meas Bar)

8.1.1.10 Periodic

When **Periodic** is selected, the instrument uses a built-in periodic timer signal as the trigger. Trigger occurrences are set by the **Periodic Timer** parameter, which is modified by the **Offset** and Periodic Sync Src.

Use this trigger when there is a periodic signal but no reliable signal on which to trigger. You can synchronize the periodic signal with outside events (using the Periodic Sync Src) to get closer to a reliable trigger signal (see "More Information" on page 2884 below).

If you do not have a sync source selected (`OFF`), then the internal timer will not be synchronized with any external timing events.

The **Trigger** tab contains the following Trigger Source dependent controls when Periodic Trigger is selected:

- "Period" on page 2900
- "Offset" on page 2901
- "Reset Offset Display" on page 2902
- "Sync Source" on page 2903
- "Trigger Delay" on page 2892

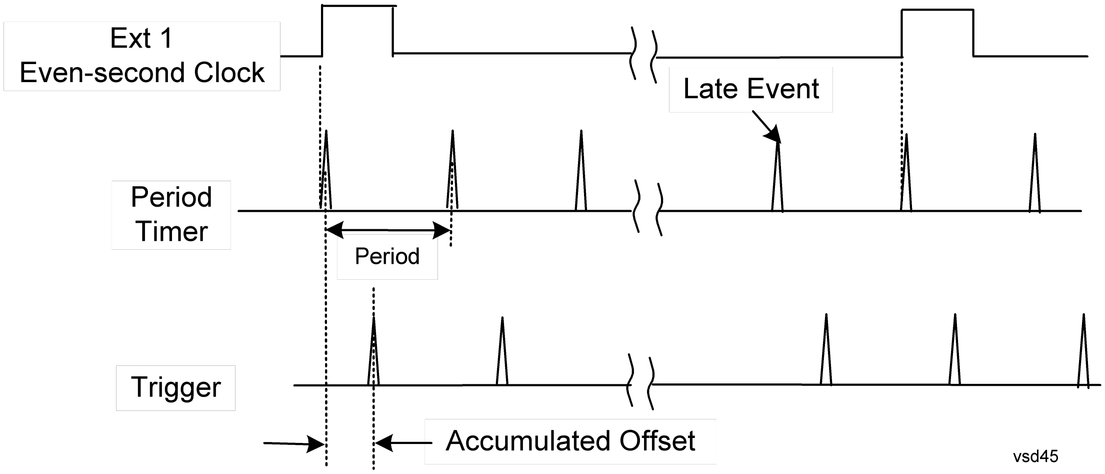
Additional controls are also present that are not dependent on the selected Trigger Source.

Example	`:TRIG:SOUR FRAM`
	Swept SA measurement
	`:TRIG:<meas>:SOUR FRAM`
	Measurements other than Swept SA

Annunciation	Periodic (in the Meas Bar)

More Information

The graphic below shows the action of the periodic timer trigger.



A common application is measuring periodic burst RF signals for which a trigger signal is not easily available. For example, we might be measuring a TDMA radio that bursts every 20 ms. Let’s assume that the 20 ms period is very consistent. Let’s also assume that we do not have an external trigger source available that is synchronized with the period, and that the signal-to-noise ratio of the signal is not high enough to provide a clean RF burst trigger at all of the analysis frequencies. For example, we might want to measure spurious transmissions at an offset from the carrier that is larger than the bandwidth of the RF burst trigger. In this application, we can set the Periodic Timer to a 20.00 ms period and adjust the offset from that timer to position our trigger just where we want it. If we find that the 20.00 ms is not exactly right, we can adjust the period slightly to minimize the drift between the period timer and the signal to be measured.

A second way to use this feature would be to use **Sync Source** temporarily, instead of **Offset**. In this case, we might tune to the signal in a narrow span and use the RF Burst trigger to synchronize the periodic timer. Then we would turn the sync source off so that it would not miss-trigger. Miss-triggering can occur when we are tuned so far away from the RF burst trigger that it is no longer reliable.

A third example would be to synchronize to a signal that has a reference time element of much longer period than the period of interest. In some CDMA applications, it is useful to look at signals with a short periodicity, by synchronizing that periodicity to the "even-second clock" edge that happens every two seconds. Thus, we could connect the even-second clock trigger to Ext1 and use then Ext1 as the sync source for the periodic timer.

The figure below illustrates this third example. The top trace represents the even-second clock. It causes the periodic timer to synchronize with the leading edge shown. The instrument trigger occurs at a time delayed by the accumulated offset from the period trigger event. The periodic timer continues to run, and triggers continue to occur, with a periodicity determined by the instrument time base. The timer output (labeled "late event") will drift away from its ideal time due to imperfect matching between the time base of the signal being measured and the time base of the instrument, and also because of imperfect setting of the period parameter. But the synchronization is restored on the next even-second clock event. ("Accumulated offset" is described in the in the **Offset** function section.)

8.1.1.11 I/Q Mag

When **I/Q Mag** is selected, the trigger condition is met when the I/Q magnitude crosses the I/Q magnitude trigger level. The magnitude is measured at the output of the main I/Q digital receiver.

This trigger type is only valid for measurements that support the I/Q inputs.

The **Trigger** tab contains the following Trigger Source dependent controls when I/Q Mag Trigger is selected:

- "Prot Frame Aligned" on page 2889
- "Trigger Delay" on page 2892
- "Trigger Slope" on page 2896

Additional controls are also present that are not dependent on the selected Trigger Source.

Example	`:TRIG:<meas>:SOUR IQM`
Annunciation	I/Q Mag (in the Meas Bar)

8.1.1.12 Input I

When **Input I** is selected, the condition is met when the voltage at the I Input crosses the trigger level.

This trigger type is only valid for measurements that support the I/Q inputs.

The **Trigger** tab contains the following Trigger Source dependent controls when Input I Trigger is selected:

- "Prot Frame Aligned" on page 2889
- "Trigger Delay" on page 2892
- "Trigger Slope" on page 2896

Additional controls are also present that are not dependent on the selected Trigger Source.

Example	`:TRIG:<meas>:SOUR IINP`
Annunciation	Input I (in the Meas Bar)

8.1.1.13 Input Q

When **Input Q** is selected, the condition is met when the voltage at the I Input crosses the trigger level.

This trigger type is only valid for measurements that support the I/Q inputs.

The **Trigger** tab contains the following Trigger Source dependent controls when Input Q Trigger is selected:

- "Prot Frame Aligned" on page 2889
- "Trigger Delay" on page 2892
- "Trigger Slope" on page 2896

Additional controls are also present that are not dependent on the selected Trigger Source.

Example	`:TRIG:<meas>:SOUR QINP`
Annunciation	Input Q (in the Meas Bar)

8.1.1.14 I (Demodulated)

When **I (Demodulated)** is selected, the trigger condition is met when the I voltage crosses the I voltage trigger level.

This trigger type is only valid for measurements that support the I/Q inputs.

The **Trigger** tab contains the following Trigger Source dependent controls when I (Demodulated) Trigger is selected:

- "Prot Frame Aligned" on page 2889
- "Trigger Delay" on page 2892
- "Trigger Slope" on page 2896

Additional controls are also present that are not dependent on the selected Trigger Source.

Example	`:TRIG:<meas>:SOUR IDEM`
Annunciation	I (Demod) (in the Meas Bar)

8.1.1.15 Q (Demodulated)

When **Q (Demodulated)** is selected, the trigger condition is met when the Q voltage crosses the Q voltage trigger level.

This trigger type is only valid for measurements that support the I/Q inputs.

The **Trigger** tab contains the following Trigger Source dependent controls when Q (Demodulated) Trigger is selected:

- "Prot Frame Aligned" on page 2889
- "Trigger Delay" on page 2892
- "Trigger Slope" on page 2896

Additional controls are also present that are not dependent on the selected Trigger Source.

Example	`:TRIG:<meas>:SOUR QDEM`
Annunciation	Q (Demod) (in the Meas Bar)

8.1.1.16 Aux I/Q Mag

When **Aux I/Q Mag** is selected, the trigger condition is met when the auxiliary receiver's I/Q magnitude output crosses the Auxiliary I/Q magnitude trigger level.

This trigger type is only valid for measurements that support the I/Q inputs.

The **Trigger** tab contains the following Trigger Source dependent controls when Aux I/Q Mag Trigger is selected:

- "Prot Frame Aligned" on page 2889
- "Trigger Delay" on page 2892
- "Trigger Slope" on page 2896
- "Trigger Center Frequency" on page 2906
- "Trigger BW" on page 2906

Additional controls are also present that are not dependent on the selected Trigger Source.

Example	`:TRIG:<meas>:SOUR AIQM`
Annunciation	Aux I/Q Mag (in the Meas Bar)

8.1.1.17 PXI

When **PXI** is selected, a new sweep/measurement will start when detecting the signal from the PXI backplane trigger line.

This trigger type is only found in the modular instrument products.

The **Trigger** tab contains the following Trigger Source dependent controls when PXI Trigger is selected:

- "Select PXI Line" on page 2907
- "Trigger Delay" on page 2892
- "Trigger Slope" on page 2896

Additional controls are also present that are not dependent on the selected Trigger Source.

Example	Swept SA measurement:
	`:TRIG:SOUR PXI`
	Measurements other than Swept SA:
	`:TRIG:<meas>:SOUR PXI`

Annunciation	PXI (in the Meas Bar)

8.1.1.18 Internal

When **Internal** is selected, the trigger condition is met when detecting the signal from the internal RF Source module.

This trigger type is only found in the modular instrument products.

The **Trigger** tab contains the following Trigger Source dependent controls when Aux I/Q Mag Trigger is selected:

- "Prot Frame Aligned" on page 2889
- "Trigger Delay" on page 2892
- "Trigger Slope" on page 2896

Additional controls are also present that are not dependent on the selected Trigger Source.

For an Internal trigger to occur, there must be a trigger output from the internal RF source. This means that you must configure the Source Trigger Output before selecting Internal as the Trigger Source. To enable the Source Trigger Output,

output trigger should not be off if internal source works as list sequence mode and Trig 2 Out should not be off if internal source works as MXG mode. Otherwise, no trigger occurs, and measurement does not start.

Example	Swept SA measurement:
	`:TRIG:SOUR INTernal`
	Measurements other than Swept SA:
	`:TRIG:<meas>:SOUR INTernal`

Annunciation	Internal (in the Meas Bar)

8.1.1.19 Prot Channel Detection

Selects a protocol channel detection Base Station Emulation as the trigger. When Prot Channel Detection is selected, a new sweep/measurement will start when the protocol channel detection trigger condition is met.

Protocol Channel Detection Trigger is defined as the Base Station Emulation protocol channel detection event of PUSCH, PUCCH, PRACH or SRS. With this trigger, the IQ data, and therefore the measurement, is aligned at the beginning of the LTE sub-frame where the particular event was detected. Channel transmission is aligned to the sub-frame boundary; therefore, the measurement is aligned with its transmission with the exception of SRS, which might not start at the beginning of the sub-frame containing the SRS as it might have an offset from the start of the sub-frame base on the SRS configuration, In this case, the trigger and measurement are aligned to the beginning of the sub-frame containing SRS as defined by this trigger type (which is not the beginning of the SRS itself due to the offset).

This trigger type is only available in UXM.

Example	`:TRIG:<meas>:SOUR PRTC`
Annunciation	Prot Chan Det (in the Meas Bar)

8.1.1.20 Prot Frame Aligned

Selects a protocol frame aligned Base Station Emulation as the trigger. When Prot Frame Aligned is selected, a new sweep/measurement will start when the protocol frame aligned data trigger condition is met.

Prot Frame Aligned Trigger is aligned with the Base Station Emulation Protocol uplink frame timing boundary. It depends on the technology format of the base station call processing.

This trigger type is only available in UXM.

Example	`:TRIG:<meas>:SOUR PRTF`
Annunciation	Prot Frame (in the Meas Bar)

8.1.1.21 Prot Event

Selects a protocol frame aligned Base Station Emulation as the trigger. When Prot Frame Aligned is selected, a new sweep/measurement will start when the protocol frame aligned data trigger condition is met.

Prot Event Trigger is defined as the Base Station Emulation protocol internal event such as the starting of a predefined uplink pattern for a relative power control ramp. With this trigger, the IQ data, and therefore the measurement, is aligned with the start of the desired uplink pattern.

This trigger type is only available in UXM.

Example	`:TRIG:<meas>:SOUR PRTF`
Annunciation	Prot Frame (in the Meas Bar)

8.1.2 Trigger Level

Sets the amplitude level for Trigger and Gate sources that use level triggering. When the video signal crosses this level, with the chosen slope, the trigger occurs.

For any given Trigger, Gate, or Periodic Sync Src, the same Trigger Level is used for the Trigger source in the Trigger menu, for the Gate source in the Gate Source menu, and for the Periodic Sync source in the Periodic Sync Src menu.

If **Video** is the selected trigger source, the trigger level displays as a green horizontal line with the label TRIG LVL just above it on the right:

If the value of trigger level is off screen low this line displays along the bottom of the graticule. If the value of trigger level is off screen high this line displays above the graticule but no farther above than 1.5 % of the graticule height (the same as the trace itself). Note that the TRIG LVL label cannot display above the graticule so the label itself stops at the top of the graticule.

For the I/Q Triggers, the I/Q reference impedance is used for converting between power and voltage.

Trigger Level Parameters

Source	Example	Min	Max	Preset	Resolution	Step Key Incr	Knob Incr
Video	`TRIG:VID:LEV -40 dBm`	-170 dBm	+30 dBm	-25 dBm	.01 dB	Scale/Div (Log), 1 dB (Lin)	Step/10, but never < 0.1 dB
Level	`TRIG:LEV:LEV -40 dBm`	-170 dBm	+30 dBm	-25 dBm	.01 dB	Scale/Div (Log), 1 dB (Lin)	Step/10, but never < 0.1 dB
External 1|2	`TRIG:EXT1:LEV 0.4 V`	-5 V VXT models M9410A/11A/15A/16A: 0 V	5 V VXT models M9410A/11A/15A/16A: 2.5 V	1.2 V	10 mV	0.5 V	0.1 V
I/Q Mag	`TRIG:IQM:LEV -30 dBm`	-200 dBm	100 dBm	-25 dBm	.1 dB	Scale/Div (Log), 1 dB (Lin)	Step/10, but never < 0.1 dB
I (Demod)	`TRIG:IDEM:LEV 0.5 V`	-1 V	1 V	0.25 V	4 significant digits	Scale/Div	Step/100, but never < 1 µV
Q (Demod)	`TRIG:QDEM:LEV 0.5 V`	-1 V	1 V	0.25 V	4 significant digits	Scale/Div	Step/100, but never < 1 µV
Input I	`TRIG:IINP:LEV 0.5 V`	-1 V	1 V	0.25 V	4 significant digits	Scale/Div	Step/100, but never < 1 µV
Input Q	`TRIG:QINP:LEV 0.5 V`	-1 V	1 V	0.25 V	4 significant digits	Scale/Div	Step/100, but never < 1 µV
Aux Chan I/Q Mag	`TRIG:AIQM:LEV -30 dBm`	-200 dBm	100 dBm	-25 dBm	.1 dB	Scale/Div (Log), 1 dB (Lin)	Step/10, but never < 0.1 dB
Internal	`TRIG:INT:LEV 1.2 V`	-5 V VXT models M9410A/11A/15A/16A: 0 V	5 V VXT models M9410A/11A/15A/16A: 2.5 V	1.2 V	10 mV	.5 V	.1 V
ADC	`TRIG:ADC:L`	-170 dBm	30 dBm	-25	.01 dB	Scale/D	Step/10,

Source	Example	Min	Max	Preset	Resolution	Step Key Incr	Knob Incr
	`EV -30 dBm`			dBm		iv (Log), 1 dB (Lin)	but never < 0.1 dB

More Information

For Video Trigger Level, when sweep type = FFT, the video trigger uses the amplitude envelope in a bandwidth wider than the FFT width as a trigger source. This can be useful but does not have the same relationship between the displayed trace and the trigger level as in swept triggering.

For Video Trigger Level the settable resolution of the function is 0.01 dB, even when the Y Axis Unit is linear. In Linear Y Axis Unit (for example, Volts) this requires 4 significant digits to display on the control.

For the Level trigger source, used in RTSA and other measurements, External Gain and Ref Level Offset modify the actual trace data as it is taken and are taken into account by Trig Level.

Remote Command	`:TRIGger[:SEQuence]:<trig_source>:LEVel <ampl>`
	`:TRIGger[:SEQuence]:<trig_source>:LEVel?`
	where `<trig_source>` is one of:
	`EXTernal1 | EXTernal2 | EXTernal3 | VIDeo | ADC | LEVel | IQMag | IDEMod | QDEMod | IINPut | QINPut | AIQMag | INTernal`

Example	`:TRIG:VID:LEV -40 dBm`
Dependencies	Only appears when Video, External 1|2, or an I/Q trigger is selected as the Trigger Source
State Saved	Saved in instrument state

Backwards Compatibility SCPI	`:TRIGger[:SEQuence]:IF:LEVel`
	taken as video trigger level
	`:TRIGger[:SEQuence]:IF:LEVel?`
	taken as video trigger level query
	`:TRIGger[:SEQuence]:EXTernal:LEVel`
	the parameter EXTernal is mapped to EXTernal1
	`:TRIGger[:SEQuence]:FRAMe:EXTernal1:LEVel`

8.1.3 Trigger Delay

Controls a time delay that the instrument will wait to begin a sweep after meeting the trigger criteria, for Trigger and Gate sources that support Trigger Delay.

For any given Trigger, Gate, or Periodic Sync source, the same Trigger Delay is used for the Trigger source in the Trigger menu, for the Gate source in the Gate Source menu, and for the Periodic Sync source in the Periodic Sync Src menu.

Negative trigger delays can be used. Negative trigger delay makes intuitive sense in time domain and works well in FFT mode where the bandwidth of the filter before the video trigger is about 1.25 span. You can use negative delay to pre-trigger the instrument in the time domain or FFT, but not in swept spans. Video trigger delay may be set to negative values, in time domain, FFT and even swept, but in swept spans, negative settings of Trig Delay are treated as a zero setting within the internal hardware and the advisory message "Neg. Trig Delay unavailable in Swept Mode, zero delay used." is generated when such a delay is set.

Remote Command	`:TRIGger[:SEQuence]:<trig_source>:DELay <time>`
	`:TRIGger[:SEQuence]:<trig_source>:DELay?`
	where `<trig_source>` is one of:
	LINE | EXTernal1 | EXTernal2 | EXTernal3 | AEXTernal | VIDeo | ADC | RFBurst | FRAMe | LEVel | FMT | IQMag | IDEMod | QDEMod | IINPut | QINPut | AIQMag | PXI | INTernal

Example	`:TRIG:VID:DEL:STAT ON` `:TRIG:VID:DEL 100 ms`
Dependencies	Only appears when Video, Line, External 1|2, RF Burst, Periodic Timer or an I/Q trigger is selected as the Trigger Source
Couplings	When FMT Trigger Criteria is `INSIDE` or `OUTSIDE`, FMT Trigger Delay State is forced to `OFF` FMT Trigger Delay MaxValue is dependent on the current AcquisitionTime. The equation is: MaxValue = 2^16 x AcqTime, but never to exceed 70 sec. Ex: In PVT View with a min PVT Acq Time of 200 us, this Trigger Delay MaxValue is 13.26 sec. In RT Spectrum and Spectrogram with a min Acq Time of 100 us, this Trigger Delay MaxValue is 6.55 sec. When the Acq Time is increased, this MaxValue also increases
State Saved	Saved in instrument state
Annotation	Trig Delay (in the Measurement Bar)

Backwards Compatibility Notes	For backward compatibility with VSA/PSA comms apps
	`:TRIGger[:SEQuence]:IF:DELay`
	`:TRIGger[:SEQuence]:DELay`
	The legacy `:TRIGger[:SEQuence]:DELay` command affects the delay for the `VID`, `LINE`, `EXT1`, `EXT2`, and `RFB` triggers

Auto Function

Remote Command	`:TRIGger[:SEQuence]:<trig_source>:DELay:STATe OFF | ON | 0 | 1`
	`:TRIGger[:SEQuence]:<trig_source>:DELay:STATe?`
	where `<trig_source>` is one of:
	`LINE | EXTernal1 | EXTernal2 | EXTernal3 | AEXTernal | VIDeo | ADC | RFBurst | FRAMe | LEVel | FMT | IQMag | IDEMod | QDEMod | IINPut | QINPut | AIQMag | PXI | INTernal`

Preset	`OFF`

Backwards Compatibility Commands

Example	`:TRIG:DEL 1 ms`
Preset	1 us
State Saved	Saved in instrument state

Backwards Compatibility SCPI	`:TRIGger[:SEQuence]:DELay <time>`
	`:TRIGger[:SEQuence]:DELay?`
	`:TRIGger[:SEQuence]:DELay:STATe OFF | ON | 0 | 1`
	`:TRIGger[:SEQuence]:DELay:STATe?`

Example	`:TRIG:OFFS ON` `:TRIG:OFFS -100 ms`
Notes	ESA commands for trigger offset, which allowed you to use a positive or negative delay when in zero span and in a Res BW >= 1 kHz. For ESA compatibility, X-series instruments keep track of this offset and adds it to the Trigger Delay for VIDeo, LINE, EXTernal1 or EXTernal2 whenever the value is sent to the hardware, if in Zero Span and RBW >= 1 kHz
Preset	Off, 0 s
State Saved	Saved in instrument state
Min	-11 s
Max	+11 s
Backwards Compatibility SCPI	`:TRIGger[:SEQuence]:OFFSet <time>` `:TRIGger[:SEQuence]:OFFSet?`

Auto Function

Remote Command	`:TRIGger[:SEQuence]:OFFSet:STATe OFF | ON | 0 | 1` `:TRIGger[:SEQuence]:OFFSet:STATe?`
Preset	`OFF`

Trigger Delay Parameters

Note: in Swept SA, when transitioning from Zero Span to Swept spans, the trigger delay is clipped to -150 ms if it had been longer in Zero Span.

Source	Example	Preset	Min	Max	Resolution
Video	`TRIG:VID:DEL:STAT ON` `TRIG:VID:DEL 100 ms`	Off, 1 us	-150 ms (-10s in Swept SA Zero Span)	+500 ms	100 ns
Level	`TRIG:LEV:DEL:STAT ON`	Off, 30 ms	0 ms	70 sec (but	Multiple of Acq

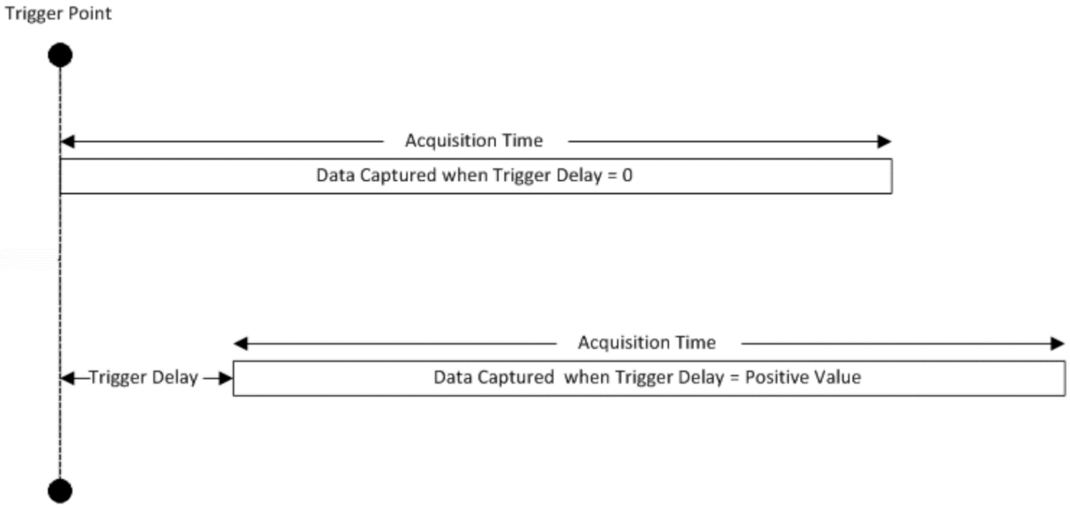
Source	Example	Preset	Min	Max	Resolution
	`TRIG:LEV:DEL 100 ms`			dependent on Acq Time like FMT)	Time (as is FMT)
FMT	`TRIG:FMT:DEL:STAT ON` `TRIG:FMT:DEL 100 ms`	Off, 30 ms	0 ms	70 sec (but dependent on Acq Time like FMT)	Multiple of Acq Time (as is FMT)
External 1|2	`TRIG:EXT1:DEL:STAT ON` `TRIG:EXT2:DEL 100 ms`	Off, 1 us	-150 ms (-10s in Swept SA Zero Span)	+500 ms	100 ns
Line	`TRIG:LINE:DEL:STAT ON` `TRIG:LINE:DEL 100 ms`	Off, 1 us	-150 ms (-10s in Swept SA Zero Span)	+500 ms	100 ns
RF Burst	`TRIG:RFB:DEL:STAT ON` `TRIG:RFB:DEL 100 ms`	Off, 1 us	-150 ms (-10s in Swept SA Zero Span)	+500 ms	100 ns
Periodic Timer	`TRIG:FRAM:DEL:STAT ON` `TRIG:FRAM:DEL 100 ms`	Off, 1 us	-150 ms (-10s in Swept SA Zero Span)	+500 ms	100 ns
I/Q Mag	`TRIG:IQM:DEL:STAT ON` `TRIG:IQM:DEL 10 ms`	Off, 1 us	-2.5 s	+10 s	10 ns
I (Demod)	`TRIG:IDEM:DEL:STAT ON` `TRIG:IDEM:DEL 10 ms`	Off, 1 us	-2.5 s	+10 s	10 ns
Q (Demod)	`TRIG:QDEM:DEL:STAT ON` `TRIG:QDEM:DEL 10 ms`	Off, 1 us	-2.5 s	+10 s	10 ns
Input I	`TRIG:IINP:DEL:STAT ON` `TRIG:IINP:DEL 10 ms`	Off, 1 us	-2.5 s	+10 s	10 ns
Input Q	`TRIG:QINP:DEL:STAT ON` `TRIG:QINP:DEL 10 ms`	Off, 1 us	-2.5 s	+10 s	10 ns
Aux Chan I/Q Mag	`TRIG:AIQM:DEL:STAT ON` `TRIG:AIQM:DEL 10 ms`	Off, 1 us	-2.5 s	+10 s	10 ns
PXI	`TRIG:PXI:DEL:STAT ON` `TRIG:PXI:DEL 10 ms`	Off, 1 us	-150 ms	+500 ms	100 ns
Internal	`TRIG:INT:DEL:STAT ON` `TRIG:INT:DEL 10 ms`	Off, 1 us	-150 ms	+500 ms	100 ns
Prot Channel Detection	`TRIG:PRTC:DEL:STAT ON` `TRIG:PRTC:DEL 1 ms`	Off, 1 ms	-10 ms	+10 ms	100 ns

Source	Example	Preset	Min	Max	Resolution
Prot Frame Aligned	`TRIG:PRTF:DEL:STAT ON` `TRIG:PRTF:DEL 1 ms`	Off, 1 ms	-10 ms	+10 ms	100 ns
Prot Event	`TRIG:PRTE:DEL:STAT ON` `TRIG:PRTE:DEL 1 ms`	Off, 1 ms	-10 ms	+10 ms	100 ns

Note: in Bluetooth Mode, the preset value of Trigger Delay is always (On, -20us).

More Information

Here is the diagram for Frequency Mask Trigger (FMT) Trigger Delay:



8.1.4 Trigger Slope

Sets the trigger polarity for Trigger and Gate sources that support Trigger Slope. It is set positive to trigger on a rising edge and negative to trigger on a falling edge.

For any given Trigger, Gate, or Periodic Sync source, the same Trigger Slope is used for the Trigger source in the Trigger menu, for the Gate source in the Gate Source menu, and for the Periodic Sync source in the Periodic Sync Src menu.

Remote Command

```
:TRIGger[:SEQuence]:<trig_source>:SLOPe POSitive | NEGative
:TRIGger[:SEQuence]:<trig_source>:SLOPe?
```

where `<trig_source>` is one of:

`LINE | EXTernal1 | EXTernal2 | EXTernal3 | AEXTernal | VIDeo | ADC RFBurst |`

	`IQMag | IDEMod | QDEMod | IINPut | QINPut | AIQMag | PXI | INTernal`

Example	`:TRIG:VID:SLOP NEG`
	`:TRIG:VID:SLOP?`
	`:TRIG:EXT1: SLOP NEG`

Dependencies	Only appears when Video, Line, External 1|2, RF Burst or an I/Q trigger is selected as the Trigger Source
Preset	`POSitive`
State Saved	Saved in instrument state

Backwards Compatibility SCPI	`:TRIGger[:SEQuence]:IF:SLOPe NEGative | POSitive`
	`:TRIGger[:SEQuence]:IF:SLOPe?`
	For backward compatibility with VSA/PSA comms apps
	`:TRIGger[:SEQuence]:EXTernal:SLOPe`
	For backward compatibility, the parameter `EXTernal` is mapped to `EXTernal1`
	`:TRIGger[:SEQuence]:FRAMe:EXTernal1:SLOPe`
	`:TRIGger[:SEQuence]:FRAMe:EXTernal2:SLOPe`

Example	`:TRIG:SLOP NEG`
Preset	`POSitive`
State Saved	Saved in instrument state
Backwards Compatibility SCPI	`:TRIGger[:SEQuence]:SLOPe POSitive | NEGative` `:TRIGger[:SEQuence]:SLOPe?`

Note: when transitioning from Zero Span to Swept spans, the trigger delay is clipped to -150 ms if it had been longer in Zero Span.

8.1.5 Trigger Level Absolute/Relative

Selects either Absolute or Relative Burst Triggering.

Remote Command	`:TRIGger[:SEQuence]:RFBurst:LEVel:TYPE ABSolute | RELative` `:TRIGger[:SEQuence]:RFBurst:LEVel:TYPE?`
Example	Set the trigger level type of the RF burst trigger to Relative: `:TRIG:RFB:LEV:TYPE REL`
Dependencies	Only appears when RF Burst is selected as the Trigger Source
Preset	`ABSolute`
State Saved	Saved in instrument state

8.1.6 Absolute Trigger Level

Sets the absolute trigger level for the RF burst envelope.

NOTE **When using the External Mixing path, the Absolute Trigger Level is uncalibrated because the factory default was set to accommodate the expected IF levels for the RF path.**

Remote Command	`:TRIGger[:SEQuence]:RFBurst:LEVel:ABSolute <ampl>` `:TRIGger[:SEQuence]:RFBurst:LEVel:ABSolute?`
Example	Set the trigger level of the RF burst envelope signal to the absolute level of 10 dBm: `:TRIG:RFB:LEV:ABS 10 dBm`
Notes	Sending this command does not switch the setting from relative to absolute; to switch it you need to send `:TRIGger[:SEQuence]:RFBurst:LEVel:TYPE` For Bluetooth Mode, the default value is -50 dBm
Dependencies	Only appears when RF Burst is selected as the Trigger, Gate or Periodic Sync Source
Couplings	This same level is used for the RF Burst trigger source in the Trigger menu, for the RF Burst selection in the Gate Source menu, and also for the RF Burst selection in the Periodic Sync Src menu
Preset	LTEA FDD/TDD modes: -40 dBm or -50 dBm depending on the hardware 5G NR mode: -40 dBm All other modes: -20 dBm
State Saved	Saved in instrument state
Min	-200 dBm
Max	100 dBm
Backwards Compatibility SCPI	`:TRIGger[:SEQuence]:FRAMe:RFBurst:LEVel:ABSolute`

8.1.7 Relative Trigger Level

Sets the relative trigger level for the RF burst envelope.

In some models, the relative burst trigger function is implemented in hardware. In other models, without the advanced triggering hardware required, the relative burst trigger function is implemented in software in some measurements, and is unavailable in other measurements.

When implemented in software, the relative RF Burst trigger function is implemented as follows:

1. The measurement starts with the absolute RF Burst trigger setting. If it cannot get a trigger with that level, auto trigger fires and the acquisition starts anyway.

After the acquisition, the measurement searches for the peak in the acquired waveform and saves it

2. In the next cycle of the measurement, the measurement determines a new absolute RF Burst level based on the peak value from the first measurement and the Relative RF Burst Trigger Level (always 0 or negative dB) set by the user. The following formula is used: absolute RF Burst level = peak level of the previous acquisition + relative RF Burst level
3. If the new absolute RF Burst level differs from the previous by more than 0.5 dB, the new level is sent to the hardware; otherwise, it is not updated (to avoid slowing down the acquisition)

Steps 2 and 3 repeat for subsequent measurements.

Remote Command	`:TRIGger[:SEQuence]:RFBurst:LEVel:RELative <rel_ampl>` `:TRIGger[:SEQuence]:RFBurst:LEVel:RELative?`
Example	Set the trigger level of the RF burst envelope signal to the relative level of -10 dB: `:TRIG:RFB:LEV:REL -10 dB`
Notes	Sending this command does not switch the setting from absolute to relative; to switch it you need to send `:TRIGger[:SEQuence]:RFBurst:LEVel:TYPE` The relative trigger level is not available in some measurements. In those measurements the `RELative` parameter, and `:TRIGger[:SEQuence]:RFBurst:LEVel:TYPE` generates an error if sent
Dependencies	This control is grayed-out and Absolute Trigger Level selected if the required hardware is not present in your instrument and the current measurement does not support Relative triggering Only appears when RF Burst is selected as the Trigger Source
Preset	-6 dB GSM: -25 dB
State Saved	Saved in instrument state
Min	-45 dB
Max	0 dB
Backwards Compatibility SCPI	`:TRIGger[:SEQuence]:RFBurst:LEVel` This legacy command is aliased to `:TRIGger[:SEQuence]:RFBurst:LEVel:RELative` because PSA had *only* relative burst triggering

In some models, a variety of burst trigger circuitry is available, resulting in various available burst trigger bandwidths. The instrument automatically chooses the appropriate trigger path based on the hardware configuration and other settings of the instrument. Here is the RF Burst Trigger Bandwidth table for Swept SA Measurement in SA mode:

Model	Option	Span	Swp Type	FFT Width	Trigger BW, −10 dB	Notes
EXA	any	All	all	all	16 MHz	
MXA	w/o B25	All	all	all	16 MHz	
MXA	B25	Zero	N/A	N/A	16 MHz	
MXA	B25	All	Swept	N/A	16 MHz	
MXA	B25	< 8 MHz	FFT	all	16 MHz	
MXA	B25	≥ 8 MHz	FFT	25 MHz	30 MHz	
PXA	any	all	all	all	> 80 MHz	Exceptions(*)

(*) Exceptions: When the RF Burst Trigger Level Type is Absolute, the start frequency is below 300 MHz, and the sweep type is either Swept or FFT with an FFT width of less than 25 MHz, then the RF Burst Trigger Bandwidth is not >80 MHz. It would be 16 MHz except in the subcase of Sweep Type = FFT and FFT Width between 8 and 25 MHz inclusive, where it would be 30 MHz.

8.1.8 Period

Sets the period of the internal periodic timer clock. For digital communications signals, this is usually set to the frame period of your current input signal. In the case that sync source is not set to OFF, and the external sync source rate is changed for some reason, the periodic timer is synchronized at every external synchronization pulse by resetting the internal state of the timer circuit.

Remote Command	`:TRIGger[:SEQuence]:FRAMe:PERiod <time>` `:TRIGger[:SEQuence]:FRAMe:PERiod?`
Example	`:TRIG:FRAM:PER 100 ms`
Dependencies	The invalid data indicator turns on when the period is changed, until the next sweep/measurement completes Only appears when Periodic Timer is selected as the Trigger or Gate Source
Couplings	The same period is used in the Gate Source selection of the period timer
Preset	20 ms unless noted below: GSM: 4.615383 ms 5G NR: 10 ms
State Saved	Saved in instrument state
Min	100.000 ns
Max	559.0000 ms

8.1.9 Offset

Adjusts the accumulated offset between the periodic timer events and the trigger event. Adjusting the accumulated offset is different than setting an offset and requires explanation.

The periodic timer is usually not synchronized with any external events, so the timing of its output events has no absolute meaning. Since the timing relative to external events (RF signals) is important, you need to be able to adjust (offset) it. However, you have no direct way to see when the periodic timer events occur. All that you can see is the trigger timing. When you want to adjust the trigger timing, you will be changing the internal offset between the periodic timer events and the trigger event. Because the absolute value of that internal offset is unknown, we will just call that the accumulated offset. Whenever the Offset parameter is changed, you are changing that accumulated offset. You can reset the displayed offset using Reset Offset Display. Changing the display does not change the value of the accumulated offset, and you can still make additional changes to accumulated offset.

To avoid ambiguity, we define that an increase in the "offset" parameter, either from the knob or the SCPI adjust command, serves to delay the timing of the trigger event.

Remote Command	`:TRIGger[:SEQuence]:FRAMe:OFFSet <time>` `:TRIGger[:SEQuence]:FRAMe:OFFSet?`
Example	`:TRIG:FRAM:OFFS 1.2 ms`
Notes	The front panel interface (for example, the knob), and this command, adjust the accumulated offset, which is shown on the control However, the actual amount sent to the hardware each time the offset is updated is the delta value, that is, the current accumulated offset value minus the previous accumulated offset value. Note that the accumulated offset value is essentially arbitrary; it represents the accumulated offset from the last time the offset was zeroed (with the Reset Offset Display key) Note that this command does not change the period of the trigger waveform. Note also that Offset is used only when the sync source is set to `OFF`, otherwise delay is used, see "Trigger Delay" on page 2892 An increase in the "offset" parameter, either from the knob or the SCPI adjust command, serves to delay the timing of the trigger event When the SCPI command is sent the value shown on the control is updated with the new value. However, the actual amount sent to the hardware is the delta value, that is, the current accumulated offset value minus the previous accumulated offset value The SCPI query simply returns the value currently showing on the key
Dependencies	The invalid data indicator turns on when the offset is changed, until the next sweep/measurement completes Only appears when Periodic Timer is selected as the Trigger or Gate Source

Couplings	The same offset is used in the Gate Source selection of the period timer
Preset	0 s
State Saved	Saved in instrument state
Min	-10.000 s
Max	10.000 s

8.1.10 Reset Offset Display

Resets the value of the periodic trigger offset display setting to 0.0 seconds. The current displayed trigger location may include an offset value defined with the **Offset** key. Pressing this control redefines the currently displayed trigger location as the new trigger point that is 0.0 s offset. The **Offset** control can then be used to add offset relative to this new timing.

Remote Command	`:TRIGger[:SEQuence]:FRAMe:OFFSet:DISPlay:RESet`
Example	`:TRIG:FRAM:OFFS:DISP:RES`
Dependencies	Only appears when Periodic Timer is selected as the Trigger or Gate Source

8.1.11 Offset Adjust (Remote Command Only)

Lets you advance the phase of the frame trigger by the amount you specify. It does *not* work in the same way as the related front panel keys.

The command does not change the period of the trigger waveform. If the command is sent multiple times, it advances the phase of the frame trigger an additional amount each time it is sent. Negative numbers are permitted.

Remote Command	`:TRIGger[:SEQuence]:FRAMe:ADJust <time>`
Example	`:TRIG:FRAM:ADJ 1.2 ms`
Notes	Note also that Offset is used only when the sync source is set to OFF, otherwise delay is used, see section "Trigger Delay" on page 2892 An increase in the "offset" parameter, either from the knob or the SCPI adjust command, serves to delay the timing of the trigger event The front panel interface (for example, the knob) and the `:TRIG:FRAM:OFFS` command adjust the accumulated offset, which is shown on the active function display. However, the actual amount sent to the hardware is the delta value, that is, the current offset value minus the previous offset value When the SCPI command is sent the value shown on the control (and the Active Function, if this happens to be the active function) is updated by increasing it (or decreasing it if the value sent is negative) by the amount specified in the SCPI command This is no query for this command
Dependencies	The invalid data indicator turns on when the offset is changed, until the next sweep/measurement

	completes
Couplings	The same offset is used in the Gate Source selection of the period timer
Preset	0 s
State Saved	Saved in instrument state
Min	-10.000 s
Max	10.000 s

8.1.12 Sync Source

For convenience, you can select the Periodic Timer Sync Source using this dropdown. You can also select it from the Periodic Sync Src tab, which also contains controls that let you configure the Sync Source.

Selects a signal source for you to synchronize your periodic timer trigger to, otherwise you might be triggering at some arbitrary location in the frame. Synchronization reduces the precision requirements on the setting of the period.

Example	`:TRIG:FRAM:SYNC EXT1`
	`:TRIG:FRAM:SYNC EXT2`
	`:TRIG:FRAM:SYNC RFB`
	`:TRIG:FRAM:SYNC OFF`

Dependencies	Only appears when Periodic Timer is selected as the Trigger or Gate Source
Preset	`OFF`
State Saved	Saved in instrument state

8.1.13 TV Line

Selects the **TV Line** number on which to trigger. Line number range is dependent on the settings of the "Standard" on page 2905 and **"Field" on page 2904**menus within the TV trigger setup functions. When the line number is incremented beyond the upper limit, the value will change to the lower limit and continue incrementing from there. When the line number is decremented below the lower limit, the value will change to the upper limit and continue decrementing from there.

Remote Command	`:TRIGger[:SEQuence]:TV:LINE <integer>` `:TRIGger[:SEQuence]:TV:LINE?`
Example	`:TRIG:TV:LINE 20` `:TRIG:TV:LINE?`
Dependencies	Only available in the Swept SA measurement Only appears when **TV** is selected as the Trigger Source

Preset	17
State Saved	Saved in instrument state
Min	1 The minimum value is the minimum line and rolls over to the maximum value. The minimum line number depends on which Field and standard are selected
Max	The maximum value is the maximum line and rolls over to the minimum value. The maximum line number depends on which Field and standard are selected Field 1 (`ODD`): – Maximum line is 263 for formats NTSC-M, NTSC-Japan, NTSC-4.43, PAL-M and PAL-60 – Maximum line is 313 for formats PAL-B, D, G, H, I, PAL-N, PAL-N Combin, and SECAM-L Field 2 (`EVEN`): – The maximum line 262 for formats NTSC-M, NTSC-Japan, NTSC-4.43, PAL-M and PAL-60 – The maximum line is 312 for formats PAL-B, D, G, H, I, PAL-N, PAL-N Combin, and SECAM-L Field = `ENTire` Frame: – 525, for formats NTSC-M, NTSC-Japan, NTSC-4.43, PAL-M and PAL-60 – 625, for formats PAL-B, D, G, H, I, PAL-N, PAL-N Combin, and SECAM-L

8.1.14 Field

Selects the **Field** on which to trigger:

Entire Frame	`ENTire`	Causes the selected line number to be viewed as an offset into the entire frame starting with line 1, the first line in Field One
Field One	`ODD`	Causes the selected line number to be viewed as an offset into the first field starting with Line 1, the first line in Field One
Field Two	`EVEN`	Causes the selected line number to be viewed as an offset into the second field. If Line 1 is selected, it is the 264th line of the frame (NTSC-M, NTSC-Japan, NTSC-4.43, PAL-M, PAL-60) or the 314th line of the frame (PAL-B,D,G,H,I, PAL-N, PAL-N-Combin, SECAM-L)

Remote Command	`:TRIGger[:SEQuence]:TV:FMODe ENTire | ODD | EVEN` `:TRIGger[:SEQuence]:TV:FMODe?`

Example	`:TRIG:TV:FMOD ENT`
	`:TRIG:TV:FMOD EVEN`
	`:TRIG:TV:FMOD ODD`

Dependencies	Only available in the Swept SA measurement Only appears when TV is selected as the Trigger Source

	This command is available only when Option B7B (TV trigger) is installed
Preset	`ENTire`
Range	`ENTire|ODD|EVEN`

8.1.15 Standard

Accesses the **Standard** menu keys, which select from the following TV standards:

NTSC-M	`MNTSc`
NTSC-Japan	`JNTSc`
NTSC-4.43	`NTSC443`
PAL-M	`MPAL`
PAL-B,D,G,H,I	`BPAL`
PAL-N	`NPAL`
PAL-N-Combin	`CPAL`
PAL-60	`PAL60`
SECAM-L	`LSEC`

As the TV standard is changed, the current line value is clipped as necessary to keep it valid for the chosen standard and field mode. For example, line 600 is selected in Entire Frame mode in PAL-N; if NTSC-M is selected, the line number is clipped to 525. Or, if line 313 is selected in Field 1 mode in PAL-N and NTSC-M is selected, the line number is clipped to 263. Changing back to the PAL-N standard will leave the line number at 263.

Remote Command	`:TRIGger[:SEQuence]:TV:STANdard MNTSc | JNTSc | NTSC443 | MPAL | BPAL | NPAL | CPAL | PAL60 | LSEC` `:TRIGger[:SEQuence]:TV:STANdard?`

Example	Sets NTSC-M
	`:TRIG:TV:STAN MNTS`
	Queries Standard
	`:TRIG:TV:STAN?`

Dependencies	Only available in the Swept SA measurement Only appears when **TV** is selected as the Trigger Source
Preset	`MNTS`
State Saved	Saved in instrument state
Range	`MNTSc|JNTSc|NTSC443|MPAL|BPAL|NPAL|CPAL|PAL60|LSEC`

8.1.16 Trigger Center Frequency

Sets the center frequency to be used by the auxiliary receiver for the **Auxiliary Channel I/Q Magnitude** trigger.

Remote Command	`:TRIGger[:SEQuence]:AIQMag:CENTer <freq>` `:TRIGger[:SEQuence]:AIQMag:CENTer?`
Example	`:TRIG:AIQM:CENT 10 MHz`
Notes	Trigger CF + 1/2 Trigger BW < Max Trigger CF - 1/2 Trigger BW > Min
Dependencies	Only appears when Aux Channel I/Q Mag is selected as the Trigger Source
Preset	0 Hz
State Saved	Saved in instrument state
Range	-40 MHz to 40 MHz
Min	-40 MHz
Max	40 MHz

8.1.17 Trigger BW

Sets the information bandwidth used by the auxiliary receiver for the Auxiliary Channel I/Q Magnitude trigger.

Remote Command	`:TRIGger[:SEQuence]:AIQMag:BANDwidth <freq>` `:TRIGger[:SEQuence]:AIQMag:BANDwidth?`
Example	`:TRIG:AIQM:BAND 8 MHz`
Notes	The combined sample rate for the main and auxiliary receivers cannot exceed 100 MSa/sec. The bandwidth available to **Trigger BW** is limited to what is available after the main receiver's bandwidth (Info BW, sometimes pre-FFT BW) is set. Because of this limitation, the Max is not always achievable The combination of "Trigger Center Frequency" on page 2906 and **Trigger BW** is also limited: – Trigger CF + 1/2 Trigger BW < Max – Trigger CF - 1/2 Trigger BW > Min
Dependencies	Only appears when Aux Channel I/Q Mag is selected as the Trigger Source
Preset	Bandwidth option dependent: – No Opt: 10 MHz – Opt B25: 25 MHz – Opt S40: 40 MHz

State Saved	Saved in instrument state
Range	10 Hz to Maximum
Min	10 Hz
Max	Bandwidth option & I/Q input path-dependent: – No Opt, I or Q Only: 10 MHz, I+jQ: 20 MHz – Opt B25, I or Q Only: 25 MHz, I+jQ: 50 MHz – Opt S40, I or Q Only: 40 MHz, I+jQ: 80 MHz

8.1.18 Zero Span Delay Compensation On/Off

In **Zero Span**, there is a natural delay in the signal path, which comes from the RBW filter. This is usually desirable, as it lets you trigger on events and also see those events, because the signal is delayed from the trigger event. However, in some cases it is desirable to eliminate this delay, so that trigger events line up exactly with the zero-time point in **Zero Span**. You can use the **Zero Span Delay Comp On/Off** feature to enable or disable zero span delay compensation.

Remote Command	`:TRIGger[:SEQuence]:EXTernal1|EXTernal2|RFBurst:DELay:COMPensation OFF | ON | 0 | 1` `:TRIGger[:SEQuence]:EXTernal1|EXTernal2|RFBurst:DELay:COMPensation?`

Example	`:TRIG:EXT1:DEL:COMP ON`
	`:TRIG:EXT1:DEL:COMP?`
	`:TRIG:EXT2:DEL:COMP ON`
	`:TRIG:RFB:DEL:COMP ON`

Dependencies	No effect except in zero-span, but not locked out in nonzero spans **Zero Span Delay Compensation** only appears in the Swept SA and List Power Step measurements. Only External and RF Burst triggers support it Does not appear in VXT If the SCPI command is sent when the control is not shown, an error is returned: -221, “Settings conflict; Feature not supported for this measurement” Only appears when External 1|2 or RF Burst is selected as the Trigger, Gate or Periodic Sync Source
Preset	`OFF`
State Saved	Saved in instrument state

8.1.19 Select PXI Line

Controls which `PXI_TRIG[0..7]` backplane line is used for the trigger source.

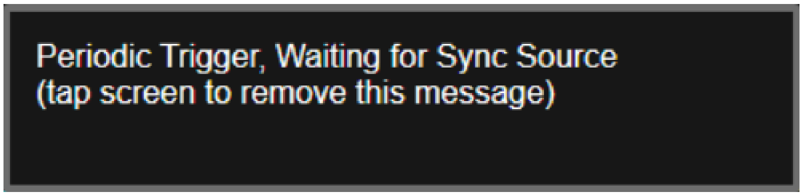
Only found in modular analyzer products.

Remote Command	`:TRIGger[:SEQuence]:PXI:LINE <line>` `:TRIGger[:SEQuence]:PXI:LINE?`
Example	`:TRIG:PXI:LIN 2`
Preset	0
State Saved	Saved in instrument state
Range	[0,7]

8.1.20 Reset Sync Monitor

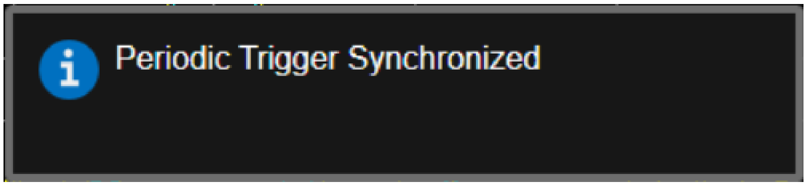
Lets you reset the status of Synchronization for **Periodic** trigger This control works together with bit 6 “Waiting for Periodic Sync Source” in the `:STATus:OPERation:CONDition` status register.

When you first switch to periodic trigger, RF Burst is the default Sync Source. The register will be set immediately. A “Periodic Trigger, Waiting for Sync Source” message will be generated after 2 seconds (if the instrument is not synchronized). The system is waiting for a RF Burst signal. You can tap the screen to remove the message.



Periodic Trigger, Waiting for Sync Source
(tap screen to remove this message)

Once RF burst signal is provided and the hardware synchronized, the register will be cleared and a “Periodic Trigger Synchronized” message will be generated.



Periodic Trigger Synchronized

When change to a new Sync Source other than Off, take External1 as an example. You’ll get the condition register set to 1 and a pop-up message again. There are the possible following conditions:

- External1 is provided: the register is cleared, message is updated.
- External1 is not provided, you set the Sync Source to Off: the register is cleared, message is cleared.
- External1 is not provided, you set the Sync Source to External2: the register and message keep the same.

  - External1 is not provided, you set the Sync Source back to RF Burst: the register is cleared, message is also cleared. That’s because the instrument is synchronized to RF Burst already. If you want to make a new synchronization, you have to press “Reset Sync Monitor” you send SCPI command “:TRIG:FRAM:SMON:RES”.

Remote Command	`:TRIGger[:SEQuence]:FRAMe:SMONitor:RESet`
Example	`:TRIG:FRAM:SMON:RES`
Notes	This control works together with bit 1 “Waiting for Periodic Sync Source” in the `:STATus:OPERation:INSTrument:CONDition` status register A “Periodic Trigger, Waiting for Sync Source” message will be generated after pressing this control, and the status bit will be set A “Periodic Trigger Synchronized” message will be generated after successfully synchronizing to Sync Source, and the status bit will be cleared
Dependencies	Only functional when Periodic Trigger is selected as the Trigger or Gate Source, and Sync Source is not Off Only available in VXT models M9410A/11A/15A/16A
Status Bits/OPC dependencies	Bit 6 of `:STATus:OPERation:CONDition` will be set after pressing this control

8.1.21 Trigger Optimization

Sets the trigger behavior for various desired operation conditions.

Remote Command	`:TRIGger[:SEQuence]:OPTimize:MODE NORMal | MJITter`
	For option details, see "Options" on page 2909
	`:TRIGger[:SEQuence]:OPTimize:MODE?`

Example	Select trigger optimization for minimum jitter: `:TRIG:OPT:MOD MJIT`
Dependencies	Only appears in VXT models M9410A/11A/15A/16A Minimum jitter is functional only when digital IF BW is lower than 300 MHz. When **Trigger Optimization** is set to `MJITter` and it is not in effect, the following warning message appears in the status bar: `Settings Alert; Minimum Jitter is not available`
Preset	`NORMal`
State Saved	Yes
Range	`NORMal|MJITter`

Options

Trigger optimization options are:

Trigger Optimization	SCPI	Notes
Normal	`NORMal`	No optimization
Minimum Jitter	`MJITter`	Optimizes trigger for minimum jitter. A software resample method is provided to reduce jitter, at the expense of some measurement speed The acquisition jitter depends on the digital IF BW, the jitter will be smaller when digital IF BW gets larger. For example, when the digital IF BW is 98.3 MHz in 5GNR, the jitter varies under 15ns. When set MJITter as trigger optimization type, the jitter will be reduced to 1ns This setting apples to all the Trigger Sources

8.1.22 Trigger Settings Diagram

Lets you configure the **Trigger** system using a visual utility.

First, select what you want to configure (the Trigger, Gate or Periodic Sync Source) by tapping the box for **Trigger**, **Gate** or **Periodic Sync Source**.

Next, tap any box in the gray row to choose a Trigger Source to connect to. For **Periodic Sync Source**, you can also tap **Off**.

The **Trigger Settings Diagram** changes depending on context. The Trigger Sources that are available change depending on which input you have selected.

8.2 Gate Source

Contains controls that let you select and configure Gate control signals.

This tab appears in the **Trigger** menu panel for measurements that support gating. In measurements that do not support gating, this tab does not appear.

The menus under the **Gate Source** tab are the same as those under the **Trigger** tab, with these exceptions:

A smaller set of sources is available for gating.

The Free Run and Video selections are not provided for Gate

- The Trig Delay controls are not present
- Relative RF Burst Triggering is not available, just Absolute
- There is an additional control, Sync Holdoff, under Gate Source

Any changes to the settings in the setup menus under each Gate Source selection (for example: Trigger Level, Trigger Delay, etc.) also affect the corresponding settings under the Trigger menu keys. The gate system uses the Trigger SCPI commands for the setup functions, since each setting affects both Gate and Trigger.

Example: to set the Trigger Level for External 1 Trigger you use the command `:TRIG:EXT1:LEV`; to set the Trigger Level for External 1 Gate you use the same command, `:TRIG:EXT1:LEV`. By the same token, once you set the External 1 Trigger Level to 1v, it is 1v whether External 1 is being used as a Gate Source or a Trigger Source.

If a command is sent to the `TRIG` node to set the functions that are omitted from the **Gate Source** menus (Auto Trig, Holdoff, Trig Delay), it is accepted and the values stored, but the values are not visible from the **Gate Source** menus.

8.2.1 Select Gate Source

Selects the source of the Gate signal for doing Gated Trigger measurements.

This version of the **Select Gate Source** function is used in all measurements except the Pulse measurement application.

For the selection of the gate source the SCPI node, `:TRIGger[:SEQuence]:` is replaced by `[:SENSe]:SWEep:EGATe:` as shown in the remote command below. Because you can independently set the Gate Source and the Trigger Source, there is a separate SCPI command for the Gate Source.

Remote Command	`[:SENSe]:SWEep:EGATe:SOURce EXTernal1 | EXTernal2 | LINE | FRAMe | RFBurst`

<table>
<tr><td></td><td><code>| TV | VIDeo | PXI | INTernal</code>
<code>[:SENSe]:SWEep:EGATe:SOURce?</code></td></tr>
<tr><td>Example</td><td><code>:SWE:EGAT:SOUR EXT1</code>
<code>:SWE:EGAT:SOUR?</code></td></tr>
<tr><td>Dependencies</td><td>Available selections differ depending on models as below
<table>
<tr><td>Benchtop</td><td>Line, External 1, External 2, RF Burst, Periodic, TV (Swept SA only)</td></tr>
<tr><td>VXT</td><td>Video, Internal, External 1, External 2, RF Burst, Periodic, PXI Internal and Periodic are not available in Spectrum Analyzer Mode
– Internal is available only in M9410A/11A/15A/16A and unavailable in M9420/21A</td></tr>
<tr><td>EXM</td><td>Video, Internal, External 1, External 2, RF Burst, Periodic</td></tr>
</table>
Not available in E7760
In some models, there is no second External input. In these models, the External 2 selection is not shown and the <code>EXTernal2</code> parameter will generate a “Hardware missing; Not available for this model number” error</td></tr>
<tr><td>Preset</td><td>GSM/EDGE, Phase Noise: <code>FRAM</code>
MSR: <code>EXT1</code>
LTEATDD, 5G NR:
– Direction is Downlink: <code>EXT1</code>
– Direction is Uplink: <code>FRAM</code>
All Others: <code>EXT1</code></td></tr>
</table>

8.2.2 Sync Holdoff

Applies only to the Periodic Timer. Specifies the duration that the sync source signal for the Periodic Timer must be kept false before the transition to true to be recognized as the sync timing. The periodic timer phase is aligned when the sync source signal becomes true, after the Holdoff time is satisfied.

A holdoff of 2 ms works with most WiMAX signals, but there may be cases where the burst off duration is less than 1 ms and this value will need to be changed.

Remote Command	`:TRIGger[:SEQuence]:FRAMe:SYNC:HOLDoff <time>` `:TRIGger[:SEQuence]:FRAMe:SYNC:HOLDoff?`
Example	`:TRIG:FRAM:SYNC:HOLD 5` `:TRIG:FRAM:SYNC:HOLD?`
Dependencies	Only appears if **Periodic** is the selected Gate Source Does not appear in all Measurements. For example, does not appear in Swept SA

Preset	LTEATDD: ON, 1 ms 5G NR: ON, 250.0 us 1xEVDO: OFF, 0 ms (SCPI only) Other than above: OFF, 4 msec
State Saved	Saved in instrument state
Min	0 ms
Max	+500 ms

Auto Function

Remote Command	`:TRIGger[:SEQuence]:FRAMe:SYNC:HOLDoff:STATe OFF | ON | 0 | 1` `:TRIGger[:SEQuence]:FRAMe:SYNC:HOLDoff:STATe?`
Preset	LTEATDD, 5G NR: ON Others: OFF

8.3 Gate Settings

Contains controls that let you control the gating function. The Gate functionality is used to view signals best viewed by qualifying them with other events.

This tab appears in the **Trigger** menu panel for measurements that support gating. In measurements that do not support gating, this tab does not appear.

In the Swept SA measurement, the Gate controls, and all SCPI under the `[:SENSe]:SWEep:EGATe` SCPI node are unavailable when Source Mode is set to Tracking. This is because the Gate circuitry is used to sync the external source. If the Tracking Source is turned on, the Gate is turned off.

Gate setup parameters are the same for all measurements – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by Meas Preset.

Note that Sweep Time auto coupling rules and annotation are changed when Gate is on.

8.3.1 Gate On/Off

Turns the gate function on or off.

When the Gate Function is `ON`, the selected Gate Method is used along with the gate settings and the signal at the gate source to control the sweep and video system with the gate signal. Not all measurements allow every type of Gate Methods.

If the Gate were to be turned `ON` without a gate signal present, Marker Count operation would be unreliable, so it is locked out whenever Gate is on for measurements that support Marker Count.

Remote Command	`[:SENSe]:SWEep:EGATe[:STATe] OFF | ON | 0 | 1` `[:SENSe]:SWEep:EGATe[:STATe]?`
Example	`:SWE:EGAT ON` `:SWE:EGAT?`
Dependencies	The function is unavailable (grayed-out) and `OFF` when: – Gate Method is LO or Video and FFT Sweep Type is manually selected – Gate Method is FFT, and Swept Sweep Type is manually selected – Marker Count is ON The following are unavailable whenever Gate is on: – FFT under Sweep Type when Method=LO or Video or Swept under Sweep Type when Method=FFT

	– Marker Count While Gate is on, the Auto Rules for Sweep Type are modified so that the choice agrees with the Gate Method: i.e., FFT for Method = FFT and Swept for Method = LO or Video When in the ACP measurement: – When Meas Method is RBW or FAST, this function is unavailable, and the control is grayed-out – Whenever Gate is on, Meas Method, RBW, or FAST is unavailable and keys for those are grayed-out – When Gate is on, Offset Res BW and Offset Video BW are ignored (if you set these values) and the measurement works as if all Offset Res BW and all Offset Video BW are coupled with the Res BW and the Video BW under the BW menu. When Gate is on, the Offset BW control in the Offset/Limit menu is grayed-out
Preset	LTEATDD Mode: `ON` Other modes: `OFF`
State Saved	Saved in instrument state
Range	`OFF|ON`
Annunciation	Annunciated in the Meas Bar ; if Gate is on, the word "Gate:" followed by the gate type appears, where – LO = Gated LO – Vid = Gated Video – FFT = Gated FFT

Backwards Compatibility SCPI	`[:SENSe]:SWEep:TIME:GATE[:STATe]`
	`Available in SA and SCPILC Modes`
	ESA compatibility

Backwards Compatibility Notes	In ESA, Trig Delay (On) and Gate (On) could not be active at the same time. This dependency does not exist in PSA or in the X-Series

8.3.2 Gate View On/Off

Turning on Gate View puts the instrument into Gate View. When in Gate View, the regular view of the current measurement traces and results are reduced vertically to about 70% of the regular height. The Zero Span window, showing the positions of the Gate, is shown between the Measurement Bar and the reduced measurement window. By reducing the height of the measurement window, some of the annotation on the Data Display may not fit and is not shown.

Remote Command	`[:SENSe]:SWEep:EGATe:VIEW ON | OFF | 1 | 0` `[:SENSe]:SWEep:EGATe:VIEW?`
Example	Turn on the gate view:

	`:SWE:EGAT:VIEW ON`
Dependencies	In the Swept SA measurement: In Gate View, the regular Sweep Time (or Acquisition Time) control is grayed out, to avoid confusing the user who wants to set Gate View Sweep Time. When pressed, the grayed-out control puts up the informational message "Use Gate View Sweep Time in the Gate menu" In other measurements: When you turn Gate View on, the lower window takes on the current state of the instrument. Upon leaving Gate View, the instrument takes on the state of the lower window When you turn Gate View on, the upper window Sweep Time (or Acquisition Time) is set to Gate View Sweep Time (or Gate View Acquisition Time)
Couplings	These couplings apply to the Swept SA measurement: – When Gate View is turned on, the instrument is set to Zero Span – Gate View automatically turns off whenever a Span other than Zero is selected – Gate View automatically turns off if you press the Swept Span toggle under Freq while in Gate View, and the instrument returns to the Span it was in before entering Gate View (even if that is Zero Span) – When Gate View is turned on, the sweep time used is the Gate View Sweep Time. This is set according to the rules in "Gate View Sweep Time" on page 2922 – When Gate View is turned off, Sweep Time is set to the normal Swept SA measurement sweep time – If Gate View is on and Gate is off, then turning on Gate turns off Gate View
Preset	`OFF`
State Saved	Saved in instrument state
Range	`ON|OFF`
Annunciation	For Gate View to work properly, a gate signal must be present at the selected Gate Source. Therefore, in Gate View, any time more than 2 seconds passes with no gate signal, a pop-up message "Waiting for gate input" appears. This message goes away when a gate signal appears

Turning Gate View off returns the instrument to the Normal measurement view.

In Swept SA, the normal measurement view is the single-window Swept SA view. When returning to this view, the Swept SA measurement returns to the Span it was in before entering **Gate View** (even if that is Zero Span).

The **Gate View** window is triggered from the Gate Source, with zero trigger delay. Also, when updating the **Gate View** window, the Gate itself must not operate. So, it is internally shut off while the gate view window is being updated. For the Swept SA measurement, this means that the Gate is internally shut off whenever the gate view window is displayed. The measurement bar and controls continue to show the Trigger source for the main sweep window and give no indication that the Gate is shut off or that the Gate View window is triggered from the Gate Source.

When in **Gate View**, vertical lines are displayed in the Gate View window as follows:

Green lines labeled GATE START and GATE STOP are displayed at the gate edges as follows: in Edge Gate, a line is shown for Delay and one for the end of the Gate period, defined by Length. In Level Gate a line is shown only for Delay. You can adjust the position of the green lines by adjusting the gate length and the gate delay or by dragging them with your finger or the mouse.. These lines update in the Gate View window as the active function changes, even if the window is not being updated. In Gated LO and Gated Video, these lines are positioned relative to the delay reference line (not relative to 0 time). In Gated FFT, their location is relative to the left edge of the screen.

A blue line is displayed showing the delay reference, that is, the reference point for the Gate Delay within the Zero Span window. The blue line represents where (in time) the effective location of the gate start would be if the gate were programmed to zero delay.

- A second blue line is displayed at the location that represents the boundary between "compensated IF" and "compensated LO" operating modes.The second blue line is labeled "MIN FAST" because it represents the minimum Gate Delay for fast Gated LO operation. This line is only displayed in Gated LO. You cannot scroll (knob) or decrement (down key) the Gate Delay to less than that represented by the position of this line, it can only be set below this position manually, although once there it can be moved freely with the knob while below the line.

A yellow line in the Gated Video case only, is displayed at B_{length}, where B_{length} is the display point (bucket) length for the swept trace, which is given by the Sweep Time (or Acquisition Time) for that trace divided by number of Points - 1. So, it is referenced to 0 time, not to the delay reference. This line is labeled NEXT PT (it is not shown in the figure above because the figure above is for Gated LO). The yellow line represents the edge of a display point (bucket). Normally in Gated Video, the bucket length must be selected so that it exceeds the off time of the burst. There is another way to use the instrument in Gated Video measurements, and that is to set the bucket width much shorter than the off time of the burst. Then use the Max Hold trace function to fill in "missing" buckets more slowly. This allows you to see some of the patterns of the Gated Video results earlier, though seeing a completely filled-in spectrum later.

8.3.3 Gate Delay

Controls the length of time from the time the gate condition goes True until the gate is turned on.

Remote Command	`[:SENSe]:SWEep:EGATe:DELay <time>` `[:SENSe]:SWEep:EGATe:DELay?`
Example	`:SWE:EGAT:DELay 500ms` `:SWE:EGAT:DELay?`

Notes	Units of time are required, or no units; otherwise, an invalid suffix error message is generated
Preset	WiMAX OFDMA: 71 us GSM/EDGE: 600 us WLAN: 500 us 5G NR: 5 ms Others: 57.7 us
State Saved	Saved in instrument state
Min	0.0 us
Max	100 s

Backwards Compatibility SCPI	`[:SENSe]:SWEep:TIME:GATE:DELay`
	`This backward compatibility command is available in SA and SCPILC Modes`
	ESA compatibility

8.3.4 Gate Length

Controls the length of time that the gate is on after it opens.

Remote Command	`[:SENSe]:SWEep:EGATe:LENGth <time>` `[:SENSe]:SWEep:EGATe:LENGth?`
Example	`:SWE:EGAT:LENG 1` `:SWE:EGAT:LENG?`
Notes	Units of time are required, or no units; otherwise, an invalid suffix error message is generated
Dependencies	Grayed-out when Gate Method is set to `FFT`, in which case the label changes to that shown below  Gate Length (=1.83/RBW) 2.7 ms The control is also grayed-out if Gate Control = `LEVel`
Preset	WiMAX OFDMA: 50 us GSM/EDGE: 200 us WLAN: 1.54 ms Others: 461.6 us
State Saved	Saved in instrument state
Min	100 ns
Max	5 s
Backwards Compatibility SCPI	`[:SENSe]:SWEep:TIME:GATE:LENGth` `This backward compatibility command is available in SA and SCPILC Modes`

	ESA compatibility

8.3.5 Gate Method

Lets you choose one of the three different types of gating. Not all types of gating are available for all measurements.

Remote Command	`[:SENSe]:SWEep:EGATe:METHod LO | VIDeo | FFT`
	For option details, see "LO" on page 2919, "Video" on page 2919 or "FFT" on page 2920
	`[:SENSe]:SWEep:EGATe:METHod?`

Example	`:SWE:EGAT:METH FFT`
Dependencies	This function is only available in the Swept SA measurement in Spectrum Analyzer Mode This control is unavailable when Gate is On and FFT Sweep Type manually selected When selected, Sweep Type is forced to Swept, and the FFT selection in Sweep Type is grayed-out Only the `FFT` method is supported in non-SA products Only the `FFT` method is supported by VXT models M9410A/11A/15A/16A
Preset	`LO`
State Saved	Saved in instrument state
Range	`Video|LO|FFT`
Annunciation	In Meas Bar

LO

In `LO` gating, when Gate is `ON`, the LO sweeps whenever the gate conditions as specified in the Gate menu are satisfied by the signal at the Gate Source.

This form of gating is more sophisticated, and results in faster measurements. With Gated LO, the instrument only sweeps while the gate conditions are satisfied. This means that a sweep could take place over several gate events. It would start when the gate signal goes true and stop when it goes false, and then continue when it goes true again. But since the LO is sweeping as long as the gate conditions are satisfied, the sweep typically finishes much more quickly than with Gated Video.

When in zero span, there is no actual sweep performed. But data is only taken while the gate conditions are satisfied. So even though there is no sweep, the gate settings will impact when data is acquired.

Video

In `Video` gating, when Gate is `ON`, the video signal is allowed to pass through whenever the gate conditions as specified in the Gate menu are satisfied by the signal at the Gate Source.

This form of gating may be thought of as a simple switch, which connects the signal to the input of the spectrum analyzer. When the gate conditions are satisfied, the switch is closed, and when the gate conditions are not satisfied, the switch is open. So we only look at the signal while the gate conditions are satisfied.

With this type of gating, you usually set the instrument to sweep very slowly. In fact, a general rule is to sweep slowly enough that the gate is guaranteed to be closed at least once per data measurement interval (bucket). Then if the peak detector is used, each bucket will represent the peak signal as it looks with the gate closed.

FFT

In `FFT` gating, when Gate is `ON`, an FFT is performed whenever the gate conditions as specified in the Gate menu are satisfied by the signal at the Gate Source. This is an FFT measurement that begins when the gate conditions are satisfied. Since the time period of an FFT is approximately 1.83/RBW, you get a measurement that starts under predefined conditions and takes place over a predefined period. So, in essence, this is a gated measurement. You have limited control over the gate length, but it works in FFT sweeps, which the other two methods do not.

Gated FFT is not possible in zero span since the instrument is not sweeping, so in zero span the Gated LO method is used. Data is still only taken while the gate conditions are satisfied, so the gate settings do impact when data is acquired.

The Gate Length will be 1.83/RBW.

This is a convenient way to make a triggered FFT measurement under control of an external gating signal.

8.3.6 Control Edge/Level

Sets the method of controlling the gating function from the gating signal.

`EDGE`	The gate opens (after the Delay) on the selected edge (for example, positive) of the gate signal and closes on the alternate edge (for example, negative)
`LEVel`	The gate opens (after the Delay) when the gate signal has achieved a certain level and stays open as long as that level is maintained

Remote Command	`[:SENSe]:SWEep:EGATe:CONTrol EDGE | LEVel` `[:SENSe]:SWEep:EGATe:CONTrol?`
Example	`:SWE:EGAT:CONT EDGE`
Dependencies	If the Gate Method is `FFT`, this control is grayed-out and `EDGE` is selected If the Gate Source is TV, Frame, or Line, this control is grayed-out and `EDGE` is selected

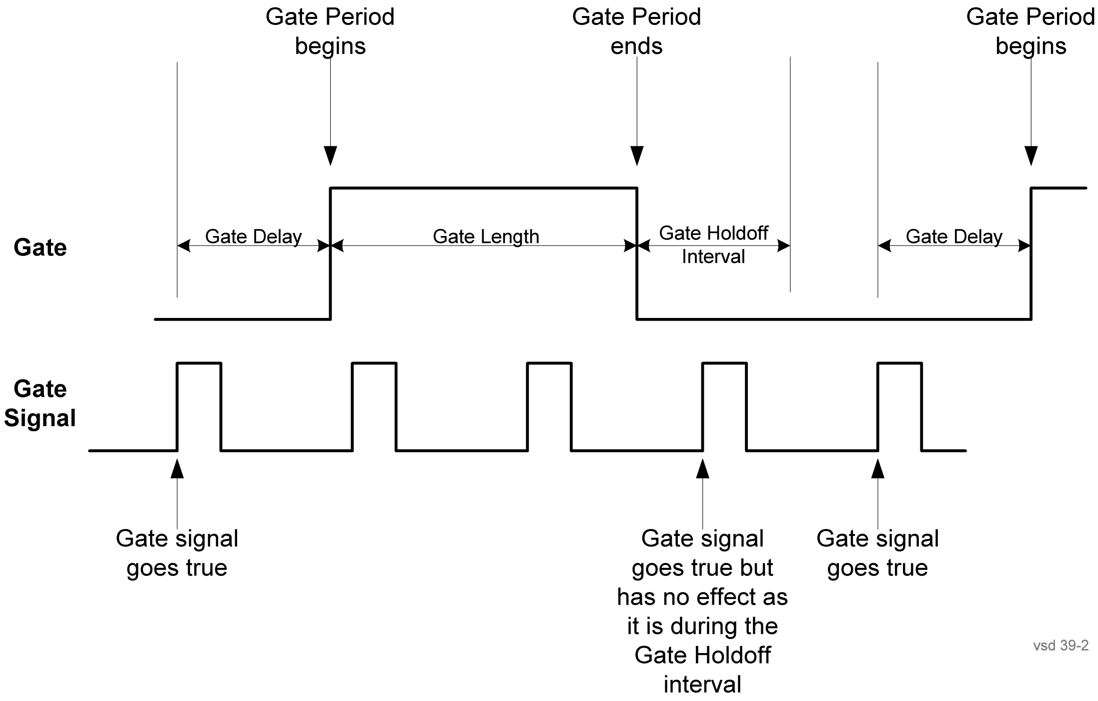
Preset	`EDGE`
State Saved	Saved in instrument state

Backwards Compatibility SCPI	`[:SENSe]:SWEep:EGATe:TYPE`
	`This backwards-compatibility command is available when the primary command is available`
	`[:SENSe]:SWEep:TIME:GATE:TYPE`
	This backwards-compatibility command is available in SA and SCPILC Modes
	ESA Compatibility

8.3.7 Gate Holdoff

Lets you increase or decrease the wait time after a gate event ends before the instrument will respond to the next gate signal.

After any Gate event finishes, the instrument must wait for the sweep system to settle before it can respond to another Gate signal. The instrument calculates a "wait time," taking into account a number of factors, including RBW and Phase Noise Optimization settings. The goal is to achieve the same accuracy when gated as in ungated operation. The figure below illustrates this concept:



When **Gate Holdoff** is Auto, the wait time calculated by the instrument is used. When Gate Time is in Manual, the user may adjust the wait time, usually decreasing it in order to achieve greater speed, but at the risk of decreasing accuracy.

When the **Method** control is set to **Video** or **FFT**, the **Gate Holdoff** function has no effect.

In measurements that do not support "Auto Function" on page 2922, the value shown when Auto is selected is "---" and the manually set holdoff is returned to a query.

Remote Command	`[:SENSe]:SWEep:EGATe:HOLDoff <time>` `[:SENSe]:SWEep:EGATe:HOLDoff?`
Example	`:SWE:EGAT:HOLD 0.0002` `:SWE:EGAT:HOLD?`
Couplings	When **Gate Holdoff** is **Auto**, the **Gate Holdoff** control shows the value calculated by the instrument for the wait time Pressing the **Gate Holdoff** control while it is in **Auto** and not selected, causes the control to become selected and allows the user to adjust the value. If the value is adjusted, the setting changes to **Man** Pressing the **Gate Holdoff** key, while it is in **Auto** and selected, does not change the value of **Gate Holdoff**, but causes the setting to change to **Man.** Now the user can adjust the value Pressing the control while it is in **Man** and selected, cause the value to change back to **Auto** Pressing the control while it is in **Man** and not selected, causes the control to become selected and allows the user to adjust the value When **Method** is set to **Video** or **FFT**, the **Gate Holdoff** function has no effect
Preset	Auto
State Saved	Saved in instrument state
Min	1 µsec
Max	1 sec

Auto Function

Remote Command	`[:SENSe]:SWEep:EGATe:HOLDoff:AUTO OFF | ON | 0 | 1` `[:SENSe]:SWEep:EGATe:HOLDoff:AUTO?`
Example	`:SWE:EGAT:HOLD:AUTO ON` `:SWE:EGAT:HOLD:AUTO?`
Preset	Auto/On
State Saved	Saved in instrument state
Range	Auto|Man

8.3.8 Gate View Sweep Time

Controls the Sweep Time in the Gate View window. To provide an optimal view of the gate signal, the instrument initializes **Gate View Sweep Time** based on the current settings of Gate Delay and Gate Length.

NOTE Since **Gate View Sweep Time** is used to calculate Gate Delay and Gate Length increments, it is maintained even when not in **Gate** View.

NOTE In instruments without sweeping hardware such as some modular analyzers, this control may be labeled **Gate View Acquisition Time**

Remote Command	`[:SENSe]:SWEep:EGATe:TIME <time>` `[:SENSe]:SWEep:EGATe:TIME?`
Example	`:SWE:EGAT:TIME 500 ms`
Dependencies	Gate View Sweep Time is initialized: – On Preset (after initializing delay and length) – Every time the Gate Method is set/changed Additionally, in the Swept SA measurement, whenever you do a Preset, or leave Gate View, the instrument remembers the Gate Delay and Gate Length settings. Then, when returning to Gate View, if the current Gate Delay and/or Gate Length do not match the remembered values Gate View Sweep Time is re-initialized
Preset	WiMAX OFDMA: 5 ms GSM/EDGE: 1 ms 5G NR: 10 ms Others: 800 µs
State Saved	Saved in instrument state
Min	1 µs
Max	6000 s
Annotation	The gate view Sweep Time is displayed in the lower-right corner of the gate view window

8.3.9 Gate View Start Time

Controls the time at the left edge of the Gate View.

Remote Command	`[:SENSe]:SWEep:EGATe:VIEW:STARt <time>` `[:SENSe]:SWEep:EGATe:VIEW:STARt?`
Example	`:SWE:EGAT:VIEW:STAR 10ms`
Notes	Units of time are required or no units; otherwise, an invalid suffix error message is generated
Preset	0 ms
State Saved	Saved in instrument state
Min	0
Max	500 ms

8.3.10 Gate Delay Compensation

Allows you to select an RBW-dependent value by which to adjust the gate delay, to compensate for changes in the delay caused by RBW effects. Youcan select between uncompensated operation and two types of compensation:

Uncompensated	`OFF`
Delay Until RBW Settled	`SETTled`
Compensate for RBW Group Delay	`GDELay`

For full details of these options, see "More Information" on page 2924

Remote Command	`[:SENSe]:SWEep:EGATe:DELay:COMPensation:TYPE OFF | SETTled | GDELay` `[:SENSe]:SWEep:EGATe:DELay:COMPensation:TYPE?`
Example	`:SWE:EGAT:DEL:COMP:TYPE SETT` `:SWE:EGAT:DEL:COMP:TYPE?`
Notes	Although this function is Meas Global, there are some measurements that do not support this function. In those measurements the control is not displayed, and the operation will be Uncompensated If some but not all measurements in a Mode support this function, then selecting a measurement that does not support it will not change the Meas Global selection; it will simply be “Uncompensated” while in that measurement. The SCPI command is still accepted while in that measurement If Gate Delay Compensation is not supported at all within a particular mode, the control is not displayed, and if the SCPI command is sent while in a measurement within that mode, an “Undefined Header” message is generated Note that, for modular products such as EXM and VXT, this function is not supported. In those products the control is not displayed and the SCPI is ignored, although it is accepted without error
Preset	TD-SCDMA, LTEA FDD/TDD, 5G NR Modes: `GDELay` All other Modes: `SETTled`
State Saved	Saved in instrument state
Range	`OFF|SETTled|GDELay`

More Information

Selecting **Uncompensated** means that the actual gate delay is as you set it.

Selecting **Delay Until RBW Settled** causes the gate delay to be increased above the user setting by an amount equal to 3.06/RBW. This compensated delay causes the GATE START and GATE STOP lines on the display to move by the compensation amount, and the actual hardware gate delay to be increased by the same amount. All the other gate lines (for example, MIN FAST) are unaffected. If the RBW subsequently changes, the compensation is readjusted for the new RBW. The value shown on the **Gate Delay** control does *not* change.

Delay Until RBW Settled allows excellent measurements of gated signals, by allowing the IF to settle following any transient that affects the burst. Excellent measurements also require that the analysis region not extend into the region affected by the falling edge of the burst. Thus, excellent measurements can only be made over a width that declines with narrowing RBWs, which is achieved by decreasing the gate length below the user setting by an amount equal to 2.53/RBW. Therefore, for general purpose compensation, you will still want to change the gate length with changes in RBW even if the gate delay is compensated. The compensated Gate Length is limited by the instrument so that it will never go below 10% of the value shown on the Gate Length key, as otherwise the sweep times could get very long. Anytime the **Gate Length** and **RBW** values combine in such a way that this limiting takes place, a warning is displayed . For measurements that contain multiple sweeps with different RBW like SEM and SPUR, the smallest RBW is used for this limiting.

Selecting **Compensate for RBW Group Delay** causes the gate delay to be increased above the user setting by an amount equal to 1.81/RBW. This compensated delay causes the GATE START, GATE STOP lines on the display to move by the compensation amount, and the actual hardware gate delay to be increased by the same amount. All the other gate lines (for example, MIN FAST) are unaffected. If the RBW subsequently changes, the compensation is readjusted for the new RBW. The value shown on the **Gate Delay** control does *not* change. **Compensate for RBW Group Delay** also includes gate length compensation; the gate length itself is adjusted as necessary to attempt to compensate for delay effects imposed by the RBW.

Compensate for RBW Group Delay is similar to **Delay Until RBW Settled** but compensates for the group delay of the RBW filter, rather than the filter settling time. As the RBW gets narrow, this can allow the settling tail of the RBW to affect the beginning part of the gated measurement and allow the beginning of the RBW settling transient to affect the end of the gated measurement. These two effects are symmetric because the RBW response is symmetric. Because the gate length is not automatically compensated, some users might find this compensation to be more intuitive than compensation for RBW settling.

8.3.11 Min Fast Position Query (Remote Query Only)

Queries the position of the MIN FAST line, relative to the delay reference (REF) line. See "Gate View On/Off" on page 2915. If this query is sent while not in Gate view, the MinFast calculation is performed based on the current values of the appropriate parameters and the result is returned. Reading this value lets you set an optimal gate delay value for the current measurement setup.

Example	`:SWE:EGAT:MIN?`
Backwards Compatibility SCPI	`[:SENSe]:SWEep:EGATe:MINFast?`

8.3.12 Gate Preset (Remote Command Only)

Presets the time-gated spectrum analysis capability.

This command sets gate parameter values to the ESA preset values, as follows:

- Gate trigger type = edge
- Gate polarity = positive
- Gate delay = 1 us
- Gate length = 1 us

Backwards Compatibility SCPI	`[:SENSe]:SWEep:TIME:GATE:PRESet` ESA Compatibility

8.3.13 Gate Level (Remote Command Only)

Sets the gate input transition point level for the external **TRIGGER** inputs on the front and rear panel. This is a legacy command for PSA compatibility. It is simply an alias to the equivalent trigger level command.

Notes	This command is simply an alias to `:TRIGger[:SEQuence]:EXTernal[1]|2:LEVel`
Backwards Compatibility SCPI	`[:SENSe]:SWEep:EGATe:EXTernal[1]|2:LEVel <voltage>` `[:SENSe]:SWEep:EGATe:EXTernal[1]|2:LEVel?`

8.3.14 Gate Polarity (Remote Command Only)

Sets the polarity for the gate signal. This setup is now done using the gate trigger’s slope setting.

When `POSitive` is selected, a positive-going edge (Edge) or a high voltage (Level) will satisfy the gate condition, after the delay set with the Gate Delay key. When `NEGative` is selected, a negative-going edge (Edge) or a low voltage (Level) will satisfy the gate condition after the delay.

Example	`:SWE:EGAT:POL NEG` `:SWE:EGAT:POL?`
Preset	`POSitive`
State Saved	Saved in instrument state

Backwards Compatibility SCPI	`[:SENSe]:SWEep:EGATe:POLarity NEGative | POSitive`
	`[:SENSe]:SWEep:EGATe:POLarity?`
	`This backwards-compatibility command is available in Modes that support Gate Polarity parameter`
	`[:SENSe]:SWEep:TIME:GATE:POLarity`
	`This backwards-compatibility command is available in SA and SCPILC Modes`
	ESA compatibility

Preset	`HIGH`

Backwards Compatibility SCPI	`[:SENSe]:SWEep:TIME:GATE:LEVel HIGH | LOW`
	`[:SENSe]:SWEep:TIME:GATE:LEVel?`
	ESA compatibility

8.4 Enables the hardware accelerated stepped FFT gating feature (Display only)

Enables or disables the hardware-accelerated stepped FFT gating feature:

- Enabling the Hardware Acceleration feature means that the Stepped FFT algorithm will run on the FPGA for configurations where speed improvements are possible
- Disabling the hardware-accelerated stepped FFT gating means the Stepped FFT software algorithm will always run on the CPU instead of the FPGA

When enabled it is only used when applicable and determined by the current sweep configuration.

The default value is `ON` and its value is power-on persistent.

Remote Command	`[:SENSe]:SWEep:EGATe:HACCelerate:ENABle OFF | ON | 0 | 1`
Example	`:SWEep:EGATe:HACCelerate:ENABle ON`
Notes	Value `ON` means the hardware accelerated stepped FFT gating is used intelligently Value `OFF` means the hardware accelerated stepped FFT gating is always disabled
Dependencies	Only valid in ACP, CHP and SEM mesurements
State Saved	Saved in instrument state

8.5 Periodic Sync Src

Contains controls that let you select and configure the sync signal for the **Periodic Timer** Trigger.

For convenience controls for adjusting the level and slope of the selected sync source are provided here. Note that these settings match those in the **Trigger** and **Gate Source** menus; that is, each trigger source has only one value of level and slope, regardless of which menu it is accessed from.

8.5.1 Select Periodic Timer Sync Source

Selects a signal source for you to synchronize your periodic timer trigger to, otherwise you are triggering at some arbitrary location in the frame. Synchronization reduces the precision requirements on the setting of the period.

Note that, with Sync Source `OFF`, the timing will drift unless the signal source frequency is locked to the instrument frequency reference.

Remote Command	`:TRIGger[:SEQuence]:FRAMe:SYNC EXTernal1 | EXTernal2 | RFBurst | PXI | INTernal | OFF` `:TRIGger[:SEQuence]:FRAMe:SYNC?`

Example	`:TRIG:FRAM:SYNC EXT1`
	`:TRIG:FRAM:SYNC EXT2`
	`:TRIG:FRAM:SYNC RFB`
	`:TRIG:FRAM:SYNC OFF`

Dependencies	`PXI` and `INTernal` triggers are only found in modular analyzers such as VXT Not available in E7760 or UXM In some models, there is no second External input. In these models, the External 2 selection is not shown, and the `EXTernal2` parameter generates a “Hardware missing; Not available for this model number” message
Preset	`OFF` GSM/EDGE, LTE, LTETDD, 5G NR: `RFBurst`
State Saved	Saved in instrument state
Backwards Compatibility SCPI	`:TRIGger[:SEQuence]:FRAMe:SYNC EXTernal` For backwards-compatibility, the parameter `EXTernal` is mapped to `EXTernal1`

8.6 Auto/Holdoff

Contains controls that let you adjust Auto Trigger and Trigger Holdoff parameters

This tab does not appear in Spectrum Analyzer Mode in VXT model M9421A.

8.6.1 Trig Holdoff

Sets the holdoff time between triggers. When the trigger condition is satisfied, the trigger occurs, the delay begins, and the holdoff time begins. New trigger conditions will be ignored until the holdoff time expires. For a free-running trigger, the holdoff value is the minimum time between triggers.

Remote Command	`:TRIGger[:SEQuence]:HOLDoff <time>` `:TRIGger[:SEQuence]:HOLDoff?`
Example	`:TRIG:HOLD:STAT ON` `:TRIG:HOLD 100 ms`
Dependencies	Unavailable if the selected Input is `BBIQ`. If this is the case, the control is grayed-out if it is pressed the informational message “Feature not supported for this Input” is displayed. If the SCPI command is sent, the error “Settings conflict; Feature not supported for this Input” is generated
Preset	All modes except GSM/EDGE, LTEAFDD/TDD and 5G NR: 100 ms GSM/EDGE, Bluetooth: 10 µs LTEATDD: 19 ms 5G NR: 4 ms
State Saved	Saved in instrument state
Min	0 s
Max	0.5 s VXT models M9410A/11A/15A/16A: 2.86 s

Auto Function

Remote Command	`:TRIGger[:SEQuence]:HOLDoff:STATe OFF | ON | 0 | 1` `:TRIGger[:SEQuence]:HOLDoff:STATe?`
Preset	All modes but GSM/EDGE: `OFF` GSM/EDGE mode: `ON`

8.6.2 Auto Trig

Sets the time that the instrument will wait for the trigger conditions to be met. If they are not met after that much time, then the instrument is triggered anyway.

Remote Command	`:TRIGger[:SEQuence]:ATRigger <time>` `:TRIGger[:SEQuence]:ATRigger?`
Example	`:TRIG:ATR:STAT ON` `:TRIG:ATR 100 ms`
Notes	The "time that the instrument will wait" starts when the instrument is ready for a trigger, which may be hundreds of ms after the data acquisition for a sweep is done. The "time" ends when the trigger condition is satisfied, not when the delay ends
Dependencies	Not available in Real Time Spectrum Analyzer Mode
Preset	Off, 100 ms
State Saved	Saved in instrument state
Min	1 ms
Max	100 s

Auto Function

Remote Command	`:TRIGger[:SEQuence]:ATRigger:STATe OFF | ON | 0 | 1` `:TRIGger[:SEQuence]:ATRigger:STATe?`
Preset	`OFF`

8.6.3 Holdoff Type

Enables you to set the Trigger **Holdoff Type**.

NOTE **Holdoff Type** is not supported by all measurements. If the current measurement does not support it, this control does not appear, and **Holdoff Type** is Normal. If **Holdoff Type** SCPI is sent while in such a measurement, the SCPI is accepted and the setting remembered, but it has no effect until a measurement is in force that supports **Holdoff Type**.

Trigger Holdoff Type functionality

`NORMal`	This is the “oscilloscope” type of trigger holdoff and is the setting when the **Holdoff Type** control does not appear. In this type of holdoff, no new trigger will be accepted until the holdoff interval has expired after the previous trigger
`ABOVe`	If the trigger slope is positive, a trigger event is generated only if the signal characteristic of interest crosses the trigger threshold (with positive slope) and then remains above the threshold for at least the holdoff time. For negative slope, the trigger event is generated if the signal characteristic crosses the threshold (with negative slope) after having been above the threshold for at least the holdoff time. In either case, the trigger event is associated with the time the level was crossed
`BELow`	If the trigger slope is positive, a trigger event is generated only if the signal characteristic of interest crosses the trigger threshold (with positive slope) after

having been below the threshold for at least the holdoff time. For negative slope, the trigger event is generated if the signal characteristic crosses the threshold (with negative slope) and then remains below the threshold for at least the holdoff time. In either case, the trigger event is associated with the time the level was crossed

Remote Command	`:TRIGger[:SEQuence]:HOLDoff:TYPE NORMal | ABOVe | BELow` `:TRIGger[:SEQuence]:HOLDoff:TYPE?`
Example	`:TRIG:HOLD:TYPE NORM`
Preset	see table below
State Saved	Saved in instrument state

Preset:

Modes	Setting
GSM/EDGE Bluetooth	`BELow`
All others	`NORMal`

9 Programming the Instrument

This section provides information about the instrument's SCPI programming interface. You can also operate the instrument remotely using some legacy programming languages by running the N9061C Remote Language Compatibility measurement application and the N9062C SCPI Language Compatibility measurement application.

9.1 List of Supported SCPI Commands

The SCPI commands available while using this application are listed below.

To find a command in the list, search according to its first alphanumeric character, ignoring any leading ":" or "[" characters. The sole exception to this is the asterisk [*] prefix, identifying IEEE 488.2 Common commands and queries; all these appear at the start of the list.

Note that most commands also have query forms. In cases where a command and its query are described in the same topic, the list below includes the command and query as a *single* item, with no suffix.

Suffix	Interpretation
No suffix	Command & Query, *or* Command only For details, click the link to view the command definition
?	Query only

9.2 IEEE 488.2 Common Commands

The instrument supports the following subset of IEEE 488.2 Common Commands, as defined in Chapter 10 of IEEE Standard 488.2–1992. As indicated below, some of these commands correspond directly to instrument front-panel functionality, while others are available only as remote commands.

- "*CAL? - Calibration Query" on page 2988 (Align Now All equivalent)
- "*CLS - Clear Status" on page 2989
- "*ESE - Standard Event Status Enable" on page 2989
- "*ESR? - Standard Event Status Register Query" on page 2990
- "*IDN? - Identification Query" on page 2990
- "*OPC? - Operation Complete" on page 2991
- "*OPT? - Query Instrument Options" on page 2992
- "*RCL - Recall Instrument State" on page 2992 (Recall State equivalent)
- "*RST - Reset" on page 2992 (Mode Preset equivalent)
- "*SAV - Save Instrument State" on page 2993 (Save State equivalent)
- "*SRE - Service Request Enable" on page 2993
- "*STB? - Status Byte Query" on page 2994
- "*TRG - Trigger" on page 2994
- "*TST? - Self Test Query" on page 2994
- "*WAI - Wait-to-Continue" on page 2995

9.2.1 *CAL? - Calibration Query

`*CAL?` Performs a full alignment and returns a number indicating the success of the alignment. A zero is returned if the alignment is successful. A one is returned if any part of the alignment fails. The equivalent SCPI command is `:CALibrate[:ALL]?`

See "Align Now All" on page 2353

Remote Command	`*CAL`

Example	`*CAL?` Runs a full alignment and returns 0 if no problems encountered
Status Bits/OPC dependencies	See "Align Now All" on page 2353

9.2.2 *CLS - Clear Status

Clears the "Status Byte Register" on page 3025, by emptying the error queue and clearing all bits in all of the event registers, and consequently all bits in the Status Byte Register.

The Status Byte Register summarizes the states of the other registers. It is also responsible for generating service requests.

Remote Command	`*CLS`
Example	`*CLS` Clears the error queue and the Status Byte Register
Notes	For related commands, see `:SYSTem:ERRor[:NEXT]?` See also `:STATus:PRESet` and all commands in the "Status Register System & STATus Subsystem" on page 3016
Status Bits/OPC dependencies	Resets all bits in all event registers to 0, which resets all the status byte register bits to 0 also

9.2.3 *ESE - Standard Event Status Enable

Sets the desired bits in the Event Enable sub-register of the "Standard Event Status Register" on page 3029, which enables the corresponding bits in the Standard Event Status Register. This register monitors I/O errors and synchronization conditions such as operation complete, request control, query error, device-dependent error, status execution error, command error, and power on. The selected bits are `ORed` to become a summary bit (bit 5) in the "Status Byte Register" on page 3025, which can be queried.

The query returns the state of this register.

Numeric values for bit patterns can be entered using decimal or hexadecimal representations (0 to 32767, equivalent to `#H0` to `#H7FFF`).

Remote Command	`*ESE <integer>` `*ESE?`
Example	`*ESE 36` Enables the Standard Event Status Register to monitor query and command errors (bits 2 and 5)

	`*ESE?` Returns a 36 indicating that the query and command status bits are enabled
Notes	For related commands, see the "Status Register System & STATus Subsystem" on page 3016 and `:SYSTem:ERRor[:NEXT]?`
Preset	255
State Saved	Not saved in state
Min	0
Max	255

9.2.4 *ESR? - Standard Event Status Register Query

Queries and clears the "Standard Event Status Register" on page 3029. (This is a destructive read.) The value returned is a hexadecimal number that reflects the current state (0/1) of all the bits in the register.

Remote Command	`*ESR?`
Example	`*ESR?` Returns a 1 if there is either a query or command error, otherwise it returns a zero
Notes	For related commands, see "Status Register System & STATus Subsystem" on page 3016
Min/Max	0 / 255
Status Bits/OPC dependencies	Standard Event Status Register (bits 0 – 7)

9.2.5 *IDN? - Identification Query

Returns a string of instrument identification information. The string contains the model number, serial number, and firmware revision.

The response is organized into four fields separated by commas. The field definitions are as follows:

1. Manufacturer
2. Model
3. Serial number
4. Firmware version

Remote Command	`*IDN?`

Example	`*IDN?`
	Returns instrument identification information, such as:
	`Keysight Technologies,N9040B,US01020004,A.15.02`

Backwards Compatibility Command

Example	`:ID?`
	Returns model number, such as:
	`N9040B`

Notes	Provided for backwards compatibility: In Remote Language Compatibility Mode, `ID?` returns the model number of the emulated instrument In any other Mode, the returned model number is that of the actual instrument
Backwards Compatibility SCPI	`:ID?`

9.2.6 *OPC? - Operation Complete

Sets bit 0 in the "Standard Event Status Register" on page 3029 (SESR) to "1" when pending operations have finished, that is when all overlapped commands are complete. It does not hold off subsequent operations. You can determine when the overlapped commands have completed either by polling the OPC bit in SESR, or by setting up the status system so that a service request (SRQ) is asserted when the OPC bit is set.

`*OPC?` returns "1" after all the current overlapped commands are complete, so it holds off subsequent commands until the "1" is returned, then the program continues. This query can be used to synchronize events of other instruments on the external bus.

Remote Command	`*OPC` `*OPC?`

Example	Select single sweeping:
	`:INIT:CONT 0`
	Initiate a sweep:
	`:INIT:IMM`
	Hold off any further commands until the sweep is complete:
	`*OPC?`

Notes	Not global to all remote ports or front panel. `*OPC` only affects operations that were initiated on the same port that the `*OPC` command was issued from `*OPC` is an overlapped command, but `*OPC?` is sequential `*OPC?` does *not* holdoff the completion of GUI update commands , such as `:MMEM:LOAD:SCON "myScreenConfig.screen"`

9.2.7 *OPT? - Query Instrument Options

Returns a string of all installed instrument options. It is a comma-separated list, with quotes, for example:

`"550,B25,B40,BBA,CRP,CRW,EA3,EDP,ESC,EXM,FBP,LNP,MPB,NF2,RTS,EMC,FP2"`

Remote Command	`*OPT?`

9.2.8 *RCL - Recall Instrument State

Recalls the instrument state from the specified instrument memory register.

- If the state being loaded has a newer firmware revision than the revision of the instrument, no state is recalled and an error is reported
- If the state being loaded has an equal firmware revision than the revision of the instrument, the state will be loaded
- If the state being loaded has an older firmware revision than the revision of the instrument, then the instrument will only load the parts of the state that apply to the older revision

Remote Command	`*RCL <register #>`
Example	Recall the instrument state that is currently stored in register 7 (register 8 in the UI): `*RCL 7`
Notes	Registers 0 through 15 are accessible from the front panel in menu keys for Recall Registers. Register 0 corresponds to front panel Register 1
Min	0
Max	127
Status Bits/OPC dependencies	The command is sequential

9.2.9 *RST - Reset

`*RST` is equivalent to `:SYST:PRES;:INIT:CONT OFF`, which is a Mode Preset in the **Single** measurement state. This command is preferred over the Mode Preset command `:SYST:PRES`, because optimal remote programming occurs with the instrument in the **Single** measurement state.

`*RST` clears all pending OPC bits and sets the Status Byte to 0.

Remote Command	`*RST`
Notes	Sequential
Couplings	`*RST` causes the currently running measurement to be aborted and causes the default measurement to be active. `*RST` gets the mode to a consistent state, with all of the default couplings set
Status Bits/OPC dependencies	Clears all pending OPC bits. The "Status Byte Register" on page 3025 is set to 0

9.2.10 *SAV - Save Instrument State

Saves the current instrument state and mode to the specified instrument memory register.

Remote Command	`*SAV <register #>`
Example	Save the instrument state in register 9 (register 10 in the UI): `*SAV 9`
Notes	Registers 0 through 15 are accessible from the front panel in menu keys for Save Registers. Register 0 corresponds to the front panel Register 1
Min/Max	0 / 127
Status Bits/OPC dependencies	The command is sequential

9.2.11 *SRE - Service Request Enable

Enables the desired bits of the "Service Request Enable Register" on page 3028.

The query returns the value of the register, indicating which bits are currently enabled.

Numeric values for bit patterns can be entered using decimal or hexadecimal representations (0 to 32767, equivalent to `#H0` to `#H7FFF`).

Remote Command	`*SRE <integer>` `*SRE?`
Example	Enable bits 1, 2, and 4 in the service request enable register: `*SRE 22`
Notes	For related commands, see "Status Register System & STATus Subsystem" on page 3016 and `:SYSTem:ERRor[:NEXT]?`
Preset	0
Min/Max	0 / 255

Status Bits/OPC dependencies	Service Request Enable Register (all bits, 0 – 7)

9.2.12 *STB? - Status Byte Query

Returns the value of the "Status Byte Register" on page 3025 without erasing its contents.

Remote Command	`*STB?`
Example	Return a decimal value for the bits in the Status Byte Register: `*STB?` For example, if 16 is returned, it indicates that bit 5 is set and one of the conditions monitored in the standard event status register is set
Notes	See related command "*CLS - Clear Status" on page 2989
Status Bits/OPC dependencies	Status Byte Register (all bits, 0 – 7)

9.2.13 *TRG - Trigger

Triggers the instrument. Use `:TRIGger[:SEQuence]:SOURce` to select the trigger source.

Remote Command	`*TRG`
Example	Trigger the instrument to take a sweep or start a measurement, depending on the current instrument settings: `*TRG`
Notes	See related command `:INITiate:IMMediate`

9.2.14 *TST? - Self Test Query

Performs the internal self-test routines and returns a number indicating the success of the testing. The value returned is 0 if the test is successful, or 1 if it fails.

Remote Command	`*TST?`
Example	Run the self-test routines: `*TST?`

9.2.15 *WAI - Wait-to-Continue

Causes the instrument to wait until all overlapped commands are completed before executing any additional commands. There is no equivalent query.

Remote Command	`*WAI`
Example	Set the instrument to single sweep. Start a sweep, then wait for its completion: `:INIT:CONT OFF;INIT;*WAI`
Notes	`*WAI` does *not* wait for the completion of user-interface-related commands, such as `:MMEM:LOAD:SCON "myScreenConfig.screen"`
Status Bits/OPC dependencies	Not global to all remote ports or front panel. `*OPC` only considers operation that was initiated on the same port that the `*OPC` command was issued from

9.3 SCPI Operation and Results Query

You can use SCPI commands for remote control of measurements and querying of measurement results data. There are several alternative commands you can use to control the measurement, depending on how you wish to operate the instrument. There are also a number of queries that you can use to extract the measurement data.

In this section, “Mode” refers to a Measurement Application, for example, Spectrum Analyzer or 5G NR.

9.3.1 Mode Control

Use either `:INSTrument:SELect` or `:INSTrument:NSELect` to select the Mode. See "Mode" on page 106.

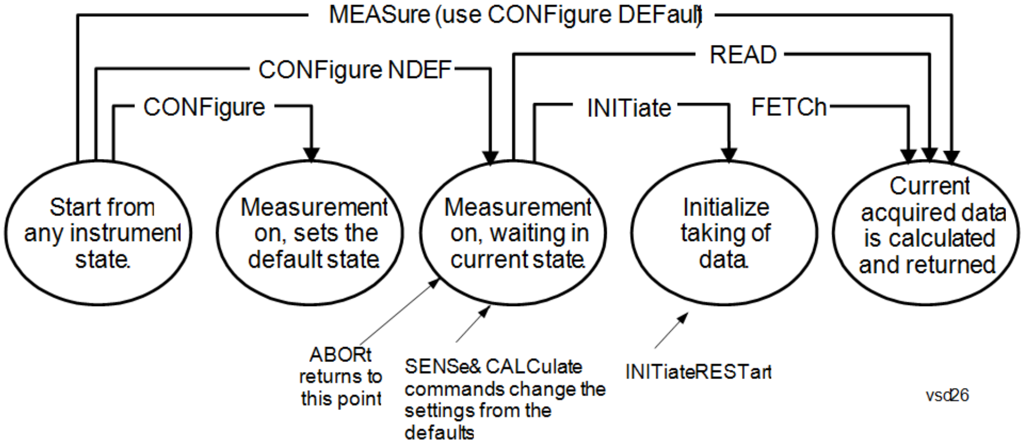
`:INSTrument:CONFigure` causes a Mode *and* Measurement switch at the same time. This results in faster overall switching than sending `:INSTrument:SELect` and `:CONFigure` separately, as described in "Mode" on page 106.

9.3.2 Measurement Control

This section describes the measurement control commands listed below, and their functions.

"CONFigure" on page 2997	Switches to the desired measurement. Presets all measurement settings to their defaults, *unless* `:NDEFault` is specified
"INITiate" on page 2998	Starts the measurement
"FETCh" on page 2998	Queries the data without starting the measurement. If a measurement is already in progress, waits for completion
"READ" on page 2999	Starts the measurement with the current settings and queries the data
"MEASure" on page 3000	Switches to the desired measurement, presets all measurement settings to their defaults, starts the measurement and queries the data

The relationship between the command forms is illustrated in the diagram below. `:FETCh`, `:READ` and `:MEASure` are queries that return measurement data.



9.3.2.1 CONFigure

Stops the current measurement (if any) and sets up the instrument for the specified measurement using the measurement's default settings. Does not initiate the collection of measurement data unless `:INIT:CONT` is `ON`. If you change any measurement settings after using `:CONFigure`, "READ" on page 2999 can be used to initiate a measurement without changing the settings back to their defaults.

Normally `:CONFigure` presets the measurement after selecting it; but, if sent with the `NDEFault` parameter, it selects it without performing a Preset.

Remote Command	`:CONFigure:<measurement>[:NDEFault]` `:CONFigure?`

Example	Select and preset the Swept SA measurement:
	`:CONF:SAN`
	Select the Swept SA measurement *without* presetting:
	`:CONF:SAN:NDEF`
	Query the current measurement:
	`:CONF?`

Remote Command	`:CONFigure:CATalog?`
Example	`:CONF:CATalog?` returns a quoted string of all licensed measurement names in the current mode. For example, `"SAN, CHP, OBW, ACP, PST, TXP, SPUR, SEM, LIST”` for the Spectrum Analyzer mode

9.3.2.2 INITiate

Initiates a trigger cycle for the specified measurement, but does not output any data. You must then use `:FETCh<meas>` to return data. If a measurement other than the current one is specified, the instrument will switch to that measurement and then initiate it.

Remote Command	`:INITiate:<measurement>`
Example	Switch to the `SANalyzer` (Swept SA) measurement if not already there, then start the measurement: `:INIT:SAN`

`:INITiate` does not change any of the measurement settings. For example, if you have already run the ACP measurement and you send `:INIT:ACP?` it initiates a new ACP measurement using the same instrument settings as the last time ACP was run.

If another measurement is running, `:INIT` switches to the specified measurement. For example, suppose you are running the channel power measurement. If you send `:INIT:ACP?` it changes from channel power to ACP and initiates an ACP measurement.

If your selected measurement is currently in the idle state, it restarts the measurement. Depending upon the measurement and the number of averages, there may be multiple data acquisitions, with multiple trigger events, for one full trigger cycle.

CAUTION

`:INIT` allows additional commands *while* the measurement is in progress.

Be aware that such additional commands may change measurement settings. They may cause the measurement in progress to be discarded, and a new measurement may start.

To wait for the completion of a measurement after sending `:INITiate`, send "*WAI - Wait-to-Continue" on page 2995, or "*OPC? - Operation Complete" on page 2991, or use "FETCh" on page 2998.

9.3.2.3 FETCh

Places selected data from the most recent measurement into the output buffer. Use `:FETCh` if you have already made a valid measurement and you want to retrieve data. You can issue `:FETCh` multiple times with differing `[n]` values without restarting or re-making the measurement, for example, both scalars and trace data from a single measurement.

Remote Command	`:FETCh:<measurement>[n]?`

Example	Fetch item 2 (Trace 2) from the `SAN` (Swept SA) measurement when the measurement completes. If not in the Swept SA measurement, returns an error: `:FETCh:SAN2?`

`:FETCh` does not change any of the measurement settings, it simply reads the results of the current measurement. `:FETCh` may be used to return results other than those specified with the original `:READ` or `:MEASure` query that you sent.

You can only `:FETCh` results from the measurement that is currently active, it does not change to a different measurement. An error message is reported if a measurement other than the current one is specified.

If you need to get new measurement data, use `"READ" on page 2999`, which is equivalent to "INITiate" on page 2998 followed by `:FETCh`.

The measurement results for `n` = 1 (usually the scalar result) will be returned if the optional `[n]` value is not included, or is set to 1. If the `[n]` value is set to a value other than 1, the selected data results will be returned. See each measurement for details of what types of scalar results or trace data results are available. The binary data formats should be used for handling large blocks of data since they are smaller and transfer faster than the ASCII format. See "Format Data: Numeric Data (Remote Command Only)" on page 3004.

Note that the data returned by `:FETCh?` uses the data setting specified by "Format Data: Numeric Data (Remote Command Only)" on page 3004 and "Format Data: Byte Order (Remote Command Only)" on page 3005 commands ,and can return real or ASCII data. If the format is set to `INT,32`, it returns `REAL,32` data.

9.3.2.4 READ

Initiates a trigger cycle for the specified measurement and outputs the requested data. If a measurement other than the current one is specified, the instrument will switch to that measurement before it initiates the measurement and returns results.

Remote Command	`:READ:<measurement>[n]?`
Example	Switch to the `SANalyzer` (Swept SA) measurement if not already there, start the measurement, and return item 2 (Trace 2) from the measurement when the measurement completes: `:READ:SAN2?`

`:READ` does not change any of the measurement settings. For example, if you have already run the ACP measurement and you send `:READ:ACP?`, it initiates a new ACP measurement using the same instrument settings as the last time ACP was run.

`:READ` switches to the specified measurement if the instrument is not already there. For example, suppose you have already run the ACP measurement but now you are running the Channel Power measurement. When you send `:READ:ACP?`, it changes from Channel Power back to ACP and, using the previous ACP settings, initiates the measurement and return results.

The measurement results for `n` = 1 (usually the scalar result) will be returned if the optional `[n]` value is not included, or is set to 1. If the `[n]` value is set to a value other than 1, the selected data results will be returned. See each measurement for details of what types of scalar results or trace data results are available. The binary data formats should be used for handling large blocks of data since they are smaller and transfer faster than the ASCII format. See "Format Data: Numeric Data (Remote Command Only)" on page 3004.

Note that the data returned by `:READ?` uses the data setting specified by "Format Data: Byte Order (Remote Command Only)" on page 3005) and "Format Data: Numeric Data (Remote Command Only)" on page 3004, and can return real or ASCII data. If the format is set to `INT,32` it returns `REAL,32` data.

`:READ` blocks other SCPI communication, waiting until the measurement is complete before returning results.

For more details of how measurements proceed, see also "INITiate" on page 2998.

9.3.2.5 MEASure

Stops the current measurement (if any) and sets up the instrument for the specified measurement using the measurement's default settings, initiates a trigger cycle for the specified measurement, and outputs the requested data.

Remote Command	`:MEASure:<measurement>[n]?`
Example	Switch to the `SANalyzer` (Swept SA) measurement, start the measurement, and read back item 2 (Trace 2) when the measurement completes `:MEAS:SAN2?`

This is a fast single-command way to make a measurement using the measurement's default settings. These are the settings and units that conform to the Mode Setup settings (for example, Radio Standard) that you have currently selected.

Stops the current measurement (if any) and sets up the instrument for the specified measurement using the measurement's defaults.

Initiates the data acquisition for the measurement.

Blocks other SCPI communication, waiting until the measurement is complete before returning results.

Depending on the measurement and the number of avaerages, there may be multiple data acquisitions, with multiple trigger events.

After the data is valid, returns the scalar results, or the trace data, for the specified measurement. The type of data returned may be defined by an `[n]` value that is sent with the command.

If the optional `[n]` value is not included, or is set to 1, scalar measurement results will be returned. If the `[n]` value is other than 1, the selected trace data results will be returned. See each command for details of which types of scalar results or trace data results are available.

The default format for data output is ASCII. (Older versions of Spectrum Analysis and Phase Noise mode measurements only use ASCII.) The binary data formats should be used for handling large blocks of data, because transfers are smaller and faster than when using the ASCII format. See "Format Data: Numeric Data (Remote Command Only)" on page 3004 for more information.

If you need to change some of the measurement parameters from the measurement's default settings, you can set up the measurement with `:CONFigure`. Use the commands in the `:SENSe:<measurement>` and `:CALCulate:<measurement>` subsystems to change the settings, then you can use `:READ?` to initiate the measurement and query the results.

Measurement settings persist if you initiate a different measurement and then return to a previous one. Use `:READ?` if you want to use those persistent settings. If you want to go back to the default settings, use `:MEASure?`.

Note that the data returned to `:MEASure?` uses the data setting specified by "Format Data: Byte Order (Remote Command Only)" on page 3005 and "Format Data: Numeric Data (Remote Command Only)" on page 3004, and can return real or ASCII data. If the format is set to `INT,32` it returns `REAL,32` data.

9.3.3 Trace Formatting Commands

The following commands and queries are available to format and manipulate trace data.

9.3.3.1 Clear Trace (Remote Command Only)

Clears the selected trace (from the front panel) or the specified trace (from SCPI). Does not affect the state of any function or variable in the instrument. Loads mintracevalue into all of the points in the selected trace, unless the trace is in Min Hold in which case it loads maxtracevalue. This occurs even if Update = Off.

Remote Command	`:TRACe:CLEar TRACE1 | … | TRACE6`
Example	Clear Trace 1: `:TRAC:CLE TRACE1`

9.3.3.2 Send/Query Trace Data (Remote Command Only)

Allows trace data to be sent to the instrument or queried from the instrument. The response to the query is a list of the amplitude points which comprise the requested trace in the current Y Axis Unit of the instrument. The X Axis Unit is that of the destination trace (for send) or the source trace (for query).

See:

– "Query Trace Data" on page 3002

– "More Information" on page 3003

Remote Command	`:TRACe[:DATA] TRACE1 | TRACE2 | TRACE3 | TRACE4 | TRACE5 | TRACE6, <data>`

Notes	The `TRACe[:DATA]` command is of the form:
	`:TRACe:DATA <trace>,<data>`
	where `<trace>` can be one of the following parameters:
	`TRACE1, TRACE2, TRACE3, TRACE4, TRACE5, TRACE6`
	and where `<data>` can be
	- ASCII data, which consists of a string of values separated by comma
	or
	- `REAL` or `INT`eger sent as a definite length block, with a header describing the data to follow

Couplings	Sweep points will affect the amount of data `:FORMat:DATA` describes the different types of data formats that can be used with trace data Use `:FORMat:BORDer` to set the byte order

Query Trace Data

Remote Command	`:TRACe[:DATA]? TRACE1 | TRACE2 | TRACE3 | TRACE4 | TRACE5 | TRACE6`

Example	Send five points to Trace 1. Assuming that `:FORMat:DATA` is set to `ASCii`, Y Axis Unit is set to dBm, and sweep points is set to 5, this will result in Trace 1 consisting of the five points -1 dBm, -2 dBm, -3 dBm, -4 dBm, and -5 dBm:
	`:TRAC TRACE1,-1,-2,-3,-4,-5`
	Query the instrument for the contents of trace 2:
	`:TRAC? TRACE2`

Backwards Compatibility Notes	In X-Series, the legacy `RAWTRACE,LLINE1,LLINE2` parameters for trace data query are no longer available

More Information

The format and byte order of the sent or received data depend on "Format Data: Numeric Data (Remote Command Only)" on page 3004 and "Format Data: Byte Order (Remote Command Only)" on page 3005. `ASCII` data consists of a string of comma separated values. `REAL` or `INTeger` data is sent as a definite length block, with a header describing the data to follow.

For example, a four point trace might look like this if in ASCII (`FORMat:DATA ASCii`):

```
-5.87350E+01, -5.89110E+01, -5.87205E+01, -5.12345E+01<NL><END>
```

and like this if in `INTeger` with 4 bytes per point (`FORMat:DATA INT,32`):

```
#216<16 bytes of data><NL><END>
```

where the 2 in the #216 means “2 digits of numeric data to follow”, and the 16 is the 2 digits and means “16 binary bytes to follow” (this is the definite length block format).

Note that the data is terminated with `<NL><END>`. (For GPIB this is newline, or linefeed, followed by EOI set true. For LAN, this is newline only.)

The data format set by "Format Data: Numeric Data (Remote Command Only)" on page 3004 and "Format Data: Byte Order (Remote Command Only)" on page 3005 is used both for sending data to the instrument and receiving data from the instrument.

When sending data to the instrument, the data block must contain exactly the number of points currently specified in **Sweep, Points** or an error message will be generated and there will be no change to the target trace.

No units terminator (for example, dB or V) is used when sending data; the data is taken as being in the current Y Axis Unit of the instrument.

When a trace is sent to the instrument, it immediately overwrites all of the data in the target trace. Consequently the trace should be inactive in order to achieve predictable results. If you send trace data while a trace is active, and particularly if a sweep or an **Average** or **Max/Min Hold** sequence is already in progress, you may end up with a trace that combines the data you sent with measurement data. Similarly, when querying trace data, it is best if the instrument is not sweeping during the query.

Therefore, it is generally advisable to be in **Single** sweep, or have the trace in **View**, when sending trace data to the instrument or querying trace data from the instrument.

9.3.3.3 Format Data: Numeric Data (Remote Command Only)

Specifies the format of the trace data input and output.

Specifies the formats used for trace data during data transfer across any remote port. Affects only the data format for setting and querying trace data for `:TRACe[:DATA]`, `:TRACe[:DATA]?`, `:CALCulate:DATA[n]?` and `:FETCh:SANalyzer[n]?`.

Remote Command	`:FORMat[:TRACe][:DATA] ASCii | INTeger,32 | REAL,32 | REAL,64` `:FORMat[:TRACe][:DATA]?`
Notes	The query response is: `ASCii`: ASC,8 `REAL,32`: REAL,32 `REAL,64`: REAL,64 `INTeger,32`: INT,32 When the numeric data format is REAL or ASCii, data is output in the current Y Axis unit. When the data format is INTeger, data is output in units of m dBm (.001 dBm) The `INT,32` format returns binary 32-bit integer values in internal units (m dBm), in a definite length block
Dependencies	Sending a data format spec with an invalid number (for example, `INT,48`) generates no error. The instrument simply uses the default (8 for `ASCii`, 32 for `INTeger`, 32 for `REAL`) Sending data to the instrument which does not conform to the current `FORMat` specified, results in an error. Sending ASCII data when a definite block is expected generates message -161 "Invalid Block Data" and sending a definite block when ASCII data is expected generates message -121 "Invalid Character in Number"
Preset	`ASCii`
Backwards Compatibility Notes	Note that the `INT,32` format is only applicable to `:TRACe:DATA`. This preserves backwards compatibility for the Swept SA measurement. For all other commands/queries that honor `:FORMat:DATA`, if `INT,32` is sent the instrument will behave as though it were set to `REAL,32`

The specifications for each output type are:

`ASCii`	Amplitude values are in ASCII, in the current Y Axis Unit, one ASCII character per digit, values separated by commas, each value in the form: `SX.YYYYYEsZZ`, where: S = sign (+ or -) X = one digit to left of decimal point Y = 5 digits to right of decimal point E = E, exponent header s = sign of exponent (+ or -) ZZ = two digit exponent
`REAL,32`	Binary 32-bit real values in the current Y Axis Unit, in a definite length block
`REAL,64`	Binary 64-bit real values in the current Y Axis Unit, in a definite length block

9.3.3.4 Format Data: Byte Order (Remote Command Only)

Selects the binary data byte order for data transfer and other queries.

Controls whether binary data is transferred in normal or swapped mode. Affects only the byte order for setting and querying trace data for `:TRACe[:DATA]`, `:TRACe[:DATA]?` , `:CALCulate:DATA[n]?` and `:FETCh:SANalyzer[n]?`.

By definition, any command that depends on this setting uses *any* format supported by :`FORMat:DATA`.

- `NORMal` order is a byte sequence that begins with the most significant byte (MSB) first, and ends with the least significant byte (LSB) last in the sequence: 1|2|3|4
- `SWAPped` order is when the byte sequence begins with the LSB first, and ends with the MSB last in the sequence: 4|3|2|1

Remote Command	`:FORMat:BORDer NORMal | SWAPped` `:FORMat:BORDer?`
Preset	`NORMal`

9.3.3.5 Calculate/Compress Trace Data Query (Remote Command Only)

Returns compressed data for the currently selected measurement and sub-opcode `[n]`.

`n` = any valid sub-opcode for that measurement. See the `:MEASure:<measurement>?` query description of your specific measurement for information on the data that can be returned.

The data is returned in the current Y Axis Unit of the instrument. The command is used with a sub-opcode `<n>` (default = 1) to specify the trace. With trace queries, it is best if the instrument is not sweeping during the query. Therefore, it is generally advisable to be in **Single** sweep, or Update = Off.

This command is used to compress or decimate a long trace to extract and return only the desired data. A typical example would be to acquire N frames of GSM data and return the mean power of the first burst in each frame. The command can also be used to identify the best curve fit for the data.

Remote Command	`:CALCulate:DATA<n>:COMPress? BLOCk | CFIT | MAXimum | MINimum | MEAN | DMEan | RMS | SAMPle | SDEViation | PPHase [,<soffset>[,<length>[,<roffset>[,<rlimit>]]]]`
Notes	The command supports 5 parameters, but the last 4 (`<soffset>, <length>, <roffset>, <rlimit>`) are optional. The optional parameters must be entered in the specified order. For example, if you want to specify <length>, then you must also specify <soffset>. See details below for a definition

of each of these parameters

This command uses the data in the format specified by "Format Data: Byte Order (Remote Command Only)" on page 3005, returning either binary or ASCII data

As an example, to query the mean power of a set of GSM bursts:

- Supply a signal that is a set of GSM bursts
- Select the IQ Waveform measurement (in IQ Analyzer Mode)
- Set the sweep time to acquire at least one burst
- Set the triggers such that acquisition happens at a known position relative to a burst
- Query the mean burst levels using, `:CALC:DATA2:COMP? MEAN,24e-6,526e-6` (These parameter values correspond to GSM signals, where 526e-6 is the length of the burst in the slot and you just want 1 burst)

BLOCk or block data

Returns all the data points from the region of the trace data that you specify. For example, it could be used to return the data points of an input signal over several timeslots, excluding the portions of the trace data that you do not want. (This is x,y pairs for trace data and I,Q pairs for complex data.)

CFIT or curve fit

Applies curve fitting routines to the data. `<soffset>` and `<length>` are required to define the data that you want. <roffset> is an optional parameter for the desired order of the curve equation. The query will return the following values: the x-offset (in seconds) and the curve coefficients ((order + 1) values).

`MIN`, `MAX`, `MEAN`, `DME`, `RMS`, `SAMP`, `SDEV` and `PPH` return one data value for each specified region (or `<length>`) of trace data, for as many regions as possible until you run out of trace data (using `<roffset>` to specify regions), or they return the number of regions you specify (using `<rlimit>`) ignoring any data beyond that.

MINimum

Returns the minimum data point (y value) for the specified region(s) of trace data. For I/Q trace data, the minimum magnitude of the I/Q pairs is returned.

MAXimum

Returns the maximum data point (y value) for the specified region(s) of trace data. For I/Q trace data, the maximum magnitude of the I/Q pairs is returned.

MEAN

Returns a single value that is the arithmetic mean of the data point values (in dB/ dBm) for the specified region(s) of trace data. For I/Q trace data, the mean of the magnitudes of the I/Q pairs is returned. See the following equations.

NOTE

If the original trace data is in dB, this function returns the arithmetic mean of those log values, not log of the mean power which is a more useful value. The mean of the log is the better measurement technique when measuring CW signals in the presence of noise. The mean of the power, expressed in dB, is useful in power measurements such as Channel Power. To achieve the mean of the power, use the RMS option.

Equation 1: Mean Value of Data Points for Specified Region(s)

$$\mathrm{MEAN} = \frac{1}{n} \sum_{Xi \,\in\, \mathrm{region(s)}} Xi$$

where Xi is a data point value, and n is the number of data points in the specified region(s).

Equation 2: Mean Value of I/Q Data Pairs for Specified Region(s)

$$\mathrm{MEAN} = \frac{1}{n} \sum_{Xi \,\in\, \mathrm{region(s)}} |Xi|$$

where |Xi| is the magnitude of an I/Q pair, and n is the number of I/Q pairs in the specified region(s).

DMEan

Returns a single value that is the mean power (in dB/ dBm) of the data point values for the specified region(s) of trace data. See the following equation:

Equation 3: DMEan Value of Data Points for Specified Region(s)

$$\mathrm{DME} = 10 \times \log_{10}\left(\frac{1}{n} \sum_{Xi \,\in\, \mathrm{region(s)}} 10^{\frac{Xi}{10}} \right)$$

RMS

Returns a single value that is the average power on a root-mean-squared voltage scale (arithmetic rms) of the data point values for the specified region(s) of trace data. See the following equation.

Equation 4: RMS Value of Data Points for Specified Region(s)

$$\mathrm{RMS} = \sqrt{\frac{1}{n} \sum_{Xi\ \in\ \mathrm{region(s)}} Xi^2}$$

where Xi is a data point value, and n is the number of data points in the specified region(s).

For I/Q trace data, the rms of the magnitudes of the I/Q pairs is returned. See the following equation.

NOTE **This function is very useful for I/Q trace data. However, if the original trace data is in dB, this function returns the rms of the log values which is not usually needed.**

Equation 5: RMS Value of I/Q Data Pairs for Specified Region(s)

$$\mathrm{RMS} = \sqrt{\frac{1}{n} \sum_{Xi\ \in\ \mathrm{region(s)}} Xi\ Xi^*}$$

where Xi is the complex value representation of an I/Q pair, Xi* its conjugate complex number, and n is the number of I/Q pairs in the specified region(s).

Once you have the rms value for a region of trace data (linear or I/Q), you may want to calculate the mean power. You must convert this rms value (peak volts) to power in dBm:

*10 x log[10 * (rms value)2]*

SAMPle

Returns the first data value (x,y pair) for the specified region(s) of trace data. For I/Q trace data, the first I/Q pair is returned.

SDEViation

Returns a single value that is the arithmetic standard deviation for the data point values for the specified region(s) of trace data. See the following equation.

Equation 6: Standard Deviation of Data Point Values for Specified Region(s)

$$\mathrm{SDEV} = \sqrt{\frac{1}{n} \sum_{Xi\ \in\ \mathrm{region(s)}} (Xi - \overline{X})^2}$$

where Xi is a data point value, X is the arithmetic mean of the data point values for the specified region(s), and n is the number of data points in the specified region(s).

For I/Q trace data, the standard deviation of the magnitudes of the I/Q pairs is returned. See the following equation.

Equation 7: Standard Deviation of I/Q Data Pair Values for Specified Region(s)

$$\mathrm{SDEV} = \sqrt{\frac{1}{n} \sum_{Xi\ \in\ \mathrm{region(s)}} (|Xi| - \overline{X})^2}$$

where |Xi| is the magnitude of an I/Q pair, X is the mean of the magnitudes for the specified region(s), and n is the number of data points in the specified region(s).

PPHase

Returns the x,y pairs of both rms power (dBm) and arithmetic mean phase (radian) for every specified region and frequency offset (Hz). The number of pairs is defined by the specified number of regions. This parameter can be used for I/Q vector (n=0) in Waveform (time domain) measurement and all parameters are specified by data point in `PPHase`.

The rms power of the specified region may be expressed as:

Power = 10 x log [10 x (RMS I/Q value)] + 10.

The RMS I/Q value (peak volts) is:

$$\sqrt{\frac{1}{n} \sum_{Xi\ \in\ \mathrm{region}} Xi\ Xi^*}$$

where Xi is the complex value representation of an I/Q pair, Xi* its conjugate complex number, and n is the number of I/Q pairs in the specified region.

The arithmetic mean phase of the specified region may be expressed as:

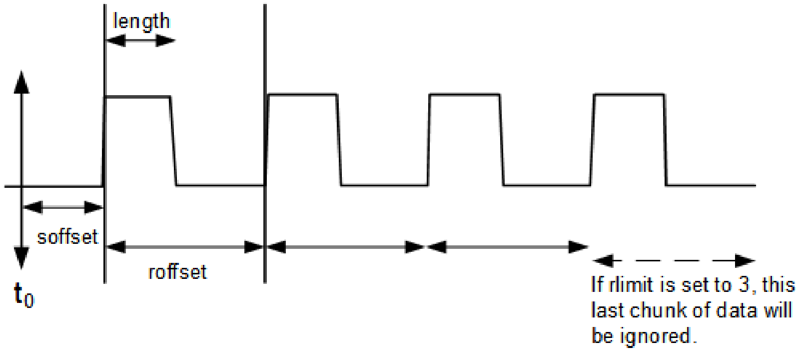
$$\frac{1}{n} \sum_{Yi\ \in\ \mathrm{region}} Yi$$

where Yi is the unwrapped phase of I/Q pair with applying frequency correction and n is the number of I/Q pairs in the specified region.

The frequency correction is made by the frequency offset calculated by the arithmetic mean of every specified region’s frequency offset. Each frequency offset is calculated by the least square method against the unwrapped phase of I/Q pair.

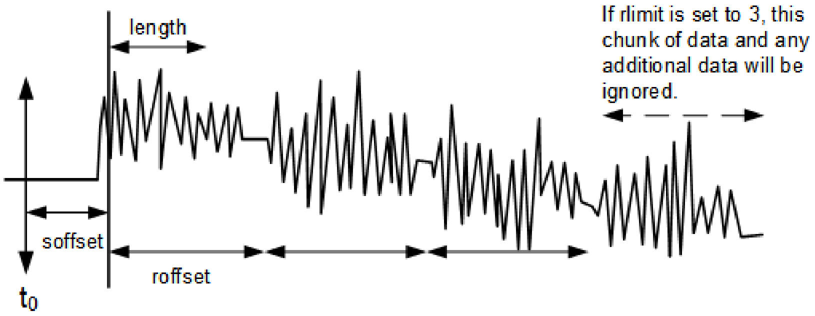
Sample Trace Data - Constant Envelope

(See below for explanation of variables.)



Sample Trace Data - Not Constant Envelope

(See below for explanation of variables.)



`<soffset>`	Optional real number, in seconds for time-domain traces, and is a dimensionless index 0 to Npoints – 1, for frequency-domain traces Specifies the amount of data at the beginning of the trace that will be ignored before the decimation process starts. It is the time or frequency change from the start of the trace to the point where you want to start using the data. The default value is zero
`<length>`	Optional real number, in seconds for time-domain traces, and is a dimensionless index 0 to Npoints – 1, for frequency-domain traces Defines how much data will be compressed into one value. This parameter has a default value equal to the current trace length
`<roffset>`	Optional real number, in seconds for time-domain traces, and is a dimensionless index 0 to Npoints – 1, for frequency-domain traces Defines the beginning of the next field of trace elements to be compressed. This is relative to the beginning of the previous field. This parameter has a default value equal to the `<length>` variable. Note that this parameter is used for a completely different purpose when curve fitting (see "CFIT or curve fit" on page 3006 above)

`<rlimit>`	Optional integer Specifies the number of data items that you want returned. Ignores any additional items beyond that number. You can use the Start offset and the Repeat limit to pick out exactly what part of the data you want to use. The default value is all the data

9.3.3.6 Calculate Peaks of Trace Data (Remote Command Only)

Returns a list of all the peaks for the currently selected measurement and sub-opcode `[n]`. The peaks must meet the requirements of the peak threshold and excursion values.

`n` = any valid sub-opcode for the current measurement. See the `:MEASure:<measurement>` command description of your specific measurement for information on the data that can be returned.

The command can only be used with specific sub-opcodes with measurement results that are trace data. Both real and complex traces can be searched, but complex traces are converted to magnitude in dBm. In many measurements the sub-opcode `n` = 0, is the raw trace data, which cannot be searched for peaks, and sub-opcode `n` = 1, is often calculated results values which also cannot be searched for peaks.

This command uses the data setting specified by "Format Data: Byte Order (Remote Command Only)" on page 3005 and "Format Data: Numeric Data (Remote Command Only)" on page 3004, and can return real or ASCII data. If the format is set to `INT,32`, it returns `REAL,32` data.

The command has four types of parameters:

1. Threshold (in dBm)
2. Excursion (in dB)
3. Sorting order (amplitude, frequency, time)
4. Optional in some measurements: Display line use (all, > display line, < display line)

Remote Command	For Swept SA measurement:
	`:CALCulate:DATA[1]|2|…|6:PEAKs? <threshold>,<excursion>[,AMPLitude | FREQuency | TIME[,ALL | GTDLine | LTDLine]]`
	For most other measurements:
	`:CALCulate:DATA[1]|2|…|6:PEAKs? <threshold>,<excursion>[,AMPLitude | FREQuency | TIME]`

Notes	Parameters:

`<n>`	The trace that will be used: `[1]|2|…|6`
`<threshold>`	The level below which trace data peaks are ignored Note that the threshold value is required and is always used as a peak criterion. To effectively disable the threshold criterion for this command, provide a substantially low threshold value such as –200 dBm Note also that the threshold value used in this command is independent of and has no effect on the threshold value stored under the Peak Criteria menu
`<excursion>`	The minimum amplitude variation (rise and fall) required for a signal to be identified as peak Note that the excursion value is required and is always used as a peak criterion. To effectively disable the excursion criterion for this command, provide the minimum value of 0.0 dB Note also that the excursion value used in this command is independent of and has no effect on the excursion value stored under the Peak Criteria menu

Values must be provided for threshold and excursion. The sorting and display line parameters are optional (defaults are `AMPLitude` and `ALL`)

Note that there is always a Y-axis value for the display line, regardless of whether the display line state is on or off. It is the current Y-axis value of the display line which is used by this command to determine whether a peak should be reported

Sorting order:

`AMPLitude`	Lists the peaks in order of descending amplitude, with the highest peak first If this optional parameter not sent, this is the default
`FREQuency`	Lists the peaks in order of occurrence, left to right across the x-axis
`TIME`	Lists the peaks in order of occurrence, left to right across the x-axis

Peaks vs. Display Line:

`ALL`	Lists all of the peaks found (default if optional parameter not sent)
`GTDLine` Greater than display line	Lists all of the peaks found above the display line
`LTDLine` Less than display line	Lists all of the peaks found below the display line

For example, for Swept SA measurement in Spectrum Analyzer Mode:

```
:CALC:DATA4:PEAK? –40,10,FREQ,GTDL
```

Identifies the peaks of trace 4 that are above –40 dBm, with excursions of at least 10 dB. The peaks are returned in order of increasing frequency, starting with the lowest frequency. Only the peaks that are above the display line are returned

Query Results:

If `:FORMat:DATA REAL,32` is selected, returns a list of floating-point numbers. The first value in the list is the number of peak points that are in the following list. A peak point consists of two values: a peak amplitude followed by its corresponding frequency (or time)

If no peaks are found, the peak list consists of only the number of peaks, (0)

9.3.3.7 Smooth Trace Data (Remote Command Only)

Included for ESA compatibility. Not recommended for new designs. Use `:CALCulate:DATA:COMPress` instead.

Smoothes the trace according to the number of points specified in `:TRACe:MATH:SMOoth:POINts`. There is no equivalent front panel function.

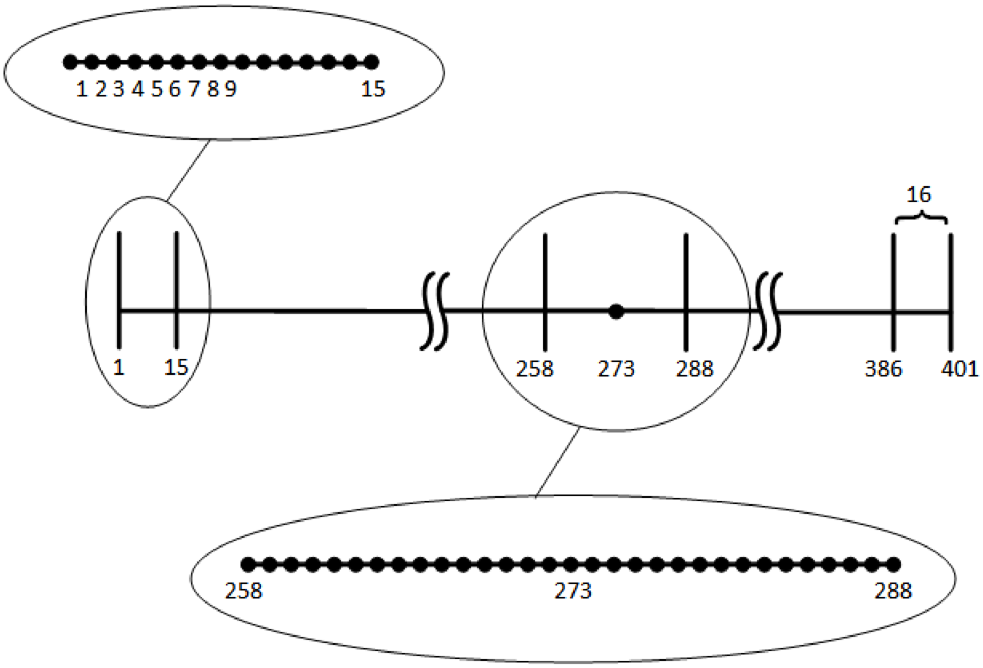
The purpose of this function is to perform a spatial video averaging, as compared to the temporal version supplied by the video-average command `[:SENSe]:AVERage:TYPE VIDeo`. The functions of `:TRACe:MATH:SMOoth <trace>` and `[:SENSe]:AVERage:TYPE VIDeo|POWer` are not interchangeable.

Backwards Compatibility SCPI	`:TRACe:MATH:SMOoth TRACE1 | … | TRACE6`

Each point value is replaced with the average of the values of the selected number of points, with half of those points located on each side of any particular point (when possible). Refer to the illustration below, which shows a 401 point trace with a smoothing number of 31. Think of the trace points as “buckets” of data. To smooth (arbitrary) point 273, the instrument averages buckets 258 through 288 and applies that value to point 273.

Increasing the number of points increases smoothing at the cost of decreasing resolution.

The amount of smoothing decreases at the end points. Because `:TRACe:MATH:SMOoth <trace>` averages values that occur before and after the data point in time, display irregularities can be caused at the start and stop frequencies. To avoid possible irregularities (signal distortion) at the ends of the trace, use small values for the smooth parameter.



Smoothing With 401 Trace Points and 31 Smoothing Points

Refer to the illustration above for a discussion of this end-point smoothing phenomena. With 31 smoothing points and a 401 point trace, point 16 will be the first point to have full 31-bucket smoothing. Likewise, point 386 will be the last point with full 31-bucket smoothing. Under the conditions stated, points 2 through 15 will be smoothed as follows: Point 2 is derived from averaging buckets 1 through 3. Point 3 is derived from averaging buckets 1 through 5, Point 4 is derived from averaging buckets 1 through 7, and so forth until point 16 is reached. The quantity of buckets used for the smoothing running average increases at the rate of 2 buckets per point, from point 1 to point ([smoothing number+1]/2), at which time the full number of smoothing points is utilized. The same characteristic occurs at the completion of the trace, beginning at point 386, beyond which the number of averaging buckets begins to decrease until point 401 is reached.

By replacing the value of each point in a trace with the average of the values of a number of points centered about that point, any rapid variations in noise or signals are smoothed into more gradual variations. It thereby performs a function similar to reducing the video bandwidth without the corresponding changes in sweep time; as such, frequency resolution is decreased. Also, signal peaks are reduced with large smoothing values. This can cause the amplitude to appear to be less than its actual value.

9.3.3.8 Number of Points for Smoothing (Remote Command Only)

Included for ESA compatibility. Not recommended for new designs. Use `:CALCulate:DATA:COMPress` instead.

Specifies the number of points that will be smoothed. Increasing the number of points increases smoothing at the cost of decreasing resolution. If the number of points is an even number, then the number of points is increased by one. If the number of points is larger than the number of sweep points, then the number of sweep points is used, unless the number of sweep points is even, in which case the number of points will be the sweep points minus one. The number of points smoothed is always an odd number.

Example	`:TRAC:MATH:SMO:POIN 501`
Notes	Only odd values are allowed If an even value of `<integer>` is specified, adds 1 unless `<integer>` = number of sweep points, in which case subtract 1 Used with `TRACe:MATH:SMOoth`
Preset	11
Min	3
Max	Number of sweep points
Backwards Compatibility SCPI	`:TRACe:MATH:SMOoth:POINts <integer>` `:TRACe:MATH:SMOoth:POINts?`

9.3.3.9 Mean Trace Data (Remote Command Only)

Included for ESA compatibility. Not recommended for new designs. Use `:CALCulate:DATA:COMPress` instead.

Returns the mean of the amplitudes of the trace amplitude elements in measurement units.

Example	`:TRAC:MATH:MEAN? TRACE2`
Backwards Compatibility SCPI	`:TRACe:MATH:MEAN? TRACE1 | … | TRACE6`

9.4 Status Register System & STATus Subsystem

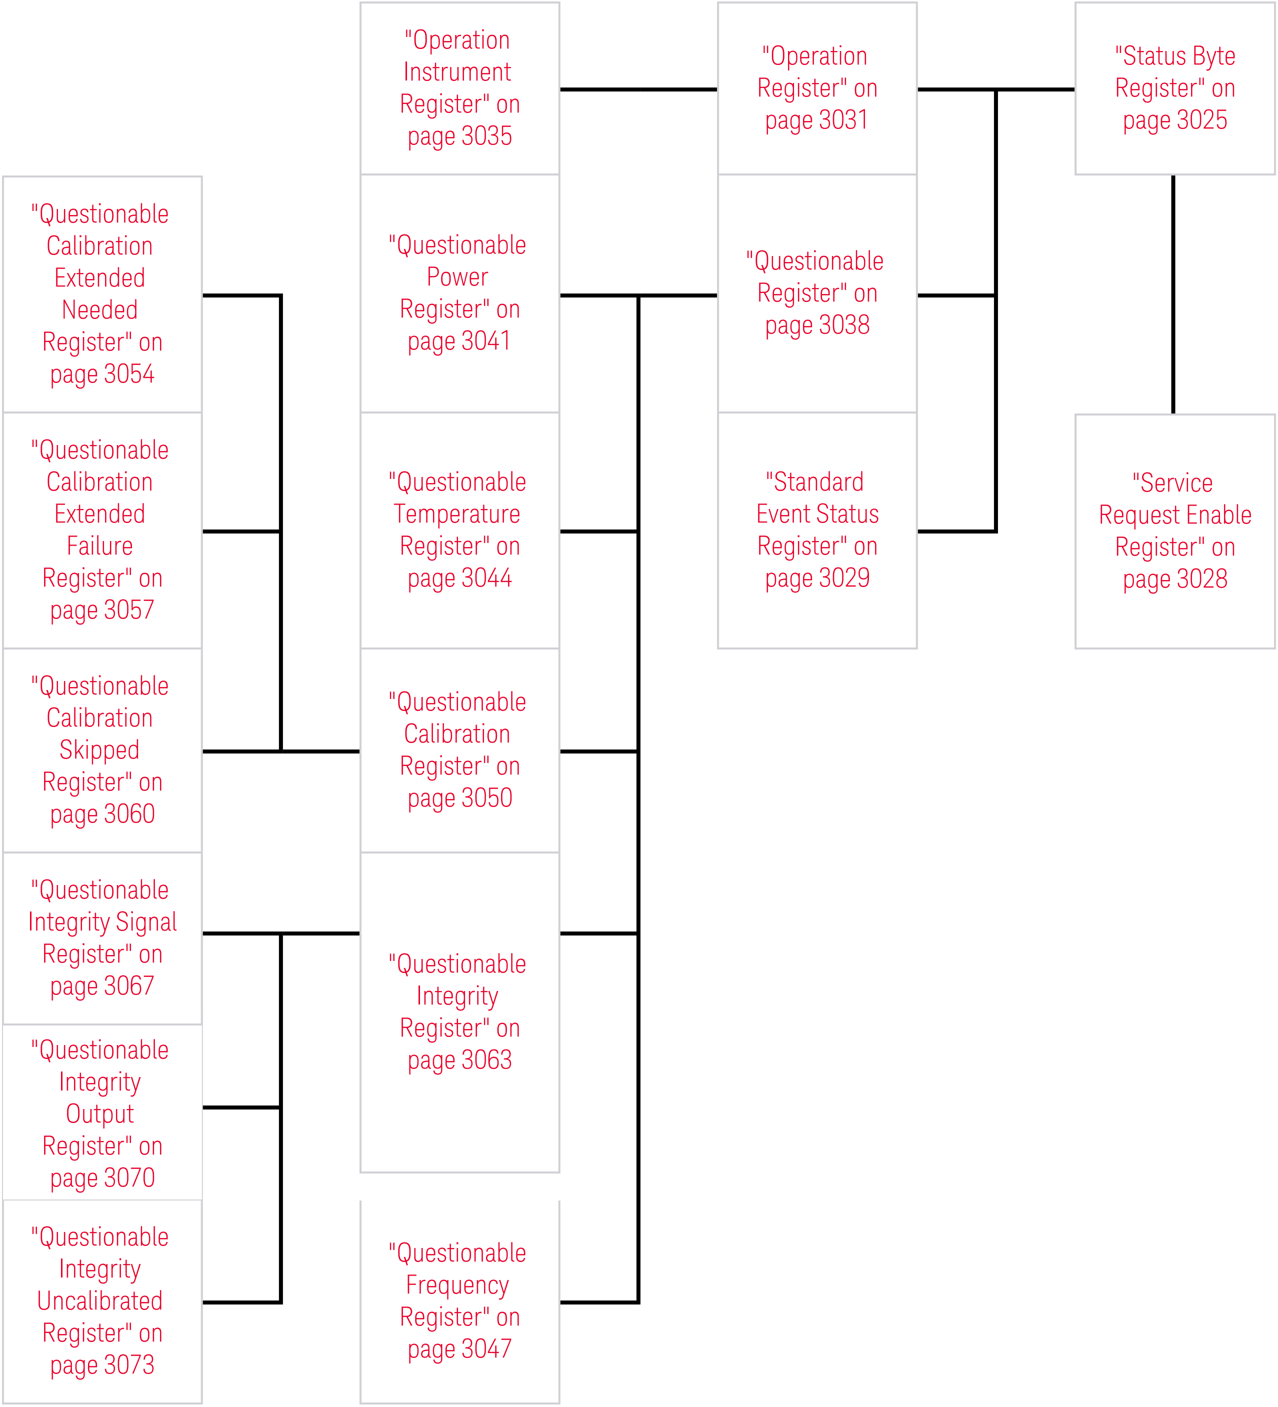
This section provides an overview of the X-Series SCPI status register system, and how to manage the registers. For detailed programming information on each status register, see "Status Subsystem Registers and Commands" on page 3025.

The SCPI `STATus` Subsystem allows you to monitor a number of status conditions within the instrument through the use of a hierarchy of status registers containing bits which go true or false depending on various conditions.

9.4.1 Status Register System Diagram

The diagram below provides a top-level overview of all the Status Registers and their interconnections.

To navigate to detailed information about each Register, click on a register name:



"Operation Instrument Register" on page 3035
"Operation Register" on page 3031

"Questionable Integrity Register" on page 3063
"Questionable Integrity Output Register" on page 3070
"Questionable Integrity Uncalibrated Register" on page 3073
"Questionable Frequency Register" on page 3047

Detailed System Diagram

As from the **X-Apps 2023** update, the fully-detailed system diagram that previously appeared here is still available, but, for improved readability, it is now published as a separate high-resolution PDF. You can download the document from Keysight's web site at:

http://literature.cdn.keysight.com/litweb/pdf/N9040-90056.pdf

9.4.2 Status Register Hierarchy

The Status Register system contains multiple registers, arranged in a hierarchy. The lower-level registers propagate their data to the higher-level registers in the data structures by means of summary bits.

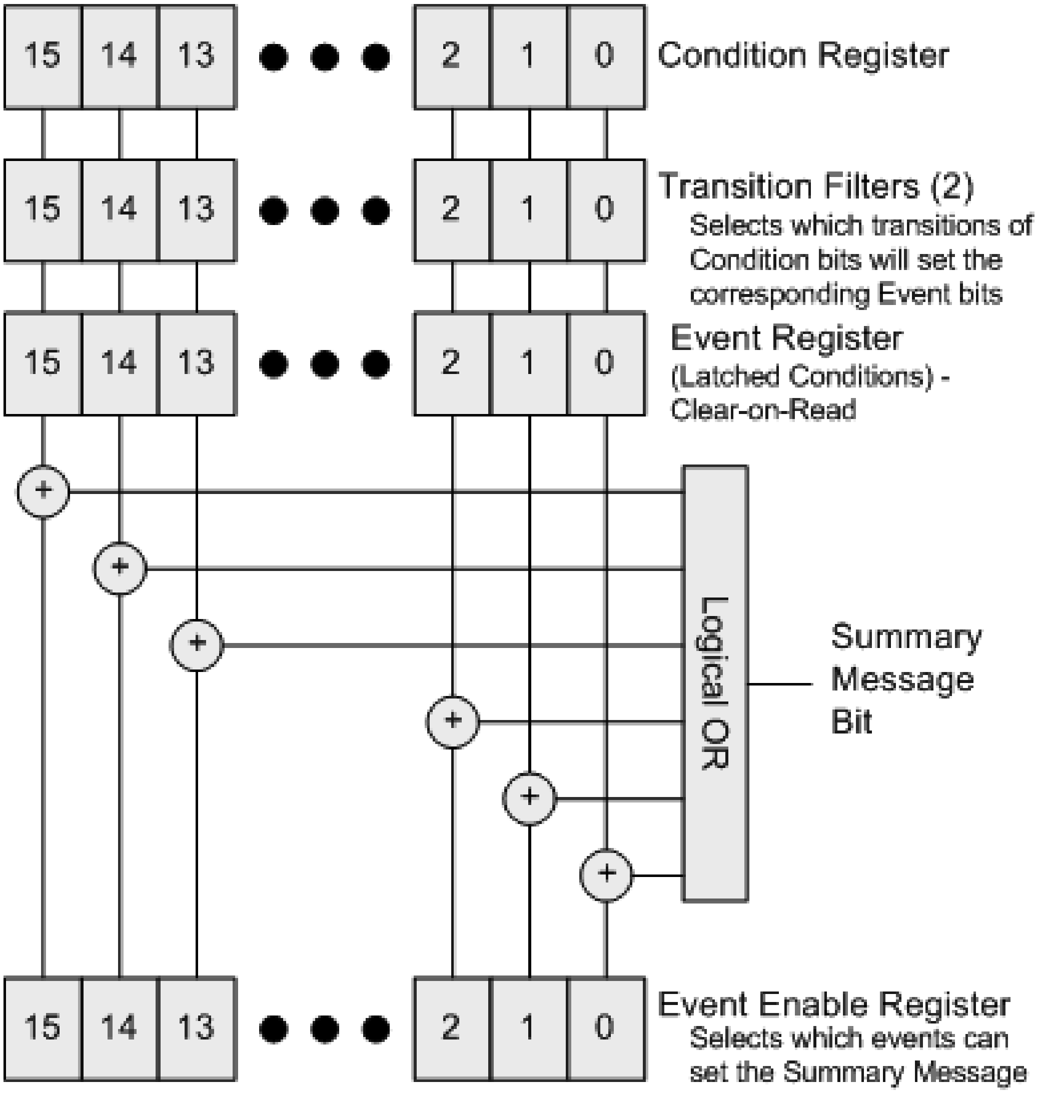
The "Status Byte Register" on page 3025 is at the top of the hierarchy and contains general status information for the instrument's events and conditions. All other individual registers are used to determine the specific events or conditions.

The "Operation Register" on page 3031 and "Questionable Register" on page 3038 are sets of registers that monitor the overall instrument condition. They are accessed using `:STATus:OPERation` and `:STATus:QUEStionable` commands in the `STATus` subsystem. Each composite status register set consists of five sub-registers:

1	Condition Register	Reports the real-time state of the signals monitored by this register set. There is no latching or buffering for a condition register
2	Positive Transition Register	Transition Filter Register Controls which signals will set a bit in the event register when the signal makes a low to high transition (when the condition bit changes from 0 to 1)
3	Negative Transition Register	Transition Filter Register Controls which signals will set a bit in the event register when the signal makes a high to low transition (when the condition bit changes from 1 to 0)
4	Event Register	Latches any signal state changes, in the way specified by the filter registers. Bits in the event register are never cleared by signal state changes. Event registers are cleared when read. They are also cleared by *CLS and by presetting the instrument
5	Event Enable Register	Controls which of the bits, being set in the event register, will be summarized as a single output for the register set. Summary bits are then used by the next higher register

Each status register produces a summary message bit.

The diagram below shows how the sub-registers relate to each other.



The settings of the Transition Filter registers determine whether or not a bit set in a Condition register ripples through to the Event register, as follows:

- If a bit is set in the Positive Transition register, then the corresponding bit in the Event register is set when the condition bit goes from low to high (false to true, off to on)
- Conversely, if a bit is set in the Negative Transition register then the Event register bit is set when the condition bit goes from high to low
- If *both* Transition Filter registers are set true, then the event bit for that condition is set whenever there is any change in the bit. If an event bit is set, the Event Enable register determines whether or not it will OR into the summary bit that is sent to the next level of register. If this bit is set, then the corresponding event bit will be included

Note that the Event register is "Clear-on-Read": when any bit is read, it is automatically cleared.

Questionable Registers

These registers report abnormal operating conditions. The status register hierarchy is:

- The summary outputs from the six `QUEStionable:<keyword>` detail registers are inputs to the "Questionable Register" on page 3038
- The summary output from the "Questionable Register" on page 3038 is an input to the Status Byte Register
- The summary output from the is an input to the "Operation Register" on page 3031. The inputs to the "Operation Condition Query" on page 3032 Register indicate the real time state of the instrument. The "Operation Event Query" on page 3033 Register summary output is an input to the Status Byte Register

Note that, in E4406A only, the "Operation Enable" on page 3033 Register has an additional function. It is `ANDed` with the "Operation Condition Query" on page 3032 Register to determine the instrument busy state, which is checked by "*OPC? - Operation Complete" on page 2991 and "*WAI - Wait-to-Continue" on page 2995 . If the `ANDed` result is non-zero, the instrument is considered busy.

9.4.3 Status Register SCPI Commands

Monitoring of instrument conditions is done at the highest level using the following IEEE 488.2 common commands.

For complete command descriptions, see "IEEE 488.2 Common Commands" on page 2988. Individual status registers can be set and queried using the commands described in "Status Subsystem Registers and Commands" on page 3025.

`*CLS`	Clear Status	Clears the status byte by emptying the error queue and clearing all the event registers
`*ESE` `*ESE?`	Event Status Enable	Sets and queries the bits in the enable register part of the standard event status register
`*ESR?`	Event Status Register	Queries and clears the event register part of the standard event status register
`*OPC` `*OPC?`	Operation Complete	Sets the standard event status register to monitor the completion of all commands. The query stops any new commands from being processed until the current processing is complete, then returns a ‘1’
`*PSC` `*PSC?`	Power-on State Clear	Sets the power-on state so that it clears the service request enable register and the event status enable register at power on

`*SRE` `*SRE?`	Service Request Enable	Sets and queries the value of the service request enable register
`*STB?`	Status Byte	Queries the value of the status byte register without erasing its contents

9.4.4 How to Use Status Registers

A program often needs to be able to detect and manage error conditions or changes in instrument status.

There are two methods you can use to programmatically access the information in status registers:

- The "Polling Method" on page 3021
- The "Service Request (SRQ) Method" on page 3022

The Polling Method works well if you do not need to know about changes the moment they occur. To detect a change using this method, the program must repeatedly read the registers.

The SRQ Method should be used if you must know immediately when a condition changes.

Either method allows you to monitor one or more conditions.

9.4.4.1 Polling Method

In this method, the instrument has a passive role. It only tells the controller that conditions have changed when the controller asks the right question.

Use this method when:

- your programming language/development environment does not support SRQ interrupts
- you want to write a simple, single-purpose program and don’t want the added complexity of setting up an SRQ handler

To monitor a condition:

- Determine which register contains the bit that reports the condition
- Send the unique SCPI query to read that register
- Examine the bit to see if the condition has changed

Monitoring Options

You can monitor conditions in various ways:

1	Check the current instrument hardware and firmware status	Do this by querying the condition registers, which continuously monitor status. These registers represent the current state of the instrument. Bits in a condition register are updated in real time When the condition monitored by a particular bit becomes true, the bit is set to 1. When the condition becomes false, the bit is reset to 0
2	Monitor a particular condition (bit)	You can enable a particular bit(s), using the "Standard Event Status Enable Register" on page 3030. The instrument will then monitor that particular condition. If the bit becomes true (0 to 1 transition) in the Event Register, it will stay set until the Event Register is cleared. Querying the Event Register allows you to detect that this condition occurred, even if the condition no longer exists. The Event Register can only be cleared by querying it, or by sending `*CLS`
3	Monitor a particular type of change in a condition (bit)	By default, the Transition Registers are set if the condition goes from 0 to 1 (false to true, or a positive transition), but you can change this behavior so the selected condition is detected if the bit goes from 1 to 0 (true to false, or a negative transition) You can also detect *both* types of transitions, or neither If both Transition Registers are set to 0 for a particular bit position, that bit is *not* set in the "Standard Event Status Enable Register" on page 3030 for either type of change

9.4.4.2 Service Request (SRQ) Method

In this method, the instrument takes a more active role, by informing the controller when there has been a condition change, without the controller asking.

Use this method when:

- you need time-critical notification of changes
- you are monitoring more than one device which supports SRQs
- you need to have the controller do something else while waiting
- you can't afford the performance penalty inherent to polling

Using the Service Request (SRQ) Method

Your language, bus, and programming environment must be able to support SRQ interrupts, for example, BASIC used with VXI-11.3 (GPIB over LAN). When you monitor a condition with the SRQ method, you must:

- Determine which bit monitors the condition
- Determine how that bit reports to the request service (`RQS`) bit of the status byte
- Send SCPI commands to enable the bit that monitors the condition and to enable the summary bits that report the condition to the `RQS` bit
- Enable the controller to respond to service requests

When the condition changes, the instrument sets its `RQS` bit. The controller is informed of the change as soon as it occurs. As a result, the time the controller would otherwise have used to monitor the condition can be used to perform other tasks. Your program determines how the controller responds to the SRQ.

Bit 6 of the "Status Byte Register" on page 3025 is the request service (`RQS`) bit. Use `*SRE` to configure the `RQS` bit to report changes in instrument status. When such a change occurs, the `RQS` bit is set. It is cleared when the Status Byte Register is queried using `*SRE?` (with a serial poll.) It can be queried *without* erasing the contents by using `*STB?`.

When a register being set causes a summary bit in the status byte to change from 0 to 1, the instrument can initiate the service request (SRQ) process. However, the process is only initiated if *both* the following conditions are true:

The corresponding bit of the service request enable register is also set to 1

The instrument does not have a service request pending. (A service request is considered to be pending between the time the instrument's SRQ process is initiated and the time the controller reads the status byte register)

The SRQ process sets the SRQ true. It also sets the status byte's request service (`RQS`) bit to 1. Both actions are necessary to inform the controller that the instrument requires service. Setting the SRQ line *only* informs the controller that some device on the bus requires service. Setting the `RQS` bit allows the controller to determine which instrument requires service.

If your program enables the controller to detect and respond to service requests, it should instruct the controller to perform a serial poll when the SRQ is set true. Each device on the bus returns the contents of its Status Byte Register in response to this poll. The device whose `RQS` bit is set to 1 is the device that requested service.

NOTE

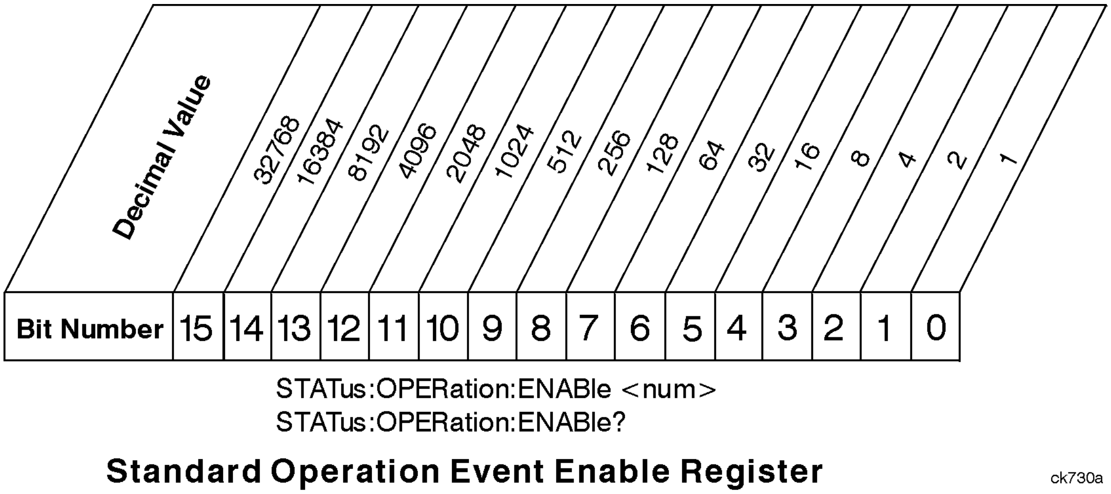
When you read the instrument's Status Byte Register using a serial poll, the `RQS` bit is reset to 0. Other bits in the register are not affected.

If the status register is configured to SRQ on end-of-measurement, and the measurement is in **Continuous** mode, then restarting a measurement (via `:INIT`) can cause the measuring bit to pulse low. This causes an SRQ even though you have not actually reached the "end-of-measurement" condition. To avoid this:

- Set `:INITiate:CONTinuous OFF`
- Set/enable the status registers
- Restart the measurement (send `:INIT`)

9.4.5 Status Register Bit Parameters

The diagram below shows a typical status register, in this case the "Operation Enable" on page 3033 Register. Each bit in a register is represented by a numerical value based on its location. When a command requires a bit pattern to be sent as its parameter, that can be entered as a numeric value using decimal or hexadecimal representations. (where 0 to 32767 is equivalent to `#H0` to `#H7FFF`). If you want to enable more than one bit, you send the sum of all the bits that you want to monitor.



NOTE Bit 15 is not used to report status.

Example 1

To enable bit 0 and bit 6 of standard event status register, you would send the command `*ESE 65` because 1 + 64 = 65

The results of a query are evaluated in a similar way. If the `*STB?` command returns a decimal value of 140, (140 = 128 + 8 + 4) then bit 7 is true, bit 3 is true and bit 2 is true

Example 2

Suppose you want to know if an Auto-trigger Timeout occurs, but you only cared about that specific condition. So you would want to know what was happening with bit 10 in the Status Questionable Integrity register, and not about any other bits

It is usually a good idea to start by clearing all the status registers, using `*CLS`

Sending `:STAT:QUES:INT:ENAB 1024` lets you monitor only bit 10 events, instead of the default monitoring all the bits in the register. The register default is for positive transition events (0 to 1 transition), that is, when an auto-trigger timeout occurs. If instead, you want to know when the Auto-trigger timeout condition is cleared, then you set `:STAT:QUES:INT:PTR 0` and `:STAT:QUES:INT:NTR 32767`

Now, the only output from the "Questionable Integrity Register" on page 3063 will come from a bit 10 positive transition, and goes to the Integrity Sum bit 9 of the "Questionable Register" on page 3038

If you want only to monitor bit 9 of the same register, send `:STAT:QUES:ENAB 512`

The "Questionable Register" on page 3038 output goes to the “Status Questionable Summary” bit 3 of the "Status Byte Register" on page 3025. The output from this register can be enabled using `*SRE 8`.

Finally, you can use the serial polling functionality available for the particular bus/software that you are using to monitor the Status Byte Register, or you could use `*STB?` to poll the Status Byte Register.

9.4.6 Status Subsystem Registers and Commands

The Status Subsystem registers monitor various events and conditions in the instrument. Software written to control the instrument may need to monitor some of these events and conditions.

To set and query status registers, you can use the `STATus` subsystem SCPI commands and queries.

NOTE

All status register commands are sequential. You can send them in the middle of an ongoing overlapped command to get the current status. You can also send them following a sequential command. In this case, the status register command waits for the completion of the previously-sent sequential command before performing the action.

***Most commands are sequential commands*; only a few are overlapped.**

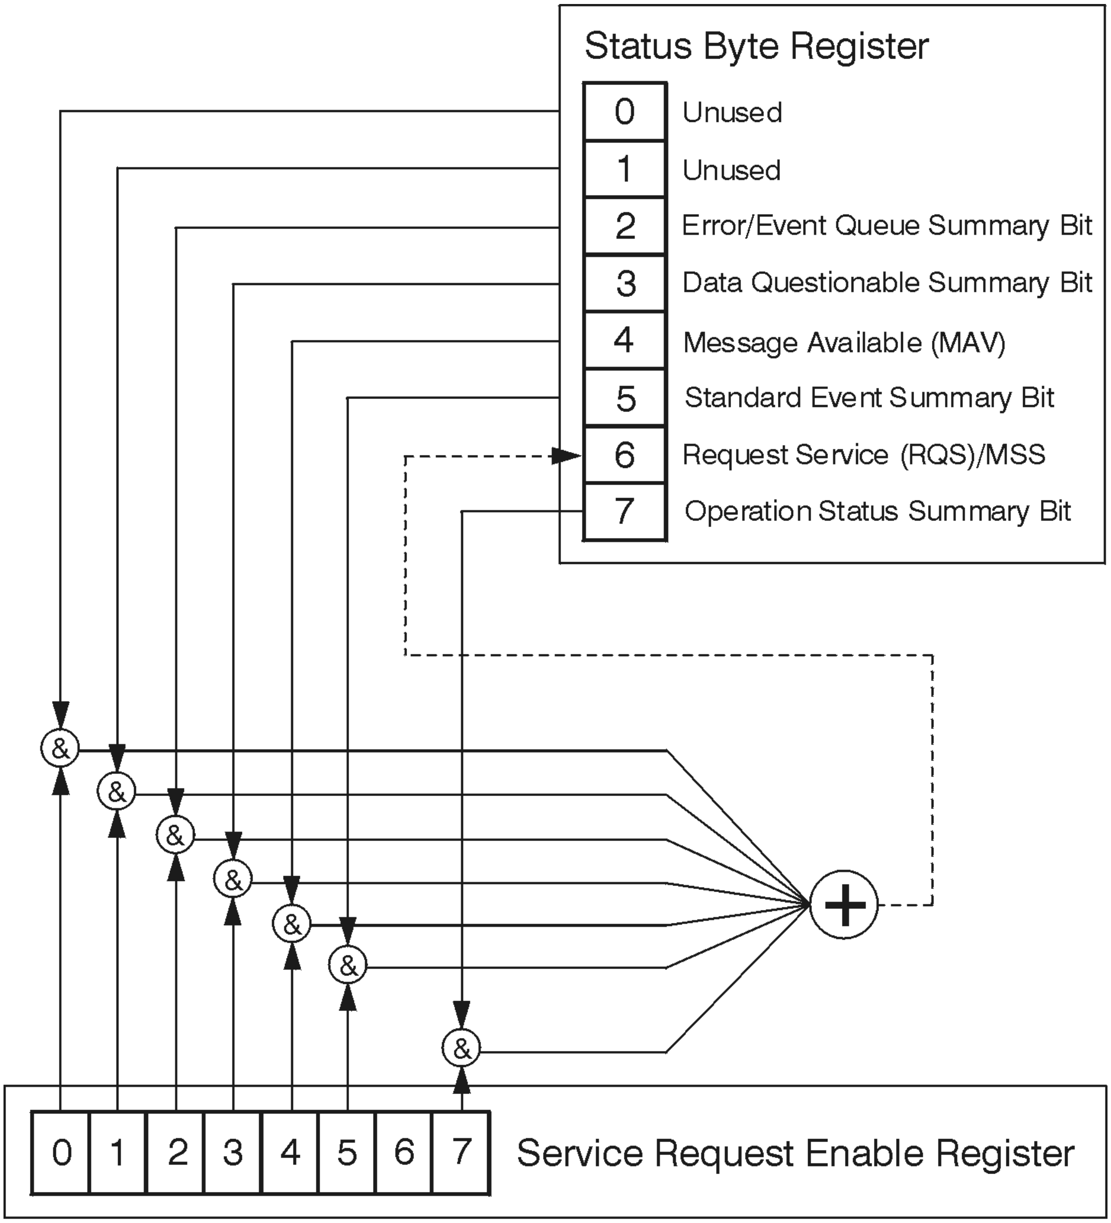
If a command *is* overlapped, then that is explicitly stated in the command description.

See also the Keysight X-Series Signal Analyzers Instrument Messages manual for more detail on the instrument conditions that can cause these bits to be set.

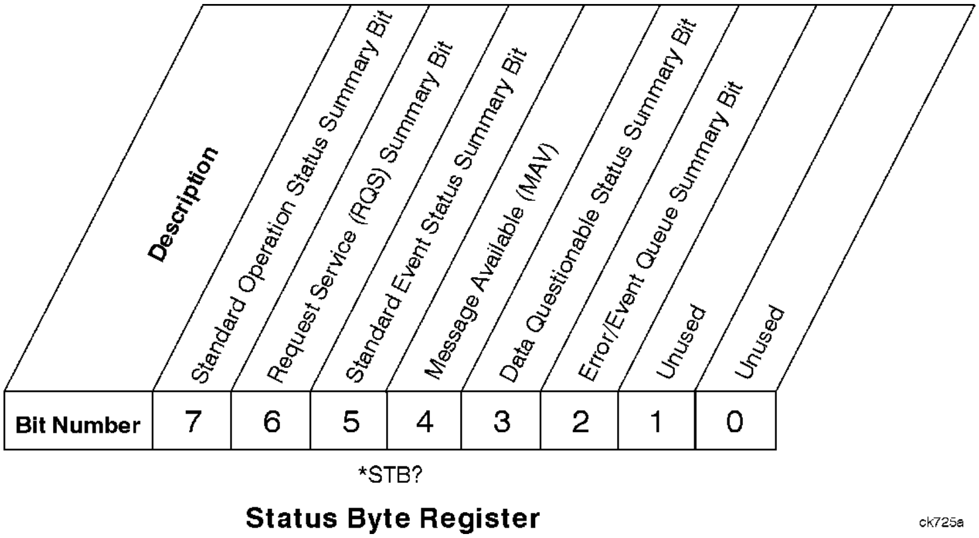
9.4.6.1 Status Byte Register

Provides a one-byte overview of the entire `STATus` subsystem. All the other registers funnel into this register via summary bits, as shown in the "Status Register System

Diagram" on page 3016.



ck776a



Bit	Description
0, 1	These bits are always set to 0
2	A 1 in this bit position indicates that the SCPI error queue is not empty which means that it contains at least one error message
3	A 1 in this bit position indicates that the data questionable summary bit has been set. The data questionable event register can then be read to determine the specific condition that caused this bit to be set
4	A 1 in this bit position indicates that the instrument has data ready in the output queue. There are no lower status groups that provide input to this bit
5	A 1 in this bit position indicates that the standard event summary bit has been set. The standard event status register can then be read to determine the specific event that caused this bit to be set
6	A 1 in this bit position indicates that the instrument has at least one reason to report a status change. This bit is also called the master summary status bit (MSS)
7	A 1 in this bit position indicates that the standard operation summary bit has been set. The standard operation event register can then be read to determine the specific condition that caused this bit to be set

To query the Status Byte Register, send "*STB? - Status Byte Query" on page 2994. The response will be the decimal sum of the bits that are set to 1. For example, if bit number 7 and bit number 3 are set to 1, the decimal sum of the 2 bits is 128 plus 8, so the decimal value 136 is returned.

`*STB` does *not* clear the status register.

The `RQS` bit is read and reset by a serial poll. The same bit position (`MSS`) is read non-destructively by `*STB?`. If you serial-poll bit 6, it is read as `RQS`, but if you send `*STB`, it reads bit 6 as `MSS`. For more information refer to Section 11 of: IEEE Standard 488.2–1992

In addition to the Status Byte Register, the status byte group also contains the "Service Request Enable Register" on page 3028, which lets you select which bits in the Status Byte Register will trigger a service request.

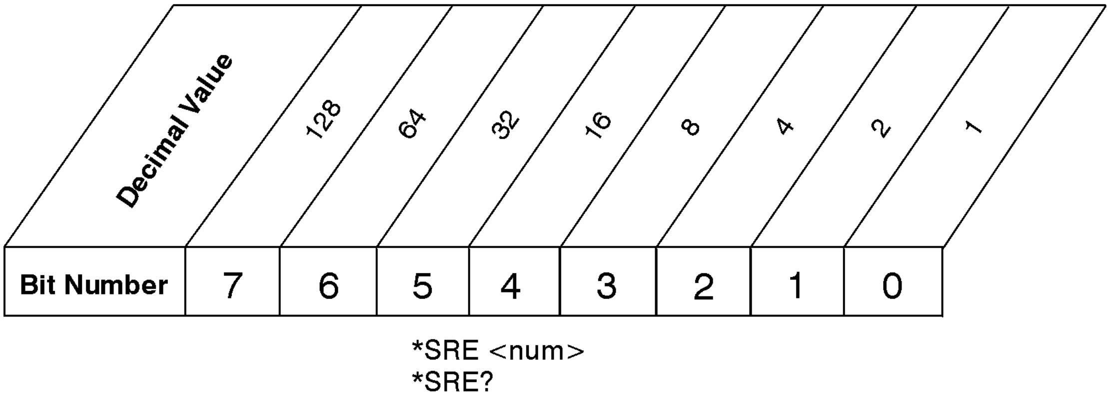
Service Request Enable Register

Enables the desired bits of the Service Request (`SRQ`) subsystem.

Send `*SRE <integer>`, where `<integer>` is the sum of the decimal values of the bits you want to enable plus the decimal value of bit 6. For example, assume that you want to enable bit 7 so that whenever the standard operation status register summary bit is set to 1 it will trigger a service request. Send the command `*SRE 192` (because 192 = 128 + 64). You must always add 64 (the numeric value of `RQS` bit 6) to your numeric sum when you enable any bits for a service request.

`*SRE?` returns the decimal value of the sum of the bits previously enabled with `*SRE <integer>`.

This register presets to zeros (0).



Service Request Enable Register

See also "*SRE - Service Request Enable" on page 2993

Preset the Status Byte

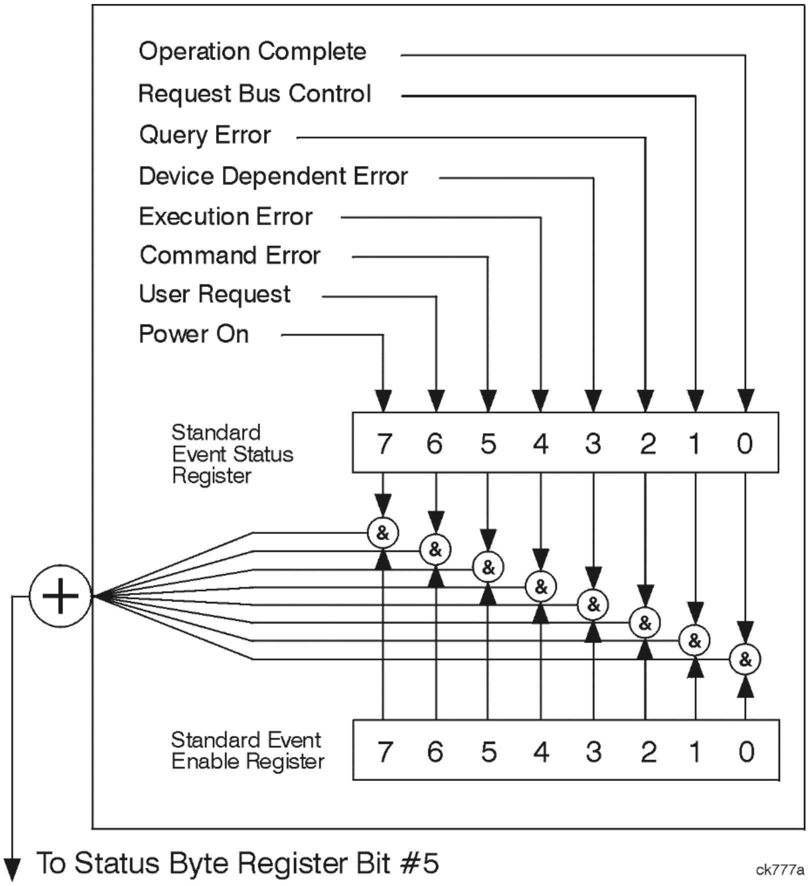
Sets bits in most of the enable and transition registers to their default state.

- Presets:
- All Transition Filters
- All Enable Registers
- Error/Event Queue Enable

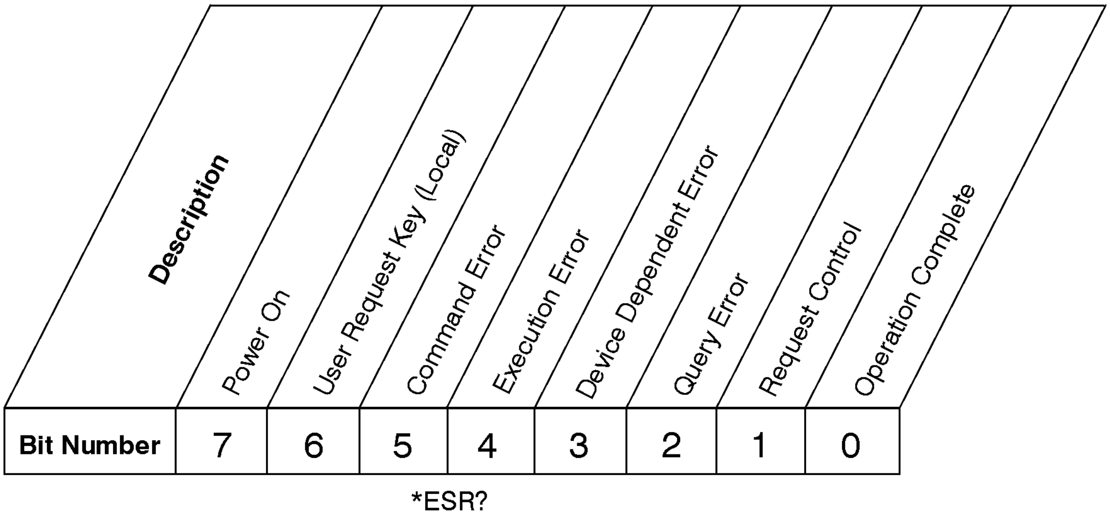
Has no effect on Event Registers, Error/Event QUEue, IEEE 488.2 ESE, and SRE Registers, as described in: IEEE Standard 488.2–1992

Remote Command	`:STATus:PRESet`
Example	`:STAT:PRES`

9.4.6.2 Standard Event Status Register



The standard event status register contains the following bits:



Standard Event Status Register

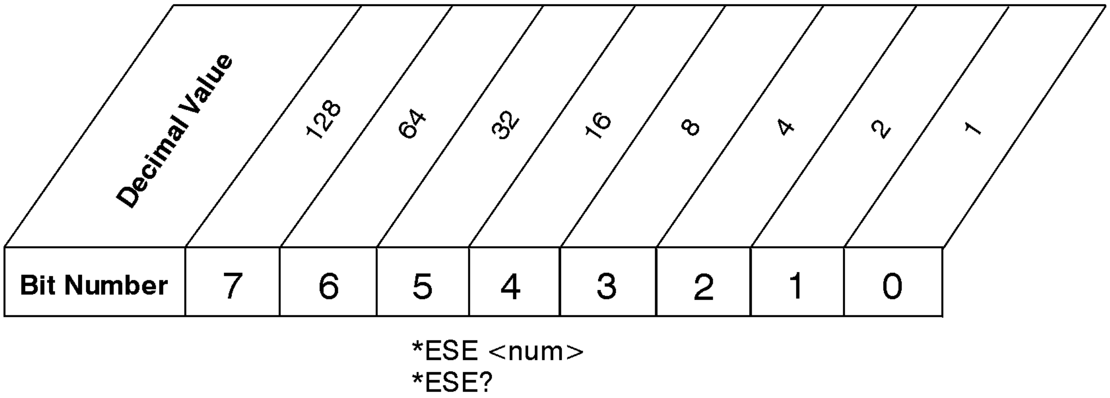
Bit	Description
0	A 1 in this bit position indicates that all pending operations were completed following execution of the `*OPC` command
1	For GPIB handshaking to request control. Currently it is set to 0, because there are no implementations where the spectrum analyzer controls another instrument
2	A 1 in this bit position indicates that a query error has occurred. Query errors have SCPI error numbers from -499 to -400
3	A 1 in this bit position indicates that a device dependent error has occurred. Device dependent errors have SCPI error numbers from -399 to -300 and 1 to 32767
4	A 1 in this bit position indicates that an execution error has occurred. Execution errors have SCPI error numbers from -299 to -200
5	A 1 in this bit position indicates that a command error has occurred. Command errors have SCPI error numbers from -199 to -100
6	A 1 in this bit position indicates that the **LOCAL** key has been pressed. This is true even if the instrument is in local lockout mode
7	A 1 in this bit position indicates that the instrument has been turned off and then on

The Standard Event Status Register is used to determine the specific events that set bit 5 in the "Status Byte Register" on page 3025. To query this register, send `*ESR?`. The response will be the decimal sum of the bits that are enabled (set to 1). For example, if bit number 7 and bit number 3 are enabled, the decimal sum of the 2 bits is 128 plus 8, so the decimal value 136 is returned. See also "*ESR? - Standard Event Status Register Query" on page 2990

Standard Event Status Enable Register

In addition to the "Standard Event Status Register" on page 3029, the Standard Event status group also contains a Standard Event Status Enable Register. This register lets you choose which bits in the standard event status register will set the summary bit (bit 5 of the status byte register) to 1. Send `*ESE <integer>`, where `<integer>` is the sum of the decimal values of the bits you want to enable. For example, to enable bit 7 and bit 6 so that whenever either of those bits is set to 1, the standard event status summary bit of the status byte register will be set to 1, send `*ESE 192` (128 + 64). `*ESE?` returns the decimal value of the sum of the bits previously enabled with `*ESE <integer>`.

The standard event status enable register presets to zeros (0).



Standard Event Status Enable Register

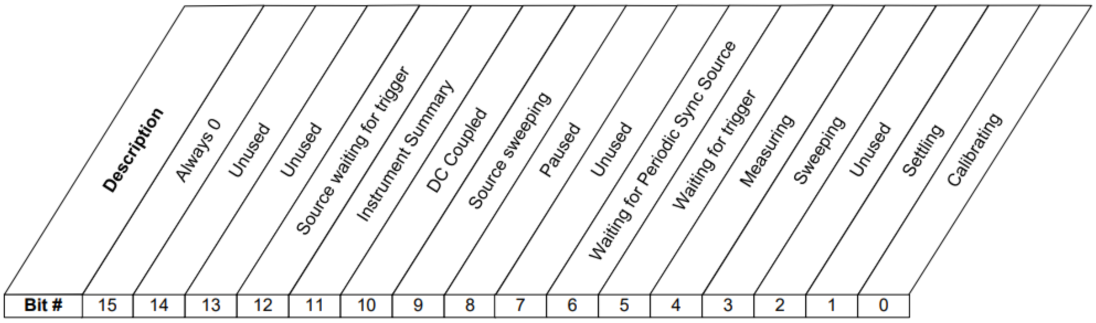
ck728a

See also "*ESE - Standard Event Status Enable" on page 2989

9.4.6.3 Operation Register

This register and the "Questionable Register" on page 3038 are sets of registers that monitor the overall instrument condition. They are accessed using `:STATus:OPERation` and `:STATus:QUEStionable`.

This register monitors the current instrument measurement state and various instrument operations for a quick summary of what is happening within the instrument. It checks to see if the instrument is calibrating, sweeping, or waiting for a trigger (see also "*OPC? - Operation Complete" on page 2991).



STATus:OPERation Register

Bit	Condition	Operation
0	Calibrating	The instrument is busy executing its Align Now process
1	Settling	The instrument circuitry is settling
3	Sweeping	The instrument is busy taking a sweep
4	Measuring	The instrument is busy making a measurement. Measurements often require multiple sweeps. They are initiated by user-interface keys or with the `MEASure` group of commands The bit is valid for most X-Series Modes
5	Waiting for trigger	The instrument is waiting for the trigger conditions to be met, then it will trigger a sweep or measurement
6	Waiting for Periodic Sync Source	The instrument is waiting for the Periodic trigger Sync Source conditions to be met, then the sweep or measurement period will be synchronized
8	Paused	The measurement is paused
9	Source Sweeping	The List Sequencer is running, or Freq Scan results are available The List Sequencer or Waveform Sequences are running, specifically, in VXT models: M9410A/11A/15A/16A, M9410E/11E/15E/16E, E6680A/80E/81A, S9110A/01A/06A/08A/15A/30A, M8920B
10	DC Coupled	The instrument is DC coupled
11	Instrument Summary	The summary bit for the "Operation Instrument Register" on page 3035
12	Source Waiting for Trigger	The built in source is waiting for a trigger

Filter Registers

- "Operation Condition Query" on page 3032
- "Operation Enable" on page 3033
- "Operation Event Query" on page 3033
- "Operation Negative Transition" on page 3034
- "Operation Positive Transition" on page 3034

Operation Condition Query

Returns the decimal value of the sum of the bits in the Status Operation Condition register.

NOTE **The data in this register is continuously updated and reflects the current conditions.**

Remote Command	`:STATus:OPERation:CONDition?`
Example	`:STAT:OPER:COND?`
Preset	0
Status Bits/OPC dependencies	Sequential command

Operation Enable

Determines which bits in the "Operation Event Query" on page 3033 register will set the Operation Status Summary bit (bit 7) in the "Status Byte Register" on page 3025.

The variable `<integer>` is the sum of the decimal values of the bits you want to enable.

NOTE **The preset condition is to have all bits in this enable register set to 0. To have any Operation Events reported to the Status Byte Register, one or more bits need to be set to 1.**

Remote Command	`:STATus:OPERation:ENABle <integer>` `:STATus:OPERation:ENABle?`
Example	`:STAT:OPER:ENAB 1` Sets the register so that Align Now events will be reported to the Status Byte Register
Preset	0
Min	0
Max	32767
Status Bits/OPC dependencies	Sequential command

Operation Event Query

Returns the decimal value of the sum of the bits in the Operation Event register.

NOTE **The register requires that the associated PTRansition or NTRansition filters be set before a condition register bit can set a bit in the event register. The data in this register is latched until it is queried. Once queried, the register is cleared.**

Remote Command	`:STATus:OPERation[:EVENt]?`
Example	`:STAT:OPER?`

Preset	0
Status Bits/OPC dependencies	Sequential command

Operation Negative Transition

Determines which bits in the "Operation Condition Query" on page 3032 register will set the corresponding bit in the "Operation Event Query" on page 3033 register when the condition register bit has a negative transition (1 to 0).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

Remote Command	`:STATus:OPERation:NTRansition <integer>` `:STATus:OPERation:NTRansition?`
Example	`:STAT:OPER:NTR 1` Align Now operation complete will be reported to the Status Byte Register
Preset	0
Min	0
Max	32767
Status Bits/OPC dependencies	Sequential command

Operation Positive Transition

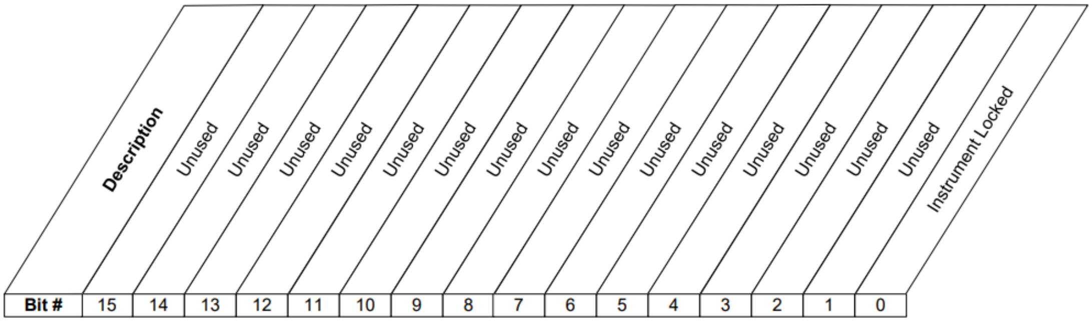
Determines which bits in the "Operation Condition Query" on page 3032 register will set the corresponding bit in the "Operation Event Query" on page 3033 register when the condition register bit has a positive transition (0 to 1).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

Remote Command	`:STATus:OPERation:PTRansition <integer>` `:STATus:OPERation:PTRansition?`
Example	`:STAT:OPER:PTR 1` Align Now operation beginning will be reported to the Status Byte Register
Preset	32767
Min	0
Max	32767
Status Bits/OPC dependencies	Sequential command

9.4.6.4 Operation Instrument Register

Monitors instrument-related operations and summarizes them in bit 11 of the "Operation Register" on page 3031.



STATus:OPERation:INSTrument Register

Bit	Condition	Operation
0	Instrument Locked	The instrument is locked

Filter Registers

- "Operation Instrument Condition" on page 3035
- "Operation Instrument Enable" on page 3036
- "Operation Instrument Event Query" on page 3036
- "Operation Instrument Negative Transition" on page 3037
- "Operation Instrument Positive Transition" on page 3037

Operation Instrument Condition

Returns the decimal value of the sum of the bits in the Status Operation Instrument Condition register.

NOTE The data in this register is continuously updated and reflects the current conditions.

Remote Command	`:STATus:OPERation:INSTrument:CONDition?`
Example	`:STAT:OPER:INST:COND?`
Preset	0
Status Bits/OPC dependencies	Sequential command

Operation Instrument Enable

Determines which bits in the "Operation Instrument Condition" on page 3035 Register will set bits in the "Operation Instrument Event Query" on page 3036 register, which also sets the Instrument Summary bit (bit 11) in the "Operation Instrument Register" on page 3035.

The variable `<integer>` is the sum of the decimal values of the bits you want to enable.

NOTE **The preset condition is to have all bits in this enable register set to 0. To have any Instrument Events reported to the Status Byte Register, one or more bits need to be set to 1.**

Remote Command	`:STATus:OPERation:INSTrument:ENABle <integer>` `:STATus:OPERation:INSTrument:ENABle?`
Example	`:STAT:OPER:INST:ENAB 1` Sets the register so that Instrument Locked will be reported to the Status Byte Register
Preset	32767
Min	0
Max	32767
Status Bits/OPC dependencies	Sequential command

Operation Instrument Event Query

Returns the decimal value of the sum of the bits in the Operation Instrument Event register.

NOTE **The register requires that the associated PTRansition or NTRansition filters be set before a condition register bit can set a bit in the event register. The data in this register is latched until it is queried. Once queried, the register is cleared.**

Remote Command	`:STATus:OPERation:INSTrument[:EVENt]?`
Example	`:STAT:OPER:INST?`
Preset	0
Status Bits/OPC dependencies	Sequential command

Operation Instrument Negative Transition

Determines which bits in the "Operation Condition Query" on page 3032 Register will set the corresponding bit in the "Operation Event Query" on page 3033 register when the condition register bit has a negative transition (1 to 0).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

Remote Command	`:STATus:OPERation:INSTrument:NTRansition <integer>` `:STATus:OPERation:INSTrument:NTRansition?`
Example	`:STAT:OPER:INST:NTR 1` Instrument Locked being cleared will be reported to the Instrument Summary of the Status Operation register
Preset	0
Min	0
Max	32767
Status Bits/OPC dependencies	Sequential command

Operation Instrument Positive Transition

Determines which bits in the "Operation Condition Query" on page 3032 Register will set the corresponding bit in the "Operation Event Query" on page 3033 register when the condition register bit has a positive transition (0 to 1).

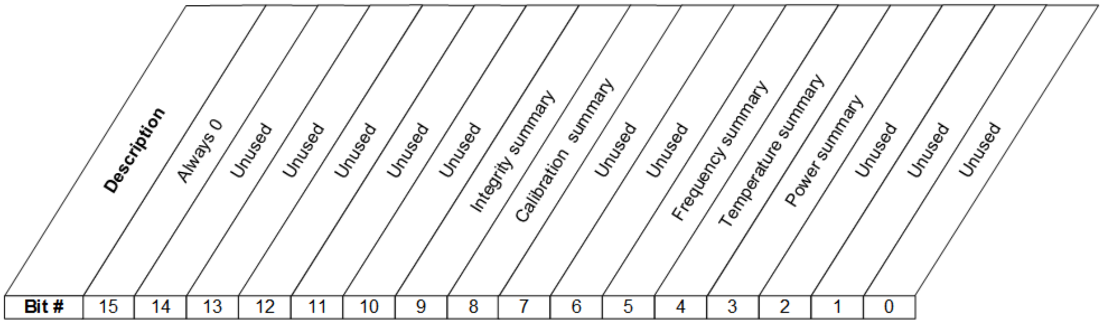
The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

Remote Command	`:STATus:OPERation:INSTrument:PTRansition <integer>` `:STATus:OPERation:INSTrument:PTRansition?`
Example	`:STAT:OPER:INST:PTR 1` Instrument Locked being set will be reported to the Instrument Summary of the Status Operation register
Preset	32767
Min	0
Max	32767
Status Bits/OPC dependencies	Sequential command

9.4.6.5 Questionable Register

This register and the "Operation Register" on page 3031 monitor the overall instrument condition. They are accessed using `:STATus:OPERation` and `:STATus:QUEStionable`.

This register monitors the instrument’s condition to see if anything questionable has happened. It detects anything that might cause an error or a bad measurement, such as a hardware problem, an out-of-calibration situation, or a unusual signal. All the bits are summary bits from lower-level event registers.



STATus:QUEStionable Register

Bit	Condition	Operation
3	Power summary	Summary bit for "Questionable Power Register" on page 3041
4	Temperature summary	Summary bit for "Questionable Temperature Register" on page 3044
5	Frequency summary	Summary bit for "Questionable Frequency Register" on page 3047
8	Calibration summary	Summary bit for "Questionable Calibration Register" on page 3050
9	Integrity summary	Summary bit for "Questionable Integrity Register" on page 3063

Filter Registers

- "Questionable Condition" on page 3039
- "Questionable Enable" on page 3039
- "Questionable Event Query" on page 3040
- "Questionable Negative Transition" on page 3040
- "Questionable Positive Transition" on page 3040

Questionable Condition

Returns the decimal value of the sum of the bits in the Questionable Condition register.

NOTE **The data in this register is continuously updated and reflects current conditions.**

Remote Command	`:STATus:QUEStionable:CONDition?`
Example	`:STAT:QUES:COND?`
Preset	0
Status Bits/OPC dependencies	Sequential command

Questionable Enable

Determines which bits in the "Questionable Event Query" on page 3040 Register will set the Questionable Status Summary bit (bit3) in the "Status Byte Register" on page 3025.

The variable `<integer>` is the sum of the decimal values of the bits you want to enable.

NOTE **The preset condition is all bits in this enable register set to 0. To report any Questionable Events to the Status Byte Register, one or more bits need to be set to 1. The "Standard Event Status Register" on page 3029 should be queried after each measurement to check the Questionable Status Summary (bit 3). If it is equal to 1, a condition during the test may have made the test results invalid. If it is equal to 0, this indicates that no hardware problem or measurement problem was detected by the analyzer.**

Remote Command	`:STATus:QUEStionable:ENABle <integer>`
	`:STATus:QUEStionable:ENABle?`
	`:STATus:OPERation:ENABle <integer>`
	`:STATus:OPERation:ENABle?`

Example	`:STAT:QUES:ENAB 16` Sets the register so that questionable temperature events will be reported to the Status Byte Register
Preset	0
Min	0
Max	32767
Status Bits/OPC	Sequential command

dependencies

Questionable Event Query

Returns the decimal value of the sum of the bits in the Questionable Event register.

NOTE **The register requires that the associated PTRansition or NTRansition filters be set before a condition register bit can set a bit in the event register. The data in this register is latched until it is queried. Once queried, the register is cleared.**

Remote Command	`:STATus:QUEStionable[:EVENt]?`
Example	`:STAT:QUES?`
Preset	0
Status Bits/OPC dependencies	Sequential command

Questionable Negative Transition

Determines which bits in the "Questionable Condition" on page 3039 Register will set the corresponding bit in the "Questionable Event Query" on page 3040 Register when the condition register bit has a negative transition (1 to 0).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

Remote Command	`:STATus:QUEStionable:NTRansition <integer>` `:STATus:QUEStionable:NTRansition?`
Example	`:STAT:QUES:NTR 16` Temperature summary ‘questionable cleared’ will be reported to the Status Byte Register
Preset	0
Min	0
Max	32767
Status Bits/OPC dependencies	Sequential command

Questionable Positive Transition

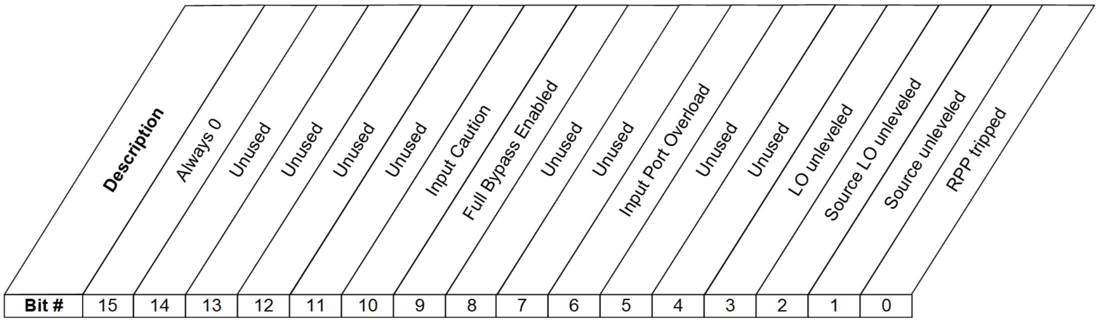
Determines which bits in the "Questionable Condition" on page 3039 Register will set the corresponding bit in the "Questionable Event Query" on page 3040 Register when the condition register bit has a positive transition (0 to 1).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

Remote Command	`:STATus:QUEStionable:PTRansition <integer>` `:STATus:QUEStionable:PTRansition?`
Example	`:STAT:QUES:PTR 16` Temperature summary 'questionable asserted' will be reported to the Status Byte Register
Preset	32767
Min	0
Max	32767
Status Bits/OPC dependencies	Sequential command

9.4.6.6 Questionable Power Register

Monitors power-related conditions within the instrument and summarizes them in bit 3 of the "Questionable Register" on page 3038.



STATus:QUEStionable:POWer Register

Bit	Condition	Operation
0	RPP tripped	(not currently in use)
1	Source Unleveled	The built-in source is not properly leveled
2	Source LO Unleveled	(not currently in use)
3	LO Unleveled	(not currently in use)
6	Input Port Overload	A power overload condition exists at an input port
9	Full Bypass Enabled	Frontend circuitry is bypassed, use caution to protect the mixer
10	Input Caution	Input circuitry is configured such that care is required to prevent damage

Filter Registers

- "Questionable Power Condition" on page 3042
- "Questionable Power Enable" on page 3042
- "Questionable Power Event Query" on page 3043
- "Questionable Power Negative Transition" on page 3043
- "Questionable Power Positive Transition" on page 3043

Questionable Power Condition

Returns the decimal value of the sum of the bits in the Questionable Power Condition register.

NOTE The data in this register is continuously updated and reflects the current conditions.

Remote Command	`:STATus:QUEStionable:POWer:CONDition?`
Example	`:STAT:QUES:POW:COND?`
Preset	0
Status Bits/OPC dependencies	Sequential command

Questionable Power Enable

Determines which bits in the "Questionable Power Condition" on page 3042 Register will set bits in the Questionable Power Event register, which also sets the Power Summary bit (bit 3) in the "Questionable Register" on page 3038.

The variable `<integer>` is the sum of the decimal values of the bits you want to enable.

Remote Command	`:STATus:QUEStionable:POWer:ENABle <integer>` `:STATus:QUEStionable:POWer:ENABle?`
Example	`:STAT:QUES:POW:ENAB 2` Source Unlevelled will be reported to the Power Summary of the Status Questionable register
Preset	32767
Min	0
Max	32767
Status Bits/OPC dependencies	Sequential command

Questionable Power Event Query

Returns the decimal value of the sum of the bits in the Questionable Power Event Query register.

NOTE **The register requires that the associated PTRansition or NTRansition filters be set before a condition register bit can set a bit in the event register. The data in this register is latched until it is queried. Once queried, the register is cleared.**

Remote Command	`:STATus:QUEStionable:POWer[:EVENt]?`
Example	`:STAT:QUES:POW?`
Preset	0
Status Bits/OPC dependencies	Sequential command

Questionable Power Negative Transition

Determines which bits in the "Questionable Power Condition" on page 3042 register will set the corresponding bit in the "Questionable Power Event Query" on page 3043 register when the condition register bit has a negative transition (1 to 0).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

Remote Command	`:STATus:QUEStionable:POWer:NTRansition <integer>` `:STATus:QUEStionable:POWer:NTRansition?`
Example	`:STAT:QUES:POW:NTR 2` Source Unlevelled being cleared will be reported to the Power Summary of the Status Questionable register
Preset	0
Min	0
Max	32767
Status Bits/OPC dependencies	Sequential command

Questionable Power Positive Transition

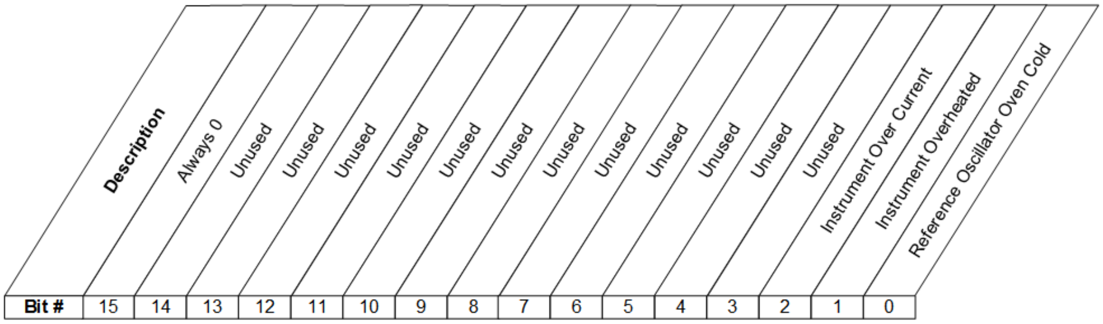
Determines which bits in the "Questionable Power Condition" on page 3042 register will set the corresponding bit in the "Questionable Power Event Query" on page 3043 register when the condition register bit has a positive transition (0 to 1).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

Remote Command	`:STATus:QUEStionable:POWer:PTRansition <integer>` `:STATus:QUEStionable:POWer:PTRansition?>`
Example	`:STAT:QUES:POW:PTR 32` Source Unlevelled being set will be reported to the Power Summary of the Status Questionable register
Preset	32767
Min	0
Max	32767
Status Bits/OPC dependencies	Sequential command

9.4.6.7 Questionable Temperature Register

Monitors temperature-related conditions within the instrument and summarizes them in bit 4 of the "Questionable Register" on page 3038.



STATus:QUEStionable:TEMPerature Register

Bit	Condition	Operation
0	Reference Oscillator Oven Cold	(not currently in use)
1	Instrument overheated (over temperature)	Excessive heat has been detected in some part of the instrument
2	Instrument over current	Excessive heat has been detected in some part of the instrument, the instrument should be restarted

Filter Registers

- "Questionable Temperature Condition" on page 3045
- "Questionable Temperature Enable" on page 3045

- "Questionable Temperature Event Query" on page 3046
- "Questionable Temperature Negative Transition" on page 3046
- "Questionable Temperature Positive Transition" on page 3046

Questionable Temperature Condition

Returns the decimal value of the sum of the bits in the Questionable Temperature Condition register.

NOTE **The data in this register is continuously updated and reflects the current conditions.**

Remote Command	`:STATus:QUEStionable:TEMPerature:CONDition?`
Example	`:STAT:QUES:TEMP:COND?`
Preset	0
Status Bits/OPC dependencies	Sequential command

Questionable Temperature Enable

Determines which bits in the "Questionable Temperature Condition" on page 3045 Register will set bits in the "Questionable Temperature Event Query" on page 3046 register, which also sets the Temperature Summary bit (bit 4) in the "Questionable Register" on page 3038.

The variable `<integer>` is the sum of the decimal values of the bits you want to enable.

Remote Command	`:STATus:QUEStionable:TEMPerature:ENABle <integer>` `:STATus:QUEStionable:TEMPerature:ENABle?`
Example	`:STAT:QUES:TEMP:ENAB 2` Instrument Overheated will be reported to the Temperature Summary of the Questionable Register
Preset	32767
Min	0
Max	32767
Status Bits/OPC dependencies	Sequential command

Questionable Temperature Event Query

Returns the decimal value of the sum of the bits in the Questionable Temperature Event register.

NOTE **The register requires that the associated PTRansition or NTRansition filters be set before a condition register bit can set a bit in the event register. The data in this register is latched until it is queried. Once queried, the register is cleared.**

Remote Command	`:STATus:QUEStionable:TEMPerature[:EVENt]?`
Example	`:STAT:QUES:TEMP?`
Preset	0
Status Bits/OPC dependencies	Sequential command

Questionable Temperature Negative Transition

Determines which bits in the "Questionable Temperature Condition" on page 3045 Register will set bits in the "Questionable Temperature Event Query" on page 3046 register, when the condition register bit has a negative transition (1 to 0).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

Remote Command	`:STATus:QUEStionable:TEMPerature:NTRansition <integer>` `:STATus:QUEStionable:TEMPerature:NTRansition?`
Example	`:STAT:QUES:TEMP:NTR 2` Instrument Overheated being cleared will be reported to the Temperature Summary of the Status Questionable register
Preset	0
Min	0
Max	32767
Status Bits/OPC dependencies	Sequential command

Questionable Temperature Positive Transition

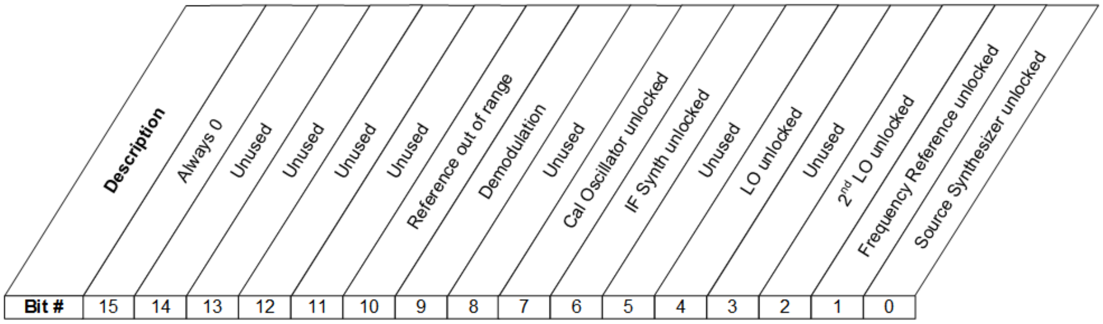
Determines which bits in the "Questionable Temperature Condition" on page 3045 Register will set bits in the "Questionable Temperature Event Query" on page 3046 register, when the condition register bit has a positive transition (0 to 1).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

Remote Command	`:STATus:QUEStionable:TEMPerature:PTRansition <integer>` `:STATus:QUEStionable:TEMPerature:PTRansition?`
Example	`:STAT:QUES:TEMP:PTR 2` Instrument Overheated being set will be reported to the Temperature Summary of the Questionable register
Preset	32767
Min	0
Max	32767
Status Bits/OPC dependencies	Sequential command

9.4.6.8 Questionable Frequency Register

Monitors frequency-related conditions within the instrument and summarizes them in bit 5 of the "Questionable Register" on page 3038.



STATus:QUEStionable:FREQuency Register

Bit	Condition	Operation
0	Source Synth Unlocked	The synthesizer in the built-in source is not locked
1	Frequency Reference Unlocked	The instrument’s frequency reference is unlocked
2	2nd LO Unlocked	The instrument’s second LO (local oscillator) is unlocked
4	LO Unlocked	The instrument’s main LO (local oscillator) is unlocked
6	IF Synth Unlocked	The synthesizer in the IF is not locked
7	Cal Osc Unlocked	The oscillator used for internal calibrations is not locked
9	Demodulation	Demodulation cannot be performed due to an out of range frequency

Bit	Condition	Operation
10	Reference missing or out of range	The signal being fed to a reference input is missing or too high or low in frequency for the reference to lock

Filter Registers

- "Questionable Frequency Condition" on page 3048
- "Questionable Frequency Enable" on page 3048
- "Questionable Frequency Event Query" on page 3049
- "Questionable Frequency Negative Transition" on page 3049
- "Questionable Frequency Positive Transition" on page 3050

Questionable Frequency Condition

Returns the decimal value of the sum of the bits in the Questionable Frequency Condition register.

NOTE The data in this register is continuously updated and reflects the current conditions.

Remote Command	`:STATus:QUEStionable:FREQuency:CONDition?`
Example	`:STAT:QUES:FREQ:COND?`
Preset	0
Status Bits/OPC dependencies	Sequential command

Questionable Frequency Enable

Determines which bits in the "Questionable Frequency Condition" on page 3048 Register will set bits in the "Questionable Temperature Event Query" on page 3046 register, which also sets the Frequency Summary bit (bit 5) in the "Questionable Register" on page 3038.

The variable `<integer>` is the sum of the decimal values of the bits you want to enable.

Remote Command	`:STATus:QUEStionable:FREQuency:ENABle <integer>` `:STATus:QUEStionable:FREQuency:ENABle?`
Example	`:STAT:QUES:FREQ:ENAB 2` Frequency Reference Unlocked will be reported to the Frequency Summary of the Status Questionable

	register
Preset	32767
Min	0
Max	32767
Status Bits/OPC dependencies	Sequential command

Questionable Frequency Event Query

Returns the decimal value of the sum of the bits in the Questionable Frequency Event register.

NOTE **The register requires that the associated PTRansition or NTRansition filters be set before a condition register bit can set a bit in the event register. The data in this register is latched until it is queried. Once queried, the register is cleared.**

Remote Command	`:STATus:QUEStionable:FREQuency[:EVENt]?`
Example	`:STAT:QUES:FREQ?`
Preset	0
Status Bits/OPC dependencies	Sequential command

Questionable Frequency Negative Transition

Determines which bits in the "Questionable Frequency Condition" on page 3048 register will set the corresponding bit in the "Questionable Frequency Event Query" on page 3049 register when the condition register bit has a negative transition (1 to 0).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

Remote Command	`:STATus:QUEStionable:FREQuency:NTRansition <integer>` `:STATus:QUEStionable:FREQuency:NTRansition?`
Example	`:STAT:QUES:FREQ:NTR 2` Frequency Reference 'regained lock' will be reported to the Frequency Summary of the Status Questionable register
Preset	0
Min	0
Max	32767

Status Bits/OPC dependencies	Sequential command

Questionable Frequency Positive Transition

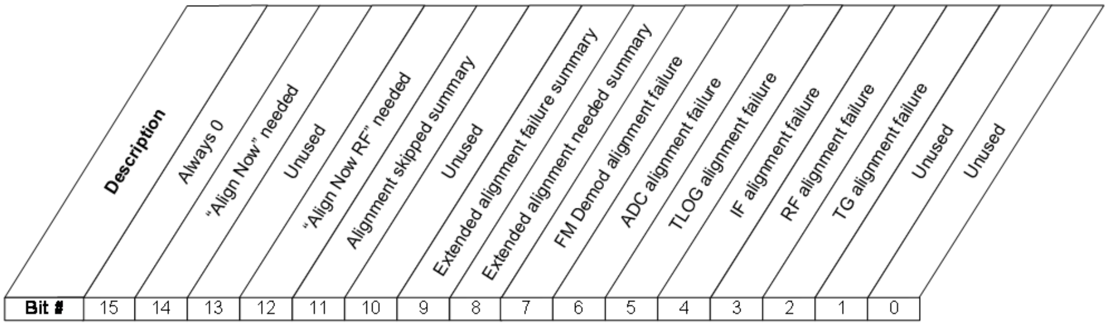
Determines which bits in the "Questionable Frequency Condition" on page 3048 register will set the corresponding bit in the "Questionable Frequency Event Query" on page 3049 register when the condition register bit has a positive transition (0 to 1).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

Remote Command	`:STATus:QUEStionable:FREQuency:PTRansition <integer>` `:STATus:QUEStionable:FREQuency:PTRansition?`
Example	`:STAT:QUES:FREQ:PTR 2` Frequency Reference 'became unlocked' will be reported to the Frequency Summary of the Status Questionable register
Preset	32767
Min	0
Max	32767
Status Bits/OPC dependencies	Sequential command

9.4.6.9 Questionable Calibration Register

Monitors calibration-related conditions within the instrument and summarizes them in bit 8 of the "Questionable Register" on page 3038. Three of the bits are summary bits from lower-level event registers.



STATus:QUEStionable:CALibration Register

Bit	Condition	Operation
2	TG Alignment Failure	The Tracking Generator failed to align properly
3	RF Alignment Failure	The RF section (frontend) failed to align properly
4	IF Alignment Failure	The IF section failed to align properly
5	LO Alignment Failure	The LO (local oscillator) failed to align properly
6	ADC Alignment Failure	The ADC section failed to align properly
7	FM Demod Alignment Failure	The FM Demod section failed to align properly
8	Extended Align Needed Summary	Summary bit for "Questionable Calibration Extended Needed Register" on page 3054
9	Extended Align Failure Summary	Summary bit for "Questionable Calibration Extended Failure Register" on page 3057
11	Align Skipped Sum Summary	Summary bit for "Questionable Calibration Skipped Register" on page 3060
12	“Align Now RF” required	Go to the System, Alignments, Align Now menu and perform an “Align Now RF”
14	“Align Now” required	Go to the System, Alignments, Align Now menu and perform an “Align Now All” or an “Align Now Expired”

Filter Registers

- "Questionable Calibration Condition" on page 3051
- "Questionable Calibration Enable" on page 3052
- "Questionable Calibration Event Query" on page 3052
- "Questionable Calibration Negative Transition" on page 3053
- "Questionable Calibration Positive Transition" on page 3053

Questionable Calibration Condition

Returns the decimal value of the sum of the bits in the Questionable Calibration Condition register.

NOTE **The data in this register is continuously updated and reflects the current conditions.**

Remote Command	`:STATus:QUEStionable:CALibration:CONDition?`
Example	`:STAT:QUES:CAL:COND?`
Preset	0
Status Bits/OPC dependencies	Sequential command

Questionable Calibration Enable

Determines which bits in the "Questionable Calibration Condition" on page 3051 Register will set bits in the "Questionable Calibration Event Query" on page 3052 register, which also sets the Calibration Summary bit (bit 8) in the "Questionable Register" on page 3038.

The variable `<integer>` is the sum of the decimal values of the bits you want to enable.

Remote Command	`:STATus:QUEStionable:CALibration:ENABle <integer>` `:STATus:QUEStionable:CALibration:ENABle?`
Example	`:STAT:QUES:CAL:ENAB 16384` Can be used to query if an alignment is needed, if you have turned off the automatic alignment process
Min	0
Max	32767
Status Bits/OPC dependencies	Sequential command

Questionable Calibration Event Query

Returns the decimal value of the sum of the bits in the Questionable Calibration Event register.

NOTE **The register requires that the associated PTRansition or NTRansition filters be set before a condition register bit can set a bit in the event register. The data in this register is latched until it is queried. Once queried, the register is cleared.**

Remote Command	`:STATus:QUEStionable:CALibration[:EVENt]?`
Example	`:STAT:QUES:CAL?`
Preset	0
Status Bits/OPC dependencies	Sequential command

Questionable Calibration Negative Transition

Determines which bits in the "Questionable Calibration Condition" on page 3051 register will set the corresponding bit in the "Questionable Calibration Event Query" on page 3052 register when the condition register bit has a negative transition (1 to 0).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

Remote Command	`:STATus:QUEStionable:CALibration:NTRansition <integer>` `:STATus:QUEStionable:CALibration:NTRansition?`
Example	`:STAT:QUES:CAL:NTR 16384` "Align All Now Needed" being cleared will be reported to the Calibration Summary of the Status Questionable register
Preset	0
Min	0
Max	32767
Status Bits/OPC dependencies	Sequential command

Questionable Calibration Positive Transition

Determines which bits in the "Questionable Calibration Condition" on page 3051 register will set the corresponding bit in the "Questionable Calibration Event Query" on page 3052 register when the condition register bit has a positive transition (0 to 1).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

Remote Command	`:STATus:QUEStionable:CALibration:PTRansition <integer>` `:STATus:QUEStionable:CALibration:PTRansition?`
Example	`:STAT:QUES:CAL:PTR 16384` "Align All Now Needed" being set will be reported to the Calibration Summary of the Status Questionable register
Preset	32767
Min	0
Max	32767
Status Bits/OPC dependencies	Sequential command

9.4.6.10 Questionable Calibration Extended Needed Register

Monitors conditions that occur because a calibration or alignment is required to guarantee accurate measurements. It summarizes them in bit 8 of the "Questionable Calibration Register" on page 3050.

Bit	Condition	Operation
1	Align 9kHz-30MHz required	EMI receiver alignment required, 9kHz-30 MHz (conducted band)
2	Align 30MHz-1GHz required	EMI receiver alignment required, 30 MHz-1 GHz (radiated band)
4	Input Attenuation not calibrated	The input attenuator is uncalibrated
5	Align current frequency range required	Alignment for current set frequency range is needed. It is suggested to process Align Selected Freq Range for the frequency range in use
8	MPA Align required	The Multiport Adaptor must be calibrated (EXT only)
11	Characterize Preselector required	Go to the System, Alignments, Advanced menu and perform a “Characterize Preselector”
12	Characterize Noise Floor required	Go to the System, Alignments, Advanced menu and perform a “Characterize Noise Floor”

Filter Registers

- "Questionable Calibration Extended Needed Condition" on page 3055
- "Questionable Calibration Extended Needed Enable" on page 3055
- "Questionable Calibration Extended Needed Event Query" on page 3056

- "Questionable Calibration Extended Needed Negative Transition" on page 3056
- "Questionable Calibration Extended Needed Positive Transition" on page 3056

Questionable Calibration Extended Needed Condition

Returns the decimal value of the sum of the bits in the Questionable Calibration Extended Needed Condition register.

NOTE **The data in this register is continuously updated and reflects the current conditions.**

Remote Command	`:STATus:QUEStionable:CALibration:EXTended:NEEDed:CONDition?`
Example	`:STAT:QUES:CAL:EXT:NEED:COND?`
Preset	0
Status Bits/OPC dependencies	Sequential command

Questionable Calibration Extended Needed Enable

Determines which bits in the "Questionable Calibration Extended Needed Condition" on page 3055 will set bits in the "Questionable Calibration Extended Needed Event Query" on page 3056 register, which also sets bit 14 of the "Questionable Calibration Register" on page 3050.

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

Remote Command	`:STATus:QUEStionable:CALibration:EXTended:NEEDed:ENABle <integer>` `:STATus:QUEStionable:CALibration:EXTended:NEEDed:ENABle?`
Example	`:STAT:QUES:CAL:EXT:NEED:ENAB 2` Can be used to query if an EMI conducted alignment is needed
Preset	32767
Min	0
Max	32767
Status Bits/OPC dependencies	Sequential command

Questionable Calibration Extended Needed Event Query

Returns the decimal value of the sum of the bits in the Questionable Calibration Extended Needed Event register.

NOTE The register requires that the associated PTRansition or NTRansition filters be set before a condition register bit can set a bit in the event register. The data in this register is latched until it is queried. Once queried, the register is cleared.

Remote Command	`:STATus:QUEStionable:CALibration:EXTended:NEEDed[:EVENt]?`
Example	`:STAT:QUES:CAL:EXT:NEED?`
Preset	0
Status Bits/OPC dependencies	Sequential command

Questionable Calibration Extended Needed Negative Transition

Determines which bits in the "Questionable Calibration Extended Needed Condition" on page 3055 register will set the corresponding bit in the "Questionable Calibration Extended Needed Event Query" on page 3056 register when the condition register bit has a negative transition (1 to 0).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

Remote Command	`:STATus:QUEStionable:CALibration:EXTended:NEEDed:NTRansition <integer>` `:STATus:QUEStionable:CALibration:EXTended:NEEDed:NTRansition?`
Example	`:STAT:QUES:CAL:EXT:NEED:NTR 2` Conducted alignment required bit being cleared will be reported
Preset	0
Min	0
Max	32767
Status Bits/OPC dependencies	Sequential command

Questionable Calibration Extended Needed Positive Transition

Determines which bits in the "Questionable Calibration Extended Needed Condition" on page 3055 register will set the corresponding bit in the "Questionable Calibration

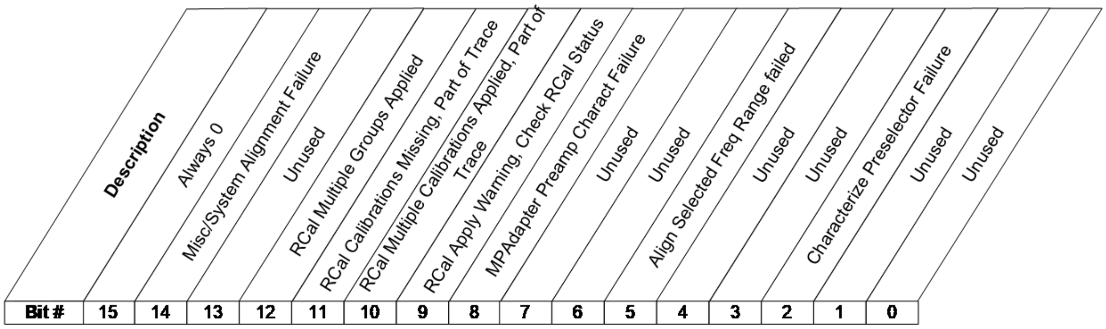
Extended Needed Event Query" on page 3056 register when the condition register bit has a positive transition (0 to 1).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

Remote Command	`:STATus:QUEStionable:CALibration:EXTended:NEEDed:PTRansition <integer>` `:STATus:QUEStionable:CALibration:EXTended:NEEDed:PTRansition?`
Example	`:STAT:QUES:CAL:EXT:NEED:PTR 2` Conducted alignment required bit being set will be reported
Preset	32767
Min	0
Max	32767
Status Bits/OPC dependencies	Sequential command

9.4.6.11 Questionable Calibration Extended Failure Register

Monitors conditions that occur because a calibration or alignment has failed to complete properly. It summarizes them in bit 9 of the "Questionable Calibration Register" on page 3050.



STATus:QUEStionable:CALibration:EXTended:FAILure Register

Bit	Condition	Operation
2	Characterize Preselector Failure	The preselector characterization failed
5	Align Selected Freq Range failed	The alignment for selected frequency range failed
8	MPAdapter Preamp Charact Failure	The Multiport Adaptor must be calibrated (EXT only)
9	RCal Apply Warning, Check RCal Status	The calibration request sent to the RCal module failed

Bit	Condition	Operation
10	RCal Multiple Calibrations Applied, Part of Trace	More than one calibration is being applied to part of the trace for current measurement
11	RCal Calibrations Missing, Part of Trace	The calibration being applied is not being applied to all of the trace for the current measurement
12	RCal Multiple Groups Applied	More than one calibrated rows are being applied to the current measurement
14	Misc/System Alignment Failure	Miscellaneous/System alignments have failed

Filter Registers

- "Questionable Calibration Extended Failure Condition" on page 3058
- "Questionable Calibration Extended Failure Enable" on page 3058
- "Questionable Calibration Extended Failure Event Query" on page 3059
- "Questionable Calibration Extended Failure Negative Transition" on page 3059
- "Questionable Calibration Extended Failure Positive Transition" on page 3060

Questionable Calibration Extended Failure Condition

Returns the decimal value of the sum of the bits in the Questionable Calibration Extended Failure Condition register.

NOTE The data in this register is continuously updated and reflects the current conditions.

Remote Command	`:STATus:QUEStionable:CALibration:EXTended:FAILure:CONDition?`
Example	`:STAT:QUES:CAL:EXT:FAIL:COND?`
Preset	0
Status Bits/OPC dependencies	Sequential command

Questionable Calibration Extended Failure Enable

Determines which bits in the "Questionable Calibration Extended Failure Condition" on page 3058 Register will set bits in the "Questionable Calibration Extended Failure Event Query" on page 3059 register, which also sets bit 9 of the "Questionable Calibration Register" on page 3050.

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

Remote Command	`:STATus:QUEStionable:CALibration:EXTended:FAILure:ENABle <integer>` `:STATus:QUEStionable:CALibration:EXTended:FAILure:ENABle?`
Example	`:STAT:QUES:CAL:EXT:FAIL:ENAB 1` Can be used to query if an EMI conducted alignment failed
Preset	32767
Min	0
Max	32767
Status Bits/OPC dependencies	Sequential command

Questionable Calibration Extended Failure Event Query

Returns the decimal value of the sum of the bits in the Questionable Calibration Extended Failure Event register.

NOTE The register requires that the associated PTRansition or NTRansition filters be set before a condition register bit can set a bit in the event register. The data in this register is latched until it is queried. Once queried, the register is cleared.

Remote Command	`:STATus:QUEStionable:CALibration:EXTended:FAILure[:EVENt]?`
Example	`:STAT:QUES:CAL:EXT:FAIL?`
Preset	0
Status Bits/OPC dependencies	Sequential command

Questionable Calibration Extended Failure Negative Transition

Determines which bits in the "Questionable Calibration Extended Failure Condition" on page 3058 register will set the corresponding bit in the "Questionable Calibration Extended Failure Event Query" on page 3059 register when the condition register bit has a negative transition (1 to 0).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

Remote Command	`:STATus:QUEStionable:CALibration:EXTended:FAILure:NTRansition <integer>` `:STATus:QUEStionable:CALibration:EXTended:FAILure:NTRansition?`
Example	`:STAT:QUES:CAL:EXT:FAIL:NTR 1`

	Conducted alignment failed bit being cleared will be reported
Preset	0
Min	0
Max	32767
Status Bits/OPC dependencies	Sequential command

Questionable Calibration Extended Failure Positive Transition

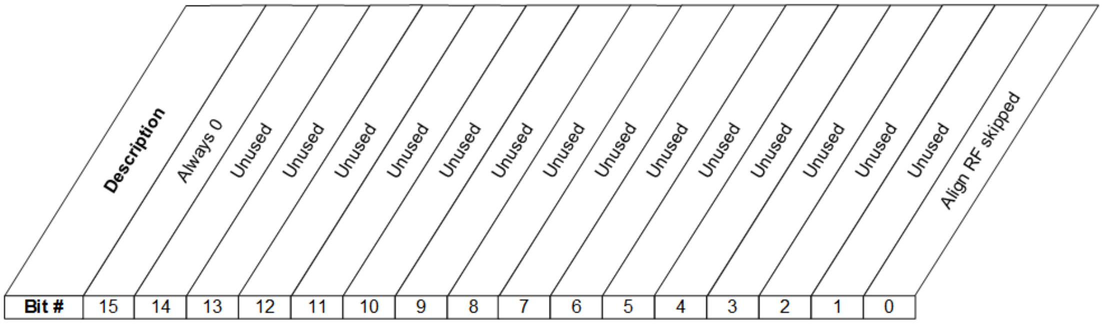
Determines which bits in the "Questionable Calibration Extended Failure Condition" on page 3058 register will set the corresponding bit in the "Questionable Calibration Extended Failure Event Query" on page 3059 register when the condition register bit has a positive transition (0 to 1).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

Remote Command	`:STATus:QUEStionable:CALibration:EXTended:FAILure:PTRansition <integer>` `:STATus:QUEStionable:CALibration:EXTended:FAILure:PTRansition?`
Example	`:STAT:QUES:CAL:EXT:FAIL:PTR 1` Conducted alignment failed bit being set will be reported
Preset	32767
Min	0
Max	32767
Status Bits/OPC dependencies	Sequential command

9.4.6.12 Questionable Calibration Skipped Register

Monitors conditions that occur because a calibration or alignment has been skipped due to various settings or conditions. It summarizes them in bit 11 of the "Questionable Calibration Register" on page 3050.



STATus:QUEStionable:CALibration:SKIPped Register

Bit	Condition	Operation
0	Align RF skipped	During an alignment, the calibration of the RF section (frontend) of the instrument was not performed. This can be caused by an interfering user signal present at the RF Input See "Align Now" on page 2351, "Align Now All" on page 2353

Filter Registers

- "Questionable Calibration Skipped Condition" on page 3061
- "Questionable Calibration Skipped Enable" on page 3062
- "Questionable Calibration Skipped Event Query" on page 3062
- "Questionable Calibration Skipped Negative Transition" on page 3062
- "Questionable Calibration Skipped Positive Transition" on page 3063

Questionable Calibration Skipped Condition

Returns the decimal value of the sum of the bits in the Questionable Calibration Skipped Condition register.

NOTE The data in this register is continuously updated and reflects the current conditions.

Remote Command	`:STATus:QUEStionable:CALibration:SKIPped:CONDition?`
Example	`:STAT:QUES:CAL:SKIP:COND?`
Preset	0
Status Bits/OPC dependencies	Sequential command

Questionable Calibration Skipped Enable

Determines which bits in the "Questionable Calibration Skipped Condition" on page 3061 Register will set bits in the "Questionable Calibration Skipped Event Query" on page 3062 register, which also sets bit 11 of the "Questionable Calibration Register" on page 3050.

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

Remote Command	`:STATus:QUEStionable:CALibration:SKIPped:ENABle <integer>` `:STATus:QUEStionable:CALibration:SKIPped:ENABle?`
Example	`:STAT:QUES:CAL:SKIP:ENAB 1` Can be used to query if an RF alignment skipped condition is detected
Preset	32767
Min	0
Max	32767
Status Bits/OPC dependencies	Sequential command

Questionable Calibration Skipped Event Query

Returns the decimal value of the sum of the bits in the Questionable Calibration Event register.

NOTE **The register requires that the associated PTRansition or NTRansition filters be set before a condition register bit can set a bit in the event register. The data in this register is latched until it is queried. Once queried, the register is cleared.**

Remote Command	`:STATus:QUEStionable:CALibration:SKIPped[:EVENt]?`
Example	`:STAT:QUES:CAL:SKIP?`
Preset	0
Status Bits/OPC dependencies	Sequential command

Questionable Calibration Skipped Negative Transition

Determines which bits in the "Questionable Calibration Skipped Condition" on page 3061 register will set the corresponding bit in the "Questionable Calibration Skipped

Event Query" on page 3062 register when the condition register bit has a negative transition (1 to 0).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

Remote Command	`:STATus:QUEStionable:CALibration:SKIPped:NTRansition <integer>` `:STATus:QUEStionable:CALibration:SKIPped:NTRansition?`
Example	`:STAT:QUES:CAL:SKIP:NTR 1` RF Align Skipped bit being cleared will be reported
Preset	0
Min	0
Max	32767
Status Bits/OPC dependencies	Sequential command

Questionable Calibration Skipped Positive Transition

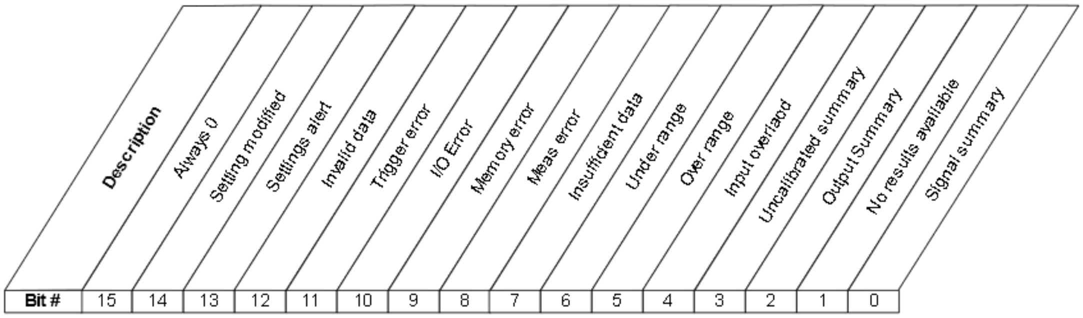
Determines which bits in the "Questionable Calibration Skipped Condition" on page 3061 register will set the corresponding bit in the "Questionable Calibration Skipped Event Query" on page 3062 register when the condition register bit has a positive transition (0 to 1).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

Remote Command	`:STATus:QUEStionable:CALibration:SKIPped:PTRansition <integer>` `:STATus:QUEStionable:CALibration:SKIPped:PTRansition?`
Example	`:STAT:QUES:CAL:SKIP:PTR 1` RF Align Skipped bit being set will be reported
Preset	32767
Min	0
Max	32767
Status Bits/OPC dependencies	Sequential command

9.4.6.13 Questionable Integrity Register

Monitors measurement integrity-related conditions within the instrument and summarizes them in bit 9 of the "Questionable Register" on page 3038. Two of the bits are summary bits from lower-level event registers.



STATus:QUEStionable:INTegrity Register

Bit	Condition	Operation
0	Signal Summary	The summary bit for the "Questionable Integrity Signal Register" on page 3067
1	No Result	The current measurement is incompatible with a setting or combination of settings, such as the selected Input, Radio Standard, etc.
2	Output Summary	The summary bit for the "Questionable Integrity Output Register" on page 3070
3	Uncalibrated Summary	The summary bit for the "Questionable Integrity Uncalibrated Register" on page 3073
4	Input Overload	A signal overload condition exists
5	Over Range	The signal at the input for this measurement is too high. You should increase the attenuation or decrease the signal level
6	Under Range	The signal at the input for this measurement is too low. You should decrease the attenuation or increase the signal level
7	Insufficient Data	Signal or settings conditions did not allow enough data to be taken during an acquisition for a valid measurement
8	Meas Error	(not currently in use)
9	Memory Error	There is not enough memory to perform the desired operation
10	I/O Error	I/O settings are preventing communication with an instrument or peripheral
11	Trigger Error	Signal or settings conditions did not allow enough data to be taken during an acquisition for a valid measurement
12	Invalid data	The Invalid Data indicator (* in upper right of display) is on, indicating that onscreen data may be stale and not match the current settings
13	Settings Alert	Settings are not right for a valid measurement, but the instrument is nonetheless allowing a measurement to be taken
14	Setting Modified	Settings are not right for a valid measurement, and the instrument is using different settings than the ones you entered in order to take a measurement

Filter Registers

- "Questionable Integrity Condition" on page 3065
- "Questionable Integrity Enable" on page 3065
- "Questionable Integrity Event Query" on page 3066
- "Questionable Integrity Negative Transition" on page 3066
- "Questionable Integrity Positive Transition" on page 3066

Questionable Integrity Condition

Returns the decimal value of the sum of the bits in the Questionable Integrity Condition register.

NOTE The data in this register is continuously updated and reflects the current conditions.

Remote Command	`:STATus:QUEStionable:INTegrity:CONDition?`
Example	`:STAT:QUES:INT:COND?`
Preset	0
Status Bits/OPC dependencies	Sequential command

Questionable Integrity Enable

Determines which bits in the "Questionable Integrity Condition" on page 3065 Register will set bits in the "Questionable Integrity Event Query" on page 3066 register, which also sets the Integrity Summary bit (bit 9) in the "Questionable Register" on page 3038.

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

Remote Command	`:STATus:QUEStionable:INTegrity:ENABle <integer>` `:STATus:QUEStionable:INTegrity:ENABle?`
Example	`:STAT:QUES:INT:ENAB 8` Uncalibrated Summary will be reported to the Integrity Summary of the Status Questionable register
Preset	32767
Min	0
Max	32767
Status Bits/OPC dependencies	Sequential command

Questionable Integrity Event Query

Returns the decimal value of the sum of the bits in the Questionable Integrity Event register.

NOTE **The register requires that the associated PTRansition or NTRansition filters be set before a condition register bit can set a bit in the event register. The data in this register is latched until it is queried. Once queried, the register is cleared.**

Remote Command	`:STATus:QUEStionable:INTegrity[:EVENt]?`
Example	`:STAT:QUES:INT?`
Preset	0
Status Bits/OPC dependencies	Sequential command

Questionable Integrity Negative Transition

Determines which bits in the "Questionable Integrity Condition" on page 3065 register will set the corresponding bit in the "Questionable Integrity Event Query" on page 3066 register when the condition register bit has a negative transition (1 to 0).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

Remote Command	`:STATus:QUEStionable:INTegrity:NTRansition <integer>` `:STATus:QUEStionable:INTegrity:NTRansition?`
Example	`:STAT:QUES:INT:NTR 8` Uncalibrated Summary being cleared will be reported to the Integrity Summary of the Status Questionable register
Preset	0
Min	0
Max	32767
Status Bits/OPC dependencies	Sequential command

Questionable Integrity Positive Transition

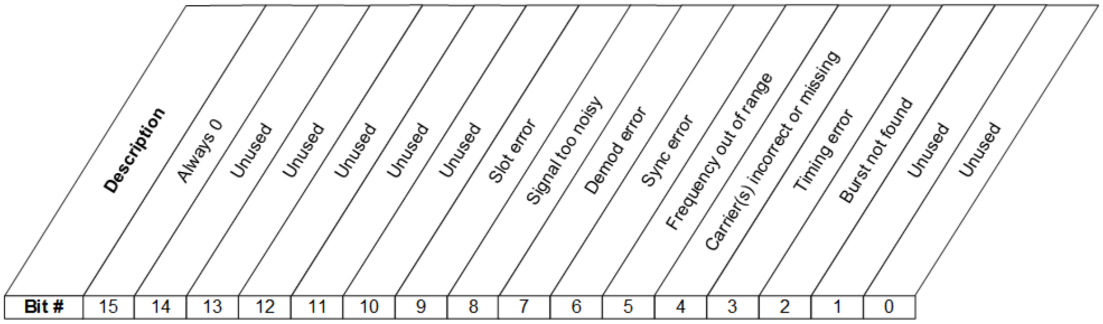
Determines which bits in the "Questionable Integrity Condition" on page 3065 register will set the corresponding bit in the "Questionable Integrity Event Query" on page 3066 register when the condition register bit has a positive transition (0 to 1).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

Remote Command	`:STATus:QUEStionable:INTegrity:PTRansition <integer>` `:STATus:QUEStionable:INTegrity:PTRansition?`
Example	`:STAT:QUES:INT:PTR 8` Uncalibrated Summary being set will be reported to the Integrity Summary of the Status Questionable register
Preset	32767
Min	0
Max	32767
Status Bits/OPC dependencies	Sequential command

9.4.6.14 Questionable Integrity Signal Register

Monitors conditions that occur because a measurement may not be able to return an accurate or valid result due to signal conditions. It summarizes them in bit 0 of the "Questionable Integrity Register" on page 3063.



STATus:QUEStionable:INTegrity:SIGNal Register

Bit	Condition	Operation
2	Burst not found	The instrument is expecting a bursted signal but such a signal cannot be detected because of inappropriate parameter settings or incorrect signal content
3	Timing Error	The instrument cannot establish appropriate timing from the signal
4	Carrier(s) incorrect or missing	The instrument cannot find the expected carrier(s) within the frequency ranges in which it is looking
5	Frequency out of range	One or more system or signal input frequencies are out of range
6	Sync error	The instrument cannot establish sync with the measured signal
7	Demod error	The instrument cannot demodulate the signal due to inappropriate

Bit	Condition	Operation
		signal or settings conditions
8	Signal Too Noisy	The instrument cannot measure the desired signal because it is too noisy
9	Slot Error	No valid signal slot found in captured data

Questionable Integrity Signal Condition

Returns the decimal value of the sum of the bits in the Questionable Integrity Signal Condition register.

NOTE The data in this register is continuously updated and reflects the current conditions.

Remote Command	`:STATus:QUEStionable:INTegrity:SIGNal:CONDition?`
Example	`:STAT:QUES:INT:SIGN:COND?`
Preset	0
Status Bits/OPC dependencies	Sequential command

Questionable Integrity Signal Enable

Determines which bits in the "Questionable Integrity Signal Condition" on page 3068 Register will set bits in the "Questionable Integrity Signal Event Query" on page 3069 register, which also sets the Integrity Summary bit (bit 9) in the "Questionable Register" on page 3038.

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

Remote	`:STATus:QUEStionable:INTegrity:SIGNal:ENABle <integer>`

Command	`:STATus:QUEStionable:INTegrity:SIGNal:ENABle?`
Example	`:STAT:QUES:INT:SIGN:ENAB 4` Burst Not Found will be reported to the Integrity Summary of the Status Questionable register
Preset	32767
Min	0
Max	32767
Status Bits/OPC dependencies	Sequential command

Questionable Integrity Signal Event Query

Returns the decimal value of the sum of the bits in the Questionable Integrity Signal Event register.

NOTE

The register requires that the associated PTRansition or NTRansition filters be set before a condition register bit can set a bit in the event register. The data in this register is latched until it is queried. Once queried, the register is cleared.

Remote Command	`:STATus:QUEStionable:INTegrity:SIGNal[:EVENt]?`
Example	`:STAT:QUES:INT:SIGN?`
Preset	0
Status Bits/OPC dependencies	Sequential command

Questionable Integrity Signal Negative Transition

Determines which bits in the "Questionable Integrity Signal Condition" on page 3068 register will set the corresponding bit in the "Questionable Integrity Signal Event Query" on page 3069 register when the condition register bit has a negative transition (1 to 0).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

Remote Command	`:STATus:QUEStionable:INTegrity:SIGNal:NTRansition <integer>` `:STATus:QUEStionable:INTegrity:SIGNal:NTRansition?`
Example	`:STAT:QUES:INT:SIGN:NTR 4` Burst not found being cleared will be reported to the Integrity Summary of the Status Questionable register
Preset	0

Min	0
Max	32767
Status Bits/OPC dependencies	Sequential command

Questionable Integrity Signal Positive Transition

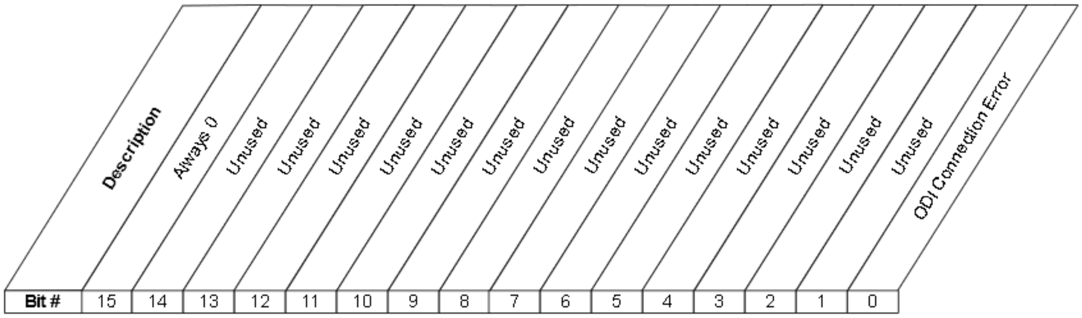
Determines which bits in the "Questionable Integrity Signal Condition" on page 3068 register will set the corresponding bit in the "Questionable Integrity Signal Event Query" on page 3069 register when the condition register bit has a positive transition (0 to 1).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

Remote Command	`:STATus:QUEStionable:INTegrity:SIGNal:PTRansition <integer>` `:STATus:QUEStionable:INTegrity:SIGNal:PTRansition?`
Example	`:STAT:QUES:INT:SIGN:PTR 4` Burst not found being set will be reported to the Integrity Summary of the Status Questionable register
Preset	32767
Min	0
Max	32767
Status Bits/OPC dependencies	Sequential command

9.4.6.15 Questionable Integrity Output Register

Monitors conditions that occur in connection status currently limited to ODI streaming . It summarizes them in bit 2 of the "Questionable Integrity Register" on page 3063.



STATus:QUEStionable:INTegrity:OUTPut Register

Bit	Condition	Operation
0	ODI Connection Error	ODI Connection Error This bit is never triggered, only its aliases are

Filter Registers

- "Questionable Integrity Output Condition" on page 3071
- "Questionable Integrity Output Enable" on page 3071
- "Questionable Integrity Output Event Query" on page 3072
- "Questionable Integrity Output Negative Transition" on page 3072
- "Questionable Integrity Output Positive Transition" on page 3073

Questionable Integrity Output Condition

Returns the decimal value of the sum of the bits in the Questionable Integrity Output Condition register.

NOTE The data in this register is continuously updated and reflects the current conditions.

Remote Command	`:STATus:QUEStionable:INTegrity:OUTPut:CONDition?`
Example	`:STAT:QUES:INT:OUTP:COND?`
Preset	0
Status Bits/OPC dependencies	Sequential command

Questionable Integrity Output Enable

Determines which bits in the "Questionable Integrity Output Condition" on page 3071 register will set the corresponding bit in the "Questionable Integrity Output Event Query" on page 3072 register, which also sets the Data Output Summary bit (bit 2) in the "Questionable Integrity Register" on page 3063.

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

Remote Command	`:STATus:QUEStionable:INTegrity:OUTPut:ENABle` `:STATus:QUEStionable:INTegrity:OUTPut:ENABle?`
Example	`:STAT:QUES:INT:OUTP:ENAB 1`

	Oversweep (Meas Uncal) is reported to the Integrity Summary of the Status Questionable register
Preset	32767
Min	0
Max	32767
Status Bits/OPC dependencies	Sequential command

Questionable Integrity Output Event Query

Returns the decimal value of the sum of the bits in the "Questionable Integrity Output Condition" on page 3071 register.

NOTE

The register requires that the associated `PTRansition` or `NTRansition` filters be set before a condition register bit can set a bit in the event register. The data in this register is latched until it is queried. Once queried, the register is cleared.

Remote Command	`:STATus:QUEStionable:INTegrity:OUTPut[:EVENt]?`
Example	`:STAT:QUES:INT:OUTP?`
Preset	0
Status Bits/OPC dependencies	Sequential command

Questionable Integrity Output Negative Transition

Determines which bits in the "Questionable Integrity Output Condition" on page 3071 register will set the corresponding bit in the "Questionable Integrity Output Event Query" on page 3072 register when the condition register bit has a negative transition (1 to 0).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

Remote Command	`:STATus:QUEStionable:INTegrity:OUTPut:NTRansition <integer>` `:STATus:QUEStionable:INTegrity:OUTPut:NTRansition?`
Example	`:STAT:QUES:INT:OUTP:NTR 1` Oversweep cleared is reported to the Integrity Summary of the Status Questionable register
Preset	0
Min	0
Max	32767
Status Bits/OPC dependencies	Sequential command

Questionable Integrity Output Positive Transition

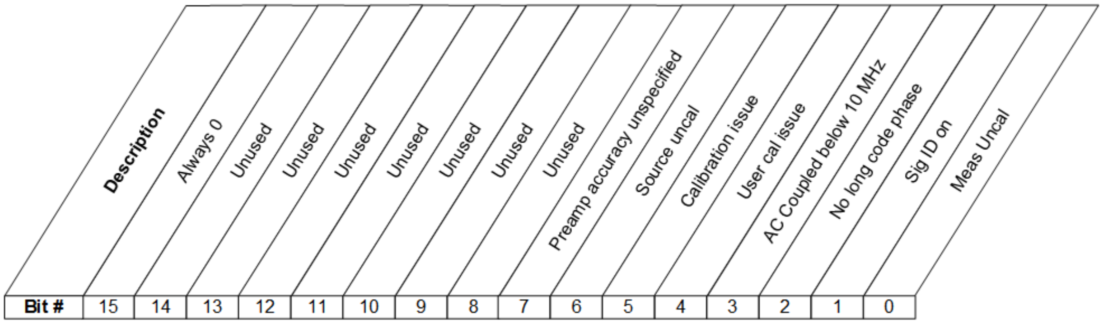
Determines which bits in the "Questionable Integrity Output Condition" on page 3071 register will set the corresponding bit in the "Questionable Integrity Output Event Query" on page 3072 register when the condition register bit has a positive transition (0 to 1).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

Remote Command	`:STATus:QUEStionable:INTegrity:OUTPut:PTRansition <integer>` `:STATus:QUEStionable:INTegrity:OUTPut:PTRansition?`
Example	`:STAT:QUES:INT:OUTP:PTR 1` Oversweep set is reported to the Integrity Summary of the Status Questionable register
Preset	32767
Min	0
Max	32767
Status Bits/OPC dependencies	Sequential command

9.4.6.16 Questionable Integrity Uncalibrated Register

Monitors conditions that occur because a measurement may not be able to return an accurate or valid result due to a mismatch between instrument settings and the signal, placing the instrument in an uncalibrated state for that signal. It summarizes them in bit 3 of the "Questionable Integrity Register" on page 3063.



STATus:QUEStionable:INTegrity:UNCalibrated Register

Bit	Condition	Operation
0	Meas Uncal	A Meas Uncal warning is being displayed; generally this means the sweep time must be reduced or the RBW increased
1	Signal ID on	In external mixing, the Sig ID function is on, which will impact the

Bit	Condition	Operation
		trace results
2	No Long Code Phase	The long code phase that identifies an access channel cannot be found (WCDMA)
3	AC coupled: Accy unspec'd <10 MHz	The instrument is AC coupled but is operating below 10 MHz, where the blocking capacitor will impact measurement accuracy
4	User cal issue	In noise figure measurements, the User Cal has not been performed or has been invalidated
5	Calibration issue	In noise figure measurements, one or more calibration or measurement frequency point exceeds the currently loaded Cal or Meas ENR Table frequency ranges
6	Source uncal	While using a Tracking Source, settings are putting it into an uncalibrated operational state
7	Preamp accuracy unspecified below XX MHz	The preamp is being used but is operating below frequencies for which its accuracy is specified

Filter Registers

Questionable Integrity Uncalibrated Condition

Returns the decimal value of the sum of the bits in the Questionable Integrity Uncalibrated Condition register.

NOTE **The data in this register is continuously updated and reflects the current conditions.**

Remote Command	`:STATus:QUEStionable:INTegrity:UNCalibrated:CONDition?`
Example	`:STAT:QUES:INT:UNC:COND?`
Preset	0
Status Bits/OPC dependencies	Sequential command

Questionable Integrity Uncalibrated Enable

Determines which bits in the "Questionable Integrity Uncalibrated Condition" on page 3074 Register will set bits in the "Questionable Integrity Uncalibrated Event Query" on page 3075 register, which also sets the Data Uncalibrated Summary bit (bit 3) in the "Questionable Integrity Register" on page 3063.

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

Remote Command	`:STATus:QUEStionable:INTegrity:UNCalibrated:ENABle` `:STATus:QUEStionable:INTegrity:UNCalibrated:ENABle?`
Example	`:STAT:QUES:INT:UNC:ENAB 1` Oversweep (Meas Uncal) is reported to the Integrity Summary of the Status Questionable register
Preset	32767
Min	0
Max	32767
Status Bits/OPC dependencies	Sequential command

Questionable Integrity Uncalibrated Event Query

Returns the decimal value of the sum of the bits in the "Questionable Integrity Uncalibrated Condition" on page 3074 register.

NOTE **The register requires that the associated PTRansition or NTRansition filters be set before a condition register bit can set a bit in the event register. The data in this register is latched until it is queried. Once queried, the register is cleared.**

Remote Command	`:STATus:QUEStionable:INTegrity:UNCalibrated[:EVENt]?`
Example	`:STAT:QUES:INT:UNC?`
Preset	0
Status Bits/OPC dependencies	Sequential command

Questionable Integrity Uncalibrated Negative Transition

Determines which bits in the "Questionable Integrity Uncalibrated Condition" on page 3074 register will set the corresponding bit in the "Questionable Integrity

Uncalibrated Event Query" on page 3075 register when the condition register bit has a negative transition (1 to 0).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

Remote Command	`:STATus:QUEStionable:INTegrity:UNCalibrated:NTRansition <integer>` `:STATus:QUEStionable:INTegrity:UNCalibrated:NTRansition?`
Example	`:STAT:QUES:INT:UNC:NTR 1` Oversweep cleared is reported to the Integrity Summary of the Status Questionable register
Preset	0
Min	0
Max	32767
Status Bits/OPC dependencies	Sequential command

Questionable Integrity Uncalibrated Positive Transition

Determines which bits in the "Questionable Integrity Uncalibrated Condition" on page 3074 register will set the corresponding bit in the "Questionable Integrity Uncalibrated Event Query" on page 3075 register when the condition register bit has a positive transition (0 to 1).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

Remote Command	`:STATus:QUEStionable:INTegrity:UNCalibrated:PTRansition <integer>` `:STATus:QUEStionable:INTegrity:UNCalibrated:PTRansition?`
Example	`:STAT:QUES:INT:UNC:PTR 1` Oversweep set is reported to the Integrity Summary of the Status Questionable register
Preset	32767
Min	0
Max	32767
Status Bits/OPC dependencies	Sequential command

10 Hardware-Accelerated Fast Power Measurement (Remote Command Only)

The **Fast Power** option (FP2) enables very fast channel power measurements for instruments with the prerequisite hardware (DP2 and/or B40). It accomplishes this by performing real-time overlapped FFTs at the hardware layer, using software for basic post-processing before returning the result. The upshot of this approach is improved throughput for user applications that require many sequential power measurements.

The analysis bandwidth of FP2 may be limited by the licenses in the instrument.

NOTE FP2 is remote-only, which means the instrument does not switch to any particular Mode or measurement. FP2 commands can be sent while another application is in use on the front panel.

Each Fast Power measurement can be predefined using an array index, and up to 1000 measurements can be stored. In the following documentation, instances of [1,2,...,999] can be substituted with a particular measurement index, for example, `:CALC:FPOW:POW1?`, `:CALC:FPOW:POW2?`, `:CALC:FPOW:POW134?`. In this way, power measurements can be defined one time in a batch, and then executed multiple times without having to redefine them, similar to “list mode” on other measurements.

In addition to basic channel power measurements, there are several other measurement “functions” for each channel, including peak power, peak frequency, and power spectral density.

10.1 Reset Fast Power Measurement (Remote Command Only)

Resets the measurement configuration to the defaults.

Remote Command	`:CALCulate:FPOWer:POWer[1,2,…,999]:RESet`
Example	`:CALC:FPOW:POW1:RES`
Notes	Option FP2 is required

10.2 Reset Fast Power Measurement (Remote Command Only)

Resets the measurement configuration to the defaults.

Remote Command	`:CALCulate:FPOWer:POWer[1,2,…,999]:RESet`
Example	`:CALC:FPOW:POW1:RES`
Notes	Option FP2 is required

10.2.1 Acquisition Time

Example	`:CALC:FPOW:POW1:DEF "AcquisitionTime=0.002"`
Notes	Sets the time in which the entire spectrum is measured. An increase in the acquisition time yields an improvement in measurement repeatability
Preset	0.001 s
Range	0 s to 1 s

10.2.2 Center Frequency

Example	`:CALC:FPOW:POW1:DEF "CenterFrequency=2e9"`
Notes	Sets the frequency in which the measurement is centered around. "Channel Offset Frequency Array" on page 3087 is calculated relative to the center frequency
Preset	1 GHz
Range	0 Hz to maximum instrument frequency

10.2.3 DC Coupled

Example	`:CALC:FPOW:POW1:DEF "DCCoupled=True"`	
Notes	Lets you specify whether the DC blocking capacitor is utilized. Set to `True` when measuring frequencies below 10 MHz	
Preset	`False`	
Range	`True`	DC Coupled
	`False`	AC Coupled

10.2.4 Detector Type

Example	`:CALC:FPOW:POW1:DEF "DetectorType=Peak"`
Notes	Option FP2 is required Lets you specify whether an RMS average or peak value is used during the measurement
Preset	`RmsAverage`
Range	`RmsAverage, Peak`

10.2.5 Do Noise Correction

Example	`:CALC:FPOW:POW1:DEF "DoNoiseCorrection=True"`
Notes	When noise correction is enabled, the linear noise power contributed by the instrument is subtracted from all measurements. This effectively lowers the noise floor of the instrument When noise correction is enabled, the first measurement for a given set of input parameters will take extra time. This is because the instrument takes an extra acquisition with the RF input disconnected from the instrument's front end to measure the noise of just the instrument. The measured noise floor is stored in a cache so the noise acquisition will occur only once for the same state settings. In other words, if noise correction was turned on and the instrument made an acquisition at frequency A, then frequency B, and back again to frequency A, the hidden initial noise floor acquisition would only occur for the first acquisition at frequency A and the cached noise floor would be used the second time frequency A was measured
Preset	`False`
Range	`True` — Enable noise correction `False` — Disable noise correction

10.2.6 Do Spur Suppression

Example	`:CALC:FPOW:POW1:DEF "DoSpurSuppression=True"`
Notes	When measuring very low-level signals, or when large out-of-band inputs are input into the instrument, sometimes unwanted spurs and residuals can appear in the measured spectrum. Spur suppression is a method to help minimize the levels of these internally generated spurs and residuals When spur suppression is enabled, the instrument will automatically take two acquisitions using two different internal analog LO frequencies. The FFT spectrums from both acquisitions are combined by taking the minimum power between both traces on a per FFT bin basis. External signals will have the same amplitude for both traces and therefore will return the expected amplitudes. However, low level spurs and residuals generated internally to the instrument tend to move to different FFT bins depending on the internal analog LO frequency used, and therefore tend to be suppressed using this spur suppression method

	Because two acquisitions, rather than a single acquisition, are made when spur suppression is enabled, the measurement time will always be slower when spur suppression is enabled
Preset	`False`
Range	`True` – Enable spur suppression `False` – Disable spur suppression

10.2.7 Electronic Attenuator Bypass

Example	`:CALC:FPOW:POW1:DEF "ElecAttBypass =False"`
Notes	Lets you either utilize or bypass the electronic attenuator. The electronic attenuator is only available for frequencies up to 3.6 GHz. Set to `True` when using frequencies above 3.6 GHz. Set to `False` when using the preamp
Preset	`True`
Range	`True` – Bypass electronic attenuator `False` – Use electronic attenuator

10.2.8 Electronic Attenuation

Example	`:CALC:FPOW:POW1:DEF "ElecAttenuation=10"`
Notes	Option EA3 is required The electronic attenuation value parameter sets the amount of electrical attenuation from 0 to 24 dB (1 dB steps) Set `ElecAttBypass` = `False` to make sure the electronic attenuator path is enabled
Preset	0 dB
Range	0 – 24 dB (1 dB steps)

10.2.9 External Reference Frequency

Example	`:CALC:FPOW:POW1:DEF "ExternalReferenceFrequency=10"`
Notes	This is the user-specified frequency of the external reference. Used when "Frequency Reference Source" on page 3082 is set to `ExternalFrequencyReference`, or `AutoExternalFrequencyReference` when the external source is present. Unused if `FrequencyReferenceSource` is set to `InternalFrequencyReference`
Preset	10 MHz

10.2.10 Frequency Reference Source

Example	`:CALC:FPOW:POW1:DEF "FrequencyReferenceSource= InternalFrequencyReference"`
Notes	Specifies which frequency reference source should be used for this request: – If `ExternalFrequencyReference` is selected and no external reference is present, the frequency reference unlocks but the data acquisition will continue – If `AutoExternalFrequencyReference` is selected, the hardware senses whether an external source is present before starting the data acquisition. If no external source is present then the internal source is selected, and the data acquisition will continue
Preset	`InternalFrequencyReference`
Range	`InternalFrequencyReference, ExternalFrequencyReference, AutoExternalFrequencyReference`

10.2.11 IF Gain

Example	`:CALC:FPOW:POW1:DEF "IFGain=10"`
Notes	Lets you specify the gain at the IF stage anywhere from -6 to 16 dB (1 dB steps). This is an advanced feature; for most cases this should remain at its default value of 0 dB
Preset	0 dB
Range	-6 – 16 dB (1 dB steps)

10.2.12 IF Type

Example	`:CALC:FPOW:POW1:DEF "IFType=B25M"`
Notes	Lets you select between different IF paths. For example, if the signal is less than 25 MHz wide, then you can select the B25M path to take advantage of additional filtering on this analog IF path
Preset	`B40M`
Range	`B10M, B25M, B40M`

10.2.13 Include Power Spectrum

Example	`:CALC:FPOW:POW1:DEF "IncludePowerSpectrum=True"`
Notes	Lets you read data on the entire spectrum for diagnostic purposes. It is not recommended for production use For details of the binary format of the response, see "Diagnostic Binary Read Fast Power Measurement (Remote Command Only)" on page 3095

Preset	`False`	
Range	`True`	Returns both channel power and full power spectrum
	`False`	Returns only channel power

10.2.14 Mechanical Attenuation

Example	`:CALC:FPOW:POW1:DEF "MechAttenuation=10"`
Notes	Sets the amount of mechanical attenuation anywhere from 0 to 70 dB (2 dB steps)
Preset	0 dB
Range	0 – 70 dB (2 dB steps)

10.2.15 Preamp Mode

Example	`:CALC:FPOW:POW1:DEF "PreAmpMode=Low"`
Notes	The license for the appropriate preamp is required Specifies whether the preamps are being utilized. `Low` allows any preamps up to 3.6 GHz, and `Full` allows all licensed preamps. Set `ElecAttBypass` = `True` to utilize any preamps (see "Electronic Attenuator Bypass" on page 3081)
Preset	`Off`
Range	`Off, Low, Full`

10.2.16 Resolution Bandwidth Mode

Example	`:CALC:FPOW:POW1:DEF "PreAmpMode=Low"`
Notes	Lets you specify whether the RBW filter is automatically or manually set. The BestSpeed value minimizes measurement time, while the Narrowest value minimizes RBW size (minimum of two FFT bins per RBW) To manually specify an RBW, set this parameter to `Explicit`, and set "Resolution Bandwidth" on page 3084 to the desired value
Preset	`BestSpeed`
Range	`BestSpeed, Narrowest, Explicit`

10.2.17 Resolution Bandwidth

Example	`:CALC:FPOW:POW1:DEF "ResolutionBW=25e3"`
Notes	Sets the 3-dB bandwidth of the RBW filter. "Resolution Bandwidth Mode" on page 3083 must be set to `Explicit` to manually set the RBW
Preset	0 Hz

10.2.18 Trigger Delay

Example	`:CALC:FPOW:POW1:DEF "TriggerDelay=0.025"`
Notes	Sets the time after an external trigger is detected until the measurement is performed
Preset	0 s
Range	0 – 1 s

10.2.19 Trigger Level

Example	`:CALC:FPOW:POW1:DEF "TriggerLevel=2"`
Notes	Sets the voltage value at which an external trigger is detected
Preset	1.2 V
Range	-5 to 5 V

10.2.20 Trigger Slope

Example	`:CALC:FPOW:POW1:DEF "TriggerSlope=Negative"`
Notes	Specifies the direction of the edge trigger voltage for detection
Preset	`Positive`
Range	`Positive, Negative`

10.2.21 Trigger Source

Example	`:CALC:FPOW:POW1:DEF "TriggerSource=Ext1"`
Notes	Lets you select whether the measurement triggers freely, or is controlled by an external input Ext1 and Ext2 correspond to Trigger 1 In and Trigger 2 In, respectively
Preset	`Free`
Range	`Free, Ext1, Ext2`

10.2.22 Trigger Timeout

Example	`:CALC:FPOW:POW1:DEF "TriggerTimeout=0.1"`
Notes	Sets the time in which the instrument will wait for a trigger before automatically performing the measurement
Preset	1 s
Range	0 – 1 s

10.2.23 Signal Input

Example	`:CALC:FPOW:POW1:DEF "SignalInput=Fp50MHzCW"`
Notes	Lets you select between using the main RF input or the internal instrument reference CW signal of 50 MHz
Preset	`FpMainRf`
Range	`FpMainRf, Fp50MHzCW`

10.2.24 Use Preselector

Example	`:CALC:FPOW:POW1:DEF "UsePreSelector=True"`	
Notes	Lets you either utilize or bypass the front-end tunable filter at frequencies above 3.6 GHz. For frequencies below 3.6 GHz, the preselector is automatically bypassed, so you do not need to set this parameter to `False` in those cases	
Preset	`False`	
Range	`True`	Use preselector above 3.6 GHz
	`False`	Preselector bypassed

10.2.25 Channel Bandwidth Array

Example	`:CALC:FPOW:POW1:DEF "Bandwidth=[3.84e6, 5e6, 3.84e6]"`
Notes	Defines the bandwidth of each channel that will be measured All array parameters should have the same number of elements. Alternatively, if all the elements are the same value, a single number with no square brackets can be used to define the parameter
Preset	[1e6]
Range	0 to 40 MHz

10.2.26 Channel Filter Type Array

Example	`:CALC:FPOW:POW1:DEF "FilterType=[RRC, IBW, RRC]"`
Notes	Lets you select either an integration bandwidth (IBW) filter, or a root-raised-cosine (RRC) filter. The integration bandwidth filter weighs all frequencies within the bandwidth equally. The root-raised-cosine filter has an associated shape parameter, defined by the FilterAlpha parameter All array parameters should have the same number of elements. Alternatively, if all the elements are the same value, a single value with no square brackets can be used to define the parameter
Preset	`[IBW]`
Range	`IBW, RRC`

10.2.27 Channel Filter Alpha Array

Example	`:CALC:FPOW:POW1:DEF "FilterAlpha=[0.5, 0.0, 0.5]"`
Notes	Lets you adjust the alpha value associated with the root-raised-cosine (RRC) filter type. Set `FilterType` to `RRC` to utilize this parameter All array parameters should have the same number of elements. Alternatively, if all the elements are the same value, a single number with no square brackets can be used to define the parameter
Preset	[0.22]
Range	0.0 – 1.0

10.2.28 Channel Measurement Function Array

Example	`:CALC:FPOW:POW1:DEF "Function=[BandPower, PeakPower, BandPower]"`
Notes	Defines what measurement is being made for each individually-specified channel. For details, see "Parameter Options" on page 3086 All array parameters should have the same number of elements Alternatively, if all the elements are the same value, a single value with no square brackets can be used to define the parameter
Preset	`BandPower`
Range	`BandPower, BandDensity, PeakPower, PeakFrequency, XdBBandwidth, OccupiedBandwidth`

Parameter Options

Option	Description	Unit
`BandPower`	Total power within the specified bandwidth of the	dBm

Option	Description	Unit
	channel	
`BandDensity`	Total power density within the specified bandwidth of the channel	dBm/Hz
`PeakPower`	The peak power value within the specified bandwidth of the channel	dBm
`PeakFrequency`	The frequency that corresponds to the peak power value within the specified bandwidth of the channel. This frequency is relative to the center frequency	Hz
`XdBBandwidth`	The half power (-3.01 dB) bandwidth of the highest amplitude signal that resides within the channel dB is configurable using "Channel x-dB Bandwidth Array" on page 3088	Hz
`OccupiedBandwidth`	The bandwidth at which 99% of the total power resides within the channel Percentage is configurable using "Channel Occupied Bandwidth Percent Array" on page 3087	Hz

10.2.29 Channel Offset Frequency Array

Example	`:CALC:FPOW:POW1:DEF "OffsetFrequency=[-5e6, 0, 5e6]"`
Notes	Defines the difference between the center frequency to the center frequency of each channel All array parameters should have the same number of elements
Preset	[0]
Range	0 to 20 MHz

10.2.30 Channel Occupied Bandwidth Percent Array

Example	`:CALC:FPOW:POW1:DEF "OccupiedBandwidthPercent =[0.95, 0.95, 0.95]"`
Notes	Only applies to channels whose "Channel Measurement Function Array" on page 3086 is set to `OccupiedBandwidth`. The occupied bandwidth percent parameter specifies the percent of total power in these channels. The valid range for this parameter is 0.0 to 1.0, where 1.0 represents 100%. The default for this parameter is 0.99, which will return the bandwidth that contains 99% of the total channel power
Preset	[0.99]
Range	0 – 1.0

10.2.31 Channel x-dB Bandwidth Array

Example	`:CALC:FPOW:POW1:DEF " XdBBandwidth =[-6.02, -3.01, -1.0]"`
Notes	Only applies to channels whose "Channel Measurement Function Array" on page 3086 is set to `XdBBandwidth`. The X dB bandwidth parameter is used to specify the power relative to the peak channel power over which the bandwidth is calculated. The parameter value must be a negative number
Preset	[-3.01]
Range	-200 to 0 dB

10.3 Define Fast Power Measurement Query (Remote Command Only)

Retrieves a list of all defined parameters in an ASCII string format

The following is an example of returned results:

```
"DCCoupled=False,ElecAttBypass=True,ElecAttenuation=0,IFGain=0,MechAttenuation=
0,PreAmpMode=Off,PreSelectorOffset=0,UsePreSelector=False,ExternalReferenceFreq
uency=10000000,FrequencyReferenceSource=AutoExternalFrequencyReference,IFType=B
40M,LOMode=SLW,SignalInput=FpMainRf,AcquisitionTime=0.001,CenterFrequency=10000
00000,ResolutionBW=0,ResolutionBWMode=BestSpeed,DetectorType=RmsAverage,Bandwid
th=[1000000],OffsetFrequency=[0],Function=[BandPower],FilterType=
[IBW],FilterAlpha=[0.22],OccupiedBandwidthPercent=[0.99],XdBBandwidth=
[3.01],DoNoiseCorrection=False,DoSpurSuppression=False,MeasurementMethod=Hardwa
reFFT,IncludePowerSpectrum=False,TriggerDelay=0,TriggerLevel=1.2,TriggerSlope=P
ositive,TriggerSource=Free,TriggerTimeout=1
,Trigger1Output=Off,Trigger1OutputPolarity=Positive,Trigger2Output=Off,Trigger2
OutputPolarity=Positive"
```

Remote Command	`:CALCulate:FPOWer:POWer[1,2,…,999]:DEFine?`
Example	`:CALC:FPOW:POW1:DEF?`
Notes	Retrieves a list of all defined parameters in an ASCII format

10.4 Configure Fast Power Measurement (Remote Command Only)

Begins hardware setup and returns immediately, with no acquisition made. This can be used in parallel with other hardware operations to effectively hide the hardware setup time.

Remote Command	`:CALCulate:FPOWer:POWer[1,2,…,999]:CONFigure`
Example	`:CALC:FPOW:POW1:CONF`
Notes	Option FP2 is required

10.5 Initiate Fast Power Measurement (Remote Command Only)

Begins an acquisition and returns immediately. The results of the measurement can be retrieved using `:FETCh`.

Remote Command	`:CALCulate:FPOWer:POWer[1,2,…,999]:INITiate`
Example	`:CALC:FPOW:POW1:INIT`
Notes	Option FP2 is required

10.6 Fetch Fast Power Measurement (Remote Command Only)

Used to retrieve the results of an acquisition initiated by `:INIT`. The returned results are in *ASCII string* format. The string begins and ends with quotation marks.

Remote Command	`:CALCulate:FPOWer:POWer[1,2,…,999]:FETCh?`
Example	`:CALC:FPOW:POW1:FETC?`
Notes	Option FP2 is required Returns m comma-separated ASCII values, where m corresponds to the number of bandwidths defined 1. Declared function return in the 1st specified channel 2. Declared function return in the 2nd specified channel ... m. Declared function return in the last specified channel The `INIT` and `FETC?` command sequence has the same effect as a single `CALC:FPOW:POW[n]?` query. Units of the returned values depend on "Channel Measurement Function Array" on page 3086 for each channel

10.7 Execute Fast Power Measurement (Remote Command Only)

Shorthand for `:INIT` immediately followed by `:FETC?`. The returned results are in *ASCII string* format. The string begins and ends with quotation marks.

Remote Command	`:CALCulate:FPOWer:POWer[1,2,…,999]?`
Example	`:CALC:FPOW:POW1?`
Notes	Option FP2 is required For return format, see notes for "Fetch Fast Power Measurement (Remote Command Only)" on page 3092

10.8 Binary Read Fast Power Measurement (Remote Command Only)

Shorthand for `:INIT` immediately followed by `:FETC?`. The returned results are in *binary format*.

Remote Command	`:CALCulate:FPOWer:POWer[1,2,…,999]:READ?` `:CALCulate:FPOWer:POWer[1,2,…,999]:READ1?`
Example	`:CALC:FPOW:POW1:READ?` `:CALC:FPOW:POW1:READ1?`
Notes	Option FP2 is required Returns m 4-byte floating point binary values (Little-Endian), where m corresponds to the number of bandwidths defined

10.9 Diagnostic Binary Read Fast Power Measurement (Remote Command Only)

Shorthand for `:INIT` immediately followed by `:FETC?`. The returned results are in *binary format*. This command is used primarily for diagnostic purposes, to test for ADC overloads and to visibly inspect the spectrum.

Remote Command	`:CALCulate:FPOWer:POWer[1,2,…,999]:READ2?`
Example	`:CALC:FPOW:POW1:READ2?`
Notes	Option FP2 is required Note that Spectrum data is only returned if `IncludePowerSpectrum` is set to `True` (see "Include Power Spectrum" on page 3082). If `IncludePowerSpectrum` is `False`, the number of spectrum points is zero (0) Units of the returned values are dependent on the `Function` parameter per channel (e.g. dBm for `BandPower`, Hz for `PeakFrequency`) Returns binary data (Little-Endian) that contains information on m amount of channels, along with ADC over range and full spectrum data The following is the binary format of the response **Bandwidth Return Value** 1. Number of channels specified, m [4-byte int] 2. Declared function result for the 1st specified channel [4-byte float] 3. Declared function result for the 2nd specified channel [4-byte float] ... (m + 1). Declared function result for the last (mth) specified channel [4-byte float] **ADC Over Range** 1. ADC over-range occurred (1: true, 0: false) [2 byte short] **Spectrum Data** 1. Number of points in the spectrum data, k [4-byte int] 2. Start frequency of spectrum data (Hz) [8-byte double] 3. Step frequency of spectrum data (Hz) [8-byte double] 4. FFT bin at 1st point (dBm) [4-byte float] 5. FFT bin at 2nd point (dBm) [4-byte float] ... (k + 3). FFT bin at last (kth) point (dBm) [4-byte float]
